Master of Science

# **Computer Science**

Cohort: Winter Term 2016

Updated: 9th June 2016

## Table of Contents

Table of Contents	2
Program description	3
Core qualification	4
Module M0523: Business & Management	4
Module M0524: Nontechnical Elective Complementary Courses for Master	5
Module M0804: Research Project and Seminar	7
Specialization Computer and Software Engineering	8
Module M0836: Communication Networks I - Analysis and Structure	8
Module M1270: Technical Complementary Course I for CSMS (according to Subject Specific Regulations)	10
Module M0753: Software Verification	11
Module M0647: Quantum Computation	13
Module M0586: Efficient Algorithms	15
Module M0926: Distributed Algorithms	17
Module M0677: Digital Signal Processing and Digital Filters	18
Module M0676: Digital Communications	20
Module M0667: Algorithmic Algebra	22
Module M0683: Algebraic Statistics for Computational Biology	24
Module M0733: Software Analysis	25
Module M1271: Technical Complementary Course II for CSMS (according to Subject Specific Regulations)	27
Module M0837: Communication Networks II - Simulation and Modeling	28
Module M1310: Methods and Applications of Differential Geometry	29
Module M1318: Wireless Sensor Networks	30
Module M0924: Software for Embedded Systems	31
Module M1248: Compilers for Embedded Systems	33
Module M0685: Computational Algebraic Geometry	35
Module M0943: Network Security	36
Module M0673: Information Theory and Coding	37
Module M0653: High-Performance Computing	39
Module M0556: Computer Graphics	40
Module M1307: Cryptography	42
Module M1301: Software Testing	43
Module M1304: Security in Embedded Hardware	45
Module M0711: Numerical Mathematics II	47
Module M0910: Advanced System-on-Chip Design (Lab)	49
Module M0942: Software Security	50
Module M0839: Traffic Engineering	52
Module M0913: CMOS Nanoelectronics with Practice	54
Module M0549: Scientific Computing and Accuracy	56
Specialization Intelligence Engineering	58
Module M0550: Digital Image Analysis	58
Module M1270: Technical Complementary Course I for CSMS (according to Subject Specific Regulations)	60
Module M0554: Quantitative Methods - Statistics and Operations Research	61
Module M0846: Control Systems Theory and Design	64
Module M0881: Mathematical Image Processing	66
Module M0667: Algorithmic Algebra	68
Module M0586: Efficient Algorithms	70
Module M0563: Robotics	72
Module M0716: Hierarchical Algorithms	74
Module M0955: Matrix Theory	76
Module M0683: Algebraic Statistics for Computational Biology	77
Module M0551: Pattern Recognition and Data Compression	78
Module M1271: Technical Complementary Course II for CSMS (according to Subject Specific Regulations)	79
Module M0685: Computational Algebraic Geometry	80
Module M0630: Robotics and Navigation in Medicine	81
Module M0558: Operations Research	83
Module M0556: Computer Graphics	85
Module M1302: Applied Humanoid Robotics	87
Module M0840: Optimal and Robust Control	88
Module M0711: Numerical Mathematics II	90
Module M0552: 3D Computer Vision	92
Module M1249: Numerical Methods for Medical Imaging	94
Module M0623: Intelligent Systems in Medicine	95
Module M0633: Industrial Process Automation	97
Module M0677: Digital Signal Processing and Digital Filters	99
Module M0738: Digital Audio Signal Processing	101
Module M0832: Advanced Topics in Control	103
Module M0549: Scientific Computing and Accuracy	105
Thesis	107
Module M-002: Master Thesis	107

---

**Core qualification**

---

---

**Module M0523: Business & Management**

<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>• Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>• Students are able to interrelate technical and management knowledge.</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>• Students are able to apply basic methods in selected areas of business management.</li> <li>• Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

**Courses**

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0524: Nontechnical Elective Complementary Courses for Master	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>The Non-technical Elective Study Area</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• explain specialized areas in context of the relevant non-technical disciplines,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
<b>Skills</b>	<p><b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic and specific methods of the said scientific disciplines,</li> <li>• question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	<p><b>Personal Competences (Social Skills)</b></p> <p>Students will be able</p> <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> </ul>

	<ul style="list-style-type: none"> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul>
<i>Autonomy</i>	<p><b>Personal Competences (Self-reliance)</b></p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Courses</b>
Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0804: Research Project and Seminar			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Project Work (L1761)	Projection Course	10	16
Seminar (L0817)	Seminar	2	2
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 372, Study Time in Lecture 168		
<b>Credit points</b>	18		
<b>Examination</b>	according to Subject Specific Regulations		
<b>Examination duration and scale</b>	Presentation on a current research topic (25-30 min and 5 min discussion). The research work is a project work according to the statutes of the ASPO and FSPO.		
<b>Assignment for the Following Curricula</b>	Computer Science: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Information and Communication Systems: Core qualification: Compulsory		

Course L1761: Project Work	
<b>Typ</b>	Projection Course
<b>Hrs/wk</b>	10
<b>CP</b>	16
<b>Workload in Hours</b>	Independent Study Time 340, Study Time in Lecture 140
<b>Lecturer</b>	Dozenten des SD E
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	

Course L0817: Seminar	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dozenten des SD E
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>Seminar presentations by enrolled students about the research work carried out by the students</li> <li>Active participation in discussions</li> </ul>
<b>Literature</b>	Wird vom Veranstalter bekanntgegeben.

## Specialization Computer and Software Engineering

### Module M0836: Communication Networks I - Analysis and Structure

#### Courses

Title	Typ	Hrs/wk	CP
Analysis and Structure of Communication Networks (L0897)	Lecture	2	2
Selected Topics of Communication Networks (L0899)	Problem-based Learning	2	2
Communication Networks Exercise (L0898)	Problem-based Learning	1	2
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Fundamental stochastics</li> <li>Basic understanding of computer networks and/or communication technologies is beneficial</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.		
<i>Skills</i>	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.		
<i>Autonomy</i>	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Colloquium		
<b>Examination duration and scale</b>	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory Mechatronics: Technical Complementary Course: Elective Compulsory Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory		

#### Course L0897: Analysis and Structure of Communication Networks

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Maciej Mühleisen
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	<ul style="list-style-type: none"> <li>Skript des Instituts für Kommunikationsnetze</li> <li>Tannenbaum, Computernetzwerke, Pearson-Studium</li> </ul> <p>Further literature is announced at the beginning of the lecture.</p>

Course L0899: Selected Topics of Communication Networks	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Maciej Mühleisen
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Example networks selected by the students will be researched on in a PBL course by the students in groups and will be presented in a poster session at the end of the term.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• see lecture</li> </ul>

Course L0898: Communication Networks Exercise	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Maciej Mühleisen
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Part of the content of the lecture Communication Networks are reflected in computing tasks in groups, others are motivated and addressed in the form of a PBL exercise.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• announced during lecture</li> </ul>

Module M1270: Technical Complementary Course I for CSMS (according to Subject Specific Regulations)			
Courses			
Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Examination</b>	according to Subject Specific Regulations		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory		

Module M0753: Software Verification	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Software Verification (L0629)	Lecture 2 3
Software Verification (L0630)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Automata theory and formal languages</li> <li>• Computational logic</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or procedural programming</li> <li>• Concurrency</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.
<i>Skills</i>	Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.
<b>Personal Competence</b> <i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Software: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems: Compulsory International Management and Engineering: Specialisation II. Information Technology: Elective Compulsory

Course L0629: Software Verification	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sibylle Schupp
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Syntax and semantics of logic-based systems</li> <li>• Deductive verification                             <ul style="list-style-type: none"> <li>◦ Specification</li> <li>◦ Proof obligations</li> <li>◦ Program properties</li> <li>◦ Automated vs. interactive theorem proving</li> </ul> </li> <li>• Model checking                             <ul style="list-style-type: none"> <li>◦ Foundations</li> <li>◦ Property languages</li> <li>◦ Tool support</li> </ul> </li> <li>• Timed automata</li> <li>• Recent developments of verification techniques and applications</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• C. Baier and J-P. Katoen, Principles of Model Checking, MIT Press 2007.</li> <li>• M. Huth and M. Bryan, Logic in Computer Science. Modelling and Reasoning about Systems, 2nd Edition, 2004.</li> <li>• Selected Research Papers</li> </ul>

Course L0630: Software Verification	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sibylle Schupp

<b>Literature</b>	See interlocking course

Module M0647: Quantum Computation			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Quantum Computation (L0381)	Lecture	2	3
Quantum Computation (L1613)	Seminar	1	1
Quantum Computation (L0382)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Dr. Christian Jansson		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 minutes		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory		

Course L0381: Quantum Computation	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Christian Jansson
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• From Bit to Quantum Register</li> <li>• Basics of Quantum Mechanics: History, Schrödinger"s Equation, Transition Systems, Experiments</li> <li>• Linear Algebra</li> <li>• Postulates of Quantum Mechanics</li> <li>• Classical Gates and Qubit Gates</li> <li>• Irreversible Computations and Quantum Parallelism</li> <li>• The Deutsch-Jozsa Algorithm</li> <li>• Quantum Teleportation</li> <li>• Quantum Fourier Transformation</li> <li>• Optical Quantum Computer</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• M.A. Nielsen, I.L. Chuang: Quantum Computation and Quantum Information, Cambridge University Press, 2001</li> <li>• M. Homeister: Quantum Computing verstehen, Vieweg, 2005</li> </ul>

Course L1613: Quantum Computation	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Christian Jansson
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0382: Quantum Computation	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Christian Jansson
<b>Language</b>	DE
<b>Cycle</b>	WiSe

<b>Literature</b>	See interlocking course

Module M0586: Efficient Algorithms	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Efficient Algorithms (L0120)	Lecture 2 3
Efficient Algorithms (L1207)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Siegfried Rump
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Programming in Matlab and/or C Basic knowledge in discrete mathematics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to explain the basic theory and methods of network algorithms and in particular their data structures. They are able to analyze the computational behavior and computing time of linear programming algorithms as well network algorithms. Moreover the students can distinguish between efficiently solvable and NP-hard problems.
<i>Skills</i>	The students are able to analyze complex tasks and can determine possibilities to transform them into networking algorithms. In particular they can efficiently implement basic algorithms and data structures of LP- and network algorithms and identify possible weaknesses. They are able to distinguish between different efficient data structures and are able to use them appropriately.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 minutes
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Modeling and Simulation: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory

Course L0120: Efficient Algorithms	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Linear Programming</li> <li>- Data structures</li> <li>- Leftist heaps</li> <li>- Minimum spanning tree</li> <li>- Shortest path</li> <li>- Maximum flow</li> <li>- NP-hard problems via max-cut</li> </ul>
<b>Literature</b>	R. E. Tarjan: Data Structures and Network Algorithms. CBMS 44, Society for Industrial and Applied Mathematics, Philadelphia, PA, 1983. Course L1207: Efficient Algorithms	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0926: Distributed Algorithms	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Distributed Algorithms (L1071)	Lecture 2 3
Distributed Algorithms (L1072)	Recitation Section (large) 2 3
<b>Module Responsible</b>	Prof. Volker Turau
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Algorithms and data structures</li> <li>Distributed systems</li> <li>Discrete mathematics</li> <li>Graph theory</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i> Students know the main abstractions of distributed algorithms (synchronous/asynchronous model, message passing and shared memory model). They are able to describe complexity measures for distributed algorithms (round , message and memory complexity). They explain well known distributed algorithms for important problems such as leader election, mutual exclusion, graph coloring, spanning trees. They know the fundamental techniques used for randomized algorithms.</p> <p><i>Skills</i> Students design their own distributed algorithms and analyze their complexity. They make use of known standard algorithms. They compute the complexity of randomized algorithms.</p>

Module M0677: Digital Signal Processing and Digital Filters			
Courses			
Title	Typ	Hrs/wk	CP
Digital Signal Processing and Digital Filters (L0446)	Lecture	3	4
Digital Signal Processing and Digital Filters (L0447)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of signal and system theory as well as random processes.</li> <li>• Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform)</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account.</p> <p><i>Skills</i> The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, they can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods of spectrum estimation and to take the effects of a limited observation window into account.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Module M0676: Digital Communications	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Digital Communications (L0444)	Lecture 2 3
Digital Communications (L0445)	Recitation Section (large) 1 2
Laboratory Digital Communications (L0646)	Laboratory Course 1 1
<b>Module Responsible</b>	Prof. Gerhard Bauch
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of Communications and Random Processes</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.
<i>Skills</i>	The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can jointly solve specific problems.
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Module M0667: Algorithmic Algebra			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Algorithmic Algebra (L0422)		Lecture	3
Algorithmic Algebra (L0423)		Recitation Section (small)	1
<b>Module Responsible</b>	Dr. Prashant Batra		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathe I-III (Real analysis, computing in Vector spaces , principle of complete induction) Diskrete Mathematik I (groups, rings, ideals, fields; euclidean algorithm)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can discuss logical connections between the following concepts and explain them by means of examples: Smith normal form, Chinese remainder theorem, grid point sets, integer solution of inequality systems.		
<i>Skills</i>	Students are able to access independently further logical connections between the concepts with which they have become familiar and are able to verify them.  Students are able to develop a suitable solution approach to given problems, to pursue it and to evaluate the results critically, such as in solving multivariate equation systems and in grid point theory.		
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>

Module M0733: Software Analysis	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Software Analysis (L0631)	Lecture 2 3
Software Analysis (L0632)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of software-engineering activities</li> <li>• Discrete algebraic structures</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or Procedural programming</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.
<i>Skills</i>	Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.

Module M0924: Software for Embedded Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Software for Embedded Systems (L1069)	Lecture 2 3
Software for Embedded Systems (L1070)	Recitation Section (small) 3 3
<b>Module Responsible</b>	Prof. Volker Turau
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Good knowledge and experience in programming language C</li> <li>• Basis knowledge in software engineering</li> <li>• Basic understanding of assembly language</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i> Students know the basic principles and procedures of software engineering for embedded systems. They are able to describe the usage and pros of event based programming using interrupts. They know the components and functions of a concrete microcontroller. The participants explain requirements of real time systems. They know at least three scheduling algorithms for real time operating systems including their pros and cons.</p> <p><i>Skills</i> Students build interrupt-based programs for a concrete microcontroller. They build and use a preemptive scheduler. They use peripheral components (timer, ADC, EEPROM) to realize complex tasks for embedded systems. To interface with external components they utilize serial protocols.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>

Module M1248: Compilers for Embedded Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Compilers for Embedded Systems (L1692)	Lecture 3 4
Compilers for Embedded Systems (L1693)	Laboratory 1 2
<b>Module Responsible</b>	Prof. Heiko Falk
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Module "Embedded Systems" C/C++ Programming skills
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The relevance of embedded systems increases from year to year. Within such systems, the amount of software to be executed on embedded processors grows continuously due to its lower costs and higher flexibility. Because of the particular application areas of embedded systems, highly optimized and application-specific processors are deployed. Such highly specialized processors impose high demands on compilers which have to generate code of highest quality. After the successful attendance of this course, the students are able</p> <ul style="list-style-type: none"> <li>• to illustrate the structure and organization of such compilers,</li> <li>• to distinguish and explain intermediate representations of various abstraction levels, and</li> <li>• to assess optimizations and their underlying problems in all compiler phases.</li> </ul> <p>The high demands on compilers for embedded systems make effective code optimizations mandatory. The students learn in particular,</p> <ul style="list-style-type: none"> <li>• which kinds of optimizations are applicable at the source code level,</li> <li>• how the translation from source code to assembly code is performed,</li> <li>• which kinds of optimizations are applicable at the assembly code level,</li> <li>• how register allocation is performed, and</li> <li>• how memory hierarchies can be exploited effectively.</li> </ul> <p>Since compilers for embedded systems often have to optimize for multiple objectives (e.g., average- or worst-case execution time, energy dissipation, code size), the students learn to evaluate the influence of optimizations on these different criteria.</p> <p><i>Skills</i></p> <p>After successful completion of the course, students shall be able to translate high-level program code into machine code. They will be enabled to assess which kind of code optimization should be applied most effectively at which abstraction level (e.g., source or assembly code) within a compiler.</p> <p>While attending the labs, the students will learn to implement a fully functional compiler including optimizations.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i></p> <p>Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>

Module M0685: Computational Algebraic Geometry			
Courses			
Title	Typ	Hrs/wk	CP
Computational Algebraic Geometry (L1759)	Lecture	4	6
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None.		
<b>Recommended Previous Knowledge</b>	Mathematical Calculus, Linear Algebra, and foundations of Higher Abstract Algebra.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	The students will get familiar with the following topics: algebraic combinatorics; ideals, local rings, standard bases and systems of polynomial equations; modules, syzygies, and free resolutions; algebraic invariant theory, and elliptic curves.		
<i>Knowledge</i>			
<i>Skills</i>	The students are able to provide computations in the fields given above.		
<b>Personal Competence</b>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate acquired knowledge with other fields.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0673: Information Theory and Coding			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Information Theory and Coding (L0436)	Lecture	3	4
Information Theory and Coding (L0438)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Probability theory and random processes</li> <li>• Basic knowledge of communications engineering (e.g. from lecture "Fundamentals of Communications and Random Processes")</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.</p> <p><i>Skills</i> The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Cryptography (L1806)	Lecture	2	3
Cryptography (L1807)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Chris Brzuska		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Introduction to Information Security, Foundations of computability and complexity		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Knowledge of cryptographic primitives such as one-way-functions, digital signatures, encryption, key exchange, zero-knowledge proofs as well as implications between the primitives, knowledge of formal security definitions of cryptographic primitives, connections between cryptography and complexity theory, in particular to the P vs. NP problem.</p> <p><i>Skills</i> Ability to discuss and develop security models for cryptographic primitives. Constructing reductions between cryptographic primitives and ability to say whether small tweaks might harm the security of a cryptographic primitive.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Ability to critically question schemes and methods that seem intuitively secure.</p> <p><i>Autonomy</i></p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 minutes		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory

Module M1301: Software Testing				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Testing (L1791)		Lecture	2	3
Software Testing (L1792)		Problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Software Engineering</li> <li>• Higher Programming Languages</li> <li>• Algorithms and Data Structures</li> <li>• Statistics</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence Knowledge</b>	Students explain the different phases of testing, describe fundamental techniques of different types of testing, and paraphrase the basic principles of the corresponding test process. They give examples of software development scenarios and the corresponding test type and technique. They explain algorithms used for particular testing techniques and describe possible advantages and limitations.			
<b>Skills</b>	Students identify the appropriate testing type and technique for a given problem. They adapt and execute respective algorithms to execute a concrete test technique properly. They interpret testing results and execute corresponding steps for proper re-test scenarios. They write and analyze test specifications. They apply bug finding techniques for non-trivial problems.			
<b>Personal Competence Social Competence</b>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.			
<b>Autonomy</b>	Students can assess their level of knowledge continuously and adjust it appropriately, based on feedback and on self-guided studies. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software testing. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0910: Advanced System-on-Chip Design (Lab)			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Advanced System-on-Chip Design (L1061)	Problem-based Learning	3	6
<b>Module Responsible</b>	Prof. Heiko Falk		
<b>Admission Requirements</b>	None.		
<b>Recommended Previous Knowledge</b>	Module "Computer Architecture", in particular having passed the practical labs of "Computer Architecture"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> This module provides in-depth, hands-on experience on advanced concepts of computer architecture. Using the Hardware Description Language VHDL and using reconfigurable FPGA hardware boards, students learn how to design complex computer systems (so-called systems-on-chip, SoCs), that are commonly found in the domain of embedded systems, in actual hardware.</p> <p>Starting with a simple processor architecture, the students learn to how realize instruction-processing of a computer processor according to the principle of pipelining. They implement different styles of cache-based memory hierarchies, examine strategies for dynamic scheduling of machine instructions and for branch prediction, and finally construct a complex MPSoC system (multi-processor system-on-chip) that consists of multiple processor cores that are connected via a shared bus.</p> <p><i>Skills</i> Students will be able to analyze, how highly specific and individual computer systems can be constructed using a library of given standard components. They evaluate the interferences between the physical structure of a computer system and the software executed thereon. This way, they will be enabled to estimate the effects of design decision at the hardware level on the performance of the entire system, to evaluate the whole and complex system and to propose design options to improve a system.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature, to transform this knowledge into actual implementations of complex hardware structures, and to associate this knowledge with contents of other classes.</p>		
<b>Workload in Hours</b>	Independent Study Time 138, Study Time in Lecture 42		
<b>Credit points</b>	6		
<b>Examination</b>	Project		
<b>Examination duration and scale</b>

<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Seminar Traffic Engineering (L0902)	Seminar 2 2
Traffic Engineering (L0900)	Lecture 2 2
Traffic Engineering Exercises (L0901)	Recitation Section (small) 1 2
<b>Module Responsible</b>	Prof. Andreas Timm-Giel
<b>Admission Requirements</b>	
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Fundamentals of communication or computer networks</li> <li>Stochastics</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to describe methods for planning, optimisation and performance evaluation of communication networks.
<i>Skills</i>	Students are able to solve typical planning and optimisation tasks for communication networks. Furthermore they are able to evaluate the network performance using queuing theory.
<b>Personal Competence</b>	Students are able to apply independently what they have learned to other and new problems. They can present their results in front of experts and discuss them.
<i>Social Competence</i>	
<i>Autonomy</i>	Students are able to acquire the necessary expert knowledge to understand the functionality and performance of new communication networks independently.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Oral exam

Course L1063: CMOS Nanoelectronics	
<b>Typ</b>	Laboratory Course
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Wolfgang Krautschneider
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L1059: CMOS Nanoelectronics	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Wolfgang Krautschneider
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0549: Scientific Computing and Accuracy	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Verification Methods (L0122)	Lecture 2 3
Verification Methods (L1208)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Siegfried Rump
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in numerics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students have deeper knowledge of numerical and semi-numerical methods with the goal to compute principally exact and accurate error bounds. For several fundamental problems they know algorithms with the verification of the correctness of the computed result.
<i>Skills</i>	The students can devise algorithms for several basic problems which compute rigorous error bounds for the solution and analyze the sensitivity with respect to variation of the input data as well.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 minutes
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory

Course L0122: Verification Methods	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Fast and accurate interval arithmetic</li> <li>• Error-free transformations</li> <li>• Verification methods for linear and nonlinear systems</li> <li>• Verification methods for finite integrals</li> <li>• Treatment of multiple zeros</li> <li>• Automatic differentiation</li> <li>• Implementation in Matlab/INTLAB</li> <li>• Practical applications</li> </ul>
<b>Literature</b>	Neumaier: Interval Methods for Systems of Equations. In: Encyclopedia of Mathematics and its Applications. Cambridge University Press, 1990 S.M. Rump. Verification methods: Rigorous results using floating-point arithmetic. Acta Numerica, 19:287-449, 2010.

Course L1208: Verification Methods	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28

## Specialization Intelligence Engineering

### Module M0550: Digital Image Analysis

#### Courses

Title	Typ	Hrs/wk	CP
Digital Image Analysis (L0126)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	System theory of one-dimensional signals (convolution and correlation, sampling theory, interpolation and decimation, Fourier transform, linear time-invariant systems), linear algebra (Eigenvalue decomposition, SVD), basic stochastics and statistics (expectation values, influence of sample size, correlation and covariance, normal distribution and its parameters), basics of Matlab, basics in optics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Students can <ul style="list-style-type: none"> <li>• Describe imaging processes</li> <li>• Depict the physics of sensorics</li> <li>• Explain linear and non-linear filtering of signals</li> <li>• Establish interdisciplinary connections in the subject area and arrange them in their context</li> <li>• Interpret effects of the most important classes of imaging sensors and displays using mathematical methods and physical models.</li> </ul>		
<b>Skills</b>	Students are able to <ul style="list-style-type: none"> <li>• Use highly sophisticated methods and procedures of the subject area</li> <li>• Identify problems and develop and implement creative solutions.</li> </ul> Students can solve simple arithmetical problems relating to the specification and design of image processing and image analysis systems. Students are able to assess different solution approaches in multidimensional decision-making areas. Students can undertake a prototypical analysis of processes in Matlab.		
<b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	Students can solve image analysis tasks independently using the relevant literature.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture and materials in StudIP		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory International Management and Engineering: Specialisation II. Information Technology: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory		

Course L0126: Digital Image Analysis	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Image representation, definition of images and volume data sets, illumination, radiometry, multispectral imaging, reflectivities, shape from shading</li> <li>• Perception of luminance and color, color spaces and transforms, color matching functions, human visual system, color appearance models</li> <li>• imaging sensors (CMOS, CCD, HDR, X-ray, IR), sensor characterization (EMVA1288), lenses and optics</li> <li>• spatio-temporal sampling (interpolation, decimation, aliasing, leakage, moiré, flicker, apertures)</li> <li>• features (filters, edge detection, morphology, invariance, statistical features, texture)</li> <li>• optical flow (variational methods, quadratic optimization, Euler-Lagrange equations)</li> <li>• segmentation (distance, region growing, cluster analysis, active contours, level sets, energy minimization and graph cuts)</li> <li>• registration (distance and similarity, variational calculus, iterative closest points)</li> </ul>
<b>Literature</b>	Bredies/Lorenz, Mathematische Bildverarbeitung, Vieweg, 2011 Wedel/Cremers, Stereo Scene Flow for 3D Motion Analysis, Springer 2011 Handels, Medizinische Bildverarbeitung, Vieweg, 2000 Pratt, Digital Image Processing, Wiley, 2001 Jain, Fundamentals of Digital Image Processing, Prentice Hall, 1989

Module M1270: Technical Complementary Course I for CSMS (according to Subject Specific Regulations)			
Courses			
Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Examination</b>	according to Subject Specific Regulations		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory		

Module M0554: Quantitative Methods - Statistics and Operations Research	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Quantitative Methods - Statistics and Operations Research (L0127)	Lecture 3 4
Quantitative Methods - Statistics and Operations Research (L0250)	Recitation Section (large) 2 2
<b>Module Responsible</b>	Prof. Kathrin Fischer
<b>Admission Requirements</b>	None.
<b>Recommended Previous Knowledge</b>	Knowledge of Mathematics on the Bachelor Level. Relevant previous knowledge is taught and tested by an online module.
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<p>The students know</p> <ul style="list-style-type: none"> <li>• different methods from the field of descriptive statistics and can explain them and their importance for Business Analysis;</li> <li>• different discrete and continuous distribution functions and can explain their meaning and their areas of application</li> <li>• the laws of probability theory as, e.g. the Bayes rule, and can explain them;</li> <li>• different methods of inferential statistics - e.g. confidence intervals, hypothesis testing and regression analysis - and can explain their theoretical background;</li> <li>• the history and relevance of Operations Research;</li> <li>• linear programming methods for solving planning problems and can explain them;</li> <li>• selected methods of transportation and network optimization and can explain them;</li> <li>• integer programming models and methods, e.g. for location planning;</li> <li>• appropriate software for solving these problems.</li> </ul>
<i>Skills</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• collect empirical data by appropriate methods, to aggregate, classify and analyze the data and to draw conclusions from them also in complex and realistic situations;</li> <li>• recognize different distribution functions and to apply them in the solution of Business problems;</li> <li>• apply laws of probability, as e.g. the Bayes rule, to construct solutions for Business problems;</li> <li>• select appropriate methods of inferential statistics, apply them to Business problems and evaluate the results of their analysis;</li> <li>• construct appropriate quantitative - linear or integer - models for Business planning situations;</li> <li>• apply methods from linear and integer programming and interpret and evaluate the results;</li> <li>• apply methods from transport and network planning and interpret and evaluate the results;</li> <li>• solve the problems with appropriate software, carry out sensitivity analyses and evaluate the results;</li> <li>• develop a critical judgement of the different methods and their applicability;</li> <li>• use models and methods from Statistics and OR to analyse problems from the areas of business and engineering and to evaluate the results;</li> <li>• apply their theoretical knowledge of the different methods to practical problems.</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• engage in scientific discussions on topics from the fields of Statistics and OR;</li> <li>• present the results of their work to specialists;</li> <li>• work successfully and respectfully in a team.</li> </ul>
<i>Autonomy</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• carry out complex data analyses independently, individually or in a team;</li> <li>• solve complex Business planning problems independently or in a team, selecting and using appropriate software;</li> <li>• gather knowledge in the area independently and to apply their knowledge also in new and unknown situations;</li> <li>• critically evaluate the results of their work and the consequences.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	3 hours
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Global Innovation Management: Core qualification: Elective Compulsory International Management and Engineering: Core qualification: Compulsory

Course L0127: Quantitative Methods - Statistics and Operations Research	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Kathrin Fischer
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Statistics</b></p> <ul style="list-style-type: none"> <li>• Descriptive Statistics: Graphical representations, calculation of relevant measures of central tendency etc., also by using a computer; application of methods for large data sets, analysis and comparison of results, critical discussion and evaluation of methods;</li> <li>• Probability theory: important laws, dependent probabilities, Bayes Rule; application to practical problems;</li> <li>• Use and application of probability distributions, as e.g. Binomial and Normal distribution to Management and Engineering problems;</li> <li>• Methods of inferential statistics: confidence intervals: theoretical background and applications; hypothesis testing: theoretical background and application to business problems; regression analysis: theoretical background and application.</li> </ul> <p><b>Operations Research</b></p> <ul style="list-style-type: none"> <li>• Linear Programming: Modelling business decision situations, solving problems by Simplex method and by using software, theoretical background of Simplex procedure, Dual Simplex procedure and blocked variables, special cases (degeneracy etc.); sensitivity analysis</li> <li>• Transportation planning: Modellung transportation and transshipment problems in global networks; Solving transportation problems using software</li> <li>• Network Optimization problems: modelling production and transportation networks, solving planning problems in networks</li> <li>• Integer Programming: Models using integer variables, e.g. in location decisions, branch and bound procedure</li> </ul>

Module M0846: Control Systems Theory and Design			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Herbert Werner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Introduction to Control Systems		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space</li> <li>They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively</li> <li>They can explain the significance of a minimal realisation</li> <li>They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection</li> <li>They can extend all of the above to multi-input multi-output systems</li> <li>They can explain the z-transform and its relationship with the Laplace Transform</li> <li>They can explain state space models and transfer function models of discrete-time systems</li> <li>They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation</li> <li>They can explain how a state space model can be constructed from a discrete-time impulse response</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can transform transfer function models into state space models and vice versa</li> <li>They can assess controllability and observability and construct minimal realisations</li> <li>They can design LQG controllers for multivariable plants</li> <li>They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate</li> <li>They can identify transfer function models and state space models of dynamic systems from experimental data</li> <li>They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink)</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p> <p>They can assess their knowledge in weekly on-line tests and thereby control their learning progress.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Core qualification: Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. <b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Algorithmic Algebra (L0422)		Lecture	3
Algorithmic Algebra (L0423)		Recitation Section (small)	1
<b>Module Responsible</b>	Dr. Prashant Batra		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathe I-III (Real analysis, computing in Vector spaces , principle of complete induction) Diskrete Mathematik I (groupus, rings, ideals, fields; euclidean algorithm)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can discuss logical connections between the following concepts and explain them by means of examples: Smith normal form, Chinese remainder theorem, grid point sets, integer solution of inequality systems.</p> <p><i>Skills</i> Students are able to access independently further logical connections between the concepts with which they have become familiar and are able to verify them.</p> <p>Students are able to develop a suitable solution approach to given problems, to pursue it and to evaluate the results critically, such as in solving multivariate equation systems and in grid point theory.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory		

Course L0422: Algorithmic Algebra	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Prashant Batra
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Extended euclidean algorithm, solution of the Bezout-equation  Division with remainder (over rings)  fast arithmetic algorithms (conversion, fast multiplications)  discrete Fourier-transformation over rings  Computation with modular remainders, solving of remainder systems (chinese remainder theorem), solvability of integer linear systems over the integers  linearization of polynomial equations-- matrix approach  Sylvester-matrix, elimination  elimination in rings, elimination of many variables  Buchberger algorithm, Gröbner basis  Minkowskis Lattice Point theorem and integer-valued optimization  LLL-algorithm for construction of 'short' lattice vectors in polynomial time

Module M0586: Efficient Algorithms	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Efficient Algorithms (L0120)	Lecture 2 3
Efficient Algorithms (L1207)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Siegfried Rump
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Programming in Matlab and/or C Basic knowledge in discrete mathematics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to explain the basic theory and methods of network algorithms and in particular their data structures. They are able to analyze the computational behavior and computing time of linear programming algorithms as well network algorithms. Moreover the students can distinguish between efficiently solvable and NP-hard problems.
<i>Skills</i>	The students are able to analyze complex tasks and can determine possibilities to transform them into networking algorithms. In particular they can efficiently implement basic algorithms and data structures of LP- and network algorithms and identify possible weaknesses. They are able to distinguish between different efficient data structures and are able to use them appropriately.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 minutes

<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Robotics: Modelling and Control (L0168)	Lecture 3 3
Robotics: Modelling and Control (L1305)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Uwe Weltin
<b>Admission Requirements</b>	
<b>Recommended Previous Knowledge</b>	Fundamentals of electrical engineering Broad knowledge of mechanics Fundamentals of control theory
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to describe fundamental properties of robots and solution approaches for multiple problems in robotics.
<i>Skills</i>	Students are able to derive and solve equations of motion for various manipulators. Students can generate trajectories in various coordinate systems. Students can design linear and partially nonlinear controllers for robotic manipulators.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups.
<i>Autonomy</i>	Students are able to recognize and improve knowledge deficits independently. With instructor assistance, students are able to evaluate their own knowledge level and define a further course of study.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0683: Algebraic Statistics for Computational Biology	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Algebraic Statistics for Computational Biology (L0456)	Lecture
<b>Hrs/wk</b>	<b>CP</b>
4	6
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann
<b>Admission Requirements</b>	None.
<b>Recommended Previous Knowledge</b>	Mathematical Calculus, Linear Algebra, Higher Abstract Algebra, and Stochastics.
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students know the basics of descriptive and inferential statistics, alignment of sequences, the hidden Markov model, and phylogenetic tree models including the respective algorithms. Moreover, they know the EM algorithm, general algebraic statistical models and the development of invariants for them, Gröbner bases in polynomial rings, elimination theory for systems of polynomial equations, Markov bases for sampling with the Metropolis algorithm, and the analysis of rank data.
<i>Skills</i>	The students are able to formalize, compute, and analyze alignments of sequences, hidden Markov models, and phylogenetic tree models. Moreover, they can compute Gröbner bases in polynomial rings, use elimination theory to tackle systems of polynomial equations, and provide invariants for algebraic statistical models. Furthermore, they can calculate Markov bases for the sampling in statistical models using the Metropolis algorithm.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge to other fields.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Oral exam

Module M0551: Pattern Recognition and Data Compression			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Pattern Recognition and Data Compression (L0128)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can name the basic concepts of pattern recognition and data compression.  Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.		
<i>Skills</i>	Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.		
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>	Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• principles of math (algebra, analysis/calculus)</li> <li>• principles of programming, e.g., in Java or C++</li> <li>• solid R or Matlab skills</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can explain kinematics and tracking systems in clinical contexts and illustrate systems and their components in details. Systems can be evaluated with respect to collision detection and safety and regulations. Students can assess typical systems regarding design and limitations.		
<i>Skills</i>	The students are able to design and evaluate navigation systems and robotic systems for medical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 minutes		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Module M0558: Operations Research			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Operations Research (L0155)	Lecture	2	2
Operations Research - Seminar (L0156)	Seminar	2	3
Project Operations Research (L1793)	Problem-based Learning	1	1
<b>Module Responsible</b>	Prof. Kathrin Fischer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge from the module "Quantitative Methods": Linear Programming, Network Optimization and basics of Integer Programming.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Students have an in-depth knowledge of the following areas: They are able to		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>explain complex quantitative models for applications, e.g. production models with integrated inventory holding over time, portfolio models, revenue management models</li> <li>Discuss advanced topics in linear programming, e.g. duality theory and its application, special structures as upper/lower bounds for variables; revised simplex method etc.</li> <li>Study problems with multiple objectives and under uncertainty, i.e. the adaption of linear programming models to realistic applications</li> <li>Discuss advanced topics in integer programming: complex problems, e.g. from vehicle routing, and logical constraints; advanced solutions procedures as branch and bound, cutting-plane procedures etc.</li> <li>Examine dynamic and non-linear programming problems and applications in Management</li> </ul>		
<i>Skills</i>	Students have in-depth abilities in the following areas: They are able to		
	<ul style="list-style-type: none"> <li>formulate complex quantitative models for applications, e.g. production models with integrated inventory holding over time, portfolio models, revenue management models</li> <li>Apply duality theory in linear programming and analyze special structures as upper/lower bounds for variables; use the revised simplex method etc.</li> <li>Analyze problems with multiple objectives and under uncertainty, i.e. the adaption of linear programming models to realistic applications</li> <li>Set up advanced models in integer programming and solve them, e.g. problems from vehicle routing, or logical constraints</li> <li>Analyze dynamic and non-linear programming problems and applications in Management</li> </ul>		
<b>Personal Competence</b>	Students are able to		
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>work successfully in a team, organize the team, and solve complex tasks in a team in a given time frame</li> <li>give structured feedback, following feedback rules, and also accept feedback from their fellow students</li> <li>lead discussions on problems from the field of OR</li> <li>present the results of their work to specialists.</li> </ul>		
<i>Autonomy</i>	Students are able to		
	<ul style="list-style-type: none"> <li>independently acquire relevant scientific knowledge from the literature</li> <li>independently carry out a (pre-defined) complex research task</li> <li>aggregate their knowledge and results and present it to others</li> <li>apply their knowledge and experience also to new problems and unknown situations.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0556: Computer Graphics			
Courses			
Title	Typ	Hrs/wk	CP
Computer Graphics (L0145)	Lecture	2	3
Computer Graphics (L0768)	Project Seminar	2	3
<b>Module Responsible</b>	Prof. Tobias Knopp		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Students are expected to have a solid knowledge of object-oriented programming as well as of linear algebra and geometry.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students have acquired a theoretical basis in computer graphics and have a clear understanding of the process of computer animation.		
<i>Skills</i>	Students have acquired <ul style="list-style-type: none"> <li>• solid skills in modelling and shading,</li> <li>• solid skills in computer animation techniques, and</li> <li>• a thorough command of Maya, a first-class animation system.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are trained in communicating abstract ideas and are familiar with planning and conducting projects within a small team.		
<i>Autonomy</i>	Students are able to direct complex computer animation projects.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Project		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory

<b>Cycle</b>	SoSe
<b>Content</b>	<p>Computer graphics and animation are leading to an unprecedented visual revolution. The course deals with its technological foundations:</p> <ul style="list-style-type: none"> <li>• Object-oriented Computer Graphics</li> <li>• Projections and Transformations</li> <li>• Polygonal and Parametric Modelling</li> <li>• Illuminating, Shading, Rendering</li> <li>• Computer Animation Techniques</li> <li>• Kinematics and Dynamics Effects</li> </ul> <p>Students will be working on a series of mini-projects which will eventually evolve into a final project. Learning computer graphics and animation resembles learning a musical instrument. Therefore, doing your projects well and in time is essential for performing well on this course.</p>

Module M0623: Intelligent Systems in Medicine			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Intelligent Systems in Medicine (L0331)	Lecture	2	3
Intelligent Systems in Medicine (L0334)	Project Seminar	2	2
Intelligent Systems in Medicine (L0333)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• principles of math (algebra, analysis/calculus)</li> <li>• principles of stochastics</li> <li>• principles of programming, Java/C++ and R/Matlab</li> <li>• advanced programming skills</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to analyze and solve clinical treatment planning and decision support problems using methods for search, optimization, and planning. They are able to explain methods for classification and their respective advantages and disadvantages in clinical contexts. The students can compare different methods for representing medical knowledge. They can evaluate methods in the context of clinical data and explain challenges due to the clinical nature of the data and its acquisition and due to privacy and safety requirements.</p> <p><i>Skills</i> The students can give reasons for selecting and adapting methods for classification, regression, and prediction. They can assess the methods based on actual patient data and evaluate the implemented methods.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.</p> <p><i>Autonomy</i> The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0633: Industrial Process Automation	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Industrial Process Automation (L0344)	Lecture 2 3
Industrial Process Automation (L0345)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Alexander Schlaefer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>mathematics and optimization methods</p> <p>principles of automata</p> <p>principles of algorithms and data structures</p> <p>programming skills</p>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students can evaluate and assess discrete event systems. They can evaluate properties of processes and explain methods for process analysis. The students can compare methods for process modelling and select an appropriate method for actual problems. They can discuss scheduling methods in the context of actual problems and give a detailed explanation of advantages and disadvantages of different programming methods.
<i>Skills</i>	The students are able to develop and model processes and evaluate them accordingly. This involves taking into account optimal scheduling, understanding algorithmic complexity and implementation using PLCs.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students work in teams to solve problems.
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0677: Digital Signal Processing and Digital Filters			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Digital Signal Processing and Digital Filters (L0446)	Lecture	3	4
Digital Signal Processing and Digital Filters (L0447)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of signal and system theory as well as random processes.</li> <li>• Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform)</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account.</p> <p><i>Skills</i> The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, they can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods of spectrum estimation and to take the effects of a limited observation window into account.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Module M0738: Digital Audio Signal Processing			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Digital Audio Signal Processing (L0650)	Lecture	3	4
Digital Audio Signal Processing (L0651)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Udo Zölzer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Die Studierenden können die grundlegenden Verfahren und Methoden der digitalen Audiosignalverarbeitung erklären. Sie können die wesentlichen physikalischen Effekte bei der Sprach- und Audiosignalverarbeitung erläutern und in Kategorien einordnen. Sie können einen Überblick der numerischen Methoden und messtechnischen Charakterisierung von Algorithmen zur Audiosignalverarbeitung geben. Sie können die erarbeiteten Algorithmen auf weitere Anwendungen im Bereich der Informationstechnik und Informatik abstrahieren.		
<i>Skills</i>	The students will be able to apply methods and techniques from audio signal processing in the fields of mobile and internet communication. They can rely on elementary algorithms of audio signal processing in form of Matlab code and interactive JAVA applets. They can study parameter modifications and evaluate the influence on human perception and technical applications in a variety of applications beyond audio signal processing. Students can perform measurements in time and frequency domain in order to give objective and subjective quality measures with respect to the methods and applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work in small groups to study special tasks and problems and will be enforced to present their results with adequate methods during the exercise.		
<i>Autonomy</i>	The students will be able to retrieve information out of the relevant literature in the field and put them into the context of the lecture. They can relate their gathered knowledge and relate them to other lectures (signals and systems, digital communication systems, image and video processing, and pattern recognition). They will be prepared to understand and communicate problems and effects in the field audio signal processing.

<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Verification Methods (L0122)	Lecture 2 3
Verification Methods (L1208)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Siegfried Rump
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in numerics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students have deeper knowledge of numerical and semi-numerical methods with the goal to compute principally exact and accurate error bounds. For several fundamental problems they know algorithms with the verification of the correctness of the computed result.
<i>Skills</i>	The students can devise algorithms for several basic problems which compute rigorous error bounds for the solution and analyze the sensitivity with respect to variation of the input data as well.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Course L1208: Verification Methods	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Thesis

### Module M-002: Master Thesis

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §24 (1):</li> </ul> <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul>		
<b>Skills</b>	<p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0		
<b>Credit points</b>	30		
<b>Examination</b>	according to Subject Specific Regulations		
<b>Examination duration and scale</b>	see FSPO		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Energy and Environmental Engineering: Thesis: Compulsory Energy Systems: Thesis: Compulsory Environmental Engineering: Thesis: Compulsory Aircraft Systems Engineering: Thesis: Compulsory Global Innovation Management: Thesis: Compulsory Computational Science and Engineering: Thesis: Compulsory Information and Communication Systems: Thesis: Compulsory International Production Management: Thesis: Compulsory International Management and Engineering: Thesis: Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Thesis: Compulsory Logistics, Infrastructure and Mobility: Thesis: Compulsory Materials Science: Thesis: Compulsory Mechanical Engineering and Management: Thesis: Compulsory Mechatronics: Thesis: Compulsory Biomedical Engineering: Thesis: Compulsory Microelectronics and Microsystems: Thesis: Compulsory Product Development, Materials and Production: Thesis: Compulsory Renewable Energies: Thesis: Compulsory Naval Architecture and Ocean Engineering: Thesis: Compulsory Ship and Offshore Technology: Thesis: Compulsory Theoretical Mechanical Engineering: Thesis: Compulsory Process Engineering: Thesis: Compulsory Water and Environmental Engineering: Thesis: Compulsory
