Table of Contents	2
Program description	3
Core Qualification	4
Module M0561: Discrete Algebraic Structures	4
Module M0731: Functional Programming	5
Module M1436: Procedural Programming for Computer Engineers	7
Module M1728: Mathematics I (EN)	9
Module M1755: Linking theory and practice (dual study program, Bachelor's degree)	11
Module M1750: Practical module 1 (dual study program, Bachelor's degree)	12
Module M0624: Automata Theory and Formal Languages	14
Module M0829: Foundations of Management	16
Module M1432: Programming Paradigms	18
Module M1729: Mathematics II (EN)	20
Module M1751: Practical module 2 (dual study program, Bachelor's degree)	22
Module M0834: Computernetworks and Internet Security	24
Module M0730: Computer Engineering	26
Module M0625: Databases	28
Module M1732: Mathematics III (EN)	30
Module M1423: Algorithms and Data Structures	32
Module M1752: Practical module 3 (dual study program, Bachelor's degree)	34
Module M0727: Stochastics	36
Module M0732: Software Engineering	38
Module M0852: Graph Theory and Optimization	40
Module M0562: Computability and Complexity Theory	42
Module M1753: Practical module 4 (dual study program, Bachelor's degree)	43
Module M0873: Software Industrial Internship	45
Module M1578: Seminars Computer Science	46
Module M1754: Practical module 5 (dual study program, Bachelor's degree)	47
Specialization I. Computer and Software Engineering	49
Module M1586: Scientific Programming	49
Module M1595: Machine Learning I	51
Module M0791: Computer Architecture	53
Module M0953: Introduction to Information Security	55
Module M1593: Data Mining	57
Module M0754: Compiler Construction	59
Module M0803: Embedded Systems	60
Module M1300: Software Development	62
Specialization II. Mathematics and Engineering Science	64
Module M1730: Mathematics IV (EN)	64
Module M0651: Computational Geometry	67
Module M0941: Combinatorial Structures and Algorithms	70
Module M1242: Quantum Mechanics for Engineers	72
Module M1592: Statistics	74
Module M0668: Algebra and Control	76
Module M1269: Lab Cyber-Physical Systems	78
Module M0715: Solvers for Sparse Linear Systems	79
Module M0672: Signals and Systems	81
Module M0634: Introduction into Medical Technology and Systems	84
Specialization III. Subject Specific Focus	86
Module M1562: Technical Complementary Course I for CSBS	86
Module M1568: Technical Complementary Course II for CSBS	87
Thesis	88
Module M1800: Bachelor thesis (dual study program)	88

### **Content**

## Core Qualification

### Module M0561: Discrete Algebraic Structures

Courses			
Title	Typ	Hrs/wk	CP
Discrete Algebraic Structures (L0164)	Lecture	2	3
Discrete Algebraic Structures (L0165)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics from High School.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the important basics of discrete algebraic structures including elementary combinatorial structures, monoids, groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub-, sum-, and quotient structures and homomorphisms.</p> <p><i>Skills</i> Students are able to formalize and analyze basic discrete algebraic structures.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve specific problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific standard books and to associate the acquired knowledge to other classes.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory		

#### Course L0164: Discrete Algebraic Structures

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Karl-Heinz Zimmermann
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	

#### Course L0165: Discrete Algebraic Structures

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Karl-Heinz Zimmermann
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0731: Functional Programming				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Functional Programming (L0624)		Lecture	2	2
Functional Programming (L0625)		Recitation Section (large)	2	2
Functional Programming (L0626)		Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Sibylle Schupp			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Discrete mathematics at high-school level			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.			
<i>Skills</i>	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students practice peer programming with varying peers. They explain problems and solutions to their peer. They defend their programs orally. They communicate in English.			
<i>Autonomy</i>	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	15 %	Excercises	
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 min			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Computer Science: Elective Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Elective Compulsory Data Science: Specialisation I. Mathematics/Computer Science: Elective Compulsory Engineering Science: Specialisation Mechatronics: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechatronics: Elective Compulsory Computer Science in Engineering: Specialisation I. Computer Science: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory			

Course L0624: Functional Programming	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sibylle Schupp
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Functions, Currying, Recursive Functions, Polymorphic Functions, Higher-Order Functions</li> <li>• Conditional Expressions, Guarded Expressions, Pattern Matching, Lambda Expressions</li> <li>• Types (simple, composite), Type Classes, Recursive Types, Algebraic Data Type</li> <li>• Type Constructors: Tuples, Lists, Trees, Associative Lists (Dictionaries, Maps)</li> <li>• Modules</li> <li>• Interactive Programming</li> <li>• Lazy Evaluation, Call-by-Value, Strictness</li> <li>• Design Recipes</li> <li>• Testing (axiom-based, invariant-based, against reference implementation)</li> <li>• Reasoning about Programs (equation-based, inductive)</li> <li>• Idioms of Functional Programming</li> <li>• Haskell Syntax and Semantics</li> </ul>
<b>Literature</b>	Graham Hutton, Programming in Haskell, Cambridge University Press 2007.

Course L0625: Functional Programming	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sibylle Schupp
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Functions, Currying, Recursive Functions, Polymorphic Functions, Higher-Order Functions</li> <li>• Conditional Expressions, Guarded Expressions, Pattern Matching, Lambda Expressions</li>   <li>• Types (simple, composite), Type Classes, Recursive Types, Algebraic Data Type</li> <li>• Type Constructors: Tuples, Lists, Trees, Associative Lists (Dictionaries, Maps)</li> <li>• Modules</li> <li>• Interactive Programming</li> <li>• Lazy Evaluation, Call-by-Value, Strictness</li> <li>• Design Recipes</li> <li>• Testing (axiom-based, invariant-based, against reference implementation)</li> <li>• Reasoning about Programs (equation-based, inductive)</li> <li>• Idioms of Functional Programming</li> <li>• Haskell Syntax and Semantics</li> </ul>
<b>Literature</b>	Graham Hutton, Programming in Haskell, Cambridge University Press 2007.

Course L0626: Functional Programming	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sibylle Schupp
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Functions, Currying, Recursive Functions, Polymorphic Functions, Higher-Order Functions</li> <li>• Conditional Expressions, Guarded Expressions, Pattern Matching, Lambda Expressions</li>   <li>• Types (simple, composite), Type Classes, Recursive Types, Algebraic Data Type</li> <li>• Type Constructors: Tuples, Lists, Trees, Associative Lists (Dictionaries, Maps)</li> <li>• Modules</li> <li>• Interactive Programming</li> <li>• Lazy Evaluation, Call-by-Value, Strictness</li> <li>• Design Recipes</li> <li>• Testing (axiom-based, invariant-based, against reference implementation)</li> <li>• Reasoning about Programs (equation-based, inductive)</li> <li>• Idioms of Functional Programming</li> <li>• Haskell Syntax and Semantics</li> </ul>
<b>Literature</b>	Graham Hutton, Programming in Haskell, Cambridge University Press 2007.

Module M1436: Procedural Programming for Computer Engineers			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Procedural Programming for Computer Engineers (L2163)		Lecture	1
Procedural Programming for Computer Engineers (L2164)		Recitation Section (large)	1
Procedural Programming for Computer Engineers (L2165)		Practical Course	2
<b>Module Responsible</b>	Prof. Bernd-Christian Renner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students will know		
	<ul style="list-style-type: none"> <li>- the essential features of a procedural programming language</li> <li>- the steps during the compilation of procedural source code to machine code</li> <li>- all essential language constructs and data types of a procedural programming language</li> <li>- software design concepts for the implementation of procedural programs</li> </ul>		
<i>Skills</i>	<ul style="list-style-type: none"> <li>- Mastery of typical development tools</li> <li>- Designing simple, structured programs based on a procedural programming language</li> <li>- Debugging by analyzing compiler warnings and error messages</li> <li>- Analysis and explanation of procedural programs</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>- After completing the module, students are able to work on subject-specific tasks alone or in a group and to present the results appropriately.</li> </ul>		
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>- After completion of the module, students are able to work independently on parts of the subject area using reference books, to summarize the acquired knowledge, to present and to link it with the contents of other courses.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Technomathematics: Core Qualification: Compulsory		

Course L2163: Procedural Programming for Computer Engineers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Bernd-Christian Renner
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Development tools: preprocessor, compiler, linker, assembler, IDE, version management (Git)</li> <li>- Procedural programming: fundamental data types, operators, control structures, functions, pointers and arrays, scopes and lifetime of variables, structures / unions, function pointers, Command line arguments</li> <li>- Programming techniques: Modularization, separation of interface and implementation, callback functions, structured data types.</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>- Greg Perry and Dean Miller. C Programming Absolute Beginner's Guide: No experience necessary! Que Publishing; 3. Auflage (7. August 2013). ISBN 978-0789751980.</li> <li>- Helmut Erlenkötter. C: Programmieren von Anfang an. Rowohlt Taschenbuch; 25. Auflage (1. Dezember 1999). ISBN 978-3499600746.</li> <li>- Markus Neumann. C Programmieren: für Einsteiger: Der leichte Weg zum C-Experten (Einfach Programmieren lernen, Band 8). BMU Verlag (30. Januar 2020). ISBN 978-3966450607.</li> <li>- Brian W. Kernighan, Dennis M. Ritchie: The C Programming Language. Prentice Hall; 2. Auflage (1988), ISBN 0-13-110362-8.</li> </ul>

<b>Course L2164: Procedural Programming for Computer Engineers</b>	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Bernd-Christian Renner
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

<b>Course L2165: Procedural Programming for Computer Engineers</b>	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Bernd-Christian Renner
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M1728: Mathematics I (EN)			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Mathematics I (EN) (L2973)	Lecture	4	4
Mathematics I (EN) (L2974)	Recitation Section (large)	2	2
Mathematics I (EN) (L2975)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Daniel Ruprecht		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	School mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <i>Skills</i> <ul style="list-style-type: none"> <li>Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul> <b>Personal Competence</b> <i>Social Competence</i> <ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <i>Autonomy</i> <ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 128, Study Time in Lecture 112		
<b>Credit points</b>	8		
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>
	Yes	10 %	Excercises
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Engineering Science: Core Qualification: Compulsory		

Course L2973: Mathematics I (EN)	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Anusch Taraz
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Mathematical Foundations:</p> <p>sets, statements, induction, mappings, trigonometry</p> <p>Analysis: Foundations of differential calculus in one variable</p> <ul style="list-style-type: none"> <li>• natural and real numbers</li> <li>• convergence of sequences and series</li> <li>• continuous and differentiable functions</li> <li>• mean value theorems</li> <li>• Taylor series</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• T. Arens u.a. : Mathematik, Springer Spektrum, Heidelberg 2015</li> <li>• W. Mackens, H. Module M1755: Linking theory and practice (dual study program, Bachelor's degree)	
<b>Module Responsible</b>	Dr. Henning Haschke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	none
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Dual students...  ... can describe and classify selected classic and modern theories, concepts and methods <ul style="list-style-type: none"> <li>• related to self-management, and organising work and learning</li> <li>• self-competence and</li> <li>• social skills</li> </ul> ... and apply them to specific situations, projects and plans in a personal and professional context.
<i>Skills</i>	Dual students... <ul style="list-style-type: none"> <li>• ... anticipate typical difficulties, positive and negative effects, as well as success and failure factors in the engineering sector, evaluate them and consider promising strategies and courses of action.</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>• ... work together in a problem-oriented and interdisciplinary manner as part of expert and work teams.</li> <li>• ... are able to assemble and lead working groups.</li> <li>• ... present complex, subject-related solutions to problems to experts and stakeholders and can develop these further together.</li> </ul>
<i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>• ... define, reflect and evaluate goals for learning and work processes.</li> <li>• ... design their learning and work processes independently and sustainably at the university and company.</li> <li>• ... take responsibility for their learning and work processes.</li> <li>• ... are able to consciously think through their ideas or actions and relate them to their self-image to develop conclusions for future action based on this.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written elaboration
<b>Examination duration and scale</b>	Studienbegleitende und semesterübergreifende Dokumentation: Die Leistungspunkte für das Modul werden durch die Anfertigung eines digitalen Lern- und Entwicklungsberichtes (E-Portfolio) erworben. Dabei handelt es sich um eine fortlaufende Dokumentation und Reflexion der Lernerfahrungen und der Kompetenzentwicklung im Bereich der Personalen Kompetenz.

Courses	
<b>Information regarding lectures and courses can be found in the corresponding module handbook published separately.</b>	

<b>Module M1750: Practical module 1 (dual study program, Bachelor's degree)</b>			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Practical term 1 (dual study program, Bachelor's degree) (L2879)		0	6
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	A: Self-management, organising work and learning in engineering (for dual study program)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Dual students...		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• ... describe their employer's organisation (company) and the associated regulations that relate to how tasks and competences are distributed, as well as how work processes are handled.</li> <li>• ... understand the structure and objectives of the dual study programme and the increasing requirements throughout the course of study.</li> </ul>		
<i>Skills</i>	Dual students... <ul style="list-style-type: none"> <li>• ... use equipment and resources professionally in accordance with the assigned work areas and tasks, and describe operational processes and procedures with regard to the intended work results/objectives.</li> <li>• ... implement the university's application recommendations in relation to their current tasks.</li> </ul>		
<b>Personal Competence</b>	Dual students...		
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• ... have familiarised themselves with their new working environment (learning environment) and the associated tasks/processes/working relationships.</li> <li>• ... know their central points of contact and company colleagues, and exchange ideas with them constructively.</li> <li>• ... coordinate work tasks with their professional supervisor and ask for support as needed.</li> <li>• ... help shape the work in the assigned work area and offer their colleagues support to complete their work.</li> <li>• ... work together with others in smaller work teams in a result-oriented manner.</li> </ul>		
<i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>• ... structure their work and learning processes within the company independently in line with their responsibilities and authorisations, and coordinate them with their professional supervisor.</li> <li>• ... complete work tasks/assignments with the support of colleagues.</li> <li>• ... coordinate the practical phase with any individual preparation required for the examination phase at TUHH.</li> <li>• ... document and reflect on how their foundational subjects link with their work as an engineer.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory		

Course L2879: Practical term 1 (dual study program, Bachelor's degree)	
<b>Typ</b>	
<b>Hrs/wk</b>	0
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0
<b>Lecturer</b>	Dr. Henning Haschke
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Company onboarding process</b></p> <ul style="list-style-type: none"> <li>• Assigning initial work areas (supervisor, colleagues)</li> <li>• Assigning a contact person within the company (usually the HR department)</li> <li>• Assigning a professional mentor in the work area (relating to practical application)</li> <li>• Responsibilities and authorisations of the dual student within the company</li> <li>• Supporting/working with colleagues</li> <li>• Scheduling the relevant practical modules with initial work tasks</li> <li>• Theory/practice transfer options</li> <li>• Scheduling the examination phase/subsequent study semester</li> </ul> <p><b>Operational knowledge and skills</b></p> <ul style="list-style-type: none"> <li>• Company-specific: organisational structure, corporate strategy, business and work areas, work procedures and processes, operational levels</li> <li>• Process and procedure options within the labour-market-relevant field of engineering</li> <li>• Operational equipment and resources</li> <li>• Implementing the university's application recommendations (theory-practice transfer) in corresponding work and task areas across the company</li> </ul> <p><b>Sharing/reflecting on learning</b></p> <ul style="list-style-type: none"> <li>• Creating an e-portfolio</li> <li>• Relevance of foundational subjects when working as an engineer</li> <li>• Comparing the learning and working processes of different learning environments with regard to their results and effects</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Studierendenhandbuch</li> <li>• Betriebliche Dokumente</li> <li>• Hochschulseitige Anwendungsempfehlungen zum Theorie-Praxis-Transfer</li> </ul>

Module M0624: Automata Theory and Formal Languages			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Automata Theory and Formal Languages (L0332)		Lecture	2
Automata Theory and Formal Languages (L0507)		Recitation Section (small)	2
<b>Module Responsible</b>	Prof. Matthias Mnich		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Participating students should be able to</p> <ul style="list-style-type: none"> <li>- specify algorithms for simple data structures (such as, e.g., arrays) to solve computational problems</li> <li>- apply propositional logic and predicate logic for specifying and understanding mathematical proofs</li> <li>- apply the knowledge and skills taught in the module Discrete Algebraic Structures</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can explain syntax, semantics, and decision problems of propositional logic, and they are able to give algorithms for solving decision problems. Students can show correspondences to Boolean algebra. Students can describe which application problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.</p> <p><i>Skills</i> Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluate which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language emptiness problem in case of infinite words.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

<b>Examination duration and scale</b>	several written exams during the semester			
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory</p> <p>Civil- and Environmental Engineering: Specialisation Civil Engineering: Elective Compulsory</p> <p>Civil- and Environmental Engineering: Specialisation Water and Environment: Elective Compulsory</p> <p>Civil- and Environmental Engineering: Specialisation Traffic and Mobility: Elective Compulsory</p> <p>Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Computer Science: Core Qualification: Compulsory</p> <p>Data Science: Core Qualification: Compulsory</p> <p>Data Science: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Compulsory</p> <p>Computer Science in Engineering: Core Qualification: Compulsory</p> <p>Integrated Building Technology: Core Qualification: Compulsory</p> <p>Logistics and Mobility: Core Qualification: Compulsory</p> <p>Mechanical Engineering: Core Qualification: Compulsory</p> <p>Mechatronics: Core Qualification: Compulsory</p> <p>Orientation Studies: Core Qualification: Elective Compulsory</p> <p>Orientation Studies: Core Qualification: Elective Compulsory</p> <p>Naval Architecture: Core Qualification: Compulsory</p> <p>Technomathematics: Core Qualification: Compulsory</p> <p>Process Engineering: Core Qualification: Compulsory</p> <p>Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory</p>			

Course L0882: Management Tutorial	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christoph Ihl, Katharina Roedelius
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>

Module M1432: Programming Paradigms			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Programming Paradigms (L2169)	Lecture	2	2
Programming Paradigms (L2170)	Recitation Section (large)	1	1
Programming Paradigms (L2171)	Practical Course	2	3
<b>Module Responsible</b>	NN		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Lecture on procedural programming or equivalent programming skills		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students have a fundamental understanding of object orientated and generic programming and can apply it in small programming projects. They can design own class hierarchies and differentiate between different ways of inheritance. They have a fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can use exceptions and apply generic programming in order to make existing data structures generic. The students know the pros and cons of both programming paradigms.</p> <p><i>Skills</i> Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a modern programming language and use these suitably in the implementation. They can design and implement unit tests.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work in teams and communicate in forums.</p> <p><i>Autonomy</i> In a programming internship, students learn object-oriented programming under supervision. In exercises they develop individual and independent solutions and receive feedback.</p>

Course L1098: Computer Networks and Internet Security	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann, Dr.-Ing. Koojana Kuladinithi
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.</p> <p>In the second part of the lecture an introduction to Internet security is given.</p> <p>This class comprises:</p> <ul style="list-style-type: none"> <li>• Application layer protocols (HTTP, FTP, DNS)</li> <li>• Transport layer protocols (TCP, UDP)</li> <li>• Network Layer (Internet Protocol, routing in the Internet)</li> <li>• Data link layer with media access at the example of Ethernet</li> <li>• Multimedia applications in the Internet</li> <li>• Network management</li> <li>• Internet security: IPSec</li> <li>• Internet security: Firewalls</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Kurose, Ross, Computer Networking - A Top-Down Approach, 6th Edition, Addison-Wesley</li> <li>• Kurose, Ross, Computernetzwerke - Der Top-Down-Ansatz, Pearson Studium; Auflage: 6. Auflage</li> <li>• W. Stallings: Cryptography and Network Security: Principles and Practice, 6th edition</li> </ul> <p>Further literature is announced at the beginning of the lecture.</p>

<b>Module M0730: Computer Engineering</b>				
<b>Courses</b>				
Title	Typ	Hrs/wk	CP	
Computer Engineering (L0321)	Lecture	3	4	
Computer Engineering (L0324)	Recitation Section (small)	1	2	
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in electrical engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:			
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks</li> <li>• Sequential logic: Flip-flops, automata, systematic hardware design</li> <li>• Technological foundations</li> <li>• Computer arithmetic: Integer addition, subtraction, multiplication and division</li> <li>• Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining</li> <li>• Memories: Memory hierarchies, SRAM, DRAM, caches</li> <li>• Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses</li> </ul>			
<i>Skills</i>	<p>The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.</p> <p>After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.</p>			
<b>Personal Competence</b>	Students are able to solve similar problems alone or in a group and to present the results accordingly.			
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Module M0625: Databases			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Databases (L0337)	Lecture	3	5
Databases (L1150)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Stefan Schulte		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Students should have basic knowledge in the following areas:</p> <ul style="list-style-type: none"> <li>• Discrete Algebraic Structures</li> <li>• Procedural Programming</li> <li>• Automata Theory and Formal Languages</li> <li>• Programming Paradigms</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> After successful completion of the course, students know:</p> <ul style="list-style-type: none"> <li>• Design instruments for relational databases</li> <li>• The relational model</li> <li>• Relational query languages, especially SQL</li> <li>• Requirements on data integrity</li> <li>• Possibilities for query optimization</li> <li>• Aspects of transaction handling, fault handling and concurrency/synchronization in database systems</li> <li>• Specific attributes and differences of object-oriented and object-relational databases</li> <li>• Paradigms and concepts of current technologies for data modelling and database systems</li> </ul> <p><i>Skills</i> The students acquire the ability to model a database and to work with it. This comprises especially the application of design methodologies and query and definition languages. Furthermore, students are able to apply basic functionalities needed to run a database.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students can work on complex problems both independently and in teams. They can exchange ideas with each other and use their individual strengths to solve the problem.</p> <p><i>Autonomy</i> Students are able to independently investigate a complex problem and assess which competencies are required to solve it.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0732: Software Engineering				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Engineering (L0627)		Lecture	2	3
Software Engineering (L0628)		Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Automata theory and formal languages</li> <li>Procedural programming or Functional programming</li> <li>Object-oriented programming, algorithms, and data structures</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning.			
<i>Skills</i>	For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students practice peer programming. They explain problems and solutions to their peer. They communicate in English.			
<i>Autonomy</i>	Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M1754: Practical module 5 (dual study program, Bachelor's degree)			
Courses			
Title	Typ	Hrs/wk	CP
Practical term 5 (dual study program, Bachelor's degree) (L2883)			
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Successful completion of practical module 4 as part of the dual Bachelor's course</li> <li>• course C from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Dual students ... <ul style="list-style-type: none"> <li>• ... combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> <li>• ... have a critical understanding of the practical applications of their engineering subject.</li> </ul>		
<i>Skills</i>	Dual students ... <ul style="list-style-type: none"> <li>• ... apply technical theoretical knowledge to complex, interdisciplinary problems within the company, and evaluate the associated work processes and results, taking into account different possible courses of action.</li> <li>• ... implement the university's application recommendations with regard to their current tasks.</li> <li>• ... develop new solutions as well as procedures and approaches in their field of activity and area of responsibility - including in the case of frequently changing requirements (systemic skills).</li> <li>• ... are able to analyse and evaluate operational issues using academic methods.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Dual students ... <ul style="list-style-type: none"> <li>• ... work responsibly in operational project teams and proactively deal with problems within their team.</li> <li>• ... represent complex engineering viewpoints, facts, problems and solution approaches in discussions with internal and external stakeholders and develop these further together.</li> </ul>		
<i>Autonomy</i>	Dual students ... <ul style="list-style-type: none"> <li>• ... define goals for their own learning and working processes as engineers.</li> <li>• ... document and reflect on learning and work processes in their area of responsibility.</li> <li>• ... document and reflect on the relevance of subject modules, specialisations and research for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory

Module M0791: Computer Architecture				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computer Architecture (L0793)		Lecture	2	3
Computer Architecture (L0794)		Project-/problem-based Learning	2	2
Computer Architecture (L1864)		Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Module "Computer Engineering"			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	This module presents advanced concepts from the discipline of computer architecture. In the beginning, a broad overview over various programming models is given, both for general-purpose computers and for special-purpose machines (e.g., signal processors). Next, foundational aspects of the micro-architecture of processors are covered. Here, the focus particularly lies on the so-called pipelining and the methods used for the acceleration of instruction execution used in this context. The students get to know concepts for dynamic scheduling, branch prediction, superscalar execution of machine instructions and for memory hierarchies.			
<i>Skills</i>	The students are able to describe the organization of processors. They know the different architectural principles and programming models. The students examine various structures of pipelined processor architectures and are able to explain their concepts and to analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies, know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>

Module M0754: Compiler Construction			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Compiler Construction (L0703)		Lecture	2
Compiler Construction (L0704)		Recitation Section (small)	2
<b>CP</b>			4
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Practical programming experience</li> <li>• Automata theory and formal languages</li> <li>• Functional programming or procedural programming</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Basic knowledge of software engineering</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools.</p> <p><i>Skills</i> Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class. They communicate in English.</p> <p><i>Autonomy</i> Students develop their software independently and define milestones by themselves. They receive feedback throughout the entire project. They organize the software project so that they can assess their progress themselves.</p>

<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Computer Engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Embedded systems can be defined as information processing systems embedded into enclosing products. This course teaches the foundations of such systems. In particular, it deals with an introduction into these systems (notions, common characteristics) and their specification languages (models of computation, hierarchical automata, specification of distributed systems, task graphs, specification of real-time applications, translations between different models).</p> <p>Another part covers the hardware of embedded systems: Sensors, A/D and D/A converters, real-time capable communication hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also features an introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-efficient realizations, compilers for embedded processors) is covered.</p> <p><i>Skills</i> After having attended the course, students shall be able to realize simple embedded systems. The students shall realize which relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall be able to compare different models of computations and feasible techniques for system-level design. They shall be able to judge in which areas of embedded system design specific risks exist.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>

Module M1300: Software Development			
Courses			
Title	Typ	Hrs/wk	CP
Software Development (L1790)	Project-/problem-based Learning	2	5
Software Development (L1789)	Lecture	1	1
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Introduction to Software Engineering</li> <li>• Programming Skills</li> <li>• Experience with Developing Small to Medium-Size Programs</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students explain the fundamental concepts of agile methods, describe the process of test-driven development, and explain how continuous integration can be used in different scenarios. They give examples of selected pitfalls in software development, regarding scalability and other non-functional requirements. They write unit tests and build scripts and combine them in a corresponding integration environment. They explain major activities in requirements analysis, program comprehension, and agile project development.</p> <p><i>Skills</i></p> <p>For a given task on a legacy system, students identify the corresponding parts in the system and select an appropriate method for understanding the details. They choose the proper approach of splitting a task in independent testable and extensible pieces and, thus, solve the task with proper methods for quality assurance. They design tests for legacy systems, create automated builds, and find errors at different levels. They integrate the resulting artifacts in a continuous development environment</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students discuss different design decisions in a group. They defend their solutions orally. They communicate in English.</p> <p><i>Autonomy</i></p> <p>Using accompanying tools, students can assess their level of knowledge continuously and adjust it appropriately. Within limits, they can set their own goals. Upon successful completion, students can identify and formulate concrete problems of software systems and propose solutions. Within this field, they can conduct independent studies to acquire the necessary competencies. They can devise plans to arrive at new solutions or assess existing ones.</p>

Module M0651: Computational Geometry			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computational Geoemetry (L0393)	Lecture	2	4
Computational Geoemetry (L0394)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Dr. Prashant Batra		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Linear algebra and analytic geometry as taught in higher secondary school</p> <p>(Computing with vectors a. determinants, Interpretation of scalar product, cross-product, Representation of lines/planes, Satz d. Pythagoras' theorem, cosine theorem, Thales' theorem, projections/embeddings)</p> <p>Basic data structures (trees, binary trees, search trees, balanced binary trees, linked lists)</p> <p>Definition of a graph</p>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can name the basic concepts of computer-assisted geometry, describe them with mathematical precision, and explain them by means of examples.</p> <p>Students are conversant with the computational description of geometrical (combinational/topological) facts, including determinant formulas and complexity assessments and proofs for all algorithms, especially output-sensitive algorithms.</p> <p>Students are able to discuss logical connections between these concepts and to explain them by means of examples.</p> <p><i>Skills</i> Students can model tasks from computer-assisted geometry with the aid of the concepts about which they have learnt and can solve them by means of the methods they have learnt.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to discuss with other attendees their own algorithmic suggestions for solving the problems presented. They are also able to work in teams and are conversant with mathematics as a common language.</p> <p><i>Autonomy</i> Students are capable of accessing independently further logical connections between the concepts about which they have learnt and are able to verify them.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation II. Mathematics and Engineering Science: Elective Compulsory

Module M1242: Quantum Mechanics for Engineers				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Quantum Mechanics for Engineers (L1686)		Lecture	2	3
Quantum Mechanics for Engineers (L1688)		Recitation Section (small)	2	3
<b>Module Responsible</b>	NN			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge in physics, particularly in optics and wave phenomena;</li> <li>• knowledge in mathematics, particularly linear algebra, vector calculus, complex numbers and Fourier expansion</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe and explain basic terms and principles of quantum mechanics. They can distinguish commons and differences to classical physics and know, in which situations quantum mechanical phenomena may be expected.</p> <p><i>Skills</i> The students get the ability to apply concepts and methods of quantum mechanics to simple problems and systems. Vice versa, they are also able to comprehend requirements and principles of quantum mechanical devices.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students discuss contents of the lectures and present solutions to simple quantum mechanical problems in small groups during the exercises.</p> <p><i>Autonomy</i> The students are able to independently find answers to simple questions on quantum mechanical systems. The students are able to independently comprehend literature to more complex subjects with quantum mechanical background.</p>

Course L1686: Quantum Mechanics for Engineers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Wolfgang Hansen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices.</p> <p>Central topics are:</p> <p>Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.</p>

Module M1269: Lab Cyber-Physical Systems			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Lab Cyber-Physical Systems (L1740)		Project-/problem-based Learning	4
<b>CP</b>			6
<b>Module Responsible</b>	Prof. Heiko Falk		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module "Embedded Systems"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	<p>Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, and actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, there is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches.</p> <p>Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. The lab introduces into the area (basic notions, characteristic properties) and their specification techniques (models of computation, hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the lab's experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification tools (MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors and actors.</p>		
<i>Skills</i>	<p>After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies between a CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converters, digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate their advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these techniques to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specification tools and in the area of simple control applications.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration

Module M0672: Signals and Systems			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Signals and Systems (L0432)		Lecture	3                  4
Signals and Systems (L0433)		Recitation Section (small)	2                  2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics 1-3  The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> <p>The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems.</p> <p><i>Skills</i> The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Introduction into Medical Technology and Systems (L0342)		Lecture	2                  3
Introduction into Medical Technology and Systems (L0343)		Project Seminar	2                  2
Introduction into Medical Technology and Systems (L1876)		Recitation Section (large)	1                  1
<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort. The students can critically reflect on the results of other groups and make constructive suggestions for improvement.		
<i>Autonomy</i>	The students can assess their level of knowledge and document their work results. They can critically evaluate the results achieved and present them in an appropriate manner.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b> <b>Description</b>
	Yes	10 %	Written elaboration
	Yes	10 %	Presentation
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation II. Mathematics and Engineering Science: Elective Compulsory Data Science: Specialisation II. Application: Elective Compulsory Data Science: Core Qualification: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Engineering Science: Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0342: Introduction into Medical Technology and Systems	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- imaging systems</li> <li>- computer aided surgery</li> <li>- medical sensor systems</li> <li>- medical information systems</li> <li>- regulatory affairs</li> <li>- standard in medical technology</li> </ul> <p>The students will work in groups to apply the methods introduced during the lecture using problem based learning.</p>
<b>Literature</b>	<p>Bernhard Priem, "Visual Computing for Medicine", 2014  Heinz Handels, "Medizinische Bildverarbeitung", 2009 (<a href="https://katalog.tub.tuhh.de/Record/745558097">https://katalog.tub.tuhh.de/Record/745558097</a>)  Valery Tuchin, "Tissue Optics - Light Scattering Methods and Instruments for Medical Diagnosis", 2015  Olaf Drössel, "Biomedizinische Technik - Medizinische Bildgebung", 2014  H. Gross, "Handbook of Optical Systems", 2008 (<a href="https://katalog.tub.tuhh.de/Record/856571687">https://katalog.tub.tuhh.de/Record/856571687</a>)  Wolfgang Drexler, "Optical Coherence Tomography", 2008  Kramme, "Medizintechnik", 2011  Thorsten M. Buzug, "Computed Tomography", 2008  Otmar Scherzer, "Handbook of Mathematical Methods in Imaging", 2015  Weishaupt, "Wie funktioniert MRI?", 2014  Paul Suetens, "Fundamentals of Medical Imaging", 2009  Vorlesungsunterlagen</p>

Course L0343: Introduction into Medical Technology and Systems	
<b>Typ</b>	Project Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L1876: Introduction into Medical Technology and Systems	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

**Specialization III. Subject Specific Focus**

**Module M1562: Technical Complementary Course I for CSBS**

Courses	
Title	Typ Hrs/wk CP
<b>Module Responsible</b>	Dozenten des SD E
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i> <b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation III. Subject Specific Focus: Elective Compulsory

Module M1568: Technical Complementary Course II for CSBS			
Courses			
Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Dozenten des SD E		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i> <b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	6		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation III. Subject Specific Focus: Elective Compulsory		

## Thesis

### Module M1800: Bachelor thesis (dual study program)

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Dual students... <ul style="list-style-type: none"> <li>• ... choose central theoretical principles from their field of study (facts, theories, methods) in relation to problems and applications, present them and discuss them critically.</li> <li>• ... further develop their subject-related and practical knowledge as appropriate and link both areas of knowledge together.</li> <li>• ... present the current research available on a chosen topic or on a chosen operational issue linked to their subject.</li> </ul>		
<b>Professional Competence</b> <i>Skills</i>	Dual students... <ul style="list-style-type: none"> <li>• ... evaluate both the basic knowledge linked to their field of study acquired at the university and professional knowledge gained through the company, then purposefully use it to solve technical and application-related problems.</li> <li>• ... analyse questions and problems using the methods learned throughout their studies (including practical phases), reach factually justifiable decisions and develop application-specific solutions.</li> <li>• ... critically analyse the results of their own research work from a subject-specific and professional perspective.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>• ... present a professional problem in the form of an academic question for a specialist audience in a structured, comprehensible and factually correct manner, both orally and in writing.</li> <li>• ... respond to questions as part of a specialist discussion and answer them appropriately. In doing so, they argue their own evaluations and points of view convincingly.</li> </ul>		
<b>Personal Competence</b> <i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>• ... structure a comprehensive, chronological workflow and work independently on a question to a high academic level within a given period of time.</li> <li>• ... identify, develop and link necessary knowledge and material to handle an academic and application-related problem.</li> <li>• ... apply the essential techniques of academic work when conducting their own research on an operational issue.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0		
<b>Credit points</b>	12		
<b>Course achievement</b>	None		
<b>Examination</b>	Thesis		
<b>Examination duration and scale</b>	According to General Regulations		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Thesis: Compulsory Civil- and Environmental Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Data Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Engineering Science: Thesis: Compulsory Green Technologies: Energy, Water, Climate: Thesis: Compulsory Computer Science in Engineering: Thesis: Compulsory Mechanical Engineering: Thesis: Compulsory Mechatronics: Thesis: Compulsory Naval Architecture: Thesis: Compulsory Technomathematics: Thesis: Compulsory Engineering and Management - Major in Logistics and Mobility: Thesis: Compulsory
