

## **Module Manual**

Bachelor of Science (B.Sc.)

# **Civil- and Environmental Engineering**

Cohort: Winter Term 2023

Updated: 5th August 2024

# Table of Contents

Table of Contents	2
Program description	4
Core Qualification	5
Module M0687: Chemistry	5
Module M0850: Mathematics I	7
Module M1802: Engineering Mechanics I (Stereostatics)	9
Module M1631: Engineering Informatics	11
Module M0577: Non-technical Courses for Bachelors	14
Module M0580: Principles of Building Materials and Building Physics	16
Module M0590: Building Materials and Building Chemistry	18
Module M0660: Construction Industry and Construction Management	19
Module M0851: Mathematics II	21
Module M1627: Water and Environment	23
Module M1803: Engineering Mechanics II (Elastostatics)	24
Module M0740: Structural Analysis I	26
Module M0706: Geotechnics I	28
Module M1082: Mathematics III - Differential Equations I	30
Module M2037: Structural Design	32
Module M2047: Hydromechanics and Hydrology	36
Module M0613: Reinforced Concrete Structures I	38
Module M0744: Structural Analysis II	40
Module M0686: Sanitary Engineering I	42
Module M0611: Steel Structures I	45
Module M1953: Applications in Civil + Environmental Engineering	47
Module M0869: Hydraulic Engineering	53
Specialization Civil Engineering	55
Module M0755: Geotechnics II	55
Module M0983: Mobility Concepts	57
Module M1628: Sustainable Building	59
Module M1715: Renewable Energies	61
Module M0631: Reinforced Concrete Structures II	64
Module M0829: Foundations of Management	66
Module M1887: Transportation Planning and Traffic Engineering	69
Module M2023: Structural Analysis III	71
Module M1633: Planning Law and Environmental Law/ Sustainable Urban Development	72
Module M0612: Steel Structures II	73
Module M0985: Introduction to Railways	75
Module M1632: Applied Water Management	77
Module M1630: Sanitary Engineering II	79
Module M1723: Building Information Modeling	81
Specialization Traffic and Mobility	83
Module M0983: Mobility Concepts	83
Module M0755: Geotechnics II	85
Module M1628: Sustainable Building	87
Module M1715: Renewable Energies	89
Module M0631: Reinforced Concrete Structures II	92
Module M1887: Transportation Planning and Traffic Engineering	94
Module M0829: Foundations of Management	96
Module M0985: Introduction to Railways	99
Module M1629: Geoinformation Science	101
Module M1633: Planning Law and Environmental Law/ Sustainable Urban Development	102
Module M0612: Steel Structures II	103
Module M1630: Sanitary Engineering II	105
Module M1632: Applied Water Management	107
Module M1723: Building Information Modeling	109
Specialization Water and Environment	111
Module M1628: Sustainable Building	111
Module M0755: Geotechnics II	113
Module M0983: Mobility Concepts	115
Module M1715: Renewable Energies	117
Module M0631: Reinforced Concrete Structures II	120
Module M0829: Foundations of Management	122
Module M1722: New Trends in Water and Environmental Research	125
Module M1887: Transportation Planning and Traffic Engineering	127
Module M1629: Geoinformation Science	129
Module M1630: Sanitary Engineering II	130
Module M0985: Introduction to Railways	132
Module M0612: Steel Structures II	134
Module M1633: Planning Law and Environmental Law/ Sustainable Urban Development	136
Module M1723: Building Information Modeling	137
Module M1632: Applied Water Management	139

Thesis	141
Module M-001: Bachelor Thesis	141

### **Content**

### **Program structure**

**Core Qualification**

Module M0687: Chemistry			
Courses			
Title	Typ	Hrs/wk	CP
Chemistry I+II (L0460)	Lecture	4	4
Chemistry I+II (L0475)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Dr. Dorothea Rechtenbach		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to name and to describe basic principles and applications of general chemistry (structure of matter, periodic table, chemical bonds), physical chemistry (aggregate states, separating processes, thermodynamics, kinetics), inorganic chemistry (acid/base, pH-value, salts, solubility, redox, metals) and organic chemistry (aliphatic hydrocarbons, functional groups, carbonyl compounds, aromates, reaction mechanisms, natural products, synthetic polymers). Furthermore students are able to explain basic chemical terms.</p> <p><i>Skills</i> After successful completion of this module students are able to describe substance groups and chemical compounds. On this basis, they are capable of explaining, choosing and applying specific methods and various reaction mechanisms.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to take part in discussions on chemical issues and problems as a member of an interdisciplinary team. They can contribute to those discussion by their own statements.</p> <p><i>Autonomy</i> After successful completion of this module students are able to solve chemical problems independently by defending proposed approaches with arguments. They can also document their approaches.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0460: Chemistry I+II	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Dr. Christoph Wutz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Chemistry I:</p> <ul style="list-style-type: none"> <li>- Structure of matter</li> <li>- Periodic table</li> <li>- Electronegativity</li> <li>- Chemical bonds</li> <li>- Solid compounds and solutions</li> <li>- Chemistry of water</li> <li>- Chemical reactions and equilibria</li> <li>- Acid-base reactions</li> <li>- Redox reactions</li> </ul> <p>Chemistry II:</p> <ul style="list-style-type: none"> <li>- Simple compounds of carbon, aliphatic hydrocarbons, aromatic hydrocarbons,</li> <li>- Alcohols, phenols, ether, aldehydes, ketones, carbonic acids, ester, amines, amino acids, fats, sugars</li> <li>- Reaction mechanisms, radical reactions, nucleophilic substitution, elimination reactions, addition reaction</li> <li>- Practical applications and examples</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>- Blumenthal, Linke, Vieth: Chemie - Grundwissen für Ingenieure</li> <li>- Kickelbick: Chemie für Ingenieure (Pearson)</li> <li>- Mortimer: Chemie. Basiswissen der Chemie.</li> <li>- Brown, LeMay, Bursten: Chemie. Studieren kompakt.</li> <li>- Schmuck: Basisbuch Organische Chemie (Pearson)</li> </ul>

Course L0475: Chemistry I+II	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Dorothea Rechtenbach
<b>Language</b>	DE

Module M0850: Mathematics I				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Mathematics I (L2970)		Lecture	4	4
Mathematics I (L2971)		Recitation Section (large)	2	2
Mathematics I (L2972)		Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Anusch Taraz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	School mathematics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>• Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>• Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

Module M1802: Engineering Mechanics I (Stereostatics)			
Courses			
Title	Typ	Hrs/wk	CP
Engineering Mechanics I (Statics) (L1001)	Lecture	2	3
Engineering Mechanics I (Statics) (L1003)	Recitation Section (large)	1	1
Engineering Mechanics I (Statics) (L1002)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Benedikt Kriegesmann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Solid school knowledge in mathematics and physics.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students can</p> <ul style="list-style-type: none"> <li>describe the axiomatic procedure used in mechanical contexts;</li> <li>explain important steps in model design;</li> <li>present technical knowledge in stereostatics.</li> </ul> <p><i>Skills</i> The students can</p> <ul style="list-style-type: none"> <li>explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>apply basic statical methods to engineering problems;</li> <li>estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can work in groups and support each other to overcome difficulties.</p> <p><i>Autonomy</i> Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Data Science: Specialisation II. Application: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Integrated Building Technology: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory  Mechatronics: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Naval Architecture: Core Qualification: Compulsory Process Engineering: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory		

Course L1001: Engineering Mechanics I (Statics)	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Tasks in Mechanics</li> <li>• Modelling and model elements</li> <li>• Vector calculus for forces and torques</li> <li>• Forces and equilibrium in space</li> <li>• Constraints and reactions, characterization of constraint systems</li> <li>• Planar and spatial truss structures</li> <li>• Internal forces and moments for beams and frames</li> <li>• Center of mass, volumn, area and line</li> <li>• Computation of center of mass by intergals, joint bodies</li> <li>• Friction (sliding and sticking)</li> <li>• Friction of ropes</li> </ul>
<b>Literature</b>	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Course L1003: Engineering Mechanics I (Statics)	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Forces and equilibrium Constraints and reactions Frames Center of mass Friction Internal forces and moments for beams
<b>Literature</b>	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Course L1002: Engineering Mechanics I (Statics)	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Forces and equilibrium Constraints and reactions Frames Center of mass Friction Internal forces and moments for beams
<b>Literature</b>	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Module M1631: Engineering Informatics				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Databases (L2758)		Integrated Lecture	1	1
Databases (L2759)		Recitation Section (small)	1	1
Object-oriented Modelling (L2468)		Integrated Lecture	2	2
Object-oriented Modelling (L2469)		Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Kay Smarsly			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Students can describe and analyze existing software programs in the discipline based on their essential characteristics. The students are able to reproduce the elementary basics and theoretical concepts of engineering informatics and to apply elementary solution algorithms to engineering problems. They are also able to define database principles and make simple queries to common database systems.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	Fundamentals of (i) object-oriented modeling and (ii) database design will be presented. The students will be able to develop and to modify software as well as database systems required in the area of civil and environmental engineering. In part (i), the students will become familiar with fundamentals of engineering informatics programming methodologies, objects and classes, methods, functions, and procedures, UML notation (such as association, aggregation and composition), control structures, exception handling, data streams, inheritance, abstract classes and interfaces, data structures (e.g. associative memory with particular emphasis on hash tables and tree structures), algorithms and generic programming. Part (ii) follows the database design process and primarily covers conceptual design and semantics of database models (with emphasis on the Entity-Relationship Model), logical design (including integrity constraints, anomalies and normalization), relational algebra, relational query languages and SQL, database views, physical database design and implementation, concepts of database application development (JDBC) as well as data integration and data exchange in civil engineering.			
<i>Skills</i> <b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>				
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	15 %	Written elaboration	Als Prüfungsvorleistung wird ein schriftlicher Beleg angefertigt. Der Beleg umfasst die bis dahin bekannten Lehrinhalte und dient u.a. dazu, die Studierenden auf die Klausur vorzubereiten.
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	180 min			
<b>Assignment for the Following Curricula</b>	Civil- and Environmental Engineering: Core Qualification: Compulsory Civil- and Environmental Engineering: Specialisation Civil Engineering: Elective Compulsory Civil- and Environmental Engineering: Specialisation Traffic and Mobility: Elective Compulsory Civil- and Environmental Engineering: Specialisation Water and Environment: Elective Compulsory

Module M0577: Non-technical Courses for Bachelors	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>The Non-technical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
<b>Skills</b>	<p><b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic methods of the said scientific disciplines,</li> <li>• question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple questions in aforementioned scientific disciplines in a successful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	<p><b>Personal Competences (Social Skills)</b></p> <p>Students will be able</p> <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> </ul>

## Module Manual B.Sc. "Civil- and Environmental Engineering"

<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> <p><b>Personal Competences (Self-reliance)</b></p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

### Courses

**Information regarding lectures and courses can be found in the corresponding module handbook published separately.**

Module M0580: Principles of Building Materials and Building Physics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Building Physics (L0217)	Lecture	2	2
Building Physics (L0219)	Recitation Section (large)	1	1
Building Physics (L0247)	Recitation Section (small)	1	1
Principles of Building Materials (L0215)	Lecture	2	2
<b>Module Responsible</b>	Prof. Frank Schmidt-Döhl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of physics, chemistry and mathematics from school		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	The students are able to identify fundamental effects of action to materials and structures, to explain different types of mechanical behaviour, to describe the structure of building materials and the correlations between structure and other properties, to show methods of joining and of corrosion processes and to describe the most important regularities and properties of building materials and structures and their measurement in the field of protection against moisture, coldness, fire and noise.		
<i>Knowledge</i>			
<i>Skills</i>	The students are able to work with the most important standardized methods and regularities in the field of moisture protection, the German regulation for energy saving, fire protection and noise protection in the case of a small building.		
<b>Personal Competence</b>	The students are able to support each other to learn the very extensive specialist knowledge.		
<i>Social Competence</i>			
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2 h written exam		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Integrated Building Technology: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0217: Building Physics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Frank Schmidt-Döhl
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Heat transport, thermal bridges, balances of energy consumption, German regulation for energy saving, heat protection in summer, moisture transport, condensation moisture, protection against mold, fire protection, noise protection
<b>Literature</b>	Fischer, H.-M. ; Freymuth, H.; Häupl, P.; Homann, M.; Jenisch, R.; Richter, E.; Stohrer, M.: Lehrbuch der Bauphysik. Vieweg und Teubner Verlag, Wiesbaden, ISBN 978-3-519-55014-3

Course L0219: Building Physics	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Frank Schmidt-Döhl
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module Manual B.Sc. "Civil- and Environmental Engineering"

Course L0247: Building Physics	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Frank Schmidt-Döhl
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0215: Principles of Building Materials	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Frank Schmidt-Döhl
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Structure of building materials Effects of action Fundamentals of mechanical behaviour  Material testing  Principles of metals  Joining methods
<b>Literature</b>	Wendehorst, R.: Baustoffkunde. ISBN 3-8351-0132-3  Scholz, W.:Baustoffkenntnis. ISBN 3-8041-4197-8

Module M0590: Building Materials and Building Chemistry			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Building Materials and Building Chemistry (L0248)		Lecture	4                  4
Building Materials and Building Chemistry (L0249)		Recitation Section (small)	1                  2
<b>Module Responsible</b>	Prof. Frank Schmidt-Döhl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module Principles of Building Materials and Building Physics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to explain the most important components, the manufacture, the structure, the most important characteristics of the mechanical behaviour and the corrosion behaviour, the material testing and the fields of utilization of all relevant building materials.		
<i>Skills</i>	The students are able to assess the usability of building materials for different applications and to select building materials according to their specific advantages and disadvantages. The students are able to prepare the mixture of a normal type concrete and to consider the mixture in respect to the actual rules and the connections between the characteristic concrete parameters. They are able to select suitable materials and mixtures to avoid damage processes.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to support each other to learn the very extensive specialist knowledge in learning groups and to carry out exercises in small groups in the lab.		
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b> <b>Description</b>
	No	10 %	Presentation
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2 h written exam		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Integrated Building Technology: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory		

Course L0248: Building Materials and Building Chemistry	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Frank Schmidt-Döhl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Cementing materials, aggregates, admixtures and other components in mortar and concrete, concrete, durability of cement bonded materials, repair of concrete structures, steel, cast iron, non-ferrous metals, metal corrosion, timber, plastics, natural stone, synthetic stones, mortar, masonry, glass, bitumen
<b>Literature</b>	Wendehorst, R.: Baustoffkunde. ISBN 3-8351-0132-3 Scholz, W.: Baustoffkenntnis. ISBN 3-8041-4197-8 Henning, O.; Knöfel, D.: Baustoffchemie. ISBN 3-345-00799-1 Knoblauch, H.; Schneider, U.: Bauchemie. ISBN 3-8041-5174-4

Course L0249: Building Materials and Building Chemistry	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14

<b>Literature</b>	See interlocking course

Module M0660: Construction Industry and Construction Management			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Construction Management (L0396)		Lecture	2
Construction Management (L0397)		Recitation Section (large)	1
Law of Building Contracts (L0408)		Lecture	1
Environmental Law (L0346)		Lecture	1
<b>Module Responsible</b>	Prof. Jürgen Grabe		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After successful completion of the module, students are able to		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• understand basic knowledge of construction management,</li> <li>• choose appropriate methods of construction project management to solve problems,</li> <li>• capture basic structures and antagonisms of European environmental legislation,</li> <li>• locate and apply relevant environmental regulations</li> <li>• implement any environmental regulation to the realisation of an construction project and to capture the significance for the civil engineer</li> <li>• recognize basic structures of general civil and construction law as well as standards for construction works</li> <li>• capture the content of contracts which are important for building design and execution.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 minutes		
<b>Assignment for the Following Curricula</b>	Civil- and Environmental Engineering: Core Qualification: Compulsory		

Course L0396: Construction Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Jürgen Grabe
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Project development</li> <li>• Project management</li> <li>• Announcement</li> <li>• Order acquisition</li> <li>• Project execution</li> <li>• Project supervision</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Vorlesungsskript, s. www.tuhh.de/gbt</li> <li>• Baugeräteliste BGL</li> <li>• Honorarordnung für Architekten und Ingenieure HOAI</li> <li>• Verdingungsordnung im Bauwesen VOB mit Kommentaren</li> </ul>

Course L0397: Construction Management	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Jürgen Grabe
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0408: Law of Building Contracts	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Daniel Waterstraat
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Detecting the legal foundations and connections of construction law</li> <li>• Awareness of legal "Control points" in the construction contract and the construction process</li> <li>• Construction contract law according to the BGB and VOB</li> <li>• public procurement according to national and EU laws</li> <li>• Engineers law</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Axel Maser, Baurecht nach BGB und VOB/B Grundlagenwissen für Architekten und Ingenieure, Id Verlag 1., Auflage 2005, 28,00 €</li> <li>• Schmeel ATB Baurecht, Auflage 2002, 34,80 €</li> <li>• Werner / Pastor, Der Bauprozess 11. Auflage 2005, 149,00 €</li> </ul>

Course L0346: Environmental Law	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Daniel Welss
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture focusses on:</p> <ul style="list-style-type: none"> <li>• Structure of Environmental Legislation in Europe and Germany</li> <li>• Important international, European and German laws/legal regulations (Water Framework Directive, IED, etc.)</li> <li>• Interactions between Environmental Laws and Technical Standards</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Erbguth, Wilfried; Schlacke, Sabine, Umweltrecht, 6. Auflage 2016</li> <li>• Gesetzessammlung Umweltrecht, 26. Auflage 2016 (Beck Texte im dtv)</li> </ul>

Module M0851: Mathematics II				
Courses				
Title	Typ	Hrs/wk	CP	
Mathematics II (L2976)	Lecture	4	4	
Mathematics II (L2977)	Recitation Section (large)	2	2	
Mathematics II (L2978)	Recitation Section (small)	2	2	
<b>Module Responsible</b>	Prof. Anusch Taraz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mathematics I			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can name further concepts in analysis and linear algebra. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul>			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>				
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 128, Study Time in Lecture 112			
<b>Credit points</b>	8			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	10 %	Excercises	
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	120 min			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Digital Mechanical Engineering: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Integrated Building Technology: Core Qualification: Compulsory Logistics and Mobility: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Naval Architecture: Core Qualification: Compulsory Process Engineering: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory			

Course L2976: Mathematics II	
<b>Typ</b>	Lecture

Module M1627: Water and Environment				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Project on Water, Environment, Traffic (L2462)		Project-/problem-based Learning	2	3
Water in the Environment (L2461)		Lecture	2	3
<b>Module Responsible</b>	Prof. Mathias Ernst			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of chemistry			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students can define generic material interactions between the environmental media. They can demonstrate their knowledge about natural as well as anthropogenic materials. They are capable of explaining the natural condition of waters and other environmental media.			
<i>Skills</i>	Students are able to research environment-specific aspects of civil engineering independent. They can present their findings using accredited academic media (e.g. posters) and can give a short summary including scientific references.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can fulfil a complex environment-related assignment in the field of civil engineering by working in a team.			
<i>Autonomy</i>	Individual students prepare aspects of the given group work independently.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	None	Presentation	Team-Projektarbeit mit Präsentation
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	60 min			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Green Technologies, Focus Water and Environmental Engineering: Elective Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Specialisation Water Technologies: Elective Compulsory			

Course L2462: Project on Water, Environment, Traffic	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dozenten des SD B
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Lecturers of Civil Engineering provide duties on environmentally relevant fields of civil engineering for small student groups (max. 4 students).
<b>Literature</b>	aufgabenspezifisch / according to corresponding tasks

Course L2461: Water in the Environment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst, Dozenten des SD B
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>Basics of global/regional Water Cycle</li> <li>quality of water</li> <li>natural/anthropogenic water ingredients</li> <li>Basics water science</li> <li>water legislation (EU/D)</li> </ul>
<b>Literature</b>	Schwoerbel, J. 2005: Einführung in die Limnologie. Heidelberg: Elsevier Grohmann, A. u. a. 2011: Wasser. Berlin: de Gruyter Kluth, W. & Schmeddinck, U. 2013: Umweltrecht: Ein Lehrbuch. Wiesbaden: Springer

Module M1803: Engineering Mechanics II (Elastostatics)			
Courses			
Title	Typ	Hrs/wk	CP
Engineering Mechanics II (Elastostatics) (L0493)	Lecture	2	2
Engineering Mechanics II (Elastostatics) (L1691)	Recitation Section (large)	2	2
Engineering Mechanics II (Elastostatics) (L0494)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Christian Cyron		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Engineering Mechanics I, Mathematics I (basic knowledge of rigid body mechanics such as balance of linear and angular momentum, basic knowledge of linear algebra like vector-matrix calculus, basic knowledge of analysis such as differential and integral calculus)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Having accomplished this module, the students know and understand the basic concepts of continuum mechanics and elastostatics, in particular stress, strain, constitutive laws, stretching, bending, torsion, failure analysis, energy methods and stability of structures.</p> <p><i>Skills</i> Having accomplished this module, the students are able to</p> <ul style="list-style-type: none"> <li>- apply the fundamental concepts of mathematical and mechanical modeling and analysis to problems of their choice</li> <li>- apply the basic methods of elastostatics to problems of engineering, in particular in the design of mechanical structures</li> <li>- to educate themselves about more advanced aspects of elastostatics</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Ability to communicate complex problems in elastostatics, to work out solution to these problems together with others, and to communicate these solutions.</p> <p><i>Autonomy</i> Self-discipline and endurance in tackling independently complex challenges in elastostatics; ability to learn also very abstract knowledge.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory</p> <p>Civil- and Environmental Engineering: Core Qualification: Compulsory</p> <p>Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Chemical and Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory</p> <p>Integrated Building Technology: Core Qualification: Compulsory</p> <p>Mechanical Engineering: Core Qualification: Compulsory</p> <p>Mechatronics: Core Qualification: Compulsory</p> <p>Orientation Studies: Core Qualification: Elective Compulsory</p> <p>Naval Architecture: Core Qualification: Compulsory</p> <p>Technomathematics: Specialisation III. Module M0740: Structural Analysis I				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Structural Analysis I (L0666)		Lecture	2	3
Structural Analysis I (L0667)		Recitation Section (large)	3	3
<b>Module Responsible</b>	Prof. Bastian Oesterle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mechanics I, Mathematics I			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	After successfully completing this module, students can express the basic aspects of linear frame analysis of statically determinate and indeterminate systems.			
<i>Skills</i>	After successful completion of this module, the students are able to distinguish between statically determinate and indeterminate structures. They are able to analyze state variables and to construct influence lines of statically determinate plane and spatial frame and truss structures.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> <li>participate in subject-specific and interdisciplinary discussions,</li> <li>defend their own work results in front of others</li> <li>promote the scientific development of colleagues</li> <li>Furthermore, they can give and accept professional constructive criticism</li> </ul>			
<i>Autonomy</i>	The students are able work in-term homework assignments. Due to the in-term feedback, they are enabled to self-assess their learning progress during the lecture period, already.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	No	10 %	Written elaboration	Hausübungen mit Testat, betreut durch Studentische Tutoren (Tutorium)
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 minutes			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Logistics and Mobility: Specialisation Traffic Planning and Systems: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Engineering and Management - Major in Logistics and Mobility: Specialisation II. Traffic Planning and Systems: Elective Compulsory			

Course L0666: Structural Analysis I	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Bastian Oesterle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>modeling of structures</li> <li>theory of plane and spacial structures</li> <li>assessment of structural behaviour, degree of static indeterminacy and kinematics</li> <li>analysis of forces and moments, as well as diplacements and rotations</li> <li>principle of virtual work</li> <li>influence lines</li> <li>Force Method for statically indeterminate structures</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>Vorlesungsmanuskript</li> <li>Bletzinger et al.: Aufgabensammlung zur Baustatik: Übungsaufgaben zur Berechnung ebener Stabtragwerke. Hanser.</li> <li>Dinkler: Grundlagen der Baustatik. Springer.</li> <li>Marti: Baustatik. Ernst und Sohn.</li> </ul>

Module M2037: Structural Design				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Basics of Structural Design (L0205)		Lecture	2	1
Basics in Structural Design (L0209)		Project-/problem-based Learning	2	4
Basics in Structural Design (L0208)		Recitation Section (large)	1	1
<b>Module Responsible</b>	Sebastian Rybczynski			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Contents of module "Principles of Building Materials and Building Physics"			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	After attending the "Building Construction" module students are able			
	<ul style="list-style-type: none"> <li>to define the basics of building regulations law</li> <li>to explain load effects and associated concepts</li> <li>to describe overriding conventions of the construction industry</li> <li>to specify typical building components</li> <li>to distinguish between different possibilities of load bearing behaviour and risks due to lack of stability</li> <li>to explain the main objectives of fire control.</li> </ul>			
<i>Skills</i>	After the successful completion of the "Building Construction" module, students will be able			
	<ul style="list-style-type: none"> <li>to apply industry-specific drawing conventions</li> <li>carry out preliminary dimensioning of basic building components</li> <li>develop stability and foundation concepts</li> <li>and to design and construct standard cross-sections due to structural aspects.</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	After attending the course students are able			
	<ul style="list-style-type: none"> <li>to work in a team and to present the results of the team work</li> <li>to use the feedback from other students to improve the own results</li> <li>to give a feedback to other students in a constructive manner</li> </ul>			
<i>Autonomy</i>	After attending the course students are able			
	<ul style="list-style-type: none"> <li>to control and improve their knowledge with the help of weekly presentations (lecture room) and tests (STUD.IP)</li> <li>to divide the main task in different parts, to deduce the needed knowledge and to schedule the different work steps</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	20 %	Subject theoretical and practical work	andKonstruktiver Entwurf eines Wohngebäudes. Abgabe von Hausarbeiten. Betreuung durch Tutoren.
<b>Examination</b>	Written exam

Module M2047: Hydromechanics and Hydrology				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Hydrology (L0909)		Lecture	1	1
Hydrology (L0956)		Project-/problem-based Learning	1	2
Hydromechanics (L0615)		Lecture	2	2
Hydromechanics (L0616)		Project-/problem-based Learning	1	1
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mathematics I, II and III Mechanics I und II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to define the basic terms of hydromechanics, hydrology groundwater hydrology and water management. They are able to derive the basic formulations of i) hydrostatics, ii) kinematics of flows and iii) conservation laws and to describe and quantify the relevant processes of the hydrological water cycle. Besides, the students can describe the main aspects of rainfall-run-off-modelling and of established reservoir / storage models as well as the concepts of the determination of a unit-hydrograph.</p> <p><i>Skills</i> The students are able to apply the fundamental formulations of hydromechanics to basic practical problems. Furthermore, they are able to run, explain and document basic hydraulic experiments.</p> <p>Besides, they are able to apply basic hydrological approaches and methods to simple hydrological problems. The students have the capability to exemplarily apply simple reservoir/storage models and a unit-hydrograph to given problems.</p> <p>In addition, the basic concepts of field-measurements of hydrological and hydrodynamic values can be described and the students are able to perform, analyze and assess respective measurements.</p>			
<b>Personal Competence</b>				
<i>Social Competence</i>				
<i>Autonomy</i>	The students are able to work in groups in a goal-orientated, structured manner. They can explain their results sustainably in plenary sessions by use of peer learning approaches. Furthermore, they are able to prepare and present technical presentations for given topics in groups.			
<i>Autonomy</i>	Students are capable of organising their individual work flow to contribute to the conduct of experiments and to present discipline-specific knowledge. They can provide each other with feedback and suggestions on their results. They are capable of reflecting their study techniques and learning strategy on an individual basis.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>

Module M0613: Reinforced Concrete Structures I				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Project Seminar Concrete I (L0896)		Seminar	1	1
Reinforced Concrete Design I (L0303)		Lecture	2	3
Reinforced Concrete Design I (L0305)		Recitation Section (large)	2	2
<b>Module Responsible</b>	NN			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in structural analysis and building materials. Modules: Structural Analysis I, Mechanics I+II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students can outline the history of concrete construction and explain the basics of structural engineering, including usual load combinations and safety concepts. They are able to draft and dimension simple structures, as well as to evaluate and discuss the behaviour of the materials and of structural members.			
<i>Skills</i>	The students are able to apply basic procedures of the conception and dimensioning to practical cases. They are capable to draft simple concrete structures and to design them for bending and bending with axial force, and to plan their detailing and execution. Moreover, they can make design and construction sketches and draw up technical descriptions.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students will be able to produce results of high quality in working groups.			
<i>Autonomy</i>	The students are able to carry out simple tasks in the conception and dimensioning of structures and to critically reflect the results.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>

Courses			
Title	Typ	Hrs/wk	CP
Wastewater Disposal (L0276)	Lecture	2	2
Wastewater Disposal (L0278)	Recitation Section (large)	1	1
Drinking Water Supply (L0306)	Lecture	2	1
Drinking Water Supply (L0308)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Ralf Otterpohl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge on Chemistry and Biology</li> <li>• Hydraulics of pipe systems and open channels</li> <li>• Basic knowledge on water management: water quantity and water quality</li> <li>• Basic knowledge on Environmental Legislation: Federal Water Act</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students can exemplify their expert knowledge on urban water infrastructures. They can present the derivation and detailed explanation of important standards for the design of drinking water supply and wastewater disposal systems in Germany and they are capable of reproducing the relevant empirical assumptions and scientific simplifications. The students are able to present and discuss sanitary engineering processes and the technologies used for drinking and wastewater treatment. They can also assess existing problems in the field of sanitary engineering by considering legal, risk and safety aspects. Furthermore, they know how to draft the features and effectiveness of important technologies of the future such as high- and low-pressure membrane filtration systems and techniques for the removal of trace pollutants.</p> <p><i>Skills</i> The students are able to apply the relevant standards and guidelines for the design and operation of urban water infrastructures independently. Their expertise comprises expert skills to design drinking water supply and urban drainage systems as well as the associated treatment facilities. Besides the acquisition of technical skills the students are able to address and solve biochemical problems in the field of drinking water and wastewater treatment. The students are also able to develop ideas of their own to improve the existing water related infrastructures, systems and concepts.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Social skills are not targeted in this module.</p> <p><i>Autonomy</i> Students are able to form concepts on their own to optimize urban water infrastructure processes. Therefore they can acquire appropriate knowledge when being given some clues or information with regard to the approach to problems (preparation and follow-up of the exercises).</p>

<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen, Prof. Mathias Ernst
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture on drinking water supply provides students with a basic understanding of the entire water supply system, encompassing water catchment, water treatment including pump systems, water storage, and the distribution system that carries water to the consumer.</p> <p>Initially, basics in hydraulics and pump systems are presented (system curve and pump curve). Students learn how the duty point of the pump is determined. Students learn about different water resources and will be able to design groundwater wells. Students learn how to determine water demand and derive planning values for designing the different elements of a water supply system (e.g. firefighting requirements). The functions of reservoirs, their design and arrangement in the water supply system are explained. Students will be able to design simple water distribution systems.</p> <p>A further part of the lecture deals with the processes involved in drinking water supply. This includes a presentation of the essential mechanisms and layout parameters for sedimentation, filtration, coagulation, membrane treatment, adsorption, water softening, gas exchange, ion exchange and disinfection. The basics of process treatment technology will be built on with parallel analysis of the impacts on chemical and physical water quality parameters.</p>

<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture gives an introduction into the classical structural dynamics, whereas the focus lies on the practical applications. The theoretical basics are worked out in order to apply them for typical issues in practice. For an effective vibration isolation due to vibration excitations by e.g. railway traffic, operating machines oder moving people, different structural measures are presented. The lecture is completed by performing examples of vibration measurements as well as interactive dynamic experiments in the laboratory.</p> <p>The following topics are covered:</p> <ul style="list-style-type: none"> <li>Particular features in structural dynamics</li> <li>Basic terms of time-dependent excitations</li> <li>Free vibrations (natural frequencies)</li> <li>Induced vibrations</li> <li>Impact excitations of structures</li> <li>Methods of amplitude reduction (vibration isolation)</li> <li>Introduction to soil dynamics</li> <li>Vibration measurements and requirements for vibration protection</li> <li>Vibrations induced by people</li> </ul>

Course L1744: Practical Course in Drinking Water Chemistry	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Examination Form</b>	Fachtheoretisch-fachpraktische Arbeit
<b>Examination duration and scale</b>	6 Versuchsprotokolle
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>!Max.12 students!</p> <p>The students learn basic experimental work in the laboratory. The experiments give an overview about the most important chemical analysis methods of drinking water. This includes sampling, photometric measurement, complexometric titration as well as acid/base titration. The experiments are strongly related to the processes in drinking water treatment and water distribution (e. g. removal of iron and manganese, softening and conditioning). Instrumental analytics is not subject of this practical course.</p> <p>1. Day: Introduction, safety instructions                  2. Day: Electrical conductivity, saturation with respect to calcite, hardness                  3. Day: Organic carbon, iron, acid and base neutralization capacity                  4. Day: Writing protocols of experiments and presentations                  5. Day: Evaluation of the protocols and presentations, final discussion</p>
<b>Literature</b>	<p>Siehe Skript.</p> <p>See Script.</p>

Course L2411: Special topics of Civil- and Environmental Engineering	
<b>Typ</b>	
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Examination Form</b>	Fachtheoretisch-fachpraktische Arbeit
<b>Examination duration and scale</b>	wird zu Beginn der Lehrveranstaltung festgelegt
<b>Lecturer</b>	Dozenten des SD B
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	The course occurs only if required. The content is defined at short notice.
<b>Literature</b>	Die Literatur wird kurzfristig festgelegt.

Course L0472: Fire Protection and Prevention	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	20 min
<b>Lecturer</b>	Philipp Below, Ulrich Körner
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• fire in residential and office buildings</li> <li>• town planning: location of residential, office and industry areas, location of fire stations</li> <li>• design of roads and water pipes</li> <li>• explosions</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Schneider U. : Ingenieurmethoden im baulichen Brandschutz. Expert Verlag, 2. Aufl., 2002</li> </ul>

Course L3253: Water and Energy	
<b>Typ</b>	Integrated Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Studienarbeit
<b>Examination duration and scale</b>	10 - 15 Seiten
<b>Lecturer</b>	Prof. Mathias Ernst
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Water and energy are connected and interlinked in many ways. Water is indispensable for many energy generation technologies (fossil fuels, biomass, hydropower, geothermal energy, etc.) and can be utilized as energy storage (pumped storage, heat, H <sub>2</sub> , etc.). In turn, energy is needed in all areas of water supply and wastewater disposal. Climate change and the energy transition pose new questions and challenges for the historical interlinking of water and energy. Exemplary contents of the course are (i) Effects of climate change on the medium of water (quantity, quality, availability) and on the German energy supply; (ii) Transformation of the water and energy industry with a view to renewable energies; (iii) Energy efficiency in the water industry; (vi) Water supply vs. production of green hydrogen; (v) Water demand and agricultural production (biomass); (vi) Water-energy nexus. The course content is covered in an integrated form as a lecture and in the form of student contributions.

Module M0869: Hydraulic Engineering				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Hydraulics (L0957)		Lecture	1	1
Hydraulics (L0958)		Project-/problem-based Learning	1	1
Hydraulic Engineering (L0959)		Lecture	2	2
Hydraulic Engineering (L0960)		Project-/problem-based Learning	1	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Hydraulic Mechanics and Hydrology			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to define the basic terms of hydraulic engineering and hydraulics. They are able to explain the application of basic hydrodynamic formulations (conservation laws) to practical hydraulic engineering problems. Besides this, the students can illustrate important tasks of hydraulic engineering and give an overview over river engineering, flood protection, hydraulic power engineering and waterways engineering.			
<i>Skills</i>	The students are able to apply hydraulic engineering methods and approaches to basic practical problems and design respective hydraulic engineering systems. Besides this, they are able to use and apply established approaches of hydraulics and determine water surfaces of channel flows, influences of constructions (weirs, etc.) on channel flows as well as flow conditions of pipe system. Furthermore, they are able to run, explain and document basic hydraulic experiments.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems. Additionally, they will be able to work in team with engineers of other disciplines in a goal-orientated, structured manner. They can explain their results by use of peer learning approaches.			
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems. Furthermore, they are capable of organising their individual work flow to contribute to the conduct of experiments and to present discipline-specific knowledge.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	None	Subject theoretical and practical work	Durchführung, Dokumentation und Präsentation zu einem Versuchs Hydromechanik oder Hydraulik
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	The duration of the examination is 2.5 hours. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Green Technologies, Focus Water and Environmental Engineering; Elective Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Specialisation Water Technologies: Elective Compulsory

Module M0983: Mobility Concepts				
Courses				
Title	Typ	Hrs/wk	CP	
Mobility Research and Transportation Projects (L1181)	Project-/problem-based Learning	3	3	
Mobility in Megacities and Developing Countries (L1182)	Seminar	3	3	
<b>Module Responsible</b>	Dr. Philine Gaffron			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Module Transportation Planning and Traffic Engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>• name the different urban transport systems existing around the world.</li> <li>• explain the transport challenges in Asian and African mega cities.</li> <li>• recognise and relate interactions between transport systems on the one hand and ecological, socio-cultural and economic problem areas on the other.</li> <li>• outline specific issues and problems in urban development and transport (in Germany and developing countries).</li> <li>• explain the effects of external framework factors (like energy costs) on transport.</li> </ul>			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• analyse and evaluate given case studies.</li> <li>• transfer learning results to other regions and cities.</li> <li>• analyse specific issues and problems in urban development and transport (in developing countries).</li> <li>• critically assess actors, planning objectives, planned measures and the implementation of transport projects in the light of the UN Millennium Development Goals</li> <li>• develop and present sustainable (i.e. ecological, poverty oriented, gender balanced and economical) solutions for urban personal and goods transport</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>• present and explain independently generated findings.</li> <li>• constructively discuss potentially controversial topics in a group context.</li> </ul>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• carry out independent literature research and analysis.</li> <li>• independently author a written report on a given topic.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6

	Yes	None	Participation in excursions	Exkursion innerhalb Hamburgs abhängig von aktuellen Themen im Modul
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	All assignments in groups (2-4 students): written report, 2000 words (incl. 2 short presentations of 10 mins.); final presentation, 20 mins. plus discussion (incl. slides) and 1000 word report incl. peer review (individual).			
<b>Assignment for the Following Curricula</b>	Civil- and Environmental Engineering: Specialisation Traffic and Mobility: Compulsory Civil- and Environmental Engineering: Specialisation Civil Engineering: Elective Compulsory Civil- and Environmental Engineering: Specialisation Water and Environment: Elective Compulsory Logistics and Mobility: Specialisation Traffic Planning and Systems: Compulsory Engineering and Management - Major in Logistics and Mobility: Specialisation II. Traffic Planning and Systems: Compulsory			

Course L1181: Mobility Research and Transportation Projects	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Philine Gaffron
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>This course places its focus on transport and mobility in Germany. It deals with questions such as:</p> <ul style="list-style-type: none"> <li>• Which external factors - like e.g. energy costs, availability of renewable and fossil fuels, environmental and climate protection objectives - influence current developments in the transport sector?</li> <li>• Which external effects in turn are caused by mobility choices and traffic?</li> <li>• How should these interactions be evaluated, how and by whom can they be influenced?</li> <li>• Which measures at the municipal level can contribute to a more sustainable transport system?</li> </ul> <p>During the course, these questions will be illustrated and discussed with reference to different examples and current developments. Participants will also provide input on specific topics. Potential core subjects of the course could be:</p> <ul style="list-style-type: none"> <li>• Environmental Justice : which population groups are disproportionately affected by transport emissions and who causes them?</li> <li>• Municipal cycle planning</li> <li>• Transport and Climate Protection: can, want, act - everything could be, nothing must be?</li> </ul>
<b>Literature</b>	Die Literaturempfehlungen sind abhängig von den jeweiligen, wechselnden Themenschwerpunkten und werden rechtzeitig vor Beginn der Veranstaltung bekannt gegeben.

Course L1182: Mobility in Megacities and Developing Countries	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Jürgen Perschon, Christof Hertel
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The course provides an overview over different transport projects in the metropolitan areas of developing countries. Considering different perspectives on urban growth, social justice, economic development, environmental and climate protection as well as the economic viability of public transport, the specific situation in the urban conglomerates of Asia, Latin America and Africa will be analysed and placed in a regional and global context. Specific public transport systems will be examined to establish, whether they are a suitable example for sustainable urban development.</p> <p>The following examples could be suitable case studies: Singapore (Metro), Lagos (BRT Light), Guangzhou, Bogota, Jakarta (Full BRT), Sao Paulo, Medellin (Cable Car Systems), Johannesburg (Minibus-Taxi).</p> <p>The course will be designed interactively with the students and will partly be in English as is the majority of the literature in this area (also: Skype online interviews with international experts in the transport sector). <b>An English language presentation is also part of the course work.</b></p>

Module M1628: Sustainable Building				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Circular flow economy and structural recycling (L2464)		Integrated Lecture	2	2
Sustainable building materials and buildings (L3179)		Integrated Lecture	2	2
Sustainable water management and hydraulic engineering (L3180)		Integrated Lecture	2	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of building materials, building chemistry, building construction and building project management			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to reproduce essential features of sustainable construction and material cycles. They can also name the constructional and environmental properties of recyclates and describe the sampling and analysis process. They are able to give an overview of the history, definition and to provide strategic approaches to the sustainability discussion from a constructional and environmental perspective. Furthermore, they can explain relevant objectives, strategies and exemplary fields of research in the field of sustainable construction (e.g. environmental impacts of the production and use of building materials, life cycle assessment, energy and climate-optimised planning and construction, material principles of renewable raw materials). Students will be able to discuss the fundamental relationship between the origin and type of construction waste, quantities produced and methods for characterising them.			
<i>Skills</i>	Students can relate relevant legal requirements to practical problems of environmentally sound design and construction and thus justify the application of specific limit values for individual areas of application. Students are able to assess risks that may arise from hazardous construction waste in a concise manner. They are able to critically examine innovative areas of application of sustainable construction on the basis of central engineering, economic and legal criteria. They can thereafter evaluate and propose approaches for alternative solutions exemplarily, e.g. for the processing and recycling of construction waste.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to work out their own solutions for specific problems of recycling building materials in small groups. For this purpose, they can organise themselves in a division of labour and can give themselves a work and project plan. Furthermore, they are able to appoint group members to coordinate the cooperation with other working groups of the module and to moderate the presentation of work results in the seminar.			
<i>Autonomy</i>	Students can coordinate their individual work performance with the other members of the group and prepare for it efficiently by use of scientific media.

Module M1715: Renewable Energies			
Courses			
Title	Typ	Hrs/wk	CP
Fuels II (L3143)	Lecture	1	1
Renewable Energies I (L2740)	Lecture	2	2
Renewable Energies I (L2742)	Recitation Section (large)	1	1
Renewable Energies II (L2741)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Upon completion of this module, students will be able to provide an overview of characteristics of renewable energy systems. They will be able to explain the issues that arise in these systems. Furthermore, they are able to explain knowledge of energy supply, energy distribution and energy trading in this context, taking into account contexts bordering on specific disciplines. The students can explain this knowledge in detail for such energy systems and take a critical stand on it. Furthermore, they can explain the environmental impact of using renewable energy systems and have an overview of the economic classification of the respective options.</p> <p><i>Skills</i> Students are able to apply methodologies for determining energy demand or energy supply to different types of renewable energy systems. Furthermore, they can evaluate such energy systems technically, ecologically and economically as well as systemically and also design them under certain given conditions. They are able to select the regulations necessary for this in a subject-specific manner, especially by means of non-standard solutions to a problem.</p> <p>Students are able to orally explain issues from the subject area and approaches to dealing with them and to classify them in the respective context.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to investigate suitable technical alternatives and ultimately evaluate them based on technical, economic and ecological criteria - and thus from a sustainability perspective.</p> <p><i>Autonomy</i> Students will be able to independently access sources about the field, acquire knowledge and transform it to address new issues.</p>

<b>Cycle</b>	SoSe
<b>Content</b>	This module includes a presentation of the renewable energy supply and a discussion of the respective technologies for providing the desired final or useful energy. Specifically, this includes the options for solar energy use for heat and power generation (i.e., passive solar energy use, solar collectors for low-temperature heat provision, solar thermal power generation, photovoltaic power generation), wind energy use for power generation (i.e. onshore and offshore wind power use), hydroelectric power use for electricity generation (i.e., run-of-river and storage hydroelectric power), ocean energy use for electricity generation (including tidal power plants), and geothermal energy use for heat and electricity generation (i.e., near-surface use by means of heat pumps, deep geothermal energy use for heat and/or electricity generation).

<b>Content</b>	<p>This lecture covers all options for energy supply from biomass; this includes the supply of heat, electricity and fuels. The biomass resource and its origin will be discussed first. Afterwards the biomass supply is addressed, which bridges the gap between biomass generation and utilization. Subsequently, the different conversion options are discussed. Only those options are presented in depth that have a corresponding significance on the market in Germany and Europe. This includes</p> <p>(a) heat generation from biogenic solid fuels in small and large-scale plants</p> <p>(b) power generation from solid biomass via combustion</p> <p>(c) a biogas production from residues, by-products and waste,</p> <p>(d) alcohol production from sugar and starch</p> <p>(e) biodiesel production from vegetable oils.</p> <p>Special attention is also paid to the corresponding environmental aspects. An economic classification of the various options is also provided.</p>

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christian Lüthje
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>

Module M2023: Structural Analysis III	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Structural Analysis III (L3277)	Lecture
Structural Analysis III (L3278)	Recitation Section (large)
<b>Hrs/wk</b>	<b>CP</b>
2	2
1	1
<b>Module Responsible</b>	Prof. Bastian Oesterle
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Mechanics I/II, Mathematics I/II, Differential Equations I, Structural Analysis I, Structural Analysis II
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	After successful completion of this module, students can express the basic aspects of non-linear structural analysis of statically indeterminate frame structures.
<i>Skills</i>	After successful completion of this module, the students will be able to predict the non-linear structural response of frame structures using the appropriate computational approaches and methods.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, defend their own work results in front of others and promote the scientific development of colleagues. Furthermore, they can give and accept professional constructive criticism.
<i>Autonomy</i>	Students are able to gain knowledge of the subject area from given and other sources and apply it to new problems. Furthermore, they are able to structure the solution process for problems in the area of nonlinear structural analysis.
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Credit points</b>	3
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 min

<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Bastian Oesterle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	The module is structured into two main parts, namely 1. Geometrically nonlinear methods and 2. Materially nonlinear methods. In both parts, first the phenomena are described, followed by the derivation of corresponding model and computational methods. The topics cover: Part 1: geometrically non-linear structural behaviour, force and displacement load cases, equilibrium in the deformed configuration, geometrical stiffness, second order theory displacement method and direct stiffness method considering second order theory, stability analysis, bifurcation problems and snap-through problems. Part 2: non-linear material behaviour loading and unloading, self-stressed states, theory of plasticity, plastic hinge theory, ultimate limit states, aspects of implementation and application in computer programs.

Module M0612: Steel Structures II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Steel Structures II (L0301)		Lecture	2
Steel Structures II (L0302)		Recitation Section (large)	2
<b>CP</b>			
			3
			3
<b>Module Responsible</b>	Prof. Marcus Rutner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Steel Structures I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After successful completion students can		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>describe and explain the behaviour of bolted and welded connections</li> <li>design and check simple halls and buildings</li> <li>calculate forces and stresses of simple structures (trusses, beams, frames)</li> <li>illustrate and dimension the main details (framework, column base, load application points)</li> </ul>		
<i>Skills</i>	Students are able to design simple structures and connections, describe the load distribution and recognize the possible modes of failure. They can apply structural imperfections, calculate according to 2nd order theory and verify their results.		
<b>Personal Competence</b>	In this module, the student gains the ability to professionally develop and responsibly shape his/her own life. This happens through attending the lectures and exercise units as well as final exam preparation by assessing old exams. In the lecture and exercise unit, the contents are not only introduced but also discussed and developed. In these discussions the students learn to critically listen to opinions and interpretation of others and to get involved in the discussion.		
<i>Social Competence</i>			
<i>Autonomy</i>	At the beginning of every lecture, the contents of the last lecture are repeated and discussed with the students. Further, at the beginning of every exercise unit, examples out of engineering practice are introduced and topic-related questions are posed and discussed. These discussions at the beginning of every lecture and exercise unit enable the student to test his/her knowledge and enforces independent follow-up and preparation of the course material. Further, the preparation for the final exam demands strategic planning, persistence and independent learning

<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	André Schoppe
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Lecture: The module provides a basic knowledge of the field of railroad engineering. An overview of railroad operations, control and safety technology, railroad superstructure, structural engineering, project management as well as maintenance and design of infrastructure facilities is given. The aim of this module is to give students as much insight as possible into railroad infrastructure. The module is examined by means of a written exam at the end of the semester.  Lecture Hall Exercise:  In order to give the students practical examples, full-day practical excursions are carried out. New handling techniques and currently available hardware will be presented by visiting the marshalling yard "die Zugbildungsanlage Maschen (ZBA)". Furthermore, the training center for track construction and civil engineering as well as the operations center in Hanover will be visited, where facilities and tasks will be presented. Questionnaires will also be provided for practice purposes. In addition, study papers can be handed out and supervised as required.

Module M1632: Applied Water Management			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Modelling of soil water dynamics (L2471)		Project-/problem-based Learning	2                  2
Modelling of soil water dynamics (L2470)		Lecture	2                  2
Nature-oriented Hydraulic Engineering (L2472)		Project-/problem-based Learning	2                  2
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of analysis and differential equations</li> <li>• hydromechanical and hydraulic engineering principles</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to define the basic tasks and terms of nature-oriented hydraulic engineering und groundwater hydrology. They can describe the basics concepts, the basic approaches and methods of nature-oriented hydraulic engineering, groundwater hydrology and groundwater modelling and are able to apply these to practical problems.		
<i>Skills</i>	The students are able to apply the methods and approaches of nature-oriented hydraulic engineering and of groundwater hydrology to practical problems. They can demonstrate to transfer and apply these to simple hydraulic engineering systems. In addition, they are able to apply the approaches commonly used in groundwater hydrology. They can exemplarily explain and reason how to apply them as a basis for geo-hydrological questions. In addition, students can apply basic groundwater modelling methods to simple problems of groundwater movement and groundwater recharge.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to help each other solving case studies. The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to demonstrate to work cooperatively in teams consisting of engineers from different subject areas.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

Management of Wastewater Infrastructure (L2467)		Seminar	2
Drinking Water Treatment (L2466)		Seminar	2
<b>CP</b>			
			3
			3
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge in the field of drinking water supply and waste water disposal.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can exemplify their expert knowledge on drinking water, waste water treatment and the associated infrastructure systems. They are capable of reproducing the relevant empirical assumptions and scientific simplifications in detail. The students can model some processes mathematically. They can also assess existing problems in the field of sanitary engineering, such as removal of nitrate, and place them in a socio-political context. Furthermore, they know how to draft the features and effectiveness of important technologies of the future such as high- and low-pressure membrane filtration systems and techniques.		
<i>Skills</i>	The students are able to apply the relevant standards and guidelines for the design and operation of urban water infrastructures independently. Their expertise comprises expert skills to design drinking water supply and urban drainage systems as well as the associated treatment facilities. Besides the acquisition of technical skills the students are able to address and solve biochemical problems in the field of drinking water and wastewater treatment. The students are also able to develop ideas of their own to improve the existing water related infrastructures, systems and concepts.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.		
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.

<b>Content</b>	<p>The seminar "Infrastructure Management Wastewater" develops the understanding of infrastructure systems in relation to wastewater systems, but also addresses other infrastructure systems.</p> <p>Initially, an overview of the entire system is given, including water catchment areas, water distribution, the origin of wastewater in households and industry, stormwater runoff management, and the treatment and reuse of water (constituents). Thereby the design tools especially of digital modelling are understood by practical application. Energetic considerations as well as planning and restoration of pipeline systems are covered.</p> <p>For wastewater treatment, the basis developed in Sanitary Engineering I will be deepened and significantly expanded, especially the resource recovery of nutrients and water. Sanitary solutions for different socio-economic and climatic conditions are understood and calculated.</p>

Module M1723: Building Information Modeling			
Courses			
Title	Typ	Hrs/wk	CP
Building Information Modeling (L2760)	Integrated Lecture	2	2
Building Information Modeling (L2761)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Kay Smarsly		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The contents of this module follow the recommendations of the German Association of Computing in Civil Engineering (www.gacce.de) for the BIM courses taught at German universities in the subject area of engineering informatics. The module aims to present methodological knowledge to enable students to introduce, to design, to monitor, and to improve BIM processes in companies and public institutions. An in-depth understanding of the methods and technologies relevant to BIM is essential. Emphasis is placed on generally valid principles and techniques independent of specific software products and valid for several decades. The theoretical content taught in the lecture is complemented by practical exercises, in which state-of-the-art software tools will be used. Topics include computer-aided design and geometry modeling, digital modeling of buildings and infrastructure, BIM data exchange and cooperation (focusing on Industry Foundation Classes), process modeling, job descriptions and BIM applications, BIM tools, and advanced aspects. A central component of this module will be a project work.</p> <p><i>Skills</i> The module focuses on enabling students to accomplish competencies required for professionally using BIM software and understanding the methods. The competencies includes construction-related skills, BIM-specific skills and additional specialist skills, in particular understanding of the requirements for modeling buildings as well as for planning, implementing, and operating buildings. Specifically, implementing and editing 3D models, coordinating and managing BIM processes and data, and implementing BIM in companies are among the competencies of this module.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Social skills are essential in the BIM context, as BIM projects are usually carried out by interdisciplinary teams. With regard to social skills, this module aims to teaching students to convey information in a clear and comprehensible manner, to enabling students to work with others and achieve goals together, and to resolving conflicts constructively, which is essentially achieved through group work. In small student groups, the students train their communication and cooperation skills, receiving feedback from the instructors and fellow students.</p> <p><i>Autonomy</i> The personal competencies pursued in this module in terms of independence are aiming towards completing tasks with few guidance or assistance, which is essential for BIM projects, as BIM projects often involve complex and urgent tasks. This module helps students develop a degree of independence in working, particularly the skills to plan, prioritize, and complete tasks in a timely and efficient manner, primarily supported through project work.</p>

Course L1181: Mobility Research and Transportation Projects	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Philine Gaffron
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>This course places its focus on transport and mobility in Germany. It deals with questions such as:</p> <ul style="list-style-type: none"> <li>• Which external factors - like e.g. energy costs, availability of renewable and fossil fuels, environmental and climate protection objectives - influence current developments in the transport sector?</li> <li>• Which external effects in turn are caused by mobility choices and traffic?</li> <li>• How should these interactions be evaluated, how and by whom can they be influenced?</li> <li>• Which measures at the municipal level can contribute to a more sustainable transport system?</li> </ul> <p>During the course, these questions will be illustrated and discussed with reference to different examples and current developments. Participants will also provide input on specific topics. Potential core subjects of the course could be:</p> <ul style="list-style-type: none"> <li>• Environmental Justice : which population groups are disproportionately affected by transport emissions and who causes them?</li> <li>• Municipal cycle planning</li> <li>• Transport and Climate Protection: can, want, act - everything could be, nothing must be?</li> </ul>
<b>Literature</b>	Die Literaturempfehlungen sind abhängig von den jeweiligen, wechselnden Themenschwerpunkten und werden rechtzeitig vor Beginn der Veranstaltung bekannt gegeben.

Course L1182: Mobility in Megacities and Developing Countries	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Jürgen Perschon, Christof Hertel
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The course provides an overview over different transport projects in the metropolitan areas of developing countries. Considering different perspectives on urban growth, social justice, economic development, environmental and climate protection as well as the economic viability of public transport, the specific situation in the urban conglomerates of Asia, Latin America and Africa will be analysed and placed in a regional and global context. Specific public transport systems will be examined to establish, whether they are a suitable example for sustainable urban development.</p> <p>The following examples could be suitable case studies: Singapore (Metro), Lagos (BRT Light), Guangzhou, Bogota, Jakarta (Full BRT), Sao Paulo, Medellin (Cable Car Systems), Johannesburg (Minibus-Taxi).</p> <p>The course will be designed interactively with the students and will partly be in English as is the majority of the literature in this area (also: Skype online interviews with international experts in the transport sector). <b>An English language presentation is also part of the course work.</b></p>

Module M1628: Sustainable Building				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Circular flow economy and structural recycling (L2464)		Integrated Lecture	2	2
Sustainable building materials and buildings (L3179)		Integrated Lecture	2	2
Sustainable water management and hydraulic engineering (L3180)		Integrated Lecture	2	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of building materials, building chemistry, building construction and building project management			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to reproduce essential features of sustainable construction and material cycles. They can also name the constructional and environmental properties of recyclates and describe the sampling and analysis process. They are able to give an overview of the history, definition and to provide strategic approaches to the sustainability discussion from a constructional and environmental perspective. Furthermore, they can explain relevant objectives, strategies and exemplary fields of research in the field of sustainable construction (e.g. environmental impacts of the production and use of building materials, life cycle assessment, energy and climate-optimised planning and construction, material principles of renewable raw materials). Students will be able to discuss the fundamental relationship between the origin and type of construction waste, quantities produced and methods for characterising them.			
<i>Skills</i>	Students can relate relevant legal requirements to practical problems of environmentally sound design and construction and thus justify the application of specific limit values for individual areas of application. Students are able to assess risks that may arise from hazardous construction waste in a concise manner. They are able to critically examine innovative areas of application of sustainable construction on the basis of central engineering, economic and legal criteria. They can thereafter evaluate and propose approaches for alternative solutions exemplarily, e.g. for the processing and recycling of construction waste.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to work out their own solutions for specific problems of recycling building materials in small groups. For this purpose, they can organise themselves in a division of labour and can give themselves a work and project plan. Furthermore, they are able to appoint group members to coordinate the cooperation with other working groups of the module and to moderate the presentation of work results in the seminar.			
<i>Autonomy</i>	Students can coordinate their individual work performance with the other members of the group and prepare for it efficiently by use of scientific media.

Module M1715: Renewable Energies				
Courses				
Title	Typ	Hrs/wk	CP	
Fuels II (L3143)	Lecture	1	1	
Renewable Energies I (L2740)	Lecture	2	2	
Renewable Energies I (L2742)	Recitation Section (large)	1	1	
Renewable Energies II (L2741)	Lecture	2	2	
<b>Module Responsible</b>	Prof. Martin Kaltschmitt			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	none			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Upon completion of this module, students will be able to provide an overview of characteristics of renewable energy systems. They will be able to explain the issues that arise in these systems. Furthermore, they are able to explain knowledge of energy supply, energy distribution and energy trading in this context, taking into account contexts bordering on specific disciplines. The students can explain this knowledge in detail for such energy systems and take a critical stand on it. Furthermore, they can explain the environmental impact of using renewable energy systems and have an overview of the economic classification of the respective options.</p> <p><i>Skills</i> Students are able to apply methodologies for determining energy demand or energy supply to different types of renewable energy systems. Furthermore, they can evaluate such energy systems technically, ecologically and economically as well as systemically and also design them under certain given conditions. They are able to select the regulations necessary for this in a subject-specific manner, especially by means of non-standard solutions to a problem.</p> <p>Students are able to orally explain issues from the subject area and approaches to dealing with them and to classify them in the respective context.</p>			
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to investigate suitable technical alternatives and ultimately evaluate them based on technical, economic and ecological criteria - and thus from a sustainability perspective.</p> <p><i>Autonomy</i> Students will be able to independently access sources about the field, acquire knowledge and transform it to address new issues.</p>

<b>Content</b>	This module includes a presentation of the renewable energy supply and a discussion of the respective technologies for providing the desired final or useful energy. Specifically, this includes the options for solar energy use for heat and power generation (i.e., passive solar energy use, solar collectors for low-temperature heat provision, solar thermal power generation, photovoltaic power generation), wind energy use for power generation (i.e. onshore and offshore wind power use), hydroelectric power use for electricity generation (i.e., run-of-river and storage hydroelectric power), ocean energy use for electricity generation (including tidal power plants), and geothermal energy use for heat and electricity generation (i.e., near-surface use by means of heat pumps, deep geothermal energy use for heat and/or electricity generation).

<b>Content</b>	<p>This lecture covers all options for energy supply from biomass; this includes the supply of heat, electricity and fuels. The biomass resource and its origin will be discussed first. Afterwards the biomass supply is addressed, which bridges the gap between biomass generation and utilization. Subsequently, the different conversion options are discussed. Only those options are presented in depth that have a corresponding significance on the market in Germany and Europe. This includes</p> <p>(a) heat generation from biogenic solid fuels in small and large-scale plants</p> <p>(b) power generation from solid biomass via combustion</p> <p>(c) a biogas production from residues, by-products and waste,</p> <p>(d) alcohol production from sugar and starch</p> <p>(e) biodiesel production from vegetable oils.</p> <p>Special attention is also paid to the corresponding environmental aspects. An economic classification of the various options is also provided.</p>

<b>Course L0997: Transport Planning and Traffic Engineering</b>	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The course provides an introductory overview over the fundamentals of urban and regional transport planning, including the sub-topic traffic engineering. The following subject areas are covered:</p> <ul style="list-style-type: none"> <li>• objectives of transport planning,</li> <li>• key mobility metrics,</li> <li>• measuring and predicting demand,</li> <li>• designing and planning transport infrastructure,</li> <li>• fundamentals of traffic engineering and</li> <li>• an introduction to transport concepts and planning processes.</li> </ul>

## Course L0882: Management Tutorial

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christian Lüthje
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>
<b>Literature</b>	Relevante Literatur aus der korrespondierenden Vorlesung.

<b>Course L0880: Introduction to Management</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3

Course L1184: Introduction to Railways	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	André Schoppe
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Lecture:</p> <p>The module provides a basic knowledge of the field of railroad engineering. An overview of railroad operations, control and safety technology, railroad superstructure, structural engineering, project management as well as maintenance and design of infrastructure facilities is given. The aim of this module is to give students as much insight as possible into railroad infrastructure. The module is examined by means of a written exam at the end of the semester.</p> <p>Lecture Hall Exercise:</p> <p>In order to give the students practical examples, full-day practical excursions are carried out. New handling techniques and currently available hardware will be presented by visiting the marshalling yard "die Zugbildungsanlage Maschen (ZBA)". Furthermore, the training center for track construction and civil engineering as well as the operations center in Hanover will be visited, where facilities and tasks will be presented. Questionnaires will also be provided for practice purposes. In addition, study papers can be handed out and supervised as required.</p>

Module M1629: Geoinformation Science			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Introduction to Geoinformation Science (L2465)		Project-/problem-based Learning	3                      3
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Principles of analysis and linear algebra		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to define the tasks and terms from the field of application of geo information systems. They can report the basics, the basic approaches and methods of geo information systems and are able to transfer these to practical questions.		
<i>Skills</i>	Students are able to apply the basic methods used in geo-information systems to practical problems. They are able to apply them to simple applications of geographic information systems and to transfer them to other problems. The students can process a simple GIS project and present their results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work together groups cooperatively and productively.		
<i>Autonomy</i>	Students are able to organize their work flow to prepare themselves before presentations and discussion. They can acquire appropriate knowledge by making enquiries independently.		
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42

Module M0612: Steel Structures II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Steel Structures II (L0301)		Lecture	2
Steel Structures II (L0302)		Recitation Section (large)	2
			<b>CP</b>
			3
<b>Module Responsible</b>	Prof. Marcus Rutner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Steel Structures I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After successful completion students can		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• describe and explain the behaviour of bolted and welded connections</li> <li>• design and check simple halls and buildings</li> <li>• calculate forces and stresses of simple structures (trusses, beams, frames)</li> <li>• illustrate and dimension the main details (framework, column base, load application points)</li> </ul>		
<i>Skills</i>	Students are able to design simple structures and connections, describe the load distribution and recognize the possible modes of failure. They can apply structural imperfections, calculate according to 2nd order theory and verify their results.		
<b>Personal Competence</b>	In this module, the student gains the ability to professionally develop and responsibly shape his/her own life. This happens through attending the lectures and exercise units as well as final exam preparation by assessing old exams. In the lecture and exercise unit, the contents are not only introduced but also discussed and developed. In these discussions the students learn to critically listen to opinions and interpretation of others and to get involved in the discussion.		
<i>Social Competence</i>			
<i>Autonomy</i>	At the beginning of every lecture, the contents of the last lecture are repeated and discussed with the students. Further, at the beginning of every exercise unit, examples out of engineering practice are introduced and topic-related questions are posed and discussed. These discussions at the beginning of every lecture and exercise unit enable the student to test his/her knowledge and enforces independent follow-up and preparation of the course material. Further, the preparation for the final exam demands strategic planning, persistence and independent learning

Module M1630: Sanitary Engineering II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Management of Wastewater Infrastructure (L2467)		Seminar	2
Drinking Water Treatment (L2466)		Seminar	2
<b>CP</b>			
			3
			3
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge in the field of drinking water supply and waste water disposal.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can exemplify their expert knowledge on drinking water, waste water treatment and the associated infrastructure systems. They are capable of reproducing the relevant empirical assumptions and scientific simplifications in detail. The students can model some processes mathematically. They can also assess existing problems in the field of sanitary engineering, such as removal of nitrate, and place them in a socio-political context. Furthermore, they know how to draft the features and effectiveness of important technologies of the future such as high- and low-pressure membrane filtration systems and techniques.		
<i>Skills</i>	The students are able to apply the relevant standards and guidelines for the design and operation of urban water infrastructures independently. Their expertise comprises expert skills to design drinking water supply and urban drainage systems as well as the associated treatment facilities. Besides the acquisition of technical skills the students are able to address and solve biochemical problems in the field of drinking water and wastewater treatment. The students are also able to develop ideas of their own to improve the existing water related infrastructures, systems and concepts.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.		
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Ralf Otterpohl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The seminar "Infrastructure Management Wastewater" develops the understanding of infrastructure systems in relation to wastewater systems, but also addresses other infrastructure systems.</p> <p>Initially, an overview of the entire system is given, including water catchment areas, water distribution, the origin of wastewater in households and industry, stormwater runoff management, and the treatment and reuse of water (constituents). Thereby the design tools especially of digital modelling are understood by practical application. Energetic considerations as well as planning and restoration of pipeline systems are covered.</p> <p>For wastewater treatment, the basis developed in Sanitary Engineering I will be deepened and significantly expanded, especially the resource recovery of nutrients and water. Sanitary solutions for different socio-economic and climatic conditions are understood and calculated.</p>

<b>Content</b>	The seminar deepens and expands the knowledge of the processes of drinking water treatment. The seminar deals with ion exchange, oxidation, disinfection, gas exchange and hybrid treatment processes. Further topics include pH adjustment and energy efficiency in water supply. Within the scope of the course, the students work out a seminar performance (presentation, design, modelling) on the basis of a task.

Module M1632: Applied Water Management			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Modelling of soil water dynamics (L2471)		Project-/problem-based Learning	2                  2
Modelling of soil water dynamics (L2470)		Lecture	2                  2
Nature-oriented Hydraulic Engineering (L2472)		Project-/problem-based Learning	2                  2
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of analysis and differential equations</li> <li>• hydromechanical and hydraulic engineering principles</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to define the basic tasks and terms of nature-oriented hydraulic engineering und groundwater hydrology. They can describe the basics concepts, the basic approaches and methods of nature-oriented hydraulic engineering, groundwater hydrology and groundwater modelling and are able to apply these to practical problems.		
<i>Skills</i>	The students are able to apply the methods and approaches of nature-oriented hydraulic engineering and of groundwater hydrology to practical problems. They can demonstrate to transfer and apply these to simple hydraulic engineering systems. In addition, they are able to apply the approaches commonly used in groundwater hydrology. They can exemplarily explain and reason how to apply them as a basis for geo-hydrological questions. In addition, students can apply basic groundwater modelling methods to simple problems of groundwater movement and groundwater recharge.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to help each other solving case studies. The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to demonstrate to work cooperatively in teams consisting of engineers from different subject areas.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	Written-theoretical part and modeling

Module M1723: Building Information Modeling			
Courses			
Title	Typ	Hrs/wk	CP
Building Information Modeling (L2760)	Integrated Lecture	2	2
Building Information Modeling (L2761)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Kay Smarsly		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The contents of this module follow the recommendations of the German Association of Computing in Civil Engineering (www.gacce.de) for the BIM courses taught at German universities in the subject area of engineering informatics. The module aims to present methodological knowledge to enable students to introduce, to design, to monitor, and to improve BIM processes in companies and public institutions. An in-depth understanding of the methods and technologies relevant to BIM is essential. Emphasis is placed on generally valid principles and techniques independent of specific software products and valid for several decades. The theoretical content taught in the lecture is complemented by practical exercises, in which state-of-the-art software tools will be used. Topics include computer-aided design and geometry modeling, digital modeling of buildings and infrastructure, BIM data exchange and cooperation (focusing on Industry Foundation Classes), process modeling, job descriptions and BIM applications, BIM tools, and advanced aspects. A central component of this module will be a project work.</p> <p><i>Skills</i> The module focuses on enabling students to accomplish competencies required for professionally using BIM software and understanding the methods. The competencies includes construction-related skills, BIM-specific skills and additional specialist skills, in particular understanding of the requirements for modeling buildings as well as for planning, implementing, and operating buildings. Specifically, implementing and editing 3D models, coordinating and managing BIM processes and data, and implementing BIM in companies are among the competencies of this module.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Social skills are essential in the BIM context, as BIM projects are usually carried out by interdisciplinary teams. With regard to social skills, this module aims to teaching students to convey information in a clear and comprehensible manner, to enabling students to work with others and achieve goals together, and to resolving conflicts constructively, which is essentially achieved through group work. In small student groups, the students train their communication and cooperation skills, receiving feedback from the instructors and fellow students.</p> <p><i>Autonomy</i> The personal competencies pursued in this module in terms of independence are aiming towards completing tasks with few guidance or assistance, which is essential for BIM projects, as BIM projects often involve complex and urgent tasks. This module helps students develop a degree of independence in working, particularly the skills to plan, prioritize, and complete tasks in a timely and efficient manner, primarily supported through project work.</p>

**Specialization Water and Environment**

**Module M1628: Sustainable Building**

Courses			
Title	Typ	Hrs/wk	CP
Circular flow economy and structural recycling (L2464)	Integrated Lecture	2	2
Sustainable building materials and buildings (L3179)	Integrated Lecture	2	2
Sustainable water management and hydraulic engineering (L3180)	Integrated Lecture	2	2
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of building materials, building chemistry, building construction and building project management		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to reproduce essential features of sustainable construction and material cycles. They can also name the constructional and environmental properties of recyclates and describe the sampling and analysis process. They are able to give an overview of the history, definition and to provide strategic approaches to the sustainability discussion from a constructional and environmental perspective. Furthermore, they can explain relevant objectives, strategies and exemplary fields of research in the field of sustainable construction (e.g. environmental impacts of the production and use of building materials, life cycle assessment, energy and climate-optimised planning and construction, material principles of renewable raw materials). Students will be able to discuss the fundamental relationship between the origin and type of construction waste, quantities produced and methods for characterising them.</p> <p><i>Skills</i> Students can relate relevant legal requirements to practical problems of environmentally sound design and construction and thus justify the application of specific limit values for individual areas of application. Students are able to assess risks that may arise from hazardous construction waste in a concise manner. They are able to critically examine innovative areas of application of sustainable construction on the basis of central engineering, economic and legal criteria. They can thereafter evaluate and propose approaches for alternative solutions exemplarily, e.g. for the processing and recycling of construction waste.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to work out their own solutions for specific problems of recycling building materials in small groups. For this purpose, they can organise themselves in a division of labour and can give themselves a work and project plan. Furthermore, they are able to appoint group members to coordinate the cooperation with other working groups of the module and to moderate the presentation of work results in the seminar.</p> <p><i>Autonomy</i> Students can coordinate their individual work performance with the other members of the group and prepare for it efficiently by use of scientific media.</p>

<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Philine Gaffron
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>This course places its focus on transport and mobility in Germany. It deals with questions such as:</p> <ul style="list-style-type: none"> <li>• Which external factors - like e.g. energy costs, availability of renewable and fossil fuels, environmental and climate protection objectives - influence current developments in the transport sector?</li> <li>• Which external effects in turn are caused by mobility choices and traffic?</li> <li>• How should these interactions be evaluated, how and by whom can they be influenced?</li> <li>• Which measures at the municipal level can contribute to a more sustainable transport system?</li> </ul> <p>During the course, these questions will be illustrated and discussed with reference to different examples and current developments. Participants will also provide input on specific topics. Potential core subjects of the course could be:</p> <ul style="list-style-type: none"> <li>• Environmental Justice : which population groups are disproportionately affected by transport emissions and who causes them?</li> <li>• Municipal cycle planning</li> <li>• Transport and Climate Protection: can, want, act - everything could be, nothing must be?</li> </ul>
<b>Literature</b>	Die Literaturempfehlungen sind abhängig von den jeweiligen, wechselnden Themenschwerpunkten und werden rechtzeitig vor Beginn der Veranstaltung bekannt gegeben.

<b>Typ</b>	Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Jürgen Perschon, Christof Hertel
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The course provides an overview over different transport projects in the metropolitan areas of developing countries. Considering different perspectives on urban growth, social justice, economic development, environmental and climate protection as well as the economic viability of public transport, the specific situation in the urban conglomerates of Asia, Latin America and Africa will be analysed and placed in a regional and global context. Specific public transport systems will be examined to establish, whether they are a suitable example for sustainable urban development.</p> <p>The following examples could be suitable case studies: Singapore (Metro), Lagos (BRT Light), Guangzhou, Bogota, Jakarta (Full BRT), Sao Paulo, Medellin (Cable Car Systems), Johannesburg (Minibus-Taxi).</p> <p>The course will be designed interactively with the students and will partly be in English as is the majority of the literature in this area (also: Skype online interviews with international experts in the transport sector). <b>An English language presentation is also part of the course work.</b></p>

Module M1715: Renewable Energies			
Courses			
Title	Typ	Hrs/wk	CP
Fuels II (L3143)	Lecture	1	1
Renewable Energies I (L2740)	Lecture	2	2
Renewable Energies I (L2742)	Recitation Section (large)	1	1
Renewable Energies II (L2741)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Upon completion of this module, students will be able to provide an overview of characteristics of renewable energy systems. They will be able to explain the issues that arise in these systems. Furthermore, they are able to explain knowledge of energy supply, energy distribution and energy trading in this context, taking into account contexts bordering on specific disciplines. The students can explain this knowledge in detail for such energy systems and take a critical stand on it. Furthermore, they can explain the environmental impact of using renewable energy systems and have an overview of the economic classification of the respective options.</p> <p><i>Skills</i> Students are able to apply methodologies for determining energy demand or energy supply to different types of renewable energy systems. Furthermore, they can evaluate such energy systems technically, ecologically and economically as well as systemically and also design them under certain given conditions. They are able to select the regulations necessary for this in a subject-specific manner, especially by means of non-standard solutions to a problem.</p> <p>Students are able to orally explain issues from the subject area and approaches to dealing with them and to classify them in the respective context.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to investigate suitable technical alternatives and ultimately evaluate them based on technical, economic and ecological criteria - and thus from a sustainability perspective.</p> <p><i>Autonomy</i> Students will be able to independently access sources about the field, acquire knowledge and transform it to address new issues.</p>

<b>Content</b>	This module includes a presentation of the renewable energy supply and a discussion of the respective technologies for providing the desired final or useful energy. Specifically, this includes the options for solar energy use for heat and power generation (i.e., passive solar energy use, solar collectors for low-temperature heat provision, solar thermal power generation, photovoltaic power generation), wind energy use for power generation (i.e. onshore and offshore wind power use), hydroelectric power use for electricity generation (i.e., run-of-river and storage hydroelectric power), ocean energy use for electricity generation (including tidal power plants), and geothermal energy use for heat and electricity generation (i.e., near-surface use by means of heat pumps, deep geothermal energy use for heat and/or electricity generation).

Course L2741: Renewable Energies II	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Martin Kaltschmitt
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>This lecture covers all options for energy supply from biomass; this includes the supply of heat, electricity and fuels. The biomass resource and its origin will be discussed first. Afterwards the biomass supply is addressed, which bridges the gap between biomass generation and utilization. Subsequently, the different conversion options are discussed. Only those options are presented in depth that have a corresponding significance on the market in Germany and Europe. This includes</p> <p>(a) heat generation from biogenic solid fuels in small and large-scale plants</p> <p>(b) power generation from solid biomass via combustion</p> <p>(c) a biogas production from residues, by-products and waste,</p> <p>(d) alcohol production from sugar and starch</p> <p>(e) biodiesel production from vegetable oils.</p> <p>Special attention is also paid to the corresponding environmental aspects. An economic classification of the various options is also provided.</p>

<b>Module M0829: Foundations of Management</b>				
<b>Courses</b>				
Title	Typ	Hrs/wk	CP	
Management Tutorial (L0882)	Recitation Section (small)	2	3	
Introduction to Management (L0880)	Lecture	3	3	
<b>Module Responsible</b>	Prof. Christian L�uthje			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic Knowledge of Mathematics and Business			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to			
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management</li> <li>• explain the most important aspects of and goals in Management and name the most important aspects of entrepreneurial projects</li> <li>• describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human resource management, information management, innovation management and marketing</li> <li>• explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance</li> <li>• state basics from accounting and costing and selected controlling methods.</li> </ul>			
<i>Skills</i>	<p>Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to</p> <ul style="list-style-type: none"> <li>• analyse Management goals and structure them appropriately</li> <li>• analyse organisational and staff structures of companies</li> <li>• apply methods for decision making under multiple objectives, under uncertainty and under risk</li> <li>• analyse production and procurement systems and Business information systems</li> <li>• analyse and apply basic methods of marketing</li> <li>• select and apply basic methods from mathematical finance to predefined problems</li> <li>• apply basic methods from accounting, costing and controlling to predefined problems</li> </ul>			
<b>Personal Competence</b>	Students are able to			
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• work successfully in a team of students</li> <li>• to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project</li> <li>• to communicate appropriately and</li> <li>• to cooperate respectfully with their fellow students.</li> </ul>			
<i>Autonomy</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• work in a team and to organize the team themselves</li> <li>• to write a report on their project.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	several written exams during the semester plus final test (90 minutes)			
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory            Civil- and Environmental Engineering: Specialisation Civil Engineering: Elective Compulsory            Civil- and Environmental Engineering: Specialisation Water and Environment: Elective Compulsory            Civil- and Environmental Engineering: Specialisation Traffic and Mobility: Elective Compulsory            Bioprocess Engineering: Core Qualification: Compulsory            Chemical and Bioprocess Engineering: Specialisation Bio Engineering: Elective Compulsory            Chemical and Bioprocess Engineering: Specialisation Chemical Engineering: Elective Compulsory            Data Science: Core Qualification: Compulsory            Electrical Engineering: Core Qualification: Compulsory            Green Technologies: Energy, Water, Climate: Specialisation Biotechnologies: Elective Compulsory            Green Technologies: Energy, Water, Climate: Specialisation Energy Systems / Renewable Energies: Elective Compulsory            Green Technologies: Energy, Water, Climate: Specialisation Energy Technology: Elective Compulsory            Green Technologies: Energy, Water, Climate: Specialisation Maritime Technologies: Elective Compulsory            Green Technologies: Energy, Water, Climate: Specialisation Water Technologies: Elective Compulsory            Computer Science in Engineering: Core Qualification: Compulsory            Logistics and Mobility: Core Qualification: Compulsory            Mechanical Engineering: Core Qualification: Compulsory            Mechanical Engineering: Specialisation Biomechanics: Compulsory            Mechanical Engineering: Specialisation Energy Systems: Compulsory            Mechanical Engineering: Specialisation Materials in Engineering Sciences: Compulsory</p>

Course L0882: Management Tutorial	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christian Lüthje
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>

Module M1722: New Trends in Water and Environmental Research			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Introduction to Microplastics in Environment (L2755)		Integrated Lecture	2
Research Methods (L2756)		Lecture	1
Research Trends (L2757)		Seminar	2
<b>Module Responsible</b>	Prof. Nima Shokri		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge in water and environmental-related research		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will be introduced to current research topics relevant to water and environment with a particular focus on the effects of microplastics in environment (introductory level). Data analysis, curation and presentation will be other skills discussed in this module.		
<i>Skills</i>	Students' research and academics skills will be improved in this module. How to prepare and deliver an effective research presentation, how to write an abstract, research paper and proposal will be explained in this module.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.		
<i>Autonomy</i>	The students will be involved in writing individual project reports and giving research presentation. This will contribute to the students' ability and willingness to work independently and responsibly.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M1630: Sanitary Engineering II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Management of Wastewater Infrastructure (L2467)		Seminar	2
Drinking Water Treatment (L2466)		Seminar	2
<b>CP</b>			
			3
			3
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge in the field of drinking water supply and waste water disposal.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can exemplify their expert knowledge on drinking water, waste water treatment and the associated infrastructure systems. They are capable of reproducing the relevant empirical assumptions and scientific simplifications in detail. The students can model some processes mathematically. They can also assess existing problems in the field of sanitary engineering, such as removal of nitrate, and place them in a socio-political context. Furthermore, they know how to draft the features and effectiveness of important technologies of the future such as high- and low-pressure membrane filtration systems and techniques.		
<i>Skills</i>	The students are able to apply the relevant standards and guidelines for the design and operation of urban water infrastructures independently. Their expertise comprises expert skills to design drinking water supply and urban drainage systems as well as the associated treatment facilities. Besides the acquisition of technical skills the students are able to address and solve biochemical problems in the field of drinking water and wastewater treatment. The students are also able to develop ideas of their own to improve the existing water related infrastructures, systems and concepts.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.		
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Course L2467: Management of Wastewater Infrastructure	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Ralf Otterpohl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The seminar "Infrastructure Management Wastewater" develops the understanding of infrastructure systems in relation to wastewater systems, but also addresses other infrastructure systems.</p> <p>Initially, an overview of the entire system is given, including water catchment areas, water distribution, the origin of wastewater in households and industry, stormwater runoff management, and the treatment and reuse of water (constituents). Thereby the design tools especially of digital modelling are understood by practical application. Energetic considerations as well as planning and restoration of pipeline systems are covered.</p> <p>For wastewater treatment, the basis developed in Sanitary Engineering I will be deepened and significantly expanded, especially the resource recovery of nutrients and water. Sanitary solutions for different socio-economic and climatic conditions are understood and calculated.</p>

<b>Course L2466: Drinking Water Treatment</b>	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst, Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The seminar deepens and expands the knowledge of the processes of drinking water treatment. The seminar deals with ion exchange, oxidation, disinfection, gas exchange and hybrid treatment processes. Further topics include pH adjustment and energy efficiency in water supply. Within the scope of the course, the students work out a seminar performance (presentation, design, modelling) on the basis of a task.

Course L1184: Introduction to Railways	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	André Schoppe
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Lecture: The module provides a basic knowledge of the field of railroad engineering. An overview of railroad operations, control and safety technology, railroad superstructure, structural engineering, project management as well as maintenance and design of infrastructure facilities is given. The aim of this module is to give students as much insight as possible into railroad infrastructure. The module is examined by means of a written exam at the end of the semester.  Lecture Hall Exercise:  In order to give the students practical examples, full-day practical excursions are carried out. New handling techniques and currently available hardware will be presented by visiting the marshalling yard "die Zugbildungsanlage Maschen (ZBA)". Furthermore, the training center for track construction and civil engineering as well as the operations center in Hanover will be visited, where facilities and tasks will be presented. Questionnaires will also be provided for practice purposes. In addition, study papers can be handed out and supervised as required.

Module M0612: Steel Structures II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Steel Structures II (L0301)		Lecture	2
Steel Structures II (L0302)		Recitation Section (large)	2
<b>CP</b>			3
<b>Module Responsible</b>	Prof. Marcus Rutner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Steel Structures I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After successful completion students can		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>describe and explain the behaviour of bolted and welded connections</li> <li>design and check simple halls and buildings</li> <li>calculate forces and stresses of simple structures (trusses, beams, frames)</li> <li>illustrate and dimension the main details (framework, column base, load application points)</li> </ul>		
<i>Skills</i>	Students are able to design simple structures and connections, describe the load distribution and recognize the possible modes of failure. They can apply structural imperfections, calculate according to 2nd order theory and verify their results.		
<b>Personal Competence</b>	In this module, the student gains the ability to professionally develop and responsibly shape his/her own life. This happens through attending the lectures and exercise units as well as final exam preparation by assessing old exams. In the lecture and exercise unit, the contents are not only introduced but also discussed and developed. In these discussions the students learn to critically listen to opinions and interpretation of others and to get involved in the discussion.		
<i>Social Competence</i>			
<i>Autonomy</i>	At the beginning of every lecture, the contents of the last lecture are repeated and discussed with the students. Further, at the beginning of every exercise unit, examples out of engineering practice are introduced and topic-related questions are posed and discussed. These discussions at the beginning of every lecture and exercise unit enable the student to test his/her knowledge and enforces independent follow-up and preparation of the course material. Further, the preparation for the final exam demands strategic planning, persistence and independent learning

Module M1723: Building Information Modeling			
Courses			
Title	Typ	Hrs/wk	CP
Building Information Modeling (L2760)	Integrated Lecture	2	2
Building Information Modeling (L2761)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Kay Smarsly		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The contents of this module follow the recommendations of the German Association of Computing in Civil Engineering (www.gacce.de) for the BIM courses taught at German universities in the subject area of engineering informatics. The module aims to present methodological knowledge to enable students to introduce, to design, to monitor, and to improve BIM processes in companies and public institutions. An in-depth understanding of the methods and technologies relevant to BIM is essential. Emphasis is placed on generally valid principles and techniques independent of specific software products and valid for several decades. The theoretical content taught in the lecture is complemented by practical exercises, in which state-of-the-art software tools will be used. Topics include computer-aided design and geometry modeling, digital modeling of buildings and infrastructure, BIM data exchange and cooperation (focusing on Industry Foundation Classes), process modeling, job descriptions and BIM applications, BIM tools, and advanced aspects. A central component of this module will be a project work.</p> <p><i>Skills</i> The module focuses on enabling students to accomplish competencies required for professionally using BIM software and understanding the methods. The competencies includes construction-related skills, BIM-specific skills and additional specialist skills, in particular understanding of the requirements for modeling buildings as well as for planning, implementing, and operating buildings. Specifically, implementing and editing 3D models, coordinating and managing BIM processes and data, and implementing BIM in companies are among the competencies of this module.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Social skills are essential in the BIM context, as BIM projects are usually carried out by interdisciplinary teams. With regard to social skills, this module aims to teaching students to convey information in a clear and comprehensible manner, to enabling students to work with others and achieve goals together, and to resolving conflicts constructively, which is essentially achieved through group work. In small student groups, the students train their communication and cooperation skills, receiving feedback from the instructors and fellow students.</p> <p><i>Autonomy</i> The personal competencies pursued in this module in terms of independence are aiming towards completing tasks with few guidance or assistance, which is essential for BIM projects, as BIM projects often involve complex and urgent tasks. This module helps students develop a degree of independence in working, particularly the skills to plan, prioritize, and complete tasks in a timely and efficient manner, primarily supported through project work.</p>

Module M1632: Applied Water Management			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Modelling of soil water dynamics (L2471)		Project-/problem-based Learning	2
Modelling of soil water dynamics (L2470)		Lecture	2
Nature-oriented Hydraulic Engineering (L2472)		Project-/problem-based Learning	2
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of analysis and differential equations</li> <li>• hydromechanical and hydraulic engineering principles</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to define the basic tasks and terms of nature-oriented hydraulic engineering und groundwater hydrology. They can describe the basics concepts, the basic approaches and methods of nature-oriented hydraulic engineering, groundwater hydrology and groundwater modelling and are able to apply these to practical problems.		
<i>Skills</i>	The students are able to apply the methods and approaches of nature-oriented hydraulic engineering and of groundwater hydrology to practical problems. They can demonstrate to transfer and apply these to simple hydraulic engineering systems. In addition, they are able to apply the approaches commonly used in groundwater hydrology. They can exemplarily explain and reason how to apply them as a basis for geo-hydrological questions. In addition, students can apply basic groundwater modelling methods to simple problems of groundwater movement and groundwater recharge.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to help each other solving case studies. The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to demonstrate to work cooperatively in teams consisting of engineers from different subject areas.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.
