

Module Manual

Master of Science (M.Sc.)

Civil Engineering

Cohort: Winter Term 2021

Updated: 20th May 2022

Table of Contents

Table of Contents	2
Program description	5
Core Qualification	6
Module M0523: Business & Management	6
Module M0524: Non-technical Courses for Master	7
Module M0808: Finite Elements Methods	9
Module M0962: Sustainability and Risk Management	11
Specialization Coastal Engineering	13
Module M0699: Geotechnics III	13
Module M1437: Non destructive testing of materials and parts	15
Module M0858: Coastal Hydraulic Engineering I	17
Module M0964: Underground Constructions	19
Module M0511: Electrical Energy from Solar Radiation and Wind Power	21
Module M1351: Construction Processes	24
Module M1721: Water and Environment: Theory and Application	25
Module M0593: Building Materials and Building Preservation	26
Module M0723: Design of Prestressed Structures and Concrete Bridges	28
Module M0756: Soil Mechanics and -Dynamics	30
Module M0807: Boundary Element Methods	33
Module M0827: Modeling in Water Management	35
Module M0828: Urban Environmental Management	37
Module M0859: Coastal Hydraulic Engineering II	39
Module M0860: Harbour Engineering and Harbour Planning	41
Module M0861: Modelling of Hydraulic Engineering	43
Module M0874: Wastewater Systems	46
Module M0922: City Planning	49
Module M0977: Construction Logistics and Project Management	51
Module M0998: Statics and Dynamics of Structures	54
Module M0999: Steel Construction Project	57
Module M0663: Marine Geotechnics	58
Module M1133: Port Logistics	60
Module M1132: Maritime Transport	62
Module M1724: Smart Monitoring	64
Module M0581: Water Protection	66
Module M0595: Examination of Materials, Structural Condition and Damages	68
Module M0713: Concrete Structures	69
Module M0619: Waste Treatment Technologies	71
Module M0722: Computational Analysis of Concrete Structures	73
Module M0923: Integrated Transportation Planning	75
Module M0963: Steel and Composite Structures	77
Module M0967: Study Work Harbour and Coastal Engineering	79
Module M0969: Selected Topics in Civil Engineering	80
Module M1350: Excavation Law	87
Module M0801: Water Resources and -Supply	89
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	92
Module M1716: Subsurface Processes	94
Module M1725: Scientific Working in Computational Engineering	96
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	97
Module M1846: Finite element modeling of structures	99
Module M1844: Modern discretization methods in structural mechanics	101
Module M1845: Thin-walled structures	103
Specialization Geotechnical Engineering	105
Module M0699: Geotechnics III	105
Module M1437: Non destructive testing of materials and parts	107
Module M0858: Coastal Hydraulic Engineering I	109
Module M0964: Underground Constructions	111
Module M0511: Electrical Energy from Solar Radiation and Wind Power	113
Module M1351: Construction Processes	116
Module M1718: Multiphase Flow in Porous Media	117
Module M0593: Building Materials and Building Preservation	119
Module M0723: Design of Prestressed Structures and Concrete Bridges	121
Module M0756: Soil Mechanics and -Dynamics	123
Module M0807: Boundary Element Methods	126
Module M0827: Modeling in Water Management	128
Module M0828: Urban Environmental Management	130
Module M0859: Coastal Hydraulic Engineering II	132
Module M0860: Harbour Engineering and Harbour Planning	134
Module M0861: Modelling of Hydraulic Engineering	136
Module M0874: Wastewater Systems	139
Module M0922: City Planning	142
Module M0977: Construction Logistics and Project Management	144

Module M0998: Statics and Dynamics of Structures	147
Module M0999: Steel Construction Project	150
Module M0663: Marine Geotechnics	151
Module M1724: Smart Monitoring	153
Module M0581: Water Protection	155
Module M0595: Examination of Materials, Structural Condition and Damages	157
Module M0713: Concrete Structures	158
Module M0619: Waste Treatment Technologies	160
Module M0722: Computational Analysis of Concrete Structures	162
Module M0801: Water Resources and -Supply	164
Module M0923: Integrated Transportation Planning	167
Module M0963: Steel and Composite Structures	169
Module M0966: Study Work Foundation Engineering	171
Module M0969: Selected Topics in Civil Engineering	172
Module M1350: Excavation Law	179
Module M1716: Subsurface Processes	181
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	183
Module M1725: Scientific Working in Computational Engineering	185
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	186
Module M1844: Modern discretization methods in structural mechanics	188
Module M1846: Finite element modeling of structures	190
Module M1845: Thin-walled structures	192
Specialization Structural Engineering	194
Module M0699: Geotechnics III	194
Module M1437: Non destructive testing of materials and parts	196
Module M0713: Concrete Structures	198
Module M0963: Steel and Composite Structures	200
Module M0511: Electrical Energy from Solar Radiation and Wind Power	202
Module M1351: Construction Processes	205
Module M0723: Design of Prestressed Structures and Concrete Bridges	206
Module M0807: Boundary Element Methods	208
Module M0756: Soil Mechanics and -Dynamics	210
Module M0827: Modeling in Water Management	213
Module M0828: Urban Environmental Management	215
Module M0859: Coastal Hydraulic Engineering II	217
Module M0860: Harbour Engineering and Harbour Planning	219
Module M0861: Modelling of Hydraulic Engineering	221
Module M0874: Wastewater Systems	224
Module M0922: City Planning	227
Module M0977: Construction Logistics and Project Management	229
Module M0998: Statics and Dynamics of Structures	232
Module M0593: Building Materials and Building Preservation	235
Module M0999: Steel Construction Project	237
Module M0663: Marine Geotechnics	238
Module M1724: Smart Monitoring	240
Module M1345: Metallic and Hybrid Light-weight Materials	242
Module M0581: Water Protection	245
Module M0595: Examination of Materials, Structural Condition and Damages	247
Module M0603: Nonlinear Structural Analysis	248
Module M0722: Computational Analysis of Concrete Structures	250
Module M0619: Waste Treatment Technologies	252
Module M0801: Water Resources and -Supply	254
Module M0858: Coastal Hydraulic Engineering I	257
Module M0923: Integrated Transportation Planning	259
Module M0964: Underground Constructions	261
Module M0965: Study Work Structural Engineering	263
Module M0969: Selected Topics in Civil Engineering	264
Module M1350: Excavation Law	271
Module M1716: Subsurface Processes	273
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	275
Module M1725: Scientific Working in Computational Engineering	277
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	278
Module M1846: Finite element modeling of structures	280
Module M1844: Modern discretization methods in structural mechanics	282
Module M1845: Thin-walled structures	284
Specialization Water and Traffic	286
Module M1437: Non destructive testing of materials and parts	286
Module M0964: Underground Constructions	288
Module M0595: Examination of Materials, Structural Condition and Damages	290
Module M0923: Integrated Transportation Planning	291
Module M0801: Water Resources and -Supply	293
Module M0830: Environmental Protection and Management	296
Module M0902: Wastewater Treatment and Air Pollution Abatement	298
Module M0826: Biology, Geology and Chemistry	301
Module M1403: Construction and Simulation of Sewerage Systems	303

Module M0874: Wastewater Systems	306
Module M0828: Urban Environmental Management	309
Module M0871: Hydrological Systems	311
Module M0875: Nexus Engineering - Water, Soil, Food and Energy	313
Module M0922: City Planning	315
Module M1351: Construction Processes	317
Module M1717: Advanced Vadose Zone Hydrology	318
Module M1718: Multiphase Flow in Porous Media	320
Module M1721: Water and Environment: Theory and Application	322
Module M0977: Construction Logistics and Project Management	323
Module M0593: Building Materials and Building Preservation	326
Module M0998: Statics and Dynamics of Structures	328
Module M0982: Transportation Modelling	331
Module M0749: Waste Treatment and Solid Matter Process Technology	332
Module M0827: Modeling in Water Management	334
Module M0870: Management of Surface Water	336
Module M0860: Harbour Engineering and Harbour Planning	339
Module M0857: Geochemical Engineering	341
Module M1724: Smart Monitoring	343
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	345
Module M0822: Process Modeling in Water Technology	347
Module M0619: Waste Treatment Technologies	350
Module M0620: Special Aspects of Waste Resource Management	352
Module M0713: Concrete Structures	354
Module M0722: Computational Analysis of Concrete Structures	356
Module M0963: Steel and Composite Structures	358
Module M1350: Excavation Law	360
Module M0581: Water Protection	362
Module M0699: Geotechnics III	364
Module M1716: Subsurface Processes	366
Module M1401: Study work Water and Traffic	368
Module M1720: Emerging Trends in Environmental Engineering	369
Module M0802: Membrane Technology	372
Module M1725: Scientific Working in Computational Engineering	374
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	375
Module M0969: Selected Topics in Civil Engineering	377
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	384
Thesis	386
Module M-002: Master Thesis	386

Program description

Content

Civil engineering deals with the erection of buildings of all kind, in particular of structures like bridges and tunnels, structures in hydraulic engineering, water supply, waste and waste water disposal, harbour construction, streets, hall construction, as well as industrial and housing construction, including refurbishment. The master program civil engineering gives graduates the qualification to process difficult projects in the construction practice, including the necessary competences in business and management. Buildings arise by the cooperation of owners, planning offices, contractors, environment, politicians and society. Civil engineering is located in the field between technical and economic constraint, political will and legal conditions. The master program prepares for that. The master program also opens the way to doctoral studies and successful research activities, assuming a sufficient diploma.

The master program civil engineering is associated with the bachelor program "Bau- und Umweltingenieurwesen" and "Allgemeine Ingenieurwissenschaften Vertiefung Bauingenieurwesen" of the University of Technology Hamburg in the sense of a consecutive course of studies. Possible entries from other bachelor programs are based on a catalog of requirements, described in the document "Specific Requirements for the Master Program Civil Engineering".

Career prospects

The graduates of the master program civil engineering are prepared for a leading professional activity in planning offices, at building contractors, building authorities, owners of major immovables and infrastructure, producers of building products, material testing institutions and in research facilities. It aims at activities in extensive and difficult projects, or in research and development. In Germany a great demand exists at this time for civil engineers in particular with good knowledge in structural engineering. The master program is based on this demand.

Learning target

The graduates of the master program civil engineering gain the specialist knowledge and the methods, to plan and erect new buildings, in particular concrete structures, steel structures, structures in water engineering, in foundation engineering, in water supply, waste and waste water disposal, including refurbishment of existing structures. This incorporates the realization of necessary preliminary investigations, the design of structural elements, the development of all necessary proofs and the project management.

The graduates of the master program are able to transfer the acquired knowledge in engineering, mathematics and natural sciences to practical applications and to analyze and solve problems on a scientific basis, even if these are unusual or incompletely defined and comprise complex specifications. The graduates are able to successfully work on research projects in the field of civil engineering. Therefore a comprehensive understanding of the underlying processes and the ability to model and calculate such processes, e.g. with Finite Elements Methods, are necessary.

The graduates for this purpose gain the skills to experimentally determine the necessary properties of soil, materials and components and to deal with construction-specific program systems to calculate mechanical behavior, the hydraulics of systems as well as other physical-chemical processes. They are enabled to work on problems of civil engineering and related disciplines on one's own. They are able to use methods needed for the solution of technical problems and planning procedures. They are able to use new findings in a critical way and to improve methods and new developments.

The graduates can communicate on advanced contents and problems of civil engineering with specialists and the laity. They are able to present their methods and the results of their work in writing and verbally in a comprehensive way. The graduates in addition learn to work on problems in a team in a purposeful way, and to document and present their methods and results understandably with up-to-date presentation methods to other persons. They learn to take the leadership for parts of a project or the whole. They are able to familiarize themselves with a topic and to select suitable methods to solve questions and problems. They are able to acquire the necessary information about a topic on one's own and to put the new information in the context of their knowledge.

The graduates are further qualified to develop concept designs for difficult projects in structural engineering, foundation engineering, bridge design and hydraulic engineering and to plan such constructions under consideration of the available information and restrictions. They can:

- successfully cooperate with expert und inexpert partners from the public administration, the economy and science,
- autonomously define, plan and conduct scientific tasks and to theoretically or experimentally investigate constructions, ground, materials, infrastructure as well as management duties,
- responsibly evaluate and consider the interests of building partners, people concerned and the society as a whole.

Program structure

The master program consists of modules which 6 credit points according to ECTS (CP) except for the master thesis. It is divided into a "Core Qualification", into the four alternative specializations "Harbor Construction and Coast Protection", "Underground Engineering", "Structures" and "Water and Traffic", as well as the master thesis. The core qualification covers 24 CP, each specialization covers 66 CP and the master thesis covers 30 CP. The program covers 120 CP in 2 years with 4 terms in total.

The core qualification contains a module "Finite Elements Methods" as well as a module "Sustainability and Risk Management" in the 1st term. In addition an open module during the 1st, 2nd or 3rd term from the field "Business and Management" as well as a module from the "Non-technical Courses for Master" are incorporated. The lectures of these open modules are selected from catalogs that are independent from the specific master program.

Each specialization covers 42 CP in the compulsory modules, that are indispensable for the specialization, and 24 CP in the mandatory electives. They contain also an open module and a project work with 6 CP in each case. The compulsory modules excepting the project work are located in the 1st and 2nd term.

The 4th term covers the master thesis. In addition lectures of the open module of the specialization can still be attended in the 4th term. The students must select a specialization and they have the choice to elect different options in the field of "Business and Management", in the field of the "Non-technical Courses for Master" and in the mandatory electives of the specialization.

A term abroad is possible. In particular the 3rd semester is used by the students to go abroad, because in the 3rd term there are no compulsory modules, but only mandatory electives.

Core Qualification

Module M0523: Business & Management

Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> • Students are able to find their way around selected special areas of management within the scope of business management. • Students are able to explain basic theories, categories, and models in selected special areas of business management. • Students are able to interrelate technical and management knowledge. <i>Skills</i> <ul style="list-style-type: none"> • Students are able to apply basic methods in selected areas of business management. • Students are able to explain and give reasons for decision proposals on practical issues in areas of business management. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> • Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems <i>Autonomy</i> <ul style="list-style-type: none"> • Students are capable of acquiring necessary knowledge independently by means of research and preparation of material. 	
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0524: Non-technical Courses for Master	
Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<p>The Nontechnical Academic Programms (NTA)</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p>Specialized Competence (Knowledge)</p> <p>Students can</p> <ul style="list-style-type: none"> • explain specialized areas in context of the relevant non-technical disciplines, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
Professional Competence <i>Skills</i>	<p>Professional Competence (Skills)</p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> • apply basic and specific methods of the said scientific disciplines, • question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

<p>Personal Competence <i>Social Competence</i></p>	<p>Personal Competences (Social Skills)</p> <p>Students will be able</p> <ul style="list-style-type: none"> • to learn to collaborate in different manner, • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge.
<p><i>Autonomy</i></p>	<p>Personal Competences (Self-reliance)</p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
<p>Workload in Hours</p>	<p>Depends on choice of courses</p>
<p>Credit points</p>	<p>6</p>

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0808: Finite Elements Methods				
Courses				
Title	Typ	Hrs/wk	CP	
Finite Element Methods (L0291)	Lecture	2	3	
Finite Element Methods (L0804)	Recitation Section (large)	2	3	
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.</p> <p><i>Skills</i> The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	No	20 %	Midterm	
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Civil Engineering: Core Qualification: Compulsory Energy Systems: Core Qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Core Qualification: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechatronics: Core Qualification: Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Product Development, Materials and Production: Core Qualification: Compulsory Technomathematics: Specialisation III. Module M0962: Sustainability and Risk Management			
Courses			
Title		Typ	Hrs/wk CP
Safety, Reliability and Risk Assessment (L1145)		Seminar	2 3
Environment and Sustainability (L0319)		Lecture	2 3
Module Responsible	Prof. Kerstin Kuchta		
Admission Requirements	None		
Recommended Previous Knowledge	none		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	Students are able to describe single techniques and to give an overview for the field of safety and risk assessment as well as environmental and sustainable engineering, in detail:		
<i>Knowledge</i>	<ul style="list-style-type: none"> • basics in safety and reliability of technical facilities • safety and reliability analysis methods • risk assessment • Production and usage of bio-char • energy production and supply • sustainable product design 		
<i>Skills</i>	Students are able apply interdisciplinary system-oriented methods for risk assessment and sustainability reporting. They can evaluate the effort and costs for processes and select economically feasible treatment concepts.		
Personal Competence	Students can gain knowledge of the subject area from given sources and transform it to new questions. Furthermore, they can define targets for new application or research-oriented duties in for risk management and sustainability concepts accordance with the potential social, economic and cultural impact.		
<i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	Elaboration and presentation (45 minutes in groups)		
Assignment for the Following Curricula	Civil Engineering: Core Qualification: Compulsory Bioprocess Engineering: Specialisation C - Bioeconomic Process Engineering, Focus Management and Controlling: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Water and Environmental Engineering: Core Qualification: Compulsory		

Course L1145: Safety, Reliability and Risk Assessment	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Marco Ritzkowski
Language	DE
Cycle	WiSe
Content	An introduction in safety and risk assessment is given and some typical problems of structural and environmental engineering are treated: <ul style="list-style-type: none"> • basics in safety and reliability of technical facilities • safety and reliability analysis methods • risk assessment • practical examples and excursions • discussions and presentations

Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Bodo Fiedler, Prof. Bernd-Christian Renner, Prof. Robert Meißner, Prof. Marcus Rutner
Language	DE/EN
Cycle	WiSe
Content	This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NTD technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice

Module M0858: Coastal Hydraulic Engineering I			
Courses			
Title	Typ	Hrs/wk	CP
Basics of Coastal Engineering (L0807)	Lecture	3	4
Basics of Coastal Engineering (L1413)	Project-/problem-based Learning	1	2
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Basics of hydraulic engineering, hydrology and hydromechanics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to define and explain the basic concepts of coastal engineering and port engineering. They are able to apply the concepts to selected practical problems of coastal engineering. Students can define and determine the basics for design and dimensioning of coastal engineering constructions.</p> <p><i>Skills</i> The students are capable to apply basic design approaches to selected and pre-defined design tasks in coastal engineering.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to deploy their gained knowledge in applied problems such as the design of coastal protection structures. Additionally, they will be able to work in team with engineers of other disciplines, for instance designing of coastal breakwaters.</p> <p><i>Autonomy</i> The students will be able to independently extend their knowledge and apply it to new problems.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	The duration of the examination is 2 hours. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. Module M0511: Electrical Energy from Solar Radiation and Wind Power				
Courses				
Title		Typ	Hrs/wk	CP
Sustainability Management (L0007)		Lecture	2	1
Hydro Power Use (L0013)		Lecture	1	1
Wind Turbine Plants (L0011)		Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)		Lecture	1	1
Module Responsible	Dr. Isabel Höfer			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe. Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.			
<i>Skills</i>	Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.			
Personal Competence				
<i>Social Competence</i>	Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.			
<i>Autonomy</i>	Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Course L0007: Sustainability Management	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Anne Rödl
Language	DE
Cycle	SoSe
Content	<p>The lecture "Sustainability Management" gives an insight into the different aspects and dimensions of sustainability. First, essential terms and definitions, significant developments of the last years, and legal framework conditions are explained. The various aspects of sustainability are then presented and discussed in detail. The lecture mainly focuses on concepts for the implementation of the topic sustainability in companies:</p> <ul style="list-style-type: none"> • What is "sustainability"? • Why is this concept an important topic for companies? • What opportunities and business risks are addressed or are associated with it? • How can the often mentioned three pillars of sustainability - economy, ecology, and social- be meaningfully integrated into corporate management despite their sometimes contradictory tendencies, and how a corresponding compromise can be found? • What concepts or frameworks exist for the implementation of sustainability management in companies? • Which sustainability labels exist for products or companies? What do they have in common, and where do they differ? <p>Furthermore, the lecture is intended to provide insights into the concrete implementation of sustainability aspects into business practice. External lecturers from companies will be invited to report on how sustainability is integrated into their daily processes.</p> <p>In the course of an independently carried out group work, the students will analyze and discuss the implementation of sustainability aspects based on short case studies. By studying and comparing best practice examples, the students will learn about corporate decisions' effects and implications. It should become clear which risks or opportunities are associated if sustainability aspects are taken into account in management decisions.</p>

Module M0593: Building Materials and Building Preservation				
Courses				
Title		Typ	Hrs/wk	CP
Repair of Structures (L0255)		Lecture	1	1
Mineral Building Materials (L0253)		Lecture	2	2
Technology of mineral Building Materials (L0256)		Project-/problem-based Learning	1	2
Transport Processes in Building Materials and Damage Processes (L0254)		Lecture	1	1
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials, building physics and building chemistry, for example by the modules Principles of Building Materials and Building Physics and Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the components of mineral building materials and their function in detail and to use them for the manufacture of special mineral building materials. They are able to show the characteristics of mineral building materials. They are able to describe the manufacture, properties and fields of application of special mortars and special concretes and the correlations of their material parameters. They are able to show the principles of anchor technology and design.			
<i>Skills</i>	The students are able to perform an optimization of granulometry of a mineral building material. They are able to design a special mineral mortar and to manufacture this mortar. The students are able to manufacture post installed rebar connections. They are able to recognize damages, to assess possible causes, to use the fundamentals of construction preservation and to select repair and strengthening measures.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop in small groups the mixture of a special mortar. They present their results to the lecturer and the other students. In a critical discussion they defend and adjust their results. The students are able to manufacture their special building material on the basis of this feedback.			
<i>Autonomy</i>	The students are able to responsibly use the resources of materials and lab equipment for their project and to investigate and to get missing components.

Module M0756: Soil Mechanics and -Dynamics				
Courses				
Title		Typ	Hrs/wk	CP
Soil Mechanics - Selected Topics (L0374)		Lecture	2	2
Soil Dynamics (L0452)		Lecture	3	2
Experimental Researches in Geotechnics (L0706)		Practical Course	1	2
Module Responsible	Prof. Jürgen Grabe			
Admission Requirements	None			
Recommended Previous Knowledge	modules: Mathematics I-III, Mechanics I-II, Geotechnics I courses: Soil laboratory course, (Applied structural dynamics)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	After the successful completion of the module the students should be able to: <ul style="list-style-type: none"> • to derive and to apply the basic equation of a simple mass oscillator, • to understand the wave propagation in the soil under dynamic excitation and to detect the relevant parameters, • to know the essential laboratory and field tests to determine soil dynamic characteristics and to evaluate them, • to design machine foundations to dynamic load, • to measure shocks to perform vibration forecast, • to evaluate shocks in term to their effect on people and buildings, • to evaluate possibilities of isolation, • to understand mechanisms that cause earthquakes and evaluate earthquake in term of their magnitude and intensity, • to know methods to determine axial pile capacity, integrity and the dynamic bedding modulus, • to know the mechanisms that lead to a deformation accumulation due to cyclic loading and to estimate these deformations mathematically, • to distinguish the area of application of the method of elastodynamics and plastodynamics, 			
<i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<ul style="list-style-type: none"> • to detect the undrained shear strength as a function of a number of state variables, • to capture the visous behaviour of cohesive soils and to consider the effects of creep and rate-dependent shear strength in calculations, • to consider the impact of the partly saturated of a seepage and shear strength.

Content	<p>The students are supposed to:</p> <ul style="list-style-type: none"> • become acquainted with geotechnical model tests, field tests and laboratory tests as well as corresponding measurement techniques. These comprise amongst others inclinometer measurements and geophone measurements as well as high-grade laboratory tests on the stress-strain relationship of soil specimens, e. g. triaxial tests, simple shear tests and resonant column tests. • gain insight into current soil mechanical research. • plan, coordinate, perform and evaluate soil mechanical tests in a team. • discuss, reflect, review and present the obtained results in a group. <p>An important learning target is the introduction to scientific work for students who plan a scientific career, and for those who will work in practice with the responsibility to order corresponding tests and evaluate the results.</p> <p>The practical laboratory work is based on annually changing problems, which are however related to the experience and results of the preceding year's course group.</p>

Module M0807: Boundary Element Methods				
Courses				
Title	Typ	Hrs/wk	CP	
Boundary Element Methods (L0523)	Lecture	2	3	
Boundary Element Methods (L0524)	Recitation Section (large)	2	3	
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.			
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.			
Personal Competence				
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.			
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0827: Modeling in Water Management				
Courses				
Title		Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)		Lecture	1	1
Groundwater Modeling using Modflow (L0544)		Recitation Section (small)	2	2
Modeling of Water Supply and Sewer Network (L0875)		Project-/problem-based Learning	2	3
Module Responsible	Dr. Klaus Johannsen			
Admission Requirements	None			
Recommended Previous Knowledge	Groundwater <ul style="list-style-type: none"> groundwater hydraulics and transport of substances Pipe Systems <ul style="list-style-type: none"> Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures Hydraulics of drinking water supply systems and sewer systems Basic knowledge on water management 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.			
<i>Skills</i>	The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).			
Personal Competence				
<i>Social Competence</i>	Wird nicht vermittelt.			
<i>Autonomy</i>	Wird nicht vermittelt.

Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2	
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1	
Advanced Wastewater Treatment (L0357)	Lecture	2	2	
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1	
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.			
<i>Skills</i>	Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.			
Personal Competence				
<i>Social Competence</i>	Social skills are not targeted in this module.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory International Management and Engineering: Specialisation II. Module M0922: City Planning			
Courses			
Title	Typ	Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	for "Principles of Urban Planning": none for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> • use technical terms of urban planning. • describe the main determinants of urban development. • explain and compare different possibilities of how urban development can be influenced. • discuss requirements for public streetscapes. • explain the importance of street design. 		
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> • read and analyze urban development concepts and designs for streetscapes • appraise such concepts in the context of competing requirements. • design, justify and reflect their own solutions for concrete examples. 		
Personal Competence			
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> • discuss intermediate results with each other. • constructively accept feedback on their own work. • provide constructive feedback to others. 		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> • independently complete a written report including drawings following a broadly pre-defined process. • assess the consequences of their proposed solutions. • independently acquire knowledge and apply this to new issues or problem areas. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	written assignment, designwork during the semester		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

Course L1066: City Planning	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Carsten Gertz
Language	DE
Cycle	SoSe
Content	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> • legal framework, • instruments and methods of planning, • functional requirements, • stakeholders and actors • basic design requirements • different planning levels and • historical contexts. <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0977: Construction Logistics and Project Management				
Courses				
Title		Typ	Hrs/wk	CP
Construction Logistics (L1163)		Lecture	1	2
Construction Logistics (L1164)		Recitation Section (small)	1	2
Project Development and Management (L1161)		Lecture	1	1
Project Development and Management (L1162)		Project-/problem-based Learning	1	1
Module Responsible	Prof. Heike Flämig			
Admission Requirements	None			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can...			
	<ul style="list-style-type: none"> • give definitions of the main terms of construction logistics and project development and management • name advantages and disadvantages of internal or external construction logistics • explain characteristics of products, demand and production of construction objects and their consequences for construction specific supply chains • differentiate constructions logistics from other logistics systems 			
<i>Skills</i>	Students can...			
	<ul style="list-style-type: none"> • carry out project life cycle assessments • apply methods and instruments of construction logistics • apply methods and instruments of project development and management • apply methods and instruments of conflict management • design supply and waste removal concepts for a construction project 			
Personal Competence				
<i>Social Competence</i>	Students can...			
	<ul style="list-style-type: none"> • hold presentations in and for groups • apply methods of conflict solving skills in group work and case studies 			
<i>Autonomy</i>	Students can...			
	<ul style="list-style-type: none"> • solve problems by holistic, systemic and flow oriented thinking • improve their creativity, negotiation skills, conflict and crises solution skills by applying methods of moderation in case studies 			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	Two written papers with presentations			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory			

Course L1163: Construction Logistics	
Typ	Lecture
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Heike Flämig
Language	DE
Cycle	SoSe
Content	<p>The lecture gives deeper insight how important logistics are as a competitive factor for construction projects and which issues are to be addressed.</p> <p>The following topics are covered:</p> <ul style="list-style-type: none"> • competitive factor logistics • the concept of systems, planning and coordination of logistics • material, equipment and reverse logistics • IT in construction logistics • elements of the planning model of construction logistics and their connections • flow oriented logistics systems for construction projects • logistics concepts for ready to use construction projects (especially procurement and waste removal logistics) • best practice examples (construction logistics Potsdamer Platz, recent case study of the region) <p>Contents of the lecture are deepened in special exercises.</p>

Module M0998: Statics and Dynamics of Structures				
Courses				
Title		Typ	Hrs/wk	CP
Structural Dynamics (L1202)		Lecture	2	2
Structural Dynamics (L1203)		Recitation Section (large)	2	2
Fracture mechanics and fatigue in steel structures (L0564)		Lecture	1	1
Fracture mechanics and fatigue in steel structures (L0565)		Recitation Section (large)	1	1
Module Responsible	Prof. Uwe Starossek			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of linear structural analysis of statically determinate and indeterminate structures; Mechanics I/II, Mathematics I/II, Differential equations I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	After successful completion of this module, the student can explain the basic aspects of dynamic effects on structures and the respective methods.			
<i>Skills</i>	After successful completion of this module, the students will be able to predict the response of material and structures to dynamics loading using the appropriate computational approaches and methods.			
Personal Competence				
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> • participate in subject-specific and interdisciplinary discussions, • defend their own work results in front of others • promote the scientific development of colleagues • Furthermore, they can give and accept professional constructive criticism 			
<i>Autonomy</i>	Students are able to gain knowledge of the subject area from given and other sources and apply it to new problems. Furthermore, they are able to structure the solution process for problems in the area of Structural Analysis.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	150 min

Content	<p>Port Logistics deals with the planning, control, execution and monitoring of material flows and the associated information flows in the port system and its interfaces to numerous actors inside and outside the port area.</p> <p>The extraordinary role of maritime transport in international trade requires very efficient ports. These must meet numerous requirements in terms of economy, speed, safety and the environment. Against this background, the lecture Port Logistics deals with the planning, control, execution and monitoring of material flows and the associated information flows in the port system and its interfaces to numerous actors inside and outside the port area. The aim of the lecture Port Logistics is to convey an understanding of structures and processes in ports. The focus will be on different types of terminals, their characteristic layouts and the technical equipment used as well as the ongoing digitization and interaction of the players involved.</p> <p>In addition, renowned guest speakers from science and practice will be regularly invited to discuss some lecture-relevant topics from alternative perspectives.</p> <p>The following contents will be conveyed in the lectures:</p> <ul style="list-style-type: none"> • Instruction of structures and processes in the port • Planning, control, implementation and monitoring of material and information flows in the port • Fundamentals of different terminals, characteristic layouts and the technical equipment used • Handling of current issues in port logistics

Content	<p>The content of the exercise is the independent preparation of a scientific paper plus an accompanying presentation on a current topic of port logistics. The paper deals with current topics of port logistics. For example, the future challenges in sustainability and productivity of ports, the digital transformation of terminals and ports or the introduction of new regulations by the International Maritime Organization regarding the verified gross weight of containers. Due to the international orientation of the event, the paper is to be prepared in English.</p>

Module M1132: Maritime Transport				
Courses				
Title		Typ	Hrs/wk	CP
Maritime Transport (L0063)		Lecture	2	3
Maritime Transport (L0064)		Recitation Section (small)	2	3
Module Responsible	Prof. Carlos Jahn			
Admission Requirements	None			
Recommended Previous Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to... <ul style="list-style-type: none"> • present the actors involved in the maritime transport chain with regard to their typical tasks; • name common cargo types in shipping and classify cargo to the corresponding categories; • explain operating forms in maritime shipping, transport options and management in transport networks; • weigh the advantages and disadvantages of the various modes of hinterland transport and apply them in practice; • present relevant factors for the location planning of ports and seaport terminals and discuss them in a problem-oriented way; • estimate the potential of digitisation in maritime shipping. 			
<i>Skills</i>	The students are able to... <ul style="list-style-type: none"> • determine the mode of transport, actors and functions of the actors in the maritime supply chain; • identify possible cost drivers in a transport chain and recommend appropriate proposals for cost reduction; • record, map and systematically analyse material and information flows of a maritime logistics chain, identify possible problems and recommend solutions; • perform risk assessments of human disruptions to the supply chain; • analyse accidents in the field of maritime logistics and evaluating their relevance in everyday life; • deal with current research topics in the field of maritime logistics in a differentiated way; • apply different process modelling methods in a hitherto unknown field of activity and to work out the respective advantages. 			
Personal Competence				
<i>Social Competence</i>	The students are able to... <ul style="list-style-type: none"> • discuss and organise extensive work packages in groups; • document and present the elaborated results. 			
<i>Autonomy</i>	The students are capable to... <ul style="list-style-type: none"> • research and select technical literature, including standards and guidelines; • submit own shares in an extensive written elaboration in small groups in due time.

Course L0063: Maritime Transport	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Carlos Jahn
Language	DE
Cycle	SoSe
Content	<p>The general tasks of maritime logistics include the planning, design, implementation and control of material and information flows in the logistics chain ship - port - hinterland. This includes technology assessment, selection, dimensioning and implementation as well as the operation of technologies.</p> <p>The aim of the course is to provide students with knowledge of maritime transport and the actors involved in the maritime transport chain. Typical problem areas and tasks will be dealt with, taking into account the economic development. Thus, classical problems as well as current developments and trends in the field of maritime logistics are considered.</p> <p>In the lecture, the components of the maritime logistics chain and the actors involved will be examined and risk assessments of human disturbances on the supply chain will be developed. In addition, students learn to estimate the potential of digitisation in maritime shipping, especially with regard to the monitoring of ships. Further content of the lecture is the different modes of transport in the hinterland, which students can evaluate after completion of the course regarding their advantages and disadvantages.</p>

Module M1724: Smart Monitoring			
Courses			
Title	Typ	Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture	2	2
Smart Monitoring (L2763)	Recitation Section (small)	2	4
Module Responsible	Prof. Kay Smarsly		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.		
<i>Skills</i>			
Personal Competence <i>Social Competence</i>			
<i>Autonomy</i>

Course L2762: Smart Monitoring	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.

Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M0581: Water Protection				
Courses				
Title		Typ	Hrs/wk	CP
Water Protection and Wastewater Management (L0226)		Lecture	3	3
Water Protection and Wastewater Management (L2008)		Project Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge in water management; • Good knowledge in urban drainage; • Good knowledge of wastewater treatment techniques; • Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties; 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.			
<i>Skills</i>	Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.			
Personal Competence				
<i>Social Competence</i>	The students can work together in international groups.			
<i>Autonomy</i>	Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.

Module M0595: Examination of Materials, Structural Condition and Damages				
Courses				
Title		Typ	Hrs/wk	CP
Examination of Materials, Structural Condition and Damages (L0260)		Lecture	3	4
Examination of Materials, Structural Condition and Damages (L0261)		Recitation Section (small)	1	2
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials or material science, for example by the module Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the rules for trading, use and marking of construction products in Germany. They know which methods for the testing of building material properties are usable and know the limitations and characteristics of the most important testing methods.			
<i>Skills</i>	The students are able to responsibly discover the rules for trading and using of building products in Germany. They are able to chose suitable methods for the testing and inspection of construction products, the examination of damages and the examination of the structural conditions of buildings. They are able to conclude from symptoms to the cause of damages. They are able to describe an examination in form of a test report or expert opinion.			
Personal Competence				
<i>Social Competence</i>	The students can describe the different roles of manufacturers as well as testing, supervisory and certification bodies within the framework of material testing. They can describe the different roles of the participants in legal proceedings.			
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.

Module Responsible	Prof. Günter Rombach			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of structural analysis, conception and dimensioning of structural concrete Modules: Reinforced Concrete Structures I+II, Structural Analysis I+II, Mechanics I+II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students broaden their skills in structural engineering, especially in the field of buildings (houses, roofs, halls). They dispose of the knowledge for the conception and design of concrete buildings and structural members that are often used.			
<i>Skills</i>	The students are able to apply procedures of the conception and dimensioning to practical problems of structural engineering. They are capable to draft concrete buildings and to design them for general action effects and to plan their detailing and execution. Moreover, they can make design and construction sketches and draw up technical descriptions.			
Personal Competence				
<i>Social Competence</i>	The students are able to obtain results of high quality in teamwork.			
<i>Autonomy</i>	The students are able to carry out complex conception and dimensioning tasks of structures under the guidance of tutors.

Courses				
Title		Typ	Hrs/wk	CP
Waste and Environmental Chemistry (L0328)		Practical Course	2	2
Biological Waste Treatment (L0318)		Project-/problem-based Learning	3	4
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	chemical and biological basics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherché and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
Personal Competence				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.

Module M0967: Study Work Harbour and Coastal Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Subjects of the Port and Coastal Engineering specialisation.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to demonstrate their detailed knowledge in the field of port and coastal engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in port and coastal engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p> <p><i>Skills</i> The students are able to independently select methods for the project work and to justify this choice. They can explain how these methods relate to the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p> <p><i>Autonomy</i> The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>

Course L2447: Geotechnical Engineering Design	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Schriftliche Ausarbeitung
Examination duration and scale	45 Min.
Lecturer	Prof. Jürgen Grabe, Dr. Tim Pucker
Language	DE
Cycle	WiSe
Content	<p>The focus of the course is on the design of geotechnical structures. Methods and fundamental approaches for the successful processing of geotechnical designs are taught. Theoretical approaches are backed up with examples from everyday work in industry. In parallel to the theoretical content, students are given a practical task for a geotechnical design at beginning of the course, which will be worked on in small teams. In addition to the application of the already acquired technical knowledge, topics like realisation, construction sequence planning, cost calculation, optimisation and evaluation criteria are also part of the course.</p> <p>The event will be finished with the presentation of the designs.</p>

Module M0801: Water Resources and -Supply				
Courses				
Title		Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)		Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)		Recitation Section (large)	1	2
Water Resource Management (L0402)		Lecture	2	2
Water Resource Management (L0403)		Recitation Section (small)	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of water management and the key processes involved in water treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.			
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.			
Personal Competence				
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.			
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.

Cycle	WiSe
Content	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Course L0312: Chemistry of Drinking Water Treatment	
Typ	Recitation Section (large)
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Dr. Klaus Johannsen
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Course L0402: Water Resource Management	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Mathias Ernst
Language	DE
Cycle	WiSe
Content	<p>The lecture provides comprehensive knowledge on interaction of water resource management and drinking water supply. Content overview:</p> <ul style="list-style-type: none"> • Current situation of global water resources - User and Stakeholder conflicts - Wasserressourcenmanagement in urbane Gebieten - Rechtliche Aspekte, Organisationsformen Trinkwasserversorgungsunternehmen. - Ökobilanzierung, Benchmarking in der Wasserversorgung
Literature	<ul style="list-style-type: none"> • Aktuelle UN World Water Development Reports • Branchenbild der deutschen Wasserwirtschaft, VKU (2011) • Aktuelle Artikel wissenschaftlicher Zeitschriften • Ppt der Vorlesung

Course L0403: Water Resource Management

Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)			
Courses			
Title	Typ	Hrs/wk	CP
Adaptation to climate change in hydraulic engineering (L2291)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Hydrology, Hydraulic Engineering Hydromechanic, Hydraulics Fundamentals of Coastal Engineering, Coastal- and Flood Protection Hydrological Systems 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Climate protection and climate adaptation Insights into climate change and its regional characteristics - fundamentals, climate modelling / climate models Impacts of climate change on the components of the regional hydrological cycle Fundamentals of analysis of climate data Consequences of the impact of the climate change Measures for climate adaptation Assessment, prioritization and communication of adaptation measures Fundamentals of the analysis of hydrometeorological and hydrological data 		
<i>Knowledge</i>			
<i>Skills</i>	<ul style="list-style-type: none"> Critical thinking: analysis of processes and relations, assessment of needs for action Creative thinking: development of adaptation strategies and adaptation measures Practical thinking: inclusion of restrictions, application of calculation approaches, methods, numerical models, planning methods Consideration of complex tasks 		
Personal Competence	<ul style="list-style-type: none"> Working in heterogenous groups Working with different scientific / non-scientific disciplines Self reflection 		
<i>Social Competence</i>			
<i>Autonomy</i>	<ul style="list-style-type: none"> Application oriented use of knowledge and skills Autonomous work on complex tasks 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	Preparation of a written report and a presentation of a complex task.		
Assignment for the Following Curricula	Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory		

Course L2291: Adaptation to climate change in hydraulic engineering	
Typ	Project-/problem-based Learning

Module M1716: Subsurface Processes			
Courses			
Title	Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)	Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)	Lecture	2	2
Subsurface Solute Transport (L2729)	Recitation Section (large)	1	1
Module Responsible	Prof. Nima Shokri		
Admission Requirements	None		
Recommended Previous Knowledge	Basic Mathematics, Hydrology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.</p> <p><i>Skills</i> In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Teamwork & problem solving</p> <p><i>Autonomy</i> The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.</p>		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Course achievement	None		
Examination	Subject theoretical and practical work		
Examination duration and scale	Report and Presentation		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory		
Course L2731: Modeling of Subsurface Processes			
Typ	Recitation Section (small)		
Hrs/wk	3		
CP	3		
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42		
Lecturer	Sonja Götz		
Language	EN		
Cycle	WiSe		
Content	Basic usage and background of chosen computer software to calculate flow and transport in the saturated and unsaturated zone and to analyze field data like pumping test data		
Literature			

Course L2728: Subsurface Solute Transport	
Typ	Lecture

Module M1725: Scientific Working in Computational Engineering				
Courses				
Title	Scientific Working in Computational Engineering (L2764)	Typ	Project-/problem-based Learning	Hrs/wk 4 CP 6
Module Responsible	Prof. Kay Smarsly			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in scientific writing. String interest in topics related to computing in civil engineering.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p>The students will learn to apply concepts and methods of scientific working in computational engineering. In interaction with the course instructors and in collaboration with each other, the students will also learn to understand the complex process of scientific thinking, being able to accurately plan, implement and analyze scientific projects, such as prospective master theses. A project will be conducted throughout the semester, which will contribute to the grade. Since scientific writing is of particular importance in this course, a scientific paper will be developed based, which is a prerequisite for the final examination. The paper will be written based on the project conducted within this course. Project meetings in small groups, presentations, and critical discussions of scientific publications are further key activities.</p>			
<i>Knowledge</i>				
<i>Skills</i>				
Personal Competence				
<i>Social Competence</i> <i>Autonomy</i>				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None

Examination duration and scale	10 pages of work with 15-minute oral presentation			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory			

Course L2764: Scientific Working in Computational Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In the course, a scientific problem of practical relevance will first be defined, taking into account the interests of the students participating in the course. The scientific problem will then systematically be solved within the framework of a comprehensive project. The principles of scientific working will be taught based on the scientific problem defined previously. As an integral part of scientific working, fundamentals of scientific writing will be presented and applied to a scientific paper to be written during the course. Topics related to scientific writing include structuring in scientific writing (structuring the abstract, the introduction, the main part, the summary and conclusions, and the acknowledgments and references) and recommendations on effective scientific writing (principles of composition, use of English in scientific writing, useful tips, creating figures, writing in mathematics, referencing, and formal email correspondence). A final paper and a final presentation will be assembled by the students.

Content	Basic phenomena and aspects of the finite element modelling of structures are discussed. Besides theoretical description of the phenomena and methods, a strong focus is on the practical use a commercial finite element software within computer-based exercises. The covered topics are: <ul style="list-style-type: none"> • finite element modeling of trusses/beams/frames, plates subject to in-plane/out-of-plane loading and shells • convergence properties of displacements and stresses • singularities • locking effects • critical assessment, interpretation and check of results • mixed-dimensional coupling of finite elements • geometrically linear and non-linear, and material linear and non-linear analyses • stability: bifurcation and snap-through problems • dynamic problems, modal analyses

Content	<p>This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NTD technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice</p>

Cycle	WiSe
Content	This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NDT technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice

Module M0858: Coastal Hydraulic Engineering I			
Courses			
Title	Typ	Hrs/wk	CP
Basics of Coastal Engineering (L0807)	Lecture	3	4
Basics of Coastal Engineering (L1413)	Project-/problem-based Learning	1	2
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Basics of hydraulic engineering, hydrology and hydromechanics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to define and explain the basic concepts of coastal engineering and port engineering. They are able to apply the concepts to selected practical problems of coastal engineering. Students can define and determine the basics for design and dimensioning of coastal engineering constructions.</p> <p><i>Skills</i> The students are capable to apply basic design approaches to selected and pre-defined design tasks in coastal engineering.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to deploy their gained knowledge in applied problems such as the design of coastal protection structures. Additionally, they will be able to work in team with engineers of other disciplines, for instance designing of coastal breakwaters.</p> <p><i>Autonomy</i> The students will be able to independently extend their knowledge and apply it to new problems.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	The duration of the examination is 2 hours. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory

Module M0964: Underground Constructions			
Courses			
Title	Typ	Hrs/wk	CP
Applied Tunnel Constructions (L2407)	Lecture	2	3
Introduction to tunnel construction (L0707)	Lecture	1	2
Introduction to tunnel construction (L1811)	Recitation Section (large)	1	1
Module Responsible	Prof. Jürgen Grabe		
Admission Requirements	None		
Recommended Previous Knowledge	Modules from Bachelor studies Civil and environmental engineering: <ul style="list-style-type: none"> • Geotechnics I-II • Steel Structures I-II 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Knowledge of different tunnel construction types as well as special methods and techniques of subsoil construction. The students get deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.</p> <p><i>Skills</i> Basic knowledge of tunnel design as well as practical skills in structural tunnel analysis. Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Capacity for teamwork concerning project management and design of tunnels.</p> <p><i>Autonomy</i> Promotion of independent and creative work flow in the framework of a design exercise.</p>

Module M0511: Electrical Energy from Solar Radiation and Wind Power				
Courses				
Title		Typ	Hrs/wk	CP
Sustainability Management (L0007)		Lecture	2	1
Hydro Power Use (L0013)		Lecture	1	1
Wind Turbine Plants (L0011)		Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)		Lecture	1	1
Module Responsible	Dr. Isabel Höfer			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.			
	Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.			
<i>Skills</i>	Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.			
Personal Competence				
<i>Social Competence</i>	Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.			
<i>Autonomy</i>	Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	2.5 hours written exam + written elaboration (incl. presentation) in sustainability management			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Renewable Energies: Core Qualification: Compulsory Theoretical Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0007: Sustainability Management	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Anne Rödl
Language	DE
Cycle	SoSe
Content	<p>The lecture "Sustainability Management" gives an insight into the different aspects and dimensions of sustainability. First, essential terms and definitions, significant developments of the last years, and legal framework conditions are explained. The various aspects of sustainability are then presented and discussed in detail. The lecture mainly focuses on concepts for the implementation of the topic sustainability in companies:</p> <ul style="list-style-type: none"> • What is "sustainability"? • Why is this concept an important topic for companies? • What opportunities and business risks are addressed or are associated with it? • How can the often mentioned three pillars of sustainability - economy, ecology, and social- be meaningfully integrated into corporate management despite their sometimes contradictory tendencies, and how a corresponding compromise can be found? • What concepts or frameworks exist for the implementation of sustainability management in companies? • Which sustainability labels exist for products or companies? What do they have in common, and where do they differ? <p>Furthermore, the lecture is intended to provide insights into the concrete implementation of sustainability aspects into business practice. External lecturers from companies will be invited to report on how sustainability is integrated into their daily processes.</p> <p>In the course of an independently carried out group work, the students will analyze and discuss the implementation of sustainability aspects based on short case studies. By studying and comparing best practice examples, the students will learn about corporate decisions' effects and implications. It should become clear which risks or opportunities are associated if sustainability aspects are taken into account in management decisions.</p>

Module M0593: Building Materials and Building Preservation				
Courses				
Title		Typ	Hrs/wk	CP
Repair of Structures (L0255)		Lecture	1	1
Mineral Building Materials (L0253)		Lecture	2	2
Technology of mineral Building Materials (L0256)		Project-/problem-based Learning	1	2
Transport Processes in Building Materials and Damage Processes (L0254)		Lecture	1	1
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials, building physics and building chemistry, for example by the modules Principles of Building Materials and Building Physics and Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the components of mineral building materials and their function in detail and to use them for the manufacture of special mineral building materials. They are able to show the characteristics of mineral building materials. They are able to describe the manufacture, properties and fields of application of special mortars and special concretes and the correlations of their material parameters. They are able to show the principles of anchor technology and design.			
<i>Skills</i>	The students are able to perform an optimization of granulometry of a mineral building material. They are able to design a special mineral mortar and to manufacture this mortar. The students are able to manufacture post installed rebar connections. They are able to recognize damages, to assess possible causes, to use the fundamentals of construction preservation and to select repair and strengthening measures.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop in small groups the mixture of a special mortar. They present their results to the lecturer and the other students. In a critical discussion they defend and adjust their results. The students are able to manufacture their special building material on the basis of this feedback.			
<i>Autonomy</i>	The students are able to responsibly use the resources of materials and lab equipment for their project and to investigate and to get missing components.

Lecturer	Marius Milatz
Language	DE
Cycle	SoSe
Content	<p>The students are supposed to:</p> <ul style="list-style-type: none"> • become acquainted with geotechnical model tests, field tests and laboratory tests as well as corresponding measurement techniques. These comprise amongst others inclinometer measurements and geophone measurements as well as high-grade laboratory tests on the stress-strain relationship of soil specimens, e. g. triaxial tests, simple shear tests and resonant column tests. • gain insight into current soil mechanical research. • plan, coordinate, perform and evaluate soil mechanical tests in a team. • discuss, reflect, review and present the obtained results in a group. <p>An important learning target is the introduction to scientific work for students who plan a scientific career, and for those who will work in practice with the responsibility to order corresponding tests and evaluate the results.</p> <p>The practical laboratory work is based on annually changing problems, which are however related to the experience and results of the preceding year's course group.</p>

Module M0807: Boundary Element Methods				
Courses				
Title	Typ	Hrs/wk	CP	
Boundary Element Methods (L0523)	Lecture	2	3	
Boundary Element Methods (L0524)	Recitation Section (large)	2	3	
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.			
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.			
Personal Competence				
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.			
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0827: Modeling in Water Management				
Courses				
Title		Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)		Lecture	1	1
Groundwater Modeling using Modflow (L0544)		Recitation Section (small)	2	2
Modeling of Water Supply and Sewer Network (L0875)		Project-/problem-based Learning	2	3
Module Responsible	Dr. Klaus Johannsen			
Admission Requirements	None			
Recommended Previous Knowledge	Groundwater <ul style="list-style-type: none"> groundwater hydraulics and transport of substances Pipe Systems <ul style="list-style-type: none"> Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures Hydraulics of drinking water supply systems and sewer systems Basic knowledge on water management 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.			
<i>Skills</i>	The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).			
Personal Competence				
<i>Social Competence</i>	Wird nicht vermittelt.			
<i>Autonomy</i>	Wird nicht vermittelt.

Courses			
Title		Typ	Hrs/wk CP
Noise Protection (L1109)		Lecture	2 2
Urban Infrastructures (L0874)		Project-/problem-based Learning	2 4
Module Responsible	Dr. Dorothea Rechtenbach		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Knowledge on Urban planning • Knowledge on measures for climate protection • General knowledge of scientific writing/working 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can describe urban development corridors as well as current and future urban environmental problems. They are able to explain the causes of environmental problems (like noise). Students can specify applications for various technical innovations and explain why these contribute to the improvement of urban life. They can, for example, derive and discuss measures for effective noise abatement.</p> <p><i>Skills</i> Students are able to develop specific solutions for correcting existing or future environment-related problems of urban development. They can define a range of conceptual and technical solutions for environmental problems for different development paths. To solve specific urban environmental problems they can select technical innovations and integrate them into the urban context.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2	
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1	
Advanced Wastewater Treatment (L0357)	Lecture	2	2	
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1	
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.			
<i>Skills</i>	Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.			
Personal Competence				
<i>Social Competence</i>	Social skills are not targeted in this module.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0922: City Planning			
Courses			
Title	Typ	Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	for "Principles of Urban Planning": none for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> • use technical terms of urban planning. • describe the main determinants of urban development. • explain and compare different possibilities of how urban development can be influenced. • discuss requirements for public streetscapes. • explain the importance of street design. 		
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> • read and analyze urban development concepts and designs for streetscapes • appraise such concepts in the context of competing requirements. • design, justify and reflect their own solutions for concrete examples. 		
Personal Competence			
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> • discuss intermediate results with each other. • constructively accept feedback on their own work. • provide constructive feedback to others. 		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> • independently complete a written report including drawings following a broadly pre-defined process. • assess the consequences of their proposed solutions. • independently acquire knowledge and apply this to new issues or problem areas. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	written assignment, designwork during the semester		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

Course L1066: City Planning	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Carsten Gertz
Language	DE
Cycle	SoSe
Content	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> • legal framework, • instruments and methods of planning, • functional requirements, • stakeholders and actors • basic design requirements • different planning levels and • historical contexts. <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0977: Construction Logistics and Project Management				
Courses				
Title		Typ	Hrs/wk	CP
Construction Logistics (L1163)		Lecture	1	2
Construction Logistics (L1164)		Recitation Section (small)	1	2
Project Development and Management (L1161)		Lecture	1	1
Project Development and Management (L1162)		Project-/problem-based Learning	1	1
Module Responsible	Prof. Heike Flämig			
Admission Requirements	None			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can... <ul style="list-style-type: none"> • give definitions of the main terms of construction logistics and project development and management • name advantages and disadvantages of internal or external construction logistics • explain characteristics of products, demand and production of construction objects and their consequences for construction specific supply chains • differentiate constructions logistics from other logistics systems 			
<i>Skills</i>	Students can... <ul style="list-style-type: none"> • carry out project life cycle assessments • apply methods and instruments of construction logistics • apply methods and instruments of project development and management • apply methods and instruments of conflict management • design supply and waste removal concepts for a construction project 			
Personal Competence				
<i>Social Competence</i>	Students can... <ul style="list-style-type: none"> • hold presentations in and for groups • apply methods of conflict solving skills in group work and case studies 			
<i>Autonomy</i>	Students can... <ul style="list-style-type: none"> • solve problems by holistic, systemic and flow oriented thinking • improve their creativity, negotiation skills, conflict and crises solution skills by applying methods of moderation in case studies 			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	Two written papers with presentations			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory			

Course L1163: Construction Logistics	
Typ	Lecture
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Heike Flämig
Language	DE
Cycle	SoSe
Content	<p>The lecture gives deeper insight how important logistics are as a competitive factor for construction projects and which issues are to be addressed.</p> <p>The following topics are covered:</p> <ul style="list-style-type: none"> • competitive factor logistics • the concept of systems, planning and coordination of logistics • material, equipment and reverse logistics • IT in construction logistics • elements of the planning model of construction logistics and their connections • flow oriented logistics systems for construction projects • logistics concepts for ready to use construction projects (especially procurement and waste removal logistics) • best practice examples (construction logistics Potsdamer Platz, recent case study of the region) <p>Contents of the lecture are deepened in special exercises.</p>

Module M0998: Statics and Dynamics of Structures				
Courses				
Title		Typ	Hrs/wk	CP
Structural Dynamics (L1202)		Lecture	2	2
Structural Dynamics (L1203)		Recitation Section (large)	2	2
Fracture mechanics and fatigue in steel structures (L0564)		Lecture	1	1
Fracture mechanics and fatigue in steel structures (L0565)		Recitation Section (large)	1	1
Module Responsible	Prof. Uwe Starossek			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of linear structural analysis of statically determinate and indeterminate structures; Mechanics I/II, Mathematics I/II, Differential equations I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	After successful completion of this module, the student can explain the basic aspects of dynamic effects on structures and the respective methods.			
<i>Skills</i>	After successful completion of this module, the students will be able to predict the response of material and structures to dynamics loading using the appropriate computational approaches and methods.			
Personal Competence				
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> • participate in subject-specific and interdisciplinary discussions, • defend their own work results in front of others • promote the scientific development of colleagues • Furthermore, they can give and accept professional constructive criticism 			
<i>Autonomy</i>	Students are able to gain knowledge of the subject area from given and other sources and apply it to new problems. Furthermore, they are able to structure the solution process for problems in the area of Structural Analysis.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	150 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory

Module M0999: Steel Construction Project			
Courses			
Title		Typ	Hrs/wk
Steel Construction Project (L1206)		Project Seminar	4
			CP
			6
Module Responsible	Prof. Marcus Rutner		
Admission Requirements	None		
Recommended Previous Knowledge	Steel and Composite Structures		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	Students are able to prepare a part of the whole project and explain it to the others. Students can produce sketches and calculations of their part of the project. They are able to adjust their work in reaction to changing conditions resulting from other participants of the project. Students can present their results to other members of the group. They have the ability to work for a broad agreement with respect to intergroup dependencies. They can distribute and process tasks independently. Students can handle their part of the project on their own responsibility-

Module M1724: Smart Monitoring			
Courses			
Title	Typ	Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture	2	2
Smart Monitoring (L2763)	Recitation Section (small)	2	4
Module Responsible	Prof. Kay Smarsly		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.		
<i>Skills</i>			
Personal Competence <i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory		

Course L2762: Smart Monitoring	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.
Literature	

Course L2763: Smart Monitoring	
Typ	Recitation Section (small)
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M0581: Water Protection				
Courses				
Title		Typ	Hrs/wk	CP
Water Protection and Wastewater Management (L0226)		Lecture	3	3
Water Protection and Wastewater Management (L2008)		Project Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge in water management; • Good knowledge in urban drainage; • Good knowledge of wastewater treatment techniques; • Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties; 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.			
<i>Skills</i>	Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.			
Personal Competence				
<i>Social Competence</i>	The students can work together in international groups.			
<i>Autonomy</i>	Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.

Module M0595: Examination of Materials, Structural Condition and Damages				
Courses				
Title		Typ	Hrs/wk	CP
Examination of Materials, Structural Condition and Damages (L0260)		Lecture	3	4
Examination of Materials, Structural Condition and Damages (L0261)		Recitation Section (small)	1	2
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials or material science, for example by the module Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the rules for trading, use and marking of construction products in Germany. They know which methods for the testing of building material properties are usable and know the limitations and characteristics of the most important testing methods.			
<i>Skills</i>	The students are able to responsibly discover the rules for trading and using of building products in Germany. They are able to chose suitable methods for the testing and inspection of construction products, the examination of damages and the examination of the structural conditions of buildings. They are able to conclude from symptoms to the cause of damages. They are able to describe an examination in form of a test report or expert opinion.			
Personal Competence				
<i>Social Competence</i>	The students can describe the different roles of manufacturers as well as testing, supervisory and certification bodies within the framework of material testing. They can describe the different roles of the participants in legal proceedings.			
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.

Module M0713: Concrete Structures				
Courses				
Title		Typ	Hrs/wk	CP
Concrete Structures (L0579)		Seminar	1	1
Structural Concrete Members (L0577)		Lecture	2	3
Structural Concrete Members (L0578)		Recitation Section (large)	2	2
Module Responsible	Prof. Günter Rombach			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of structural analysis, conception and dimensioning of structural concrete Modules: Reinforced Concrete Structures I+II, Structural Analysis I+II, Mechanics I+II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students broaden their skills in structural engineering, especially in the field of buildings (houses, roofs, halls). They dispose of the knowledge for the conception and design of concrete buildings and structural members that are often used.			
<i>Skills</i>	The students are able to apply procedures of the conception and dimensioning to practical problems of structural engineering. They are capable to draft concrete buildings and to design them for general action effects and to plan their detailing and execution. Moreover, they can make design and construction sketches and draw up technical descriptions.			
Personal Competence				
<i>Social Competence</i>	The students are able to obtain results of high quality in teamwork.			
<i>Autonomy</i>	The students are able to carry out complex conception and dimensioning tasks of structures under the guidance of tutors.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	Yes	None	Presentation	Es werden 2 Referate ausgegeben
Examination	Written exam			
Examination duration and scale	120 minutes			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory

Module M0619: Waste Treatment Technologies				
Courses				
Title		Typ	Hrs/wk	CP
Waste and Environmental Chemistry (L0328)		Practical Course	2	2
Biological Waste Treatment (L0318)		Project-/problem-based Learning	3	4
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	chemical and biological basics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherché and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
Personal Competence				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.

Module M0801: Water Resources and -Supply				
Courses				
Title		Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)		Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)		Recitation Section (large)	1	2
Water Resource Management (L0402)		Lecture	2	2
Water Resource Management (L0403)		Recitation Section (small)	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of water management and the key processes involved in water treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.			
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.			
Personal Competence				
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.			
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6

Course L0311: Chemistry of Drinking Water Treatment	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Klaus Johannsen
Language	DE
Cycle	WiSe
Content	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Module M0966: Study Work Foundation Engineering				
Courses				
Title	Typ	Hrs/wk	CP	
Module Responsible	Dozenten des SD B			
Admission Requirements	None			
Recommended Previous Knowledge	Subjects of the Foundation Engineering specialisation.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to demonstrate their detailed knowledge in the field of geotechnical and foundation engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.			
	The students can develop solving strategies and approaches for fundamental and practical problems in geotechnical and foundation engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.			
	Scientific work techniques that are used can be described and critically reviewed.			
<i>Skills</i>	The students are able to independently select methods for the project work and to justify this choice. They can explain how these methods relate to the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.			
Personal Competence				
<i>Social Competence</i>	The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.			
<i>Autonomy</i>	The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.

Cycle	WiSe
Content	The students learn in the lecture the required knowledge in control systems to apply it to a specific project-based geotechnical problem. In a two-weeks time frame, students can test developed control strategies in the lab and present their results. At the end of the lecture, students will have an oral examination.

Course L1867: Analysis of Offshore Structures	
Typ	Lecture
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Dr. Said Fawad Mohammadi
Language	DE/EN
Cycle	SoSe
Content	<p>Topic 1: Types of Offshore Structures, Fixed and floating structures for Oil & Gas and Offshore Wind industry</p> <p>Topic 2: Wave Forces, Morisons equation</p> <p>Topic 3: Irregular Seastates, Power spectrum and application of FFT</p> <p>Topic 4: Additional Environmental Forces, wind spectra, current forces</p> <p>Topic 5: Linear-Time-Invariant Systems, response of an LTI-system in frequency domain</p> <p>Topic 6: Tubular Welded Connections, stress concentration factors, weld geometry</p> <p>Topic 7: Introduction to Fracture Mechanics, criteria for fracture initiation and crack growth</p> <p>Topic 8: Time and Frequency Domain Fatigue Analyses, rainflow counting, application of LTI-systems for frequency domain fatigue</p> <p>Topic 9: Offshore Installation and Exam, installation of structures, pile driving, pipe laying techniques</p>
Literature	<p>Chakrabarti, Handbook of Offshore Engineering, 2005</p> <p>Sarpkaya, Wave Forces on Offshore Structures, 2010</p> <p>Faltinsen, Sea Loads on Ships and Offshore Structures, 1998</p> <p>Sorensen, Basic Coastal Engineering, 2006</p> <p>Dowling, Mechanical Behavior of Materials, 2007</p> <p>Haibach, Betriebsfestigkeit, 2006</p> <p>Marshall, Design of Welded Tubular Connections, 1992</p> <p>Newland, Random vibrations, spectral and wavelet analysis, 1993</p>

Course L2387: Excellence in International Project Delivery	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	2 h
Lecturer	Dr. Jens Huckfeldt
Language	EN
Cycle	SoSe
Content	Simply and easy to avoid mistake in project delivery can deliver projects within budget and as per schedule. You have to attend if you see yourself in project execution and potentially even abroad.
Literature	

Course L0596: Design of Prefabricated Concrete Structures	
Typ	Lecture
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Klausur
Examination duration and scale	60 min
Lecturer	Prof. Günter Rombach
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • application and advantages and disadvantages of precast concrete structures • basics of design - precast element production - construction - tolerances • elements of a warehouse • design of a beam - joints • design of D-regions: half joints, corbels, openings • slab types - walls - facades • footings: pocket and block foundations • joints - connections • shear design of the interface between concrete cast at different times • unreinforced concrete structures

Course L2447: Geotechnical Engineering Design	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Schriftliche Ausarbeitung
Examination duration and scale	45 Min.
Lecturer	Prof. Jürgen Grabe, Dr. Tim Pucker
Language	DE
Cycle	WiSe
Content	<p>The focus of the course is on the design of geotechnical structures. Methods and fundamental approaches for the successful processing of geotechnical designs are taught. Theoretical approaches are backed up with examples from everyday work in industry. In parallel to the theoretical content, students are given a practical task for a geotechnical design at beginning of the course, which will be worked on in small teams. In addition to the application of the already acquired technical knowledge, topics like realisation, construction sequence planning, cost calculation, optimisation and evaluation criteria are also part of the course.</p> <p>The event will be finished with the presentation of the designs.</p>

Module M1716: Subsurface Processes			
Courses			
Title	Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)	Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)	Lecture	2	2
Subsurface Solute Transport (L2729)	Recitation Section (large)	1	1
Module Responsible	Prof. Nima Shokri		
Admission Requirements	None		
Recommended Previous Knowledge	Basic Mathematics, Hydrology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module. In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career. Teamwork & problem solving The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.		
<i>Knowledge</i>

Module M1725: Scientific Working in Computational Engineering				
Courses				
Title	Scientific Working in Computational Engineering (L2764)	Typ	Project-/problem-based Learning	Hrs/wk 4 CP 6
Module Responsible	Prof. Kay Smarsly			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in scientific writing. String interest in topics related to computing in civil engineering.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i></p> <p>The students will learn to apply concepts and methods of scientific working in computational engineering. In interaction with the course instructors and in collaboration with each other, the students will also learn to understand the complex process of scientific thinking, being able to accurately plan, implement and analyze scientific projects, such as prospective master theses. A project will be conducted throughout the semester, which will contribute to the grade. Since scientific writing is of particular importance in this course, a scientific paper will be developed based, which is a prerequisite for the final examination. The paper will be written based on the project conducted within this course. Project meetings in small groups, presentations, and critical discussions of scientific publications are further key activities.</p> <p><i>Skills</i></p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>			
Workload in Hours				
Credit points

Course L2764: Scientific Working in Computational Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In the course, a scientific problem of practical relevance will first be defined, taking into account the interests of the students participating in the course. The scientific problem will then systematically be solved within the framework of a comprehensive project. The principles of scientific working will be taught based on the scientific problem defined previously. As an integral part of scientific working, fundamentals of scientific writing will be presented and applied to a scientific paper to be written during the course. Topics related to scientific writing include structuring in scientific writing (structuring the abstract, the introduction, the main part, the summary and conclusions, and the acknowledgments and references) and recommendations on effective scientific writing (principles of composition, use of English in scientific writing, useful tips, creating figures, writing in mathematics, referencing, and formal email correspondence). A final paper and a final presentation will be assembled by the students.

Lecturer	Prof. Bastian Oesterle			
Language	EN			
Cycle	WiSe			
Content	Basic phenomena and aspects of the finite element modelling of structures are discussed. Besides theoretical description of the phenomena and methods, a strong focus is on the practical use a commercial finite element software within computer-based exercises. The covered topics are: <ul style="list-style-type: none"> • finite element modeling of trusses/beams/frames, plates subject to in-plane/out-of-plane loading and shells • convergence properties of displacements and stresses • singularities • locking effects • critical assessment, interpretation and check of results • mixed-dimensional coupling of finite elements • geometrically linear and non-linear, and material linear and non-linear analyses • stability: bifurcation and snap-through problems • dynamic problems, modal analyses

Content	<p>This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NTD technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice</p>

Module M0713: Concrete Structures				
Courses				
Title		Typ	Hrs/wk	CP
Concrete Structures (L0579)		Seminar	1	1
Structural Concrete Members (L0577)		Lecture	2	3
Structural Concrete Members (L0578)		Recitation Section (large)	2	2
Module Responsible	Prof. Günter Rombach			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of structural analysis, conception and dimensioning of structural concrete Modules: Reinforced Concrete Structures I+II, Structural Analysis I+II, Mechanics I+II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students broaden their skills in structural engineering, especially in the field of buildings (houses, roofs, halls). They dispose of the knowledge for the conception and design of concrete buildings and structural members that are often used.			
<i>Skills</i>	The students are able to apply procedures of the conception and dimensioning to practical problems of structural engineering. They are capable to draft concrete buildings and to design them for general action effects and to plan their detailing and execution. Moreover, they can make design and construction sketches and draw up technical descriptions.			
Personal Competence				
<i>Social Competence</i>	The students are able to obtain results of high quality in teamwork.			
<i>Autonomy</i>	The students are able to carry out complex conception and dimensioning tasks of structures under the guidance of tutors.

Module M0511: Electrical Energy from Solar Radiation and Wind Power				
Courses				
Title		Typ	Hrs/wk	CP
Sustainability Management (L0007)		Lecture	2	1
Hydro Power Use (L0013)		Lecture	1	1
Wind Turbine Plants (L0011)		Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)		Lecture	1	1
Module Responsible	Dr. Isabel Höfer			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.			
	Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.			
<i>Skills</i>	Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.			
Personal Competence				
<i>Social Competence</i>	Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.			
<i>Autonomy</i>	Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.

Course L0007: Sustainability Management	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Anne Rödl
Language	DE
Cycle	SoSe
Content	<p>The lecture "Sustainability Management" gives an insight into the different aspects and dimensions of sustainability. First, essential terms and definitions, significant developments of the last years, and legal framework conditions are explained. The various aspects of sustainability are then presented and discussed in detail. The lecture mainly focuses on concepts for the implementation of the topic sustainability in companies:</p> <ul style="list-style-type: none"> • What is "sustainability"? • Why is this concept an important topic for companies? • What opportunities and business risks are addressed or are associated with it? • How can the often mentioned three pillars of sustainability - economy, ecology, and social- be meaningfully integrated into corporate management despite their sometimes contradictory tendencies, and how a corresponding compromise can be found? • What concepts or frameworks exist for the implementation of sustainability management in companies? • Which sustainability labels exist for products or companies? What do they have in common, and where do they differ? <p>Furthermore, the lecture is intended to provide insights into the concrete implementation of sustainability aspects into business practice. External lecturers from companies will be invited to report on how sustainability is integrated into their daily processes.</p> <p>In the course of an independently carried out group work, the students will analyze and discuss the implementation of sustainability aspects based on short case studies. By studying and comparing best practice examples, the students will learn about corporate decisions' effects and implications. It should become clear which risks or opportunities are associated if sustainability aspects are taken into account in management decisions.</p>

Module M0723: Design of Prestressed Structures and Concrete Bridges			
Courses			
Title	Typ	Hrs/wk	CP
Design of Prestressed Structures and Concrete Bridges (L0603)	Lecture	3	4
Design of Prestressed Structures and Concrete Bridges (L0604)	Recitation Section (large)	2	2
Module Responsible	Prof. Günter Rombach		
Admission Requirements	None		
Recommended Previous Knowledge	Detailed knowledge on the design of concrete structures. Modules: Reinforced Concrete Structures I+II, Structural Analysis I+II, Mechanics I+II, Concrete Structures		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students know the main bridge types, their applications and the various loads. They can explain the basic design methods. They can explain the design of a prestressed bridge.</p> <p><i>Skills</i> The students are able to design reinforced or prestressed concrete bridges.</p>		
Personal Competence	<p><i>Social Competence</i> The students can design in teamwork a real concrete bridge.</p> <p><i>Autonomy</i> The students are able to design a prestressed concrete bridge and discuss the problems and results with other students.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6

Module M0807: Boundary Element Methods				
Courses				
Title	Typ	Hrs/wk	CP	
Boundary Element Methods (L0523)	Lecture	2	3	
Boundary Element Methods (L0524)	Recitation Section (large)	2	3	
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.			
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.			
Personal Competence				
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.			
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Content	<p>The students are supposed to:</p> <ul style="list-style-type: none"> • become acquainted with geotechnical model tests, field tests and laboratory tests as well as corresponding measurement techniques. These comprise amongst others inclinometer measurements and geophone measurements as well as high-grade laboratory tests on the stress-strain relationship of soil specimens, e. g. triaxial tests, simple shear tests and resonant column tests. • gain insight into current soil mechanical research. • plan, coordinate, perform and evaluate soil mechanical tests in a team. • discuss, reflect, review and present the obtained results in a group. <p>An important learning target is the introduction to scientific work for students who plan a scientific career, and for those who will work in practice with the responsibility to order corresponding tests and evaluate the results.</p> <p>The practical laboratory work is based on annually changing problems, which are however related to the experience and results of the preceding year's course group.</p>

Module M0827: Modeling in Water Management				
Courses				
Title		Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)		Lecture	1	1
Groundwater Modeling using Modflow (L0544)		Recitation Section (small)	2	2
Modeling of Water Supply and Sewer Network (L0875)		Project-/problem-based Learning	2	3
Module Responsible	Dr. Klaus Johannsen			
Admission Requirements	None			
Recommended Previous Knowledge	Groundwater <ul style="list-style-type: none"> groundwater hydraulics and transport of substances Pipe Systems <ul style="list-style-type: none"> Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures Hydraulics of drinking water supply systems and sewer systems Basic knowledge on water management 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.			
<i>Skills</i>	The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).			
Personal Competence				
<i>Social Competence</i>	Wird nicht vermittelt.			
<i>Autonomy</i>	Wird nicht vermittelt.

Courses			
Title		Typ	Hrs/wk CP
Noise Protection (L1109)		Lecture	2 2
Urban Infrastructures (L0874)		Project-/problem-based Learning	2 4
Module Responsible	Dr. Dorothea Rechtenbach		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Knowledge on Urban planning • Knowledge on measures for climate protection • General knowledge of scientific writing/working 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can describe urban development corridors as well as current and future urban environmental problems. They are able to explain the causes of environmental problems (like noise). Students can specify applications for various technical innovations and explain why these contribute to the improvement of urban life. They can, for example, derive and discuss measures for effective noise abatement.</p> <p><i>Skills</i> Students are able to develop specific solutions for correcting existing or future environment-related problems of urban development. They can define a range of conceptual and technical solutions for environmental problems for different development paths. To solve specific urban environmental problems they can select technical innovations and integrate them into the urban context.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Module M0874: Wastewater Systems			
Courses			
Title	Typ	Hrs/wk	CP
Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1
Advanced Wastewater Treatment (L0357)	Lecture	2	2
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1
Module Responsible	Prof. Ralf Otterpohl		
Admission Requirements	None		
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.		
<i>Skills</i>	Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.		
Personal Competence			
<i>Social Competence</i>	Social skills are not targeted in this module.		
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	120 min		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

Course L0934: Wastewater Systems - Collection, Treatment and Reuse	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Ralf Otterpohl
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Understanding the global situation with water and wastewater • Regional planning and decentralised systems • Overview on innovative approaches • In depth knowledge on advanced wastewater treatment options for different situations, for end-of-pipe and reuse • Mathematical Modelling of Nitrogen Removal • Exercises with calculations and design
Literature	Henze, Mogens: Wastewater Treatment: Biological and Chemical Processes, Springer 2002, 430 pages George Tchobanoglous, Franklin L. Burton, H. David Stensel: Wastewater Engineering: Treatment and Reuse, Metcalf & Eddy McGraw-Hill, 2004 - 1819 pages

Module M0922: City Planning			
Courses			
Title	Typ	Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	for "Principles of Urban Planning": none for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> • use technical terms of urban planning. • describe the main determinants of urban development. • explain and compare different possibilities of how urban development can be influenced. • discuss requirements for public streetscapes. • explain the importance of street design. 		
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> • read and analyze urban development concepts and designs for streetscapes • appraise such concepts in the context of competing requirements. • design, justify and reflect their own solutions for concrete examples. 		
Personal Competence			
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> • discuss intermediate results with each other. • constructively accept feedback on their own work. • provide constructive feedback to others. 		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> • independently complete a written report including drawings following a broadly pre-defined process. • assess the consequences of their proposed solutions. • independently acquire knowledge and apply this to new issues or problem areas. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	written assignment, designwork during the semester		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

Course L1066: City Planning	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Carsten Gertz
Language	DE
Cycle	SoSe
Content	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> • legal framework, • instruments and methods of planning, • functional requirements, • stakeholders and actors • basic design requirements • different planning levels and • historical contexts. <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0977: Construction Logistics and Project Management				
Courses				
Title		Typ	Hrs/wk	CP
Construction Logistics (L1163)		Lecture	1	2
Construction Logistics (L1164)		Recitation Section (small)	1	2
Project Development and Management (L1161)		Lecture	1	1
Project Development and Management (L1162)		Project-/problem-based Learning	1	1
Module Responsible	Prof. Heike Flämig			
Admission Requirements	None			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can... <ul style="list-style-type: none"> • give definitions of the main terms of construction logistics and project development and management • name advantages and disadvantages of internal or external construction logistics • explain characteristics of products, demand and production of construction objects and their consequences for construction specific supply chains • differentiate constructions logistics from other logistics systems 			
<i>Skills</i>	Students can... <ul style="list-style-type: none"> • carry out project life cycle assessments • apply methods and instruments of construction logistics • apply methods and instruments of project development and management • apply methods and instruments of conflict management • design supply and waste removal concepts for a construction project 			
Personal Competence				
<i>Social Competence</i>	Students can... <ul style="list-style-type: none"> • hold presentations in and for groups • apply methods of conflict solving skills in group work and case studies 			
<i>Autonomy</i>	Students can... <ul style="list-style-type: none"> • solve problems by holistic, systemic and flow oriented thinking • improve their creativity, negotiation skills, conflict and crises solution skills by applying methods of moderation in case studies 			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	Two written papers with presentations			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory			

Course L1163: Construction Logistics	
Typ	Lecture
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Heike Flämig
Language	DE
Cycle	SoSe
Content	<p>The lecture gives deeper insight how important logistics are as a competitive factor for construction projects and which issues are to be addressed.</p> <p>The following topics are covered:</p> <ul style="list-style-type: none"> • competitive factor logistics • the concept of systems, planning and coordination of logistics • material, equipment and reverse logistics • IT in construction logistics • elements of the planning model of construction logistics and their connections • flow oriented logistics systems for construction projects • logistics concepts for ready to use construction projects (especially procurement and waste removal logistics) • best practice examples (construction logistics Potsdamer Platz, recent case study of the region) <p>Contents of the lecture are deepened in special exercises.</p>

Module M0998: Statics and Dynamics of Structures				
Courses				
Title		Typ	Hrs/wk	CP
Structural Dynamics (L1202)		Lecture	2	2
Structural Dynamics (L1203)		Recitation Section (large)	2	2
Fracture mechanics and fatigue in steel structures (L0564)		Lecture	1	1
Fracture mechanics and fatigue in steel structures (L0565)		Recitation Section (large)	1	1
Module Responsible	Prof. Uwe Starossek			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of linear structural analysis of statically determinate and indeterminate structures; Mechanics I/II, Mathematics I/II, Differential equations I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	After successful completion of this module, the student can explain the basic aspects of dynamic effects on structures and the respective methods.			
<i>Skills</i>	After successful completion of this module, the students will be able to predict the response of material and structures to dynamics loading using the appropriate computational approaches and methods.			
Personal Competence				
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> • participate in subject-specific and interdisciplinary discussions, • defend their own work results in front of others • promote the scientific development of colleagues • Furthermore, they can give and accept professional constructive criticism 			
<i>Autonomy</i>	Students are able to gain knowledge of the subject area from given and other sources and apply it to new problems. Furthermore, they are able to structure the solution process for problems in the area of Structural Analysis.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	150 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Module M0593: Building Materials and Building Preservation				
Courses				
Title		Typ	Hrs/wk	CP
Repair of Structures (L0255)		Lecture	1	1
Mineral Building Materials (L0253)		Lecture	2	2
Technology of mineral Building Materials (L0256)		Project-/problem-based Learning	1	2
Transport Processes in Building Materials and Damage Processes (L0254)		Lecture	1	1
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials, building physics and building chemistry, for example by the modules Principles of Building Materials and Building Physics and Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the components of mineral building materials and their function in detail and to use them for the manufacture of special mineral building materials. They are able to show the characteristics of mineral building materials. They are able to describe the manufacture, properties and fields of application of special mortars and special concretes and the correlations of their material parameters. They are able to show the principles of anchor technology and design.			
<i>Skills</i>	The students are able to perform an optimization of granulometry of a mineral building material. They are able to design a special mineral mortar and to manufacture this mortar. The students are able to manufacture post installed rebar connections. They are able to recognize damages, to assess possible causes, to use the fundamentals of construction preservation and to select repair and strengthening measures.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop in small groups the mixture of a special mortar. They present their results to the lecturer and the other students. In a critical discussion they defend and adjust their results. The students are able to manufacture their special building material on the basis of this feedback.			
<i>Autonomy</i>	The students are able to responsibly use the resources of materials and lab equipment for their project and to investigate and to get missing components.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Examination	Written elaboration		
Examination duration and scale	approx. 15-20 pages (without appendix)		
Assignment for the Following Curricula	Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Compulsory		

Course L1206: Steel Construction Project	
Typ	Project Seminar
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Marcus Rutner
Language	DE
Cycle	SoSe
Content	Design of a big construction project (i.e skyscraper, large bridge, roof of a stadium) in small groups
Literature	Wird je nach Projekt individuell angegeben.

Module M0663: Marine Geotechnics				
Courses				
Title		Typ	Hrs/wk	CP
Marine Geotechnics (L0548)		Lecture	1	2
Marine Geotechnics (L0549)		Recitation Section (large)	2	2
Steel Structures in Foundation and Hydraulic Engineering (L1146)		Lecture	2	2
Module Responsible	Prof. Jürgen Grabe			
Admission Requirements	None			
Recommended Previous Knowledge	complete modules: Geotechnics I-III, Mathematics I-III courses: Soil laboratory course			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <i>Skills</i>				
Personal Competence <i>Social Competence</i> <i>Autonomy</i>				
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory Theoretical Mechanical Engineering: Specialisation Maritime Technology: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory			

Course L0548: Marine Geotechnics	
Typ	Lecture
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Jürgen Grabe
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Geotechnical investigation an description of the seabed • Foundations of Offshore-Constructions • cCliff erosion • Sea dikes • Port structures • Flood protection structures
Literature	<ul style="list-style-type: none"> • EAK (2002): Empfehlungen für Küstenschutzbauwerke • EAU (2004): Empfehlungen des Arbeitsausschusses Uferbauwerke • Poulos H.G. (1988): Marine Geotechnics. Unwin Hyman, London • Wagner P. (1990): Meerestechnik: Eine Einführung für Bauingenieure. Ernst & Sohn, Berlin

Course L0549: Marine Geotechnics	
Typ	Recitation Section (large)
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Jürgen Grabe
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1146: Steel Structures in Foundation and Hydraulic Engineering	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Frank Feindt
Language	DE
Cycle	SoSe
Content	Design of a sheet pile wall, design of a combined sheet pile wall, piles, walings, connections, fatigue
Literature	EAU 2012, EA-Pfähle, EAB

Module M1724: Smart Monitoring			
Courses			
Title	Typ	Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture	2	2
Smart Monitoring (L2763)	Recitation Section (small)	2	4
Module Responsible	Prof. Kay Smarsly		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.		
<i>Skills</i>			
Personal Competence <i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	10 pages of work with 15-minute oral presentation		
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory		

Course L2762: Smart Monitoring	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.
Literature	

Course L2763: Smart Monitoring	
Typ	Recitation Section (small)
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M0581: Water Protection				
Courses				
Title		Typ	Hrs/wk	CP
Water Protection and Wastewater Management (L0226)		Lecture	3	3
Water Protection and Wastewater Management (L2008)		Project Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge in water management; • Good knowledge in urban drainage; • Good knowledge of wastewater treatment techniques; • Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties; 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.</p> <p><i>Skills</i> Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Module M0595: Examination of Materials, Structural Condition and Damages				
Courses				
Title		Typ	Hrs/wk	CP
Examination of Materials, Structural Condition and Damages (L0260)		Lecture	3	4
Examination of Materials, Structural Condition and Damages (L0261)		Recitation Section (small)	1	2
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials or material science, for example by the module Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the rules for trading, use and marking of construction products in Germany. They know which methods for the testing of building material properties are usable and know the limitations and characteristics of the most important testing methods.			
<i>Skills</i>	The students are able to responsibly discover the rules for trading and using of building products in Germany. They are able to chose suitable methods for the testing and inspection of construction products, the examination of damages and the examination of the structural conditions of buildings. They are able to conclude from symptoms to the cause of damages. They are able to describe an examination in form of a test report or expert opinion.			
Personal Competence				
<i>Social Competence</i>	The students can describe the different roles of manufacturers as well as testing, supervisory and certification bodies within the framework of material testing. They can describe the different roles of the participants in legal proceedings.			
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.

Courses				
Title		Typ	Hrs/wk	CP
Nonlinear Structural Analysis (L0277)		Lecture	3	4
Nonlinear Structural Analysis (L0279)		Recitation Section (small)	1	2
Module Responsible	Prof. Alexander Düster			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of partial differential equations is recommended.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to + give an overview of the different nonlinear phenomena in structural mechanics. + explain the mechanical background of nonlinear phenomena in structural mechanics. + to specify problems of nonlinear structural analysis, to identify them in a given situation and to explain their mathematical and mechanical background.			
<i>Skills</i>	Students are able to + model nonlinear structural problems. + select for a given nonlinear structural problem a suitable computational procedure. + apply finite element procedures for nonlinear structural analysis. + critically verify and judge results of nonlinear finite elements. + to transfer their knowledge of nonlinear solution procedures to new problems.			
Personal Competence				
<i>Social Competence</i>	Students are able to + solve problems in heterogeneous groups. + present and discuss their results in front of others. + give and accept professional constructive criticism.			
<i>Autonomy</i>	Students are able to + assess their knowledge by means of exercises and E-Learning. + acquaint themselves with the necessary knowledge to solve research oriented tasks. + to transform the acquired knowledge to similar problems.

Courses				
Title		Typ	Hrs/wk	CP
Waste and Environmental Chemistry (L0328)		Practical Course	2	2
Biological Waste Treatment (L0318)		Project-/problem-based Learning	3	4
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	chemical and biological basics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherché and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
Personal Competence				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	Yes	None	Subject	theoretical and practical work
Examination	Presentation			
Examination duration and scale	Elaboration and Presentation (15-25 minutes in groups)			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Core Qualification: Compulsory International Management and Engineering: Specialisation II. Module M0801: Water Resources and -Supply				
Courses				
Title		Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)		Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)		Recitation Section (large)	1	2
Water Resource Management (L0402)		Lecture	2	2
Water Resource Management (L0403)		Recitation Section (small)	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of water management and the key processes involved in water treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.			
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.			
Personal Competence				
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.			
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	60 min (chemistry) + presentation

Course L0311: Chemistry of Drinking Water Treatment	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Klaus Johannsen
Language	DE
Cycle	WiSe
Content	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Module M0858: Coastal Hydraulic Engineering I			
Courses			
Title		Typ	Hrs/wk CP
Basics of Coastal Engineering (L0807)		Lecture	3 4
Basics of Coastal Engineering (L1413)		Project-/problem-based Learning	1 2
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Basics of hydraulic engineering, hydrology and hydromechanics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students are able to define and explain the basic concepts of coastal engineering and port engineering. They are able to apply the concepts to selected practical problems of coastal engineering. Students can define and determine the basics for design and dimensioning of coastal engineering constructions.		
<i>Skills</i>	The students are capable to apply basic design approaches to selected and pre-defined design tasks in coastal engineering.		
Personal Competence			
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems such as the design of coastal protection structures. Additionally, they will be able to work in team with engineers of other disciplines, for instance designing of coastal breakwaters.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	The duration of the examination is 2 hours. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. Module M0923: Integrated Transportation Planning			
Courses			
Title	Typ	Hrs/wk	CP
Integrated Transportation Planning (L1068)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineerin		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> describe interdependencies between land-use/location choice and transportation/mobility behaviour explain and evaluate the social, ecological and economic effects of transport and land-use policy measures. relate current issues in the area of integrated transport planning and formulate an opinion on them. 		
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> quantify important parameters, which influence travel demand or are influenced by it. comprehensively examine a pre-defined or self-selected topic from a transportation studies perspective and document the results in accordance with scientific conventions. 		
Personal Competence			
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> provide feedback on topical contents and their teaching. constructively handle feedback on their own work. produce results in group work and document these. 		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> assess potential consequences of their future professional activities independently plan working on a pre-defined project topic, acquire the necessary knowledge and use appropriate means for its execution. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0965: Study Work Structural Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Module Responsible	Dozenten des SD B		
Admission Requirements	None		
Recommended Previous Knowledge	Subjects of the Structural Engineering specialisation.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to demonstrate their detailed knowledge in the field of structural and construction engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in structural and construction engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p> <p><i>Skills</i> The students are able to independently select methods for the project work and to justify this choice. They can explain how these methods relate to the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p> <p><i>Autonomy</i> The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>

Course L2447: Geotechnical Engineering Design	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Schriftliche Ausarbeitung
Examination duration and scale	45 Min.
Lecturer	Prof. Jürgen Grabe, Dr. Tim Pucker
Language	DE
Cycle	WiSe
Content	<p>The focus of the course is on the design of geotechnical structures. Methods and fundamental approaches for the successful processing of geotechnical designs are taught. Theoretical approaches are backed up with examples from everyday work in industry. In parallel to the theoretical content, students are given a practical task for a geotechnical design at beginning of the course, which will be worked on in small teams. In addition to the application of the already acquired technical knowledge, topics like realisation, construction sequence planning, cost calculation, optimisation and evaluation criteria are also part of the course.</p> <p>The event will be finished with the presentation of the designs.</p>

Module M1350: Excavation Law				
Courses				
Title		Typ	Hrs/wk	CP
Subsoil and Underground Engineering Law (L0395)		Lecture	2	3
Service Contract and Procurement Law (L1906)		Lecture	2	3
Module Responsible	Prof. Jürgen Grabe			
Admission Requirements	None			
Recommended Previous Knowledge	Complete modules: Geotechnics I-III			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Students will gain knowledge of			
<i>Knowledge</i>	<ul style="list-style-type: none"> • the history of civil engineering law, • basics of foundation and civil engineering law, • legal aspects of technical regulations in civil engineering (with case studies), • the civil engineering contract, • the liability of the designer and contractor in civil engineering, • the subsoil risk and the system risk, • the total debt in (civil) engineering law, • the (construction) conflict, dispute avoidance models and the construction process, • the systematics of construction contract law, • the BGB construction contract law, • responsibilities on the construction site, • remuneration and contract management, • liability for defects, • public procurement law. 			
<i>Skills</i>	Students learn to apply legal aspects in planning and construction in a legally balanced way.			
Personal Competence	Students can work in groups and support each other in finding solutions.			
<i>Social Competence</i>				
<i>Autonomy</i>	Students are able to assess their own strengths and weaknesses and organize their time and learning management based on this.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Oral exam			
Examination duration and scale	30 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory			

Course L0395: Subsoil and Underground Engineering Law	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Günther Schalk
Language	DE
Cycle	WiSe
Content	<ul style="list-style-type: none"> • History of Civil Engineering Law (from 1700 BC to 2000 AD) • Basics of foundation and excavation law / engineering law (the participants in the case law of geotechnical law case studies) • Legal aspects of technical regulations in civil engineering (with case studies) • The civil engineering contract (including checklists for the special civil engineering contract design and execution) • The liability of the planner and entrepreneur in civil engineering (practical examples, jurisprudence and law, inter alia, to the Ordinance on Combatants, liability for defects and traffic safety obligations, construction law and insurance questions) • The ground / foundation risk and the systemic risk (also in the European context) • The total debt in (low) building law (based on practice-oriented case constellations) • The (construction) conflict, the dispute avoidance models and the construction process (practice-oriented presentation)

Module M1716: Subsurface Processes			
Courses			
Title	Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)	Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)	Lecture	2	2
Subsurface Solute Transport (L2729)	Recitation Section (large)	1	1
Module Responsible	Prof. Nima Shokri		
Admission Requirements	None		
Recommended Previous Knowledge	Basic Mathematics, Hydrology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.</p> <p><i>Skills</i> In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Teamwork & problem solving</p> <p><i>Autonomy</i> The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.</p>		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M1725: Scientific Working in Computational Engineering				
Courses				
Title	Scientific Working in Computational Engineering (L2764)	Typ	Project-/problem-based Learning	Hrs/wk 4 CP 6
Module Responsible	Prof. Kay Smarsly			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in scientific writing. String interest in topics related to computing in civil engineering.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i></p> <p>The students will learn to apply concepts and methods of scientific working in computational engineering. In interaction with the course instructors and in collaboration with each other, the students will also learn to understand the complex process of scientific thinking, being able to accurately plan, implement and analyze scientific projects, such as prospective master theses. A project will be conducted throughout the semester, which will contribute to the grade. Since scientific writing is of particular importance in this course, a scientific paper will be developed based, which is a prerequisite for the final examination. The paper will be written based on the project conducted within this course. Project meetings in small groups, presentations, and critical discussions of scientific publications are further key activities.</p> <p><i>Skills</i></p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>			
Workload in Hours				
Credit points				
Course achievement				
Examination	Written elaboration			
Examination duration and scale	10 pages of work with 15-minute oral presentation			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory			

Course L2764: Scientific Working in Computational Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	<p>In the course, a scientific problem of practical relevance will first be defined, taking into account the interests of the students participating in the course. The scientific problem will then systematically be solved within the framework of a comprehensive project. The principles of scientific working will be taught based on the scientific problem defined previously. As an integral part of scientific working, fundamentals of scientific writing will be presented and applied to a scientific paper to be written during the course. Topics related to scientific writing include structuring in scientific writing (structuring the abstract, the introduction, the main part, the summary and conclusions, and the acknowledgments and references) and recommendations on effective scientific writing (principles of composition, use of English in scientific writing, useful tips, creating figures, writing in mathematics, referencing, and formal email correspondence). A final paper and a final presentation will be assembled by the students.</p>

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Bastian Oesterle
Language	EN
Cycle	WiSe
Content	Basic phenomena and aspects of the finite element modelling of structures are discussed. Besides theoretical description of the phenomena and methods, a strong focus is on the practical use of a commercial finite element software within computer-based exercises. The covered topics are: <ul style="list-style-type: none"> • finite element modeling of trusses/beams/frames, plates subject to in-plane/out-of-plane loading and shells • convergence properties of displacements and stresses • singularities • locking effects • critical assessment, interpretation and check of results • mixed-dimensional coupling of finite elements • geometrically linear and non-linear, and material linear and non-linear analyses • stability: bifurcation and snap-through problems • dynamic problems, modal analyses

Content	<p>This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NDT technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice</p>

Content	This strongly interdisciplinary lecture and practical course is offered to Masterstudents who are interested to learn about an important field across engineering and material science industries, i.e. nondestructive testing of materials and parts. Interdisciplinary approaches and thinking becomes more and more important since many problems extend into various disciplines, hence, can only be solved through interdisciplinary thinking and collaboration. Accordingly, this module combines the efforts of 4 different disciplines, i.e. mechanical engineering, civil engineering, materials science and computer science with a touch of electrical engineering. Nondestructive testing (NDT) is the process of inspecting, testing, and evaluating materials, parts, and assemblies to understand properties and defects without causing damage to the material or part. This scientific approach enables to make intrinsic material and component characteristics visible. Hence, the approach links detection approaches (e.g. linear and nonlinear acoustic methods, ultrasonic testing, Magnetic Particle Testing, thermo-chemical methods, etc.) with material physics and the mechanics of components, further, with evaluation, interpretation, big data management, transmission of data, and cybersecurity. The module embraces a lecture and a practical course. Contents of the lecture are NDT technologies and their theory behind, evaluation, transmission of data, while the students will apply the NDT technologies during the practical course in the experimental test halls and labs at TUHH. Lecture and practical course split into the major themes: A) Detection: Theory and Practice B) Evaluation of Data: Theory and Practice C) Data Acquisition and Transmission with Wireless, Batteryless Sensor Devices: Theory and Practice

Module M0964: Underground Constructions			
Courses			
Title	Typ	Hrs/wk	CP
Applied Tunnel Constructions (L2407)	Lecture	2	3
Introduction to tunnel construction (L0707)	Lecture	1	2
Introduction to tunnel construction (L1811)	Recitation Section (large)	1	1
Module Responsible	Prof. Jürgen Grabe		
Admission Requirements	None		
Recommended Previous Knowledge	Modules from Bachelor studies Civil and environmental engineering: <ul style="list-style-type: none"> • Geotechnics I-II • Steel Structures I-II 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Knowledge of different tunnel construction types as well as special methods and techniques of subsoil construction. The students get deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.</p> <p><i>Skills</i> Basic knowledge of tunnel design as well as practical skills in structural tunnel analysis. Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Capacity for teamwork concerning project management and design of tunnels.</p> <p><i>Autonomy</i> Promotion of independent and creative work flow in the framework of a design exercise.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	120 minutes		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Module M0595: Examination of Materials, Structural Condition and Damages				
Courses				
Title		Typ	Hrs/wk	CP
Examination of Materials, Structural Condition and Damages (L0260)		Lecture	3	4
Examination of Materials, Structural Condition and Damages (L0261)		Recitation Section (small)	1	2
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials or material science, for example by the module Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the rules for trading, use and marking of construction products in Germany. They know which methods for the testing of building material properties are usable and know the limitations and characteristics of the most important testing methods.			
<i>Skills</i>	The students are able to responsibly discover the rules for trading and using of building products in Germany. They are able to chose suitable methods for the testing and inspection of construction products, the examination of damages and the examination of the structural conditions of buildings. They are able to conclude from symptoms to the cause of damages. They are able to describe an examination in form of a test report or expert opinion.			
Personal Competence				
<i>Social Competence</i>	The students can describe the different roles of manufacturers as well as testing, supervisory and certification bodies within the framework of material testing. They can describe the different roles of the participants in legal proceedings.			
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0923: Integrated Transportation Planning				
Courses				
Title	Typ	Hrs/wk	CP	
Integrated Transportation Planning (L1068)	Project-/problem-based Learning	4	6	
Module Responsible	Prof. Carsten Gertz			
Admission Requirements	None			
Recommended Previous Knowledge	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineerin			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> describe interdependencies between land-use/location choice and transportation/mobility behaviour explain and evaluate the social, ecological and economic effects of transport and land-use policy measures. relate current issues in the area of integrated transport planning and formulate an opinion on them. 			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> quantify important parameters, which influence travel demand or are influenced by it. comprehensively examine a pre-defined or self-selected topic from a transportation studies perspective and document the results in accordance with scientific conventions. 			
Personal Competence				
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> provide feedback on topical contents and their teaching. constructively handle feedback on their own work. produce results in group work and document these. 			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> assess potential consequences of their future professional activities independently plan working on a pre-defined project topic, acquire the necessary knowledge and use appropriate means for its execution. 			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	written assignment with presentation during the semester			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory

Module M0801: Water Resources and -Supply				
Courses				
Title		Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)		Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)		Recitation Section (large)	1	2
Water Resource Management (L0402)		Lecture	2	2
Water Resource Management (L0403)		Recitation Section (small)	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of water management and the key processes involved in water treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.			
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.			
Personal Competence				
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.			
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	60 min (chemistry) + presentation			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Course L0311: Chemistry of Drinking Water Treatment	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Klaus Johannsen
Language	DE
Cycle	WiSe
Content	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Module M0830: Environmental Protection and Management			
Courses			
Title	Typ	Hrs/wk	CP
Integrated Pollution Control (L0502)	Lecture	2	2
Health, Safety and Environmental Management (L0387)	Lecture	2	3
Health, Safety and Environmental Management (L0388)	Recitation Section (small)	1	1
Module Responsible	Prof. Ralf Otterpohl		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Good knowledge in Technologies for Environmental Protection (end-of-pipe, integrated solutions) • Good knowledge of the relevant Environmental Legislation • Basic knowledge of instruments for Environmental Assessment 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to describe the basics of regulations, economic instruments, voluntary initiatives, fundamentals of HSE legislation ISO 14001, EMAS and Responsible Care ISO 14001 requirements. They can analyse and discuss industrial processes, substance cycles and approaches from end-of-pipe technology to eco-efficiency and eco-effectiveness, showing their sound knowledge of complex industry related problems. They are able to judge environmental issues and to widely consider, apply or carry out innovative technical solutions, remediation measures and further interventions as well as conceptual problem solving approaches in the full range of problems in different industrial sectors.</p> <p><i>Skills</i> Students are able to assess current problems and situations in the field of environmental protection. They can consider the best available techniques and to plan and suggest concrete actions in a company- or branch-specific context. By this means they can solve problems on a technical, administrative and legislative level.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Course L0203: Air Pollution Abatement	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Swantje Pietsch-Braune, Christian Eichler
Language	EN
Cycle	WiSe
Content	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants form flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.

Module M0826: Biology, Geology and Chemistry				
Courses				
Title		Typ	Hrs/wk	CP
Biology (L1428)		Lecture	2	2
Geology and Soil Science (L0903)		Lecture	2	1
Environmental Analysis (L0354)		Lecture	2	3
Module Responsible	Dr. Dorothea Rechtenbach			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of inorganic/organic chemistry and biology (knowledge acquired at school)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	With the completion of this module students acquire profound knowledge of the geo- and pedosphere, biogeochemical processes and the fate of migrating compounds in soil and groundwater. They learn about methods to investigate sites for different use.			
<i>Skills</i>	With the completion of this module students can apply the acquired theoretical knowledge to model sites and assess the situation technically and conceptually. They are able to draw comparisons on different investigation strategies and techniques. Model projects can be devised and treated.			
Personal Competence				
<i>Social Competence</i>	Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .			
<i>Autonomy</i>	Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	2 Std. 15 Min.			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Water and Environmental Engineering: Core Qualification: Compulsory			

Course L1428: Biology	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Johannes Gescher
Language	EN
Cycle	WiSe
Content	
Literature	Umweltmikrobiologie, Reineke, W. und Schlömann, M. (2015) 2. Aufl., Springer Spektrum Verlag

Course L0903: Geology and Soil Science	
Typ	Lecture
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dr. Joachim Gerth, Sonja Götz
Language	DE
Cycle	WiSe
Content	Geology: formation of the Earth, plate tectonics, macroscopic rock identification, introduction to Earth history, introduction to halokinesis. Soil science: soil use and function in ecosystems, factors and processes of soil formation, mineral and organic components, surface types and properties, retention of nutrients and pollutants, hazards from faulty land use, erosion, salinization, and contamination, measures to preserve soils
Literature	R. Vinx (2011): "Gesteinsbestimmung im Gelände" H. Bahlburg & C. Breitzkreutz (2012): "Grundlagen der Geologie", TUB Signatur GWB-318 R. Walter (2003): "Ergeschichte" TUB Signatur: 2816-1769 F.Scheffer und P. Schachtschabel (2002): "Lehrbuch der Bodenkunde" TUB Signatur AGG-308 W.E.H. Blum (2007): "Bodenkunde in Stichworten" TUB Signatur AGG-317

Course L0354: Environmental Analysis	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Dorothea Rechtenbach, Dr. Henning Mangels
Language	EN
Cycle	WiSe
Content	<p>Introduction</p> <p>Sampling in different environmental compartments, sample transportation, sample storage</p> <p>Sample preparation</p> <p>Photometry</p> <p>Wastewater analysis</p> <p>Introduction into chromatography</p> <p>Gas chromatography</p> <p>HPLC</p> <p>Mass spectrometry</p> <p>Optical emission spectrometry</p> <p>Atom absorption spectrometry</p> <p>Quality assurance in environmental analysis</p>

Module M1403: Construction and Simulation of Sewerage Systems				
Courses				
Title		Typ	Hrs/wk	CP
Construction and renovation of urban sewer systems (L1998)		Seminar	3	3
Simulation of sewerage systems (L2006)		Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Hydraulics in pipes and gravity-sewers • Mechanics • Soil mechanics and foundation engineering • Knowledge about urban sewerage systems and water management 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students can describe urban wastewater systems by means of software-based modeling. In case studies they can perform system and weak point analyzes. In addition, they can analyze the hydraulic effects quantitatively. Furthermore, they have the knowledge to comprehend flow events in gravity-sewers based on the St. Venant equations.</p> <p>Students have knowledge of static and structural requirements of the sewer system. Cases of damage are investigated and the knowledge regarding different renovation technologies for sewer systems is acquired.</p> <p><i>Skills</i> The students can simulate different run-off events in sewer systems and are able to dimension the sewer systems accordingly. Moreover, they can determine suitable construction materials and static requirements for different cases of application.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students are able to apply the acquired skills in a team and can impart this knowledge.</p> <p><i>Autonomy</i> Students can solve problems in the field of wastewater systems independently, concerning in particular dimensioning and simulation of sewer systems. Furthermore, they are able to present and justify their solutions.</p>

Course L2006: Simulation of sewerage systems	
Typ	Seminar
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Ralf Otterpohl
Language	EN
Cycle	WiSe
Content	<p>Modeling of sewer systems:</p> <ul style="list-style-type: none"> • Modeling approaches in wastewater management, especially approaches to integrated modeling • Planning processes, calculations and design approaches for elements of gravity-sewers • Model setup • St. Venant equation and simplifications of models (kinematic wave etc.) • Calculation & modeling of solids transport (advection, diffusion, dispersion and sales processes) • Examples for modeling with SWMM (EPA, USA)
Literature	

Module M0874: Wastewater Systems				
Courses				
Title	Typ	Hrs/wk	CP	
Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2	
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1	
Advanced Wastewater Treatment (L0357)	Lecture	2	2	
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1	
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.			
<i>Skills</i>	Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.			
Personal Competence				
<i>Social Competence</i>	Social skills are not targeted in this module.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	120 min

Module M0828: Urban Environmental Management			
Courses			
Title		Typ	Hrs/wk CP
Noise Protection (L1109)		Lecture	2 2
Urban Infrastructures (L0874)		Project-/problem-based Learning	2 4
Module Responsible	Dr. Dorothea Rechtenbach		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Knowledge on Urban planning • Knowledge on measures for climate protection • General knowledge of scientific writing/working 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can describe urban development corridors as well as current and future urban environmental problems. They are able to explain the causes of environmental problems (like noise). Students can specify applications for various technical innovations and explain why these contribute to the improvement of urban life. They can, for example, derive and discuss measures for effective noise abatement.</p> <p><i>Skills</i> Students are able to develop specific solutions for correcting existing or future environment-related problems of urban development. They can define a range of conceptual and technical solutions for environmental problems for different development paths. To solve specific urban environmental problems they can select technical innovations and integrate them into the urban context.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Cycle	SoSe
Content	<p>Problem Based Learning</p> <p>Main topics are:</p> <ul style="list-style-type: none"> • Central vs. Decentral Wastewater Treatment. • Compaction of Cities. • Car Free Cities. • Multifunctional Places in Cities. • The Sustainability of Freight Transport in Cities.
Literature	Depends on chosen topic.

Module M0871: Hydrological Systems	
Courses	
Title	Typ Hrs/wk CP
Applied Surface Hydrology (L0289)	Lecture 2 2
Applied Surface Hydrology (L1412)	Project-/problem-based Learning 1 2
Interaction Water - Environment in Fluvial Areas (L0295)	Project-/problem-based Learning 1 2
Module Responsible	Prof. Peter Fröhle
Admission Requirements	None
Recommended Previous Knowledge	Fundamentals of Hydromechanics and Hydraulic Engineering: Hydraulic Engineering I and Hydraulic Engineering II
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to define the basic concepts of hydrology and water management. They are able to describe and quantify the relevant processes of the hydrological water cycle. Besides, the students know the main aspects of rainfall-run-off-models and are able to theoretically derive established reservoir / storage models and a unit-hydrograph.
<i>Skills</i>	The students are able to use the basic hydrological concepts and approaches and are able to theoretically derive established reservoir / storage models or a unit-hydrograph as the basis for rainfall-run-off-models. The student are able to explain the basic concepts of measurements of hydrological and hydrodynamic values in nature and are able to perform, analyze and statistically assess these measurements. Furthermore, they are able to apply a hydrological model to basic hydrological problems.
Personal Competence	
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems of the hydrology and water management. Additionally, they will be able to work in team with engineers of other disciplines.
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Course achievement	None
Examination	Written exam
Examination duration and scale	The duration of the examination is 90 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Course L0289: Applied Surface Hydrology

Module M0875: Nexus Engineering - Water, Soil, Food and Energy				
Courses				
Title		Typ	Hrs/wk	CP
Ecological Town Design - Water, Energy, Soil and Food Nexus (L1229)		Seminar	2	2
Water & Wastewater Systems in a Global Context (L0939)		Lecture	2	4
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of the global situation with rising poverty, soil degradation, migration to cities, lack of water resources and sanitation			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can describe the facets of the global water situation. Students can judge the enormous potential of the implementation of synergistic systems in Water, Soil, Food and Energy supply.			
<i>Skills</i>	Students are able to design ecological settlements for different geographic and socio-economic conditions for the main climates around the world.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Subject theoretical and practical work			
Examination duration and scale	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information can be found at the beginning of the semester in the StudIP course module handbook.			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Module M0922: City Planning			
Courses			
Title	Typ	Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	for "Principles of Urban Planning": none for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> • use technical terms of urban planning. • describe the main determinants of urban development. • explain and compare different possibilities of how urban development can be influenced. • discuss requirements for public streetscapes. • explain the importance of street design. 		
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> • read and analyze urban development concepts and designs for streetscapes • appraise such concepts in the context of competing requirements. • design, justify and reflect their own solutions for concrete examples. 		
Personal Competence			
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> • discuss intermediate results with each other. • constructively accept feedback on their own work. • provide constructive feedback to others. 		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> • independently complete a written report including drawings following a broadly pre-defined process. • assess the consequences of their proposed solutions. • independently acquire knowledge and apply this to new issues or problem areas. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration		
Examination duration and scale	written assignment, designwork during the semester		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory

CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Carsten Gertz
Language	DE
Cycle	SoSe
Content	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> • legal framework, • instruments and methods of planning, • functional requirements, • stakeholders and actors • basic design requirements • different planning levels and • historical contexts. <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0977: Construction Logistics and Project Management				
Courses				
Title		Typ	Hrs/wk	CP
Construction Logistics (L1163)		Lecture	1	2
Construction Logistics (L1164)		Recitation Section (small)	1	2
Project Development and Management (L1161)		Lecture	1	1
Project Development and Management (L1162)		Project-/problem-based Learning	1	1
Module Responsible	Prof. Heike Flämig			
Admission Requirements	None			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can...			
	<ul style="list-style-type: none"> • give definitions of the main terms of construction logistics and project development and management • name advantages and disadvantages of internal or external construction logistics • explain characteristics of products, demand and production of construction objects and their consequences for construction specific supply chains • differentiate constructions logistics from other logistics systems 			
<i>Skills</i>	Students can...			
	<ul style="list-style-type: none"> • carry out project life cycle assessments • apply methods and instruments of construction logistics • apply methods and instruments of project development and management • apply methods and instruments of conflict management • design supply and waste removal concepts for a construction project 			
Personal Competence				
<i>Social Competence</i>	Students can...			
	<ul style="list-style-type: none"> • hold presentations in and for groups • apply methods of conflict solving skills in group work and case studies 			
<i>Autonomy</i>	Students can...			
	<ul style="list-style-type: none"> • solve problems by holistic, systemic and flow oriented thinking • improve their creativity, negotiation skills, conflict and crises solution skills by applying methods of moderation in case studies 			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	Two written papers with presentations			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Module M0593: Building Materials and Building Preservation				
Courses				
Title		Typ	Hrs/wk	CP
Repair of Structures (L0255)		Lecture	1	1
Mineral Building Materials (L0253)		Lecture	2	2
Technology of mineral Building Materials (L0256)		Project-/problem-based Learning	1	2
Transport Processes in Building Materials and Damage Processes (L0254)		Lecture	1	1
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge about building materials, building physics and building chemistry, for example by the modules Principles of Building Materials and Building Physics and Building Materials and Building Chemistry.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the components of mineral building materials and their function in detail and to use them for the manufacture of special mineral building materials. They are able to show the characteristics of mineral building materials. They are able to describe the manufacture, properties and fields of application of special mortars and special concretes and the correlations of their material parameters. They are able to show the principles of anchor technology and design.			
<i>Skills</i>	The students are able to perform an optimization of granulometry of a mineral building material. They are able to design a special mineral mortar and to manufacture this mortar. The students are able to manufacture post installed rebar connections. They are able to recognize damages, to assess possible causes, to use the fundamentals of construction preservation and to select repair and strengthening measures.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop in small groups the mixture of a special mortar. They present their results to the lecturer and the other students. In a critical discussion they defend and adjust their results. The students are able to manufacture their special building material on the basis of this feedback.			
<i>Autonomy</i>	The students are able to responsibly use the resources of materials and lab equipment for their project and to investigate and to get missing components.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Structural Dynamics (L1203)		Recitation Section (large)	2	2
Fracture mechanics and fatigue in steel structures (L0564)		Lecture	1	1
Fracture mechanics and fatigue in steel structures (L0565)		Recitation Section (large)	1	1
Module Responsible	Prof. Uwe Starossek			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of linear structural analysis of statically determinate and indeterminate structures; Mechanics I/II, Mathematics I/II, Differential equations I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	After successful completion of this module, the student can explain the basic aspects of dynamic effects on structures and the respective methods.			
<i>Skills</i>	After successful completion of this module, the students will be able to predict the response of material and structures to dynamics loading using the appropriate computational approaches and methods.			
Personal Competence				
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> • participate in subject-specific and interdisciplinary discussions, • defend their own work results in front of others • promote the scientific development of colleagues • Furthermore, they can give and accept professional constructive criticism 			
<i>Autonomy</i>	Students are able to gain knowledge of the subject area from given and other sources and apply it to new problems. Furthermore, they are able to structure the solution process for problems in the area of Structural Analysis.

Examination duration and scale	120 min		
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective Compulsory Renewable Energies: Specialisation Bioenergy Systems: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory		

Course L0052: Solid Matter Process Technology for Biomass	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Werner Sitzmann
Language	DE
Cycle	SoSe
Content	The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture.

Module M0827: Modeling in Water Management				
Courses				
Title		Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)		Lecture	1	1
Groundwater Modeling using Modflow (L0544)		Recitation Section (small)	2	2
Modeling of Water Supply and Sewer Network (L0875)		Project-/problem-based Learning	2	3
Module Responsible	Dr. Klaus Johannsen			
Admission Requirements	None			
Recommended Previous Knowledge	Groundwater <ul style="list-style-type: none"> groundwater hydraulics and transport of substances Pipe Systems <ul style="list-style-type: none"> Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures Hydraulics of drinking water supply systems and sewer systems Basic knowledge on water management 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.			
<i>Skills</i>	The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).			
Personal Competence				
<i>Social Competence</i>	Wird nicht vermittelt.			
<i>Autonomy</i>	Wird nicht vermittelt.

Modelling of Flow in Rivers and Estuaries (L0810)		Lecture	3	4
Nature-Oriented Hydraulic Engineering / Integrated Flood Protection (L0961)		Project-/problem-based Learning	2	2
Module Responsible	Prof. Peter Fröhle			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of Hydromechanics, Hydraulics, Hydrology and Hydraulic Engineering; Hydraulic Engineering I and Hydraulic Engineering II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to define in detail the basic processes that are related to the modelling of flows in hydraulic engineering. Besides, they can describe the basic aspects of numerical modelling and actual numerical models for the simulation of flows and waves. They can also depict the concepts of nature oriented hydraulic engineering.			
<i>Skills</i>	Students are able to apply hydrodynamic-numerical models to practical hydraulic engineering tasks. Furthermore, the students are able to set up flood-risk management concepts and are able to apply basic concepts of renaturation to practical problems.			
Personal Competence				
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to work in team with engineers of other disciplines.			
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Contaminated Sites and Landfilling (L0906)	Lecture	2	2
Contaminated Sites and Landfilling (L0907)	Recitation Section (large)	1	2
Geochemical Engineering (L0904)	Lecture	2	2
Module Responsible	Dr. Marco Ritzkowski		
Admission Requirements	None		
Recommended Previous Knowledge	Module: General and Inorganic Chemistry, Module: Organic Chemistry, Biology (Basic Knowledge)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	With the completion of this module students acquire profound knowledge of biogeochemical processes, the fate of pollutants in soil and groundwater, and techniques to deposit contaminated waste material. They are able to describe in principle the behaviour of chemicals in the environment. Students can explain and report the approach to remediate contaminated sites.		
<i>Skills</i>	With the completion of this module students can apply the acquired theoretical knowledge to model cases of site pollution and critically assess the situation technically and conceptually. They are able to draw comparisons on different remediation strategies and techniques. Model projects can be devised and treated.		
Personal Competence			
<i>Social Competence</i>	Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .		
<i>Autonomy</i>	Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.

Content	<p>The part Contaminated Sites gives an introduction into different scales of pollution and identifies key pollutants. Geochemical attenuation mechanisms and the role of organisms are highlighted affecting the fate of pollutants in leachate and groundwater. Techniques for site characterization and remediation are discussed including economical aspects.</p> <p>The part Landfilling is introduced by discussing fundamental aspects and the worldwide situation of waste management. The lecture highlights transformation processes in landfill bodies, emissions of gases and leachate, and the long-term behaviour of landfill sites with measures of aftercare.</p>

Content	As an introduction cases are presented in which geochemical engineering was used to solve environmental problems. Environmentally important minerals are discussed and methods for their detection. It is demonstrated how solution equilibria can be modified to eliminate elevated concentrations of unwanted species in solution and how carbon dioxide concentration affects pH and the dissolution of carbonate minerals. Modifications of redox conditions, pH, and electrolyte concentration are shown to be effective tools for controlling the mobility and fate of hazardous species in the environment.

Module M1724: Smart Monitoring			
Courses			
Title	Typ	Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture	2	2
Smart Monitoring (L2763)	Recitation Section (small)	2	4
Module Responsible	Prof. Kay Smarsly		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.		
<i>Skills</i>

Course L2762: Smart Monitoring	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.
Literature	

Course L2763: Smart Monitoring	
Typ	Recitation Section (small)
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones				
Courses				
Title		Typ	Hrs/wk	CP
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)		Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)		Lecture	2	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.			
	Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.			
<i>Skills</i>	Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.			
Personal Competence				
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Subject theoretical and practical work			
Examination duration and scale	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Module M0822: Process Modeling in Water Technology			
Courses			
Title		Typ	Hrs/wk CP
Process Modelling of Wastewater Treatment (L0522)		Project-/problem-based Learning	2 3
Process Modeling in Drinking Water Treatment (L0314)		Project-/problem-based Learning	2 3
Module Responsible	Dr. Klaus Johannsen		
Admission Requirements	None		
Recommended Previous Knowledge	Knowledge of the most important processes in drinking water and waste water treatment.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to explain selected processes of drinking water and waste water treatment in detail. They are able to explain basics as well as possibilities and limitations of dynamic modeling.		
<i>Skills</i>	Students are able to use the most important features Modelica offers. They are able to transpose selected processes in drinking water and waste water treatment into a mathematical model in Modelica with respect to equilibrium, kinetics and mass balances. They are able to set up and apply models and assess their possibilities and limitations.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve problems and document solutions in a group with members of different technical background. They are able to give appropriate feedback and can work constructively with feedback concerning their work.		
<i>Autonomy</i>	Students are able to define a problem, gain the required knowledge and set up a model.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Oral exam		
Examination duration and scale	30 min

Cycle	WiSe
Content	<p>In this course selected drinking water treatment processes (e.g. aeration or activated carbon adsorption) are modeled dynamically using the programming language Modelica, that is increasingly used in industry. In this course OpenModelica is used, an free access frontend of the programming language Modelica.</p> <p>In the beginning of the course the use of OpenModelica is explained by means of simple examples. Together required elements and structure of the model are developed. The implementation in OpenModelica and the application of the model is done individually or in groups respectively. Students get feedback and can gain extra points for the exam.</p>

Module M0619: Waste Treatment Technologies				
Courses				
Title		Typ	Hrs/wk	CP
Waste and Environmental Chemistry (L0328)		Practical Course	2	2
Biological Waste Treatment (L0318)		Project-/problem-based Learning	3	4
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	chemical and biological basics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherché and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
Personal Competence				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module M0620: Special Aspects of Waste Resource Management				
Courses				
Title		Typ	Hrs/wk	CP
Advanced Topics in Waste Resource Management (L1055)		Project-/problem-based Learning	3	3
International Waste Management (L0317)		Project-/problem-based Learning	2	3
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	basics in waste treatment technologies			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students are able to describe waste as a resource as well as advanced technologies for recycling and recovery of resources from waste in detail. This covers collection, transport, treatment and disposal in national and international contexts.			
<i>Skills</i>	Students are able to select suitable processes for the treatment with respect to the national or cultural and developmental context. They can evaluate the ecological impact and the technical effort of different technologies and management systems.			
Personal Competence				
<i>Social Competence</i>	Students can work together as a team of 2-5 persons, participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development of colleagues. Furthermore, they can give and accept professional constructive criticisms.			
<i>Autonomy</i>	Students can independently gain additional knowledge of the subject area and apply it in solving the given course tasks and projects.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	Yes	20 %	Written elaboration	
Examination	Presentation			
Examination duration and scale	PowerPoint presentation (10-15 minutes)

Course L1055: Advanced Topics in Waste Resource Management	
Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Rüdiger Siechau
Language	EN
Cycle	WiSe
Content	<p>Focus of the course "Advanced topics of waste resource management" lies on the organisational structures in waste management - such as planning, financing and logistics. One excursion will be offered to take part in (incineration plant, vehicle fleet and waste collection systems).</p> <p>The course is split into two parts:</p> <ol style="list-style-type: none"> part: "Conventional" lecture (development of waste management, legislation, collection, transportation and organisation of waste management, costs, fees and revenues). part: Project base learning: You will get a project to work out in groups of 4 to 6 students; all tools and data you need to work out the project were given before during the conventional lecture. Course documents are published in StudIP and communication during project work takes place via StudIP. <p>The results of the project work are presented at the end of the semester. The final mark for the course consists of the grade for the presentation.</p>

Module M0713: Concrete Structures				
Courses				
Title		Typ	Hrs/wk	CP
Concrete Structures (L0579)		Seminar	1	1
Structural Concrete Members (L0577)		Lecture	2	3
Structural Concrete Members (L0578)		Recitation Section (large)	2	2
Module Responsible	Prof. Günter Rombach			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of structural analysis, conception and dimensioning of structural concrete Modules: Reinforced Concrete Structures I+II, Structural Analysis I+II, Mechanics I+II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students broaden their skills in structural engineering, especially in the field of buildings (houses, roofs, halls). They dispose of the knowledge for the conception and design of concrete buildings and structural members that are often used.			
<i>Skills</i>	The students are able to apply procedures of the conception and dimensioning to practical problems of structural engineering. They are capable to draft concrete buildings and to design them for general action effects and to plan their detailing and execution. Moreover, they can make design and construction sketches and draw up technical descriptions.			
Personal Competence				
<i>Social Competence</i>	The students are able to obtain results of high quality in teamwork.			
<i>Autonomy</i>	The students are able to carry out complex conception and dimensioning tasks of structures under the guidance of tutors.

Module M0581: Water Protection				
Courses				
Title		Typ	Hrs/wk	CP
Water Protection and Wastewater Management (L0226)		Lecture	3	3
Water Protection and Wastewater Management (L2008)		Project Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge in water management; • Good knowledge in urban drainage; • Good knowledge of wastewater treatment techniques; • Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties; 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.			
<i>Skills</i>	Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.			
Personal Competence				
<i>Social Competence</i>	The students can work together in international groups.			
<i>Autonomy</i>	Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Presentation			
Examination duration and scale	Term paper plus presentation

Module M0699: Geotechnics III				
Courses				
Title		Typ	Hrs/wk	CP
Numerical Methods in Geotechnics (L0375)		Lecture	3	3
Advanced Foundation Engineering (L0497)		Lecture	2	2
Advanced Foundation Engineering (L0498)		Recitation Section (large)	1	1
Module Responsible	Prof. Jürgen Grabe			
Admission Requirements	None			
Recommended Previous Knowledge	Geotechnics I and II, Mathematics I-III			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	After successfully completing the module, students will be able to			
<i>Knowledge</i>	<ul style="list-style-type: none"> describe individual procedures for the geotechnical monitoring of civil engineering measures, reproduce exploration and investigation methods of the subsoil, select suitable types of field and laboratory tests for subsoil investigation and evaluate their results, state the differences between various stress and deformation states and the physical significance of invariants of the stress and distortion tensor, outline the standard and special soil mechanics tests used to determine the stress-strain behavior of soil, describe continuum models and the resulting boundary value problems, as well as define boundary value problems from the field of geotechnical engineering in such a way that they can be solved unambiguously. 			
<i>Skills</i>	Students will be able to <ul style="list-style-type: none"> dimension vertical drains for soil improvement of soft soils, calculate depth compaction using various appropriate methods, apply principles of horizontal bearing capacity of piles, verify the internal and external stability of fluid-supported diaphragm walls, evaluate the boundary conditions for the design of a deep excavation and design the individual components of the excavation, perform, evaluate and interpret tests for the description and classification of soils according to applicable standards, computationally implement numerical algorithms to solve boundary value problems, select and apply the types of analyses depending on the degree of saturation, the impact, and the material behavior determine appropriate model parameters for different possibilities and limitations of material models for the grain structure of soils. 			
Personal Competence	Students can work in groups and support each other in finding solutions.			
<i>Social Competence</i>				
<i>Autonomy</i>	Students are able to assess their own strengths and weaknesses and, based on this, organize their time and learning management and think in terms of processes.

Courses			
Title	Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)	Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)	Lecture	2	2
Subsurface Solute Transport (L2729)	Recitation Section (large)	1	1
Module Responsible	Prof. Nima Shokri		
Admission Requirements	None		
Recommended Previous Knowledge	Basic Mathematics, Hydrology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.</p> <p><i>Skills</i> In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</p>		
Personal Competence	<p><i>Social Competence</i> Teamwork & problem solving</p> <p><i>Autonomy</i> The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.</p>

Module M1401: Study work Water and Traffic			
Courses			
Title	Typ	Hrs/wk	CP
Module Responsible	Dozenten des SD B		
Admission Requirements	None		
Recommended Previous Knowledge	Subjects of the Water Management and Waste specialisation.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to demonstrate their detailed knowledge in the field of water management and waste. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in the field of water management and waste. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p> <p><i>Skills</i> The students are able to independently select methods or planning approaches for the project work and to justify their choice. They can explain how these methods or approaches relate to solutions in the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p> <p><i>Autonomy</i> The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>

Module M1720: Emerging Trends in Environmental Engineering				
Courses				
Title		Typ	Hrs/wk	CP
Environmental Research Trends (L2752)		Seminar	2	2
Microplastics in Environment (L2750)		Lecture	2	2
Scientific Communication and Methods (L2751)		Lecture	1	2
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge on water, soil and environmental research.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students will be exposed to up-to-date research topics focused on soil, water and climate related challenges with a particular focus on the effects of microplastics in environment. Data analysis, data measurement, curation and presentation will be other skills that the students will develop in this module.			
<i>Skills</i>	Students' research skills will be improved in this module. How to prepare and deliver an effective presentation, how to write an abstract, research paper and proposal will be discussed in this module. Moreover, through Research-Based Learning approaches, the students will be exposed to current research trends in environmental engineering.			
Personal Competence				
<i>Social Competence</i>	Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.			
<i>Autonomy</i>	The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.

Module M0802: Membrane Technology				
Courses				
Title		Typ	Hrs/wk	CP
Membrane Technology (L0399)		Lecture	2	3
Membrane Technology (L0400)		Recitation Section (small)	1	2
Membrane Technology (L0401)		Practical Course	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of water chemistry. Knowledge of the core processes involved in water, gas and steam treatment			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will be able to rank the technical applications of industrially important membrane processes. They will be able to explain the different driving forces behind existing membrane separation processes. Students will be able to name materials used in membrane filtration and their advantages and disadvantages. Students will be able to explain the key differences in the use of membranes in water, other liquid media, gases and in liquid/gas mixtures.			
<i>Skills</i>	Students will be able to prepare mathematical equations for material transport in porous and solution-diffusion membranes and calculate key parameters in the membrane separation process. They will be able to handle technical membrane processes using available boundary data and provide recommendations for the sequence of different treatment processes. Through their own experiments, students will be able to classify the separation efficiency, filtration characteristics and application of different membrane materials. Students will be able to characterise the formation of the fouling layer in different waters and apply technical measures to control this.			
Personal Competence				
<i>Social Competence</i>	Students will be able to work in diverse teams on tasks in the field of membrane technology. They will be able to make decisions within their group on laboratory experiments to be undertaken jointly and present these to others.			
<i>Autonomy</i>	Students will be in a position to solve homework on the topic of membrane technology independently. They will be capable of finding creative solutions to technical questions.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam

Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Bioprocess Engineering: Specialisation B - Industrial Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0399: Membrane Technology	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Mathias Ernst
Language	EN
Cycle	WiSe
Content	<p>The lecture on membrane technology supply provides students with a broad understanding of existing membrane treatment processes, encompassing pressure driven membrane processes, membrane application in electrodialysis, pervaporation as well as membrane distillation. The lectures main focus is the industrial production of drinking water like particle separation or desalination; however gas separation processes as well as specific wastewater oriented applications such as membrane bioreactor systems will be discussed as well.</p> <p>Initially, basics in low pressure and high pressure membrane applications are presented (microfiltration, ultrafiltration, nanofiltration, reverse osmosis). Students learn about essential water quality parameter, transport equations and key parameter for pore membrane as well as solution diffusion membrane systems. The lecture sets a specific focus on fouling and scaling issues and provides knowledge on methods how to tackle with these phenomena in real water treatment application. A further part of the lecture deals with the character and manufacturing of different membrane materials and the characterization of membrane material by simple methods and advanced analysis.</p> <p>The functions, advantages and drawbacks of different membrane housings and modules are explained. Students learn how an industrial membrane application is designed in the succession of treatment steps like pre-treatment, water conditioning, membrane integration and post-treatment of water. Besides theory, the students will be provided with knowledge on membrane demo-site examples and insights in industrial practice.</p>

Module M1725: Scientific Working in Computational Engineering				
Courses				
Title	Scientific Working in Computational Engineering (L2764)	Typ	Project-/problem-based Learning	Hrs/wk 4 CP 6
Module Responsible	Prof. Kay Smarsly			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in scientific writing. String interest in topics related to computing in civil engineering.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p>The students will learn to apply concepts and methods of scientific working in computational engineering. In interaction with the course instructors and in collaboration with each other, the students will also learn to understand the complex process of scientific thinking, being able to accurately plan, implement and analyze scientific projects, such as prospective master theses. A project will be conducted throughout the semester, which will contribute to the grade. Since scientific writing is of particular importance in this course, a scientific paper will be developed based, which is a prerequisite for the final examination. The paper will be written based on the project conducted within this course. Project meetings in small groups, presentations, and critical discussions of scientific publications are further key activities.</p>

Course L2764: Scientific Working in Computational Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Kay Smarsly
Language	EN
Cycle	WiSe/SoSe
Content	In the course, a scientific problem of practical relevance will first be defined, taking into account the interests of the students participating in the course. The scientific problem will then systematically be solved within the framework of a comprehensive project. The principles of scientific working will be taught based on the scientific problem defined previously. As an integral part of scientific working, fundamentals of scientific writing will be presented and applied to a scientific paper to be written during the course. Topics related to scientific writing include structuring in scientific writing (structuring the abstract, the introduction, the main part, the summary and conclusions, and the acknowledgments and references) and recommendations on effective scientific writing (principles of composition, use of English in scientific writing, useful tips, creating figures, writing in mathematics, referencing, and formal email correspondence). A final paper and a final presentation will be assembled by the students.

Design of Prefabricated Concrete Structures (L0596)	Lecture 1 1
Design of Prefabricated Concrete Structures (L0597)	Recitation Section (large) 1 1
Forum I - Geotechnics and Construction Management (L1634)	Seminar 1 1
Forum II - Geotechnics and Construction Management (L1635)	Seminar 1 1
Geotechnical Engineering Design (L2447)	Lecture 2 3
Timber Structures (L1151)	Seminar 2 2
Innovative Timber Construction (L2666)	Lecture 2 3
Glass Structures (L1152)	Lecture 2 2
Glass Structures (L1447)	Recitation Section (large) 1 1
Testing and non-destructive examination of concrete members (L2725)	Project-/problem-based Learning 2 2
Special topics of civil engineering 1CP (L2378)	1 1
Special topics of civil engineering 2 LP (L2379)	2 2
Special topics of civil engineering 3 LP (L2380)	3 3
Structural Design (L2789)	Seminar 2 2
Module Responsible	Prof. Frank Schmidt-Döhl
Admission Requirements	None
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"> Students are able to find their way through selected special areas within civil and structural engineering. Students are able to explain basic models and procedures in selected special areas of civil and structural engineering. Students are able to interrelate scientific and technical knowledge.
<i>Skills</i>	<ul style="list-style-type: none"> Students are able to apply basic methods in selected areas of civil and structural engineering.
Personal Competence <i>Social Competence</i> <i>Autonomy</i>	--- <ul style="list-style-type: none"> Students can chose independently, in which fields they want to deepen their knowledge and skills through the election of courses.
Workload in Hours	Depends on choice of courses
Credit points	6
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory

Course L0653: Ergonomics	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	NN
Language	DE
Cycle	WiSe
Content	
Literature	

Course L0708: Construction robotics	
Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Examination Form	Mündliche Prüfung
Examination duration and scale	15 min
Lecturer	Prof. Jürgen Grabe
Language	DE
Cycle	WiSe
Content	The students learn in the lecture the required knowledge in control systems to apply it to a specific project-based geotechnical problem. In a two-weeks time frame, students can test developed control strategies in the lab and present their results. At the end of the lecture, students will have an oral examination.
Literature	Ogata, Katsuhiko. Modern control engineering. Vol. 5. Upper Saddle River, NJ: Prentice hall, 2010. Ross, Timothy J. Fuzzy logic with engineering applications. John Wiley & Sons, 2005.

Course L1867: Analysis of Offshore Structures	
Typ	Lecture
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Dr. Said Fawad Mohammadi
Language	DE/EN
Cycle	SoSe
Content	Topic 1: Types of Offshore Structures, Fixed and floating structures for Oil & Gas and Offshore Wind industry Topic 2: Wave Forces, Morisons equation Topic 3: Irregular Seastates, Power spectrum and application of FFT Topic 4: Additional Environmental Forces, wind spectra, current forces Topic 5: Linear-Time-Invariant Systems, response of an LTI-system in frequency domain Topic 6: Tubular Welded Connections, stress concentration factors, weld geometry Topic 7: Introduction to Fracture Mechanics, criteria for fracture initiation and crack growth Topic 8: Time and Frequency Domain Fatigue Analyses, rainflow counting, application of LTI-systems for frequency domain fatigue Topic 9: Offshore Installation and Exam, installation of structures, pile driving, pipe laying techniques
Literature	Chakrabarti, Handbook of Offshore Engineering, 2005 Sarpkaya, Wave Forces on Offshore Structures, 2010 Faltinsen, Sea Loads on Ships and Offshore Structures, 1998 Sorensen, Basic Coastal Engineering, 2006 Dowling, Mechanical Behavior of Materials, 2007 Haibach, Betriebsfestigkeit, 2006 Marshall, Design of Welded Tubular Connections, 1992 Newland, Random vibrations, spectral and wavelet analysis, 1993

Course L2387: Excellence in International Project Delivery	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	2 h
Lecturer	Dr. Jens Huckfeldt
Language	EN
Cycle	SoSe
Content	Simply and easy to avoid mistake in project delivery can deliver projects within budget and as per schedule. You have to attend if you see yourself in project execution and potentially even abroad.
Literature	

Course L0596: Design of Prefabricated Concrete Structures	
Typ	Lecture
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Klausur
Examination duration and scale	60 min
Lecturer	Prof. Günter Rombach
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • application and advantages and disadvantages of precast concrete structures • basics of design - precast element production - construction - tolerances • elements of a warehouse • design of a beam - joints • design of D-regions: half joints, corbels, openings • slab types - walls - facades • footings: pocket and block foundations • joints - connections • shear design of the interface between concrete cast at different times • unreinforced concrete structures

Course L2447: Geotechnical Engineering Design	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Schriftliche Ausarbeitung
Examination duration and scale	45 Min.
Lecturer	Prof. Jürgen Grabe, Dr. Tim Pucker
Language	DE
Cycle	WiSe
Content	<p>The focus of the course is on the design of geotechnical structures. Methods and fundamental approaches for the successful processing of geotechnical designs are taught. Theoretical approaches are backed up with examples from everyday work in industry. In parallel to the theoretical content, students are given a practical task for a geotechnical design at beginning of the course, which will be worked on in small teams. In addition to the application of the already acquired technical knowledge, topics like realisation, construction sequence planning, cost calculation, optimisation and evaluation criteria are also part of the course.</p> <p>The event will be finished with the presentation of the designs.</p>
Literature	

Course L1151: Timber Structures	
Typ	Seminar
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Referat
Examination duration and scale	90 min
Lecturer	Prof. Torsten Faber
Language	DE
Cycle	WiSe

Thesis

Module M-002: Master Thesis

Courses

Title	Typ	Hrs/wk	CP
Module Responsible	Professoren der TUHH		
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §21 (1): <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"> The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues. The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them. The students can place a research task in their subject area in its context and describe and critically assess the state of research. 		
Skills	<p>The students are able:</p> <ul style="list-style-type: none"> To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question. To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way. To develop new scientific findings in their subject area and subject them to a critical assessment. 		
Personal Competence <i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way. Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly. 		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> To structure a project of their own in work packages and to work them off accordingly. To work their way in depth into a largely unknown subject and to access the information required for them to do so. To apply the techniques of scientific work comprehensively in research of their own. 		
Workload in Hours	Independent Study Time 900, Study Time in Lecture 0		
Credit points	30		
Course achievement	None		
Examination	Thesis
