Core qualification

	·			
Module M0575: Procedura	al Programming			
Courses				
Title		Тур	Hrs/wk	СР
Procedural Programming (L0197)		Lecture	1	2
Procedural Programming (L0201)		Recitation Section (large)	1	1
Procedural Programming (L0202)		Laboratory Course	2	3
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	None			
Recommended Previous	Elementary PC handling skills			
Knowledge	Liementary i o narialing skins			
	Elementary mathematical skills			
Educational Objectives	After taking part successfully, students have reached the following I	earning results		
Professional Competence				
Knowledge	The students acquire the following knowledge:			
	 They know basic elements of the programmi how to use them. 	ng language C. They know	w the basic dat	a types and know
	 They have an understanding of elemental environment and know how those interact. 	ry compiler tasks, of the	preprocessor	and programming
	They know how to bind programs and how to	include external libraries to	enhance softwa	are packages.
	 They know how to use header files and how projects. 	to declare function interfa	ces to create la	rger programming
	The acquire some knowledge how the programed develop programs interacting with the programed the programed states.	·		his allows them to
	They learnt several possibilities how to model	and implement frequently of	occurring standa	ard algorithms.
Skills	The students know how to judge the complexity	ty of an algorithms and how	to program alg	orithms efficiently.
	 The students are able to model and imple Moreover, they are able to adapt a given API. 	ement algorithms for a nu	mber of standa	ard functionalities.
Personal Competence Social Competence	The students acquire the following skills:			
	 They are able to work in small teams to solverrors and to present their results. 	ve given weekly tasks, to id	dentify and ana	lyze programming
	They are able to explain simple phenomena to	each other directly at the F	PC.	
	They are able to plan and to work out a project	t in small teams.		
	They communicate final results and present p	rograms to their tutor.		
Autonomy	The students take individual examinations a skills and ability to solve new tasks.	s well as a final written ex	kamn to prove t	their programming
	 The students have many possibilities to che exercises. 	eck their abilities when so	lving several gi	iven programming
	 In order to solve the given tasks efficiently, the where every student solves his or her part indi 	·	e appropriately	within their group,

Module M0577: Nontechn	ical Complementary Courses for Bachelors
Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	

rofessional Competence

Knowledge

The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its **teaching architecture**, in its **teaching and learning arrangements**, in **teaching areas** and by means of teaching offerings in which students can qualify by opting for **specific competences** and a **competence level** at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline.
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- $\bullet \quad \text{to handle simple questions in aforementioned scientific disciplines in a sucsessful manner},\\$
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

Autonomy Pers	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. resonal Competences (Self-reliance) dents are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

Content	In the physics lab a number of key experiments on physical phenomena in mechanics, oscillatory and wave motion, thermodynamics, electricity,
	and optics will be conducted by the students under assistance of a lecturing tutor. The experiments are part of the physics education program presented in the course "Physics for TUHH-ET Engineers".
	Beyond teaching of fundamental physical background the objectives are basic skills in preparation and performing physical measurements, usage of physical equipment, analysis of the results and preparation of a report on the experimental data.
Literature	Zu den Versuchen gibt es individuelle Versuchsanleitungen, die vor der Versuchsdurchführung ausgegeben werden.
	Zum Teil müssen die zur Versuchsdurchführung notwendigen physikalischen Hintergründe selbstständig erarbeitet werden, wozu die zur Vorlesung "Physik für TUHH-ET Ingenieure" angegebene Literatur gut geeignet ist.

Module M0547: Electrical	Engineering II: Alternating Current Ne	tworks and Bas	sic Devices		
Courses					
Title			Тур	Hrs/wk	CP
	rent Networks and Basic Devices (L0178)		Lecture	3	5
	rent Networks and Basic Devices (L0179)		Recitation Section (small)	2	1
Module Responsible	Prof. Christian Becker				
Admission Requirements	None				
Recommended Previous	Electrical Engineering I				
Knowledge	ge Mathematics I				
	Direct current networks, complex numbers				
Educational Objectives	After taking part successfully, students have reached	d the following learni	ng results		
Professional Competence					
Knowledge	Students are able to reproduce and explain fundamental theories, principles, and methods related to the theory of alternating currents. They can describe networks of linear elements using a complex notation for voltages and currents. They can reproduce an overview of applications for the theory of alternating currents in the area of electrical engineering. Students are capable of explaining the behavior of fundamental passive and active devices as well as their impact on simple circuits.				
Skills	Students are capable of calculating parameters within simple electrical networks at alternating currents by means of a complex notation for voltages and currents. They can appraise the fundamental effects that may occur within electrical networks at alternating currents. Students are able to analyze simple circuits such as oscillating circuits, filter, and matching networks quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of an electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified to dimension their main features.				
Personal Competence					
	Students are able to work together on subject relate	ud tacke in emall arou	ine. Thoy are able to present	their results offectively	/ (o.g. during a wook o
300ai Guilpetence	project work).	u tasks III siliali giot	ps. They are able to present	then results ellectively	y (e.g. duffing a week c
Autonomy	Students are capable to gather necessary informati are able to continually reflect their knowledge by related to the exam. Based on respective feedbac connections between their knowledge obtained in the Analysis).	means of activities	that accompany the lecture, ected to adjust their individu	such as online-tests and learning process.	and exercises that are They are able to draw

Content	- General time-dependency of electrical networks
	- Representation and properties of harmonic signals
	- RLC-elements at alternating currents/voltages
	- Complex notation for the representation of RLC-elements
	- Power in electrical networks at alternating currents, compensation of reactive power
	- Frequency response locus (Nyquist plot) and Bode-diagrams
	- Measurement instrumentation for assessing alternating currents
	- Oscillating circuits, filters, electrical transmission lines
	- Transformers, three-phase current, energy converters
	- Simple non-linear and active electrical devices
Literature	- M. Albach, "Elektrotechnik", Pearson Studium (2011)
	- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)
	- R. Kories, H. Schmidt-Walter, "Taschenbuch der Elektrotechnik", Harri Deutsch (2010)

Recommended Previous	Highschool level physics and mathematics			
Knowledge				
Educational Objectives	After taking part successfully, students have reach	ned the following learning results		
Professional Competence				
Knowledge	Students can explain the composition and the structural properties of materials used in electrical engineering. Students can explicate the relevance of mechanical, electrical, thermal, dielectric, magnetic and chemical properties of materials in view of their applications in electrical engineering.			
Skills	Students can identify appropriate descriptive models and apply them mathematically. They can derive approximative solutions and judge factors influential on the performance of materials in electrical engineering applications.			
Personal Competence				
Social Competence	Students can jointly solve subject related problem course.	ns in groups. They can present their results effectivel	y within the framewor	k of the problem solvin
Autonomy	Students are capable to extract relevant information from the provided references and to relate this information to the content of the lecture. They can reflect their acquired level of expertise with the help of lecture accompanying measures such as exam typical exam questions. Students are able to connect their knowledge with that acquired from other lectures.

Course L0566: Circuit Theory	
Тур	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Arne Jacob
Language	DE
Cycle	WiSe
Content	- Circuit theorems
	- N-port circuits
	- Periodic excitation of linear circuits
	- Transient analysis in time domain
	- Transient analysis in frequency domain; Laplace Transform
	- Frequency behaviour of passive one-ports
Literature	- M. Albach, "Grundlagen der Elektrotechnik 1", Pearson Studium (2011)
	- M. Albach, "Grundlagen der Elektrotechnik 2", Pearson Studium (2011)
	- L. P. Schmidt, G. Schaller, S. Martius, "Grundlagen der Elektrotechnik 3", Pearson Studium (2011)
	- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)
	- A. Hambley, "Electrical Engineering: Principles and Applications", Pearson (2008)
	- R. C. Dorf, J. A. Svoboda, "Introduction to electrical circuits", Wiley (2006)
	- L. Moura, I. Darwazeh, "Introduction to Linear Circuit Analysis and Modeling", Amsterdam Newnes (2005)

Computer Engineering (L0321)		cture	3	4
Computer Engineering (L0324)	Rec	citation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Basic knowledge in electrical engineering			
Knowledge	The everyonist appropriation of the laboratill he have and during the evelvation	of the medulals aversingtion as	anudina to the fo	Haurian milan
	The successful completion of the labs will be honored during the evaluation	of the module's examination ac	cording to the to	llowing rules:
	Upon a passed module examination, the student is granted a bonus	s on the examination's marks d	ue to the succes	sful labs, such that t
	examination's marks are lifted by 0,3 or 0,4, respectively, up to the ne	ext-better grade.		
	2. The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is not	t possible.		
Educational Objectives	After taking part successfully, students have reached the following learning re	results		
Professional Competence		Courto		
Knowledge		stems. It covers the layers from	the assembly-le	vel programming do
Milowieage	to gates. The module includes the following topics:	steriis. It covers the layers hom	life assembly-le	ver programming do
	to gates. The module modules are following topics.			
	Introduction			
	Combinational logic: Gates, Boolean algebra, Boolean functions, har	rdware synthesis, combinationa	ıl networks	
	Sequential logic: Flip-flops, automata, systematic hardware design			
	Technological foundations			
	Computer arithmetic: Integer addition, subtraction, multiplication and Design of assessment as white three Page respections are addle MIPO single.			
	Basics of computer architecture: Programming models, MIPS single-c Memorics: Memory biographics, SPAM, DRAM, caches	cycle architecture, pipelining		
	Memories: Memory hierarchies, SRAM, DRAM, caches Input/output: I/O from the propagative of the CRIL principles of pagein	ua data point to point connectio	no buogo	
	Input/output: I/O from the perspective of the CPU, principles of passing	ig data, point-to-point connectio	ins, busses	
Skills	The students perceive computer systems from the architect's perspective, i.	.e., they identify the internal str	ucture and the p	physical composition
	computer systems. The students can analyze, how highly specific and indiv	vidual computers can be built b	ased on a collec	ction of few and simp
	components. They are able to distinguish between and to explain the differ	rent abstraction layers of today	's computing sys	stems - from gates a
	circuits up to complete processors.			
	After successful completion of the module, the students are able to judge			
	software executed on it. In particular, they shall understand the consequences the leaves from the assembly leaves and our to gate. This way the			
	abstraction layers from the assembly language down to gates. This way, the		e the impact tha	t these low abstracti
	levels have on an entire system's performance and to propose feasible optio	ons.		
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a group and to prese	ent the results accordingly.		
Autonomy	Students are able to acquire new knowledge from specific literature and to a	ssociate this knowledge with of	ther classes.	
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can reproduce them. Students can model problems in the area of analysis and differential equations with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. Personal Competence Social Competence Social Competence * Students are able to work together in teams. They are capable to use mathematics as a common language. * In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. Authoromy * Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. * Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems. Course L1028: Analysis III	
Тур	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	WiSe
Content	Main features of differential and integrational calculus of several variables
	 Differential calculus for several variables Mean value theorems and Taylor's theorem Maximum and minimum values Implicit functions Minimization under equality constraints Newton's method for multiple variables Double integrals over general regions Line and surface integrals Theorems of Gauß and Stokes
Literature	http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html

Course L1029: Analysis III	
Тур	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14

Module M0567: Theoretica	I Electrical Engineering I: Time-Independe	ent Fields		
Courses				
Title Theoretical Electrical Engineering I: Time Theoretical Electrical Engineering I: Time		Typ Lecture Recitation Section (small)	Hrs/wk 3 2	CP 5
	Prof. Christian Schuster	Tronation Gotton (Gridal)		
-	None			
-	Basic principles of electrical engineering and advanced m	nathematics		
Educational Objectives	After taking part successfully, students have reached the f	ollowing learning results		
Professional Competence Knowledge	Students can explain the fundamental formulas, relatio explicate the principal behavior of electrostatic, magnetos properties of complex electromagnetic fields by means of theory of time-independent electromagnetic fields and are	static, and current density fields with regard superposition of solutions for simple fields.	to respective sources	. They can describe th
Skills	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.			
Personal Competence Social Competence	Students are able to work together on subject related tas sessions).	ks in small groups. They are able to prese	nt their results effective	ely (e.g. during exercis
Autonomy	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercis that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebrand Analysis).			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90-150 minutes			
Assignment for the Following Curricula	General Engineering Science (German program): Special General Engineering Science (German program, 7 semes Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Speciali General Engineering Science (English program, 7 semes	ster): Specialisation Electrical Engineering: sation Electrical Engineering: Compulsory	Compulsory

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Christian Schuster
Language	
Cycle	SoSe
Content	- Maxwell's Equations in integral and differential notation
	- Boundary conditions
	- Laws of conservation for energy and charge
	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
Literature	- G. Lehner, "Elektromagnetische Feldtheorie: Für Ingenieure und Physiker", Springer (2010)
	- H. Henke, "Elektromagnetische Felder: Theorie und Anwendung", Springer (2011)
	- W. Nolting, "Grundkurs Theoretische Physik 3: Elektrodynamik", Springer (2011)
	- D. Griffiths, "Introduction to Electrodynamics", Pearson (2012)
	- J. Edminister, " Schaum's Outline of Electromagnetics", Mcgraw-Hill (2013)
	- Richard Feynman, "Feynman Lectures on Physics: Volume 2", Basic Books (2011)

Course L0181: Theoretical Electric	cal Engineering I: Time-Independent Fields

Signals and Systems (L0432) Signals and Systems (L0433)		Lecture Recitation Section (large)	3 1	4 2
	Prof. Gerhard Bauch	necitation Section (large)		2
Module Responsible				
Admission Requirements	None Mathematics 1.2			
Recommended Previous Knowledge	Mathematics 1-3			
Knowledge	The modul is an introduction to the theory of signals and s	stems. Good knowledge in maths as	covered by the mod	duls Mathematik 1-
	expected. Further experience with spectral transformations (Fo	urier series, Fourier transform, Laplace t	ransform) is useful b	ut not required.
Educational Objectives	After taking want acceptable, at identals are necessarily at the	ing Learning requite		
Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence Knowledge	The students are able to elegably and describe signals and line	or time inverient (LTI) eveteme using me	sthada of signal and	avotom theory. They
Knowieage	The students are able to classify and describe signals and line able to apply the fundamental transformations of continuous		_	
	deterministic signals and systems mathematically in both time	•		
	image domain which are caused by the transition of a continuo		understand the ener	cis iii iiiile doillaili i
Skille	The students are able to describe and analyse deterministic si		using methods of sig	anal and evetem the
Skills	They can analyse and design basic systems regarding import			
	can assess the impact of LTI systems on the signal properties i		mase response, stat	omity, intearity etc 1
Personal Competence	can assess the impact of Err systems on the signal properties i	Time and requertey domain.		
Social Competence	The students can jointly solve specific problems.			
Autonomy	The students are able to acquire relevant information from a	onronriate literature sources. They can	control their level of	f knowledge during
Adionomy	lecture period by solving tutorial problems, software tools, click		control their level of	r knowledge daring

Transmission Line Theory (L0570)		Lecture	2	3
Transmission Line Theory (L0572)		Recitation Section (large)	2	1
Module Responsible	Prof. Arne Jacob			
Admission Requirements	None			
Recommended Previous	Electrical Engineering I-III, Mathematics I-III			
Knowledge				
Educational Objectives	After taking part successfully, students have reache	d the following learning results		
Professional Competence				
Knowledge	Students can explain the fundamentals of wave pro	ppagation on transmission lines at low and high	frequencies. They are	able to analyze circui
	with transmission lines in time and frequency dom	ain. They can describe simple equivalent circuit	s of transmission lines	. They are able to solv
	problems with coupled transmission lines. They car	present and discuss a self-chosen research top	ic.	
Skills	Students can analyze and calculate the propagat	ion of waves in simple circuits with transmissi-	on lines. They are ab	e to analyze circuits
	frequency domain and with the Smith chart. They c	an analyze equivalent circuits of transmission lir	nes. They are able to s	olve problems includir
	coupled transmission lines using the vectorial trans	mission line equations. They are able to give a ta	alk to professionals.	
Personal Competence				
Social Competence	Students can analyze and solve problems in small	groups and discuss their solutions. They can co	ompare the learned the	eory with experiments
	the lecture and discuss it in small groups. They are	able to present a research topic to professionals	and discuss it with the	m.
Autonomy	The students can solve problems by their own a	nd are able to acquire skills from the lecture	and the literature. The	y are able to test the
	knowledge using computer animations. They can to	est their level of knowledge by answering short q	uestions and tests duri	ng the lecture. They a
	able to relate their acquired knowledge to other le	ctures (e.g. Electrical Engineering I-III and Math	nematics I-III). They car	n familiarize themselve
	with a research topic and can prepare a presentation	n.

Courses		
Title Electrical Engineering Project Laboratory	Typ Hrs/wk CP (L0640) Laboratory Course 5 6	
	Prof. Christian Becker	
•		
Recommended Previous	Electrical Engineering I, Electrical Engineering II	
Knowledge	Electrical Engineering I, Electrical Engineering II	
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge	Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate respective relationships	
	They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.	
Skills	The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.	
Personal Competence Social Competence	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Student have the ability to develop alternative approaches to an electrical engineering problem independently or in groups and discuss advantages a well as drawbacks.	
Autonomy	Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps in as well a extent their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend give problems and pragmatically solve them by means of corresponding solutions and concepts.

Module M0569: Engineeri	ng Mechanics I			
Courses				
Title		Тур	Hrs/wk	СР
Engineering Mechanics I (L0187)		Lecture	3	3
Engineering Mechanics I (L0190)		Recitation Section (small)	2	3
Module Responsible	Prof. Uwe Weltin			
Admission Requirements	None			
Recommended Previous	Elementary knowledge in mathematics and physics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	ne following learning results		
Professional Competence				
Knowledge	Students are able to describe fundamental connection	s, theories and methods to calculate forces in s	statically determined r	nounted systems of rigid
	bodies and fundamentals in elastostatics.			
Skills	Students are able to apply theories and methods to ca	lculate forces in statically determined mounted	d systems of rigid bod	ies and fundamentals o
	elastostatics.			
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mixed	groups, learning and broadening teamwork a	bilities.	
Autonomy	Students are able to solve individually exercises related to this lecture.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 7	0		
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 min.			
Assignment for the Following	Bioprocess Engineering: Core qualification: Compulso	ory		
Curricula	Electrical Engineering: Core qualification: Elective Cor	mpulsory

Module M0675: Introduction	on to Communications and Random Proce	esses		
Courses				
Title		Тур	Hrs/wk	СР
Introduction to Communications and Rai	ndom Processes (L0442)	Lecture	3	4
Introduction to Communications and Rai	ndom Processes (L0443)	Recitation Section (large)	1	2
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous	- Madhamaka 4 O			
Knowledge	Mathematics 1-3 Signals and Systems			
	Signals and Systems Basic knowledge of probability theory			
	Basic knowledge of probability theory			
Educational Objectives	After taking part successfully, students have reached the fo	ollowing learning results		
Professional Competence				
Knowledge	The students know and understand the fundamental build	ding blocks of a communications system.	They can describe and	d analyse the individual
	building blocks using knowledge of signal and system	theory as well as the theory of stochasti	c processes. The are	aware of the essential
	resources and evaluation criteria of information transmissi	on and are able to design and evaluate a	basic communications	system.
Skills	The students are able to design and evaluate a basic cor	nmunications system. In particular, they ca	an estimate the require	ed resources in terms of
	bandwidth and power. They are able to assess essential e	valuation parameters of a basic communic	cations system such as	bandwidth efficiency or
	bit error rate and to decide for a suitable transmission met	nod.		
Personal Competence				
Social Competence	The students can jointly solve specific problems.			
Autonomy	The students are able to acquire relevant information from	m appropriate literature sources. They ex	an control their level o	f knowledge during the
Autonomy	lecture period by solving tutorial problems, software tools,		an control their level o	i knowledge during the
	lecture period by solving tatorial problems, sollware tools,	clicker system.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0568: Theoretic	al Electrical Engineering II: Time-Depe	endent Fields		
Courses				
Title Theoretical Electrical Engineering II: Tim Theoretical Electrical Engineering II: Tim		Typ Lecture Recitation Section (small)	Hrs/wk 3 2	CP 5
Module Responsible				
Admission Requirements				
Recommended Previous		heoretical Electrical Engineering I		
Knowledge	Mathematics I, Mathematics III, Mathematics IIII, Math			
Educational Objectives	After taking part successfully, students have reache	ed the following learning results		
Professional Competence				
Knowledge				
Skills	Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependent field problems. They can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret them with regard to practical applications.			
Personal Competence				
Social Competence	Students are able to work together on subject relat sessions).	ted tasks in small groups. They are able to pres	ent their results effective	ely (e.g. during exercise
Autonomy	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercise that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between acquired knowledge and ongoing research at the Hamburg University of Technology (TUHH), e.g. in the area of high frequency engineering and optics.

Admission Requirements	None			
Recommended Previous	Atomic model and quantum theory, electrical currents in solid state m	aterials, basics in solid-state physic	cs	
Knowledge	Successful participation of Physics for Engineers and Materials in Ele	ectrical Engineering or courses with	equivalent contents	3
Educational Objectives	After taking part successfully, students have reached the following lea	arning results		
Professional Competence				
Knowledge				
	Students are able			
	to represent the basics of semiconductor physics,			
	to explain the operating principle of important semiconductor	devices,		
	to outline device characteristics and equivalent circuits as we	I as to explain their derivation and		
	to discuss the limitation of device models.			
Skills				
	Students are capable			
	to apply devices in basic circuits,			
	to realize the physical context and to solve complex problems	by oneself		
Personal Competence				
Social Competence	Students are able to prepare and perform their lab experiments in tea	m work as well as to present and d	iscuss the results in	front of audience.
Autonomy	Students are capable to acquire knowledge based on literature in ord	der to prepare their experiments.

Hrs/wk	3
CP	5
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are
	introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to
	performance modelling are addressed using computing tasks and (virtual) labs.
	In the second part of the lecture an introduction to Internet security is given.
	This class comprises:
	Application layer protocols (HTTP, FTP, DNS)
	Transport layer protocols (TCP, UDP)
	Network Layer (Internet Protocol, routing in the Internet)
	Data link layer with media access at the example of Ethernet
	Multimedia applications in the Internet
	Network management
	Internet security: IPSec
	Internet security: Firewalls

	This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices. Central topics are: Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.

Module Responsible	Prof. Alexander Schlaefer				
Admission Requirements	None				
Recommended Previous	principles of math (algebra, analysis/calculus)				
Knowledge	principles of stochastics				
	principles of programming, R/Matlab				
Educational Objectives	After taking part successfully, students have reached	the following learning results			
Professional Competence					
Knowledge	The students can explain principles of medical techn	ology, including imaging systems, computer ai	ded surgery, and medi	cal information syste	
	They are able to give an overview of regulatory affairs and standards in medical technology.				
Skills	The students are able to evaluate systems and medic	cal devices in the context of clinical applications	S.		
Personal Competence					
Social Competence	The students describe a problem in medical technological	ogy as a project, and define tasks that are solve	d in a joint effort.		
Autonomy	The students can reflect their knowledge and docum	ent the results of their work. They can present the	ne results in an approp	riate manner.	
Workload in Hours	Independent Study Time 110, Study Time in Lecture	70

Module M0803: Embedde	d Systems			
Courses				
Title		Тур	Hrs/wk	СР
Embedded Systems (L0805)		Lecture	3	4
Embedded Systems (L0806)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Computer Engineering			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ving learning results		
Professional Competence				
Knowledge	Embedded systems can be defined as information processing	systems embedded into enclosing prod	ucts. This course tea	ches the foundations of
	such systems. In particular, it deals with an introduction into	these systems (notions, common chara	cteristics) and their	specification languages
	(models of computation, hierarchical automata, specification o	f distributed systems, task graphs, specif	fication of real-time a	pplications, translations
	between different models).			
	Another next equals the herdusers of embedded customer	Concern A/D and D/A converters to	al tima sanahla sar	mmunication bandular
	Another part covers the hardware of embedded systems:			
	embedded processors, memories, energy dissipation, reconfi			
	operating systems, middleware and real-time scheduling. Fir (hardware/software partitioning, high-level transformations of		-	
	covered.	specifications, energy-efficient realization	ons, compliers for en	ilbedded processors) is
	covered.			
Skills	After having attended the course, students shall be able to re	ealize simple embedded systems. The s	tudents shall realize	which relevant parts of
	technological competences to use in order to obtain a function	nal embedded systems. In particular, the	ey shall be able to co	ompare different models
	of computations and feasible techniques for system-level desi	ign. They shall be able to judge in which	areas of embedded	l system design specific
	risks exist.			
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a group	p and to present the results accordingly.		
A - · · ·	Childanta ava abla ta agguiya navulmaydadaa fi	voture and to appoint this knowledge	iith athau alaaa -	
Autonomy	Students are able to acquire new knowledge from specific liter	ature and to associate this knowledge w	ith other classes.	
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 minutes, contents of course and labs			
Assignment for the Following	General Engineering Science (German program, 7 semester):	Specialisation Computer Science: Election	ive Compulsory	
Curricula	Computer Science: Specialisation Computer and Software En	gineering: Elective Compulsory		
	Electrical Engineering: Core qualification: Elective Compulsor	у		
	General Engineering Science (English program, 7 semester):	Specialisation Computer Science: Election	ve Compulsory	
	Computational Science and Engineering: Core qualification: C	Compulsory		
	Mechatronics: Specialisation System Design: Elective Comput	lsory		
	Mechatronics: Specialisation Intelligent Systems and Robotics	:: Elective Compulsory		

Course L0805: Embedded Systems		
Тур	Lecture	
Hrs/wk	3	
CP	4	
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42	
Lecturer	Prof. Heiko Falk	
Language	EN	
Cycle	SoSe	
Content	 Introduction Specifications and Modeling Embedded/Cyber-Physical Systems Hardware System Software Evaluation and Validation Mapping of Applications to Execution Platforms Optimization 	
Literature	 Peter Marwedel. Embedded System Design - Embedded Systems Foundations of Cyber-Physical Systems. 2nd Edition, Springer, 2012., Springer, 2012. 	

Course L0806: Embedded Systems	
Тур	Recitation Section (small)
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14

Literature	See interlocking course

Thesis

Module M-001: Bachelor 1	Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to General Regulations §24 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	
	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (fac
	theories, and methods).
	 On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up ar establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-relate
	problems.
	With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issue
	and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	
	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structure
	way.
	 The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing they can uphold their own assessments and viewpoints convincingly.
	they can upriord their own assessments and viewpoints convincingly.
Autonomy	
riateriorny	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified tine.
	frame.
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.
	The students can apply the essential techniques of scientific work to research of their own.
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
Credit points	12
Examination	according to Subject Specific Regulations
Examination duration and scale	laut FSPO
