Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Duefocaleual Commetence	

Knowledae

The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

Autonomy	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. Personal Competences (Self-reliance) Students are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	

Courses

Content	In the physics lab a number of key experiments on physical phenomena in mechanics, oscillatory and wave motion, thermodynamics, electricity, and optics will be conducted by the students under assistance of a lecturing tutor. The experiments are part of the physics education program presented in the course "Physics for TUHH-ET Engineers". Beyond teaching of fundamental physical background the objectives are basic skills in preparation and performing physical measurements, usage of physical equipment, analysis of the results and preparation of a report on the experimental data.	
Literature	Zu den Versuchen gibt es individuelle Versuchsanleitungen, die vor der Versuchsdurchführung ausgegeben werden. Zum Teil müssen die zur Versuchsdurchführung notwendigen physikalischen Hintergründe selbstständig erarbeitet werden, wozu die zur Vorlesung "Physik für TUHH-ET Ingenieure" angegebene Literatur gut geeignet ist.

Cycle

In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools

If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Courses				
Title		Тур	Hrs/wk	СР
Electrical Engineering II: Alternating	g Current Networks and Basic Devices (L0178)	Lecture	3	5
Electrical Engineering II: Alternating	g Current Networks and Basic Devices (L0179)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Becker			
Admission Requirements	None			
Recommended Previous	Electrical Engineering I			
Knowledge	Mathematics I			
	Direct current networks, complex numbers			
	Direct current networks, complex numbers			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence	A recording part successionly, students have reached	. a.e. onowing rearring results		
_	Students are able to reproduce and explain fundan	nental theories, principles, and method	s related to the t	theory of alternating
	currents. They can describe networks of linear elem-			
	an overview of applications for the theory of altern	ating currents in the area of electrical	engineering. Stu	dents are capable of
	explaining the behavior of fundamental passive and a	active devices as well as their impact on	simple circuits.	
Skills	Students are capable of calculating parameters with			
	notation for voltages and currents. They can appr			
	alternating currents. Students are able to analyze quantitatively and dimension elements by means of	•		_
	electrical power supply (transformer, transmission li		-	
	dimension their main features.	, , , , , , , , , , , , , , , , , , , ,	, , , , , , , , , , , , , , , , , , , ,	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
Personal Competence				
Social Competence	Students are able to work together on subject related	d tasks in small groups. They are able to	present their res	ults effectively.
Autonomy	Students are capable to gather necessary information			
	the lecture. They are able to continually reflect their tests and exercises that are related to the exam. Ba			
	learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).

Knowledge					
Educational Objectives	After taking part successfully, students have rea	ached the following learning results			
Professional Competence					
Knowledge	Students can explain the composition and the structural properties of materials used in electrical engineering. Students can explicate the relevance of mechanical, electrical, thermal, dielectric, magnetic and chemical properties of materials in view of their applications in electrical engineering.				
Skills	Students can identify appropriate descriptive models and apply them mathematically. They can derive approximative solutions and judge factors influential on the performance of materials in electrical engineering applications.				
Personal Competence					
Social Competence	Students can jointly solve subject related proble problem solving course.	ems in groups. They can present their resu	Ilts effectively within	the framework of th	
Autonomy	Students are capable to extract relevant information from the provided references and to relate this information to the content of the lecture. They can reflect their acquired level of expertise with the help of lecture accompanying measures such as exam typical exam questions. Students are able to connect their knowledge with that acquired from other lectures.

Content	The Hamiltonian approach to classical mechanics. Analysis of a simple oscillator.
	Analysis of vibrations in a one-dimensional lattice. Phononic bandgap
	Introduction to quantum mechanics
	Wave function, Schrödinger's equation, observables and measurements.
	Quantum mechanical harmonic oscillator and spectral decomposition.
	Symmetries, conserved quantities, and the labeling of states.
	Angular momentum
	The hydrogen atom
	Waves in periodic potentials
	Reciprocal lattice and reciprocal lattice vectors
	Band gap
	Band diagrams The free electron gas and the density of states
	Fermi-Dirac distribution
	Density of charge carriers in semiconductors
	Conductivity in semiconductors. Engineering conductivity through doping.
	The P-N junction (diode)
	Light emitting diodes
	Electromagnetic waves interacting with materials
	Reflection and refraction
	Photonic band gaps
	Origins of magnetization
	Hysteresis in ferromagnetic materials Magnetic domains
	Progrede domains

Knowledge		
Educational Objectives	s After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge		series analysis of line
	networks driven by periodic signals. They know the methods for transient analysis of linear networks in	
	domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-cir	
Skills	The students are able to calculate currents and voltages in linear networks by means of basic method	ls, also when driven i
	periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain an	d are able to explain t
	respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of	f passive two-termina
	circuits.	
Personal Competence		
Social Competence	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss	their results within the
	group.	
Autonomy	The students are able to find out the required methods for solving the given practice problems. Possibilities	
	knowledge during the lectures continuously by means of short-time tests. This allows them to cont	
	educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I a	na Mathematics I.

omputer Engineering (L0321)	Lecture 3 4				
omputer Engineering (L0324)	Recitation Section (small) 1 2				
Module Responsible					
Admission Requirements					
Recommended Previous Knowledge	Basic knowledge in electrical engineering				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence	After taking part successfully, students have reached the following learning results				
•	This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-leve				
, and the second	programming down to gates. The module includes the following topics:				
	 Introduction Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks 				
	Sequential logic: Flip-flops, automata, systematic hardware design				
	Technological foundations				
	Computer arithmetic: Integer addition, subtraction, multiplication and division				
	Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining				
	Memories: Memory hierarchies, SRAM, DRAM, caches				
	Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses				
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the phys				
	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based o				
	collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers				
	today's computing systems - from gates and circuits up to complete processors.				
	After successful completion of the module, the students are able to judge the interdependencies between a physical completion				
	system and the software executed on it. In particular, they shall understand the consequences that the execution of software				
	on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evalu				
	the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.				
Personal Competence					
•	Students are able to solve similar problems alone or in a group and to present the results accordingly.				
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Module M0853: Mathematics III								
Courses								
Title Analysis III (L1028) Analysis III (L1029) Analysis III (L1030) Differential Equations 1 (Ordinary II Differential Equations 1 (Ordinary II Module Responsible	Differential Equations) (L1032) Differential Equations) (L1033) Prof. Anusch Taraz None Mathematics I + II	Typ Lecture Recitation Section (small) Recitation Section (large) Lecture Recitation Section (small) Recitation Section (large)	Hrs/wk 2 1 1 2 1	CP 2 1 1 2 1 1				
Knowledge	 Students can name the basic concepts in the area of analysis and differential equations. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can reproduce them. 							
Skills	 Students can model problems in the area of analysis and differential equations with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. 							
Personal Competence Social Competence								
Autonomy	 Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems. 							
Workload in Hours	Independent Study Time 128, Study Time in Lecture 2	112

Module M0567: Theor	retical Electrical Engineering I:	Time-Independent Fields		
Courses				
Title Theoretical Electrical Engineering I Theoretical Electrical Engineering I		Typ Lecture Recitation Section (small)	Hrs/wk 3 2	CP 5 1
	Prof. Christian Schuster			
Admission Requirements				
Recommended Previous Knowledge	Basic principles of electrical engineering and	advanced mathematics		
Educational Objectives	After taking part successfully, students have i	reached the following learning results		
Professional Competence Knowledge	Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic fields. They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explicate these.			
Skills	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields an analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.			
Personal Competence Social Competence	Students are able to work together on subjecturing exercise sessions).	t related tasks in small groups. They are abl	e to present their re	sults effectively (e.
Autonomy	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).

Content	- Maxwell's Equations in integral and differential notation
	- Boundary conditions
	- Laws of conservation for energy and charge
	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

	ls and Systems
Courses	
Title	Typ Hrs/wk CP
Signals and Systems (L0432)	Lecture 3 4
Signals and Systems (L0433)	Recitation Section (small) 2 2
Module Responsible	Prof. Gerhard Bauch
Admission Requirements	None
Recommended Previous	Mathematics 1-3
Knowledge	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik
	1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful
	but not required.
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	Arter taking part successions, students have reached the following learning results
•	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system
Knowiedge	theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They
	can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they
	understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a
	discrete-time signal.
Skills	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and
	system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase
	response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency domain.
Personal Competence	
Social Competence	The students can jointly solve specific problems.
Autonomy	The students are able to acquire relevant information from appropriate literature sources. They can control their level of
	knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Content	Introduction to signal and system theory
	• Signals
	Classification of signals
	 Continuous-time and discrete-time signals
	 Analog and digital signals

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- o Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- Correlation functions of deterministic signals
 - Autocorrelation function
 - Crosscorrelation function
 - Orthogonal signals
 - Applications of correlation
- Linear time-invariant (LTI) systems
 - Linearity
 - Time-invariance
 - Description of LTI systems by impulse response and frequency response
 - Convolution
 - o Convolution and correlation
 - Properties of LTI-systems
 - Causal systems
 - Stable systems
 - Memoryless systems
- Fourier Series and Fourier Transform
 - $\circ \quad \text{Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals} \\$
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - o Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - · Bandwidth definitions
 - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - · Linear-phase systems
 - o Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - $\circ\hspace{0.1cm}$ Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - o Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - $\circ~$ Relation of Fourier transform and DTFT $\,$
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrixZero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - $\circ \ \ \, \hbox{Z-transform of digital filters}$
 - $\circ\hspace{0.1in}$ Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters

	 Minimum-phase, maximum-phase and mixed-phase filters Linear phase filters

Courses	
Title	Typ Hrs/wk CP
Electrical Engineering Project Labo	ratory (L0640) Project-/problem-based Learning 8 6
Module Responsible	Prof. Christian Becker
Admission Requirements	None
Recommended Previous	Electrical Engineering I, Electrical Engineering II
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	5 5 5 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7
•	Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate
	respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate
	technical language. They can explain the typical process of solving practical problems and present related results.
Skills	The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are
	able to develop, compare, and choose conceptual solutions for non-standardized problems.
Personal Competence	
Social Competence	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the
	context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a
	qualified audience. Students have the ability to develop alternative approaches to an electrical engineering problem
	independently or in groups and discuss advantages as well as drawbacks.
Autonomy	Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps
,	in as well as extent their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can
	meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.

Content	Topics and projects cover the entire field of applications of electrical engineering. Typically, the students will prototype functional units and self-contained systems, such as radar devices, networks of sensors, amateur radio transceiver, power electronics based inverters, discrete computers, or atomic force microscopes. Different projects are devised on a yearly basis.
Literature	Alle zur Durchführung der Projekte sinnvollen Quellen (Skripte, Fachbücher, Manuals, Datenblätter, Internetseiten). / All sources that are useful for completion of the projects (lecture notes, textbooks, manuals, data sheets, internet pages).

Knowledge				
Educational Objectives	,	ne following learning results		
Professional Competence				
Knowledge	Students can name the basic concepts in Mather	matics IV. They are able to explain ther	n using appropri	ate examples.
	Students can discuss logical connections between	•		
	the help of examples.			
	They know proof strategies and can reproduce the strategies.	nem.		
	γ			
Skills				
SKIIIS	 Students can model problems in Mathematics I' 	V with the help of the concepts studie	ed in this course	. Moreover, they are
	capable of solving them by applying established	methods.		
	 Students are able to discover and verify further I 	ogical connections between the conce	ots studied in the	e course.
	 For a given problem, the students can develop 	and execute a suitable approach, a	nd are able to c	ritically evaluate the
	results.			
Personal Competence				
Social Competence				
Social competence	Students are able to work together in teams. The	ey are capable to use mathematics as a	a common langu	age.
	 In doing so, they can communicate new concept 	s according to the needs of their coop	erating partners	. Moreover, they can
	design examples to check and deepen the under	standing of their peers.		
Autonomy				
	Students are capable of checking their understa		wn. They can sp	ecify open questions
	precisely and know where to get help in solving			
	Students have developed sufficient persistence	to be able to work for longer period	s in a goal-orien	ted manner on hard
	problems.

Knowledge	basic principles of physics and electrical engineering			
	After taking part successfully, students have reached	the following learning results		
	After taking part successiumy, students have reached	the following learning results		
Professional Competence	Students can explain the basis principles, relationship	ns, and methods for the design of wa	voquidos and an	stannas as wall as s
Knowieage	Students can explain the basic principles, relationshi	ps, and methods for the design of wa	veguides and ar	iterinas as weir as (
	Electromagnetic Compatibility. Specific topics are:			
	- Fundamental properties and phenomena of electrical	circuits		
	- Steady-state sinusoidal analysis of electrical circuits			
	- Fundamental properties and phenomena of electrom	agnetic fields and waves		
	- Steady-state sinusoidal description of electromagnet	ic fields and waves		
	- Useful microwave network parameters			
	- Transmission lines and basic results from transmission	n line theory		
	- Plane wave propagation, superposition, reflection and	d refraction		
	- General theory of waveguides			
	- Most important types of waveguides and their proper	ties		
	- Radiation and basic antenna parameters			
	- Most important types of antennas and their propertie			
	- Numerical techniques and CAD tools for waveguide a	nd antenna design		
	- Fundamentals of Electromagnetic Compatibility			
	- Coupling mechanisms and countermeasures			
	- Shielding, grounding, filtering			
	- Standards and regulations			
	- EMC measurement techniques			
Skills	Students know how to apply various methods and mo	odels for characterization and choice of	f waveguides and	d antennas. They ar
able to assess and qualify their basic electromagnetic properties. They can apply results and strategies from			es from the field of	
	Electromagnetic Compatibilty to the development of e	lectrical components and systems.		
Personal Competence				
Social Competence	Students are able to work together on subject related	d tasks in small groups. They are able	to present their	results effectively
	English (e.g. during small group exercises).			
Autonomy	Students are capable to gather information from su	bject related, professional publication	s and relate tha	it information to th
	context of the lecture. They are able to make a conn	ection between their knowledge obtair	ed in this lecture	e with the content of
	other lectures (e.g. theory of electromagnetic fields, f	undamentals of electrical engineering	/ physics). They	can discuss technica
	problems and physical effects in English.

Content	This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC). It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed. Topics: - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques

Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given.
	This class comprises: Application layer protocols (HTTP, FTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol, routing in the Internet) Data link layer with media access at the example of Ethernet Multimedia applications in the Internet Network management Internet security: IPSec Internet security: Firewalls

Content	- Theory and principal characteristics of quasistationary electromagnetic fields
	- Electromagnetic induction and law of induction
	- Skin effect and eddy currents
	- Shielding of time variable magnetic fields
	- Theory and principal characteristics of fully dynamic electromagnetic fields
	- Wave equations and properties of planar waves
	- Polarization and superposition of planar waves
	- Reflection and refraction of planar waves at boundary surfaces
	- Waveguide theory
	- Rectangular waveguide, planar optical waveguide
	- Elektrical and magnetical dipol radiation
	- Simple arrays of antennas
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

Educational Objectives A Professional Competence	basic MATLAB/Python knowledge
Professional Competence	fter taking part successfully, students have reached the following learning results
-	
Knowledge S	
	tudents are able to
	name numerical methods for interpolation, integration, least squares problems, eigenvalue problems, nonlinear root find
	problems and to explain their core ideas,
	repeat convergence statements for the numerical methods,
	 explain aspects for the practical execution of numerical methods with respect to computational and storage complexitx.
Skills S	itudents are able to
	implement, apply and compare numerical methods using MATLAB/Python, in this shape and solutions of a manifest and solutions and solutions are also below to the solutions of a manifest and solutions.
	justify the convergence behaviour of numerical methods with respect to the problem and solution algorithm, select and execute a suitable solution approach for a given problem.
	 select and execute a suitable solution approach for a given problem.
Personal Competence	
Social Competence S	tudents are able to
	• work together in betargangously compased tooms (i.e., tooms from different study programs and background knowled
	work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge available the implementation of algorithms and support each other with practical aspects regarding the implementation of algorithms.
	explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms
Autonomy S	itudents are capable
	to assess whether the supporting theoretical and practical excercises are better solved individually or in a team,
	 to assess their individual progess and, if necessary, to ask questions and seek help.
	to assess their matriada progess and mocessary, to ask questions and seak neigh

Introduction to Control Systems (LC		Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner			
Admission Requirements				
	Representation of signals and systems in time and freq	uency domain, Laplace transform		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	ne following learning results		
Professional Competence				
Knowledge	Students can represent dynamic system behavior	or in time and frequency domain, and	can in particular	explain properties o
	first and second order systems		,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	
	They can explain the dynamics of simple control	loops and interpret dynamic propertie	s in terms of fre	quency response and
	root locus			
	They can explain the Nyquist stability criterion a	nd the stability margins derived from i	: .	
	They can explain the role of the phase margin in	analysis and synthesis of control loops	5	
	They can explain the way a PID controller affects	a control loop in terms of its frequence	y response	
	They can explain issues arising when controllers	designed in continuous time domain a	re implemented	digitally
Skills				
	Students can transform models of linear dynamic		ain and vice vers	sa
	They can simulate and assess the behavior of sy			
	They can design PID controllers with the help of They can apply a god a with a size size also controllers.			
	They can analyze and synthesize simple control They can calculate discrete time approximate.			
	 They can calculate discrete-time approximat implementation 	ons of controllers designed in con	illiuous-tillie ali	a use it ioi aigita
	They can use standard software tools (Matlab Co	ntrol Toolbox, Simulink) for carrying or	it these tasks	
	- They can use standard software tools (Mattab et	neror rootbox, simuline, for earlying of	at these tasks	
Personal Competence				
Social Competence	Students can work in small groups to jointly solve techn	nical problems, and experimentally val	date their contro	oller designs
Autonomy	Students can obtain information from provided source	es (lecture notes, software document	ation, experimer	nt guides) and use i
	when solving given problems.			
	They can assess their knowledge in weekly on-line test	s and thereby control their learning pro	ogress.

Content	This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices. Central topics are: Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.

emiconductor Circuit Design (L076		Lecture	3	4
emiconductor Circuit Design (L086		Recitation Section (small)	1	2
Module Responsible				
Admission Requirements	None			
Recommended Previous	Fundamentals of electrical engineering			
Knowledge	Basics of physics, especially semiconductor pl	nysics		
Educational Objectives	After taking part successfully, students have r	reached the following learning results		
Professional Competence				
Knowledge		nality of different MOS devices in electronic circ		
		g circuits functions and where they are applied. Inality of fundamental operational amplifiers an		ions
		logic circuits and can discuss their advantages		
		ry circuits and can explain their functionality an		
	Students know the appropriate fields for		a specifications.	
	Stadents know the appropriate news to	. the use of sipolar transistors.		
Skills				
		ns of different MOS devices and can define the p		ctronic circuits.
		ogic circuits and can design different types of lo		
	Students can use MOS devices, operation	onal amplifiers and bipolar transistors for specif	ic applications.	
Personal Competence				
Social Competence	Students are able work efficiently in he	terogeneous teams.		
	Students working together in small group	ups can solve problems and answer professiona	I questions.	
Autonomy	Students are able to assess their level of the students are able to assess their level of the students are able to assess their level of the students are able to assess their level of the students are able to assess their level of the students are able to assess their level of the students are able to assess the students are able to a student are able to a students are able to	of knowledge		
	• Students are able to assess their level to	of knowledge.		
Workload in Hours	Independent Study Time 124, Study Time in L	ecture 56

Module M0803: Embe	dded Systems			
Courses				
Title		Тур	Hrs/wk	СР
Embedded Systems (L0805)		Lecture	3	4
Embedded Systems (L0806)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Computer Engineering			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Embedded systems can be defined as information proce	ssing systems embedded into enclos	ing products. Thi	s course teaches the
	foundations of such systems. In particular, it deals with			
	their specification languages (models of computation,		of distributed sy	stems, task graphs,
	specification of real-time applications, translations between	een different models).		
	Another part covers the hardware of embedded syste	ms: Sonsors, A/D and D/A converter	rs, real-time cap	able communication
	hardware, embedded processors, memories, energy dis	sipation, reconfigurable logic and ac	tuators. The cou	ırse also features an
	introduction into real-time operating systems, middlew	are and real-time scheduling. Finally	y, the implemen	tation of embedded
	systems using hardware/software co-design (hardware/s	oftware partitioning, high-level trans	formations of sp	ecifications, energy-
	efficient realizations, compilers for embedded processors	s) is covered.		
Sville	After having attended the course, students shall be ab	la to realize simple embedded syste	ms. The student	e shall realize which
Skiiis	relevant parts of technological competences to use in o			
	able to compare different models of computations and f			-
	which areas of embedded system design specific risks ex		ge, e	,
Personal Competence	, , ,			
	Students are able to solve similar problems alone or in a	group and to present the results acco	ordingly.	
Autonomy	Students are able to acquire new knowledge from specifi	c literature and to associate this know	wledge with othe	r classes.

Thesis

Module M-001: Bache	lor Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to Congral Degulations \$21 (1)
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	
	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve which related archives.
	 subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	• The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
4	
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	specified time frame.
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific
	 problem. The students can apply the essential techniques of scientific work to research of their own.
	The students can apply the essential techniques of scientific work to research of their own.
