Bachelor of Science (B.Sc.) Computer Science

Cohort: Winter Term 2019 Updated: 24th May 2022

# **Table of Contents**

Table of Contents	2
Program description	3
	4
Core Qualification	4
Module M0561: Discrete Algebraic Structures Module M0731: Functional Programming	
Module M0575: Procedural Programming Module M0577: Non-technical Courses for Bachelors	
Module M0377. Non-technical Courses for Bachelors Module M0736: Linear Algebra	
Module M0730: Enterin Algebra Module M0624: Automata Theory and Formal Languages	13
Module M0724. Automata Theory and Formal Languages Module M0737: Mathematical Analysis	15
Module M0829: Foundations of Management	15
Module M0523: Objectoriented Programming, Algorithms and Data Structures	20
Module M0333: Computernetworks and Internet Security	20
Module M0953: Introduction to Information Security	24
Module M0730: Computer Engineering	26
Module M0750: Computer Engineering Module M0853: Mathematics III	28
Module M0552: Mathematics in Module M0562: Computability and Complexity Theory	31
Module M032: Software Engineering	32
Module M0727: Stochastics	34
Module M0771: Operating Systems	36
Module M0852: Graph Theory and Optimization	37
Module M0823: Software Industrial Internship	39
Module M0793: Seminars Computer Science and Mathematics	40
Module M0672: Signals and Systems	42
Specialization Computer and Software Engineering	45
Module M0625: Databases	45
Module M0023: Databases Module M0675: Introduction to Communications and Random Processes	43
Module M0073: Incoduction to communications and Random Processes Module M0941: Combinatorial Structures and Algorithms	47
Module M0391: Computer Architecture	51
Module M0551: Computer Architecture Module M0651: Computational Geometry	53
Module M0011: Computational Geometry Module M0972: Distributed Systems	56
Module M1242: Quantum Mechanics for Engineers	57
Module M0754: Compiler Construction	59
Module M0634: Introduction into Medical Technology and Systems	61
Module M1300: Software Development	63
Module M0803: Embedded Systems	65
Module M1269: Lab Cyber-Physical Systems	67
Specialization Computational Mathematics	68
Module M0675: Introduction to Communications and Random Processes	68
Module M0833: Introduction to Control Systems Module M0941: Combinatorial Structures and Algorithms	70 73
Module M0641. Combinatorial Structures and Algorithms Module M0662: Numerical Mathematics I	75
Module M1242: Quantum Mechanics for Engineers Module M0651: Computational Geometry	77 79
Module M0651: Computational Geometry Module M0668: Algebra and Control	82
Module M0006: Algebra and Control Module M0715: Solvers for Sparse Linear Systems	84
Module M0715: Solvers for Sparse Linear Systems Module M0854: Mathematics IV	84
Thesis	89
Module M-001: Bachelor Thesis

Knowledge				
Educational Objectives	After taking part successfully, students	have reached the following learning results		
Professional Competence				
Knowledge	Students apply the principles, construc	ts, and simple design techniques of functional prog	ramming. They den	nonstrate their ab
-	to read Haskell programs and to explain	in Haskell syntax as well as Haskell's read-eval-prir	t loop. They interp	ret warnings and
	errors in programs. They apply the fu	ndamental data structures, data types, and type of	onstructors. They	emplov strategies
			-	
	unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other e strategies.			
Skills	s Students break a natural-language description down in parts amenable to a formal specification and develop a functional p		a functional prog	
in a structured way. They assess		different language constructs, make conscious	selections both a	at specification a
	implementations level, and justify thei	r choice. They analyze given programs and rewrite	them in a control	led way. They des
	and implement unit tests and can asses	ss the quality of their tests. They argue for the corre	ectness of their prog	gram.
Demonal Commetence				
Personal Competence		with a second to a second the second se		
Social Competence		with varying peers. They explain problems and so	iutions to their pee	er. They detend ti
	programs orally. They communicate in	English.		
Autonomy	In programming labs, students learn	under supervision (a.k.a. "Betreutes Programmier	en") the mechanics	s of programming
		dually and independently, and receive feedback.	,

Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu
	Self-reliance, self-management, collaboration and professional and personnel management competences. The departme
	implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching
	areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competences
	level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechn
	complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechn
	academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one
	two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making
	transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study there subjects in one or two specific semesters during the course of studies.
	study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dea
	with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberal encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migrat
	studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semes 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a gr
	oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging go oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. The
	differences are reflected in the practical examples used, in content topics that refer to different professional application content and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leaders functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	locate selected specialized areas with the relevant non-technical mother discipline,
	• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in
	learning area,
	<ul> <li>different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of represental</li> </ul>
	<ul> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> </ul>
	<ul> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	apply basic methods of the said scientific disciplines,
	<ul> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned special</li> </ul>
	<ul><li>discipline,</li><li>to handle simple questions in aforementioned scientific disciplines in a sucsessful manner,</li></ul>
	<ul> <li>to handle simple questions in aforementioned scientific disciplines in a successful manner,</li> <li>justify their decisions on forms of organization and application in practical questions in contexts that go beyond</li> </ul>
	technical relationship to the subject.
Bergenet Community	
Personal Competence	Percenal Competences (Social Skills)
suciai competence	Personal Competences (Social Skills)
1	
	Students will be able

Autonomy	<ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul>
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	<ul> <li>to reflect and decide questions in front of a broad education background</li> </ul>
	<ul> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> </ul>
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

<b>Recommended Previous</b>	None			
Knowledge				
Educational Objectives	After taking part successfully, students have re	ached the following learning results		
Professional Competence				
Knowledge				
	Students can name the basic concepts in		÷	
	Students can discuss logical connection	s between these concepts. They are o	capable of illustrating t	hese connections w
	the help of examples.			
	<ul> <li>They know proof strategies and can repr</li> </ul>	oduce them.		
Skills				
SKIIIS	• Students can model problems in linear	algebra with the help of the concept	s studied in this cours	e. Moreover, they a
	capable of solving them by applying esta	ablished methods.		
	Students are able to discover and verify	further logical connections between the	e concepts studied in th	ne course.
	• For a given problem, the students can	develop and execute a suitable appr	oach, and are able to	critically evaluate
	results.			
Personal Competence				
Social Competence	- Students are able to work together (e.g. or	their regular home work) in heteroge	eneously composed te	ams (i.e., teams fr
	different study programs and background know	ledge) and to present their results app	propriately (e.g. during	exercise class).
Autonomy	Students are canable of checking their up	derstanding of complex concepts on t	hair awn Thay can a	acify apon quactic
Autonomy	<ul> <li>Students are capable of checking their und precisely and know where to get help in solving</li> </ul>		neir own. They can s	pecity open question
	precisely and know where to get help in solving	, mem.

СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on su selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given. This class comprises: • Application layer protocols (HTTP, FTP, DNS) • Transport layer protocols (TCP, UDP) • Network Layer (Internet Protocol, routing in the Internet) • Data link layer with media access at the example of Ethernet • Multimedia applications in the Internet • Network management • Internet security: IPSec • Internet security: Firewalls

Computability and Complexity The	ory (L0166)	Lecture	2	3	
Computability and Complexity The	ory (L0167)	Recitation Section (small)	2	3	
Module Responsible	Prof. Karl-Heinz Zimmermann				
Admission Requirements	None				
<b>Recommended Previous</b>	Discrete Algebraic Structures, Automa	ata Theory, Logic, and Formal Language Theory.			
Knowledge					
Educational Objectives	After taking part successfully, student	s have reached the following learning results			
Professional Competence					
Knowledge	The students known the important	machine models of computability, the class of	partial recursive	functions, unive	
	computability, Gödel numbering of co	I numbering of computations, the theorems of Kleene, Rice, and Rice-Shapiro, the concept of decidable a			
	undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post correspondence system				
Hilbert's 10-th problem, and the basic		concepts of complexity theory.			
Chille				nutable functions	
SKIIIS	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.				
Personal Competence					
Social Competence	Students are able to solve specific pro	blems alone or in a group and to present the results	accordingly.		
Autonomy	Students are able to acquire new know	wledge from newer literature and to associate the acc	juired knowledge w	ith other classes.	
Workload in Hours	Independent Study Time 124, Study T	ïme in Lecture 56

Graph Theory and Optimization (L1046)		Lecture	2	3
Graph Theory and Optimization (L1047)		Recitation Section (small)	2	3
Module Responsible Prof. A	Anusch Taraz			
Admission Requirements None				
Recommended Previous	Discrete Algebraic Structures			
Knowledge	Mathematics I			
Educational Objectives After	aking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students can name the basic concepts in Grap	h Theory and Optimization. They are	able to explain the	em using appropria
	examples.	in meory and optimization. mey are		
	Students can discuss logical connections betw	een these concents. They are canable	e of illustrating th	ese connections w
	the help of examples.			
	They know proof strategies and can reproduce	them		
Skills	Students can madel problems in Craph The	ry and Ontimization with the help of	the concente et	udiad in this cour
	Students can model problems in Graph Theory and Optimization with the help of the concepts studied in this course			
	<ul><li>Moreover, they are capable of solving them by applying established methods.</li><li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li></ul>			
		-		
•	For a given problem, the students can developed results.	op and execute a suitable approach,		Including evaluate
Personal Competence				
Social Competence	Students are able to work together in teams. T	hey are capable to use mathematics as	a common langu	age.
	In doing so, they can communicate new conce			
	design examples to check and deepen the und			
Autonomy				
	Students are capable of checking their unders	tanding of complex concepts on their	own. They can sp	ecify open question
	precisely and know where to get help in solving	g them.		
•	Students have developed sufficient persistence	e to be able to work for longer period	ds in a goal-orien	ted manner on ha
	problems.

Module M0873: Softw	vare Industrial Internship
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Prof. Karl-Heinz Zimmermann
Admission Requirements	None
<b>Recommended Previous</b>	Foundations of Software Engineering
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students know the important aspects and phases of software development.
Skills	Students can describe the typical phases of software development and are able to contribute to a software project.
Personal Competence	
Social Competence	Students are able to specify, implement, and analyze specific basic topics in software development and present them accordingly
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
Workload in Hours	Independent Study Time 180, Study Time in Lecture 0
Credit points	6
Course achievement	None
Examination	Written elaboration (accord. to Internship Regulations)
Examination duration and	Die Ausarbeitung wird von der Betreuerin bzw. dem Betreuer der Bachelorarbeit bewertet.

Content	Introduction to signal and system theory	
	• Signals	
	Classification of signals	
	<ul> <li>Continuous-time and discrete-time signals</li> </ul>	
	Analog and digital signals	
	<ul> <li>Deterministic and random signals</li> </ul>	
	<ul> <li>Description of LTI systems by differential equations or difference equations, respectively</li> </ul>	
	<ul> <li>Basic properties of signals and operations on signals</li> </ul>	
	Elementary signals	
	<ul> <li>Distributions (Generalized Functions)</li> </ul>	
	<ul> <li>Power and energy of signals</li> </ul>	
	<ul> <li>Correlation functions of deterministic signals</li> </ul>	
	Autocorrelation function	
	Crosscorrelation function	
	Orthogonal signals	
	Applications of correlation	
	Linear time-invariant (LTI) systems	
	• Linearity	
	• Time-invariance	

- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- Properties of LTI-systems
- Causal systems
- Stable systems
- Memoryless systems
- Fourier Series and Fourier Transform
  - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - Bandwidth definitions
  - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - Linear-phase systems
  - Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - Properties of the Laplace transform
  - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
  - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - Relation of Fourier transform and DTFT
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolution
  - Fast Fourier Transform (FFT)
  - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - Z-transform of digital filters
  - Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability

Literature

- Allpass filters
- Minimum-phase, maximum-phase and mixed-phase filters
- Linear phase filters

Computational Geoemetry (L0393)		Lecture	2	4
Computational Geoemetry (L0394)		Recitation Section (small)	2	2
Module Responsible	Dr. Prashant Batra			
Admission Requirements	None			
	Linear algebra and analytic geometry as taught in	higher secondary school		
Knowledge	<ul> <li>Computing with vectors a. determinants, Interpretation of scalar product, cross-product, Representation of lines/planes, S</li> <li>Pythagoras' theorem, cosine theorem, Thales' theorem, projections/embeddings)</li> </ul>			
	Basic data structures (trees, binary trees, search tre	ees, balanced binary trees, linked lists)		
	Definition of a graph			
Educational Objectives	After taking part successfully, students have reache	ed the following learning results		
Professional Competence				
Knowledge	Students can name the basic concepts of computer-assisted geometry, describe them with mathematical precision, and expla them by means of examples.			
	Students are conversant with the computational description of geometrical (combinational/topological) facts, including determination formulas and complexity assessments and proofs for all algorithms, especially output-sensitive algorithms.			
	Students are able to discuss logical connections bel	ween these concepts and to explain them	by means of exa	amples.
Skills	Students can model tasks from computer-assisted geometry with the aid of the concepts about which they have learnt and ca solve them by means of the methods they have learnt.			
Personal Competence				
Social Competence	Students are able to discuss with other attendees their own algorithmic suggestions for solving the problems presented. They a also able to work in teams and are conversant with mathematics as a common language.			
Autonomy	Students are capable of accessing independently further logical connections between the concepts about which they have learn and are able to verify them.

Recommended Previous Knowledge	<ul> <li>Knowledge in physics, particularly in optics and wave phenomena;</li> <li>knowledge in mathematics, particularly linear algebra, vector calculus, complex numbers and Fourier expansion</li> </ul>					
<b>Educational Objectives</b>	After taking part suc	cessfully, students have r	eached the following lear	ning results		
Professional Competence						
-	The students are able to describe and explain basic terms and principles of quantum mechanics. They can distinguish commons and differences to classical physics and know, in which situations quantum mechanical phenomena may be expected. The students get the ability to apply concepts and methods of quantum mechanics to simple problems					
	and systems. Vice versa, they are also able to comprehend requirements and principles of quantun mechanical devices.					
Personal Competence						
	The students discuss contents of the lectures and present solutions to simple quantum mechanical problems in small groups during the exercises.					
Autonomy	The students are able to independently find answers to simple questions on quantum mechanica systems. The students are able to independently comprehend literature to more complex subjects with quantum mechanical background.

Content	This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices. Central topics are: Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.

	Experience with Developing Small to Medium-Size Pro	ograms			
Educational	After taking part successfully, students have reached the fo	llowing learning results			
Objectives					
Professional					
Competence					
Knowledge	Students explain the fundamental concepts of a	aile methods, describe the process of			
	test-driven development, and explain how conti				
	different scenarios. They give examples of selec	-			
	regarding scalability and other non-functional re	•			
	build scripts and combine them in a correspond				
	environment. They explain major activities in re				
	program comprehension, and agile project deve	elopment.			
Skills	For a given task on a legacy system, students ic	dentify the corresponding			
	parts in the system and select an appropriate method for understanding the				
	details. They choose the proper approach of spl	5			
	independent testable and extensible pieces and	l, thus, solve the task			
	with proper methods for quality assurance. They	y design tests for			
	legacy systems, create automated builds, and fi				
	levels. They integrate the resulting artifacts in a	a continuous			
	development environment				
Personal					
Competence					
Social	Students discuss different design decisions in a group. They	defend their solutions orally. They communicate in	English.		
Competence			5		
Autonomy	Using accompanying tools, students can assess their level	I of knowledge continuously and adjust it appropria	ately. Within	limits, they can set t	their ow
	goals. Upon successful completion, students can identify a	and formulate concrete problems of software syste	ms and propo	ose solutions. Within th	his field,
	conduct independent studies to acquire the necessary comp	petencies. They can devise plans to arrive at new so	lutions or asso	ess existing ones.

Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, and
	actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, the
	is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches.
	Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. The second se
	lab introduces into the area (basic notions, characteristical properties) and their specification techniques (models of computation
	hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the lat
	experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification too
	(MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors ar
	actors.
CL-III-	
SKIIIS	After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies betwee CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converte
	digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate the
	advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these technique
	to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specificati
	tools and in the area of simple control applications.
Personal Competence	
	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Title			T.	n	Hrs/wk	СР
Quantum Mechanics for Engineers	(11686)		Ty	<b>p</b> cture	2	3
Quantum Mechanics for Engineers				citation Section (small)	2	3
Module Responsible	1	en				-
Admission Requirements						
Recommended Previous Knowledge	<ul> <li>Knowledge in physics, particularly in optics and wave phenomena;</li> <li>knowledge in mathematics, particularly linear algebra, vector calculus, complex numbers and Fourier expansion</li> </ul>					
Educational Objectives	After taking part suc	cessfully, students have	reached the following I	earning results		
Professional Competence						
	The students are able to describe and explain basic terms and principles of quantum mechanics. They can distinguish commons and differences to classical physics and know, in which situations quantum mechanical phenomena may be expected. The students get the ability to apply concepts and methods of quantum mechanics to simple problems and systems. Vice versa, they are also able to comprehend requirements and principles of quantum mechanical devices.					
Personal Competence						
	The students discuss contents of the lectures and present solutions to simple quantum mechanical problems in small groups during the exercises.					
Autonomy	The students are able to independently find answers to simple questions on quantum mechanical systems. The students are able to independently comprehend literature to more complex subjects with quantum mechanical background.					
Workload in Hours	Independent Study T	Independent Study Time 124, Study Time in Lecture 56

Course L1686: Quantum Mec	hanics for Engineers
Тур	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Wolfgang Hansen
Language	DE
Cycle	WiSe
Content	This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices. Central topics are: Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.

Courses				
Title Computational Geoemetry (L0393)		<b>Typ</b> Lecture	Hrs/wk	<b>CP</b> 4
Computational Geoemetry (L0394)		Recitation Section (small)	2	2
Module Responsible	Dr. Prashant Batra			
Admission Requirements	None			
<b>Recommended Previous</b>	Linear algebra and analytic geometry as taught in	higher secondary school		
Knowledge	(Computing with vectors a. determinants, Interpretation of scalar product, cross-product, Representation of lines/planes, Satz d Pythagoras' theorem, cosine theorem, Thales' theorem, projections/embeddings) Basic data structures (trees, binary trees, search trees, balanced binary trees, linked lists)			
	Definition of a graph			
Educational Objectives	After taking part successfully, students have reach	ed the following learning results		
Professional Competence				
Knowledge	Students can name the basic concepts of computer-assisted geometry, describe them with mathematical precision, and explain them by means of examples.			
	Students are conversant with the computational description of geometrical (combinational/topological) facts, including determinar formulas and complexity assessments and proofs for all algorithms, especially output-sensitive algorithms.			
	Students are able to discuss logical connections between these concepts and to explain them by means of examples.			
Skills	Students can model tasks from computer-assisted geometry with the aid of the concepts about which they have learnt and car solve them by means of the methods they have learnt.			
Personal Competence				
Social Competence	Students are able to discuss with other attendees their own algorithmic suggestions for solving the problems presented. They are also able to work in teams and are conversant with mathematics as a common language.			
Autonomy	Students are capable of accessing independently further logical connections between the concepts about which they have learn and are able to verify them.

Course L1043: Differential Equations 2 (Partial Differential Equations)		
Тур	Lecture	
Hrs/wk	2	
CP	1	
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28	
Lecturer	Dozenten des Fachbereiches Mathematik der UHH	
Language	DE	
Cycle	SoSe	
Content	Main features of the theory and numerical treatment of partial differential equations	
Literature		
	http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html	

Course L1044: Differential Equations 2 (Partial Differential Equations)	
Тур	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1045: Differential Equations 2 (Partial Differential Equations)	
Тур	Recitation Section (large)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1038: Complex Fund	Course L1038: Complex Functions	
Тур	Lecture	
Hrs/wk	2	
CP	1	
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28	
Lecturer	Dozenten des Fachbereiches Mathematik der UHH	
Language	DE	
Cycle	SoSe	
Content	Main features of complex analysis	
Likensterne	<ul> <li>Functions of one complex variable</li> <li>Complex differentiation</li> <li>Conformal mappings</li> <li>Complex integration</li> <li>Cauchy's integral theorem</li> <li>Cauchy's integral formula</li> <li>Taylor and Laurent series expansion</li> <li>Singularities and residuals</li> <li>Integral transformations: Fourier and Laplace transformation</li> </ul>	
Literature	<ul> <li>http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html</li> </ul>	

## Module Manual B.Sc. "Computer Science"

ourse L1041: Complex Functions	
Тур	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1042: Complex Functions	
Тур	Recitation Section (large)
Hrs/wk	1
СР	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

	Thesis	
Module M-001: Bachelor Thesis		
Courses		
Title	Typ Hrs/wk CP	
Module Responsible	Professoren der TUHH	
Admission Requirements	A According to Canadal Degulations \$21 (1):	
	According to General Regulations §21 (1):	
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.	
<b>Recommended Previous</b>		
Knowledge		
Professional Competence	After taking part successfully, students have reached the following learning results	
Knowledge Skills Personal Competence Social Competence	<ul> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>	
Autonomy	<ul> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>	
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0	
Credit points	12	
Course achievement		
Examination		
	According to General Regulations	
scale Assignment for the	General Engineering Science (German program): Thosis: Compulsory	
Assignment for the Following Curricula	General Engineering Science (German program): Thesis: Compulsory General Engineering Science (German program, 7 semester): Thesis: Compulsory
