|---|-----|
| Table of Contents   | 2   |
| Program description   | 3   |
| Core Qualification  | 4   |
| Module M0561: Discrete Algebraic Structures   | 4   |
| Module M1436: Procedural Programming for Computer Engineers                                       | 5   |
| Module M1809: Introduction to Data Science  | 7   |
| Module M1728: Mathematics I (EN)  | 8   |
| Module M1750: Practical module 1 (dual study program, Bachelor's degree)                          | 10  |
| Module M1755: Linking theory and practice (dual study program, Bachelor's degree)                 | 12  |
| Module M0624: Automata Theory and Formal Languages  | 14  |
| Module M0727: Stochastics   | 16  |
| Module M1432: Programming Paradigms   | 18  |
| Module M1729: Mathematics II (EN)   | 20  |
| Module M0829: Foundations of Management   | 22  |
| Module M1751: Practical module 2 (dual study program, Bachelor's degree)                          | 24  |
| Module M0625: Databases   | 26  |
| Module M1592: Statistics  | 28  |
| Module M0662: Numerical Mathematics I   | 30  |
| Module M1423: Algorithms and Data Structures  | 32  |
| Module M1732: Mathematics III (EN)  | 34  |
| Module M1752: Practical module 3 (dual study program, Bachelor's degree)                          | 36  |
| Module M1595: Machine Learning I  | 38  |
| Module M1578: Seminars Computer Science   | 40  |
| Module M0672: Signals and Systems   | 42  |
| Module M0852: Graph Theory and Optimization   | 45  |
| Module M1586: Scientific Programming  | 47  |
| Module M1753: Practical module 4 (dual study program, Bachelor's degree)                          | 49  |
| Module M0953: Introduction to Information Security  | 51  |
| Module M1594: Machine Learning II   | 53  |
| Module M1593: Data Mining   | 55  |
| Module M1754: Practical module 5 (dual study program, Bachelor's degree)                          | 57  |
| Module M1620: Ethics in Information Technology  | 59  |
| Specialization I. Mathematics/Computer Science  | 60  |
| Module M0834: Computernetworks and Internet Security  | 60  |
| Module M0731: Functional Programming  | 62  |
| Module M0941: Combinatorial Structures and Algorithms   | 64  |
| Module M0675: Introduction to Communications and Random Processes                                 | 66  |
| Module M0730: Computer Engineering  | 70  |
| Module M1615: Introduction to Data Acquisition and Processing                                     | 72  |
| Module M1598: Image Processing  | 74  |
| Module M0562: Computability and Complexity Theory   | 76  |
| Module M0715: Solvers for Sparse Linear Systems   | 78  |
| Module M1730: Mathematics IV (EN)   | 80  |
| Module M0732: Software Engineering  | 83  |
| Module M1922: Technical Complementary Course for DSBS (according to Subject Specific Regulations) | 85  |
| Specialization II. Application  | 86  |
| Module M0933: Fundamentals of Materials Science   | 86  |
| Module M1802: Engineering Mechanics I (Stereostatics)   | 88  |
| Module M0833: Introduction to Control Systems   | 90  |
| Module M0634: Introduction into Medical Technology and Systems                                    | 92  |
| Module M1519: Introduction to Electrical Engineering (Technomathematics)                          | 94  |
| Module M1004: Logistics Management  | 96  |
| Module M1277: MED I: Introduction to Anatomy  | 99  |
| Module M1278: MED I: Introduction to Radiology and Radiation Therapy                              | 101 |
| Thesis  | 103 |
| Module M1800: Bachelor thesis (dual study program)  | 103 |

## Core Qualification

### Module M0561: Discrete Algebraic Structures

| Courses                                       |  |        |    |
|---|--|--------|----|
| Title   | Typ  | Hrs/wk | CP |
| Discrete Algebraic Structures (L0164)         | Lecture  | 2      | 3  |
| Discrete Algebraic Structures (L0165)         | Recitation Section (small)   | 2      | 3  |
| <b>Module Responsible</b>                     | Prof. Karl-Heinz Zimmermann  |        |    |
| <b>Admission Requirements</b>                 | None   |        |    |
| <b>Recommended Previous Knowledge</b>         | Mathematics from High School.  |        |    |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>                | <p><i>Knowledge</i> The students know the important basics of discrete algebraic structures including elementary combinatorial structures, monoids, groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub-, sum-, and quotient structures and homomorphisms.</p> <p><i>Skills</i> Students are able to formalize and analyze basic discrete algebraic structures.</p> |        |    |
| <b>Personal Competence</b>                    | <p><i>Social Competence</i> Students are able to solve specific problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific standard books and to associate the acquired knowledge to other classes.</p>  |        |    |
| <b>Workload in Hours</b>                      | Independent Study Time 124, Study Time in Lecture 56   |        |    |
| <b>Credit points</b>                          | 6  |        |    |
| <b>Course achievement</b>                     | None   |        |    |
| <b>Examination</b>                            | Written exam   |        |    |
| <b>Examination duration and scale</b>         | 120 min  |        |    |
| <b>Assignment for the Following Curricula</b> | General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory<br>Computer Science: Core Qualification: Compulsory<br>Data Science: Core Qualification: Compulsory<br>Computer Science in Engineering: Core Qualification: Compulsory<br>Orientation Studies: Core Qualification: Elective Compulsory   |        |    |

#### Course L0164: Discrete Algebraic Structures

|                          |   |
|--------------------------|---|
| <b>Typ</b>               | Lecture   |
| <b>Hrs/wk</b>            | 2   |
| <b>CP</b>                | 3   |
| <b>Workload in Hours</b> | Independent Study Time 62, Study Time in Lecture 28 |
| <b>Lecturer</b>          | Prof. Karl-Heinz Zimmermann                         |
| <b>Language</b>          | DE/EN   |
| <b>Cycle</b>             | WiSe  |
| <b>Content</b>           |   |
| <b>Literature</b>        |   |

#### Course L0165: Discrete Algebraic Structures

|                          |   |
|--------------------------|---|
| <b>Typ</b>               | Recitation Section (small)                          |
| <b>Hrs/wk</b>            | 2   |
| <b>CP</b>                | 3   |
| <b>Workload in Hours</b> | Independent Study Time 62, Study Time in Lecture 28 |
| <b>Lecturer</b>          | Prof. Karl-Heinz Zimmermann                         |
| <b>Language</b>          | DE/EN   |
| <b>Cycle</b>             | WiSe  |
| <b>Content</b>           | See interlocking course                             |
| <b>Literature</b>        | See interlocking course                             |

| Module M1436: Procedural Programming for Computer Engineers |  |                            |               |
|---|--|----------------------------|---------------|
| <b>Courses</b>  |  |                            |               |
| <b>Title</b>  |  | <b>Typ</b>                 | <b>Hrs/wk</b> |
| Procedural Programming for Computer Engineers (L2163)       |  | Lecture                    | 2             |
| Procedural Programming for Computer Engineers (L2164)       |  | Recitation Section (large) | 1             |
| Procedural Programming for Computer Engineers (L2165)       |  | Practical Course           | 2             |
| <b>Module Responsible</b>                                   | Prof. Bernd-Christian Renner   |                            |               |
| <b>Admission Requirements</b>                               | None   |                            |               |
| <b>Recommended Previous Knowledge</b>                       | None   |                            |               |
| <b>Educational Objectives</b>                               | After taking part successfully, students have reached the following learning results   |                            |               |
| <b>Professional Competence</b>                              |  |                            |               |
| <i>Knowledge</i>  | Students will know   |                            |               |
|   | <ul style="list-style-type: none"> <li>- the essential features of a procedural programming language</li> <li>- the steps during the compilation of procedural source code to machine code</li> <li>- all essential language constructs and data types of a procedural programming language</li> <li>- software design concepts for the implementation of procedural programs</li> </ul> |                            |               |
| <i>Skills</i>   | <ul style="list-style-type: none"> <li>- Mastery of typical development tools</li> <li>- Designing simple, structured programs based on a procedural programming language</li> <li>- Debugging by analyzing compiler warnings and error messages</li> <li>- Analysis and explanation of procedural programs</li> </ul>   |                            |               |
| <b>Personal Competence</b>                                  |  |                            |               |
| <i>Social Competence</i>                                    | <ul style="list-style-type: none"> <li>- After completing the module, students are able to work on subject-specific tasks alone or in a group and to present the results appropriately.</li> </ul>   |                            |               |
| <i>Autonomy</i>   | <ul style="list-style-type: none"> <li>- After completion of the module, students are able to work independently on parts of the subject area using reference books, to summarize the acquired knowledge, to present and to link it with the contents of other courses.</li> </ul>   |                            |               |
| <b>Workload in Hours</b>                                    | Independent Study Time 110, Study Time in Lecture 70   |                            |               |
| <b>Credit points</b>  | 6  |                            |               |
| <b>Course achievement</b>                                   | None   |                            |               |
| <b>Examination</b>  | Written exam   |                            |               |
| <b>Examination duration and scale</b>                       | 120 min  |                            |               |
| <b>Assignment for the Following Curricula</b>               | Computer Science: Core Qualification: Compulsory<br>Data Science: Core Qualification: Compulsory<br>Computer Science in Engineering: Core Qualification: Compulsory<br>Orientation Studies: Core Qualification: Elective Compulsory<br>Technomathematics: Core Qualification: Compulsory   |                            |               |

| Course L2163: Procedural Programming for Computer Engineers |  |
|---|--|
| <b>Typ</b>  | Lecture  |
| <b>Hrs/wk</b>   | 2  |
| <b>CP</b>   | 2  |
| <b>Workload in Hours</b>                                    | Independent Study Time 32, Study Time in Lecture 28  |
| <b>Lecturer</b>   | Prof. Bernd-Christian Renner   |
| <b>Language</b>   | DE/EN  |
| <b>Cycle</b>  | WiSe   |
| <b>Content</b>  | <ul style="list-style-type: none"> <li>- Development tools: preprocessor, compiler, linker, assembler, IDE, version management (Git)</li> <li>- Procedural programming: fundamental data types, operators, control structures, functions, pointers and arrays, scopes and lifetime of variables, structures / unions, function pointers, Command line arguments</li> <li>- Programming techniques: Modularization, separation of interface and implementation, callback functions, structured data types.</li> </ul>   |
| <b>Literature</b>   | <ul style="list-style-type: none"> <li>- Greg Perry and Dean Miller. C Programming Absolute Beginner's Guide: No experience necessary! Que Publishing; 3. Auflage (7. August 2013). ISBN 978-0789751980.</li> <li>- Helmut Erlenkötter. C: Programmieren von Anfang an. Rowohlt Taschenbuch; 25. Auflage (1. Dezember 1999). ISBN 978-3499600746.</li> <li>- Markus Neumann. | Module M1809: Introduction to Data Science    |   |               |           |
|---|---|---------------|-----------|
| <b>Courses</b>                                |   |               |           |
| <b>Title</b>                                  | <b>Typ</b>  | <b>Hrs/wk</b> | <b>CP</b> |
| Introduction to Data Science (L2998)          | Lecture   | 2             | 4         |
| Introduction to Data Science (L2999)          | Seminar   | 1             | 2         |
| <b>Module Responsible</b>                     | Prof. Tobias Knopp  |               |           |
| <b>Admission Requirements</b>                 | None  |               |           |
| <b>Recommended Previous Knowledge</b>         | none  |               |           |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results  |               |           |
| <b>Professional Competence</b>                | <p><i>Knowledge</i> In this course, students receive a broad overview of the scientific field known as Data Science. The basic terms and concepts are explained at a high level of abstraction and enable the students to classify the methods taught in the further course of study. In addition to a historical overview, current application examples of Data Science are presented.</p> <p><i>Skills</i> Students are able to:</p> <ul style="list-style-type: none"> <li>• to define data science;</li> <li>• to understand that problem definition and problem solving include different perspectives, approaches, and motives;</li> <li>• to discuss the responsibility of data science and computer science for the design of technology in respect to societal change;</li> <li>• to list important methods and ideas of data science, and to critically discuss their relevance.</li> </ul> |               |           |
| <b>Personal Competence</b>                    | <p><i>Social Competence</i> Students are able to discuss and collaborate in small groups to present a topic related to Data Science.</p> <p><i>Autonomy</i> Students are able to independently prepare and review the lecture content.</p>  |               |           |
| <b>Workload in Hours</b>                      | Independent Study Time 138, Study Time in Lecture 42  |               |           |
| <b>Credit points</b>                          | 6   |               |           |
| <b>Course achievement</b>                     | None  |               |           |
| <b>Examination</b>                            | Presentation  |               |           |
| <b>Examination duration and scale</b>         | Preparation and presentation of a poster on a Data Science topic  |               |           |
| <b>Assignment for the Following Curricula</b> | Data Science: Core Qualification: Compulsory  |               |           |

| Course L2998: Introduction to Data Science |   |
|--|---|
| <b>Typ</b>                                 | Lecture   |

| <b>Module M0624: Automata Theory and Formal Languages</b> |  |               |           |
|---|--|---------------|-----------|
| <b>Courses</b>  |  |               |           |
| <b>Title</b>  | <b>Typ</b>   | <b>Hrs/wk</b> | <b>CP</b> |
| Automata Theory and Formal Languages (L0332)              | Lecture  | 2             | 4         |
| Automata Theory and Formal Languages (L0507)              | Recitation Section (small)   | 2             | 2         |
| <b>Module Responsible</b>                                 | Prof. Matthias Mnich   |               |           |
| <b>Admission Requirements</b>                             | None   |               |           |
| <b>Recommended Previous Knowledge</b>                     | Participating students should be able to<br>- specify algorithms for simple data structures (such as, e.g., arrays) to solve computational problems<br>- apply propositional logic and predicate logic for specifying and understanding mathematical proofs<br>- apply the knowledge and skills taught in the module Discrete Algebraic Structures   |               |           |
| <b>Educational Objectives</b>                             | After taking part successfully, students have reached the following learning results   |               |           |
| <b>Professional Competence</b>                            | <p><i>Knowledge</i> Students can explain syntax, semantics, and decision problems of propositional logic, and they are able to give algorithms for solving decision problems. Students can show correspondences to Boolean algebra. Students can describe which application problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.</p> <p><i>Skills</i> Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluate which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language emptiness problem in case of infinite words.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul> |               |           |

| <b>Language</b>                                    | EN  |
| <b>Cycle</b>                                       | SoSe  |
| <b>Content</b>                                     | <ol style="list-style-type: none"> <li>1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF</li> <li>2. Predicate logic, unification, predicate logic resolution</li> <li>3. Temporal Logics (LTL, CTL)</li> <li>4. Deterministic finite automata, definition and construction</li> <li>5. Regular languages, closure properties, word problem, string matching</li> <li>6. Nondeterministic automata:<br/>Rabin-Scott transformation of nondeterministic into deterministic automata</li> <li>7. Epsilon automata, minimization of automata,<br/>elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)</li> <li>8. Myhill-Nerode Theorem:<br/>Correctness of the minimization procedure, equivalence classes of strings induced by automata</li> <li>9. Pumping Lemma for regular languages:<br/>provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive enough to solve a word problem for some given language</li> <li>10. Regular expressions vs. finite automata:<br/>Equivalence of formalisms, systematic transformation of representations, reductions</li> <li>11. Pushdown automata and context-free grammars:<br/>Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and back)</li> <li>12. Chomsky normal form</li> <li>13. CYK algorithm for deciding the word problem for context-free grammars</li> <li>14. Deterministic pushdown automata</li> <li>15. Deterministic vs. nondeterministic pushdown automata:<br/>Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler</li> <li>16. Regular grammars</li> <li>17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars</li> <li>18. Chomsky hierarchy</li> <li>19. Mealy- and Moore automata:<br/>Automata with output (w/o accepting states), infinite state sequences, automata networks</li> <li>20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification w.r.t. temporal logic specifications (in particular LTL)</li> <li>21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic</li> <li>22. Fixed points, propositional mu-calculus</li> <li>23. Characterization of regular languages by monadic second-order logic (MSO)</li> </ol> |

| <b>Recommended Previous Knowledge</b>         | Lecture on procedural programming or equivalent programming skills  |               |           |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results  |               |           |
| <b>Professional Competence</b>                | <p><i>Knowledge</i> The students have a fundamental understanding of object orientated and generic programming and can apply it in small programming projects. They can design own class hierarchies and differentiate between different ways of inheritance. They have a fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can use exceptions and apply generic programming in order to make existing data structures generic. The students know the pros and cons of both programming paradigms.</p> <p><i>Skills</i> Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a modern programming language and use these suitably in the implementation. They can design and implement unit tests.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work in teams and communicate in forums.</p> <p><i>Autonomy</i> In a programming internship, students learn object-oriented programming under supervision. In exercises they develop individual and independent solutions and receive feedback.</p> |               |           |

| <b>Workload in Hours</b>          | Independent Study Time 62, Study Time in Lecture 28  |
| <b>Lecturer</b>                   | Prof. Christoph Ihl, Katharina Roedelius   |
| <b>Language</b>                   | DE   |
| <b>Cycle</b>                      | WiSe/SoSe  |
| <b>Content</b>                    | <p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p> |

| <b>Module Responsible</b>  | Dr. Henning Haschke  |        |    |
| <b>Admission Requirements</b>  | None   |        |    |
| <b>Recommended Previous Knowledge</b>                                    | <ul style="list-style-type: none"> <li>• Successful completion of practical module 1 as part of the dual Bachelor's course</li> <li>• course A from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>  |        |    |
| <b>Educational Objectives</b>  | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>   |  |        |    |
| <i>Knowledge</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... describe their employer's organisational structure (company) and differentiate between associated regulations that relate to how tasks and competences are distributed, as well as how work processes are handled.</li> <li>• ... understand the structure and objectives of the dual study programme and the increasing requirements throughout the course of study.</li> </ul>  |        |    |
| <i>Skills</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... use equipment and resources professionally in accordance with the assigned work areas and tasks, and assess operational processes and procedures with regard to the intended work results/objectives.</li> <li>• ... implement the university's application recommendations in relation to their current tasks.</li> </ul>  |        |    |
| <b>Personal Competence</b>   |  |        |    |
| <i>Social Competence</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... have familiarised themselves with their new working environment (learning environment) and the associated tasks/processes/working relationships.</li> <li>• ... know their central points of contact and colleagues, and are integrated into the designated tasks and work areas.</li> <li>• ... coordinate work tasks with their professional supervisor and justify procedures and intended results.</li> <li>• ... help shape the work in the assigned work area and offer their colleagues support to complete their work or ask for support based on their needs.</li> <li>• ... work together with others in interdisciplinary work teams in a result-oriented manner.</li> </ul>   |        |    |
| <i>Autonomy</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... structure their work and learning processes within the company independently in line with their responsibilities and authorisations, and coordinate them with their professional supervisor.</li> <li>• ... complete work tasks/assignments independently and/or with the support of colleagues.</li> <li>• ... coordinate the practical phase with any individual preparation required for the examination phase at TUHH.</li> <li>• ... document and reflect on how their foundational subjects link with their work as an engineer.</li> </ul>   |        |    |
| <b>Workload in Hours</b>   | Independent Study Time 180, Study Time in Lecture 0  |        |    |
| <b>Credit points</b>   | 6  |        |    |
| <b>Course achievement</b>  | None   |        |    |
| <b>Examination</b>   | Written elaboration  |        |    |
| <b>Examination duration and scale</b>                                    | Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.   |        |    |

| Title   | Typ  | Hrs/wk | CP |
| Databases (L0337)                             | Lecture  | 3      | 4  |
| Databases - Exercise (L1150)                  | Recitation Section (small)   | 2      | 2  |
| <b>Module Responsible</b>                     | Prof. Stefan Schulte   |        |    |
| <b>Admission Requirements</b>                 | None   |        |    |
| <b>Recommended Previous Knowledge</b>         | Students should have basic knowledge in the following areas: <ul style="list-style-type: none"> <li>• Discrete Algebraic Structures</li> <li>• Procedural Programming</li> <li>• Automata Theory and Formal Languages</li> <li>• Programming Paradigms</li> </ul>  |        |    |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>                | After successful completion of the course, students know: <ul style="list-style-type: none"> <li>• Introduction to database systems</li> <li>• Design instruments for relational databases, especially entity-relationship</li> <li>• The relational model</li> <li>• Relational query languages, especially SQL</li> <li>• Normalization</li> <li>• Physical data organization</li> <li>• Transaction management</li> <li>• Query optimization</li> <li>• Data representation</li> <li>• Object-oriented and object-relational databases</li> <li>• Paradigms and concepts of current technologies for data modelling and database systems</li> </ul> |        |    |
| <i>Knowledge</i>                              |  |        |    |
| <i>Skills</i>                                 | The students acquire the ability to model a database and to work with it. This comprises especially the application of design methodologies and query and definition languages. Furthermore, students are able to apply basic functionalities needed to run a database.  |        |    |
| <b>Personal Competence</b>                    | Students can work on complex problems both independently and in teams. They can exchange ideas with each other and use their individual strengths to solve the problem.  |        |    |
| <i>Social Competence</i>                      |  |        |    |
| <i>Autonomy</i>                               | Students are able to independently investigate a complex problem and assess which competencies are required to solve it.   |        |    |
| <b>Workload in Hours</b>                      | Independent Study Time 110, Study Time in Lecture 70   |        |    |

| <b>Recommended Previous Knowledge</b>         | Stochastics (or a comparable class)   |                            |               |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results  |                            |               |
| <b>Professional Competence</b>                | <ul style="list-style-type: none"> <li>Students can name the basic concepts in Statistics. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>Students can model statistical problems with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. They are able to use the statistical software R.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> <li>Students are able to work together (e.g. on their regular home work) in heterogeneously composed teams and to present their results appropriately (e.g. during exercise class).</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students can put their knowledge in relation to the contents of other lectures.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul> |                            |               |
| <i>Knowledge</i>                              |   |                            |               |
| <i>Skills</i>                                 |   |                            |               |

| Module M1752: Practical module 3 (dual study program, Bachelor's degree) |  |        |    |
|--|--|--------|----|
| Courses  |  |        |    |
| Title  | Typ  | Hrs/wk | CP |
| Practical term 3 (dual study program, Bachelor's degree) (L2881)         |  |        |    |
| <b>Module Responsible</b>  | Dr. Henning Haschke  |        |    |
| <b>Admission Requirements</b>  | None   |        |    |
| <b>Recommended Previous Knowledge</b>                                    | <ul style="list-style-type: none"> <li>• Successful completion of practical module 2 as part of the dual Bachelor's course</li> <li>• course B from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>  |        |    |
| <b>Educational Objectives</b>  | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>   |  |        |    |
| <i>Knowledge</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... understand the company's strategic orientation, as well as the functions and organisation of central departments with their decision-making structures, network relationships.</li> <li>• ... understand the requirements of the engineering profession and correctly estimate the resulting responsibility.</li> <li>• ... combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> </ul>   |        |    |
| <i>Skills</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... apply technical theoretical knowledge to current problems in their own area of work, and evaluate work processes and results.</li> <li>• ... use technology, equipment and resources in accordance with the assigned work areas and tasks, and assess operational processes and procedures with regard to the intended work results/objectives.</li> <li>• ... implement the university's application recommendations in relation to their current tasks.</li> </ul>  |        |    |
| <b>Personal Competence</b>   |  |        |    |
| <i>Social Competence</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... plan work processes cooperatively, including across work areas.</li> <li>• ... communicate professionally with operational stakeholders and present complex issues in a structured, targeted and convincing manner.</li> </ul>  |        |    |
| <i>Autonomy</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... assume responsibility for work assignments and areas.</li> <li>• ... document and reflect on the relevance of subject modules and specialisations for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>  |        |    |
| <b>Workload in Hours</b>   | Independent Study Time 180, Study Time in Lecture 0  |        |    |
| <b>Credit points</b>   | 6  |        |    |
| <b>Course achievement</b>  | None   |        |    |
| <b>Examination</b>   | Written elaboration  |        |    |
| <b>Examination duration and scale</b>                                    | Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.   |        |    |

| Signals and Systems (L0432)                   |   | Lecture                    | 3             |
| Signals and Systems (L0433)                   |   | Recitation Section (small) | 2             |
| <b>Module Responsible</b>                     | Prof. Gerhard Bauch   |                            |               |
| <b>Admission Requirements</b>                 | None  |                            |               |
| <b>Recommended Previous Knowledge</b>         | Mathematics 1-3   |                            |               |
|   | The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.   |                            |               |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results  |                            |               |
| <b>Professional Competence</b>                |   |                            |               |
| <i>Knowledge</i>                              | The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.                               |                            |               |
|   | The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems.  |                            |               |
| <i>Skills</i>                                 | The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.   |                            |               |
| <b>Personal Competence</b>                    |   |                            |               |
| <i>Social Competence</i>                      | The students can jointly solve specific problems.   |                            |               |
| <i>Autonomy</i>                               | The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.  |                            |               |
| <b>Workload in Hours</b>                      | Independent Study Time 110, Study Time in Lecture 70  |                            |               |
| <b>Credit points</b>                          | 6   |                            |               |
| <b>Course achievement</b>                     | None  |                            |               |
| <b>Examination</b>                            | Written exam  |                            |               |
| <b>Examination duration and scale</b>         | 90 min  |                            |               |

|--|--|--------|----|
| Courses  |  |        |    |
| Title  | Typ  | Hrs/wk | CP |
| Practical term 5 (dual study program, Bachelor's degree) (L2883)         |  |        |    |
| <b>Module Responsible</b>  | Dr. Henning Haschke  |        |    |
| <b>Admission Requirements</b>  | None   |        |    |
| <b>Recommended Previous Knowledge</b>                                    | <ul style="list-style-type: none"> <li>• Successful completion of practical module 4 as part of the dual Bachelor's course</li> <li>• course C from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>  |        |    |
| <b>Educational Objectives</b>  | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>   |  |        |    |
| <i>Knowledge</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> <li>• ... have a critical understanding of the practical applications of their engineering subject.</li> </ul>  |        |    |
| <i>Skills</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... apply technical theoretical knowledge to complex, interdisciplinary problems within the company, and evaluate the associated work processes and results, taking into account different possible courses of action.</li> <li>• ... implement the university's application recommendations with regard to their current tasks.</li> <li>• ... develop new solutions as well as procedures and approaches in their field of activity and area of responsibility - including in the case of frequently changing requirements (systemic skills).</li> <li>• ... are able to analyse and evaluate operational issues using academic methods.</li> </ul>   |        |    |
| <b>Personal Competence</b>   |  |        |    |
| <i>Social Competence</i>   | Dual students ... <ul style="list-style-type: none"> <li>• ... work responsibly in operational project teams and proactively deal with problems within their team.</li> <li>• ... represent complex engineering viewpoints, facts, problems and solution approaches in discussions with internal and external stakeholders and develop these further together.</li> </ul>  |        |    |
| <i>Autonomy</i>  | Dual students ... <ul style="list-style-type: none"> <li>• ... define goals for their own learning and working processes as engineers.</li> <li>• ... document and reflect on learning and work processes in their area of responsibility.</li> <li>• ... document and reflect on the relevance of subject modules, specialisations and research for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>  |        |    |
| <b>Workload in Hours</b>   | Independent Study Time 180, Study Time in Lecture 0  |        |    |
| <b>Credit points</b>   | 6  |        |    |
| <b>Course achievement</b>  | None   |        |    |
| <b>Examination</b>   | Written elaboration  |        |    |
| <b>Examination duration and scale</b>                                    | Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.   |        |    |

## Specialization I. Mathematics/Computer Science

### Module M0834: Computernetworks and Internet Security

| Courses   |   |        |    |
|---|---|--------|----|
| Title   | Typ   | Hrs/wk | CP |
| Computer Networks and Internet Security (L1098) | Lecture   | 3      | 5  |
| Computer Networks and Internet Security (L1099) | Recitation Section (small)  | 1      | 1  |
| <b>Module Responsible</b>                       | Prof. Andreas Timm-Giel   |        |    |
| <b>Admission Requirements</b>                   | None  |        |    |
| <b>Recommended Previous Knowledge</b>           | Basics of Computer Science  |        |    |
| <b>Educational Objectives</b>                   | After taking part successfully, students have reached the following learning results  |        |    |
| <b>Professional Competence</b>                  | <p><i>Knowledge</i> Students are able to explain important and common Internet protocols in detail and classify them, in order to be able to analyse and develop networked systems in further studies and job.</p> <p><i>Skills</i> Students are able to analyse common Internet protocols and evaluate the use of them in different domains.</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Students can select relevant parts out of high amount of professional knowledge and can independently learn and understand it.</p>   |        |    |
| <i>Knowledge</i>                                |   |        |    |
| <i>Skills</i>                                   |   |        |    |
| <i>Social Competence</i>                        |   |        |    |
| <b>Personal Competence</b>                      |   |        |    |
| <i>Social Competence</i>                        |   |        |    |
| <i>Autonomy</i>                                 |   |        |    |
| <b>Workload in Hours</b>                        | Independent Study Time 124, Study Time in Lecture 56  |        |    |
| <b>Credit points</b>                            | 6   |        |    |
| <b>Course achievement</b>                       | None  |        |    |
| <b>Examination</b>                              | Written exam  |        |    |
| <b>Examination duration and scale</b>           | 120 min   |        |    |

| Course L1098: Computer Networks and Internet Security |  |
|---|--|
| <b>Typ</b>  | Lecture  |
| <b>Hrs/wk</b>   | 3  |
| <b>CP</b>   | 5  |
| <b>Workload in Hours</b>                              | Independent Study Time 108, Study Time in Lecture 42   |
| <b>Lecturer</b>                                       | Dr.-Ing. Koojana Kuladinithi, Prof. Sibylle Fröschele  |
| <b>Language</b>                                       | EN   |
| <b>Cycle</b>  | WiSe   |
| <b>Content</b>  | <p>In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and physical labs.</p> <p>In the second part of the lecture an introduction to Internet security is given.</p> <p>This class comprises:</p> <ul style="list-style-type: none"> <li>• Introduction to the Internet (TCP/IP model)</li> <li>• Application layer protocols (HTTP, SMTP, DNS)</li> <li>• Transport layer protocols (TCP, UDP)</li> <li>• Network Layer (Internet Protocol IPv4 &amp; IPv6, routing in the Internet)</li> <li>• Data link layer with media access at the example of WLAN</li> <li>• Introduction to Internet Security</li> <li>• Security Aspects of Address Resolution (DNS/DNSSEC, ARP/SEND)</li> <li>• Communication Security (IPSec) - From Address Resolution to Routing (Securing BGP)</li> <li>• Botnets + Firewalls</li> </ul> |
| <b>Literature</b>                                     | <ul style="list-style-type: none"> <li>• Kurose, Ross, Computer Networking - A Top-Down Approach, 8th Edition, Addison-Wesley</li> <li>• Kurose, Ross, Computernetzwerke - Der Top-Down-Ansatz, Pearson Studium; Auflage: 8. Auflage</li> <li>• W. Stallings: Cryptography and Network Security: Principles and Practice, 6th edition</li> </ul> <p>Further literature is announced at the beginning of the lecture.</p>   |

| <b>Module Responsible</b>                     | Prof. Sibylle Schupp   |                            |               |                    |
| <b>Admission Requirements</b>                 | None   |                            |               |                    |
| <b>Recommended Previous Knowledge</b>         | Discrete mathematics at high-school level  |                            |               |                    |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |                            |               |                    |
| <b>Professional Competence</b>                |  |                            |               |                    |
| <i>Knowledge</i>                              | Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.  |                            |               |                    |
| <i>Skills</i>                                 | Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.  |                            |               |                    |
| <b>Personal Competence</b>                    |  |                            |               |                    |
| <i>Social Competence</i>                      | Students practice peer programming with varying peers. They explain problems and solutions to their peer. They defend their programs orally. They communicate in English.  |                            |               |                    |
| <i>Autonomy</i>                               | In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.  |                            |               |                    |
| <b>Workload in Hours</b>                      | Independent Study Time 96, Study Time in Lecture 84  |                            |               |                    |
| <b>Credit points</b>                          | 6  |                            |               |                    |
| <b>Course achievement</b>                     | <b>Compulsory</b>  | <b>Bonus</b>               | <b>Form</b>   | <b>Description</b> |
|   | Yes  | 15 %                       | Excercises    |                    |

- Continuous and discrete random variables
  - Probability density function (pdf), cumulative distribution function (cdf)
  - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
  - Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution, Rayleigh distribution, etc.)
- Multiple random variables
  - Conditional probability, joint probability
  - Conditional and joint probability density function
  - Bayes' rule
  - Correlation coefficient
  - Two-dimensional Gaussian distribution
  - Statistically independent, uncorrelated and orthogonal random variables
  - Independent identically distributed (iid) random variables
  - Properties of expected value and variance
  - Covariance
  - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
  - Central limit theorem
- Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
  - Examples for random processes
  - Ensemble average and time average
  - Ergodic random processes
  - Quadratic mean and variance
  - Probability density function (pdf) and cumulative distribution function (cdf)
  - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
  - Statistically independent, uncorrelated and orthogonal random processes
  - Stationary random processes
  - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of non-stationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
  - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
  - Pseudo-noise sequences, example: Code division multiple access (CDMA)
  - Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khinchine relations
  - White (Gaussian) noise
- Filtering of random processes by LTI systems
  - Transformation of the probability density function (pdf)
  - Transformation of the mean
  - Transformation of the power spectral density (psd)
  - Correlation functions of input and output signal
  - Filtering of white Gaussian noise
  - Bandlimitation for noise power limitation
  - Preemphasis and deemphasis
- Companding,  $\mu$ -law, A-law
- Functions of random variables
  - Transformation of probabilities and of the probability density function (pdf)
  - Application: Non-linear amplifiers
- Functions of two random variables
  - Probability density function
  - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
  - Wireline channels: Telephone cable, coaxial cable, optical fiber
  - Wireless channels: Fading radio channel, underwater channels
  - Frequency-flat and frequency-selective channels
  - Additive white Gaussian noise (AWGN) channel
  - Signal to noise power ratio (SNR)
  - Discrete-time channel models
  - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
  - Sampling
    - Sampling theorem
  - Pulse modulation
    - Pulse-amplitude modulation (PAM)
    - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
    - Pulse-position modulation (PPM)
    - Pulse-code modulation (PCM)
  - Quantization
    - Linear quantization, midtread and midrise characteristic
    - Quantization error, quantization noise
    - Signal-to-quantization noise ratio
    - Non-linear quantization, compressor characteristics,  $\mu$ -law, A-law
    - Speech transmission with PCM
  - Differential pulse-code modulation (DPCM)
    - Linear prediction according to the minimum mean squared error (MMSE) criterion.
    - DPCM with forward prediction and backward prediction

| <b>Admission Requirements</b>                 | None   |        |            |             |
| <b>Recommended Previous Knowledge</b>         | Basic knowledge in electrical engineering  |        |            |             |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |        |            |             |
| <b>Professional Competence</b>                | This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:  |        |            |             |
| <i>Knowledge</i>                              | <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks</li> <li>• Sequential logic: Flip-flops, automata, systematic hardware design</li> <li>• Technological foundations</li> <li>• Computer arithmetic: Integer addition, subtraction, multiplication and division</li> <li>• Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining</li> <li>• Memories: Memory hierarchies, SRAM, DRAM, caches</li> <li>• Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses</li> </ul>   |        |            |             |
| <i>Skills</i>                                 | <p>The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.</p> <p>After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.</p> |        |            |             |
| <b>Personal Competence</b>                    |  |        |            |             |
| <i>Social Competence</i>                      | Students are able to solve similar problems alone or in a group and to present the results accordingly.  |        |            |             |
| <i>Autonomy</i>                               | Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  |        |            |             |
| <b>Workload in Hours</b>                      | Independent Study Time 124, Study Time in Lecture 56   |        |            |             |

| <b>Title</b>                                  | <b>Typ</b>  | <b>Hrs/wk</b> | <b>CP</b>   |
| Software Engineering (L0627)                  | Lecture   | 2             | 3           |
| Software Engineering (L0628)                  | Recitation Section (small)  | 2             | 3           |
| <b>Module Responsible</b>                     | Prof. Sibylle Schupp  |               |             |
| <b>Admission Requirements</b>                 | None  |               |             |
| <b>Recommended Previous Knowledge</b>         | <ul style="list-style-type: none"> <li>Automata theory and formal languages</li> <li>Procedural programming or Functional programming</li> <li>Object-oriented programming, algorithms, and data structures</li> </ul>  |               |             |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results  |               |             |
| <b>Professional Competence</b>                | <p><i>Knowledge</i> Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning.</p> <p><i>Skills</i> For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students practice peer programming. They explain problems and solutions to their peer. They communicate in English.</p> <p><i>Autonomy</i> Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback.</p> |               |             |
| <b>Workload in Hours</b>                      | Independent Study Time 124, Study Time in Lecture 56  |               |             |
| <b>Credit points</b>                          | 6   |               |             |

## Specialization II. Application

### Module M0933: Fundamentals of Materials Science

#### Courses

| Title  | Typ     | Hrs/wk | CP |
|--|---------|--------|----|
| Fundamentals of Materials Science I (L1085)  | Lecture | 2      | 2  |
| Fundamentals of Materials Science II (Advanced Ceramic Materials, Polymers and Composites) (L0506) | Lecture | 2      | 2  |
| Physical and Chemical Basics of Materials Science (L1095)  | Lecture | 2      | 2  |

|   |  |
|---|--|
| <b>Module Responsible</b>                     | Prof. Jörg Weißmüller  |
| <b>Admission Requirements</b>                 | None   |
| <b>Recommended Previous Knowledge</b>         | Highschool-level physics, chemistry und mathematics  |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |
| <b>Professional Competence</b>                |  |
| <i>Knowledge</i>                              | The students have acquired a fundamental knowledge on metals, ceramics and polymers and can describe this knowledge comprehensively. Fundamental knowledge here means specifically the issues of atomic structure, microstructure, phase diagrams, phase transformations, corrosion and mechanical properties. The students know about the key aspects of characterization methods for materials and can identify relevant approaches for characterizing specific properties. They are able to trace materials phenomena back to the underlying physical and chemical laws of nature.  |
| <i>Skills</i>                                 | The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena here refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to phase transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and the materials microstructure, and they can account for the impact of microstructure on the material's behavior.   |
| <b>Personal Competence</b>                    |  |
| <i>Social Competence</i>                      | -  |
| <i>Autonomy</i>                               | -  |
| <b>Workload in Hours</b>                      | Independent Study Time 96, Study Time in Lecture 84  |
| <b>Credit points</b>                          | 6  |
| <b>Course achievement</b>                     | None   |
| <b>Examination</b>                            | Written exam   |
| <b>Examination duration and scale</b>         | 180 min  |
| <b>Assignment for the Following Curricula</b> | General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Compulsory<br>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory<br>General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory<br>General Engineering Science (German program, 7 semester): Specialisation Advanced Materials: Compulsory<br>Data Science: Specialisation II. | Title   | Typ  | Hrs/wk | CP |
| Introduction to Anatomy (L0384)               | Lecture  | 2      | 3  |
| <b>Module Responsible</b>                     | Prof. Udo Schumacher   |        |    |
| <b>Admission Requirements</b>                 | None   |        |    |
| <b>Recommended Previous Knowledge</b>         | Students can listen to the lectures without any prior knowledge. Basic school knowledge of biology, chemistry / biochemistry, physics and Latin can be useful.   |        |    |
| <b>Educational Objectives</b>                 | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b>                | <p><i>Knowledge</i> The lectures are about microscopic anatomy, describing the microscopic structure of tissues and organs, and about macroscopic anatomy which is about organs and organ systems. The lectures also contain an introduction to cell biology, human development and to the central nervous system. The fundamentals of radiologic imaging are described as well, using projectional x-ray and cross-sectional images. The Latin terms are introduced.</p> <p><i>Skills</i> At the end of the lecture series the students are able to describe the microscopic as well as the macroscopic assembly and functions of the human body. The Latin terms are the prerequisite to understand medical literature. This knowledge is needed to understand and further develop medical devices.</p> <p>These insights in human anatomy are the fundamentals to explain the role of structure and function for the development of common diseases and their impact on the human body.</p>   |        |    |
| <b>Personal Competence</b>                    | <p><i>Social Competence</i> The students can participate in current discussions in biomedical research and medicine on a professional level. The Latin terms are prerequisite for communication with physicians on a professional level.</p> <p><i>Autonomy</i> The lectures are an introduction to the basics of anatomy and should encourage students to improve their knowledge by themselves. Advice is given as to which further literature is suitable for this purpose. Likewise, the lecture series encourages students to recognize and think critically about biomedical problems.</p>   |        |    |
| <b>Workload in Hours</b>                      | Independent Study Time 62, Study Time in Lecture 28  |        |    |
| <b>Credit points</b>                          | 3  |        |    |
| <b>Course achievement</b>                     | None   |        |    |
| <b>Examination</b>                            | Written exam   |        |    |
| <b>Examination duration and scale</b>         | 90 minutes   |        |    |
| <b>Assignment for the Following Curricula</b> | <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>Data Science: Specialisation II. **Course L0383: Introduction to Radiology and Radiation Therapy**

|                          |  |
|--------------------------|--|
| <b>Typ</b>               | Lecture  |
| <b>Hrs/wk</b>            | 2  |
| <b>CP</b>                | 3  |
| <b>Workload in Hours</b> | Independent Study Time 62, Study Time in Lecture 28  |
| <b>Lecturer</b>          | Prof. Ulrich Carl, Prof. Thomas Vestring   |
| <b>Language</b>          | DE   |
| <b>Cycle</b>             | SoSe   |
| <b>Content</b>           | The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments  |

## Thesis

### Module M1800: Bachelor thesis (dual study program)

#### Courses

| Title  | Typ  | Hrs/wk | CP |
|--|--|--------|----|
| <b>Module Responsible</b>                              | Professoren der TUHH   |        |    |
| <b>Admission Requirements</b>                          | None   |        |    |
| <b>Recommended Previous Knowledge</b>                  |  |        |    |
| <b>Educational Objectives</b>                          | After taking part successfully, students have reached the following learning results   |        |    |
| <b>Professional Competence</b><br><i>Knowledge</i>     | Dual students... <ul style="list-style-type: none"> <li>• ... choose central theoretical principles from their field of study (facts, theories, methods) in relation to problems and applications, present them and discuss them critically.</li> <li>• ... further develop their subject-related and practical knowledge as appropriate and link both areas of knowledge together.</li> <li>• ... present the current research available on a chosen topic or on a chosen operational issue linked to their subject.</li> </ul>   |        |    |
| <b>Professional Competence</b><br><i>Skills</i>        | Dual students... <ul style="list-style-type: none"> <li>• ... evaluate both the basic knowledge linked to their field of study acquired at the university and professional knowledge gained through the company, then purposefully use it to solve technical and application-related problems.</li> <li>• ... analyse questions and problems using the methods learned throughout their studies (including practical phases), reach factually justifiable decisions and develop application-specific solutions.</li> <li>• ... critically analyse the results of their own research work from a subject-specific and professional perspective.</li> </ul>  |        |    |
| <b>Personal Competence</b><br><i>Social Competence</i> | Dual students... <ul style="list-style-type: none"> <li>• ... present a professional problem in the form of an academic question for a specialist audience in a structured, comprehensible and factually correct manner, both orally and in writing.</li> <li>• ... respond to questions as part of a specialist discussion and answer them appropriately. In doing so, they argue their own evaluations and points of view convincingly.</li> </ul>   |        |    |
| <b>Personal Competence</b><br><i>Autonomy</i>          | Dual students... <ul style="list-style-type: none"> <li>• ... structure a comprehensive, chronological workflow and work independently on a question to a high academic level within a given period of time.</li> <li>• ... identify, develop and link necessary knowledge and material to handle an academic and application-related problem.</li> <li>• ... apply the essential techniques of academic work when conducting their own research on an operational issue.</li> </ul>   |        |    |
| <b>Workload in Hours</b>                               | Independent Study Time 360, Study Time in Lecture 0  |        |    |
| <b>Credit points</b>                                   | 12   |        |    |
| <b>Course achievement</b>                              | None   |        |    |
| <b>Examination</b>                                     | Thesis   |        |    |
| <b>Examination duration and scale</b>                  | According to General Regulations   |        |    |
| <b>Assignment for the Following Curricula</b>          | General Engineering Science (German program, 7 semester): Thesis: Compulsory<br>Civil- and Environmental Engineering: Thesis: Compulsory<br>Chemical and Bioprocess Engineering: Thesis: Compulsory<br>Computer Science: Thesis: Compulsory<br>Data Science: Thesis: Compulsory<br>Electrical Engineering: Thesis: Compulsory<br>Engineering Science: Thesis: Compulsory<br>Green Technologies: Energy, Water, Climate: Thesis: Compulsory<br>Computer Science in Engineering: Thesis: Compulsory<br>Mechanical Engineering: Thesis: Compulsory<br>Mechatronics: Thesis: Compulsory<br>Naval Architecture: Thesis: Compulsory<br>Technomathematics: Thesis: Compulsory<br>Engineering and Management - Major in Logistics and Mobility: Thesis: Compulsory |        |    |
