

Module Manual

Master of Science (M.Sc.)
Computer Science

Cohort: Winter Term 2021 Updated: 31st May 2024

Table of Contents

Table of Contents	2
	3
Program description	
Core Qualification	4
Module M0523: Business & Management	4
Module M0524: Non-technical Courses for Master	5
Module M1563: Research Project Computer Science	7
Specialization I. Computer and Software Engineering	8
Module M0753: Software Verification	8
Module M0942: Software Security	10
Module M1694: Security of Cyber-Physical Systems	12
Module M0926: Distributed Algorithms	14
Module M1400: Design of Dependable Systems	15
Module M1685: Selected Aspects in Computer Science	17
Module M1682: Secure Software Engineering	18
Module M1812: Constraint Satisfaction Problems	19
Module M1886: GPU Arcuitectures and Programming	20
Module M1397: Model Checking - Proof Engines and Algorithms	21
Module M1301: Software Testing	23
Module M1427: Algorithmic Game Theory	25
Module M1248: Compilers for Embedded Systems	27
Module M0556: Computer Graphics	29
Module M1741: Operating System Construction	31
Module M1810: Autonomous Cyber-Physical Systems	32
Module M1774: Advanced Internet Computing	33
Module M0924: Software for Embedded Systems	35
Module M0910: Advanced System-on-Chip Design (Lab)	37
Module M0839: Traffic Engineering	38
Module M1742: Operating System Techniques	40
Module M1780: Massively Parallel Systems: Architecture and Programming	41
Specialization II: Intelligence Engineering	
	43
Module M0633: Industrial Process Automation	43
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis	43 45
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	43 45 47
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine	43 45 47 49
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging	43 45 47 49 51
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining	43 45 47 49 51 53
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics	43 45 47 49 51 53 55
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging	43 45 47 49 51 53 55 56
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine	43 45 47 49 51 53 55 56 56 58
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics	43 45 47 49 51 53 55 56
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra	43 45 47 49 51 53 55 56 58 60 60
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M1428: Linear and Nonlinear Optimization	43 45 47 49 51 53 55 56 58 60 60 60 63
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra	43 45 47 49 51 53 55 56 58 60 60
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M1428: Linear and Nonlinear Optimization Module M0716: Hierarchical Algorithms Module M1405: Randomised Algorithms and Random Graphs	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M1405: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M1405: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M1668: Probability Theory	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M1428: Linear and Nonlinear Optimization Module M1405: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M1668: Probability Theory Module M0711: Numerical Mathematics II	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0716: Hierarchical Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Mathematics II Module M0711: Numerical Image Processing	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0716: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Mathematics II Module M0711: Numerical Image Processing	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M1702: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M1405: Randomised Algorithms and Random Graphs Module M0711: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Mathematics II Module M0711: Numerical Image Processing Module M0712: Numerical Mathematics II Module M0711: Numerical Image Processing Module M0712: Numerical Mathematics II Module M0711: Numerical Image Processing Module M1552: Advanced Machine Learning Module M1202: Numerical Methods for Partial Differential Equations	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77 79
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M1428: Linear and Nonlinear Optimization Module M0716: Hierarchical Algorithms Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Theory Module M0712: Advanced Machine Learning Module M0713: Specialization III Systems in Forcessing Module M0714: Numerical Theory Module M0714: Numerical Theory Module M0711: Numerical Mathematics II Module M0712: Advanced Machine Learning Module M1552: Advanced Machine Learning Module M1200: Numerical Methods for Partial Differential Equations Specialization IV. Subject Specific Focus	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0716: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Mathematics II Module M0881: Mathematical Image Processing Module M1552: Advanced Machine Learning Module M1202: Numerical Methods for Partial Differential Equations Specialization IV. Subject Specific Focus Module M1265: Technical Complementary Course I for CSMS	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77 79
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M0627: Machine Learning and Data Mining Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M0667: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0716: Randomised Algorithms and Random Graphs Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0881: Mathematics II Module M0881: Mathematics II Module M1552: Advanced Machine Learning Module M1552: Advanced Machine Learning Module M1555: Technical Complementary Course I for CSMS Module M1565: Technical Complementary Course I for CSMS	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77 79 80 80 80
Module M0633: Industrial Process Automation Module M0630: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M1702: Process Imaging Module M1302: Applied Humanoid Robotics Module M1302: Applied Humanoid Robotics Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M067: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0881: Mathematical Image Processing Module M1552: Advanced Machine Learning Module M1565: Technical Complementary Course I for CSMS Module M1565: Technical Complementary Course I for CSMS Module M1564: Advanced Seminars Computer Science and Communication Technology	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77 79 80 80 80 81 82
Module M0633: Industrial Process Automation Module M0550: Digital Image Analysis Module M0629: Intelligent Autonomous Agents and Cognitive Robotics Module M0630: Robotics and Navigation in Medicine Module M1702: Process Imaging Module M1702: Process Imaging Module M1302: Applied Humanoid Robotics Module M1249: Medical Imaging Module M0623: Intelligent Systems in Medicine Specialization III. Mathematics Module M067: Algorithmic Algebra Module M0716: Hierarchical Algorithms Module M0714: Numerical Algorithms Module M0714: Numerical Treatment of Ordinary Differential Equations Module M0711: Numerical Mathematics II Module M0881: Mathematical Image Processing Module M1552: Advanced Machine Learning Module M1552: Advanced Machine Learning Module M1565: Technical Complementary Course I for CSMS Module M1565: Technical Complementary Course I for CSMS Module M1564: Advanced Seminars Computer Science and Communication Technology Thesis	43 45 47 49 51 53 55 56 58 60 60 60 63 65 67 69 71 73 75 77 79 80 80 80

Content

Ξ

Core Qualification

Module M0523: Busin	ess & Management
Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	 Students are able to find their way around selected special areas of management within the scope of business management Students are able to explain basic theories, categories, and models in selected special areas of business management. Students are able to interrelate technical and management knowledge.
Skills	 Students are able to apply basic methods in selected areas of business management. Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.
Personal Competence	
Social Competence	• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems
Autonomy	• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

	Dagmar Richter
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
rofessional Competence	The Nontechnical Academic Programms (NTA)
Knowledge	The Nontechnical Academic Programmis (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover Self-reliance, self-management, collaboration and professional and personnel management competences. The depart implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teac areas and by means of teaching offerings in which students can qualify by opting for specific competences and a compet level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nonteck complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontech academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual developme competences. It also provides orientation knowledge in the form of "profiles".
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in o two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making transition from school to university and in order to encourage individually planned semesters abroad, there is no obligati study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of de with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliber encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical stu communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the v semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and star in a goal-oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. T differences are reflected in the practical examples used, in content topics that refer to different professional application cont and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leade functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 explain specialized areas in context of the relevant non-technical disciplines, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented i learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of represent in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skille	Professional Competence (Skills)
<i>ЭКШ5</i>	
	 In selected sub-areas students can apply basic and specific methods of the said scientific disciplines, aquestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specidiscipline, to handle simple and advanced questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond

Personal Competence

Social Competence Personal Competences (Social Skills)

	 Students will be able to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	 to reflect on their own profession and professionalism in the context of real-life fields of application
	 to organize themselves and their own learning processes to an effect and deside eventions in fourt of a based advection is a learning.
	 to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly
	 to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Specialization I. Computer and Software Engineering

Module M0753: Softw	are Verification			
Courses				
Title		Тур	Hrs/wk	СР
Software Verification (L0629)		Lecture	2	3
Software Verification (L0630)		Recitation Section (small)	2	3
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous	Automote theory and formed longuages			
Knowledge	 Automata theory and formal languages Computational logic 			
	 Object-oriented programming, algorithms, and data 	structuros		
	 Functional programming or procedural programming 			
	Concurrency	9		
Educational Objectives	After taking part successfully, students have reached the f	ollowing learning results		
Professional Competence				
Knowledge				
	Students apply the major verification techniques in model	-		
	and semantics of the underlying logics, and assess the e	, , ,		, ,
	formal properties of software systems. They find flaws in fo	ormal arguments, arising from mod	deling artifacts or	underspecification.
Skills	Students formulate provable properties of a software syste	em in a formal language. They dev	elop logic-based	models that properly
	abstract from the software under verification and, where	necessary, adapt model or propert	y. They construct	proofs and property
	checks by hand or using tools for model checking or deduc	tive verification, and reflect on the	e scope of the res	ults. Presented with a
	verification problem in natural language, they select the a	ppropriate verification technique a	nd justify their ch	oice.
Personal Competence				
•	Students discuss relevant topics in class. They defend thei	r solutions orally. They communica	te in English.	
Autonomy			-	
	appropriately. Working on exercise problems, they receipt		-	-
	goals. Upon successful completion, students can identify a			
	the field of software verification. Within this field, they ca			
	and compile their findings in academic reports. They can d	levise plans to arrive at new solution	ons or assess exis	sting ones.

Security of Cyber-Physical Systems		Lecture	2	3
Security of Cyber-Physical Systems		Recitation Section (small)	2	3
Module Responsible Admission Requirements				
	IT security, programming skills, statistics			
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	The students know and can explain			
	- the threats posed by cyber attacks to cybe	er-physical systems (CPS)		
	- concrete attacks at a technical level, e.g. o	on bus systems		
	- security solutions specific to CPS with their	r capabilities and limitations		
	 examples of security architectures for CPS 	and the requirements they guarantee		
	- standard security engineering processes for	or CPS		
Skills	The students are able to			
	- identify security threats and assess the ris	sks for a given CPS		
		-		
	 apply attack toolkits to analyse a network 	ed control system, and detect attacks beyond th	ose taught in class	5
	 identify and apply security solutions suita 	ble to the requirements		
	- follow security engineering processes to c	levelop a security architecture for a given CPS		
	- recognize challenges and limitations, e.g.	posed by novel types of attack		
Personal Competence				
-	The students are able to			
	- expertly discuss security risks and incide	ents of CPS and their mitigation in a solution-o	riented fashion w	ith experts and no
	experts			
	- foster a security culture with respect to CF	S and the corresponding critical infrastructures		
Autonomy	The students are able to			
	- follow up and critically assess current deve	elopments in the security of CPS including releva	nt security incider	its
	- master a new topic within the area by self	-study and self-initiated interaction with experts	and peers.

Content	Embedded systems in energy, production, and transportation are currently undergoing a technological transition to highly networked automated cyber-physical systems (CPS). Such systems are potentially vulnerable to cyber attacks, and these can have physical impact. In this course we investigate security threats, solutions and architectures that are specific to CPS. The topics are as follows:	
	Fundamentals and motivating examples Networked and embedded control systems Bus system level attacks	
	Intruder detection systems (IDS), in particular physics-based IDS System security architectures, including cryptographic solutions Adversarial machine learning attacks in the physical world	
	Aspects of Location and Localization Wireless networks and infrastructures for critical applications	
	Communication security architectures and remaining threats Intruder detection systems (IDS), in particular data-centric IDS Resilience against multi-instance attacks Security Engineering of CPS: Process and Norms	
Literature	Recent scientific papers and reports in the public domain.

Admission Requirements	None			
Recommended Previous Knowledge	 Algorithms and data structures Distributed systems Discrete mathematics Graph theory 			
Educational Objectives	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
	Students know the main abstractions of distributed algorithms (synchronous/asynchronous model, message passing and share memory model). They are able to describe complexity measures for distributed algorithms (round , message and memor complexity). They explain well known distributed algorithms for important problems such as leader election, mutual exclusion graph coloring, spanning trees. They know the fundamental techniques used for randomized algorithms. Students design their own distributed algorithms and analyze their complexity. They make use of known standard algorithms They compute the complexity of randomized algorithms.

Content	Description
	The term dependability comprises various aspects of a system. These are typically:
	 Reliability Availability Maintainability Safety Security
	This makes dependability a core aspect that has to be considered early in system design, no matter whether software, embedded systems or full scale cyber-physical systems are considered. Contents
	The module introduces the basic concepts for the design and the analysis of dependable systems. Design examples for getting practical hands-on-experience in dependable design techniques. The module focuses towards embedded systems. The following topics are covered:
	 Modelling Fault Tolerance Design Concepts Analysis Techniques

Content	This course gives an introduction to the topic of constraint satisfaction problems and their complexity. It will cover the basics of the theory such as the universal-algebraic approach to constraint satisfaction and several classical algorithms such as local consistency checking and the Bulatov-Dalmau algorithm. We will finally discuss the recent research directions in the field.Educational Objectives: After taking part successfully, students have reached the following learning results Professional Competence:- Knowledge:* Students can describe basic concepts from the theory of constraint satisfaction such as primitive positive formulas, interpretations, polymorphisms, clones* Students can discuss the connections between these concepts* Students know proofs strategies and can reproduce them- Skills:* Students can use CSPs to model problems fromcomplexity theory and decide their complexity using methods from the course.

Content	- Review of computer architecture basics - measuring performance, benchmarks, five-stage RISC pipeline, caches
	- GPU basics - evolution of GPU computing, a high-level overview of a GPU architecture
	- GPU programming with CUDA - program structure, CUDA threads organization, warp/thread-block scheduling
	- GPU (micro) architecture - streaming multiprocessors, single instruction multiple threads (SIMT) core design, tensor/RT cores,
	mixed-precision support
	- GPU memory hierarchy - banked register file and operand collectors, shared memory, GPU caches (differences w.r.t. CPU caches),
	global memory
	- Branch and memory divergence - branch handling, stack-based reconvergence, memory coalescing, coalescer design
	- Barriers and synchronization
	- Temporal and spatial locality exploitation challenges in GPU caches
	- Global memory- high throughput requirements, GDDR/HBM, memory bandwidth optimization techniques
	- GPU research issues - performance bottlenecks, GPU power modeling, high-power consumption/energy efficiency, GPU security
	- Application case study - deep learning
	- Cycle-accurate simulators for GPUs
	The learning in the lectures will be augmented by a semester-long problem-based project.

Content	Correctness is a major concern in embedded systems. Model checking can fully automatically proof formal properties about digit hardware or software. Such properties are given in temporal logic, e.g., to prove "No two orthogonal traffic lights will ever green."
	And how do the underlying reasoning algorithms work so effectively in practice despite a computational complexity of NP hardne and beyond?
	But what are the limitations of model checking?
	How are the models generated from a given design? The lecture will answer these questions. Open source tools will be used to gather a practical experience.
	Among other topics, the lecture will consider the following topics:
	Modelling digital Hardware, Software, and Cyber Physical Systems
	Data structures, decision procedures and proof engines
	Binary Decision Diagrams
	And-Inverter-Graphs
	Boolean Satisfiability
	Satisfiability Modulo Theories
	Specification Languages

Content	Algorithmic game theory is a topic at the intersection of economics and computation. It deals with analyzing the behavior and interactions of strategic agents, who often try to maximize their incentives. The environment in which those agents interact is referred to as a game. We wish to understand if the agents can reach an "equilibrium", or steady state of the game, in which agents have no incentive to deviate from their chosen strategies. The algorithmic part is to design efficient methods to find equilibria in games, and to make recommendations to the agents so that they can quickly reach a state of personal satisfaction. We will also study mechanism design. In mechanism design, we wish to design markets and auctions and give strategic options to agents, so that they have an incentive to act rationally. We also wish to design the markets and auctions so that they are efficient, in the sense that all goods are cleared and agents do not overpay for the goods which they acquire. Topics: • basic equilibrium concepts (Nash equilibria, correlated equilibria,)	
Literature	 strategic actions (best-response dynamics, no-regret dynamics,) auction design (revenue-maximizing auctions, Vickrey auctions) stable matching theory (preference aggregations, kidney exchanges,) price of anarchy and selfish routing (Braess' paradox, congestion games,) T. Content	Computer graphics and animation are leading to an unprecedented visual revolution. The course deals with its technological foundations: Object-oriented Computer Graphics Projections and Transformations Polygonal and Parametric Modelling Illuminating, Shading, Rendering Computer Animation Techniques Kinematics and Dynamics Effects Students will be be working on a series of mini-projects which will eventually evolve into a final project. Learning computer graphics and animation resembles learning a musical instrument. Therefore, doing your projects well and in time is essential for performing well on this course.

Recommended Previous	Good programming skills are necessary	. Previous knowledge in the field of distributed syste	ms is helpful.		
Knowledge					
Educational Objectives	After taking part successfully, students	have reached the following learning results			
Professional Competence					
Knowledge	After successful completion of the course, students are able to:				
	Describe basic concepts of Cloud Computing, the Internet of Things (IoT), and blockchain technologies				
	Discuss and assess critical aspects of Cloud Computing, the IoT, and blockchain technologies				
	 Select and apply cloud and IoT technologies for particular application areas 				
	Design and develop practical solutions for the integration of smart objects in IoT, Cloud, and blockchain software				
	Implement IoT services				
Skills	The students acquire the ability to model Internet-based distributed systems and to work with these systems. This comprise				
	especially the ability to select and util	lize fitting technologies for different application are	eas. Furthermore,	students are able	
	critically assess the chosen technologies.				
Personal Competence					
Social Competence	Students can work on complex problem	s both independently and in teams. They can excha	nge ideas with eac	h other and use t	
,	individual strengths to solve the problem	n.	5		
Autonomy	Students are able to independently inve	estigate a complex problem and assess which compe	etencies are requir	ed to solve it.

Module M0550: Digita	Il Image Analysis
Courses	
Title	Typ Hrs/wk CP
Digital Image Analysis (L0126)	Lecture 4 6
	Prof. Rolf-Rainer Grigat
Admission Requirements	None
-	
	System theory of one-dimensional signals (convolution and correlation, sampling theory, interpolation and decimation, Four transform, linear time-invariant systems), linear algebra (Eigenvalue decomposition, SVD), basic stochastics and statist (expectation values, influence of sample size, correlation and covariance, normal distribution and its parameters), basics of Matl basics in optics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
	Students can
	 Describe imaging processes Depict the physics of sensorics Explain linear and non-linear filtering of signals Establish interdisciplinary connections in the subject area and arrange them in their context Interpret effects of the most important classes of imaging sensors and displays using mathematical methods and physi models.
Skills	Students are able to
	 Use highly sophisticated methods and procedures of the subject area Identify problems and develop and implement creative solutions.
	Students can solve simple arithmetical problems relating to the specification and design of image processing and image analy systems.
	Students are able to assess different solution approaches in multidimensional decision-making areas.
	Students can undertake a prototypical analysis of processes in Matlab.
Personal Competence	
Social Competence	k.A.
Autonomy	Students can solve image analysis tasks independently using the relevant literature.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence		5 5		
Skills	explain how axioms, features, parameters, or structures used in these formalisms can be learned automatically with different algorithms. Students are also able to sketch different clustering techniques. They depict how the performance of learned classifi- can be improved by ensemble learning, and they can summarize how this influences computational learning theory. Algorithms to reinforcement learning can also be explained by students. Student derive decision trees and, in turn, propositional rule sets from simple and static data tables and are able to name and explain basic optimization techniques. They present and apply the basic idea of first-order inductive leaning. Students apply the BME, MAP, ML, and EM algorithms for learning parameters of Bayesian networks and compare the different algorithms. They a know how to carry out Gaussian mixture learning. They can contrast kNN classifiers, neural networks, and support vec machines, and name their basic components of those techniques. Students compare related machine learning techniques, e.g., k-mear clustering and nearest neighbor classification. They can distinguish various ensemble learning techniques and compare the different goals of those techniques.

Title Applied Humanoid Robotics (L1794	Typ Hrs/wk CP) Project-/problem-based Learning 6 6	
Module Responsible	Patrick Göttsch	
Admission Requirements	None	
Recommended Previous Knowledge	 Object oriented programming; algorithms and data structures Introduction to control systems Control systems theory and design Mechanics 	
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge	 Students can explain humanoid robots. Students can explain the basic concepts, relationships and methods of forward- and inverse kinematics Students learn to apply basic control concepts for different tasks in humanoid robotics. 	
Skills	 Students can implement models for humanoid robotic systems in Matlab and C++, and use these models for robot motion of other tasks. They are capable of using models in Matlab for simulation and testing these models if necessary with C++ code on the rear robot system. They are capable of selecting methods for solving abstract problems, for which no standard methods are available, an apply it successfully. 	
Personal Competence		
Social Competence	Students can develop joint solutions in mixed teams and present these.They can provide appropriate feedback to others, and constructively handle feedback on their own results	
Autonomy	 Students are able to obtain required information from provided literature sources, and to put in into the context of the lecture. They can independently define tasks and apply the appropriate means to solve them.

Knowledge				
Educational Objectives Professional Competence	After taking part successfully, students	have reached the following learning results		
Knowledge	After successful completion of the module, students are able to describe reconstruction methods for different tomographic imag modalities such as computed tomography and magnetic resonance imaging. They know the necessary basics from the fields signal processing and inverse problems and are familiar with both analytical and iterative image reconstruction methods. T students have a deepened knowledge of the imaging operators of computed tomography and magnetic resonance imaging.			
Skills	The students are able to implement reconstruction methods and test them using tomographic measurement data. They c visualize the reconstructed images and evaluate the quality of their data and results. In addition, students can estimate t temporal complexity of imaging algorithms.			
Personal Competence				
Social Competence	Students can work on complex problem individual strengths to solve the problem	is both independently and in teams. They can exch m.	ange ideas with eac	ch other and use th
Autonomy	Students are able to independently inve	estigate a complex problem and assess which com	petencies are requir	ed to solve it.

Mathematical Image Processing (L0991)		Lecture	3	4	
Mathematical Image Processing (LO	992)	Recitation Section (small)	1	2	
Module Responsible	Prof. Marko Lindner				
Admission Requirements	None				
Recommended Previous	 Analysis: partial derivatives, grad 	ient directional derivative			
Knowledge	 Linear Algebra: eigenvalues, least 				
	· Ellear Algebra: elgenvalues, leas	squares solution of a linear system			
Educational Objectives	After taking part successfully, students I	nave reached the following learning results			
Professional Competence					
Knowledge	Students are able to				
	characterize and compare diffusion				
	explain elementary methods of in explain methods of image source				
	 explain methods of image segme sketch and interrelate basic conce 				
Skills	Students are able to				
	implement and apply elementary methods of image processing				
	 explain and apply modern method 	is of image processing			
Personal Competence					
Social Competence	Students are able to work together	in heterogeneously composed teams (i.e., tear	ns from different	study programs a	
	background knowledge) and to explain t	heoretical foundations.			
Autonom					
Autonomy	Students are capable of checking their understanding of complex concepts on their own. They can specify open questions				
	precisely and know where to get I	nelp in solving them.			
	 Students have developed sufficient 	ent persistence to be able to work for longer per	iods in a goal-orier	nted manner on ha	
	problems.

Advanced Machine Learning (L232)		Recitation Section (small)	2	3	
Module Responsible					
Admission Requirements					
Recommended Previous	1. Mathematics I-III				
Knowledge	2. Numerical Mathematics 1/ Numerics				
	3. Programming skills, preferably in Pyth	ion			
Educational Objectives	After taking part successfully, students have	reached the following learning results			
Professional Competence					
Knowledge	Students are able to name, state and classi	fy state-of-the-art neural networks and their co	rresponding mathe	ematical basics. Th	
	can assess the difficulties of different neural	networks.			
Skills	Students are able to implement, understand	, and, tailored to the field of application, apply i	neural networks.		
Personal Competence					
Social Competence	Students can				
	 develop and document joint solutions 	in small toams:			
	 form groups to further develop the ideas and transfer them to other areas of applicability; 				
	 form a team to develop, build, and ad 		Jincy,		
		vance a sortware library.			
Autonomy	Students are able to				
	 correctly assess the time and effort or 	f solf defined work:			
	-	tical and practical excercises are better solved	individually or in a	toom.	
	 define test problems for testing and e 			ceann,	
	'	necessary, to ask questions and seek help.			
	- ussess then maintabal progess and, in	necessary, to ask questions and seek help.

ntroductory Seminar Computer Sci	ence and Communication Technology II (L2429)	Seminar	2	3
Module Responsible	Dozenten des SD E			
Admission Requirements	None			
Recommended Previous	ed Previous Basic knowledge of Computer Science and Mathematics at the Master's level.			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The students are able to			
	 explicate a specific topic in the field of Computer 	ter Science.		
	 describe complex issues, 			
	 present different views and evaluate in a critic 	cal way.		
Skills	The students are able to			
	 familiarize in a specific topic of Computer Scie 	nce in limited time,		
	 realize a literature survey on the specific topic 	and cite in a correct way,		
	 elaborate a presentation and give a lecture to 	a selected audience,		
	 sum up the presentation in 10-15 lines, 			
	 answer questions in the final discussion. 			
Personal Competence				
•	The students are able to			
	 elaborate and introduce a topic for a certain a 			
	 discuss the topic, content and structure of the discuss contain concerts with the audience. 			
	discuss certain aspects with the audience, and act the last way listen and reasoned to succeive from the audience.			
	 as the lecturer listen and respond to questions from the audience. 			
Autonomy	The students are able to			
	define the task in question in an autonomous	way.		
	 develop the necessary knowledge, 			
	 use appropriate work equipment, and 			
	 guided by an instructor critically check the wo 	rking status.

Module M-002: Maste	r Thesis	
Courses		
Title	Typ Hrs/wk CP	
Module Responsible	Professoren der TUHH	
Admission Requirements	According to General Regulations §21 (1):	
	At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.	
	······································	
Recommended Previous		
Knowledge Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence	Ancer taking part successivity, stadents have reached the following rearining reacts	
Knowledge	 The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specializ issues. The students can explain in depth the relevant approaches and terminologies in one or more areas of their subjet describing current developments and taking up a critical position on them. The students can place a research task in their subject area in its context and describe and critically assess the state research. 	
Skills	The students are able:	
	 To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in questio To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/ incompletely defined problems in a solution-oriented way. To develop new scientific findings in their subject area and subject them to a critical assessment. 	
Personal Competence		
Social Competence	Students can	
	 Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structur way. Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addresse while upholding their own assessments and viewpoints convincingly. 	
Autonomy	 Students are able: To structure a project of their own in work packages and to work them off accordingly. To work their way in depth into a largely unknown subject and to access the information required for them to do so. To apply the techniques of scientific work comprehensively in research of their own.
