Module M0834: Computernetworks and Internet Security	21 23
Module M0730: Computer Engineering Module M1732: Mathematics III (EN)	25
Module M1732. Algorithms and Data Structures	25
Module M1425. Algorithms and Data Structures Module M0732: Software Engineering	29
Module M0732: Software Engineering Module M0727: Stochastics	31
Module M0727: Stochastics Module M0562: Computability and Complexity Theory	33
Module M0302: Computability and Complexity media Module M0852: Graph Theory and Optimization	35
Module M0032: Software Industrial Internship	37
Module M1578: Seminars Computer Science	38
Specialization I. Computer and Software Engineering	40
Module M0625: Databases	40
Module M10025. Databases Module M1586: Scientific Programming	40
Module M1388. Scientific Programming Module M0971: Operating Systems	44
Module M1595: Machine Learning I	44
Module M1393: Machine Leanning T Module M0791: Computer Architecture	45
Module M0791: Computer Architecture Module M0953: Introduction to Information Security	49
Module M1593: Data Mining	51
Module M0754: Compiler Construction	53
Module M0803: Embedded Systems	54
Module M1300: Software Development	56
Module M1890: Software Development Module M1872: Operating System Construction for Single-Core Systems	58
Specialization II. Mathematics and Engineering Science	60
Module M0662: Numerical Mathematics I	60
Module M1730: Mathematics IV (EN)	62
Module M0651: Computational Geometry	65
Module M0941: Combinatorial Structures and Algorithms	68
Module M1883: Introduction to Quantum Computing	70
Module M1592: Statistics	72
Module M0715: Solvers for Sparse Linear Systems	74
Module M0668: Algebra and Control	76
Module M0634: Introduction into Medical Technology and Systems	78
Module M1269: Lab Cyber-Physical Systems	80
Module M0672: Signals and Systems	81
Specialization III. Subject Specific Focus	84
Module M1562: Technical Complementary Course I for CSBS	84
Module M1568: Technical Complementary Course II for CSBS	85
Thesis	86
Module M-001: Bachelor Thesis	86

#### **Core Qualification**

Module M0561: Discre	ete Algebraic Structures			
Courses				
Title		Тур	Hrs/wk	СР
Discrete Algebraic Structures (L016		Lecture	2	3
Discrete Algebraic Structures (L016		Recitation Section (small)	2	3
	Prof. Karl-Heinz Zimmermann			
Admission Requirements				
	Mathematics from High School.			
Knowledge				
	After taking part successfully, students have reach	ed the following learning results		
Professional Competence	The shudents know the important basis of discus		town conclusion at a stat	about a burne a second de
Knowledge	The students know the important basics of discre		-	
	groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub sum-, and quotient structures are			
	homomorphisms.			
Skills	Students are able to formalize and analyze basic d	iscrete algebraic structures.		
Personal Competence				
	Students are able to solve specific problems alone	or in a group and to proport the results	accordingly	
Social Competence	Students are able to solve specific problems alone	of the group and to present the results	accordingry.	
Autonomy	Students are able to acquire new knowledge fro	m specific standard books and to asso	ciate the acquired	knowledge to othe
	classes.			
Workload in Hours	Independent Study Time 124, Study Time in Lectu	re 56		
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and	120 min			
scale				
-	General Engineering Science (German program, 7		nce: Compulsory	
Following Curricula	Computer Science: Core Qualification: Compulsory			
	Data Science: Core Qualification: Compulsory			
	Computational Science and Engineering: Core Qua			
	Orientation Studies: Core Qualification: Elective Co	mpulsory

Module M0731: Funct	ional Progra	mmina				
	<b>j</b>	<b>y</b>				
Courses						
Title				Тур	Hrs/wk	СР
Functional Programming (L0624)				Lecture	2	2
Functional Programming (L0625)				Recitation Section (large)	2	2
Functional Programming (L0626)	r			Recitation Section (small)	2	2
Module Responsible	Prof. Sibylle Schup	р				
Admission Requirements	None					
<b>Recommended Previous</b>	Discrete mathema	tics at high-scho	ol level			
Knowledge						
Educational Objectives	After taking part s	uccessfully, stude	ents have reached the fo	llowing learning results		
<b>Professional Competence</b>						
Knowledge	Students apply the	e principles, cons	tructs, and simple desigr	n techniques of functional progra	mming. They dem	nonstrate their abi
	to read Haskell pro	ograms and to e	kplain Haskell syntax as	well as Haskell's read-eval-print	loop. They interp	ret warnings and f
	errors in programs	s. They apply the	e fundamental data stru	ctures, data types, and type co	nstructors. They e	employ strategies
	unit tests of functi	ons and simple p	roof techniques for partia	al and total correctness. They dis	tinguish laziness f	from other evaluat
	strategies.					
	-					
Skills	Students break a r	natural-language	description down in part	s amenable to a formal specifica	tion and develop	a functional progr
	in a structured	way. They asse	ss different language	constructs, make conscious s	elections both a	at specification a
	implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They desired					
	and implement un	it tests and can a	ssess the quality of their	tests. They argue for the correc	tness of their prog	gram.
Personal Competence						
•				The second state is a second state of the seco		
Social Competence	-			They explain problems and solu	tions to their pee	er. They defend tr
	programs orally. T	hey communicat	e in English.			
Autonomy	In programming la	abs, students lea	rn under supervision (a	a.k.a. "Betreutes Programmierer	") the mechanics	of programming
	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. exercises, they develop solutions individually and independently, and receive feedback.

Module Responsible	Dagmar Richter
Admission Requirements	None
<b>Recommended Previous</b>	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu
	Self-reliance, self-management, collaboration and professional and personnel management competences. The departm
	implements these training objectives in its <b>teaching architecture</b> , in its <b>teaching and learning arrangements</b> , in <b>teach</b> <b>areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>compete</b> <b>level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechn
	complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechn academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dea
	with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are delibera encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migra studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter seme 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a g oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging g oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. Th differences are reflected in the practical examples used, in content topics that refer to different professional application conte and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leaders functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	<ul> <li>locate selected specialized areas with the relevant non-technical mother discipline,</li> </ul>
	<ul> <li>outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in</li> </ul>
	learning area,
	• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
	<ul> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representa in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> </ul>
	<ul> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	<ul> <li>apply basic methods of the said scientific disciplines,</li> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned special discipline,</li> </ul>
	<ul> <li>to handle simple questions in aforementioned scientific disciplines in a sucsessful manner,</li> <li>justify their decisions on forms of organization and application in practical questions in contexts that go beyond technical relationship to the subject.</li> </ul>
Personal Competence	
Social Competence	Personal Competences (Social Skills)
	Students will be able
	Stadents will be able

Autonomy	<ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul>
, accremy	Students are able in selected areas
	<ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> </ul>
	to organize themselves and their own learning processes
	<ul> <li>to reflect and decide questions in front of a broad education background</li> </ul>
	<ul> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> </ul>
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

CP			
_	* ndependent Study Time 92, Study Time in Lecture 28		
	Prof. Matthias Mnich		
Language			
Cycle	SoSe		
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF		
	2. Predicate logic, unification, predicate logic resolution		
	3. Temporal Logics (LTL, CTL)		
	4. Deterministic finite automata, definition and construction		
	5. Regular languages, closure properties, word problem, string matching		
	6. Nondeterministic automata:		
	Rabin-Scott transformation of nondeterministic into deterministic automata		
	7. Epsilon automata, minimization of automata,		
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)		
	8. Myhill-Nerode Theorem:		
	Correctness of the minimization procedure, equivalence classes of strings induced by automata		
	9. Pumping Lemma for regular languages:		
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be express		
	enough to solve a word problem for some given language		
	10. Regular expressions vs. finite automata:		
	Equivalence of formalisms, systematic transformation of representations, reductions		
	11. Pushdown automata and context-free grammars:		
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pump		
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars		
	back)		
	12. Chomsky normal form		
	13. CYK algorithm for deciding the word problem for context-free grammrs		
	14. Deterministic pushdown automata		
	15. Deterministic vs. nondeterministic pushdown automata:		
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler		
	16. Regular grammars		
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars		
	18. Chomsky hierarchy		
	19. Mealy- and Moore automata:		
	Automata with output (w/o accepting states), infinite state sequences, automata networks		
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verificat		
	w.r.t. temporal logic specifications (in particular LTL)		
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic		
	22. Fixed points, propositional mu-calculus		
	23. Characterization of regular languages by monadic second-order logic (MSO)		
Literature	1. Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.		
	2. Logik für Informatiker Martin Kreuzer, Stefan Kühling, Pearson Studium, 2006		
	3. Grundkurs Theoretische Informatik, Gottfried Vossen, Kurt-Ulrich Witt, Vieweg-Verlag, 2010.		
	4. Principles of Model Checking, Christel Baier, Joost-Pieter Katoen, The MIT Press, 2007		
	4. Principles of Model Checking, Christel Baier, Joost-Pieter Katoen, The MIT Press, 2007

Course L0	382: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busines knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Admission Requirements				
Recommended Previous	Lecture on procedural programming or equivalent p	rogramming skills		
Knowledge				
	After taking part successfully, students have reache	d the following learning results		
Professional Competence				
Kibinebge	The students have a fundamental understanding of object orientated and generic programming and can apply it in sm programming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. T students know the concept of information hiding and can design interfaces with public and private methods. They can u exceptions and apply generic programming in order to make existing data structures generic. The students know the pros a cons of both programming paradigms.			
Skills	Students can break down a medium-sized problem into subproblems and create their own classes in an object-orien programming language based on these subproblems. They can design a public and private interface and implement implementation generically and extensible by abstraction. They can distinguish different language constructs of a mod programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
Social Competence	Students can work in teams and communicate in for	rums.		
Autonomy	In a programming internship, students learn object and independent solutions and receive feedback.	-oriented programming under supervision	. In exercises the	ey develop individ

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Andreas Timm-Giel, DrIng. Koojana Kuladinithi, Prof. Dieter Gollmann
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality
	complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these bas
	principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.
	In the second part of the lecture an introduction to Internet security is given.
	This class comprises:
	Application layer protocols (HTTP, FTP, DNS)
	Transport layer protocols (TCP, UDP)
	Network Layer (Internet Protocol, routing in the Internet)
	Data link layer with media access at the example of Ethernet
	Multimedia applications in the Internet
	Network management
	Internet security: IPSec
	Internet security: Firewalls

Module Responsible	Prof. Heiko Falk				
Admission Requirements	None				
<b>Recommended Previous</b>	Basic knowledge in electrical eng	ineering			
Knowledge					
Educational Objectives	After taking part successfully, stu	Idents have reached the follo	wing learning results		
Professional Competence					
Knowledge	This module deals with the four	dations of the functionality	of computing systems. It cove	ers the layers from	m the assembly-le
	programming down to gates. The	module includes the followin	ng topics:		
	Introduction				
			unctions, hardware synthesis, o	combinational net	works
	Sequential logic: Flip-flops	, automata, systematic hardv	vare design		
	Technological foundations				
	Computer arithmetic: Integ			a la alla la a	
			MIPS single-cycle architecture	, pipelining	
	Memories: Memory hierard		inter of a contraction of the second data		h
	<ul> <li>Input/output: I/O from the</li> </ul>	perspective of the CPU, princ	iples of passing data, point-to-	point connections	, busses
Skills	The students perceive computer	systems from the architect's	perspective, i.e., they identify	the internal struc	ture and the physi
	composition of computer system	s. The students can analyze,	how highly specific and individ	lual computers ca	n be built based o
	collection of few and simple com	ponents. They are able to d	istinguish between and to exp	lain the different	abstraction layers
	today's computing systems - fror	n gates and circuits up to cor	nplete processors.		
	After successful completion of the				
	system and the software execute				
	on the hardware-centric abstract				
	the impact that these low abstra	ction levels have on an entire	system's performance and to	propose reasible of	options.
Personal Competence					
Social Competence	Students are able to solve similar	r problems alone or in a grou	p and to present the results ac	cordingly.	
Autonomy	Students are able to acquire new	knowledge from specific lite	rature and to associate this kno	owledge with othe	er classes.

Module M0873: Softw	vare Industrial Internship
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Dozenten des SD E
Admission Requirements	None
<b>Recommended Previous</b>	Foundations of Software Engineering
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students know the important aspects and phases of software development.
Skills	Students can describe the typical phases of software development and are able to contribute to a software project.
Personal Competence	
Social Competence	Students are able to specify, implement, and analyze specific basic topics in software development and present them accordingly
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
Workload in Hours	Independent Study Time 180, Study Time in Lecture 0
Credit points	6
Course achievement	None
Examination	Written elaboration (accord. to Internship Regulations)
Examination duration and	Die Ausarbeitung wird von der Betreuerin bzw. dem Betreuer der Bachelorarbeit bewertet.

Knowledge				
Educational Objectives	After taking part successfully, students have reached the fo	llowing learning results		
Professional Competence				
	various programming models is given, both for general-purpose computers and for special-purpose machines (e.g., signal processors). Next, foundational aspects of the micro-architecture of processors are covered. Here, the focus particularly lies on the so-called pipelining and the methods used for the acceleration of instruction execution used in this context. The students get to know concepts for dynamic scheduling, branch prediction, superscalar execution of machine instructions and for memory hierarchies.			
Skills	The students are able to describe the organization of processors. They know the different architectural principles and programming models. The students examine various structures of pipelined processor architectures and are able to explain their concepts and to analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies, know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.			
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a gr	oup and to present the results accord	ingly.	
Autonomy	Students are able to acquire new knowledge from specific I	terature and to associate this knowle	dge with othe	r classes.

Educational Objectives	After taking part successfully, students h	ave reached the following learning results		
Professional Competence				
	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language run and test them. They choose appropriate internal languages and representations and justify their choice. They explain a modify implementations of existing compiler frameworks and experiment with frameworks and tools. Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. The organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithm that analyze or synthesize software.			
Personal Competence				
•	Students develop the software in a team. They explain problems and solutions to their team members. They present and defer their software in class. They communicate in English.			
Autonomy		dently and define milestones by themselves. They r ect so that they can assess their progress themselve		throughout the enti

Knowledge						
Educational Objectives	After taking part success	fully, students have reach	ed the following learning results			
Professional Competence						
Knowledge	Embedded systems can be defined as information processing systems embedded into enclosing products. This course tea foundations of such systems. In particular, it deals with an introduction into these systems (notions, common characteris their specification languages (models of computation, hierarchical automata, specification of distributed systems, task specification of real-time applications, translations between different models).					
	hardware, embedded pr introduction into real-tir systems using hardware efficient realizations, cor	Another part covers the hardware of embedded systems: Sonsors, A/D and D/A converters, real-time capable communica hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also feature introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embed systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, ene efficient realizations, compilers for embedded processors) is covered.				
Skills	After having attended the course, students shall be able to realize simple embedded systems. The students shall realize whi relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall l able to compare different models of computations and feasible techniques for system-level design. They shall be able to judge which areas of embedded system design specific risks exist.					
Personal Competence						
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.					
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Computational Geoemetry (L0393)		Lecture	2	4	
Computational Geoemetry (L0394)		Recitation Section (small)	2	2	
Module Responsible	Dr. Prashant Batra				
Admission Requirements	None				
<b>Recommended Previous</b>	Linear algebra and analytic geometry as taught in hi	gher secondary school			
Knowledge	(Computing with vectors a. determinants, Interpreta	tion of scalar product cross-product R	enrecentation of	lines/planes Satz	
	Pythagoras' theorem, cosine theorem, Thales' theore		epresentation of	intes/planes, Satz	
	· , ·····	,			
	Basic data structures (trees, binary trees, search tree	s, balanced binary trees, linked lists)			
	Definition of a graph				
Educational Objectives	After taking part successfully, students have reached	the following learning results			
Professional Competence					
Knowledge	Students can name the basic concepts of computer-	assisted geometry, describe them with	mathematical pr	recision, and expla	
	them by means of examples.				
	Students are conversant with the computational docs	ription of accomptrical (complicational/to	nological) facto i	ncluding dotormin	
	Students are conversant with the computational description of geometrical (combinational/topological) facts, includi formulas and complexity assessments and proofs for all algorithms, especially output-sensitive algorithms.				
	Students are able to discuss logical connections betw	een these concepts and to explain them	by means of exa	amples.	
Skills	s Students can model tasks from computer-assisted geometry with the aid of the concepts about which they have learnt and c solve them by means of the methods they have learnt.				
Personal Competence					
Social Competence	Students are able to discuss with other attendees their own algorithmic suggestions for solving the problems presented. They a also able to work in teams and are conversant with mathematics as a common language.				
Autonomy	omy Students are capable of accessing independently further logical connections between the concepts about which they h				
	and are able to verify them.

Language	DE/EN
Cycle	WiSe
Content	Quantum computing is among the most exciting applications of quantum mechanics. Quantum algorithms can solve computational problems efficiently that have a prohibitive runtime on traditional computers. Such problems include, for instance, factoring of integer numbers or energy estimation problems from quantum chemistry and material science. This course provides an introduction to the topic. An emphasize will be put on conceptual and mathematical aspects.
Literature	<ul> <li>Course specific lecture notes will be provided</li> <li>Nielsen and Chuang, Quantum Computation and Quantum Information</li> <li>Sevag Gharibian's lecture notes</li> </ul>

_ab Cyber-Physical Systems (L174)		4	6
Module Responsible	Prof. Heiko Falk		
Admission Requirements	None		
<b>Recommended Previous</b>	Module "Embedded Systems"		
Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sen	sors, A/D and	D/A converters,
	actors. Due to their particular application areas, highly specialized sensors, processors and actor	rs are commor	n. Accordingly, th
	is a large variety of different specification approaches for CPS - in contrast to classical software e	ngineering ap	proaches.
	Based on practical experiments using robot kits and computers, the basics of specification and	modelling of	CPS are taught
	lab introduces into the area (basic notions, characteristical properties) and their specification te		
	hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequent		-
	experiments will base on simple control applications. The experiments will use state-of-the		
	(MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with t		•
	actors.		
Skills	After successful attendance of the lab, students are able to develop simple CPS. They understand		
	CPS and its surrounding processes which stem from the fact that a CPS interacts with the environ		
	digital processors, D/A converters and actors. The lab enables students to compare modellin		
	advantages and limitations, and to decide which technique to use for a concrete task. They will to practical problems. They obtain first experiences in hardware-related software development,		-
	tools and in the area of simple control applications.	, in muusuy-re	elevant specifica
Personal Competence			
	Students are able to solve similar problems alone or in a group and to present the results accordi	ingly.	
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowled	dae with other	classes
		uge with other	classes.

## Course L0432: Signals and Systems Тур Lecture Hrs/wk 3 СР 4 Workload in Hours Independent Study Time 78, Study Time in Lecture 42 Lecturer Prof. Gerhard Bauch DE/EN Language Cycle SoSe Content • Introduction to signal and system theory Signals Classification of signals Continuous-time and discrete-time signals Analog and digital signals Deterministic and random signals • Description of LTI systems by differential equations or difference equations, respectively • Basic properties of signals and operations on signals • Elementary signals • Distributions (Generalized Functions) • Power and energy of signals • Correlation functions of deterministic signals Autocorrelation function Crosscorrelation function Orthogonal signals Applications of correlation • Linear time-invariant (LTI) systems

- Linearity
- Time-invariance
- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- Properties of LTI-systems
- Causal systems
- Stable systems
- Memoryless systems • Fourier Series and Fourier Transform
  - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - Bandwidth definitions
  - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - Linear-phase systems
  - Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - Properties of the Laplace transform
  - Laplace transform of some basic signals
- · Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
  - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - Relation of Fourier transform and DTFT
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolution
  - Fast Fourier Transform (FFT)
  - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - Z-transform of digital filters
  - Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability

  - Allpass filters Minimum-phase, maximum-phase and mixed-phase filters
  - Linear phase filters

## **Specialization III. Subject Specific Focus**

## Module M1562: Technical Complementary Course I for CSBS

Courses	
Title	Typ Hrs/wk CP
Module Responsible	Dozenten des SD E
Admission Requirements	None
<b>Recommended Previous</b>	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	
Skills	
Personal Competence	
Social Competence	
Autonomy	
Workload in Hours	Depends on choice of courses
Credit points	6
Assignment for the	Computer Science: Specialisation III. Subject Specific Focus: Elective Compulsory
Following Curricula	

Courses

	Thesis		
Module M-001: Bache	lor Thesis		
Courses			
Title	Typ Hrs/wk CP		
Module Responsible	Professoren der TUHH		
Admission Requirements	According to General Regulations §21 (1):		
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.		
Recommended Previous			
Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence Knowledge			
Skills	<ul> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> <li>S</li> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to set.</li> </ul>		
	<ul> <li>subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>		
Personal Competence Social Competence			
Autonomy	<ul> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>		
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0		
Credit points	12		
Course achievement	None		
Examination	Thesis		
Examination duration and	According to General Regulations		
scale Assignment for the	General Engineering Science (German program): Thesis: Compulsory
