Program description	3
Core Qualification	4
Module M0577: Non-technical Courses for Bachelors	4
Module M1436: Procedural Programming for Computer Engineers	6
Module M1728: Mathematics I (EN)	7
Module M0561: Discrete Algebraic Structures	9
Module M0624: Automata Theory and Formal Languages	10
Module M1729: Mathematics II (EN)	12
Module M0727: Stochastics	14
Module M1432: Programming Paradigms Module M0625: Databases	16
Module M16025. Databases Module M1592: Statistics	18 20
Module M1592: Statistics Module M0662: Numerical Mathematics I	20
Module M1423: Algorithms and Data Structures	24
Module M1732: Mathematics III (EN)	26
Module M1595: Machine Learning I	28
Module M0672: Signals and Systems	30
Module M0852: Graph Theory and Optimization	33
Module M1586: Scientific Programming	35
Module M0829: Foundations of Management	37
Module M0953: Introduction to Information Security	39
Module M1594: Machine Learning II	41
Module M1593: Data Mining Module M1515: Introduction to Data Acquisition and Proceeding	43
Module M1615: Introduction to Data Acquisition and Processing Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	45 47
Module M1233. Electrical Power Systems 1. Infoduction to Electrical Power Systems Module M0834: Computernetworks and Internet Security	50
Module M0833: Introduction to Control Systems	50
Module M1598: Image Processing	54
Module M0941: Combinatorial Structures and Algorithms	56
Module M0731: Functional Programming	58
Module M0675: Introduction to Communications and Random Processes	60
Module M1804: Engineering Mechanics III (Dynamics)	64
Module M1070: Simulation of Transport and Handling Systems	66
Module M0730: Computer Engineering	68
Module M1620: Ethics in Information Technology	70
Module M0715: Solvers for Sparse Linear Systems	71
Module M1730: Mathematics IV (EN) Module M0562: Computability and Complexity Theory	73 76
Module M0502. Computability and Complexity medry Module M0634: Introduction into Medical Technology and Systems	78
Module M0034. Inforduction into Medical Technology and Systems Module M0777: Semiconductor Circuit Design	80
Module M1005: Enhanced Fundamentals of Materials Science	82
Module M1578: Seminars Computer Science	86
Module M1922: Technical Complementary Course for DSBS (according to Subject Specific Regulations)	88
Specialization Electrical Engineering	89
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	89
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	90
Specialization Logistics	93
Module M1013: Traffic systems and handling technology	93
Module M1004: Logistics Management	95
Specialization Materials Science	98
Module M0933: Fundamentals of Materials Science	98
Module M0934: Advanced Materials	100
Specialization Mechanics	102
Module M0889: Mechanics I (Statics)	102
Module M0696: Mechanics II: Mechanics of Materials	104
Specialization Medicine	106
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	106
Module M1277: MED I: Introduction to Anatomy Module M1278: MED I: Introduction to Radiology and Radiation Therapy	107 109
Module M1278: MED I: Introduction to Physiology	109
Thesis	112
Module M-001: Bachelor Thesis	112

Program description

Content

Ξ

Core Qualification

Module Responsible Admission Requirements	
	None
Recommended Previous	None
Knowledge	
	After taking part successfully, students have reached the following learning results
Professional Competence	The Non-technical Academic Programms (NTA)
Knowledge	
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover a Self-reliance, self-management, collaboration and professional and personnel management competences. The departn implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teach areas and by means of teaching offerings in which students can qualify by opting for specific competences and a compete level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechn complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontech academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual developmen competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in on two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making transition from school to university and in order to encourage individually planned semesters abroad, there is no obligatio study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dea with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are delibera encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migra studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter seme 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a g oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging g oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. The differences are reflected in the practical examples used, in content topics that refer to different professional application contra- and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leader functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	 Students can locate selected specialized areas with the relevant non-technical mother discipline, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
SKIIIS	
	In selected sub-areas students can
	 apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specidiscipline,
	 to handle simple questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond technical relationship to the subject.

Social Competence	Personal Competences (Social Skills)
	 Students will be able to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
	 to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
	 to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	 to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	 to communicate a nontechnical item in a competent way in writen form or verbaly
	to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Discrete Algebraic Structures (L01	54)	Lecture	2	3
Discrete Algebraic Structures (L016	55)	Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous	Mathematics from High School.			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	The students know the important basic	s of discrete algebraic structures including elemer	tary combinatorial	structures, monoio
	groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub sum-, and quotient structures a			
	homomorphisms.			
	c. Students are able to formalize and analyze basic discrete algebraic structures			
Skills	Students are able to formalize and analyze basic discrete algebraic structures.			
Personal Competence				
Social Competence	Students are able to solve specific prob	lems alone or in a group and to present the results	accordingly.	
Autonomy		wledge from specific standard books and to asso	ciate the acquired	I knowledge to oth
	classes.			
	Independent Study Time 124, Study Tir	ne in Lecture 56

Tvp	Lecture
Hrs/wk	
CP	4
	Independent Study Time 92, Study Time in Lecture 28
Lecturer	
Language	EN
Cycle	SoSe
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states) 8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be express enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pump lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars a
	back)
	12. Chomsky normal form
	 CYK algorithm for deciding the word problem for context-free grammrs Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	 17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	 Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verificat
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
Literature	
Literature	1. Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.
	2. Logik für Informatiker Martin Kreuzer, Stefan Kühling, Pearson Studium, 2006

	programming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. T students know the concept of information hiding and can design interfaces with public and private methods. They can u exceptions and apply generic programming in order to make existing data structures generic. The students know the pros a cons of both programming paradigms.			
Skills	Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a mode programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
Social Competence	Students can work in teams and comm	unicate in forums.

Knowledge				
Educational Objectives	After taking part successfully, students have reac	hed the following learning results		
Professional Competence				
Knowledge				
internedge	 Students can name the basic concepts in the students can name the basic concepts in the students of the students	ne area of analysis and differential equation	s. They are able t	to explain them usi
	appropriate examples.			
	 Students can discuss logical connections b 	etween these concepts. They are capable	of illustrating th	ese connections wi
	the help of examples.		5	
	 They know proof strategies and can reprod 	uce them		
	• They know proor strategies and carreprod	dee them.		
Skills	 Students can model problems in the area of analysis and differential equations with the help of the concepts studied in course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate results. 			
Personal Competence Social Competence				
Social competence	 Students are able to work together in team 	s. They are capable to use mathematics as	a common langu	age.
	In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they			. Moreover, they c
	design examples to check and deepen the	understanding of their peers.		
Autonomy	 Students are capable of checking their und 	forstanding of complex concents on their a	wh They can ch	acify anon quactio
	,		wii. They can sp	eeny open questio
	precisely and know where to get help in sol			
	Students have developed sufficient persist	tence to be able to work for longer period	s in a goal-orien	ited manner on ha
	problems.

Signals and Systems (L0432)		Lecture	3	4
Signals and Systems (L0433)		Recitation Section (small)	2	2
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous	Mathematics 1-3			
Knowledge	The modul is an introduction to the theory of signals a 1-3 is expected. Further experience with spectral tra but not required.		-	
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
knowieage	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. The can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, the understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to discrete-time signal.			
Skille	The students are familiar with the contents of lecture The students are able to describe and analyse detern			
5/11/2	system theory. They can analyse and design basi response, stability, linearity etc They can assess the	c systems regarding important proper	ties such as ma	agnitude and phas
Personal Competence				
Social Competence	The students can jointly solve specific problems.			
Autonomy	The students are able to acquire relevant informa	ation from appropriate literature source	ces. They can c	ontrol their level
	knowledge during the lecture period by solving tutori	al problems, software tools, clicker syste	m.

Course L0882: Management Tutorial

Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busine knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Module M0953: Intro	luction to Information	Security			
Courses					
Title			Тур	Hrs/wk	СР
ntroduction to Information Securit Introduction to Information Securit			Lecture Recitation Section (small)	2 2	3 3
Module Responsible	Prof. Riccardo Scandariato				
Admission Requirements					
	Basics of Computer Science				
Knowledge					
Educational Objectives	After taking part successfully, s	idents have reached the foll	owing learning results		
Professional Competence					
Knowledge	Students can				
	security mechanisms, • describe commonly use	d methods for risk and sec		stems and nam	ne the fundamen
	 name the fundamental 	principles of data protection	on.		
Skills	Students can				
	 evaluate the strenghts and weaknesses of the fundamental security mechanisms and of the commonly use methods for risk and security analysis, apply the fundamental principles of data protection to concrete cases. 				
Personal Competence					
	Students are capable of appreciating the impact of security problems on those affected and of the potential responsibilities fo their resolution.				
Autonomy	None				
Workload in Hours	Independent Study Time 124, S	udy Time in Lecture 56			
Credit points	6				
Course achievement	Compulsory Bonus Form No 5 % Subject practical		n arbeit mit aktuellen Technologier	aus dem Bereic	h Sicherheit
Examination	Written exam				
Examination duration and	120 minutes				
scale					
Assignment for the	Computer Science: Specialisation	I. Computer and Software E	Engineering: Elective Compulsory	/	
Following Curricula	Data Science: Core Qualification	Compulsory			
Course L1114: Introduction	o Information Security				
Тур	Lecture				
Hrs/wk	2				
CP	3				
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28				
Lecturer	Prof. Riccardo Scandariato				
Language	EN				
Cycle	WiSe				
Content	Fundamental conceptsPasswords & biometrics				
	 Introduction to cryptogra 	hy			
	 Sessions, SSL/TLS 				

- Sessions, SSL/TLS
 - Certificates, electronic signatures
 - Public key infrastructures
 - Side-channel analysis Access control
 - Privacy
 - Software security basics
 - Security management & risk analysis
 - Security evaluation: Common Criteria

Machine Learning II (L2436)				cture	2	3
Machine Learning II (L2941)	1		Re	citation Section (small)	3	3
Module Responsible	Prof. Nihat Ay					
Admission Requirements	None					
Recommended Previous	Successful participation	in the modules:				
Knowledge	Scientific Program	nmina				
	 Algorithms and D 					
	Machine Learning					
Educational Objectives	After taking part succes	sfully, students have	reached the following I	earning results		
Professional Competence						
Knowledge	Students get to know to	ols used by developr	ment teams to			
	plan developmen	t flows,				
	 mine, process an 					
	 train and validate 	data-orientated mo	dels			
	 follow good pract 	ice in software engin	eering			
CL 11						
SKIIIS	Skills Students work in teams on a larger data project. The required competences are learned and practically appl				oplied. These are	
	example:					
	 project specificat 	ion based on user red	quirements			
	creating a data-orientated software architecture					
	 mining, preproce 	ssing and analyzing l	arger datasets			
	 implementing a l 	earning platform in a	team			
	 comparison of dif 	ferent learning meth	ods			
	 performing statis 	tical tests				
Personal Competence						
	Team work has its own	hallenges with respe	ect to interaction of tear	m members as well as fin	ding the necessa	rv agreement duri
booldi competence				equired competences and		
		5 1 1				
Autonomy						
	results to the team. Ope	en issues must be ide	entified and returned int	to the team to find an agr	eed resolution.	
Workload in Hours	Independent Study Time	e 110, Study Time in	Lecture 70			
Credit points	6					
Course achievement	Compulsory Bonus	orm	Description			
	No 20 %	Excercises				
Examination	Written exam

Lecturer	Prof. Alexander Schlaefer
Language	DE
Cycle	WiSe
Content	Within an actual project setting, relevant tasks in data acquisition and data processing willbe discussed, including
	- data acquisition (e.g., image data, sensor data)
	- data pre-processing (e.g., filtering)
	- data analysis (e.g., solving regressing and classification tasks using machine learning methods)
	- evaluation and interpretation of the results

Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these by principles and an introduction to performance modelling are addressed using computing tasks and physical labs.
	In the second part of the lecture an introduction to Internet security is given. This class comprises:
	 Introduction to the Internet (TCP/IP model) Application layer protocols (HTTP, SMTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol IPv4 & IPv6, routing in the Internet) Data link layer with media access at the example of WLAN Introduction to Internet Security Security Aspects of Address Resolution (DNS/DNSSEC, ARP/SEND Communication Security (IPSec) - From Address Resolution to Routing (Securing BGP) Botnets + Firewalls

Admission Requirements	
	Representation of signals and systems in time and frequency domain, Laplace transform
Knowledge	
	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	 Students can represent dynamic system behavior in time and frequency domain, and can in particular explain proper
	first and second order systems
	They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency respon
	root locus
	 They can explain the Nyquist stability criterion and the stability margins derived from it.
	They can explain the role of the phase margin in analysis and synthesis of control loops
	 They can explain the way a PID controller affects a control loop in terms of its frequency response
	• They can explain issues arising when controllers designed in continuous time domain are implemented digitally
Skills	 Students can transform models of linear dynamic systems from time to frequency domain and vice versa
	 They can simulate and assess the behavior of systems and control loops
	 They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules
	 They can adapt the controllers with the help of neurosite (Elegier-Neuros) canning rules They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques
	 They can calculate discrete-time approximations of controllers designed in continuous-time and use it for
	implementation
	 They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks
	They can use standard software tools (Matlab Control Foolbox, simulity for carrying out these tasks
Personal Competence	
Social Competence	Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs
Autonomy	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and
	when solving given problems.

	 Random experiments Probability model, probability space, sample space Definitions of probability Probability according to Bernoulli/Laplace Probability according to van Mises, relative frequency Bertrand's paradox Axiomatic definition of probability according to Kolmogorov Probability of disjoint and non-disjoint events Venn diagrams

- Continuous and discrete random variables
 - Probability density function (pdf), cululative distribution function (cdf)
 - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
 - Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution. Rayleigh distribution. etc.)
- Multiple random variables
 - Conditional probability, joint probability
 - Conditional and joint probability density function
 - Bayes' rule
 - Correlation coefficient
 - Two-dimensional Gaussian distribution
 - Statistically independent, uncorrelated and orthogonal random variables
 - Independent identically distributed (iid) random variables
 - Properties of expected value and variance
 - Covariance
 - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
 - Central limit theorem
- Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
 - Examples for random processes
 - Ensemble average and time average
 - Ergodic random processes
 - Quadratic mean and variance
 - Probability density function (pdf) and cumulative distribution function (cdf)
 - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
 - Statistically independent, uncorrelated and orthogonal random processes
 - Stationary random processes
 - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of nonstationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
 - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
 - Pseudo-noise sequences, example: Code division multiple access (CDMA)
 - Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khintchine relations
 - White (Gaussian) noise
- Filtering of random processes by LTI systems
 - Transformation of the probability density function (pdf)
 - Transformation of the mean
 - Transformation of the power spectral density (psd)
 - Correlation functions of input and output signal
 - · Filtering of white Gaussian noise
 - Bandlimitation for noise power limitation
 - Preemphasis and deemphasis
- Companding, mu-law, A-law
- Functions of random variables
 - Transformation of probabilities and of the probability density function (pdf)
 - Application: Non-linear amplifiers
- Functions of two random variables
 - Probability density function
 - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
 - Wireline channels: Telephone cable, coaxial cable, optical fiber
 - Wireless channels: Fading radio channel, underwater channels
 - Frequency-flat and frequency-selective channels
 - Additive white Gaussian noise (AWGN) channel
 - Signal to noise power ratio (SNR)
 - Discrete-time channel models
 - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
 - Sampling
 - Sampling theorem
 - Pulse modulation
 - Pulse-amplitude modulation (PAM)
 - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
 - Pulse-position modulation (PPM)
 - Pulse-code modulation (PCM)
 - Quantization
 - Linear quantizaton, midtread and midrise characteristic
 - Quantization error, quantization noise
 - Signal-to-quantization noise ratio
 - Non-linear quantization, compressor characteristics, mu-law, A-law
 - Speech transmission with PCM
 - Differential pulse-code modulation (DPCM)
 - Linear prediction according to the minimum mean squared error (MMSE) criterion.
 - DPCM with forward prediction and backward prediction

Content	The lecture deals with the simulation of external logistics systems. The focus is therefore on the consideration of log
	processes between companies or on transhipment systems, such as ports or individual terminals.
	In the first part of the lecture, students will first acquire basic knowledge of external logistics systems and the advantages of
	simulations to present them. Then an overview of existing simulation types and programs is given and examples for ex
	simulation models of logistic systems in science and practice are shown. Some simulation models will be demonstrated.
	In the second part of the lecture the students learn the basic handling of the simulation software Plant Simulation®. They re
	theoretical explanations of the general functionality of the simulation tool, which are further deepened through the u
	extensive, interactive examples. At the same time, five exercises, which build on each other, offer students the opportun
	implement the course content they have learnt alone and in small groups. The exercises can be completed during the supe
	lecture periods as well as at other times.
	The acquired knowledge is to be applied in the third part in the course of group work. The students will be divided into gr
	each of which will then work on a relevant problem from the field of (external) logistic systems by means of simulation
	students are given a defined period of time for their work. During this time at least one person is always available for que
	and suggestions. The results of the group work are to be documented in a simulation report and handed in at the end of
	processing time. Finally, the individual groups present the problems they have worked on and their results in a presentation.

Title		Тур	Hrs/wk	СР
Computer Engineering (L0321)		Lecture	3	4
Computer Engineering (L0324)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Basic knowledge in electrical engineering			
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	This module deals with the foundations of	the functionality of computing systems. It cover	ers the layers from	n the assembly-le
	programming down to gates. The module in	cludes the following topics:		
	Introduction			
		algebra, Boolean functions, hardware synthesis,	combinational net	works
	 Sequential logic: Flip-flops, automata 			
	Technological foundations			
	Computer arithmetic: Integer addition	n, subtraction, multiplication and division		
	Basics of computer architecture: Prog	ramming models, MIPS single-cycle architecture	, pipelining	
	Memories: Memory hierarchies, SRAM	I, DRAM, caches		
	 Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, but 		, busses	
CI-111-	The short shows for		the links we also have	
Skills		om the architect's perspective, i.e., they identify		
		ents can analyze, how highly specific and individ		
		They are able to distinguish between and to exp	biain the different	abstraction layers
	today's computing systems - from gates and	circuits up to complete processors.		
	After successful completion of the module,	the students are able to judge the interdepen	dencies between	a physical comput
	system and the software executed on it. In	particular, they shall understand the consequer	ces that the exec	ution of software h
	on the hardware-centric abstraction layers	from the assembly language down to gates. This	s way, they will be	e enabled to evalua
	the impact that these low abstraction levels	have on an entire system's performance and to	propose feasible	options.
Personal Competence				
	Students are able to solve similar problems	alone or in a group and to present the results ac	cordinaly	
Social competence	Statents are able to some similar problems	alone of an a group and to present the results ac	cordingly.	
Autonomy	Students are able to acquire new knowledge	e from specific literature and to associate this kn	owledge with othe	er classes.

Cycle	SoSe
Content	Advanced understanding of metals:
	Physical materials properties
	o Materials behaviour - elastic, thermal, electrical
	o Superelasticity and shape memory effect
	 Fundamentals of electrical conductivity in metals and semiconductors
	o Superconductivity
	Chemical (or "dry") corrosion
	o Driving forces and mechanisms
	o Passivation
	o Growth laws
	Introduction to electrochemistry
	o Electrolytes
	o lons
	o Solvatation
	o Dissolution and deposition of metals
	o Galvanic cells and cell voltage
	o Galvanic series
	o Nernst equation
	o Polarizable electrodes
	o Electrochemical double layer
	o Capacitive and pseudocapacitive processes
	o Capacitive currents and Faraday currents
	Electrochemical (or "wet") corrosion and corrosion protection
	o Basic observations
[o Galvanic corrosion

I	
	o Protection against galvanic corrosion
	o Stainless steel
	o sacrificial anodes
	o Passivation and Pourbaix diagrams
	o Corrosion through gas reduction
	o Crevice corrosion
	o Stress corrosion cracking
	o Alloy corrosion and nanoporous metals
	Electrochemical energy storage
	o How a battery works
	o Lead accumulators
	o Alkaline batteries
	o Nickel-metal hydride accumulators
	o Flux batteries
	o Lithium-ion accumulators
	o Electrolytic and super capacitors
	o Fuel cells
	Materials for hydrogen storage
	o Storage strategies
	o Requirements for storage materials
	o State of the art
	 Magnetism and magnetic materials Phenomenology: magnetic field and magnetization
	 Prenomenology: magnetic field and magnetization Para-, ferro-, antiferromagnets; Curie transition
	 Magnetism at the atomic scale; exchange coupling Magnetization isotherms, domains
	o Measurement methods
	 Magnetocrystalline anisotropy and domain walls
	 Hard magnetic materials and their applications
	 Soft magnetic materials and their applications
	o Solt magnetic indentitis and their applications

Content	The course Transportation and Handling Technology teaches the basics, possible applications and areas of application of transportation and handling techniques. The students are enabled to select, evaluate and dimension suitable techniques for defined transport and handling tasks. In addition, a basic knowledge of the relevant guidelines and standards is taught. The lecture is part of the bachelor's program "Logistics and Mobility" and is particularly aimed at students in their third semester. The aim is to convey the basics, possible applications and usefulness of the various transport and handling tasks. In addition to the transported goods and loading units, the various means of transport, handling terminals and the necessary equipment play a special role. Furthermore, it is possible to build up a basic knowledge of the relevant guidelines and standards. In addition to road, rail, water (inland and sea shipping), air, combined transport is also addressed.
	Contents of the lecture Basics, possible applications, usefulnes of different transport and handling techniques Overview of transported goods, loading units, means of transport, handling terminals and equipment Representation of the modes of transport: road, rail, water (inland waterway, ocean-going vessel), air, combined transport

Content	The exercise consists of two parts. In the first part, the topics presented in the lecture are deepened by means of guided quantitative group exercises.
	In the second part of the exercise, students work on a topic throughout the semester in the context of research-based learning.
	This takes place in so-called research-based learning: "Research-based learning is characterized [] by the fact that the students (co-)design, experience and reflect on the process of a research project, which is aimed at gaining knowledge that is also of interest to third parties, in its essential phases - from the development of questions and hypotheses to the selection and execution of methods to the examination and presentation of the results in independent work or in active participation in a comprehensive project" (translated from German / Huber 2009, p.11).
	The students apply the knowledge they have acquired in the course of two written papers. These written assignments are carried out as group work.
	The contents of the written papers deal, for example, with the presentation of the entire maritime supply chain of different types of goods, such as containers, crude oil, project cargo or RoRo.
	Students can achieve a total of up to 10% for both written papers.

-	In the era of time-competition production and logistics need to be considered as a combined strategic competitive advantage.	
	"Introduction in to production logistics" gives an overview over the different disciplinces of production logistics:	
	- Development from cost-, quality to time-competitiion,	
	- fundamentals of production and logistics,	
	- phase-oriented and functional subsystems of production logistics,	
	- planning and steering,	
	- analysis and optimization (focus: Lean Management),	
	 production logistics controlling and supply-chain management in production network 	
	Theory is complented by case studies and guest presentations.

Specialization Materials Science

Module M0933: Funda	amentals of Materials Science			
Courses				
Title		Тур	Hrs/wk	СР
Fundamentals of Materials Science I (L1085)		Lecture	2	2
Fundamentals of Materials Science	II (Advanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture	2	2
Physical and Chemical Basics of Ma	terials Science (L1095)	Lecture	2	2
Module Responsible	Prof. Jörg Weißmüller			
Admission Requirements	None			
Recommended Previous	Highschool-level physics, chemistry und mathematics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence				
Knowledge	The students have acquired a fundamental knowledge on n	netals, ceramics and polyr	ners and can descr	ribe this knowledg
	comprehensively. Fundamental knowledge here means specific	ally the issues of atomic stru	ucture, microstructu	ıre, phase diagram
	phase transformations, corrosion and mechanical properties. Th	e students know about the	key aspects of char	acterization metho
	for materials and can identify relevant approaches for cha	racterizing specific propert	ies. They are able	to trace materia
	phenomena back to the underlying physical and chemical laws	of nature.		
CL 11	<u>_</u>			
Skills	The students are able to trace materials phenomena back to			
	phenomena here refers to mechanical properties such as stren			
	resistance, and to phase transformations such as solidification			
	between processing conditions and the materials microstructu	re, and they can account f	or the impact of m	icrostructure on tr
	material's behavior.			
Demonstration of the second				
Personal Competence				
Social Competence	-			
Autonomy	- In demonstrate Churche Times - O.C., Churche Times in Lasthurs - O.A.			
Credit points	Independent Study Time 96, Study Time in Lecture 84			
Course achievement				
Examination	Written exam			
Examination duration and	180 min			
scale

Specialization Mechanics

Module M0889: Mecha	anics I (Statics)				
Courses					
Title		Тур	Hrs/wk	СР	
Mechanics I (Statics) (L1001)	Lecture 2				
Mechanics I (Statics) (L1002)		Recitation Section (small)	2	2	
Mechanics I (Statics) (L1003)		Recitation Section (large)	1	1	
Module Responsible	Prof. Robert Seifried				
Admission Requirements	None				
Recommended Previous	Solid school knowledge in mathematics and physics.				
Knowledge					
Educational Objectives	After taking part successfully, students have reached the	following learning results			
Professional Competence					
Knowledge	The students can				
	 describe the axiomatic procedure used in mechani 	cal contexts;			
	 explain important steps in model design; 				
	 present technical knowledge in stereostatics. 				
Skills	The students can				
	 explain the important elements of mathematical / 	mechanical analysis and model forr	mation, and appl	y it to the context of	
	their own problems;				
	apply basic statical methods to engineering problems;				
	 estimate the reach and boundaries of statical methods 	nods and extend them to be applicab	le to wider probl	em sets.	
Personal Competence					
Social Competence	The students can work in groups and support each other	to overcome difficulties.			
Autonomy	Students are capable of determining their own strengths	and weaknesses and to organize the	ir time and learn	ing based on those.	
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

ntroduction to Radiology and Radia	ation Therapy (L0383)	Lecture	2	3	
Module Responsible	Prof. Ulrich Carl				
•	None				
Recommended Previous Knowledge	None				
Ţ	After taking part successfully, students	have reached the following learning results			
Professional Competence					
Knowledge					
	The students can distinguish different t	types of currently used equipment with respect	to its use in radiation th	erapy.	
	The students can explain treatment pla	ans used in radiation therapy in interdisciplinary	contexts (e.g. surgery,	internal medicine).	
	The students can describe the pati	ients' passage from their initial admittance	e through to follow-up	o care.	
	Diagnostics				
	The students can illustrate the technic	cal base concepts of projection radiography, in	cluding angiography an	d mammography	
	well as sectional imaging techniques (C		cluding anglography an	a mannography,	
	The students can explain the diagnost	ic as well as therapeutic use of imaging technic	nues as well as the tecl	nical basis for tho	
	techniques.				
	The students can choose the right trea	tment method depending on the patient's clinic	al history and needs.		
	The student can explain the influence of	of technical errors on the imaging techniques.			
	The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.				
Skills	Therapy				
	The students can distinguish curative and palliative situations and motivate why they came to that conclusion.				
	The students can develop adequate therapy concepts and relate it to the radiation biological aspects.				
	The students can use the therapeutic principle (effects vs adverse effects)				
	The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the				
	tumor) and choose the energy needed in that situation (irradiation planning).				
	The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social hel				
	groups, self-help groups, social service		e.g. follow up treatment		
	Diagnostics				
	-

Cycle				
Content	The students will be given an understanding of the technological possibilities in the field of medical imaging interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments

Thesis Module M-001: Bachelor Thesis					
Courses					
Title	Typ Hrs/wk CP				
Module Responsible Admission Requirements	Professoren der TUHH				
Aumssion Requirements	According to General Regulations §21 (1):				
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.				
Recommended Previous Knowledge					
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence					
Knowledge Skills	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their cours of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solv subject-related problems. 				
	 With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions o technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 				
Personal Competence Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably an in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 				
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientifi problem. The students can apply the essential techniques of scientific work to research of their own.
