Core Qualification

Module M0561: Discre	ete Algebraic Structures			
Courses				
Title		Typ	Hrs/wk	CP
Discrete Algebraic Structures (L016	4)	Lecture	2	3
Discrete Algebraic Structures (L016		Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous	Mathematics from High School.			
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	The students know the important basics of	discrete algebraic structures including element	ary combinatorial	structures, monoids,
	groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub sum-, and quotient structures and homomorphisms.		otient structures and	
Skills	Students are able to formalize and analyze basic discrete algebraic structures.			
Personal Competence				
Social Competence	Students are able to solve specific problems alone or in a group and to present the results accordingly.			
Autonomy	Students are able to acquire new knowledge from specific standard books and to associate the acquired knowledge to other classes.			
Workload in Hours	Independent Study Time 124, Study Time in	Lecture 56

Module M0731: Funct	ional Programming			
Courses				
Title		Тур	Hrs/wk	СР
Functional Programming (L0624)		Lecture	2	2
Functional Programming (L0625)		Recitation Section (large	e) 2	2
Functional Programming (L0626)		Recitation Section (sma	II) 2	2
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous	Discrete mathematics at high-school level			
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	Students apply the principles, constructs, a	and simple design techniques of functional p	rogramming. They de	monstrate their ability
	to read Haskell programs and to explain H	askell syntax as well as Haskell's read-eval-	print loop. They interp	oret warnings and find
	errors in programs. They apply the funda-	mental data structures, data types, and typ	e constructors. They	employ strategies for
	unit tests of functions and simple proof tec	hniques for partial and total correctness. The	ey distinguish laziness	from other evaluation
	strategies.			
Ckilla	Chudanta hyanica natural languaga dagarin	tion down in north opposite to a formal opposite	sification and daylalan	a functional program
SKIIIS		tion down in parts amenable to a formal spe		
	· · ·	erent language constructs, make conscio		•
	implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.			
	and implement unit tests and can assess th	ie quality of their tests. They argue for the c	orrectifess of their pro	grain.
Personal Competence				
Social Competence	Students practice peer programming with	varying peers. They explain problems and	solutions to their pe	er. They defend their
	programs orally. They communicate in Eng	lish.		
Autonomou	In an arrangement laborate lab	law sumantisian (a l. a. IID atroutas Drassa	ioronll) the mechanic	
Autonomy	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.			
	exercises, they develop solutions individua	ny and independently, and receive reedback	•

Module M0577: Non-technical Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
Educational Objectives After taking part successfully, students have reached the following learning results		
Professional Competence		

Knowledge The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. Personal Competences (Self-reliance) Students are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

Module M0624: Autor	nata Theory and Formal Lang	juages		
Courses				
Title		Тур	Hrs/wk	СР
Automata Theory and Formal Langi	_	Lecture	2	4
Automata Theory and Formal Langi	uages (L0507)	Recitation Section (small)	2	2
Module Responsible	Prof. Tobias Knopp			
Admission Requirements	None			
Recommended Previous	Participating students should be able to			
Knowledge	- specify algorithms for simple data structu	ures (such as, e.g., arrays) to solve computational	problems	
	- apply propositional logic and predicate lo	gic for specifying and understanding mathematica	l proofs	
	- apply the knowledge and skills taught in	the module Discrete Algebraic Structures		
Educational Objectives	After taking part successfully, students ha	ve reached the following learning results		
Professional Competence		_ <u> </u>		
-	Students can explain syntax, semantics,	and decision problems of propositional logic, and	I they are able to	o give algorithms f
5		show correspondences to Boolean algebra. Stud		
Skills	syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for variou kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finit automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges fror deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automate or grammars. Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluat which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for			
Paramal Committee	grammars from automata and vice versa emptiness problem in case of infinite word	a. They can show how parsers work, and they calls.	an apply algorith	ms for the langua

Тур	Lecture	
СР	4	
	Independent Study Time 92, Study Time in Lecture 28	
	Prof. Tobias Knopp	
Language		
Cycle		
Content	3036	
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF	
	Predicate logic, unification, predicate logic resolution	
	3. Temporal Logics (LTL, CTL)	
	Deterministic finite automata, definition and construction	
	5. Regular languages, closure properties, word problem, string matching	
	6. Nondeterministic automata:	
	Rabin-Scott transformation of nondeterministic into deterministic automata	
	7. Epsilon automata, minimization of automata,	
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)	
	8. Myhill-Nerode Theorem:	
	Correctness of the minimization procedure, equivalence classes of strings induced by automata	
	9. Pumping Lemma for regular languages:	
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive	
	enough to solve a word problem for some given language	
	10. Regular expressions vs. finite automata:	
	Equivalence of formalisms, systematic transformation of representations, reductions	
	11. Pushdown automata and context-free grammars:	
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and	
	back)	
	12. Chomsky normal form	
	13. CYK algorithm for deciding the word problem for context-free grammrs	
	14. Deterministic pushdown automata	
	15. Deterministic vs. nondeterministic pushdown automata:	
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler	
	16. Regular grammars	
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars	
	18. Chomsky hierarchy	
	19. Mealy- and Moore automata:	
	Automata with output (w/o accepting states), infinite state sequences, automata networks	
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification	
	w.r.t. temporal logic specifications (in particular LTL)	
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic	
	22. Fixed points, propositional mu-calculus	
	23. Characterization of regular languages by monadic second-order logic (MSO)	
Literature

Course L08	82: Management Tutorial		
Тур	Recitation Section (small)		
Hrs/wk	2		
СР	3		
Workload	Independent Study Time 62, Study Time in Lecture 28		
in Hours			
Lecturer	Prof. Christoph Ihl, Katharina Roedelius		
Language	DE		
Cycle	WiSe/SoSe		
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.		
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se		
	selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin-		
	knowledge from the lecture should come to practical use. The group projects are guided by a mentor.		
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.		

Course L0880: Introduction t	o Management	
Тур	Lecture	
Hrs/wk	3	
СР	3	
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42	
Lecturer	Prof. Christoph Ihl, Prof. Thorsten Blecker, Prof. Christian Lüthje, Prof. Christian Ringle, Prof. Kathrin Fischer, Prof. Cornelius	
	Herstatt, Prof. Wolfgang Kersten, Prof. Matthias Meyer, Prof. Thomas Wrona	
Language	DE	
Cycle	WiSe/SoSe	
Content	Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management	
	Important definitions from Management,	
	Developing Objectives for Business, and their relation to important Business functions	
	Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation	
	Management, Marketing and Sales	
	Cross-sectional Functions, e.g. Organisation, Human Ressource Management, Supply Chain Management, Information Management	
	Definitions as information, information systems, aspects of data security and strategic information systems	
	Definition and Relevance of innovations, e.g. innovation opporunities, risks etc.	
	Relevance of marketing, B2B vs. B2C-Marketing	
	different techniques from the field of marketing (e.g. scenario technique), pricing strategies	
	important organizational structures	
	basics of human ressource management	
	Introduction to Business Planning and the steps of a planning process	
	Decision Analysis: Elements of decision problems and methods for solving decision problems	
	Selected Planning Tasks, e.g. Investment and Financial Decisions Introduction to Accounting Polynops Chartes Continue	
	Introduction to Accounting: Accounting, Balance-Sheets, Costing Relevance of Controlling and selected Controlling methods	
	Important aspects of Entrepreneurship projects	
	important aspects of Entrepreneurs in projects

Admission Requirements				
Recommended Previous Knowledge	Lecture on procedural programming or equivalent program	mming skills		
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
	The students have a fundamental understanding of object orientated and generic programming and can apply it in small programming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have a fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can use exceptions and apply generic programming in order to make existing data structures generic. The students know the pros and cons of both programming paradigms. Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a modern programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
•	Students can work in teams and communicate in forums.			
Autonomy	In a programming internship, students learn object-oriented programming under supervision. In exercises they develop individual and independent solutions and receive feedback.

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann, DrIng. Koojana Kuladinithi
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality o complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given. This class comprises: Application layer protocols (HTTP, FTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol, routing in the Internet) Data link layer with media access at the example of Ethernet Multimedia applications in the Internet Network management Internet security: IPSec
Literature	 Kurose, Ross, Computer Networking - A Top-Down Approach, 6th Edition, Addison-Wesley Kurose, Ross, Computernetzwerke - Der Top-Down-Ansatz, Pearson Studium; Auflage: 6. Auflage W. Stallings: Cryptography and Network Security: Principles and Practice, 6th edition
	Further literature is announced at the beginning of the lecture.

Courses	
Title	Typ Hrs/wk CP
Computer Engineering (L0321)	Lecture 3 4
Computer Engineering (L0324)	Recitation Section (small) 1 2
Module Responsible	
Admission Requirements	
Kecommended Previous Knowledge	Basic knowledge in electrical engineering
	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level
	programming down to gates. The module includes the following topics:
	Introduction
	Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks
	Sequential logic: Flip-flops, automata, systematic hardware design
	Technological foundations Computer arithmetic: Integer addition, subtraction, multiplication and division
	Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining
	Memories: Memory hierarchies, SRAM, DRAM, caches
	Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical
Skins	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on
	collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of
	today's computing systems - from gates and circuits up to complete processors.
	After successful completion of the module, the students are able to judge the interdependencies between a physical compute
	system and the software executed on it. In particular, they shall understand the consequences that the execution of software ha
	on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate
	the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.
Personal Competence	
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

,,	Module M0732: Softw	are Engineering				
Software Engineering (L0627) Module Responsible Prof. Sibylle Schupp Admission Requirements None Recommended Previous Automata theory and formal languages Procedural programming or Functional programming Professional Competence Professional Competence Knowledge Knowledge Knowledge Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning. Skills For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications. Personal Competence Students practice peer programming. They explain problems and solutions to their peer. They communicate in English. Autonomy Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Workload in Hours Independent Study Time 124, Study Time in Lecture 56 Course achievement Computers Sont Students S	Courses

Professional Competence Knowledge Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning. Skills For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications. Personal Competence Social Competence Social Competence Lysing on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Knowledge				
Educational Objectives	After taking part successfully, students have reached the following	ng learning results		
Professional Competence				
Knowledge	This module presents advanced concepts from the discipline of	f computer architecture. In the	beginning, a bı	road overview over
	various programming models is given, both for general-purp	pose computers and for specia	il-purpose mad	chines (e.g., signal
	processors). Next, foundational aspects of the micro-architecture	·		-
	so-called pipelining and the methods used for the acceleration			-
	know concepts for dynamic scheduling, branch prediction, s	superscalar execution of machi	ne instructions	and for memory
	hierarchies.			
Skills	The students are able to describe the organization of processors.	They know the different archite	ctural principle	s and programming
	models. The students examine various structures of pipelined pro	•		
	analyze them w.r.t. criteria like, e.g., performance or energy effi			·
	know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.			
Personal Competence				
-	Students are able to solve similar problems alone or in a group a	nd to present the results accordi	nalv.	
			9.7	
Autonomy	Students are able to acquire new knowledge from specific literat	ure and to associate this knowled	dge with other	classes.

Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Embedded systems can be defined as information proce	ssing systems embedded into enclos	ing products. Thi	s course teaches the
	foundations of such systems. In particular, it deals with			
	their specification languages (models of computation,		of distributed sy	stems, task graphs,
	specification of real-time applications, translations between	een different models).		
	Another part covers the hardware of embedded syste	ms: Sonsors, A/D and D/A converter	rs, real-time cap	able communication
	hardware, embedded processors, memories, energy dis	sipation, reconfigurable logic and ac	tuators. The cou	ırse also features an
	introduction into real-time operating systems, middlew	are and real-time scheduling. Finally	y, the implemen	tation of embedded
	systems using hardware/software co-design (hardware/s	oftware partitioning, high-level trans	formations of sp	ecifications, energy-
	efficient realizations, compilers for embedded processors	s) is covered.		
Sville	After having attended the course, students shall be ab	la to realize simple embedded syste	ms. The student	e shall realize which
Skiiis	relevant parts of technological competences to use in o			
	able to compare different models of computations and f			-
	which areas of embedded system design specific risks ex		ge, e	,
Personal Competence	, , ,			
	Students are able to solve similar problems alone or in a	group and to present the results acco	ordingly.	
Autonomy	Students are able to acquire new knowledge from specifi	c literature and to associate this know	wledge with othe	r classes.

Admission Requirements				
Recommended Previous Knowledge	Practical programming experience Automata theory and formal languages Functional programming or procedural programmin Object-oriented programming, algorithms, and data Basic knowledge of software engineering	-		
Educational Objectives	After taking part successfully, students have reached the	following learning results		
	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools. Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.			
·	Students develop the software in a team. They explain p their software in class. They communicate in English. Students develop their software independently and define project. They organize the software project so that they can	milestones by themselves. They re	eceive feedback t

Admission Requirements	None
Recommended Previous	Mathematik I + II for Engineering Students (german or english) or Analysis & Linear Algebra I + II for Technomathematician
Knowledge	basic MATLAB/Python knowledge
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	Students are able to
Knowiedge	Students are able to
	name numerical methods for interpolation, integration, least squares problems, eigenvalue problems, nonlinear root findin
	problems and to explain their core ideas,
	repeat convergence statements for the numerical methods,
	 explain aspects for the practical execution of numerical methods with respect to computational and storage complexitx.
C1.''	
SKIIIS	Students are able to
	implement, apply and compare numerical methods using MATLAB/Python,
	• justify the convergence behaviour of numerical methods with respect to the problem and solution algorithm,
	select and execute a suitable solution approach for a given problem.
Personal Competence	
	Students are able to
	work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge
	explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.
Autonomy	Students are capable
	 to assess whether the supporting theoretical and practical excercises are better solved individually or in a team, to assess their individual progess and, if necessary, to ask questions and seek help.
	to assess their individual progess and, if necessary, to ask questions and seek neip.

Content	This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices. Central topics are: Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.

Course L0428: Algebra and C	Control
Тур	Lecture
Hrs/wk	2
СР	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Dr. Prashant Batra
Language	DE/EN
Cycle	SoSe
Content	- Algebraic control methods, polynomial and fractional approach
	-Single input - single output (SISO) control systems synthesis by algebraic methods,
	- Simultaneous stabilization
	- Parametrization of all stabilizing controllers
	- Selected methods of pole assignment.
	- Filtering and sensitivity minimization
	- Polynomial matrices, left and right polynomial fractions.
	- Euclidean algorithm, diophantine equations over rings
	- Smith-McMillan normal form
	- Multiple input - multiple output control system synthesis by polynomial methods, condition of
	stability.

Module M1269: Lab C	yber-Physical Systems
Courses	
Title Lab Cyber-Physical Systems (L1740	Typ Hrs/wk CP Project-/problem-based Learning 4 6
Module Responsible	
Admission Requirements	None
Recommended Previous	Module "Embedded Systems"
Knowledge	Flouric Embedded Systems
,	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, and actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, there is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches. Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. The lab introduces into the area (basic notions, characteristical properties) and their specification techniques (models of computation, hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the lab's experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification tools (MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors and actors.
Skills	After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies between a CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converters, digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate their advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these techniques to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specification tools and in the area of simple control applications.
Personal Competence	
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Courses	
Title	Typ Hrs/wk CP
Signals and Systems (L0432)	Lecture 3 4
Signals and Systems (L0433)	Recitation Section (small) 2 2
Module Responsible	Prof. Gerhard Bauch
Admission Requirements	None
Recommended Previous	Mathematics 1-3
Knowledge	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik
	1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful
	but not required.
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system
	theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They
	can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they
	understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a
	discrete-time signal.
Skills	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and
	system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase
Davisanal Commetence	response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency domain.
Personal Competence	The skydenke can is jakly salva anajijia nyahlama
	The students can jointly solve specific problems. The students are able to acquire relevant information from appropriate literature sources. They can control their level of
Autonomy	knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

	Orthogonal signals Applications of correlation		
	 Applications of correlation Linear time-invariant (LTI) systems 		
	Linear time-invariant (L11) systems Linearity		
	Time-invariance		

- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- · Properties of LTI-systems
- Causal systems
- Stable systems
- · Memoryless systems
- Fourier Series and Fourier Transform
 - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - o Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - o Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - o Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - o Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - $\circ~$ Relation of Laplace transform, DTFT, and z-transform
 - o Properties of the z-transform
 - o Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed-phase filters
 - Linear phase filters

Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to Congrel Populations \$21 (1)
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	
	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve the students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve
	subject-related problems. • With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	• The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
4	
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	specified time frame.
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific
	 problem. The students can apply the essential techniques of scientific work to research of their own.
	The students can apply the essential techniques of scientific work to research of their own.
