Table of Contents	2
Program description	4
Core Qualification	5
Module M0523: Business & Management	5
Module M0524: Non-technical Courses for Master	24
Module M0826: Biology, Geology and Chemistry	26
Module M0962: Sustainability and Risk Management	28
Specialization Cities	30
Module M0830: Environmental Protection and Management	30
Module M0902: Wastewater Treatment and Air Pollution Abatement	32
Module M0923: Integrated Transportation Planning	35
Module M0749: Waste Treatment and Solid Matter Process Technology	37
Module M0827: Modeling in Water Management	39
Module M0828: Urban Environmental Management	41
Module M0857: Geochemical Engineering	43
Module M0870: Management of Surface Water	45
Module M0871: Hydrological Systems	48
Module M0874: Wastewater Systems	50
Module M0875: Nexus Engineering - Water, Soil, Food and Energy	53
Module M0922: City Planning	55
Module M0982: Transportation Modelling	57
Module M0663: Marine Geotechnics	58
Module M1717: Advanced Vadose Zone Hydrology	60
Module M1721: Water and Environment: Theory and Application	62
Module M1724: Smart Monitoring	63
Module M1878: Sustainable energy from wind and water	65
Module M0581: Water Protection	68
Module M0620: Special Aspects of Waste Resource Management	70
Module M1123: Selected Topics in Environmental Engineering	72
Module M0619: Waste Treatment Technologies	75
Module M0801: Water Resources and -Supply	77
Module M0822: Process Modeling in Water Technology	80
Module M0802: Membrane Technology	83
Module M0894: Study Work Cities	85
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	86
Module M0981: Operation of Public Transportation Systems	88
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	90
Module M1716: Subsurface Processes	92
Module M1720: Emerging Trends in Environmental Engineering	94
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	97
Specialization Environment	99
Module M0830: Environmental Protection and Management	99
Module M0902: Wastewater Treatment and Air Pollution Abatement	101
Module M1403: Construction and Simulation of Sewerage Systems	104
Module M0581: Water Protection	107
Module M0513: System Aspects of Renewable Energies	109
Module M0749: Waste Treatment and Solid Matter Process Technology	112
Module M0827: Modeling in Water Management	114
Module M0828: Urban Environmental Management	116
Module M0857: Geochemical Engineering	118
Module M0870: Management of Surface Water	120
Module M0871: Hydrological Systems	123
Module M0874: Wastewater Systems	125
Module M0875: Nexus Engineering - Water, Soil, Food and Energy	128
Module M0922: City Planning	130
Module M0663: Marine Geotechnics	132
Module M1717: Advanced Vadose Zone Hydrology	134
Module M1721: Water and Environment: Theory and Application	136
Module M1724: Smart Monitoring	137
Module M1702: Process Imaging	139
Module M1878: Sustainable energy from wind and water	141
Module M0620: Special Aspects of Waste Resource Management	144
Module M1123: Selected Topics in Environmental Engineering	146
Module M0801: Water Resources and -Supply	149
Module M0802: Membrane Technology	152
Module M0822: Process Modeling in Water Technology	154
Module M0923: Integrated Transportation Planning	157
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	159
Module M0950: Study Work Environment	161
Module M0619: Waste Treatment Technologies	162
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	164

Module M1716: Subsurface Processes	166
Module M1720: Emerging Trends in Environmental Engineering	168
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	171
<b>Specialization Water</b>	<b>173</b>
Module M0801: Water Resources and -Supply	173
Module M1403: Construction and Simulation of Sewerage Systems	176
Module M1716: Subsurface Processes	179
Module M0513: System Aspects of Renewable Energies	181
Module M0827: Modeling in Water Management	184
Module M0857: Geochemical Engineering	186
Module M0870: Management of Surface Water	188
Module M0871: Hydrological Systems	191
Module M0874: Wastewater Systems	193
Module M0875: Nexus Engineering - Water, Soil, Food and Energy	196
Module M0922: City Planning	198
Module M0663: Marine Geotechnics	200
Module M1717: Advanced Vadose Zone Hydrology	202
Module M1721: Water and Environment: Theory and Application	204
Module M1702: Process Imaging	205
Module M1724: Smart Monitoring	207
Module M0620: Special Aspects of Waste Resource Management	209
Module M1123: Selected Topics in Environmental Engineering	211
Module M0822: Process Modeling in Water Technology	214
Module M0802: Membrane Technology	217
Module M0902: Wastewater Treatment and Air Pollution Abatement	219
Module M0923: Integrated Transportation Planning	222
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	224
Module M0948: Study Work Water/ Waste Water	226
Module M0581: Water Protection	227
Module M1720: Emerging Trends in Environmental Engineering	229
Module M1779: Sustainable Nature-based Coastal Protection in a Changing Climate (SeaPiaC)	232
Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)	234
<b>Thesis</b>	<b>236</b>
Module M-002: Master Thesis	236

## Program description

### Content

#### Master of Science in 'Water and Environmental Engineering'

The Master of Science in Water and Environmental Engineering gives students a choice of three areas of specialization - Water, Environment and City. Graduates of the Master in Water and Environmental Engineering are able to translate the engineering, mathematical and scientific knowledge gained on the course into practice in order to analyze problems scientifically and solve them even when they are unusually or incompletely defined and have complex specifications. Graduates have the ability to work independently, to apply the methods and processes required to solve technical and planning problems, and to apply, critically scrutinize, and further develop new findings. They are also qualified to plan exacting (household) water management projects and projects geared to environmental protection and to plan them paying due attention to the necessary clarifications and examination of existing information and resources. They can

- Collaborate successfully with professional and non-professional players in public administration, industry, and academia
- Independently define research tasks for theoretical and experimental exploration of environmental and water management issues and plan and execute projects in those areas
- Responsibly assess and take into account the concerns of those affected by planning and implementation and of society in general
- work together in international teams on international subjects with cross-cultural competence.

## Core Qualification

### Module M0523: Business & Management

<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>Students are able to interrelate technical and management knowledge.</li> </ul> <i>Skills</i> <ul style="list-style-type: none"> <li>Students are able to apply basic methods in selected areas of business management.</li> <li>Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul> <b>Personal Competence</b> <i>Social Competence</i> <ul style="list-style-type: none"> <li>Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems</li> </ul> <i>Autonomy</i> <ul style="list-style-type: none"> <li>Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>	
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

### Course L3065: Current Issues in Digital Economics B&M

<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Referat
<b>Examination duration and scale</b>	30 Minuten
<b>Lecturer</b>	Dr. Christina Strobel
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Digital economics is the targeted approach to meeting human needs in the face of scarcity based on the use of digital information and communication technologies. The goal of the seminar is to discuss current issues in digital economics and their underlying economic theory. To do so, students will read a current popular science book (in German or English) as well as the relevant scientific literature (in English) prior to the seminar. During the seminar, individual topics will be presented by the students and critically discussed.
<b>Literature</b>	

### Course L2993: Current issues in behavioral economics

<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Referat
<b>Examination duration and scale</b>	30 Minuten
<b>Lecturer</b>	Prof. Timo Heinrich
<b>Language</b>	EN
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	The goal of the seminar is to discuss current issues in behavioral and to shed light on their relationship to economic theory and our own behavior. Students will first read a current popular science book (in English) as well as the relevant scientific literature. Then the individual topics will be presented and critically discussed during the seminar. Furthermore, students will develop individual research questions.
<b>Literature</b>	Wird noch bekanntgegeben.

Course L2860: Behavioral Online Experiments	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Fachtheoretisch-fachpraktische Arbeit
<b>Examination duration and scale</b>	5-seitige Ausarbeitung & 20-minütige Teampräsentation
<b>Lecturer</b>	Dr. Christina Strobel
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	The course offers an introduction to the methods and techniques of online experiments used in experimental Economics, Psychology, and Business Administration. The course is targeted at participants with no or limited experience. It pursues the agenda of providing the practical, theoretical and tool knowledge to find a research question, deduce hypotheses and design and run an experiment. Hence, the focus will be on general methodological, design and process issues. The course is not surveying the existing experimental evidence but rather pinpoints towards selected well known experiments. We will follow a learning-by-doing approach. We will have a short introduction to data evaluation using non-parametric statistics as well as to relevant software tools (oTree). At the end of this course you will have gained not only the know-how needed to develop and implement an experimental research design online but you have also gained the basic skills required to gather, analyze and interpret experimental data.

Course L2722: Digitalization and the impact on people	

## Module Manual M.Sc. "Water and Environmental Engineering"

<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Schriftliche Ausarbeitung (laut FPrO)
<b>Examination duration and scale</b>	Ausarbeitung, 5 Seiten
<b>Lecturer</b>	Robert Damköhler, Laura Noack
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p><b>Digital:</b></p> <p>In this module we provide you with a practical overview of digital tools &amp; methods, new business models &amp; strategies, technological trends and legal aspects in 3 intensive phases - the conception, implementation and establishment of projects. The whole thing is consolidated with practical exercises, so that you already develop your own business model in the course of the seminar and test it on the market with the right techniques.</p> <p><b>Human Factors:</b></p> <p>With practical exercises, you will learn about methodical user-centredness through the user-centred design process and learn in which project phases, which UCD methods are useful to apply. In addition, you will get to know the subject area of "Human Factors" and understand why we also talk about socio-technical systems in digitalisation, why these represent an important success factor and which phases have to be gone through to integrate the principles into the organisational structure of a company.</p> <p><b>New Leadership:</b></p> <p>In the New Leadership module, you will learn about a new leadership approach that supports you in mastering the challenges of digitalisation. With the help of agile methodology and interactive exercises, you will learn how to anchor the principles of the new leadership approach and increase the empowerment and self-organisation of the team in order to create the framework for innovative work.</p>

<b>Lecturer</b>	Prof. Daniel Heiner Ehls
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Scientific knowledge grows continuously but also experiences certain alignments over time. For example, early cultures had the believe of a flat earth while latest research has a spherical earth model. Also in social science and business management, from time to time certain concepts that have even been the predominant paradigm are challenged by new observations and models. Consequently, certain controversies emerge and build the base for advancing theory and managerial practice. With this lecture, we put ourselves in the middle of heated debates for informed academics and practitioners of the day after tomorrow.</p> <p>The lecture targets several controversies in the domain of technology strategy and innovation management. By the classical academic method and the novel problem based learning format of a structured discussion, a given controversy is scrutinized. On selected topics, students will discuss a dispute and gain a thorough understanding. Specifically, based on a brief introduction of a motion, a affirmative constructive as well as a negative constructive is presented by two different student groups. Each presentation is followed by a response of the other group and questions from the class. Topics range from latest theories and concepts for value capture, to the importance of operating within a global marketplace, to cutting edge approaches for innovation stimulation and technology management. Consequently, this lecture deepens the knowledge in technology strategy and innovation management (TIM), enables a critical thinking and thought leadership.</p>

<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Referat
<b>Examination duration and scale</b>	NN
<b>Lecturer</b>	Dr. Vytaute Dlugoborskyte
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The course aims to provide students with an understanding of key issues in the management of innovation and development of the relevant skills needed to manage innovation at both strategic and operational levels. It provides evidence of different approaches based on leading research, real world examples and experiences of firms and organizations from around the world. The management of innovation is one of the most important and challenging aspects of modern organization. Innovation is a fundamental driver of competitiveness and it plays a large part in improving quality of life. Innovation, and particularly technological innovation, is inherently difficult, uncertain and risky, and most new technologies fail to be translated into successful products and services. Given this, it is essential that students understand the strategies, tools and techniques for managing innovation, which often requires a different set of management knowledge and skills from those employed in everyday business administration. The course itself draws upon research activities of the Innovation Management Group within TUHH, the Institute for Technology and Innovation Management (TIM, W-7, <a href="http://www.tuhh.de/tim">www.tuhh.de/tim</a>)</p> <p><b>Knowledge Objectives:</b></p> <ol style="list-style-type: none"> <li>1. Understand definitions and concepts of innovation,</li> <li>2. Explore major models and theories of innovation,</li> <li>3. Use and apply tools for innovation management.</li> </ol> <p><b>Skill Objectives:</b></p> <ol style="list-style-type: none"> <li>1. Diagnostic and analytical skills,</li> <li>2. Enhance verbal skills through class and syndicate discussions,</li> <li>3. Build up critical and interpretation skills,</li> <li>4. Learn how to evaluate different options,</li> <li>5. Formulate and develop strategy,</li> <li>6. Assess and resolve managerial challenges.</li> </ol> <p><b>Learning Outcomes</b></p> <p>At the end of the course students will be able to demonstrate understanding, and make critical assessments of the following:</p> <ol style="list-style-type: none"> <li>1. Assess and interpret innovation processes,</li> <li>2. Develop and formulate managerial strategies to shape innovative performance,</li> <li>3. Utilize tools of innovation management to map and measure innovative activities,</li> <li>4. Diagnose different innovation challenges and make recommendations for resolving them.</li> </ol> <p><b>Course Outline - Lecture Topics:</b></p> <ol style="list-style-type: none"> <li>1. The Management of (Technological) Innovation,</li> <li>2. Strategy and Organization for Innovation,</li> <li>3. Innovation of Products, Services and Business Models,</li> <li>4. Course L3060: Causal Data Science for Business Analytics	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Schriftliche Ausarbeitung
<b>Examination duration and scale</b>	Mehrere schriftliche Ausarbeitungen über das Semester hinweg verteilt
<b>Lecturer</b>	Oliver Mork
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Most managerial decision problems require answers to questions such as “what happens to Y if we do X?”, or “was it X that caused Y to change?” In other words, practical business decision-making requires knowledge about cause-and-effect. While most data science and machine learning approaches are designed to efficiently detect patterns in high-dimensional data, they are not able to distinguish causal relationships from simple correlations. That means, commonly used approaches to business analytics often fall short to provide decision makers with important causal knowledge. Therefore, many leading companies currently try to develop specific causal data science capabilities. This module will provide an introduction into the topic of causal inference with the help of modern data science and machine learning approaches and with a focus on applications to practical business problems from various management areas. Based on an overarching framework for causal data science, the course will guide students to detect sources of confounding influence factors, understand the problem of selective measurement in data collection, and extrapolate causal knowledge across different business contexts. We also cover several tools for causal inference, such as A/B testing and experiments, difference-in-differences, instrumental variables, matching, regression discontinuity designs, etc. A variety of hands-on examples will be discussed that allow students to apply their newly obtained knowledge and carry out state-of-the-art causal analyses by themselves.</p>

<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Schriftliche Ausarbeitung
<b>Examination duration and scale</b>	Gruppenarbeit: Erstellung eines Poster sowie eines Aufgabenblatts (inkl. Lösungen)
<b>Lecturer</b>	Dipl.-Ing. Wilhelm Radomsky
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The event will cover current knowledge and trends in project management:</p> <p>Basics of project management (competences, methods, tools) are practised, e.g. EVA, MTA, KTA, FMEA, PDCA, MPM</p> <p>Project management culture with lessons learned, optimisation of theory and process</p> <p>Project management theory mirrored by experiences from project management practice</p> <p>Development, implementation and operation of a PM system in small and large companies, e.g. Siemens</p> <p><b>The aim is to inform about current challenges in PM.</b></p> <p>Modern agile project management in dynamic markets</p> <p>Meeting challenges in turbulent times, project management in VUCA and BANI environments</p> <p>Managing change and transformation</p> <p>Securing the future through professional action</p> <p>Ensuring health and results in job and project</p> <p><b>With the main topics</b></p> <p>Project management in industry, SMEs, studies and private life</p> <p>Project life cycle, process and organisation, agile or 'agile'</p> <p>Integration, content and scope management, environment and stakeholder management</p> <p>Contract, risk and change management</p> <p>Schedule, cost and personnel management</p> <p>Quality management, success factors in the project environment</p> <p>The human factor, corporate culture</p> <p>Communication management, team development, leadership theories</p> <p>Project management is presented as a proven means of solving tasks and problems in private and professional environments. Project management is increasingly used as an agile goal-oriented leadership concept in companies and businesses. The participants are presented with competences and solutions to better cope with their tasks. The application of project management can already lead to an improvement of structure, communication and results during studies and prepare for the start of a career. The lecture serves as a basis for project management certification with the corresponding certification bodies such as GPM or PMI. The project management process is presented according to the basic international project management standards of IPMA and PMI and the Siemens project management system adapted for practical use.</p>

Course L1897: Project Management and Agile Methods	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Fachtheoretisch-fachpraktische Arbeit
<b>Examination duration and scale</b>	Ausarbeitung eines Projektplans in Kleingruppen (ca. 5-10 Seiten)
<b>Lecturer</b>	Christian Bussler
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The Seminar teaches the basics of project management, which constitutes the foundations for technical as well as for business projects. It also includes a sideline about process management. The participants will work on the following questions:</p> <ul style="list-style-type: none"> <li>• What is a project and what challenges does it imply?</li> <li>• What methods have been developed to meet those challenges?</li> <li>• How have these methods evolved over time? What is "state of the art" today?</li> <li>• What basic skills should project members have?</li> <li>• What is the difference between project and process? How can the latter be analyzed?</li> </ul> <p>The approaches are not just taught theoretically, but put to use in group work. Through this approach, participants are enabled to work successfully on actual projects - and manage projects later on. As project work is increasingly important in work life, project management is a key skill for job applicants.</p> <p>Main topics of the seminar include:</p> <ul style="list-style-type: none"> <li>• The "magic triangle" of project objectives</li> <li>• Typical project phases</li> <li>• Key instruments and methods (project structure plan, RACI, Gantt chart)</li> <li>• Project organization and steering</li> <li>• Team communication and collaboration</li> <li>• The agile approach of Scrum</li> <li>• Process levels and cascading</li> <li>• Process improvement</li> </ul> <p>With the knowledge and experience from the seminar, participants should be able to acquire a basic certificate in project management with relatively little additional effort. The certification is available through institutions like GPM.</p> <p>Participants already start working on their homework paper in the group work. It comprises 5 to 10 pages and a structure plan for the chosen project, which can be done in Excel for example. Ideally, the members of the work groups write their homework paper together. The expected scale of the paper would increase in this case, yet not proportionally with the number of group members (4 participants would be expected to hand in a paper of 15-20 pages).</p>

<b>Content</b>	The Management Consulting lecture teaches students knowledge that is complementary to their technical and business administration studies. They learn the basics of consulting and agent-principal theory and are given an overview of the consulting market. They are also shown how management consulting works and which methodical building blocks (processes) are needed to deal with a client's concerns and to undertake a consulting process. By means of practical examples students gain an insight into the extensive range of management consultancy services and of functional consulting.

Course L2669: Negotiation Management	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Examination Form</b>	Fachtheoretisch-fachpraktische Arbeit
<b>Examination duration and scale</b>	Vorbereitung, Durchführung und Selbstreflektion zu einer simulierten Verhandlungssituation. Die fiktive Verhandlung hat einen Umfang von 4 ½ Präsenzstunden und erfordert ausführliche Vor- und Nachbereitung im Umfang von ca. 3 x 2 Stunden. Zum Abschluss ist ein Reflektionsbericht einzureichen. Weitere Prüfungsleistungen werden im Rahmen von Lernfortschrittsabfragen entlang der Vorlesung erbracht.

<b>Lecturer</b>	Prof. Christian Lüthje
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>General description of course content and course goals</b></p> <p>We negotiate everyday in private and professional contexts. Leading negotiations successfully has a significant impact on future careers. Yet, we tend to have limited knowledge about the theory and empirical evidence regarding successful negotiating. Many people approach negotiations in a rather intuitive and unplanned way which often results in sub-optimal negotiation outcomes.</p> <p>The purpose of this interactive and problem-based course is to theoretically understand the strategies and process of negotiation as practiced in a variety of business-related settings (e.g. negotiations about working conditions, negotiations with customers and suppliers). The course will highlight the components of an effective negotiation (strategy, preparation, execution, evaluation) and offer the students the opportunity to analyze their own behavior in negotiations in order to improve.</p> <p>The course structure is experiential and problem-based, combining lectures, class discussion, mini-cases and small exercises, and more comprehensive negotiation practices in longer sessions. Through participation in negotiation exercises, students will have the opportunity to practice their communication and persuasion skills and to experiment with a variety of negotiating strategies and tactics. Students will apply the lessons learned to ongoing, real-world negotiations.</p> <p><b>Content:</b></p> <p>The students will find answers to the following fundamental questions of negotiation strategies in theory and practice:</p> <ul style="list-style-type: none"> <li>• How do negotiations influence everyday life and business processes?</li> <li>• What are key features of negotiations?</li> <li>• What are different forms of negotiations? What kinds of negotiation can be distinguished?</li> <li>• Which theoretical approaches to a theory of negotiation can be distinguished?</li> <li>• How can game theory be applied to negotiation?</li> <li>• What makes an effective negotiator?</li> <li>• Which factors should be considered when planning negotiations?</li> <li>• What steps must be followed to reach a deal?</li> <li>• Are there specific negotiation tactics?</li> <li>• What are the typical barriers to an agreement and how to deal with them?</li> <li>• What are possible cognitive (mental) errors and how to correct them?</li> </ul> <p><b>Knowledge</b></p> <p>Students know...</p> <ul style="list-style-type: none"> <li>• the theory basics of negotiations (e.g. game theory, behavioral theories)</li> <li>• the types and the pros and cons of different negotiation strategies</li> <li>• the process of negotiation, including goal formulation, preparation/planning, execution and evaluation</li> <li>• about some key issues impacting negotiations (e.g. team building and roles, barriers to reaching a deal, cognitive biases, multi-phase negotiations)</li> </ul> <p><b>Skills</b></p> <p>Students are capable of...</p> <ul style="list-style-type: none"> <li>• simultaneously considering multiple factors in negotiation situations and taking reasoned actions when preparing and conducting negotiations.</li> <li>• Analyzing and handling the key challenges of uncertainty, risk, intercultural differences, and time pressure in realistic negotiation situations.</li> <li>• assessing the typical barriers to an agreement (e.g. lack of trust), dealing with hardball tactics (e.g. good cop, bad cop; lowball, highball; intimidation), and avoiding cognitive traps (e.g. unchecked emotions, overconfidence).</li> <li>• reflecting on their decision-making in uncertain negotiation situations and derive actions for future decisions.</li> </ul> <p><b>Social Competence</b></p> <p>Students can...</p> <ul style="list-style-type: none"> <li>• provide appropriate feedback and handle feedback on their own performance constructively.</li> <li>• constructively interact with their team members in role playing in negotiations sessions</li> <li>• develop joint solutions in mixed teams and present them to others in real-world negotiation situations</li> </ul> <p><b>Self-Reliance</b></p> <p>Students are able to...</p> <ul style="list-style-type: none"> <li>◦ assess possible consequences of their own negotiation behavior</li> <li>◦ define own positions and tasks in the negotiation preparation process.</li> <li>◦ justify and make elaborated decisions in authentic negotiation situations.</li> </ul>

Course L1132: Civil- & Business Law	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	90 Minuten
<b>Lecturer</b>	Markus A. Meyer-Chory
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>- Basics of German Law System</p> <p>- Basic concepts and Systematics of Civil-, Commercial-, Companies- and Labor Law by specific bullet points, i.e. Insurance law, etc.</p>
<b>Literature</b>	folgt im Seminar

Course L1381: Public and Constitutional Law	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	2 Stunden
<b>Lecturer</b>	Klaus-Ulrich Tempke
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>Different areas of public law; proceedings, jurisdiction of administrative courts with stages of appeal, members of the courts;</p> <p>Court levels, organization and legal capacity;</p> <p>Introduction to and structure of fundamental rights;</p> <p>Human dignity: the guiding principle of the constitution;</p> <p>General right of privacy and freedom of action.</p>
<b>Literature</b>	

Module M0524: Non-technical Courses for Master	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• explain specialized areas in context of the relevant non-technical disciplines,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul> <p><i>Skills</i> <b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic and specific methods of the said scientific disciplines,</li> <li>• question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul>

<b>Personal Competence</b> <i>Social Competence</i>	<b>Personal Competences (Social Skills)</b>  Students will be able <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul>
	<i>Autonomy</i> <b>Personal Competences (Self-reliance)</b>  Students are able in selected areas <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

## Courses

**Information regarding lectures and courses can be found in the corresponding module handbook published separately.**

Module M0826: Biology, Geology and Chemistry				
Courses				
Title	Typ	Hrs/wk	CP	
Biology (L1428)	Lecture	2	2	
Geology and Soil Science (L0903)	Lecture	2	1	
Environmental Analysis (L0354)	Lecture	2	3	
Module Responsible	Dr. Dorothea Rechtenbach			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of inorganic/organic chemistry and biology (knowledge acquired at school)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><div>With the completion of this module students acquire profound knowledge of the geo- and pedosphere, biogeochemical processes and the fate of migrating compounds in soil and groundwater. They learn about methods to investigate sites for different use.</div></div> <div><div>Skills</div><div>With the completion of this module students can apply the acquired theoretical knowledge to model sites and assess the situation technically and conceptually. They are able to draw comparisons on different investigation strategies and techniques. Model projects can be devised and treated.</div></div> <div><div>Personal Competence</div><div><div>Social Competence</div><div>Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .</div><div>Autonomy</div><div>Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.</div></div></div>			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	2 Std. 15 Min.			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Water and Environmental Engineering: Core Qualification: Compulsory			

Course L1428: Biology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Johannes Gescher
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	Umweltmikrobiologie, Reineke, W. und Schlömann, M. (2015) 2. Aufl., Springer Spektrum Verlag

Course L0903: Geology and Soil Science	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Gerth, Sonja Götz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Geology: formation of the Earth, plate tectonics, macroscopic rock identification, introduction to Earth history, introduction to halokinesis.</p> <p>Soil science: soil use and function in ecosystems, factors and processes of soil formation, mineral and organic components, surface types and properties, retention of nutrients and pollutants, hazards from faulty land use, erosion, salinization, and contamination, measures to preserve soils</p>

Module M0962: Sustainability and Risk Management			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Safety, Reliability and Risk Assessment (L1145)	Seminar	2	3
Environment and Sustainability (L0319)	Lecture	2	3
<b>Module Responsible</b>	Prof. Kerstin Kuchta		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Students are able to describe single techniques and to give an overview for the field of safety and risk assessment as well as environmental and sustainable engineering, in detail: <ul style="list-style-type: none"> <li>basics in safety and reliability of technical facilities</li> <li>safety and reliability analysis methods</li> <li>risk assessment</li> <li>Production and usage of bio-char</li> <li>energy production and supply</li> <li>sustainable product design</li> </ul>		
<i>Skills</i>	Students are able apply interdisciplinary system-oriented methods for risk assessment and sustainability reporting. They can evaluate the effort and costs for processes and select economically feasible treatment concepts.		
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	Students can gain knowledge of the subject area from given sources and transform it to new questions. Furthermore, they can define targets for new application or research-oriented duties in for risk management and sustainability concepts accordance with the potential social, economic and cultural impact.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Elaboration and presentation (45 minutes in groups)		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Core Qualification: Compulsory Bioprocess Engineering: Specialisation C - Bioeconomic Process Engineering, Focus Management and Controlling: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Water and Environmental Engineering: Core Qualification: Compulsory		

Course L1145: Safety, Reliability and Risk Assessment	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marco Ritzkowski
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	An introduction in safety and risk assessment is given and some typical problems of structural and environmental engineering are treated: <ul style="list-style-type: none"> <li>basics in safety and reliability of technical facilities</li> <li>safety and reliability analysis methods</li> <li>risk assessment</li> <li>practical examples and excursions</li> <li>discussions and presentations</li> </ul>
<b>Literature</b>	- Vorlesungsunterlagen - Schneider, J., Schlatter, H.P.: Sicherheit und Zuverlässigkeit im Bauwesen. <a href="http://www.risksafety.ch/files/sicherheit_und_zuverlaessigkeit.pdf">www.risksafety.ch/files/sicherheit_und_zuverlaessigkeit.pdf</a>

Course L0319: Environment and Sustainability	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kerstin Kuchta
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>This course presents actual methodologies and examples of environmental relevant, sustainable technologies, concepts and strategies in the field of energy supply, product design, water supply, waste water treatment or mobility. The following list show examples.</p> <p>Production and Usage of Bio-char</p> <p>Energy production with algae</p> <p>Environmental product design</p> <p>Clean Development mechanism (CDM)</p> <p>Democracy and Energy</p> <p>New Concepts for a sustainable Energy Supply</p> <p>Recycling of Wind Turbines</p> <p>Alternative Mobility</p> <p>Disposal of Nuclear Wastes</p> <p>Waste2Energy</p> <p>Offshore Wind energy</p>
<b>Literature</b>	Wird in der Veranstaltung bekannt gegeben.

## Specialization Cities

### Module M0830: Environmental Protection and Management

#### Courses

Title	Type	Hrs/wk	CP
Integrated Pollution Control (L0502)	Lecture	2	2
Health, Safety and Environmental Management (L0387)	Lecture	2	3
Health, Safety and Environmental Management (L0388)	Recitation Section (small)	1	1

<b>Module Responsible</b>	Prof. Ralf Otterpohl
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Good knowledge in Technologies for Environmental Protection (end-of-pipe, integrated solutions)</li> <li>• Good knowledge of the relevant Environmental Legislation</li> <li>• Basic knowledge of instruments for Environmental Assessment</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students are able to describe the basics of regulations, economic instruments, voluntary initiatives, fundamentals of HSE legislation ISO 14001, EMAS and Responsible Care ISO 14001 requirements. They can analyse and discuss industrial processes, substance cycles and approaches from end-of-pipe technology to eco-efficiency and eco-effectiveness, showing their sound knowledge of complex industry related problems. They are able to judge environmental issues and to widely consider, apply or carry out innovative technical solutions, remediation measures and further interventions as well as conceptual problem solving approaches in the full range of problems in different industrial sectors.</p> <p>Students are able to assess current problems and situations in the field of environmental protection. They can consider the best available techniques and to plan and suggest concrete actions in a company- or branch-specific context. By this means they can solve problems on a technical, administrative and legislative level.</p> <p>The students can work together in international groups.</p> <p>Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation C - Bioeconomic Process Engineering, Focus Management and Controlling: Elective Compulsory Environmental Engineering: Core Qualification: Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Energy: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory

Course L0502: Integrated Pollution Control	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Ralf Otterpohl

## Module M0902: Wastewater Treatment and Air Pollution Abatement

Courses			
Title		Typ	Hrs/wk CP
Biological Wastewater Treatment (L0517)		Lecture	2 3
Air Pollution Abatement (L0203)		Lecture	2 3
<b>Module Responsible</b>	Dr. Swantje Pietsch-Braune		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of biology and chemistry Basic knowledge of solids process engineering and separation technology		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	After successful completion of the module students are able to <ul style="list-style-type: none"> <li>name and explain biological processes for waste water treatment,</li> <li>characterize waste water and sewage sludge,</li> <li>discuss legal regulations in the area of emissions and air quality</li> <li>explain the effects of air pollutants on the environment,</li> <li>name and explain off gas tretament processes and to define their area of application</li> </ul>		
<i>Skills</i>	Students are able to <ul style="list-style-type: none"> <li>choose and design processs steps for the biological waste water treatment</li> <li>combine processes for cleaning of off-gases depending on the pollutants contained in the gases</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Renewable Energies: Specialisation Bioenergy Systems: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

**Course L0517: Biological Wastewater Treatment**

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Behrendt
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	Charaterisation of Wastewater Metobolism of Microorganisms Kinetic of microbiotic processes Calculation of bioreactor for wastewater treatment Concepts of Wastewater treatment Design of WWTP Excursion to a WWTP Biofilms Biofim Reactors Anaerobic Wastewater and sludge treatment resources oriented sanitation technology Future challenges of wastewater treatment

Course L0203: Air Pollution Abatement	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Swantje Pietsch-Braune, Christian Eichler
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants from flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.
<b>Literature</b>	Handbook of air pollution prevention and control, Nicholas P. Cheremisinoff. - Amsterdam [u.a.] : Butterworth-Heinemann, 2002 Atmospheric pollution : history, science, and regulation, Mark Zachary Jacobson. - Cambridge [u.a.] : Cambridge Univ. Press, 2002 Air pollution control technology handbook, Karl B. Schnelle. - Boca Raton [u.a.] : CRC Press, c 2002 Air pollution, Jeremy Colls. - 2. ed. - London [u.a.] : Spon, 2002

Module M0923: Integrated Transportation Planning				
Courses				
Title	Typ		Hrs/wk	CP
Integrated Transportation Planning (L1068)	Project-/problem-based Learning		4	6
<b>Module Responsible</b>	Prof. Carsten Gertz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineerin			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to:</p> <ul style="list-style-type: none"> <li>describe interdependencies between land-use/location choice and transportation/mobility behaviour</li> <li>explain and evaluate the social, ecological and economic effects of transport and land-use policy measures.</li> <li>relate current issues in the area of integrated transport planning and formulate an opinion on them.</li> </ul> <p><i>Skills</i> Students are able to:</p> <ul style="list-style-type: none"> <li>quantify important parameters, which influence travel demand or are influenced by it.</li> <li>comprehensively examine a pre-defined or self-selected topic from a transportation studies perspective and document the results in accordance with scientific conventions.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to:</p> <ul style="list-style-type: none"> <li>provide feedback on topical contents and their teaching.</li> <li>constructively handle feedback on their own work.</li> <li>produce results in group work and document these.</li> </ul> <p><i>Autonomy</i> Students are able to:</p> <ul style="list-style-type: none"> <li>assess potential consequences of their future professional activities</li> <li>independently plan working on a pre-defined project topic, acquire the necessary knowledge and use appropriate means for its execution.</li> </ul>			
<b>Workload in Hours</b>				
<b>Credit points</b>				
<b>Course achievement</b>				
<b>Examination</b>				
<b>Examination duration and scale</b>	written assignment with presentation during the semester			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory			

Course L1068: Integrated Transportation Planning	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz, Dr. Philine Gaffron, Jacqueline Bianca Maaß
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The course will provide students with an understanding of interdependencies between land-use and transportation. Specific topics include a.o.:</p> <ul style="list-style-type: none"> <li>• interactions between transport and the environment and consequent limitations</li> <li>• characteristics of integrated planning</li> <li>• complex planning processes</li> <li>• interdependencies of location choice and mobility behaviour</li> <li>• transport and land-use policies</li> <li>• project on current issues in transportation studies</li> </ul>
<b>Literature</b>	<p>Kutter, Eckhard (2005) Entwicklung innovativer Verkehrsstrategien für die mobile Gesellschaft. Erich Schmidt Verlag. Berlin.</p> <p>Bracher, Tilman u. a. (Hrsg.) (68. Module M0749: Waste Treatment and Solid Matter Process Technology			
Courses			
Title	Type	Hrs/wk	CP
Solid Matter Process Technology for Biomass (L0052)	Lecture	2	2
Thermal Waste Treatment (L0320)	Lecture	2	2
Thermal Waste Treatment (L1177)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Kerstin Kuchta		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of <ul style="list-style-type: none"> <li>thermo dynamics</li> <li>fluid dynamics</li> <li>chemistry</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students can name, describe current issue and problems in the field of thermal waste treatment and particle process engineering and contemplate them in the context of their field.</p> <p>The industrial application of unit operations as part of process engineering is explained by actual examples of waste incineration technologies and solid biomass processes. Compostion, particle sizes, transportation and dosing, drying and agglomeration of renewable resources and wastes are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, electricity , heat and mineral recyclables.</p> <p>The students are able to select suitable processes for the treatment of wastes or raw material with respect to their characteristics and the process aims. They can evaluate the efforts and costs for processes and select economically feasible treatment concepts.</p> <p>Students can</p> <ul style="list-style-type: none"> <li>respectfully work together as a team and discuss technical tasks</li> <li>participate in subject-specific and interdisciplinary discussions,</li> <li>develop cooperated solutions</li> <li>promote the scientific development and accept professional constructive criticism.</li> </ul> <p>Students can independently tap knowledge of the subject area and transform it to new questions. They are capable, in consultation with supervisors, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective Compulsory Renewable Energies: Specialisation Bioenergy Systems: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory		

Course L0052: Solid Matter Process Technology for Biomass	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Werner Sitzmann
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture.

## Module M0827: Modeling in Water Management

### Courses

Title	Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)	Lecture	1	1
Groundwater Modeling using Modflow (L0544)	Recitation Section (small)	2	2
Modeling of Water Supply Network (L0875)	Project-/problem-based Learning	2	3

<b>Module Responsible</b>	Dr. Klaus Johannsen
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Groundwater</p> <ul style="list-style-type: none"> <li>groundwater hydraulics and transport of substances</li> </ul> <p>Pipe Systems</p> <ul style="list-style-type: none"> <li>Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures</li> <li>Hydraulics of drinking water supply systems and sewer systems</li> <li>Basic knowledge on water management</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.</p> <p>The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).</p> <p>Wird nicht vermittelt.</p> <p>Wird nicht vermittelt.</p>

Module M0828: Urban Environmental Management				
Courses				
Title	Typ		Hrs/wk	CP
Noise Protection (L1109)	Lecture		2	2
Urban Infrastructures (L0874)	Project-/problem-based Learning		2	4
Module Responsible	Dr. Dorothea Rechtenbach			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> <li>• Knowledge on Urban planning</li> <li>• Knowledge on measures for climate protection</li> <li>• General knowledge of scientific writing/working</li> </ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students can describe urban development corridors as well as current and future urban environmental problems. They are able to explain the causes of environmental problems (like noise). Students can specify applications for various technical innovations and explain why these contribute to the improvement of urban life. They can, for example, derive and discuss measures for effective noise abatement.</p> <p><i>Skills</i> Students are able to develop specific solutions for correcting existing or future environment-related problems of urban development. They can define a range of conceptual and technical solutions for environmental problems for different development paths. To solve specific urban environmental problems they can select technical innovations and integrate them into the urban context.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Module M0857: Geochemical Engineering				
Courses				
Title	Typ	Hrs/wk	CP	
Contaminated Sites and Landfilling (L0906)	Lecture	2	2	
Contaminated Sites and Landfilling (L0907)	Recitation Section (large)	1	2	
Geochemical Engineering (L0904)	Lecture	2	2	
Module Responsible	Dr. Marco Ritzkowski			
Admission Requirements	None			
Recommended Previous Knowledge	Module: General and Inorganic Chemistry,  Module:Organic Chemistry,  Biology (Basic Knowledge)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	With the completion of this module students acquire profound knowledge of biogeochemical processes, the fate of pollutants in soil and groundwater, and techniques to deposit contaminated waste material. They are able to describe in principle the behaviour of chemicals in the environment. Students can explain and report the approach to remediate contaminated sites.			
Skills	With the completion of this module students can apply the acquired theoretical knowledge to model cases of site pollution and critically assess the situation technically and conceptually. They are able to draw comparisons on different remediation strategies and techniques. Model projects can be devised and treated.			
Personal Competence				
Social Competence	Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .			
Autonomy	Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam

Course L0906: Contaminated Sites and Landfilling	
<b>Type</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marco Ritzkowski, Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The part Contaminated Sites gives an introduction into different scales of pollution and identifies key pollutants. Geochemical attenuation mechanisms and the role of organisms are highlighted affecting the fate of pollutants in leachate and groundwater. Techniques for site characterization and remediation are discussed including economical aspects.</p> <p>The part Landfilling is introduced by discussing fundamental aspects and the worldwide situation of waste management. The lecture highlights transformation processes in landfill bodies, emissions of gases and leachate, and the long-term behaviour of landfill sites with measures of aftercare.</p>
<b>Literature</b>	<p>1) <b>Waste Management.</b> Bernd Bilitewski; Georg Härdtle; Klaus Marek (Eds.), ISBN: 9783540592105 , Springer Verlag Lehrbuchsammlung der TUB, Signatur USH-305</p> <p>2) <b>Solid Waste Technology and Management.</b> Thomas Christensen (Ed.), ISBN: 978-1-4051-7517-3 , Wiley Verlag Lesesaal 2: US - Umweltschutz, Signatur USH-332</p> <p>3) <b>Natural attenuation of fuels and chlorinated solvents in the subsurface.</b> Todd H. <b>Content</b>	As an introduction cases are presented in which geochemical engineering was used to solve environmental problems. Environmentally important minerals are discussed and methods for their detection. It is demonstrated how solution equilibria can be modified to eliminate elevated concentrations of unwanted species in solution and how carbon dioxide concentration affects pH and the dissolution of carbonate minerals. Modifications of redox conditions, pH, and electrolyte concentration are shown to be effective tools for controlling the mobility and fate of hazardous species in the environment.

Module M0870: Management of Surface Water				
Courses				
Title	Typ		Hrs/wk	CP
Modelling of Flow in Rivers and Estuaries (L0810)	Lecture		3	4
Nature-Oriented Hydraulic Engineering / Integrated Flood Protection (L0961)	Project-/problem-based Learning		2	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of Hydromechanics, Hydraulics, Hydrology and Hydraulic Engineering; Hydraulic Engineering I and Hydraulic Engineering II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to define in detail the basic processes that are related to the modelling of flows in hydraulic engineering. Besides, they can describe the basic aspects of numerical modelling and actual numerical models for the simulation of flows and waves. They can also depict the concepts of nature oriented hydraulic engineering.</p> <p><i>Skills</i> Students are able to apply hydrodynamic-numerical models to practical hydraulic engineering tasks. Furthermore, the students are able to set up flood-risk management concepts and are able to apply basic concepts of renaturation to practical problems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to work in team with engineers of other disciplines.</p> <p><i>Autonomy</i> The students will be able to independently extend their knowledge and apply it to new problems.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	The duration of the examination is 150 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Module M0922: City Planning				
Courses				
Title	Typ		Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning		4	6
<b>Module Responsible</b>	Prof. Carsten Gertz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	for "Principles of Urban Planning": none  for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>• use technical terms of urban planning.</li> <li>• describe the main determinants of urban development.</li> <li>• explain and compare different possibilities of how urban development can be influenced.</li> <li>• discuss requirements for public streetscapes.</li> <li>• explain the importance of street design.</li> </ul>			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• read and analyze urban development concepts and designs for streetscapes</li> <li>• appraise such concepts in the context of competing requirements.</li> <li>• design, justify and reflect their own solutions for concrete examples.</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>• discuss intermediate results with each other.</li> <li>• constructively accept feedback on their own work.</li> <li>• provide constructive feedback to others.</li> </ul>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• independently complete a written report including drawings following a broadly pre-defined process.</li> <li>• assess the consequences of their proposed solutions.</li> <li>• independently acquire knowledge and apply this to new issues or problem areas.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	written assignment, designwork during the semester			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory			

Course L1066: City Planning	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> <li>• legal framework,</li> <li>• instruments and methods of planning,</li> <li>• functional requirements,</li> <li>• stakeholders and actors</li> <li>• basic design requirements</li> <li>• different planning levels and</li> <li>• historical contexts.</li> </ul> <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0982: Transportation Modelling			
Courses			
Title	Typ	Hrs/wk	CP
Transportation Modelling (L1180)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Carsten Gertz		
Admission Requirements	None		
Recommended Previous Knowledge	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	Students are able to understand the operation and potential applications of transport models.  Students are able to: <ul style="list-style-type: none"><li>• use travel demand modelling software packages for solving practical problems.</li><li>• design a database structure for travel demand models.</li><li>• assess modelling results.</li><li>• appraise potential applications and limitations of such models.</li></ul>		
Knowledge			
Skills			
Personal Competence			
Social Competence	Students are able to independently develop and document solutions.		
Autonomy	Students are able to: <ul style="list-style-type: none"><li>• independently organise, manage and solve set tasks.</li><li>• independently prepare written reports.</li></ul>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written elaboration

Module M0663: Marine Geotechnics				
Courses				
Title	Typ		Hrs/wk	CP
Marine Geotechnics (L0548)	Lecture		1	2
Marine Geotechnics (L0549)	Recitation Section (large)		2	2
Steel Structures in Foundation and Hydraulic Engineering (L1146)	Lecture		2	2
<b>Module Responsible</b>	Prof. Jürgen Grabe			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Complete modules: Geotechnics I-III, Mathematics I-III Courses: Soil laboratory course			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students get a deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.</p> <p><i>Skills</i> Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Students are able to assess their own strengths and weaknesses and organize their time and learning management based on this.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam

Module M1717: Advanced Vadose Zone Hydrology				
Courses				
Title		Typ	Hrs/wk	CP
Modeling Processes in Vadose Zone (L2735)		Recitation Section (small)	2	2
Vadose Zone Hydrology (L2732)		Lecture	2	2
Vadose Zone Hydrology (L2733)		Recitation Section (large)	2	2
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in water and soil			
	Comfortable with math and physics, critical thinking, creative problem solving			
	Analytic skills			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<i>Knowledge</i> The students will learn about soil characterization (solid and liquid phase), the energy state of soil water, the soil water characteristic curve, flow in saturated and unsaturated soil as well as about solute transport in soil			
	<i>Skills</i> Students will work on practical examples modelling transport processes in soil using different quantitative tools including computer simulations and analytical tools. This will help them to apply knowledge in order to solve problems and tasks.			
Personal Competence	<i>Social Competence</i> The module aims at raising awareness and enthusiasm for new knowledge related to water, soil and environment. This will positively contribute to shape their work and life environment.			
	<i>Autonomy</i> The students will be involved in many problem solving exercises. This will contribute toward their willingness to work independently and responsibly.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None

Module M1724: Smart Monitoring				
Courses				
Title	Typ		Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture		2	2
Smart Monitoring (L2763)	Recitation Section (small)		2	4
<b>Module Responsible</b>	Prof. Kay Smarsly			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module, which will be conducted throughout the semester and will contribute to the grade. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.			
<i>Skills</i>				
<b>Personal Competence</b> <i>Social Competence</i>				
<i>Autonomy</i>				
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	10 pages of work with 15-minute oral presentation			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory			

Course L2762: Smart Monitoring	
<b>Typ</b>	Integrated Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kay Smarsly
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.

# Module Manual M.Sc. "Water and Environmental Engineering"

Course L2763: Smart Monitoring	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kay Smarsly
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted throughout the semester, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M1878: Sustainable energy from wind and water				
Courses				
Title		Type	Hrs/wk	CP
Sustainability Management (L0007)		Lecture	2	1
Hydro Power Use (L0013)		Lecture	1	1
Wind Turbine Plants (L0011)		Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)		Lecture	1	1
Module Responsible	Dr. Marvin Scherzinger			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I,			
	Module: Technical Thermodynamics II,			
	Module: Fundamentals of Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.</p> <p>Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.</p> <p><i>Skills</i> Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.</p> <p><i>Autonomy</i> Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.</p>

Course L0007: Sustainability Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Anne Rödl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture "Sustainability Management" gives an insight into the different aspects and dimensions of sustainability. First, essential terms and definitions, significant developments of the last years, and legal framework conditions are explained. The various aspects of sustainability are then presented and discussed in detail. The lecture mainly focuses on concepts for the implementation of the topic sustainability in companies:</p> <ul style="list-style-type: none"> <li>• What is "sustainability"?</li> <li>• Why is this concept an important topic for companies?</li> <li>• What opportunities and business risks are addressed or are associated with it?</li> <li>• How can the often mentioned three pillars of sustainability - economy, ecology, and social- be meaningfully integrated into corporate management despite their sometimes contradictory tendencies, and how a corresponding compromise can be found?</li> <li>• What concepts or frameworks exist for the implementation of sustainability management in companies?</li> <li>• Which sustainability labels exist for products or companies? What do they have in common, and where do they differ?</li> </ul> <p>Furthermore, the lecture is intended to provide insights into the concrete implementation of sustainability aspects into business practice. External lecturers from companies will be invited to report on how sustainability is integrated into their daily processes.</p> <p>In the course of an independently carried out group work, the students will analyze and discuss the implementation of sustainability aspects based on short case studies. By studying and comparing best practice examples, the students will learn about corporate decisions' effects and implications. It should become clear which risks or opportunities are associated if sustainability aspects are taken into account in management decisions.</p>

Module M0581: Water Protection				
Courses				
Title	Typ		Hrs/wk	CP
Water Protection and Wastewater Management (L0226)	Lecture		3	3
Water Protection and Wastewater Management (L2008)	Project Seminar		3	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge in water management;</li> <li>• Good knowledge in urban drainage;</li> <li>• Good knowledge of wastewater treatment techniques;</li> <li>• Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties;</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.</p> <p>Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.</p> <p>The students can work together in international groups.</p> <p>Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Title	Typ		Hrs/wk	CP
Advanced Topics in Waste Resource Management (L1055)	Project-/problem-based Learning		3	3
International Waste Management (L0317)	Project-/problem-based Learning		2	3
<b>Module Responsible</b>	Prof. Kerstin Kuchta			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	basics in waste treatment technologies			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe waste as a resource as well as advanced technologies for recycling and recovery of resources from waste in detail. This covers collection, transport, treatment and disposal in national and international contexts.</p> <p><i>Skills</i> Students are able to select suitable processes for the treatment with respect to the national or cultural and developmental context. They can evaluate the ecological impact and the technical effort of different technologies and management systems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work together as a team of 2-5 persons, participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development of colleagues. Furthermore, they can give and accept professional constructive criticisms.</p> <p><i>Autonomy</i> Students can independently gain additional knowledge of the subject area and apply it in solving the given course tasks and projects.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	20 %	Written elaboration	
<b>Examination</b>	Presentation			
<b>Examination duration and scale</b>	PowerPoint presentation (10-15 minutes)			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Energy: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L1055: Advanced Topics in Waste Resource Management	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Rüdiger Siechau
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Focus of the course "Advanced topics of waste resource management" lies on the organisational structures in waste management - such as planning, financing and logistics. One excursion will be offered to take part in (incineration plant, vehicle fleet and waste collection systems).</p> <p>The course is split into two parts:</p> <p>1. part: "Conventional" lecture (development of waste management, legislation, collection, transportation and organisation of waste management, costs, fees and revenues).</p> <p>2. part: Project base learning: You will get a project to work out in groups of 4 to 6 students; all tools and data you need to work out the project were given before during the conventional lecture. Course documents are published in StudIP and communication during project work takes place via StudIP.</p> <p>The results of the project work are presented at the end of the semester. The final mark for the course consists of the grade for the presentation.</p>

Course L0317: International Waste Management	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kerstin Kuchta
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Waste avoidance and recycling are the focus of this lecture. Additionally, waste logistics ( Collection, transport, export, fees and taxes) as well as international waste shipment solutions are presented.</p> <p>Other specific wastes, e.g. industrial waste, treatment concepts will be presented and developed by students themselves</p> <p>Waste composition and production on international level, waste eulogistic, collection and treatment in emerging and developing countries.</p> <p>Single national projects and studies will be prepared and presented by students</p>

Course L2386: Thermal Biomass Utilization	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Examination Form</b>	Schriftliche Ausarbeitung
<b>Examination duration and scale</b>	Protokolle
<b>Lecturer</b>	Prof. Martin Kaltschmitt, Dr. Marvin Scherzinger
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The experiments of the practical lab course illustrate the different aspects of heat generation from biogenic solid fuels. First, different biomasses (e.g. wood, straw or agricultural residues) will be investigated; the focus will be on the calorific value of the biomass. Furthermore, the used biomass will be pelletized, the pellet properties analysed and a combustion test carried out on a pellet combustion system. The gaseous and solid pollutant emissions, especially the particulate matter emissions, are measured and the composition of the particulate matter is investigated in a further experiment. Another focus of the practical course is the consideration of options for the reduction of particulate matter emissions from biomass combustion. In the practical course, a method for particulate matter reduction will be developed and tested. All experiments will be evaluated and the results presented.</p> <p>Within the practical lab course the students discuss different technical-scientific tasks, both subject-specifically and interdisciplinary. They discuss various approaches to solving the problem and advise on the theoretical or practical implementation.</p>

Module M0619: Waste Treatment Technologies				
Courses				
Title	Typ		Hrs/wk	CP
Waste and Environmental Chemistry (L0328)	Practical Course		2	2
Biological Waste Treatment (L0318)	Project-/problem-based Learning		3	4
<b>Module Responsible</b>	Prof. Kerstin Kuchta			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	chemical and biological basics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherche and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6

Module M0801: Water Resources and -Supply			
Courses			
Title	Type	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)	Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)	Recitation Section (large)	1	2
Water Resource Management (L0402)	Lecture	2	2
Water Resource Management (L0403)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of water management and the key processes involved in water treatment.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.		
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.		
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None

Course L0311: Chemistry of Drinking Water Treatment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Module M0822: Process Modeling in Water Technology					
Courses					
Title		Type	Hrs/wk	CP	
Process Modelling of Wastewater Treatment (L0522)		Project-/problem-based Learning	2	3	
Process Modeling in Drinking Water Treatment (L0314)		Project-/problem-based Learning	2	3	
Module Responsible	Dr. Klaus Johannsen				
Admission Requirements	None				
Recommended Previous Knowledge	Knowledge of the most important processes in drinking water and waste water treatment.				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence					
Knowledge					Students are able to explain selected processes of drinking water and waste water treatment in detail. They are able to explain basics as well as possibilities and limitations of dynamic modeling.
Skills					Students are able to use the most important features Modelica offers. They are able to transpose selected processes in drinking water and waste water treatment into a mathematical model in Modelica with respect to equilibrium, kinetics and mass balances. They are able to set up and apply models and assess their possibilities and limitations.
Personal Competence					
Social Competence	Students are able to solve problems and document solutions in a group with members of different technical background. They are able to give appropriate feedback and can work constructively with feedback concerning their work.				
Autonomy	Students are able to define a problem, gain the required knowledge and set up a model.				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56				
Credit points	6				
Course achievement	None				
Examination	Oral exam				
Examination duration and scale	30 min

<b>Content</b>	<p>In this course selected drinking water treatment processes (e.g. aeration or activated carbon adsorption) are modeled dynamically using the programming language Modelica, that is increasingly used in industry. In this course OpenModelica is used, an free access frontend of the programming language Modelica.</p> <p>In the beginning of the course the use of OpenModelica is explained by means of simple examples. Together required elements and structure of the model are developed. The implementation in OpenModelica and the application of the model is done individually or in groups respectively. Students get feedback and can gain extra points for the exam.</p>

Module M0802: Membrane Technology				
Courses				
Title		Typ	Hrs/wk	CP
Membrane Technology (L0399)		Lecture	2	3
Membrane Technology (L0400)		Recitation Section (small)	1	2
Membrane Technology (L0401)		Practical Course	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of water chemistry. Knowledge of the core processes involved in water, gas and steam treatment			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students will be able to rank the technical applications of industrially important membrane processes. They will be able to explain the different driving forces behind existing membrane separation processes. Students will be able to name materials used in membrane filtration and their advantages and disadvantages. Students will be able to explain the key differences in the use of membranes in water, other liquid media, gases and in liquid/gas mixtures.</p> <p><i>Skills</i> Students will be able to prepare mathematical equations for material transport in porous and solution-diffusion membranes and calculate key parameters in the membrane separation process. They will be able to handle technical membrane processes using available boundary data and provide recommendations for the sequence of different treatment processes. Through their own experiments, students will be able to classify the separation efficiency, filtration characteristics and application of different membrane materials. Students will be able to characterise the formation of the fouling layer in different waters and apply technical measures to control this.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students will be able to work in diverse teams on tasks in the field of membrane technology. They will be able to make decisions within their group on laboratory experiments to be undertaken jointly and present these to others.</p> <p><i>Autonomy</i> Students will be in a position to solve homework on the topic of membrane technology independently. They will be capable of finding creative solutions to technical questions.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Bioprocess Engineering: Specialisation B - Industrial Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0399: Membrane Technology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture on membrane technology supply provides students with a broad understanding of existing membrane treatment processes, encompassing pressure driven membrane processes, membrane application in electrodialysis, pervaporation as well as membrane distillation. The lectures main focus is the industrial production of drinking water like particle separation or desalination; however gas separation processes as well as specific wastewater oriented applications such as membrane bioreactor systems will be discussed as well.</p> <p>Initially, basics in low pressure and high pressure membrane applications are presented (microfiltration, ultrafiltration, nanofiltration, reverse osmosis). Students learn about essential water quality parameter, transport equations and key parameter for pore membrane as well as solution diffusion membrane systems. The lecture sets a specific focus on fouling and scaling issues and provides knowledge on methods how to tackle with these phenomena in real water treatment application. A further part of the lecture deals with the character and manufacturing of different membrane materials and the characterization of membrane material by simple methods and advanced analysis.</p> <p>The functions, advantages and drawbacks of different membrane housings and modules are explained. Students learn how an industrial membrane application is designed in the succession of treatment steps like pre-treatment, water conditioning, membrane integration and post-treatment of water. Besides theory, the students will be provided with knowledge on membrane demo-site examples and insights in industrial practice.</p>

Module M0894: Study Work Cities				
Courses				
Title	Typ		Hrs/wk	CP
<b>Module Responsible</b>	Dozenten des SD B			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Basics of Urban Planning</li> <li>Urban Infrastructures (Water, Energy, Heat)</li> <li>Environmental Technologies (Solid Waste Disposal, Air Quality Control, Wastewater Treatment, etc.)</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p>The students are able to demonstrate their detailed knowledge in the field of Water and Environmental Engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in the field of Water and Environmental Engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p>			
<i>Skills</i>	<p>The students are able to independently select methods or planning approaches for the project work and to justify their choice. They can explain how these methods or approaches relate to solutions in the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p>			
<b>Personal Competence</b> <i>Social Competence</i>	<p>The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p>			
<i>Autonomy</i>	<p>The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Study work			
<b>Examination duration and scale</b>				
<b>Assignment for the Following Curricula</b>	Water and Environmental Engineering: Specialisation Cities: Compulsory			

Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)		Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)		Lecture	2	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.			
	Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.			
<i>Skills</i>	Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. ## Module M0981: Operation of Public Transportation Systems

<b>Courses</b>					
<b>Title</b>	<b>Type</b>	<b>Hrs/wk</b>	<b>CP</b>		
Operation of Public Transportation Systems (L1179)		Project-/problem-based Learning	4	6	
<b>Module Responsible</b>	Prof. Carsten Gertz				
<b>Admission Requirements</b>	None				
<b>Recommended Previous Knowledge</b>	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results				
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to:</p> <ul style="list-style-type: none"> <li>• describe public transport (PT) systems in technical language.</li> <li>• outline the entire PT system including the interdependencies of the different elements.</li> <li>• explain the requirements for a PT system from different perspectives.</li> <li>• explain the role of PT in the transport system.</li> </ul> <p><i>Skills</i> Students are able to:</p> <ul style="list-style-type: none"> <li>• systematically develop a public transport system when there are no clear cut correct or incorrect approaches.</li> <li>• cope with imprecise and incomplete data.</li> <li>• develop and appraise alternative solutions.</li> <li>• distinguish or develop appropriate methods of analysis and modes of presentation.</li> <li>• reflect and evaluate their own transport concept, considering competing requirements.</li> </ul>  <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to:</p> <ul style="list-style-type: none"> <li>• carry out and complete a group project, inclusive of an appropriate allocation of tasks.</li> <li>• constructively provide and accept feedback.</li> <li>• present their own results to others.</li> </ul> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> <li>• independently develop a bus PT concept within a given framework.</li> <li>• determine and justify the focus of their work.</li> <li>• organize and follow their work process regarding time and content.</li> <li>• independently author a written report.</li> <li>• assess the consequences of the solutions they develop.</li> </ul>				
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56				
<b>Credit points</b>	6				
<b>Course achievement</b>	None				
<b>Examination</b>	Written elaboration				
<b>Examination duration and scale</b>	written assignment as groupwork with presentation during the semester				
<b>Assignment for the Following Curricula</b>	Logistics, Infrastructure and Mobility: Core Qualification: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory				

Course L1179: Operation of Public Transportation Systems	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The course primarily deals with the planning and operational challenges of public transport systems. A bus-system is the example for studying these problems in depth. The following topics and systemic elements are covered:</p> <ul style="list-style-type: none"> <li>• PT network planning</li> <li>• timetabling</li> <li>• operational concepts</li> <li>• requirements for vehicle technology and operation</li> <li>• infrastructural requirements</li> <li>• inter- and multimodal connections</li> <li>• financing and competition</li> <li>• organisational structures</li> </ul> <p>The topics are discussed with guests lecturers from the public transport sector and are considered in practice during an excursion.</p>

Module M1716: Subsurface Processes			
Courses			
Title	Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)	Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)	Lecture	2	2
Subsurface Solute Transport (L2729)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Nima Shokri		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic Mathematics, Hydrology		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.</p> <p><i>Skills</i> In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Teamwork &amp; problem solving</p> <p><i>Autonomy</i> The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	Report and Presentation

Module M1720: Emerging Trends in Environmental Engineering			
Courses			
Title	Type	Hrs/wk	CP
Environmental Research Trends (L2752)	Seminar	2	2
Microplastics in Environment (L2750)	Lecture	2	2
Scientific Communication and Methods (L2751)	Lecture	1	2
<b>Module Responsible</b>	Prof. Nima Shokri		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge on water, soil and environmental research.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will be exposed to up-to-date research topics focused on soil, water and climate related challenges with a particular focus on the effects of microplastics in environment. Data analysis, data measurement, curation and presentation will be other skills that the students will develop in this module.		
<i>Skills</i>	Students' research skills will be improved in this module. How to prepare and deliver an effective presentation, how to write an abstract, research paper and proposal will be discussed in this module. Moreover, through Research-Based Learning approaches, the students will be exposed to current research trends in environmental engineering.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.		
<i>Autonomy</i>	The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Specialization Environment

### Module M0830: Environmental Protection and Management

#### Courses

Title	Type	Hrs/wk	CP
Integrated Pollution Control (L0502)	Lecture	2	2
Health, Safety and Environmental Management (L0387)	Lecture	2	3
Health, Safety and Environmental Management (L0388)	Recitation Section (small)	1	1

<b>Module Responsible</b>	Prof. Ralf Otterpohl
<b>Admission Requirements</b>	None

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Good knowledge in Technologies for Environmental Protection (end-of-pipe, integrated solutions)</li> <li>• Good knowledge of the relevant Environmental Legislation</li> <li>• Basic knowledge of instruments for Environmental Assessment</li> </ul>
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to describe the basics of regulations, economic instruments, voluntary initiatives, fundamentals of HSE legislation ISO 14001, EMAS and Responsible Care ISO 14001 requirements. They can analyse and discuss industrial processes, substance cycles and approaches from end-of-pipe technology to eco-efficiency and eco-effectiveness, showing their sound knowledge of complex industry related problems. They are able to judge environmental issues and to widely consider, apply or carry out innovative technical solutions, remediation measures and further interventions as well as conceptual problem solving approaches in the full range of problems in different industrial sectors.
<i>Skills</i>	Students are able to assess current problems and situations in the field of environmental protection. They can consider the best available techniques and to plan and suggest concrete actions in a company- or branch-specific context. By this means they can solve problems on a technical, administrative and legislative level.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can work together in international groups.
<i>Autonomy</i>	Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.

<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
--------------------------	--

<b>Credit points</b>	6

Course L0203: Air Pollution Abatement	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Swantje Pietsch-Braune, Christian Eichler
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants form flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.
<b>Literature</b>	Handbook of air pollution prevention and control, Nicholas P. Module M1403: Construction and Simulation of Sewerage Systems				
Courses				
Title	Typ		Hrs/wk	CP
Construction and renovation of urban sewer systems (L1998)	Seminar		3	3
Simulation of sewerage systems (L2006)	Seminar		3	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Hydraulics in pipes and gravity-sewers</li> <li>Mechanics</li> <li>Soil mechanics and foundation engineering</li> <li>Knowledge about urban sewerage systems and water management</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Students can describe urban wastewater systems by means of software-based modeling. In case studies they can perform system and weak point analyzes. In addition, they can analyze the hydraulic effects quantitatively. Furthermore, they have the knowledge to comprehend flow events in gravity-sewers based on the St. Venant equations.</p> <p>Students have knowledge of static and structural requirements of the sewer system. Cases of damage are investigated and the knowledge regarding different renovation technologies for sewer systems is acquired.</p> <p>The students can simulate different run-off events in sewer systems and are able to dimension the sewer systems accordingly. Moreover, they can determine suitable construction materials and static requirements for different cases of application.</p> <p>Students are able to apply the acquired skills in a team and can impart this knowledge.</p> <p>Students can solve problems in the field of wastewater systems independently, concerning in particular dimensioning and simulation of sewer systems. Furthermore, they are able to present and justify their solutions.</p>

Module M0581: Water Protection				
Courses				
Title		Type	Hrs/wk	CP
Water Protection and Wastewater Management (L0226)		Lecture	3	3
Water Protection and Wastewater Management (L2008)		Project Seminar	3	3
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>• Basic knowledge in water management;</li><li>• Good knowledge in urban drainage;</li><li>• Good knowledge of wastewater treatment techniques;</li><li>• Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties;</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.</p> <p><i>Skills</i> Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.</p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Module M0513: System Aspects of Renewable Energies				
Courses				
Title		Typ	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)		Lecture	2	2
Energy Trading (L0019)		Lecture	1	1
Energy Trading (L0020)		Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)		Lecture	2	2
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I			
	Module: Technical Thermodynamics II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.		
		Skills	Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.	
			Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energie markets and energy trades.	
	Personal Competence	Social Competence	Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.	
	Autonomy	Students can independently exploit sources , acquire the particular knowledge about the subject area and transform it to new questions.

Module M0749: Waste Treatment and Solid Matter Process Technology				
Courses				
Title		Type	Hrs/wk	CP
Solid Matter Process Technology for Biomass (L0052)		Lecture	2	2
Thermal Waste Treatment (L0320)		Lecture	2	2
Thermal Waste Treatment (L1177)		Recitation Section (large)	1	2
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of <ul style="list-style-type: none"><li>thermo dynamics</li><li>fluid dynamics</li><li>chemistry</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Knowledge</div> <p>The students can name, describe current issue and problems in the field of thermal waste treatment and particle process engineering and contemplate them in the context of their field.</p> <p>The industrial application of unit operations as part of process engineering is explained by actual examples of waste incineration technologies and solid biomass processes. Compostion, particle sizes, transportation and dosing, drying and agglomeration of renewable resources and wastes are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, electricity , heat and mineral recyclables.</p> <div>Skills</div> <p>The students are able to select suitable processes for the treatment of wastes or raw material with respect to their characteristics and the process aims. They can evaluate the efforts and costs for processes and select economically feasible treatment concepts.</p> <div>Personal Competence</div> <div>Social Competence</div> <p>Students can</p> <ul style="list-style-type: none"><li>respectfully work together as a team and discuss technical tasks</li><li>participate in subject-specific and interdisciplinary discussions,</li><li>develop cooperated solutions</li><li>promote the scientific development and accept professional constructive criticism.</li></ul> <div>Autonomy</div> <p>Students can independently tap knowledge of the subject area and transform it to new questions. They are capable, in consultation with supervisors, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.</p>

## Module M0827: Modeling in Water Management

### Courses

Title	Typ	Hrs/wk	CP
Groundwater Modeling using Modflow (L0543)	Lecture	1	1
Groundwater Modeling using Modflow (L0544)	Recitation Section (small)	2	2
Modeling of Water Supply Network (L0875)	Project-/problem-based Learning	2	3

<b>Module Responsible</b>	Dr. Klaus Johannsen
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Groundwater</p> <ul style="list-style-type: none"> <li>groundwater hydraulics and transport of substances</li> </ul> <p>Pipe Systems</p> <ul style="list-style-type: none"> <li>Knowledge on urban water infrastructures, in particular drinking water systems and urban drainage systems including special structures</li> <li>Hydraulics of drinking water supply systems and sewer systems</li> <li>Basic knowledge on water management</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students are able to describe the modelling of groundwater flow and transport as well as urban water infrastructures. They can carry out systems analyses and can detect technical and conceptual weak points within the systems in case studies. Besides they are able to analyse interdependencies of hydraulic and toxic phenomena in soil and water.</p> <p>The students are able to construct and apply scientific groundwater models independently. They can work on different scenarios and can compare or assess different solutions for existing problems by application of selected software products. The students are able to use different software solutions (e.g. EPANET, EPA-SWMM).</p> <p>Wird nicht vermittelt.</p> <p>Wird nicht vermittelt.</p>

Module M0828: Urban Environmental Management				
Courses				
Title	Typ		Hrs/wk	CP
Noise Protection (L1109)	Lecture		2	2
Urban Infrastructures (L0874)	Project-/problem-based Learning		2	4
Module Responsible	Dr. Dorothea Rechtenbach			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> <li>• Knowledge on Urban planning</li> <li>• Knowledge on measures for climate protection</li> <li>• General knowledge of scientific writing/working</li> </ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students can describe urban development corridors as well as current and future urban environmental problems. They are able to explain the causes of environmental problems (like noise). Students can specify applications for various technical innovations and explain why these contribute to the improvement of urban life. They can, for example, derive and discuss measures for effective noise abatement.</p> <p><i>Skills</i> Students are able to develop specific solutions for correcting existing or future environment-related problems of urban development. They can define a range of conceptual and technical solutions for environmental problems for different development paths. To solve specific urban environmental problems they can select technical innovations and integrate them into the urban context.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students can work together in international groups.</p> <p><i>Autonomy</i> Students are able to organize their work flow to prepare themselves for presentations and contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.</p>

Course L0906: Contaminated Sites and Landfilling	
<b>Type</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marco Ritzkowski, Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The part Contaminated Sites gives an introduction into different scales of pollution and identifies key pollutants. Geochemical attenuation mechanisms and the role of organisms are highlighted affecting the fate of pollutants in leachate and groundwater. Techniques for site characterization and remediation are discussed including economical aspects.</p> <p>The part Landfilling is introduced by discussing fundamental aspects and the worldwide situation of waste management. The lecture highlights transformation processes in landfill bodies, emissions of gases and leachate, and the long-term behaviour of landfill sites with measures of aftercare.</p>

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	As an introduction cases are presented in which geochemical engineering was used to solve environmental problems. Environmentally important minerals are discussed and methods for their detection. It is demonstrated how solution equilibria can be modified to eliminate elevated concentrations of unwanted species in solution and how carbon dioxide concentration affects pH and the dissolution of carbonate minerals. Modifications of redox conditions, pH, and electrolyte concentration are shown to be effective tools for controlling the mobility and fate of hazardous species in the environment.

Module M0870: Management of Surface Water				
Courses				
Title	Typ		Hrs/wk	CP
Modelling of Flow in Rivers and Estuaries (L0810)	Lecture		3	4
Nature-Oriented Hydraulic Engineering / Integrated Flood Protection (L0961)	Project-/problem-based Learning		2	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of Hydromechanics, Hydraulics, Hydrology and Hydraulic Engineering; Hydraulic Engineering I and Hydraulic Engineering II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to define in detail the basic processes that are related to the modelling of flows in hydraulic engineering. Besides, they can describe the basic aspects of numerical modelling and actual numerical models for the simulation of flows and waves. They can also depict the concepts of nature oriented hydraulic engineering.</p> <p><i>Skills</i> Students are able to apply hydrodynamic-numerical models to practical hydraulic engineering tasks. Furthermore, the students are able to set up flood-risk management concepts and are able to apply basic concepts of renaturation to practical problems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to work in team with engineers of other disciplines.</p> <p><i>Autonomy</i> The students will be able to independently extend their knowledge and apply it to new problems.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	The duration of the examination is 150 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.

Course L0961: Nature-Oriented Hydraulic Engineering / Integrated Flood Protection	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Natasa Manojlovic, Prof. Peter Fröhle
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Regime-Theory and application for the development of environmental guiding principles of rivers</li> <li>• Engineering - biological measures for the stabilization of rivers</li> <li>• Risk management in flood protection</li> <li>• Design techniques in technical flood protection</li> <li>• Methods for the assessment of flood caused damages</li> </ul>
<b>Literature</b>	Vorlesungsumdruck

Module M0871: Hydrological Systems			
Courses			
Title	Type	Hrs/wk	CP
Applied Surface Hydrology (L0289)	Lecture	2	2
Applied Surface Hydrology (L1412)	Project-/problem-based Learning	1	2
Interaction Water - Environment in Fluvial Areas (L0295)	Project-/problem-based Learning	1	2
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Hydromechanics and Hydraulic Engineering: Hydraulic Engineering I and Hydraulic Engineering II		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students are able to define the basic concepts of hydrology and water management. They are able to describe and quantify the relevant processes of the hydrological water cycle. Besides, the students know the main aspects of rainfall-run-off-models and are able to theoretically derive established reservoir / storage models and a unit-hydrograph.</p> <p>The students are able to use the basic hydrological concepts and approaches and are able to theoretically derive established reservoir / storage models or a unit-hydrograph as the basis for rainfall-run-off-models. The student are able to explain the basic concepts of measurements of hydrological and hydrodynamic values in nature and are able to perform, analyze and statistically assess these measurements. Furthermore, they are able to apply a hydrological model to basic hydrological problems.</p> <p>The students are able to deploy their gained knowledge in applied problems of the hydrology and water management. Additionally, they will be able to work in team with engineers of other disciplines.</p> <p>The students will be able to independently extend their knowledge and apply it to new problems</p>

Module M0874: Wastewater Systems				
Courses				
Title	Typ	Hrs/wk	CP	
Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2	
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1	
Advanced Wastewater Treatment (L0357)	Lecture	2	2	
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1	
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.</div> <div>Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.</div> <div>Social skills are not targeted in this module.</div> <div>Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.</div>

Module M0875: Nexus Engineering - Water, Soil, Food and Energy			
Courses			
Title	Type	Hrs/wk	CP
Ecological Town Design - Water, Energy, Soil and Food Nexus (L1229)	Seminar	2	2
Water & Wastewater Systems in a Global Context (L0939)	Lecture	2	4
<b>Module Responsible</b>	Prof. Ralf Otterpohl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, migration to cities, lack of water resources and sanitation		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can describe the facets of the global water situation. Students can judge the enormous potential of the implementation of synergistic systems in Water, Soil, Food and Energy supply.</p> <p><i>Skills</i> Students are able to design ecological settlements for different geographic and socio-economic conditions for the main climates around the world.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students are able to develop a specific topic in a team and to work out milestones according to a given plan.</p> <p><i>Autonomy</i> Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information can be found at the beginning of the smester in the StudIP course module handbook.		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Module M0922: City Planning				
Courses				
Title	Typ		Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning		4	6
<b>Module Responsible</b>	Prof. Carsten Gertz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	for "Principles of Urban Planning": none  for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>• use technical terms of urban planning.</li> <li>• describe the main determinants of urban development.</li> <li>• explain and compare different possibilities of how urban development can be influenced.</li> <li>• discuss requirements for public streetscapes.</li> <li>• explain the importance of street design.</li> </ul>			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• read and analyze urban development concepts and designs for streetscapes</li> <li>• appraise such concepts in the context of competing requirements.</li> <li>• design, justify and reflect their own solutions for concrete examples.</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>• discuss intermediate results with each other.</li> <li>• constructively accept feedback on their own work.</li> <li>• provide constructive feedback to others.</li> </ul>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• independently complete a written report including drawings following a broadly pre-defined process.</li> <li>• assess the consequences of their proposed solutions.</li> <li>• independently acquire knowledge and apply this to new issues or problem areas.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	written assignment, designwork during the semester			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory			

Course L1066: City Planning	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> <li>• legal framework,</li> <li>• instruments and methods of planning,</li> <li>• functional requirements,</li> <li>• stakeholders and actors</li> <li>• basic design requirements</li> <li>• different planning levels and</li> <li>• historical contexts.</li> </ul> <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0663: Marine Geotechnics				
Courses				
Title	Typ		Hrs/wk	CP
Marine Geotechnics (L0548)	Lecture		1	2
Marine Geotechnics (L0549)	Recitation Section (large)		2	2
Steel Structures in Foundation and Hydraulic Engineering (L1146)	Lecture		2	2
Module Responsible	Prof. Jürgen Grabe			
Admission Requirements	None			
Recommended Previous Knowledge	Complete modules: Geotechnics I-III, Mathematics I-III Courses: Soil laboratory course			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students get a deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.</p> <p><i>Skills</i> Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Students are able to assess their own strengths and weaknesses and organize their time and learning management based on this.</p>

Module M1717: Advanced Vadose Zone Hydrology				
Courses				
Title		Type	Hrs/wk	CP
Modeling Processes in Vadose Zone (L2735)		Recitation Section (small)	2	2
Vadose Zone Hydrology (L2732)		Lecture	2	2
Vadose Zone Hydrology (L2733)		Recitation Section (large)	2	2
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in water and soil			
	Comfortable with math and physics, critical thinking, creative problem solving			
	Analytic skills			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	The students will learn about soil characterization (solid and liquid phase), the energy state of soil water, the soil water characteristic curve, flow in saturated and unsaturated soil as well as about solute transport in soil		
		Skills	Students will work on practical examples modelling transport processes in soil using different quantitative tools including computer simulations and analytical tools. This will help them to apply knowledge in order to solve problems and tasks.	
	Personal Competence		Social Competence	The module aims at raising awareness and enthusiasm for new knowledge related to water, soil and environment. This will positively contribute to shape their work and life environment.
		Autonomy		The students will be involved in many problem solving exercises. This will contribute toward their willingness to work independently and responsibly.

Module M1724: Smart Monitoring				
Courses				
Title	Typ		Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture		2	2
Smart Monitoring (L2763)	Recitation Section (small)		2	4
<b>Module Responsible</b>	Prof. Kay Smarsly			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module, which will be conducted throughout the semester and will contribute to the grade. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.			
<i>Skills</i>				
<b>Personal Competence</b> <i>Social Competence</i>				
<i>Autonomy</i>

<b>Cycle</b>	SoSe
<b>Content</b>	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.

Course L2763: Smart Monitoring	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kay Smarsly
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted throughout the semester, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M1702: Process Imaging				
Courses				
Title	Typ		Hrs/wk	CP
Process Imaging (L2723)	Lecture		3	3
Process Imaging (L2724)	Project-/problem-based Learning		3	3
<b>Module Responsible</b>	Prof. Alexander Penn			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	No special prerequisites needed			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>Content:</b> The module focuses primarily on discussing established imaging techniques including (a) optical and infrared imaging, (b) magnetic resonance imaging, (c) X-ray imaging and tomography, and (d) ultrasound imaging but also covers a range of more recent imaging modalities. The students will learn:</p> <ol style="list-style-type: none"> <li>1. what these imaging techniques can measure (such as sample density or concentration, material transport, chemical composition, temperature),</li> <li>2. how the measurements work (physical measurement principles, hardware requirements, image reconstruction), and</li> <li>3. how to determine the most suited imaging methods for a given problem.</li> </ol> <p><b>Learning goals:</b> After the successful completion of the course, the students shall:</p> <ol style="list-style-type: none"> <li>1. understand the physical principles and practical aspects of the most common imaging methods,</li> <li>2. be able to assess the pros and cons of these methods with regard to cost, complexity, expected contrasts, spatial and temporal resolution, and based on this assessment</li> <li>3. be able to identify the most suited imaging modality for any specific engineering challenge in the field of chemical and bioprocess engineering.</li> </ol>			
<i>Skills</i>				
<b>Personal Competence</b> <i>Social Competence</i>	In the problem-based interactive course, students work in small teams and set up two process imaging systems and use these systems to measure relevant process parameters in different chemical and bioprocess engineering applications. The teamwork will foster interpersonal communication skills.			
<i>Autonomy</i>	Students are guided to work in self-motivation due to the challenge-based character of this module. A final presentation improves presentation skills.

Module M1878: Sustainable energy from wind and water								
Courses								
Title		Type	Hrs/wk	CP				
Sustainability Management (L0007)		Lecture	2	1				
Hydro Power Use (L0013)		Lecture	1	1				
Wind Turbine Plants (L0011)		Lecture	2	3				
Wind Energy Use - Focus Offshore (L0012)		Lecture	1	1				
Module Responsible	Dr. Marvin Scherzinger							
Admission Requirements	None							
Recommended Previous Knowledge	Module: Technical Thermodynamics I,							
	Module: Technical Thermodynamics II,							
	Module: Fundamentals of Fluid Mechanics							
Educational Objectives	After taking part successfully, students have reached the following learning results							
Professional Competence	<div><div>Knowledge</div><p>By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.</p><p>Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.</p></div> <div><div>Skills</div><p>Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.</p></div> <div><div>Personal Competence</div><div><div>Social Competence</div><p>Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.</p><div><div>Autonomy</div><p>Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.</p></div></div></div>

Course L0007: Sustainability Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Anne Rödl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture "Sustainability Management" gives an insight into the different aspects and dimensions of sustainability. First, essential terms and definitions, significant developments of the last years, and legal framework conditions are explained. The various aspects of sustainability are then presented and discussed in detail. The lecture mainly focuses on concepts for the implementation of the topic sustainability in companies:</p> <ul style="list-style-type: none"> <li>• What is "sustainability"?</li> <li>• Why is this concept an important topic for companies?</li> <li>• What opportunities and business risks are addressed or are associated with it?</li> <li>• How can the often mentioned three pillars of sustainability - economy, ecology, and social- be meaningfully integrated into corporate management despite their sometimes contradictory tendencies, and how a corresponding compromise can be found?</li> <li>• What concepts or frameworks exist for the implementation of sustainability management in companies?</li> <li>• Which sustainability labels exist for products or companies? What do they have in common, and where do they differ?</li> </ul> <p>Furthermore, the lecture is intended to provide insights into the concrete implementation of sustainability aspects into business practice. External lecturers from companies will be invited to report on how sustainability is integrated into their daily processes.</p> <p>In the course of an independently carried out group work, the students will analyze and discuss the implementation of sustainability aspects based on short case studies. By studying and comparing best practice examples, the students will learn about corporate decisions' effects and implications. It should become clear which risks or opportunities are associated if sustainability aspects are taken into account in management decisions.</p>

<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Rüdiger Siechau
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Focus of the course "Advanced topics of waste resource management" lies on the organisational structures in waste management - such as planning, financing and logistics. One excursion will be offered to take part in (incineration plant, vehicle fleet and waste collection systems).</p> <p>The course is split into two parts:</p> <p>1. part: "Conventional" lecture (development of waste management, legislation, collection, transportation and organisation of waste management, costs, fees and revenues).</p> <p>2. part: Project base learning: You will get a project to work out in groups of 4 to 6 students; all tools and data you need to work out the project were given before during the conventional lecture. Course documents are published in StudIP and communication during project work takes place via StudIP.</p> <p>The results of the project work are presented at the end of the semester. The final mark for the course consists of the grade for the presentation.</p>

Course L1767: Thermal Biomass Utilization	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	60 min
<b>Lecturer</b>	Prof. Martin Kaltschmitt
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Goal of this course is it to discuss the physical, chemical, and biological as well as the technical, economic, and environmental basics of all options to provide energy from biomass from a German and international point of view. Additionally different system approaches to use biomass for energy, aspects to integrate bioenergy within the energy system, technical and economic development potentials, and the current and expected future use within the energy system are presented.</p> <p>The course is structured as follows:</p> <ul style="list-style-type: none"> <li>• Biomass as an energy carrier within the energy system; use of biomass in Germany and world-wide, overview on the content of the course</li> <li>• Photosynthesis, composition of organic matter, plant production, energy crops, residues, organic waste</li> <li>• Biomass provision chains for woody and herbaceous biomass, harvesting and provision, transport, storage, drying</li> <li>• Thermo-chemical conversion of solid biofuels <ul style="list-style-type: none"> <li>◦ Basics of thermo-chemical conversion</li> <li>◦ Direct thermo-chemical conversion through combustion: combustion technologies for small and large scale units, electricity generation technologies, flue gas treatment technologies, ashes and their use</li> <li>◦ Gasification: Gasification technologies, producer gas cleaning technologies, options to use the cleaned producer gas for the provision of heat, electricity and/or fuels</li> <li>◦ Fast and slow pyrolysis: Technologies for the provision of bio-oil and/or for the provision of charcoal, oil cleaning technologies, options to use the pyrolysis oil and charcoal as an energy carrier as well as a raw material</li> </ul> </li> <li>• Physical-chemical conversion of biomass containing oils and/or fats: Basics, oil seeds and oil fruits, vegetable oil production, production of a biofuel with standardized characteristics (trans-esterification, hydrogenation, co-processing in existing refineries), options to use this fuel, options to use the residues (i.e. meal, glycerine)</li> <li>• Bio-chemical conversion of biomass <ul style="list-style-type: none"> <li>◦ Basics of bio-chemical conversion</li> <li>◦ Biogas: Process technologies for plants using agricultural feedstock, sewage sludge (sewage gas), organic waste fraction (landfill gas), technologies for the provision of bio methane, use of the digested slurry</li> <li>◦ Ethanol production: Process technologies for feedstock containing sugar, starch or celluloses, use of ethanol as a fuel, use of the stillage</li> </ul> </li> </ul>

Course L2386: Thermal Biomass Utilization	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Examination Form</b>	Schriftliche Ausarbeitung
<b>Examination duration and scale</b>	Protokolle
<b>Lecturer</b>	Prof. Martin Kaltschmitt, Dr. Marvin Scherzinger
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The experiments of the practical lab course illustrate the different aspects of heat generation from biogenic solid fuels. First, different biomasses (e.g. wood, straw or agricultural residues) will be investigated; the focus will be on the calorific value of the biomass. Furthermore, the used biomass will be pelletized, the pellet properties analysed and a combustion test carried out on a pellet combustion system. The gaseous and solid pollutant emissions, especially the particulate matter emissions, are measured and the composition of the particulate matter is investigated in a further experiment. Another focus of the practical course is the consideration of options for the reduction of particulate matter emissions from biomass combustion. In the practical course, a method for particulate matter reduction will be developed and tested. All experiments will be evaluated and the results presented.</p> <p>Within the practical lab course the students discuss different technical-scientific tasks, both subject-specifically and interdisciplinary. They discuss various approaches to solving the problem and advise on the theoretical or practical implementation.</p>

Module M0801: Water Resources and -Supply			
Courses			
Title	Type	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)	Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)	Recitation Section (large)	1	2
Water Resource Management (L0402)	Lecture	2	2
Water Resource Management (L0403)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of water management and the key processes involved in water treatment.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.		
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.		
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 min (chemistry) + presentation		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Course L0311: Chemistry of Drinking Water Treatment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>

Module M0802: Membrane Technology				
Courses				
Title	Typ		Hrs/wk	CP
Membrane Technology (L0399)	Lecture		2	3
Membrane Technology (L0400)	Recitation Section (small)		1	2
Membrane Technology (L0401)	Practical Course		1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of water chemistry. Knowledge of the core processes involved in water, gas and steam treatment			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students will be able to rank the technical applications of industrially important membrane processes. They will be able to explain the different driving forces behind existing membrane separation processes. Students will be able to name materials used in membrane filtration and their advantages and disadvantages. Students will be able to explain the key differences in the use of membranes in water, other liquid media, gases and in liquid/gas mixtures.</p> <p><i>Skills</i> Students will be able to prepare mathematical equations for material transport in porous and solution-diffusion membranes and calculate key parameters in the membrane separation process. They will be able to handle technical membrane processes using available boundary data and provide recommendations for the sequence of different treatment processes. Through their own experiments, students will be able to classify the separation efficiency, filtration characteristics and application of different membrane materials. Students will be able to characterise the formation of the fouling layer in different waters and apply technical measures to control this.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> Students will be able to work in diverse teams on tasks in the field of membrane technology. They will be able to make decisions within their group on laboratory experiments to be undertaken jointly and present these to others.</p> <p><i>Autonomy</i> Students will be in a position to solve homework on the topic of membrane technology independently. They will be capable of finding creative solutions to technical questions.</p>			
Workload in Hours

Course achievement				
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Bioprocess Engineering: Specialisation B - Industrial Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0399: Membrane Technology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture on membrane technology supply provides students with a broad understanding of existing membrane treatment processes, encompassing pressure driven membrane processes, membrane application in electrodialysis, pervaporation as well as membrane distillation. The lectures main focus is the industrial production of drinking water like particle separation or desalination; however gas separation processes as well as specific wastewater oriented applications such as membrane bioreactor systems will be discussed as well.</p> <p>Initially, basics in low pressure and high pressure membrane applications are presented (microfiltration, ultrafiltration, nanofiltration, reverse osmosis). Students learn about essential water quality parameter, transport equations and key parameter for pore membrane as well as solution diffusion membrane systems. The lecture sets a specific focus on fouling and scaling issues and provides knowledge on methods how to tackle with these phenomena in real water treatment application. A further part of the lecture deals with the character and manufacturing of different membrane materials and the characterization of membrane material by simple methods and advanced analysis.</p> <p>The functions, advantages and drawbacks of different membrane housings and modules are explained. Students learn how an industrial membrane application is designed in the succession of treatment steps like pre-treatment, water conditioning, membrane integration and post-treatment of water. Besides theory, the students will be provided with knowledge on membrane demo-site examples and insights in industrial practice.</p>

<b>Cycle</b>	WiSe
<b>Content</b>	<p>In this course selected drinking water treatment processes (e.g. aeration or activated carbon adsorption) are modeled dynamically using the programming language Modelica, that is increasingly used in industry. In this course OpenModelica is used, an free access frontend of the programming language Modelica.</p> <p>In the beginning of the course the use of OpenModelica is explained by means of simple examples. Together required elements and structure of the model are developed. The implementation in OpenModelica and the application of the model is done individually or in groups respectively. Students get feedback and can gain extra points for the exam.</p>

Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)		Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)		Lecture	2	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.			
	Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.			
<i>Skills</i>	Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.

Module M0950: Study Work Environment				
Courses				
Title	Typ		Hrs/wk	CP
<b>Module Responsible</b>	Dozenten des SD B			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p>The students are able to demonstrate their detailed knowledge in the field of Water and Environmental Engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in the field of Water and Environmental Engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p>			
<i>Skills</i>	<p>The students are able to independently select methods or planning approaches for the project work and to justify their choice. They can explain how these methods or approaches relate to solutions in the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p>			
<b>Personal Competence</b> <i>Social Competence</i>	<p>The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p>			
<i>Autonomy</i>	<p>The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Study work			
<b>Examination duration and scale</b>				
<b>Assignment for the Following Curricula</b>	Water and Environmental Engineering: Specialisation Environment: Compulsory			

Module M0619: Waste Treatment Technologies				
Courses				
Title	Typ		Hrs/wk	CP
Waste and Environmental Chemistry (L0328)	Practical Course		2	2
Biological Waste Treatment (L0318)	Project-/problem-based Learning		3	4
<b>Module Responsible</b>	Prof. Kerstin Kuchta			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	chemical and biological basics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherche and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	None	Subject	theoretical and practical work
<b>Examination</b>	Presentation			
<b>Examination duration and scale</b>	Elaboration and Presentation (15-25 minutes in groups)			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Core Qualification: Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Energy: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory			

Course L0328: Waste and Environmental Chemistry	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kerstin Kuchta
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The participants are divided into groups. Each group prepares a transcript on the experiment performed, which is then used as basis for discussing the results and to evaluate the performance of the group and the individual student.</p> <p>In some experiments the test procedure and the results are presented in seminar form, accompanied by discussion and results evaluation.</p> <p>Experiments are e.g.</p> <p>Screening and particle size determination</p> <p>Fos/Tac</p> <p>AAS</p> <p>Calorific value</p>
<b>Literature</b>	Scripte

Module M1716: Subsurface Processes					
Courses					
Title		Typ	Hrs/wk	CP	
Modeling of Subsurface Processes (L2731)		Recitation Section (small)	3	3	
Subsurface Solute Transport (L2728)		Lecture	2	2	
Subsurface Solute Transport (L2729)		Recitation Section (large)	1	1	
Module Responsible	Prof. Nima Shokri				
Admission Requirements	None				
Recommended Previous Knowledge	Basic Mathematics, Hydrology				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence	<p><i>Knowledge</i> Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.</p> <p><i>Skills</i> In addition to the physical insights, the students will be exposed to analytical, experimental and numerical tools and techniques in this module. This provides them with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</p>				
Personal Competence					
<i>Social Competence</i>					Teamwork & problem solving
<i>Autonomy</i>					The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84				
Credit points	6				
Course achievement	None				
Examination	Subject theoretical and practical work				
Examination duration and scale	Report and Presentation				
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory				

Course L2731: Modeling of Subsurface Processes	
<b>Type</b>	Recitation Section (small)
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Milad Aminzadeh
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Basic usage and background of chosen computer software to calculate flow and transport in the saturated and unsaturated zone and to analyze field data like pumping test data
<b>Literature</b>	

Course L2728: Subsurface Solute Transport	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2

Module M1720: Emerging Trends in Environmental Engineering			
Courses			
Title	Type	Hrs/wk	CP
Environmental Research Trends (L2752)	Seminar	2	2
Microplastics in Environment (L2750)	Lecture	2	2
Scientific Communication and Methods (L2751)	Lecture	1	2
<b>Module Responsible</b>	Prof. Nima Shokri		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge on water, soil and environmental research.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will be exposed to up-to-date research topics focused on soil, water and climate related challenges with a particular focus on the effects of microplastics in environment. Data analysis, data measurement, curation and presentation will be other skills that the students will develop in this module.		
<i>Skills</i>	Students' research skills will be improved in this module. How to prepare and deliver an effective presentation, how to write an abstract, research paper and proposal will be discussed in this module. Moreover, through Research-Based Learning approaches, the students will be exposed to current research trends in environmental engineering.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.		
<i>Autonomy</i>	The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Specialization Water

### Module M0801: Water Resources and -Supply

#### Courses

Title	Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)	Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)	Recitation Section (large)	1	2
Water Resource Management (L0402)	Lecture	2	2
Water Resource Management (L0403)	Recitation Section (small)	1	1

<b>Module Responsible</b>	Prof. Mathias Ernst
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Knowledge of water management and the key processes involved in water treatment.
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.
<b>Personal Competence</b>	
<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 min (chemistry) + presentation
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Course L0311: Chemistry of Drinking Water Treatment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>
<b>Literature</b>	<p><b>MHW (rev. by Crittenden, J. et al.):</b> Water treatment principles and design. John Wiley &amp; Sons, Hoboken, 2005.</p> <p><b>Stumm, W., Morgan, J.J.:</b> Aquatic chemistry. Module M1403: Construction and Simulation of Sewerage Systems				
Courses				
Title	Typ		Hrs/wk	CP
Construction and renovation of urban sewer systems (L1998)	Seminar		3	3
Simulation of sewerage systems (L2006)	Seminar		3	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Hydraulics in pipes and gravity-sewers</li> <li>Mechanics</li> <li>Soil mechanics and foundation engineering</li> <li>Knowledge about urban sewerage systems and water management</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Students can describe urban wastewater systems by means of software-based modeling. In case studies they can perform system and weak point analyzes. In addition, they can analyze the hydraulic effects quantitatively. Furthermore, they have the knowledge to comprehend flow events in gravity-sewers based on the St. Venant equations.</p> <p>Students have knowledge of static and structural requirements of the sewer system. Cases of damage are investigated and the knowledge regarding different renovation technologies for sewer systems is acquired.</p> <p>The students can simulate different run-off events in sewer systems and are able to dimension the sewer systems accordingly. Moreover, they can determine suitable construction materials and static requirements for different cases of application.</p> <p>Students are able to apply the acquired skills in a team and can impart this knowledge.</p> <p>Students can solve problems in the field of wastewater systems independently, concerning in particular dimensioning and simulation of sewer systems. Furthermore, they are able to present and justify their solutions.</p>

Module M1716: Subsurface Processes				
Courses				
Title		Typ	Hrs/wk	CP
Modeling of Subsurface Processes (L2731)		Recitation Section (small)	3	3
Subsurface Solute Transport (L2728)		Lecture	2	2
Subsurface Solute Transport (L2729)		Recitation Section (large)	1	1
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic Mathematics, Hydrology			
Educational Objectives	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	Upon completion of this module, the students will understand the mechanisms controlling solute transport in soil and natural porous media and will be able to work with the equations that govern the fate and transport of solutes in porous media. Analytical, numerical and experimental tools and techniques will be used in this module.			
<i>Knowledge</i>				
<i>Skills</i>				
<i>Personal Competence</i>				
<i>Social Competence</i>	Teamwork & problem solving			
<i>Autonomy</i>	The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Subject theoretical and practical work			
Examination duration and scale	Report and Presentation			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L2731: Modeling of Subsurface Processes	
<b>Type</b>	Recitation Section (small)
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Milad Aminzadeh
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Basic usage and background of chosen computer software to calculate flow and transport in the saturated and unsaturated zone and to analyze field data like pumping test data
<b>Literature</b>

Module M0513: System Aspects of Renewable Energies				
Courses				
Title		Typ	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)		Lecture	2	2
Energy Trading (L0019)		Lecture	1	1
Energy Trading (L0020)		Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)		Lecture	2	2
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	None			
Recommended Previous Knowledge	Module: Technical Thermodynamics I			
	Module: Technical Thermodynamics II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.		
		Skills	Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.	
			Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energie markets and energy trades.	
	Personal Competence	Social Competence	Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.	
	Autonomy	Students can independently exploit sources , acquire the particular knowledge about the subject area and transform it to new questions.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0857: Geochemical Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Contaminated Sites and Landfilling (L0906)	Lecture	2	2
Contaminated Sites and Landfilling (L0907)	Recitation Section (large)	1	2
Geochemical Engineering (L0904)	Lecture	2	2
Module Responsible	Dr. Marco Ritzkowski		
Admission Requirements	None		
Recommended Previous Knowledge	Module: General and Inorganic Chemistry,  Module:Organic Chemistry,  Biology (Basic Knowledge)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	With the completion of this module students acquire profound knowledge of biogeochemical processes, the fate of pollutants in soil and groundwater, and techniques to deposit contaminated waste material. They are able to describe in principle the behaviour of chemicals in the environment. Students can explain and report the approach to remediate contaminated sites.  With the completion of this module students can apply the acquired theoretical knowledge to model cases of site pollution and critically assess the situation technically and conceptually. They are able to draw comparisons on different remediation strategies and techniques. Model projects can be devised and treated.		
Knowledge			
Skills			
Personal Competence			
Social Competence	Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .		
Autonomy	Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Course L0906: Contaminated Sites and Landfilling	
<b>Type</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marco Ritzkowski, Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The part Contaminated Sites gives an introduction into different scales of pollution and identifies key pollutants. Geochemical attenuation mechanisms and the role of organisms are highlighted affecting the fate of pollutants in leachate and groundwater. Techniques for site characterization and remediation are discussed including economical aspects.</p> <p>The part Landfilling is introduced by discussing fundamental aspects and the worldwide situation of waste management. The lecture highlights transformation processes in landfill bodies, emissions of gases and leachate, and the long-term behaviour of landfill sites with measures of aftercare.</p>
<b>Literature</b>	<p>1) <b>Waste Management.</b> Bernd Bilitewski; Georg Härdtle; Klaus Marek (Eds.), ISBN: 9783540592105 , Springer Verlag Lehrbuchsammlung der TUB, Signatur USH-305</p> <p>2) <b>Solid Waste Technology and Management.</b> Thomas Christensen (Ed.), ISBN: 978-1-4051-7517-3 , Wiley Verlag Lesesaal 2: US - Umweltschutz, Signatur USH-332</p> <p>3) <b>Natural attenuation of fuels and chlorinated solvents in the subsurface.</b> Todd H. <b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	As an introduction cases are presented in which geochemical engineering was used to solve environmental problems. Environmentally important minerals are discussed and methods for their detection. It is demonstrated how solution equilibria can be modified to eliminate elevated concentrations of unwanted species in solution and how carbon dioxide concentration affects pH and the dissolution of carbonate minerals. Modifications of redox conditions, pH, and electrolyte concentration are shown to be effective tools for controlling the mobility and fate of hazardous species in the environment.
<b>Literature</b>	<p><b>Geochemistry, groundwater and pollution.</b> C. A. J. Appelo; D. Postma</p> <p>Leiden [u.a.] Balkema 2005</p> <p>Lehrbuchsammlung der TUB, Signatur GWC-515</p>

Module M0870: Management of Surface Water				
Courses				
Title	Typ		Hrs/wk	CP
Modelling of Flow in Rivers and Estuaries (L0810)	Lecture		3	4
Nature-Oriented Hydraulic Engineering / Integrated Flood Protection (L0961)	Project-/problem-based Learning		2	2
<b>Module Responsible</b>	Prof. Peter Fröhle			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of Hydromechanics, Hydraulics, Hydrology and Hydraulic Engineering; Hydraulic Engineering I and Hydraulic Engineering II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to define in detail the basic processes that are related to the modelling of flows in hydraulic engineering. Besides, they can describe the basic aspects of numerical modelling and actual numerical models for the simulation of flows and waves. They can also depict the concepts of nature oriented hydraulic engineering.</p> <p><i>Skills</i> Students are able to apply hydrodynamic-numerical models to practical hydraulic engineering tasks. Furthermore, the students are able to set up flood-risk management concepts and are able to apply basic concepts of renaturation to practical problems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to deploy their gained knowledge in applied problems of the practical nature-based hydraulic engineering. Additionally, they will be able to work in team with engineers of other disciplines.</p> <p><i>Autonomy</i> The students will be able to independently extend their knowledge and apply it to new problems.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	The duration of the examination is 150 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Course L0961: Nature-Oriented Hydraulic Engineering / Integrated Flood Protection	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Natasa Manojlovic, Prof. Peter Fröhle
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Regime-Theory and application for the development of environmental guiding principles of rivers</li> <li>• Engineering - biological measures for the stabilization of rivers</li> <li>• Risk management in flood protection</li> <li>• Design techniques in technical flood protection</li> <li>• Methods for the assessment of flood caused damages</li> </ul>
<b>Literature</b>	Vorlesungsumdruck

Module M0871: Hydrological Systems			
Courses			
Title	Type	Hrs/wk	CP
Applied Surface Hydrology (L0289)	Lecture	2	2
Applied Surface Hydrology (L1412)	Project-/problem-based Learning	1	2
Interaction Water - Environment in Fluvial Areas (L0295)	Project-/problem-based Learning	1	2
Module Responsible	Prof. Peter Fröhle		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Hydromechanics and Hydraulic Engineering: Hydraulic Engineering I and Hydraulic Engineering II		
Educational Objectives	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<div><div>Knowledge</div><div>The students are able to define the basic concepts of hydrology and water management. They are able to describe and quantify the relevant processes of the hydrological water cycle. Besides, the students know the main aspects of rainfall-run-off-models and are able to theoretically derive established reservoir / storage models and a unit-hydrograph.</div></div> <div><div>Skills</div><div>The students are able to use the basic hydrological concepts and approaches and are able to theoretically derive established reservoir / storage models or a unit-hydrograph as the basis for rainfall-run-off-models. The student are able to explain the basic concepts of measurements of hydrological and hydrodynamic values in nature and are able to perform, analyze and statistically assess these measurements. Furthermore, they are able to apply a hydrological model to basic hydrological problems.</div></div> <div><div>Personal Competence</div><div><div>Social Competence</div><div>The students are able to deploy their gained knowledge in applied problems of the hydrology and water management. Additionally, they will be able to work in team with engineers of other disciplines.</div><div>Autonomy</div><div>The students will be able to independently extend their knowledge and apply it to new problems</div></div></div>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	The duration of the examination is 90 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Core Qualification: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Module M0875: Nexus Engineering - Water, Soil, Food and Energy			
Courses			
Title	Type	Hrs/wk	CP
Ecological Town Design - Water, Energy, Soil and Food Nexus (L1229)	Seminar	2	2
Water & Wastewater Systems in a Global Context (L0939)	Lecture	2	4
<b>Module Responsible</b>	Prof. Ralf Otterpohl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, migration to cities, lack of water resources and sanitation		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can describe the facets of the global water situation. Students can judge the enormous potential of the implementation of synergistic systems in Water, Soil, Food and Energy supply.</p> <p><i>Skills</i> Students are able to design ecological settlements for different geographic and socio-economic conditions for the main climates around the world.</p> <p><i>Social Competence</i> The students are able to develop a specific topic in a team and to work out milestones according to a given plan.</p> <p><i>Autonomy</i> Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information can be found at the beginning of the smester in the StudIP course module handbook.		
<b>Assignment for the Following Curricula</b>	<p>Civil Engineering: Specialisation Water and Traffic: Elective Compulsory</p> <p>Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory</p> <p>Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory</p> <p>Environmental Engineering: Core Qualification: Elective Compulsory</p> <p>Joint European Master in Environmental Studies - Cities and Sustainability: Core Qualification: Compulsory</p> <p>Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory</p> <p>Process Engineering: Specialisation Process Engineering: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Water: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Environment: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Cities: Elective Compulsory</p>

Module M0922: City Planning				
Courses				
Title	Typ		Hrs/wk	CP
City Planning (L1066)	Project-/problem-based Learning		4	6
<b>Module Responsible</b>	Prof. Carsten Gertz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<p>for "Principles of Urban Planning": none</p> <p>for "Designing Urban Streetscapes": some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineering“</p>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• use technical terms of urban planning.</li> <li>• describe the main determinants of urban development.</li> <li>• explain and compare different possibilities of how urban development can be influenced.</li> <li>• discuss requirements for public streetscapes.</li> <li>• explain the importance of street design.</li> </ul>			
<i>Skills</i>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• read and analyze urban development concepts and designs for streetscapes</li> <li>• appraise such concepts in the context of competing requirements.</li> <li>• design, justify and reflect their own solutions for concrete examples.</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• discuss intermediate results with each other.</li> <li>• constructively accept feedback on their own work.</li> <li>• provide constructive feedback to others.</li> </ul>			
<i>Autonomy</i>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• independently complete a written report including drawings following a broadly pre-defined process.</li> <li>• assess the consequences of their proposed solutions.</li> <li>• independently acquire knowledge and apply this to new issues or problem areas.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	written assignment, designwork during the semester			
<b>Assignment for the Following Curricula</b>	<p>Civil Engineering: Specialisation Structural Engineering: Elective Compulsory</p> <p>Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory</p> <p>Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory</p> <p>Civil Engineering: Specialisation Water and Traffic: Elective Compulsory</p> <p>Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Water: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Environment: Elective Compulsory</p> <p>Water and Environmental Engineering: Specialisation Cities: Compulsory</p>			

# Module Manual M.Sc. "Water and Environmental Engineering"

Course L1066: City Planning	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>„Principles of Urban Planning“ deals with the determinants of urban development and their interactions. Topics include:</p> <ul style="list-style-type: none"> <li>• legal framework,</li> <li>• instruments and methods of planning,</li> <li>• functional requirements,</li> <li>• stakeholders and actors</li> <li>• basic design requirements</li> <li>• different planning levels and</li> <li>• historical contexts.</li> </ul> <p>The objective of the course is for students to acquire a basic understanding of urban development problems and approaches for solving them. They will also be able to comprehend the process of urban planning. The course also covers the various functional and aesthetic requirements for designing streetscape as the most important elements of public space.</p> <p>The project work deals with a real life scenario and includes drawing up a development plan, an urban design concept, a building masterplan and a street redesign.</p>

Module M0663: Marine Geotechnics				
Courses				
Title	Typ		Hrs/wk	CP
Marine Geotechnics (L0548)	Lecture		1	2
Marine Geotechnics (L0549)	Recitation Section (large)		2	2
Steel Structures in Foundation and Hydraulic Engineering (L1146)	Lecture		2	2
<b>Module Responsible</b>	Prof. Jürgen Grabe			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Complete modules: Geotechnics I-III, Mathematics I-III Courses: Soil laboratory course			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students get a deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.</p> <p><i>Skills</i> Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Students are able to assess their own strengths and weaknesses and organize their time and learning management based on this.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M1717: Advanced Vadose Zone Hydrology				
Courses				
Title		Type	Hrs/wk	CP
Modeling Processes in Vadose Zone (L2735)		Recitation Section (small)	2	2
Vadose Zone Hydrology (L2732)		Lecture	2	2
Vadose Zone Hydrology (L2733)		Recitation Section (large)	2	2
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in water and soil			
	Comfortable with math and physics, critical thinking, creative problem solving			
	Analytic skills			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	The students will learn about soil characterization (solid and liquid phase), the energy state of soil water, the soil water characteristic curve, flow in saturated and unsaturated soil as well as about solute transport in soil		
		Skills	Students will work on practical examples modelling transport processes in soil using different quantitative tools including computer simulations and analytical tools. This will help them to apply knowledge in order to solve problems and tasks.	
	Personal Competence		Social Competence	The module aims at raising awareness and enthusiasm for new knowledge related to water, soil and environment. This will positively contribute to shape their work and life environment.
		Autonomy		The students will be involved in many problem solving exercises. This will contribute toward their willingness to work independently and responsibly.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L2735: Modeling Processes in Vadose Zone	
<b>Type</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Milad Aminzadeh
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Numerical tools will be introduced and used to quantify flow and transport processes in soil
<b>Literature</b>	NA

Course L2732: Vadose Zone Hydrology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Nima Shokri
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Soil solid phase characterization, Soil liquid phase characterization, The energy state of soil water, Soil Water Characteristic Curve, Flow in saturated soil, Flow in unsaturated soil, Solute transport in porous media
<b>Literature</b>	<ul style="list-style-type: none"> <li>- Environmental Soil Physics, by Daniel Hillel</li> <li>- Soil Physics, Sixth Edition, by William A. Jury and Robert Horton</li> <li>- Physical Hydrology, Second Edition, by S. Lawrence Dingman</li> <li>- Introduction to Physical Hydrology, by Martin R. Hendriks</li> </ul>

Course L2733: Vadose Zone Hydrology	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Nima Shokri

Module M1721: Water and Environment: Theory and Application				
Courses				
Title		Type	Hrs/wk	CP
Water and Environment (L2754)		Project-/problem-based Learning	3	4
Water and Environment (L2753)		Lecture	1	2
Module Responsible	Prof. Nima Shokri			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in water and environmental research, Hydrology			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><div>Common research tools and techniques together with the fundamental knowledge relevant to multi-scale and multi-phase challenges present in water and environmental research will be discussed in this module. Both theory and application will be considered.</div></div> <div><div>Skills</div><div>In addition to the fundamental knowledge, the students will be exposed to several analytical, experimental and numerical tools and techniques relevant to water and environmental research at different scales. This will provide the students with an excellent opportunity to improve their skills on multiple fronts which will be useful in their future career.</div></div> <div><div>Personal Competence</div><div><div>Social Competence</div><div>Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.</div></div><div><div>Autonomy</div><div>The students will be involved in writing individual reports and presentation. This will contribute to the students’ ability and willingness to work independently and responsibly.</div></div></div>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written elaboration			
Examination duration and scale	Report and Presentation			
Assignment for the Following Curricula	Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory			

Course L2754: Water and Environment	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42

<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Nima Shokri
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Research based learning: The students will be engaged in active research focused on water and environmental related challenges. The required knowledge and tools will be discussed during the semester.
<b>Literature</b>	NA

Module M1702: Process Imaging				
Courses				
Title	Typ		Hrs/wk	CP
Process Imaging (L2723)	Lecture		3	3
Process Imaging (L2724)	Project-/problem-based Learning		3	3
<b>Module Responsible</b>	Prof. Alexander Penn			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	No special prerequisites needed			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>Content:</b> The module focuses primarily on discussing established imaging techniques including (a) optical and infrared imaging, (b) magnetic resonance imaging, (c) X-ray imaging and tomography, and (d) ultrasound imaging but also covers a range of more recent imaging modalities. The students will learn:</p> <ol style="list-style-type: none"> <li>1. what these imaging techniques can measure (such as sample density or concentration, material transport, chemical composition, temperature),</li> <li>2. how the measurements work (physical measurement principles, hardware requirements, image reconstruction), and</li> <li>3. how to determine the most suited imaging methods for a given problem.</li> </ol> <p><b>Learning goals:</b> After the successful completion of the course, the students shall:</p> <ol style="list-style-type: none"> <li>1. understand the physical principles and practical aspects of the most common imaging methods,</li> <li>2. be able to assess the pros and cons of these methods with regard to cost, complexity, expected contrasts, spatial and temporal resolution, and based on this assessment</li> <li>3. be able to identify the most suited imaging modality for any specific engineering challenge in the field of chemical and bioprocess engineering.</li> </ol>			
<i>Skills</i> <b>Personal Competence</b> <i>Social Competence</i>	<p>In the problem-based interactive course, students work in small teams and set up two process imaging systems and use these systems to measure relevant process parameters in different chemical and bioprocess engineering applications. The teamwork will foster interpersonal communication skills.</p>			
<i>Autonomy</i>	<p>Students are guided to work in self-motivation due to the challenge-based character of this module. A final presentation improves presentation skills.</p>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam

Module M1724: Smart Monitoring				
Courses				
Title	Typ		Hrs/wk	CP
Smart Monitoring (L2762)	Integrated Lecture		2	2
Smart Monitoring (L2763)	Recitation Section (small)		2	4
<b>Module Responsible</b>	Prof. Kay Smarsly			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge or interest in object-oriented modeling, programming, and sensor technologies are helpful. Interest in modern research and teaching areas, such as Internet of Things, Industry 4.0 and cyber-physical systems, as well as the will to deepen skills of scientific working, are required. Basic knowledge in scientific writing and good English skills.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	The students will become familiar with the principles and practices of smart monitoring. The students will be able to design decentralized smart systems to be applied for continuous (remote) monitoring of systems in the built and in the natural environment. In addition, the students will learn to design and to implement intelligent sensor systems using state-of-the-art data analysis techniques, modern software design concepts, and embedded computing methodologies. Besides lectures, project work is also part of this module, which will be conducted throughout the semester and will contribute to the grade. In small groups, the students will design smart monitoring systems that integrate a number of "intelligent" sensors to be implemented by the students. Specific focus will be put on the application of machine learning techniques. The smart monitoring systems will be mounted on real-world (built or natural) systems, such as bridges or slopes, or on scaled lab structures for validation purposes. The outcome of every group will be documented in a paper. All students of this module will "automatically" participate with their smart monitoring system in the annual "Smart Monitoring" competition. The written papers and oral examinations form the final grades. The module will be taught in English. Limited enrollment.			
<i>Skills</i>				
<b>Personal Competence</b> <i>Social Competence</i>				
<i>Autonomy</i>				
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	10 pages of work with 15-minute oral presentation			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory			

Course L2762: Smart Monitoring	
<b>Typ</b>	Integrated Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kay Smarsly
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	In this course, principles of smart monitoring will be taught, focusing on modern concepts of data acquisition, data storage, and data analysis. Also, fundamentals of intelligent sensors and embedded computing will be illuminated. Autonomous software and decentralized data processing are further crucial parts of the course, including concepts of the Internet of Things, Industry 4.0 and cyber-physical systems. Furthermore, measuring principles, data acquisition systems, data management and data analysis algorithms will be discussed. Besides the theoretical background, numerous practical examples will be shown to demonstrate how smart monitoring may advantageously be used for assessing the condition of systems in the built or natural environment.

Course L2763: Smart Monitoring	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kay Smarsly
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	The contents of the exercises are based on the lecture contents. In addition to the exercises, project work will be conducted throughout the semester, which will consume the majority of the workload. As part of the project work, students will design smart monitoring systems that will be tested in the laboratory or in the field. As mentioned in the module description, the students will participate in the "Smart Monitoring" competition, hosted annually by the Institute of Digital and Autonomous Construction. Students are encouraged to contribute their own ideas. The tools required to implement the smart monitoring systems will be taught in the group exercises as well as through external sources, such as video tutorials and literature.

Module M0620: Special Aspects of Waste Resource Management				
Courses				
Title	Typ		Hrs/wk	CP
Advanced Topics in Waste Resource Management (L1055)	Project-/problem-based Learning		3	3
International Waste Management (L0317)	Project-/problem-based Learning		2	3
<b>Module Responsible</b>	Prof. Kerstin Kuchta			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	basics in waste treatment technologies			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe waste as a resource as well as advanced technologies for recycling and recovery of resources from waste in detail. This covers collection, transport, treatment and disposal in national and international contexts.</p> <p><i>Skills</i> Students are able to select suitable processes for the treatment with respect to the national or cultural and developmental context. They can evaluate the ecological impact and the technical effort of different technologies and management systems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work together as a team of 2-5 persons, participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development of colleagues. Furthermore, they can give and accept professional constructive criticisms.</p> <p><i>Autonomy</i> Students can independently gain additional knowledge of the subject area and apply it in solving the given course tasks and projects.</p>

<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Rüdiger Siechau
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Focus of the course "Advanced topics of waste resource management" lies on the organisational structures in waste management - such as planning, financing and logistics. One excursion will be offered to take part in (incineration plant, vehicle fleet and waste collection systems).</p> <p>The course is split into two parts:</p> <p>1. part: "Conventional" lecture (development of waste management, legislation, collection, transportation and organisation of waste management, costs, fees and revenues).</p> <p>2. part: Project base learning: You will get a project to work out in groups of 4 to 6 students; all tools and data you need to work out the project were given before during the conventional lecture. Course documents are published in StudIP and communication during project work takes place via StudIP.</p> <p>The results of the project work are presented at the end of the semester. The final mark for the course consists of the grade for the presentation.</p>

<b>Examination Form</b>	Schriftliche Ausarbeitung
<b>Examination duration and scale</b>	Protokolle
<b>Lecturer</b>	Prof. Martin Kaltschmitt, Dr. Marvin Scherzinger
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The experiments of the practical lab course illustrate the different aspects of heat generation from biogenic solid fuels. First, different biomasses (e.g. wood, straw or agricultural residues) will be investigated; the focus will be on the calorific value of the biomass. Furthermore, the used biomass will be pelletized, the pellet properties analysed and a combustion test carried out on a pellet combustion system. The gaseous and solid pollutant emissions, especially the particulate matter emissions, are measured and the composition of the particulate matter is investigated in a further experiment. Another focus of the practical course is the consideration of options for the reduction of particulate matter emissions from biomass combustion. In the practical course, a method for particulate matter reduction will be developed and tested. All experiments will be evaluated and the results presented.</p> <p>Within the practical lab course the students discuss different technical-scientific tasks, both subject-specifically and interdisciplinary. They discuss various approaches to solving the problem and advise on the theoretical or practical implementation.</p>

Module M0822: Process Modeling in Water Technology					
Courses					
Title		Type	Hrs/wk	CP	
Process Modelling of Wastewater Treatment (L0522)		Project-/problem-based Learning	2	3	
Process Modeling in Drinking Water Treatment (L0314)		Project-/problem-based Learning	2	3	
Module Responsible	Dr. Klaus Johannsen				
Admission Requirements	None				
Recommended Previous Knowledge	Knowledge of the most important processes in drinking water and waste water treatment.				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence					
Knowledge					Students are able to explain selected processes of drinking water and waste water treatment in detail. They are able to explain basics as well as possibilities and limitations of dynamic modeling.
Skills					Students are able to use the most important features Modelica offers. They are able to transpose selected processes in drinking water and waste water treatment into a mathematical model in Modelica with respect to equilibrium, kinetics and mass balances. They are able to set up and apply models and assess their possibilities and limitations.
Personal Competence					
Social Competence	Students are able to solve problems and document solutions in a group with members of different technical background. They are able to give appropriate feedback and can work constructively with feedback concerning their work.				
Autonomy	Students are able to define a problem, gain the required knowledge and set up a model.				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Course L0314: Process Modeling in Drinking Water Treatment	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In this course selected drinking water treatment processes (e.g. aeration or activated carbon adsorption) are modeled dynamically using the programming language Modelica, that is increasingly used in industry. In this course OpenModelica is used, an free access frontend of the programming language Modelica.</p> <p>In the beginning of the course the use of OpenModelica is explained by means of simple examples. Together required elements and structure of the model are developed. The implementation in OpenModelica and the application of the model is done individually or in groups respectively. Students get feedback and can gain extra points for the exam.</p>
<b>Literature</b>	<p><b>OpenModelica:</b> <a href="https://openmodelica.org/index.php/download/download-windows">https://openmodelica.org/index.php/download/download-windows</a></p> <p><b>OpenModelica - Modelica Tutorial:</b> <a href="https://openmodelica.org/index.php/useresresources/userdocumentation">https://openmodelica.org/index.php/useresresources/userdocumentation</a></p> <p><b>OpenModelica - Users Guide:</b> <a href="https://openmodelica.org/index.php/useresresources/userdocumentation">https://openmodelica.org/index.php/useresresources/userdocumentation</a></p> <p><b>Peter Fritzson:</b> Principles of Object-Oriented Modeling and Simulation with Modelica 2.1, Wiley-IEEE Press, ISBN 0-471-471631.</p> <p><b>MHW (rev. by Crittenden, J. et al.):</b> Water treatment principles and design. Module M0802: Membrane Technology				
Courses				
Title		Typ	Hrs/wk	CP
Membrane Technology (L0399)		Lecture	2	3
Membrane Technology (L0400)		Recitation Section (small)	1	2
Membrane Technology (L0401)		Practical Course	1	1
Module Responsible	Prof. Mathias Ernst			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of water chemistry. Knowledge of the core processes involved in water, gas and steam treatment			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students will be able to rank the technical applications of industrially important membrane processes. They will be able to explain the different driving forces behind existing membrane separation processes. Students will be able to name materials used in membrane filtration and their advantages and disadvantages. Students will be able to explain the key differences in the use of membranes in water, other liquid media, gases and in liquid/gas mixtures.			
Skills	Students will be able to prepare mathematical equations for material transport in porous and solution-diffusion membranes and calculate key parameters in the membrane separation process. They will be able to handle technical membrane processes using available boundary data and provide recommendations for the sequence of different treatment processes. Through their own experiments, students will be able to classify the separation efficiency, filtration characteristics and application of different membrane materials. Students will be able to characterise the formation of the fouling layer in different waters and apply technical measures to control this.			
Personal Competence				
Social Competence	Students will be able to work in diverse teams on tasks in the field of membrane technology. They will be able to make decisions within their group on laboratory experiments to be undertaken jointly and present these to others.			
Autonomy	Students will be in a position to solve homework on the topic of membrane technology independently. They will be capable of finding creative solutions to technical questions.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Bioprocess Engineering: Specialisation B - Industrial Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0399: Membrane Technology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture on membrane technology supply provides students with a broad understanding of existing membrane treatment processes, encompassing pressure driven membrane processes, membrane application in electrodialysis, pervaporation as well as membrane distillation. The lectures main focus is the industrial production of drinking water like particle separation or desalination; however gas separation processes as well as specific wastewater oriented applications such as membrane bioreactor systems will be discussed as well.</p> <p>Initially, basics in low pressure and high pressure membrane applications are presented (microfiltration, ultrafiltration, nanofiltration, reverse osmosis). Students learn about essential water quality parameter, transport equations and key parameter for pore membrane as well as solution diffusion membrane systems. The lecture sets a specific focus on fouling and scaling issues and provides knowledge on methods how to tackle with these phenomena in real water treatment application. A further part of the lecture deals with the character and manufacturing of different membrane materials and the characterization of membrane material by simple methods and advanced analysis.</p> <p>The functions, advantages and drawbacks of different membrane housings and modules are explained. Students learn how an industrial membrane application is designed in the succession of treatment steps like pre-treatment, water conditioning, membrane integration and post-treatment of water. Besides theory, the students will be provided with knowledge on membrane demo-site examples and insights in industrial practice.</p>

Course L0203: Air Pollution Abatement	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Swantje Pietsch-Braune, Christian Eichler
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants form flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.

## Module M0923: Integrated Transportation Planning

### Courses

Title	Typ	Hrs/wk	CP
Integrated Transportation Planning (L1068)	Project-/problem-based Learning	4	6
<b>Module Responsible</b>	Prof. Carsten Gertz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	some knowledge of transport planning, e.g. through taking the undergraduate class „Transport Planning and Traffic Engineerin		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>describe interdependencies between land-use/location choice and transportation/mobility behaviour</li> <li>explain and evaluate the social, ecological and economic effects of transport and land-use policy measures.</li> <li>relate current issues in the area of integrated transport planning and formulate an opinion on them.</li> </ul>		
<b>Skills</b>	Students are able to: <ul style="list-style-type: none"> <li>quantify important parameters, which influence travel demand or are influenced by it.</li> <li>comprehensively examine a pre-defined or self-selected topic from a transportation studies perspective and document the results in accordance with scientific conventions.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>provide feedback on topical contents and their teaching.</li> <li>constructively handle feedback on their own work.</li> <li>produce results in group work and document these.</li> </ul>		
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>assess potential consequences of their future professional activities</li> <li>independently plan working on a pre-defined project topic, acquire the necessary knowledge and use appropriate means for its execution.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	written assignment with presentation during the semester		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Compulsory		

Course L1068: Integrated Transportation Planning	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Carsten Gertz, Dr. Philine Gaffron, Jacqueline Bianca Maaß
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The course will provide students with an understanding of interdependencies between land-use and transportation. Specific topics include a.o.:</p> <ul style="list-style-type: none"> <li>• interactions between transport and the environment and consequent limitations</li> <li>• characteristics of integrated planning</li> <li>• complex planning processes</li> <li>• interdependencies of location choice and mobility behaviour</li> <li>• transport and land-use policies</li> <li>• project on current issues in transportation studies</li> </ul>

Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)		Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)		Lecture	2	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.			
	Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.			
<i>Skills</i>	Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to develop a specific topic in a team and to work out milestones according to a given plan.			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory

Module M0948: Study Work Water/ Waste Water				
Courses				
Title	Typ		Hrs/wk	CP
<b>Module Responsible</b>	Dozenten des SD 8			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<p>The students are able to demonstrate their detailed knowledge in the field of Water and Environmental Engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p>The students can develop solving strategies and approaches for fundamental and practical problems in the field of Water and Environmental Engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p>Scientific work techniques that are used can be described and critically reviewed.</p>			
<i>Skills</i>	<p>The students are able to independently select methods or planning approaches for the project work and to justify their choice. They can explain how these methods or approaches relate to solutions in the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p>			
<b>Personal Competence</b> <i>Social Competence</i>	<p>The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p>			
<i>Autonomy</i>	<p>The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.</p>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Study work			
<b>Examination duration and scale</b>				
<b>Assignment for the Following Curricula</b>	Water and Environmental Engineering: Specialisation Water: Compulsory

Water Protection and Wastewater Management (L2008)	Project Seminar		3	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge in water management;</li> <li>• Good knowledge in urban drainage;</li> <li>• Good knowledge of wastewater treatment techniques;</li> <li>• Good knowledge of pollutants (e.g. COD, BOD, TS, N, P) and their properties;</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>The students can describe the basic principles of the regulatory framework related to the international and European water sector. They can explain limnological processes, substance cycles and water morphology in detail. They are able to assess complex problems related to water protection, such as ecosystem service and wastewater treatment with a special focus on innovative solutions, remediation measures as well as conceptual approaches.</p> <p>Students can accurately assess current problems and situations in a country-specific or local context. They can suggest concrete actions to contribute to the planning of tomorrow's urban water cycle. Furthermore, they can suggest appropriate technical, administrative and legislative solutions to solve these problems.</p> <p>The students can work together in international groups.</p> <p>Students are able to organize their work flow to prepare presentations and discussions. They can acquire appropriate knowledge by making enquiries independently.</p>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Presentation			
<b>Examination duration and scale</b>	Term paper plus presentation			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory			

Course L0226: Water Protection and Wastewater Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Ralf Otterpohl
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture focusses on:</p> <ul style="list-style-type: none"> <li>• Regulatory Framework (e.g. WFD)</li> <li>• Main instruments for the water management and protection</li> <li>• In depth knowledge of relevant measures of water pollution control</li> <li>• Urban drainage, treatment options in different regions on the world</li> <li>• Rainwater management, improved management of heavy rainfalls, downpours, rainwater harvesting, rainwater infiltration</li> <li>• Case Studies and Field Trips</li> </ul>
<b>Literature</b>	<p>The literature listed below is available in the library of the TUHH.</p> <ul style="list-style-type: none"> <li>• Water and wastewater technology Hammer, M. J. 1., &amp; . (2012). (7. ed., internat. ed.). Boston [u.a.]: Pearson Education International.</li> <li>• Water and wastewater engineering : design principles and practice: Davis, M. L. 1. (2011). . New York, NY: McGraw-Hill.</li> <li>• Biological wastewater treatment: (2011). C. P. Leslie Grady, Jr. (3. ed.). London, Boca Raton, Fla. [u.a.]: IWA Publ.</li> </ul>

Module M1720: Emerging Trends in Environmental Engineering			
Courses			
Title	Type	Hrs/wk	CP
Environmental Research Trends (L2752)	Seminar	2	2
Microplastics in Environment (L2750)	Lecture	2	2
Scientific Communication and Methods (L2751)	Lecture	1	2
<b>Module Responsible</b>	Prof. Nima Shokri		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge on water, soil and environmental research.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will be exposed to up-to-date research topics focused on soil, water and climate related challenges with a particular focus on the effects of microplastics in environment. Data analysis, data measurement, curation and presentation will be other skills that the students will develop in this module.		
<i>Skills</i>	Students' research skills will be improved in this module. How to prepare and deliver an effective presentation, how to write an abstract, research paper and proposal will be discussed in this module. Moreover, through Research-Based Learning approaches, the students will be exposed to current research trends in environmental engineering.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Developing teamwork and problem solving skills through Research-Based Teaching approaches will be at the core of this module.		
<i>Autonomy</i>	The students will be involved in writing individual reports and presentation. This will contribute to the students' ability and willingness to work independently and responsibly.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Report and Presentation		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory Environmental Engineering: Specialisation Waste and Energy: Elective Compulsory Environmental Engineering: Specialisation Biotechnology: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory		

Course L2752: Environmental Research Trends	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Salome Shokri-Kuehni
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Introduction - course objectives, expectations and format</p> <p>Analyzing the Audience, purpose and occasion</p> <p>Constructing and delivering effective technical presentations</p> <p>How to write an abstract</p> <p>How to write a scientific paper</p> <p>Developing competitive and persuasive research proposals</p> <p>Databases and resources available for water and environmental research</p> <p>Individual proposal on water and environmental research</p> <p>Individual project on water and environmental research</p> <p>Presentation on water and environmental research</p>

<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Climate and Climate Change</li> <li>• General Impacts of Climate Change on Wind Regime and Water Cycle</li> <li>• Consequences of Climate Change for Coastal Processes</li> <li>• Coastal Protection in Taiwan and Germany</li> <li>• Fundamentals of Climate Adaptation</li> <li>• Nature-Based Solutions (NBS) for Coastal Protection</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Materials provided on eLearning Platform (HOOU Platform)</li> </ul>

## Module M1505: Adaptation to Climate Change in Hydraulic Engineering (AKWAS)

### Courses

Title	Typ	Hrs/wk	CP
Adaptation to climate change in hydraulic engineering (L2291)	Project-/problem-based Learning	4	6
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Hydrology, Hydraulic Engineering</li> <li>Hydromechanic, Hydraulics</li> <li>Fundamentals of Coastal Engineering, Coastal- and Flood Protection</li> <li>Hydrological Systems</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>Climate protection and climate adaptation</li> <li>Insights into climate change and its regional characteristics - fundamentals, climate modelling / climate models</li> <li>Impacts of climate change on the components of the regional hydrological cycle</li> <li>Fundamentals of analysis of climate data</li> <li>Consequences of the impact of the climate change</li> <li>Measures for climate adaptation</li> <li>Assessment, prioritization and communication of adaptation measures</li> <li>Fundamentals of the analysis of hydrometeorological and hydrological data</li> </ul> <i>Skills</i> <ul style="list-style-type: none"> <li>Critical thinking: analysis of processes and relations, assessment of needs for action</li> <li>Creative thinking: development of adaptation strategies and adaptation measures</li> <li>Practical thinking: inclusion of restrictions, application of calculation approaches, methods, numerical models, planning methods</li> <li>Consideration of complex tasks</li> </ul> <b>Personal Competence</b> <i>Social Competence</i> <ul style="list-style-type: none"> <li>Working in heterogenous groups</li> <li>Working with different scientific / non-scientific disciplines</li> <li>Self reflection</li> </ul> <i>Autonomy</i> <ul style="list-style-type: none"> <li>Application oriented use of knowledge and skills</li> <li>Autonomous work on complex tasks</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Preparation of a written report and a presentation of a complex task.		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory		

Course L2291: Adaptation to climate change in hydraulic engineering	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Peter Fröhle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Climate protection and climate adaptation</li> <li>• Findings on climate change and its regional characteristics: fundamentals of climate change, climate modelling / climate models</li> <li>• Impacts of climate change on the components of the regional hydrological cycle(climate science view)</li> <li>• Fundamentals of the analysis of climate data</li> <li>• Consequences of the impacts of climate change (ingenieering science view)</li> <li>• Measures for climate change adaptation</li> <li>• Assessment, prioritization and communication of measures</li> <li>• Fundamentals of analysis of hydrometeorological and hydrological data</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Bereitgestellte eLearning Plattform</li> </ul>

## Thesis

### Module M-002: Master Thesis

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul>		
<i>Skills</i>	<p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0		
<b>Credit points</b>	30		
<b>Course achievement</b>	None		
<b>Examination</b>	Thesis		
<b>Examination duration and scale</b>	According to General Regulations		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Energy Systems: Thesis: Compulsory Environmental Engineering: Thesis: Compulsory Aircraft Systems Engineering: Thesis: Compulsory Global Innovation Management: Thesis: Compulsory Computer Science in Engineering: Thesis: Compulsory Information and Communication Systems: Thesis: Compulsory Interdisciplinary Mathematics: Thesis: Compulsory International Production Management: Thesis: Compulsory International Management and Engineering: Thesis: Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Thesis: Compulsory Logistics, Infrastructure and Mobility: Thesis: Compulsory Materials Science: Thesis: Compulsory Mechanical Engineering and Management: Thesis: Compulsory
