

## **Module Manual**

Bachelor of Science (B.Sc.)

# **Electrical Engineering Dual study program**

Cohort: Winter Term 2022

Updated: 20th December 2023

# Table of Contents

Table of Contents	2
Program description	3
Core Qualification	5
Module M0642: Physics for Engineers	5
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	7
Module M1692: Computer Science for Engineers - Introduction and Overview	8
Module M0829: Foundations of Management	9
Module M0850: Mathematics I	11
Module M1755: Linking theory and practice (dual study program, Bachelor's degree)	13
Module M1750: Practical module 1 (dual study program, Bachelor's degree)	15
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	17
Module M0748: Materials in Electrical Engineering	20
Module M1693: Computer Science for Engineers - Programming Concepts, Data Handling & Communication	24
Module M0851: Mathematics II	26
Module M1751: Practical module 2 (dual study program, Bachelor's degree)	28
Module M0783: Measurements: Methods and Data Processing	30
Module M0708: Electrical Engineering III: Circuit Theory and Transients	32
Module M0730: Computer Engineering	34
Module M0853: Mathematics III	36
Module M1752: Practical module 3 (dual study program, Bachelor's degree)	39
Module M0610: Electrical Machines and Actuators	41
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	43
Module M0672: Signals and Systems	45
Module M0734: Electrical Engineering Project Laboratory	48
Module M0854: Mathematics IV	50
Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	53
Module M1753: Practical module 4 (dual study program, Bachelor's degree)	55
Module M1962: Basics space electronics and primary mission	57
Module M0834: Computernetworks and Internet Security	58
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	60
Module M1802: Engineering Mechanics I (Stereostatics)	63
Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields	65
Module M0662: Numerical Mathematics I	67
Module M0675: Introduction to Communications and Random Processes	69
Module M0760: Electronic Devices	73
Module M0833: Introduction to Control Systems	75
Module M1754: Practical module 5 (dual study program, Bachelor's degree)	77
Module M0634: Introduction into Medical Technology and Systems	79
Module M1803: Engineering Mechanics II (Elastostatics)	81
Module M0777: Semiconductor Circuit Design	83
Module M0803: Embedded Systems	85
Thesis	87
Module M1800: Bachelor thesis (dual study program)	87

## Program description

---

---

### Content

The electrical industry is the second largest industrial sector in Germany after mechanical engineering in terms of the number of employees. With approx. 847,000 employees, a turnover of approx. 179 billion euros is achieved (based on the year 2016, source: de.statista.com). Electrical engineering is thus not only one of the "classical engineering sciences" but also one of the main drivers of national and international technical progress in recent decades.

In engineering terms, electrical engineering deals with research, development and, in general, the application of electrical signals, electrical energy and electromagnetic fields in corresponding components and circuits.

Due to the widely ramified fields of application, a high degree of specialisation is required in the profession. As a consequence, the vocational training of electrical engineers is in the area of tension between the breadth of the training (for the widest possible range of later uses) and the depth of the training (for current, subject-specific competences). Within the framework of the consecutive Bachelor's/Master's degree programmes in electrical engineering at the TUHH, the breadth of the subject is taught primarily during the Bachelor's degree programme and focal points are deepened in the Master's degree programme. The Bachelor's programme conveys the fundamentals of electrical engineering, information technology, computer science as well as mathematics and physics required for solving electrical engineering and information technology tasks. In addition to the technical canon of fundamentals, training in non-technical areas such as business administration, patents, management, humanities, law and philosophy is aimed for, which meets the modern professional requirements of an engineer.

In addition to the foundational curriculum taught at TUHH, seminars on developing personal skills are integrated into the dual study programme, in the context of transfer between theory and practice. These seminars correspond to the modern professional requirements expected of an engineer, as well as promoting the link between the two places of learning.

The intensive dual courses at TUHH integrating practical experience consist of an academic-oriented and a practice-oriented element, which are completed at two places of learning. The academic-oriented element comprises study at TUHH. The practice-oriented element is coordinated with the study programme in terms of content and time, and consists of practical modules and phases spent in an affiliate company during periods when there are no lectures.

### Career prospects

Successful completion of the Bachelor's degree programme in Electrical Engineering enables an early career entry into the typical fields of activity in electrical engineering, in addition to taking up a Master's degree programme that provides more in-depth scientific knowledge. These include communications engineering, measurement and control engineering, microsystems engineering and nanoelectronics, electrical power engineering, high-frequency engineering and optical systems.

Electrical engineers are among the most sought-after academics on the labour market. A current evaluation of data from the Federal Employment Agency proves the increasing demand (Federal Employment Agency: "Berichte: Blickpunkt Arbeitsmarkt - Ingenieurinnen und Ingenieure", Nuremberg, 2018). While the number of registered unemployed continues to fall steadily, the number of registered vacancies is increasing significantly at the same time. At the same time, only a fraction of the advertised jobs are reported to the Federal Employment Agency, so that the supply of jobs currently exceeds the demand. Thus, as in previous years, the demand for electrical engineers - especially in the old federal states including Hamburg - cannot be met ("shortage of skilled workers").

In addition, students acquire basic professional and personal skills as part of the dual study programme that enable them to enter professional practice at an early stage and to go on to further study. Students also gain practical work experience through the integrated practical modules. Graduates of the dual course have broad foundational knowledge, fundamental skills for academic work and relevant personal competences.

### Learning target

The desired learning outcomes of the degree programme are based on the objectives listed above. The focus is on enabling graduates to responsibly and competently perform an engineering activity in the various fields of activity in electrical engineering. The learning objectives are divided into the following categories: knowledge, skills, social competence and independence.

#### Knowledge

- Students can name and describe the mathematical-scientific fundamentals and methods of engineering sciences. This includes, in particular, elements of higher analysis and linear algebra as well as physics.
- Students can explain the fundamentals and methods of electrical engineering and information technology and can give an overview of their subject. Of particular importance are direct and alternating current theory, circuit technology, the theory of electromagnetic fields and waves, the materials and components of electrical engineering as well as systems theory with their respective methods.
- The students can explain the basics, methods and areas of application of the sub-disciplines of electrical engineering in detail. Important sub-disciplines are electrical power engineering, communications engineering, circuit technology, measurement technology and control engineering.
- Students can reproduce the fundamentals and methods of economics and can give an overview of the relevant social, ethical, ecological and economic boundary conditions of their subject.

#### Skills

- The students can independently work on research questions using suitable methods, document their chosen solution path and present it to an expert audience.
- Students can solve problems from the fields of analysis, linear algebra, function theory and the theory of differential equations using the methods they have learned
- The students can assess the current and voltage behaviour in electrical networks, dimension simple circuits and analyse networks in the time and frequency domain. They can use semiconductor components such as transistors and diodes as well as operational amplifiers in their areas of application. They are able to plan electrical power supply systems in basic outlines and analyse the operating behaviour of electrical machines and calculate typical variables. They are able to clarify metrological issues and apply methods for describing and processing measurement data.
- The students can model, programme and adapt simple algorithms. They can design and test software and estimate its complexity. They are able to distinguish between the different levels of abstraction of today's computing systems.
- The students can apply different methods to solve Maxwell's equations for electromagnetic field problems. They can derive typical quantities from the fields and dimension them for application in practice.
- The students can describe and analyse linear, time-invariant systems with the methods of signal and system theory. They are able to design and evaluate simple communication and control systems.
- The students can generally map typical problems to their basic knowledge, find suitable solution methods and implement them. They can appropriately document the chosen solution in writing and present it to an audience in a clearly structured manner.

#### Social competence

- Students are able to present the procedure and results of their work in a comprehensible manner, both orally and in writing.
- The students are able to communicate about the contents and problems of electrical engineering with experts and laypersons. They can react

appropriately to questions, additions and comments.

- The students are able to work in groups. They can define, distribute and integrate subtasks. They can make time arrangements and interact socially.

### **Competence to work independently**

- The students are able to obtain necessary technical information and place it in the context of their knowledge
- The students can realistically assess their existing competences and work on deficits independently
- The students can learn complex topics and work on problems in a self-organised and self-motivated manner (lifelong learning).

By continually switching places of learnings throughout the dual study programme, it is possible for theory and practice to be interlinked. Students reflect theoretically on their individual professional practical experience, and apply the results of their reflection to new forms of practice. They also test theoretical elements of the course in a practical setting, and use their findings as a stimulus for theoretical debate.

### **Program structure**

The curriculum of the Bachelor's degree programme in Electrical Engineering is structured as follows:

- Core qualification - compulsory: 29 modules, 174 credit points (LP), 1st - 6th semester.
- Core qualification - compulsory elective: 4 modules, 24 LP, 4th, 5th and 6th semester
- Bachelor thesis: 12 LP, 6th semester

The total workload for the Bachelor's programme is 210 LP, with a semester distribution of 36/34/38/36/36/36 LP.

In addition to the subject modules, the core qualification also includes the following interdisciplinary modules:

- Fundamentals of business administration: 6 LP, 1st semester
- dual courses in the Bachelor: 6 LP, 1st - 6th semester

The structural model of the dual study programme follows a module-differentiating approach. Given the practice-oriented element, the curriculum of the dual study programme is different compared to a standard Bachelor's course. Five practical modules are completed at the dual students' partner company as part of corresponding practical terms during lecture-free periods.

## Core Qualification

### Module M0642: Physics for Engineers

#### Courses

Title	Typ	Hrs/wk	CP
Physics for Engineers (L0367)	Lecture	2	3
Physics for Engineers (Problem Solving Course) (L0368)	Recitation Section (small)	1	1
Physics-Lab for ET (L0948)	Practical Course	1	2

<b>Module Responsible</b>	Prof. Manfred Eich		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Calculus and linear algebra on high school level</li> <li>Physics on high school level</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>	<p>Students can explain fundamental topics and laws of physics such as in the areas of mechanics, oscillations, waves, and optics.</p> <p>Students can relate physics topics to technical problems.</p> <p>Students can describe physical problems mathematically and solve such problems within the framework of their acquired mathematical expertise.</p> <p>Students are able to write meaningful reports on experiments and to discuss the results in a conclusive way.</p>		
<b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Students can jointly solve subject related problems in groups. They can present their results effectively within the framework of the problem solving and lab courses.</p> <p>Students are capable to extract relevant information from the provided references and to relate this information to the content of the lecture. They can reflect their acquired level of expertise with the help of lecture accompanying measures such as exam typical exam questions. Students are able to connect their knowledge with that acquired from other lectures.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory</b> Yes	<b>Bonus</b> None	<b>Form</b> Subject theoretical and practical work <b>Description</b> 4-seitige handschriftliche Versuchsvorbereitung, Ausarbeitung unter Anleitung und Testat
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 Minutes		
<b>Assignment for the Following Curricula</b>	Digital Mechanical Engineering: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory		

Course L0367: Physics for Engineers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Manfred Eich
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Kinematics and dynamics</li> <li>• Work, Energy, momentum</li> <li>• Rotatory Motion, moments of inertia</li> <li>• Gravitation</li> <li>• Special Theory of Relativity</li> <li>• Oscillations</li> <li>• Waves</li> <li>• Geometrical optics</li> <li>• Wave optics</li> <li>• Matter waves</li> <li>• Fundamentals of quantum mechanics</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Giancoli, Physics for Scientists &amp; Engineers Vol. 1, 2, Pearson</li> <li>• Halliday/Resnik/Walker, <i>Fundamentals of physics</i>, Wiley</li> <li>• K. Cummings, P. Laws, E. Redish, and P. Cooney ("CLRC"), <i>Understanding Physics</i>, Wiley</li> <li>• Gerthsen/Vogel, <i>Physik</i>, Springer Verlag</li> <li>• Hering/Martin/Stohrer, <i>Physik für Ingenieure</i>, VDI-Verlag</li> </ul>

Course L0368: Physics for Engineers (Problem Solving Course)	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Manfred Eich
<b>Language</b>	DE
<b>Cycle</b>	WiSe

Course L0948: Physics-Lab for ET	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Wolfgang Hansen
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>In the physics lab a number of key experiments on physical phenomena in mechanics, oscillatory and wave motion, thermodynamics, electricity, and optics will be conducted by the students under assistance of a lecturing tutor. The experiments are part of the physics education program presented in the course "Physics for TUHH-ET Engineers".</p> <p>Beyond teaching of fundamental physical background the objectives are basic skills in preparation and performing physical measurements, usage of physical equipment, analysis of the results and preparation of a report on the experimental data.</p>
<b>Literature</b>	<p>Zu den Versuchen gibt es individuelle Versuchsanleitungen, die vor der Versuchsdurchführung ausgegeben werden.</p> <p>Zum Teil müssen die zur Versuchsdurchführung notwendigen physikalischen Hintergründe selbstständig erarbeitet werden, wozu die zur Vorlesung "Physik für TUHH-ET Ingenieure" angegebene Literatur gut geeignet ist.</p>

Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields				
<b>Courses</b>				
<b>Title</b>			<b>Typ</b>	<b>Hrs/wk</b>

Module M0829: Foundations of Management				
Courses				
Title	Typ		Hrs/wk	CP
Management Tutorial (L0882)	Recitation Section (small)		2	3
Introduction to Management (L0880)	Lecture		3	3
<b>Module Responsible</b>	Prof. Christoph Ihl			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic Knowledge of Mathematics and Business			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	<p>After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to</p> <ul style="list-style-type: none"> <li>explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management</li> <li>explain the most important aspects of and goals in Management and name the most important aspects of entrepreneurial projects</li> <li>describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human resource management, information management, innovation management and marketing</li> <li>explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance</li> <li>state basics from accounting and costing and selected controlling methods.</li> </ul>			
<i>Skills</i>	<p>Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to</p> <ul style="list-style-type: none"> <li>analyse Management goals and structure them appropriately</li> <li>analyse organisational and staff structures of companies</li> <li>apply methods for decision making under multiple objectives, under uncertainty and under risk</li> <li>analyse production and procurement systems and Business information systems</li> <li>analyse and apply basic methods of marketing</li> <li>select and apply basic methods from mathematical finance to predefined problems</li> <li>apply basic methods from accounting, costing and controlling to predefined problems</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work successfully in a team of students</li> <li>to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project</li> <li>to communicate appropriately and</li> <li>to cooperate respectfully with their fellow students.</li> </ul>			
<i>Autonomy</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work in a team and to organize the team themselves</li> <li>to write a report on their project.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	several written exams during the semester			
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory            Civil- and Environmental Engineering: Specialisation Civil Engineering: Elective Compulsory            Civil- and Environmental Engineering: Specialisation Water and Environment: Elective Compulsory            Civil- and Environmental Engineering: Specialisation Traffic and Mobility: Elective Compulsory            Bioprocess Engineering: Core Qualification: Compulsory            Computer Science: Core Qualification: Compulsory            Data Science: Core Qualification: Compulsory            Data Science: Core Qualification: Compulsory            Electrical Engineering: Core Qualification: Compulsory            Computer Science in Engineering: Core Qualification: Compulsory            Integrated Building Technology: Core Qualification: Compulsory            Logistics and Mobility: Core Qualification: Compulsory            Mechanical Engineering: Core Qualification: Compulsory            Mechatronics: Core Qualification: Compulsory            Orientation Studies: Core Qualification: Elective Compulsory            Orientation Studies: Core Qualification: Elective Compulsory            Naval Architecture: Core Qualification: Compulsory            Technomathematics: Core Qualification: Compulsory            Process Engineering: Core Qualification: Compulsory            Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory</p>			

Course L0882: Management Tutorial	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christoph Ihl, Katharina Roedelius
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>
<b>Literature</b>	Relevante Literatur aus der korrespondierenden Vorlesung.

Course L0880: Introduction to Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christoph Ihl, Prof. Christian Lühje, Prof. Christian Ringle, Prof. Cornelius Herstatt, Prof. Kathrin Fischer, Prof. Matthias Meyer, Prof. Thomas Wrona, Prof. Thorsten Blecker, Prof. Wolfgang Kersten
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management</li> <li>• Important definitions from Management,</li> <li>• Developing Objectives for Business, and their relation to important Business functions</li> <li>• Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation Management, Marketing and Sales</li> <li>• Cross-sectional Functions, e.g. Organisation, Human Resource Management, Supply Chain Management, Information Management</li> <li>• Definitions as information, information systems, aspects of data security and strategic information systems</li> <li>• Definition and Relevance of innovations, e.g. innovation opportunities, risks etc.</li> <li>• Relevance of marketing, B2B vs. B2C-Marketing</li> <li>• different techniques from the field of marketing (e.g. scenario technique), pricing strategies</li> <li>• important organizational structures</li> <li>• basics of human resource management</li> <li>• Introduction to Business Planning and the steps of a planning process</li> <li>• Decision Analysis: Elements of decision problems and methods for solving decision problems</li> <li>• Selected Planning Tasks, e.g. Investment and Financial Decisions</li> <li>• Introduction to Accounting: Accounting, Balance-Sheets, Costing</li> <li>• Relevance of Controlling and selected Controlling methods</li> <li>• Important aspects of Entrepreneurship projects</li> </ul>

Module M1755: Linking theory and practice (dual study program, Bachelor's degree)	
<b>Module Responsible</b>	Dr. Henning Haschke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	none
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	Dual students...  ... can describe and classify selected classic and modern theories, concepts and methods <ul style="list-style-type: none"> <li>• related to self-management, and organising work and learning</li> <li>• self-competence and</li> <li>• social skills</li> </ul> ... and apply them to specific situations, projects and plans in a personal and professional context.
<b>Personal Competence</b> <i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>• ... anticipate typical difficulties, positive and negative effects, as well as success and failure factors in the engineering sector, evaluate them and consider promising strategies and courses of action.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>• ... work together in a problem-oriented and interdisciplinary manner as part of expert and work teams.</li> <li>• ... are able to assemble and lead working groups.</li> <li>• ... present complex, subject-related solutions to problems to experts and stakeholders and can develop these further together.</li> </ul>
<b>Personal Competence</b> <i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>• ... define, reflect and evaluate goals for learning and work processes.</li> <li>• ... design their learning and work processes independently and sustainably at the university and company.</li> <li>• ... take responsibility for their learning and work processes.</li> <li>• ... are able to consciously think through their ideas or actions and relate them to their self-image to develop conclusions for future action based on this.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written elaboration
<b>Examination duration and scale</b>	Studienbegleitende und semesterübergreifende Dokumentation: Die Leistungspunkte für das Modul werden durch die Anfertigung eines digitalen Lern- und Entwicklungsberichtes (E-Portfolio) erworben. Dabei handelt es sich um eine fortlaufende Dokumentation und Reflexion der Lernerfahrungen und der Kompetenzentwicklung im Bereich der Personalen Kompetenz.

Course L2885: Self-Competence for Professional Success in Engineering (for Dual Study Program)	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Henning Haschke, Heiko Sieben
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Key qualifications for professional success</li> <li>• Personality and self-image</li> <li>• Personality profiles</li> <li>• Emotional competence</li> <li>• Needs structure models</li> <li>• Motivation theories and models</li> <li>• Communication basics, communication problems</li> <li>• Conflict management</li> <li>• Constructive communication and language cultures</li> <li>• Resilience</li> <li>• Transfer skills and (self-)reflection</li> <li>• Intercultural competence and business etiquette</li> <li>• Documenting and reflecting on learning experiences</li> </ul>

Course L2886: Social-Competence: Team Development and Communication in Engineering (for Dual Study Program)	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Henning Haschke, Heiko Sieben
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Forms, conditions and processes of working groups and leadership relationships</li> <li>• Social skills: theories and models</li> <li>• Communication and discussion techniques</li> <li>• Empathy and motivation in teamwork, the way teams work</li> <li>• Critical ability</li> <li>• Team development: ways of developing working and project groups</li> <li>• Insights into day-to-day leadership: theories and models, leadership tasks, leadership styles, situational leadership, basics of change management</li> <li>• Documenting and reflecting on learning experiences</li> </ul>
<b>Literature</b>	Seminarapparat

Module M1750: Practical module 1 (dual study program, Bachelor's degree)			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Practical term 1 (dual study program, Bachelor's degree) (L2879)		0	6
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	A: Self-management, organising work and learning in engineering (for dual study program)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Dual students... <ul style="list-style-type: none"> <li>... describe their employer's organisation (company) and the associated regulations that relate to how tasks and competences are distributed, as well as how work processes are handled.</li> <li>... understand the structure and objectives of the dual study programme and the increasing requirements throughout the course of study.</li> </ul>		
<i>Skills</i>	Dual students... <ul style="list-style-type: none"> <li>... use equipment and resources professionally in accordance with the assigned work areas and tasks, and describe operational processes and procedures with regard to the intended work results/objectives.</li> <li>... implement the university's application recommendations in relation to their current tasks.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>... have familiarised themselves with their new working environment (learning environment) and the associated tasks/processes/working relationships.</li> <li>... know their central points of contact and company colleagues, and exchange ideas with them constructively.</li> <li>... coordinate work tasks with their professional supervisor and ask for support as needed.</li> <li>... help shape the work in the assigned work area and offer their colleagues support to complete their work.</li> <li>... work together with others in smaller work teams in a result-oriented manner.</li> </ul>		
<i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>... structure their work and learning processes within the company independently in line with their responsibilities and authorisations, and coordinate them with their professional supervisor.</li> <li>... complete work tasks/assignments with the support of colleagues.</li> <li>... coordinate the practical phase with any individual preparation required for the examination phase at TUHH.</li> <li>... document and reflect on how their foundational subjects link with their work as an engineer.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory

Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices				
<b>Courses</b>				
<b>Title</b>			<b>Typ</b>	<b>Hrs/wk</b>
Electrical Engineering II: Alternating Current Networks and Basic Devices (L0178)			Lecture	3
Electrical Engineering II: Alternating Current Networks and Basic Devices (L0179)			Recitation Section (small)	2
<b>Module Responsible</b>	Prof. Christian Becker			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Electrical Engineering I Mathematics I Direct current networks, complex numbers			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to reproduce and explain fundamental theories, principles, and methods related to the theory of alternating currents. They can describe networks of linear elements using a complex notation for voltages and currents. They can reproduce an overview of applications for the theory of alternating currents in the area of electrical engineering. Students are capable of explaining the behavior of fundamental passive and active devices as well as their impact on simple circuits.			
<i>Skills</i>	Students are capable of calculating parameters within simple electrical networks at alternating currents by means of a complex notation for voltages and currents. They can appraise the fundamental effects that may occur within electrical networks at alternating currents. Students are able to analyze simple circuits such as oscillating circuits, filter, and matching networks quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of an electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified to dimension their main features.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively.			
<i>Autonomy</i>	Students are capable to gather necessary information from the references provided and relate that information to the context of the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as online-tests and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0748: Materials in Electrical Engineering			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electrotechnical Experiments (L0714)	Lecture	1	1
Materials in Electrical Engineering (L0685)	Lecture	2	3
Materials in Electrical Engineering (Problem Solving Course) (L0687)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Manfred Eich		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Highschool level physics and mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can explain the composition and the structural properties of materials used in electrical engineering. Students can explicate the relevance of mechanical, electrical, thermal, dielectric, magnetic and chemical properties of materials in view of their applications in electrical engineering.</p> <p><i>Skills</i> Students can identify appropriate descriptive models and apply them mathematically. They can derive approximative solutions and judge factors influential on the performance of materials in electrical engineering applications.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can jointly solve subject related problems in groups. They can present their results effectively within the framework of the problem solving course.</p> <p><i>Autonomy</i> Students are capable to extract relevant information from the provided references and to relate this information to the content of the lecture. They can reflect their acquired level of expertise with the help of lecture accompanying measures such as exam typical exam questions. Students are able to connect their knowledge with that acquired from other lectures.</p>

Module M1751: Practical module 2 (dual study program, Bachelor's degree)			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Practical term 2 (dual study program, Bachelor's degree) (L2880)		0	6
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Successful completion of practical module 1 as part of the dual Bachelor's course</li> <li>course A from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Dual students ...</p> <ul style="list-style-type: none"> <li>... describe their employer's organisational structure (company) and differentiate between associated regulations that relate to how tasks and competences are distributed, as well as how work processes are handled.</li> <li>... understand the structure and objectives of the dual study programme and the increasing requirements throughout the course of study.</li> </ul> <p><i>Skills</i> Dual students ...</p> <ul style="list-style-type: none"> <li>... use equipment and resources professionally in accordance with the assigned work areas and tasks, and assess operational processes and procedures with regard to the intended work results/objectives.</li> <li>... implement the university's application recommendations in relation to their current tasks.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Dual students ...</p> <ul style="list-style-type: none"> <li>... have familiarised themselves with their new working environment (learning environment) and the associated tasks/processes/working relationships.</li> <li>... know their central points of contact and colleagues, and are integrated into the designated tasks and work areas.</li> <li>... coordinate work tasks with their professional supervisor and justify procedures and intended results.</li> <li>... help shape the work in the assigned work area and offer their colleagues support to complete their work or ask for support based on their needs.</li> <li>... work together with others in interdisciplinary work teams in a result-oriented manner.</li> </ul> <p><i>Autonomy</i> Dual students ...</p> <ul style="list-style-type: none"> <li>... structure their work and learning processes within the company independently in line with their responsibilities and authorisations, and coordinate them with their professional supervisor.</li> <li>... complete work tasks/assignments independently and/or with the support of colleagues.</li> <li>... coordinate the practical phase with any individual preparation required for the examination phase at TUHH.</li> <li>... document and reflect on how their foundational subjects link with their work as an engineer.</li> </ul>		
<b>Workload in Hours</b>			
<b>Credit points</b>			
<b>Course achievement</b>			
<b>Examination</b>			
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Computer Science: Core Qualification: Compulsory Data Science: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory

Module M0783: Measurements: Methods and Data Processing				
Courses				
Title	Typ		Hrs/wk	CP
EE Experimental Lab (L0781)	Practical Course		2	2
Measurements: Methods and Data Processing (L0779)	Lecture		2	3
Measurements: Methods and Data Processing (L0780)	Recitation Section (small)		1	1
<b>Module Responsible</b>	Prof. Alexander Schläefer			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	principles of mathematics principles of electrical engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students are able to explain the purpose of metrology and the acquisition and processing of measurements. They can detail aspects of probability theory and errors, and explain the processing of stochastic signals. Students know methods to digitalize and describe measured signals.			
<i>Skills</i>	The students are able to evaluate problems of metrology and to apply methods for describing and processing of measurements.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students solve problems in small groups.			
<i>Autonomy</i>	The students can reflect their knowledge and discuss and evaluate their results.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6

Module M0708: Electrical Engineering III: Circuit Theory and Transients				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Circuit Theory (L0566)		Lecture	3	4
Circuit Theory (L0567)		Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Alexander Kölpin			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Electrical Engineering I and II, Mathematics I and II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of linear networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in frequency domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.			
<i>Skills</i>	The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven by periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to explain the respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-terminal-circuits.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within the group.			
<i>Autonomy</i>	The students are able to find out the required methods for solving the given practice problems. Possibilities are given to test their knowledge during the lectures continuously by means of short-time tests. This allows them to control independently their educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	150 min

Module M0730: Computer Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Computer Engineering (L0321)	Lecture		3	4
Computer Engineering (L0324)	Recitation Section (small)		1	2
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in electrical engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p>This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:</p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks</li> <li>• Sequential logic: Flip-flops, automata, systematic hardware design</li> <li>• Technological foundations</li> <li>• Computer arithmetic: Integer addition, subtraction, multiplication and division</li> <li>• Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining</li> <li>• Memories: Memory hierarchies, SRAM, DRAM, caches</li> <li>• Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses</li> </ul> <p><i>Skills</i> The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.</p> <p>After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.</p>			
<b>Personal Competence</b>				
<i>Social Competence</i>				
<i>Autonomy</i>				
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M1752: Practical module 3 (dual study program, Bachelor's degree)			
Courses			
Title	Typ	Hrs/wk	CP
Practical term 3 (dual study program, Bachelor's degree) (L2881)		0	6
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Successful completion of practical module 2 as part of the dual Bachelor's course</li> <li>course B from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Dual students ...</p> <ul style="list-style-type: none"> <li>... understand the company's strategic orientation, as well as the functions and organisation of central departments with their decision-making structures, network relationships.</li> <li>... understand the requirements of the engineering profession and correctly estimate the resulting responsibility.</li> <li>... combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... apply technical theoretical knowledge to current problems in their own area of work, and evaluate work processes and results.</li> <li>... use technology, equipment and resources in accordance with the assigned work areas and tasks, and assess operational processes and procedures with regard to the intended work results/objectives.</li> <li>... implement the university's application recommendations in relation to their current tasks.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... plan work processes cooperatively, including across work areas.</li> <li>... communicate professionally with operational stakeholders and present complex issues in a structured, targeted and convincing manner.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... assume responsibility for work assignments and areas.</li> <li>... document and reflect on the relevance of subject modules and specialisations for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory</p> <p>Civil- and Environmental Engineering: Core Qualification: Compulsory</p> <p>Chemical and Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Computer Science: Core Qualification: Compulsory</p> <p>Data Science: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Compulsory</p> <p>Engineering Science: Core Qualification: Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory</p> <p>Computer Science in Engineering: Core Qualification: Compulsory</p> <p>Mechanical Engineering: Core Qualification: Compulsory</p> <p>Mechatronics: Core Qualification: Compulsory</p> <p>Naval Architecture: Core Qualification: Compulsory</p> <p>Technomathematics: Core Qualification: Compulsory</p> <p>Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory</p>

Module M0610: Electrical Machines and Actuators				
Courses				
Title	Typ		Hrs/wk	CP
Electrical Machines and Actuators (L0293)	Lecture		3	4
Electrical Machines and Actuators (L0294)	Recitation Section (large)		2	2
<b>Module Responsible</b>	Prof. Thorsten Kern			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basics of mathematics, in particular complexe numbers, integrals, differentials			
	Basics of electrical engineering and mechanical engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p>Students can to draw and explain the basic principles of electric and magnetic fields.</p> <p>They can describe the function of the standard types of electric machines and present the corresponding equations and characteristic curves. For typically used drives they can explain the major parameters of the energy efficiency of the whole system from the power grid to the driven engine.</p> <p>Students are able to calculate two-dimensional electric and magnetic fields in particular ferromagnetic circuits with air gap. For this they apply the usual methods of the design auf electric machines.</p> <p>They can calculate the operational performance of electric machines from their given characteristic data and selected quantities and characteristic curves. They apply the usual equivalent circuits and graphical methods.</p>			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>				
<i>Social Competence</i>				
<i>Autonomy</i>	<p>Students are able independently to calculate electric and magnatic fields for applications. They are able to analyse independently the operational performance of electric machines from the charactersitic data and theycan calculate thereof selected quantities and characteristic curves.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Subject theoretical and practical work			
<b>Examination duration and scale</b>	Design of four machines and actuators, review of design files			
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory</p> <p>Digital Mechanical Engineering: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Elective Compulsory</p> <p>Engineering Science: Specialisation Electrical Engineering: Elective Compulsory</p> <p>Engineering Science: Specialisation Electrical Engineering: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Specialisation Energy Technology: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Specialisation Maritime Technologies: Elective Compulsory</p> <p>Computer Science in Engineering: Specialisation II. Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Theoretical Electrical Engineering I: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic principles of electrical engineering and advanced mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic fields. They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explicate these.		
<i>Skills</i>	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).		
<i>Autonomy</i>	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90-150 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core Qualification: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Mechatronics: Specialisation Electrical Systems: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Module M0672: Signals and Systems				
Courses				
Title	Typ		Hrs/wk	CP
Signals and Systems (L0432)	Lecture		3	4
Signals and Systems (L0433)	Recitation Section (small)		2	2
<b>Module Responsible</b>	Prof. Gerhard Bauch			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<p>Mathematics 1-3</p> <p>The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.</p>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> <p>The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems.</p> <p><i>Skills</i> The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p>			
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0734: Electrical Engineering Project Laboratory				
Courses				
Title	Typ		Hrs/wk	CP
Electrical Engineering Project Laboratory (L0640)	Project-/problem-based Learning		8	6
<b>Module Responsible</b>	Prof. Christian Becker			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Electrical Engineering I, Electrical Engineering II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.			
<i>Skills</i>	The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Students have the ability to develop alternative approaches to an electrical engineering problem independently or in groups and discuss advantages as well as drawbacks.			
<i>Autonomy</i>	Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.

<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112
<b>Lecturer</b>	Prof. Christian Becker, Dozenten des SD E
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Topics and projects cover the entire field of applications of electrical engineering. Typically, the students will prototype functional units and self-contained systems, such as radar devices, networks of sensors, amateur radio transceiver, power electronics based inverters, discrete computers, or atomic force microscopes. Different projects are devised on a yearly basis.
<b>Literature</b>	Alle zur Durchführung der Projekte sinnvollen Quellen (Skripte, Fachbücher, Manuals, Datenblätter, Internetseiten). / All sources that are useful for completion of the projects (lecture notes, textbooks, manuals, data sheets, internet pages).

Module M0854: Mathematics IV			
Courses			
Title	Typ	Hrs/wk	CP
Differential Equations 2 (Partial Differential Equations) (L1043)	Lecture	2	1
Differential Equations 2 (Partial Differential Equations) (L1044)	Recitation Section (small)	1	1
Differential Equations 2 (Partial Differential Equations) (L1045)	Recitation Section (large)	1	1
Complex Functions (L1038)	Lecture	2	1
Complex Functions (L1041)	Recitation Section (small)	1	1
Complex Functions (L1042)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Marko Lindner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics I - III		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>Students can name the basic concepts in Mathematics IV. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <i>Skills</i> <ul style="list-style-type: none"> <li>Students can model problems in Mathematics IV with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul> <b>Personal Competence</b> <i>Social Competence</i> <ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <i>Autonomy</i> <ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112		
<b>Credit points</b>	6

Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility				
Courses				
Title	Typ		Hrs/wk	CP
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1669)	Lecture		3	4
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1877)	Recitation Section (small)		2	2
<b>Module Responsible</b>	Prof. Christian Schuster			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic principles of physics and electrical engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p>Students can explain the basic principles, relationships, and methods for the design of waveguides and antennas as well as of Electromagnetic Compatibility. Specific topics are:</p> <ul style="list-style-type: none"> <li>- Fundamental properties and phenomena of electrical circuits</li> <li>- Steady-state sinusoidal analysis of electrical circuits</li> <li>- Fundamental properties and phenomena of electromagnetic fields and waves</li> <li>- Steady-state sinusoidal description of electromagnetic fields and waves</li> <li>- Useful microwave network parameters</li> <li>- Transmission lines and basic results from transmission line theory</li> <li>- Plane wave propagation, superposition, reflection and refraction</li> <li>- General theory of waveguides</li> <li>- Most important types of waveguides and their properties</li> <li>- Radiation and basic antenna parameters</li> <li>- Most important types of antennas and their properties</li> <li>- Numerical techniques and CAD tools for waveguide and antenna design</li> <li>- Fundamentals of Electromagnetic Compatibility</li> <li>- Coupling mechanisms and countermeasures</li> <li>- Shielding, grounding, filtering</li> <li>- Standards and regulations</li> <li>- EMC measurement techniques</li> </ul> <p>Students know how to apply various methods and models for characterization and choice of waveguides and antennas. They are able to assess and qualify their basic electromagnetic properties. They can apply results and strategies from the field of Electromagnetic Compatibility to the development of electrical components and systems.</p>			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>				
<i>Social Competence</i>				
<i>Autonomy</i>	Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can discuss technical problems and physical effects in English.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M1753: Practical module 4 (dual study program, Bachelor's degree)				
Courses				
Title		Typ	Hrs/wk	CP
Practical term 4 (dual study program, Bachelor's degree) (L2882)			0	6
<b>Module Responsible</b>	Dr. Henning Haschke			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Successful completion of practical module 3 as part of the dual Bachelor's course</li> <li>course B from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Dual students ... <ul style="list-style-type: none"> <li>... understand the company's strategic orientation, as well as the functions and organisation of central departments with their decision-making structures, network relationships, and relevant company communication.</li> <li>... have developed an understanding of the requirements and responsibilities of the engineering profession, know the scope and limits of the professional field of activity.</li> <li>... can combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> </ul>			
<i>Skills</i>	Dual students ... <ul style="list-style-type: none"> <li>... apply technical theoretical knowledge to current problems in their own field of work, and evaluate work processes and results, taking into account different possible courses of action.</li> <li>... use technology, equipment and resources in accordance with the assigned work areas and tasks, and can assess operational processes and procedures with regard to the intended work results/objectives.</li> <li>... implement the university's application recommendations in relation to their current tasks.</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Dual students ... <ul style="list-style-type: none"> <li>... are able to plan work processes cooperatively, across work areas and in heterogeneous groups.</li> <li>... communicate professionally with operational stakeholders and present complex issues in a structured, targeted and convincing manner.</li> </ul>			
<i>Autonomy</i>	Dual students ... <ul style="list-style-type: none"> <li>... assume responsibility for work assignments and areas, and coordinate the associated work processes.</li> <li>... document and reflect on the relevance of subject modules and specialisations for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written elaboration			
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUUH Coordination Office that the dual student has completed the practical phase.

Module M1962: Basics space electronics and primary mission				
Courses				
Title		Typ	Hrs/wk	CP
Basics space electronics and primary mission (L3204)		Project-/problem-based Learning	4	6
Module Responsible	Prof. Ulf Kulau			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>Electrical engineering / Fundamentals of electrical engineering</li><li>Computer science / Computer science for engineers</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"><li>Fundamentals of space electronics,</li><li>Subcomponents of satellite systems</li><li>Fragmentation and planning of primary missions</li><li>Active participation in CubeSat mission to apply learned skills</li><li>Soft skills in project management, project planning and project communication</li></ul>			
	<i>Skills</i>	Upon completion of the module, students will have learned fundamentals of space electronics. They also know how to plan primary missions and how to define subsystems to achieve this primary mission (requirements analysis, performance specification). They will be actively involved in missions and will be expected to put what they have learned into practice there. Additional soft skills in the area of general project management will be taught and applied through collaboration with the students.		
		<ul style="list-style-type: none"><li>Basic teaching</li><li>Conceptual design of subsystems (description of requirements and services)</li><li>Project planning and fragmentation of primary missions (space missions)</li><li>Practical application in CubeSat mission</li></ul>		
	Personal Competence <i>Social Competence</i>	The work takes place alternately in the entire group, but also in small groups. This requires close cooperation and coordination within the individual teams. The goal is for students to gain a sound knowledge of space electronics and space missions on the one hand, to apply this knowledge on the other hand and to generate sustainability of their results by working in small groups. This can be, for example, the passing on of the requirement and performance specifications, which act as a basis, starting point and result across semesters.		
<i>Autonomy</i>	After completing the module, students will be able to independently plan and carry out scientific projects and processes. In group work, organization, idea generation, derivation of hypotheses and thought processes are to be independently moderated and carried out.

Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems				
<b>Courses</b>				
<b>Title</b>			<b>Typ</b>	<b>Hrs/wk</b>
Electrical Power Systems I: Introduction to Electrical Power Systems (L1670)			Lecture	3
Electrical Power Systems I: Introduction to Electrical Power Systems (L1671)			Recitation Section (small)	2
<b>Module Responsible</b>	Prof. Christian Becker			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of Electrical Engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.			
<i>Skills</i>	With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of electric power systems and to assess the results.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.			
<i>Autonomy</i>	Students can independently tap knowledge of the emphasis of the lectures.

Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Theoretical Electrical Engineering II: Time-Dependent Fields (L0182)	Lecture	3	5
Theoretical Electrical Engineering II: Time-Dependent Fields (L0183)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Electrical Engineering I, Electrical Engineering II, Theoretical Electrical Engineering I Mathematics I, Mathematics II, Mathematics III, Mathematics IV		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to explain fundamental formulas, relations, and methods related to the theory of time-dependent electromagnetic fields. They can assess the principal behavior and characteristics of quasistationary and fully dynamic fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-dependent electromagnetic fields and are able to explicate these.		
<i>Skills</i>	Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependent field problems. They can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret them with regard to practical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).		
<i>Autonomy</i>	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between acquired knowledge and ongoing research at the Hamburg University of Technology (TUHH), e.g. in the area of high frequency engineering and optics.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90-150 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Specialisation Electrical Engineering: Compulsory Engineering Science: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation Electrical Systems: Compulsory Technomathematics: Specialisation III. - Continuous and discrete random variables
    - Probability density function (pdf), cumulative distribution function (cdf)
    - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
    - Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution, Rayleigh distribution, etc.)
  - Multiple random variables
    - Conditional probability, joint probability
    - Conditional and joint probability density function
    - Bayes' rule
    - Correlation coefficient
    - Two-dimensional Gaussian distribution
    - Statistically independent, uncorrelated and orthogonal random variables
    - Independent identically distributed (iid) random variables
    - Properties of expected value and variance
    - Covariance
    - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
    - Central limit theorem
  - Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
  - Examples for random processes
  - Ensemble average and time average
  - Ergodic random processes
  - Quadratic mean and variance
  - Probability density function (pdf) and cumulative distribution function (cdf)
  - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
  - Statistically independent, uncorrelated and orthogonal random processes
  - Stationary random processes
  - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of non-stationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
  - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
  - Pseudo-noise sequences, example: Code division multiple access (CDMA)
  - Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khinchine relations
  - White (Gaussian) noise
- Filtering of random processes by LTI systems
  - Transformation of the probability density function (pdf)
  - Transformation of the mean
  - Transformation of the power spectral density (psd)
  - Correlation functions of input and output signal
  - Filtering of white Gaussian noise
  - Bandlimitation for noise power limitation
  - Preemphasis and deemphasis
- Companding, mu-law, A-law
- Functions of random variables
  - Transformation of probabilities and of the probability density function (pdf)
  - Application: Non-linear amplifiers
- Functions of two random variables
  - Probability density function
  - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
  - Wireline channels: Telephone cable, coaxial cable, optical fiber
  - Wireless channels: Fading radio channel, underwater channels
  - Frequency-flat and frequency-selective channels
  - Additive white Gaussian noise (AWGN) channel
  - Signal to noise power ratio (SNR)
  - Discrete-time channel models
  - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
  - Sampling
    - Sampling theorem
  - Pulse modulation
    - Pulse-amplitude modulation (PAM)
    - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
    - Pulse-position modulation (PPM)
    - Pulse-code modulation (PCM)
  - Quantization
    - Linear quantization, midtread and midrise characteristic
    - Quantization error, quantization noise
    - Signal-to-quantization noise ratio
    - Non-linear quantization, compressor characteristics, mu-law, A-law
    - Speech transmission with PCM
  - Differential pulse-code modulation (DPCM)
    - Linear prediction according to the minimum mean squared error (MMSE) criterion.
    - DPCM with forward prediction and backward prediction

Module M0760: Electronic Devices				
Courses				
Title	Typ		Hrs/wk	CP
Electronic Devices (L0720)	Lecture		3	4
Electronic Devices (L0721)	Project-/problem-based Learning		2	2
<b>Module Responsible</b>	Prof. Hoc Khiem Trieu			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Atomic model and quantum theory, electrical currents in solid state materials, basics in solid-state physics Successful participation of Physics for Engineers and Materials in Electrical Engineering or courses with equivalent contents			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	Students are able <ul style="list-style-type: none"> <li>to represent the basics of semiconductor physics,</li> <li>to explain the operating principle of important semiconductor devices,</li> <li>to outline device characteristics and equivalent circuits as well as to explain their derivation and</li> <li>to discuss the limitation of device models.</li> </ul>			
<i>Skills</i>	Students are capable <ul style="list-style-type: none"> <li>to apply devices in basic circuits,</li> <li>to realize the physical context and to solve complex problems by oneself</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	Students are able to prepare and perform their lab experiments in team work as well as to present and discuss the results in front of audience.			
<i>Autonomy</i>	Students are capable to acquire knowledge based on literature in order to prepare their experiments.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b> Yes	<b>Bonus</b> 10 %	<b>Form</b> Subject theoretical and practical work	<b>Description</b> Studierenden erarbeiten in Kleingruppen Wissen zu einem bestimmten Thema, demonstrieren dieses in Form eines Versuches mit Präsentation und Diskussion. Darüber hinaus betreut jede Gruppe eine Übungsaufgabe, die inhaltlich zu dem jeweiligen Versuch gehört.
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	120 min			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Mechatronics: Specialisation Electrical Systems: Compulsory			

Course L0720: Electronic Devices	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Hoc Khiem Trieu
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>Uniformly doped semiconductor (semiconductor, crystal structure, energy band diagram, effective mass, density of state, probability of occupancy, mass action law, generation and recombination processes, generation and recombination lifetime, carrier transport mechanisms: drift current, diffusion current; equilibriums in semiconductor, semiconductor equations)</li> <li>pn-junction (zero applied bias, energy band diagram in thermal equilibrium, current-voltage characteristics, derivation of diode equation, consideration of space charge recombination, transient behaviour, breakdown mechanisms, various types of diodes: Zener diode, tunnel diode, backward diode, photo diode, LED, laser diode)</li> <li>Bipolar transistor (principle of operation, current-voltage characteristics: calculation of base, collector and emitter current, operating modes; non-ideality: actual doping profile, Early effect, breakdown, generation and recombination current and high injection; Ebers-Moll model: family of characteristics, equivalent circuit; frequency response, switching characteristics, heterojunction bipolar transistor)</li> <li>Unipolar devices (surface effects: surface states, work function, energy band diagram; metal-semiconductor junctions: Schottky contact, current-voltage characteristics, ohmic contact; junction field effect transistor: operating principle, current-voltage characteristics, small-signal model, breakdown characteristics; MESFET: operating principle, depletion mode and enhancement mode MESFET; MIS structure: accumulation, depletion, inversion, strong inversion, flatband voltage, oxide charges, threshold voltage, capacitance voltage characteristics; MOSFET: basic structure, principle of operation, current voltage characteristics, frequency response, subthreshold behaviour, threshold voltage, device scaling; CMOS)</li> </ul>

Module M0833: Introduction to Control Systems			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Introduction to Control Systems (L0654)	Lecture	2	4
Introduction to Control Systems (L0655)	Recitation Section (small)	2	2
<b>Module Responsible</b>	NN		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Representation of signals and systems in time and frequency domain, Laplace transform		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems</li> <li>They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus</li> <li>They can explain the Nyquist stability criterion and the stability margins derived from it.</li> <li>They can explain the role of the phase margin in analysis and synthesis of control loops</li> <li>They can explain the way a PID controller affects a control loop in terms of its frequency response</li> <li>They can explain issues arising when controllers designed in continuous time domain are implemented digitally</li> </ul> <i>Skills</i> <ul style="list-style-type: none"> <li>Students can transform models of linear dynamic systems from time to frequency domain and vice versa</li> <li>They can simulate and assess the behavior of systems and control loops</li> <li>They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules</li> <li>They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques</li> <li>They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation</li> <li>They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks</li> </ul> <b>Personal Competence</b> <i>Social Competence</i> Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs <i>Autonomy</i> Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems. They can assess their knowledge in weekly on-line tests and thereby control their learning progress.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Data Science: Core Qualification: Elective Compulsory Data Science: Specialisation II. Application: Elective Compulsory Electrical Engineering: Core Qualification: Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Core Qualification: Compulsory Integrated Building Technology: Core Qualification: Elective Compulsory Logistics and Mobility: Specialisation Information Technology: Elective Compulsory Logistics and Mobility: Specialisation Traffic Planning and Systems: Elective Compulsory Logistics and Mobility: Specialisation Production Management and Processes: Elective Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Technomathematics: Specialisation III. Module M1754: Practical module 5 (dual study program, Bachelor's degree)			
Courses			
Title	Typ	Hrs/wk	CP
Practical term 5 (dual study program, Bachelor's degree) (L2883)		0	6
<b>Module Responsible</b>	Dr. Henning Haschke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Successful completion of practical module 4 as part of the dual Bachelor's course</li> <li>course C from the module on interlinking theory and practice as part of the dual Bachelor's course</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Dual students ...</p> <ul style="list-style-type: none"> <li>... combine their knowledge of facts, principles, theories and methods gained from previous study content with acquired practical knowledge - in particular their knowledge of practical professional procedures and approaches, in the current field of activity.</li> <li>... have a critical understanding of the practical applications of their engineering subject.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... apply technical theoretical knowledge to complex, interdisciplinary problems within the company, and evaluate the associated work processes and results, taking into account different possible courses of action.</li> <li>... implement the university's application recommendations with regard to their current tasks.</li> <li>... develop new solutions as well as procedures and approaches in their field of activity and area of responsibility - including in the case of frequently changing requirements (systemic skills).</li> <li>... are able to analyse and evaluate operational issues using academic methods.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... work responsibly in operational project teams and proactively deal with problems within their team.</li> <li>... represent complex engineering viewpoints, facts, problems and solution approaches in discussions with internal and external stakeholders and develop these further together.</li> </ul> <p>Dual students ...</p> <ul style="list-style-type: none"> <li>... define goals for their own learning and working processes as engineers.</li> <li>... document and reflect on learning and work processes in their area of responsibility.</li> <li>... document and reflect on the relevance of subject modules, specialisations and research for work as an engineer, as well as the implementation of the university's application recommendations and the associated challenges of a positive transfer of knowledge between theory and practice.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Documentation accompanying studies and across semesters: Module credit points are earned by completing a digital learning and development report (e-portfolio). This documents and reflects individual learning experiences and skills development relating to interlinking theory and practice, as well as professional practice. In addition, the partner company provides proof to the dual@TUHH Coordination Office that the dual student has completed the practical phase.		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory</p> <p>Civil- and Environmental Engineering: Core Qualification: Compulsory</p> <p>Chemical and Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Computer Science: Core Qualification: Compulsory</p> <p>Data Science: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Compulsory</p> <p>Engineering Science: Core Qualification: Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory</p> <p>Computer Science in Engineering: Core Qualification: Compulsory</p> <p>Mechanical Engineering: Core Qualification: Compulsory</p> <p>Mechatronics: Core Qualification: Compulsory</p> <p>Naval Architecture: Core Qualification: Compulsory</p> <p>Technomathematics: Core Qualification: Compulsory</p> <p>Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory</p>

Module M0634: Introduction into Medical Technology and Systems				
Courses				
Title	Typ		Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture		2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar		2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)		1	1
<b>Module Responsible</b>	Prof. Alexander Schlaefer			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.  The students are able to evaluate systems and medical devices in the context of clinical applications.			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort. The students can critically reflect on the results of other groups and make constructive suggestions for improvement.			
<i>Social Competence</i>				
<i>Autonomy</i>	The students can assess their level of knowledge and document their work results. They can critically evaluate the results achieved and present them in an appropriate manner.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	10 %	Written elaboration	
	Yes	10 %	Presentation	
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 minutes			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation II. Mathematics and Engineering Science: Elective Compulsory Data Science: Specialisation II. Application: Elective Compulsory Data Science: Core Qualification: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Engineering Science: Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science in Engineering: Specialisation II. Module M1803: Engineering Mechanics II (Elastostatics)			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Engineering Mechanics II (Elastostatics) (L0493)	Lecture	2	2
Engineering Mechanics II (Elastostatics) (L1691)	Recitation Section (large)	2	2
Engineering Mechanics II (Elastostatics) (L0494)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Christian Cyron		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Engineering Mechanics I, Mathematics I (basic knowledge of rigid body mechanics such as balance of linear and angular momentum, basic knowledge of linear algebra like vector-matrix calculus, basic knowledge of analysis such as differential and integral calculus)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Having accomplished this module, the students know and understand the basic concepts of continuum mechanics and elastostatics, in particular stress, strain, constitutive laws, stretching, bending, torsion, failure analysis, energy methods and stability of structures.</p> <p><i>Skills</i> Having accomplished this module, the students are able to</p> <ul style="list-style-type: none"> <li>- apply the fundamental concepts of mathematical and mechanical modeling and analysis to problems of their choice</li> <li>- apply the basic methods of elastostatics to problems of engineering, in particular in the design of mechanical structures</li> <li>- to educate themselves about more advanced aspects of elastostatics</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Ability to communicate complex problems in elastostatics, to work out solution to these problems together with others, and to communicate these solutions.</p> <p><i>Autonomy</i> Self-discipline and endurance in tackling independently complex challenges in elastostatics; ability to learn also very abstract knowledge.</p>		
<b>Workload in Hours</b>			
<b>Credit points</b>			
<b>Course achievement</b>			
<b>Examination</b>			
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Core Qualification: Compulsory</p> <p>Civil- and Environmental Engineering: Core Qualification: Compulsory</p> <p>Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Chemical and Bioprocess Engineering: Core Qualification: Compulsory</p> <p>Electrical Engineering: Core Qualification: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory</p> <p>Integrated Building Technology: Core Qualification: Compulsory</p> <p>Mechanical Engineering: Core Qualification: Compulsory</p> <p>Mechatronics: Core Qualification: Compulsory</p> <p>Orientation Studies: Core Qualification: Elective Compulsory</p> <p>Naval Architecture: Core Qualification: Compulsory</p> <p>Technomathematics: Specialisation III. Module M0777: Semiconductor Circuit Design			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Semiconductor Circuit Design (L0763)	Lecture	3	4
Semiconductor Circuit Design (L0864)	Recitation Section (small)	1	2
<b>Module Responsible</b>	NN		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of electrical engineering Basics of physics, especially semiconductor physics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students are able to explain the functionality of different MOS devices in electronic circuits.</li> <li>Students are able to explain how analog circuits functions and where they are applied.</li> <li>Students are able to explain the functionality of fundamental operational amplifiers and their specifications.</li> <li>Students know the fundamental digital logic circuits and can discuss their advantages and disadvantages.</li> <li>Students have knowledge about memory circuits and can explain their functionality and specifications.</li> <li>Students know the appropriate fields for the use of bipolar transistors.</li> </ul>		
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can calculate the specifications of different MOS devices and can define the parameters of electronic circuits.</li> <li>Students are able to develop different logic circuits and can design different types of logic circuits.</li> <li>Students can use MOS devices, operational amplifiers and bipolar transistors for specific applications.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	<ul style="list-style-type: none"> <li>Students are able work efficiently in heterogeneous teams.</li> <li>Students working together in small groups can solve problems and answer professional questions.</li> </ul>		
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>Students are able to assess their level of knowledge.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory Data Science: Core Qualification: Elective Compulsory Electrical Engineering: Core Qualification: Compulsory Engineering Science: Specialisation Electrical Engineering: Compulsory Engineering Science: Specialisation Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechatronics: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Mechanical Engineering: Specialisation Mechatronics: Compulsory Mechatronics: Specialisation Electrical Systems: Compulsory Mechatronics: Core Qualification: Compulsory Mechatronics: Specialisation Robot- and Machine-Systems: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0763: Semiconductor Circuit Design	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Matthias Kuhl
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Repetition Semiconductorphysics and Diodes</li> <li>• Functionality and characteristic curve of bipolar transistors</li> <li>• Basic circuits with bipolar transistors</li> <li>• Functionality and characteristic curve of MOS transistors</li> <li>• Basic circuits with MOS transistors for amplifiers</li> <li>• Operational amplifiers and their applications</li> <li>• Typical applications for analog and digital circuits</li> <li>• Realization of logical functions</li> <li>• Basic circuits with MOS transistors for combinational logic</li> <li>• Memory circuits</li> <li>• Basic circuits with MOS transistors for sequential logic</li> <li>• Basic concepts of analog-to-digital and digital-to-analog-converters</li> </ul>
<b>Literature</b>	<p>U. Tietze und Ch. Schenk, E. Gamm, Halbleiterschaltungstechnik, Springer Verlag, 14. Auflage, 2012, ISBN 3540428496</p> <p>R. J. Baker, CMOS - Circuit Design, Layout and Simulation, J. Wiley &amp; Sons Inc., 3. Auflage, 2011, ISBN: 0471700555</p> <p>H. Module M0803: Embedded Systems				
Courses				
Title	Typ		Hrs/wk	CP
Embedded Systems (L0805)	Lecture		3	3
Embedded Systems (L2938)	Project-/problem-based Learning		1	1
Embedded Systems (L0806)	Recitation Section (small)		1	2
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Computer Engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Embedded systems can be defined as information processing systems embedded into enclosing products. This course teaches the foundations of such systems. In particular, it deals with an introduction into these systems (notions, common characteristics) and their specification languages (models of computation, hierarchical automata, specification of distributed systems, task graphs, specification of real-time applications, translations between different models).</p> <p>Another part covers the hardware of embedded systems: Sensors, A/D and D/A converters, real-time capable communication hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also features an introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-efficient realizations, compilers for embedded processors) is covered.</p> <p><i>Skills</i> After having attended the course, students shall be able to realize simple embedded systems. The students shall realize which relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall be able to compare different models of computations and feasible techniques for system-level design. They shall be able to judge in which areas of embedded system design specific risks exist.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	10 %	Subject	theoretical and practical work
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 minutes, contents of course and labs			
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory</p> <p>Computer Science: Specialisation I. Computer and Software Engineering: Elective Compulsory</p> <p>Electrical Engineering: Core Qualification: Elective Compulsory</p> <p>Engineering Science: Specialisation Mechatronics: Elective Compulsory</p> <p>Engineering Science: Specialisation Electrical Engineering: Elective Compulsory</p> <p>Aircraft Systems Engineering: Core Qualification: Elective Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechatronics: Elective Compulsory</p> <p>Computer Science in Engineering: Core Qualification: Compulsory</p> <p>Aeronautics: Core Qualification: Elective Compulsory</p> <p>Mechatronics: Core Qualification: Elective Compulsory</p> <p>Mechatronics: Specialisation Naval Engineering: Compulsory</p> <p>Mechatronics: Specialisation Electrical Systems: Compulsory</p> <p>Mechatronics: Specialisation Dynamic Systems and AI: Compulsory</p> <p>Mechatronics: Specialisation Robot- and Machine-Systems: Compulsory</p> <p>Mechatronics: Specialisation Medical Engineering: Compulsory</p> <p>Microelectronics and Microsystems: Specialisation Embedded Systems: Elective Compulsory</p>

## Thesis

### Module M1800: Bachelor thesis (dual study program)

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Dual students... <ul style="list-style-type: none"> <li>... choose central theoretical principles from their field of study (facts, theories, methods) in relation to problems and applications, present them and discuss them critically.</li> <li>... further develop their subject-related and practical knowledge as appropriate and link both areas of knowledge together.</li> <li>... present the current research available on a chosen topic or on a chosen operational issue linked to their subject.</li> </ul>		
<b>Skills</b>	Dual students... <ul style="list-style-type: none"> <li>... evaluate both the basic knowledge linked to their field of study acquired at the university and professional knowledge gained through the company, then purposefully use it to solve technical and application-related problems.</li> <li>... analyse questions and problems using the methods learned throughout their studies (including practical phases), reach factually justifiable decisions and develop application-specific solutions.</li> <li>... critically analyse the results of their own research work from a subject-specific and professional perspective.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Dual students... <ul style="list-style-type: none"> <li>... present a professional problem in the form of an academic question for a specialist audience in a structured, comprehensible and factually correct manner, both orally and in writing.</li> <li>... respond to questions as part of a specialist discussion and answer them appropriately. In doing so, they argue their own evaluations and points of view convincingly.</li> </ul>		
<i>Autonomy</i>	Dual students... <ul style="list-style-type: none"> <li>... structure a comprehensive, chronological workflow and work independently on a question to a high academic level within a given period of time.</li> <li>... identify, develop and link necessary knowledge and material to handle an academic and application-related problem.</li> <li>... apply the essential techniques of academic work when conducting their own research on an operational issue.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0		
<b>Credit points</b>	12		
<b>Course achievement</b>	None		
<b>Examination</b>	Thesis		
<b>Examination duration and scale</b>	According to General Regulations		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Thesis: Compulsory Civil- and Environmental Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Data Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Engineering Science: Thesis: Compulsory Green Technologies: Energy, Water, Climate: Thesis: Compulsory Computer Science in Engineering: Thesis: Compulsory Mechanical Engineering: Thesis: Compulsory Mechatronics: Thesis: Compulsory Naval Architecture: Thesis: Compulsory Technomathematics: Thesis: Compulsory Engineering and Management - Major in Logistics and Mobility: Thesis: Compulsory
