Bachelor of Science

# **Computational Science and Engineering**

Cohort: Winter Term 2015

Updated: 17th March 2017

## Table of Contents

Table of Contents	2
Program description	3
Core qualification	4
Module M0561: Discrete Algebraic Structures	4
Module M0575: Procedural Programming	5
Module M0577: Nontechnical Complementary Courses for Bachelors	7
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	9
Module M0850: Mathematics I	10
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0553: Objectoriented Programming, Algorithms and Data Structures	16
Module M0624: Logic, Automata and Formal Languages	18
Module M0829: Foundations of Management	20
Module M0851: Mathematics II	22
Module M0569: Engineering Mechanics I	25
Module M0662: Numerical Mathematics I	26
Module M0834: Computernetworks and Internet Security	28
Module M0730: Computer Engineering	30
Module M0853: Mathematics III	33
Module M0570: Engineering Mechanics II	36
Module M0672: Signals and Systems	37
Module M0803: Embedded Systems	39
Module M0852: Graph Theory and Optimization	41
Module M0793: Seminars Computer Science and Mathematics	43
Module M0833: Introduction to Control Systems	45
Module M0727: Stochastics	48
Specialization Computer Science	50
Module M1254: Foundations of Computer Science	50
Module M0971: Operating Systems	51
Module M0732: Software Engineering	52
Module M0854: Mathematics IV	53
Module M0791: Computer Architecture	56
Module M0651: Computational Geometry	58
Module M0972: Distributed Systems	60
Module M0863: Numerics and Computer Algebra	61
Module M0941: Combinatorial Structures and Algorithms	63
Module M0760: Electronic Devices	65
Module M0625: Databases	67
Module M1269: Lab Cyber-Physical Systems	69
Module M0754: Compiler Construction	70
Module M0777: Semiconductor Circuit Design	71
Module M1062: Mathematical Statistics	73
Module M0634: Introduction into Medical Technology and Systems	75
Module M0715: Solvers for Sparse Linear Systems	77
Module M1300: Software Development	78
Specialization Engineering Sciences	80
Module M0671: Technical Thermodynamics I	80
Module M0854: Mathematics IV	82
Module M0688: Technical Thermodynamics II	85
Module M0675: Introduction to Communications and Random Processes	87
Module M1105: Mechanics III (GES)	89
Module M0708: Electrical Engineering III: Circuit Theory and Transients	91
Module M0783: Measurements: Methods and Data Processing	93
Module M1235: Electrical Power Systems I	95
Module M1242: Quantum Mechanics for Engineers	98
Module M0680: Fluid Dynamics	100
Module M0748: Materials in Electrical Engineering	102
Module M0668: Algebra and Control	106
Module M0634: Introduction into Medical Technology and Systems	108
Module M0610: Electrical Machines	110
Module M0709: Electrical Engineering IV: Transmission Lines and Research Seminar	112
Thesis	114
Module M-001: Bachelor Thesis	114

**Module M0561: Discrete Algebraic Structures**
**Courses**

Title	Typ	Hrs/wk	CP
Discrete Algebraic Structures (L0164)	Lecture	2	3
Discrete Algebraic Structures (L0165)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None.		
<b>Recommended Previous Knowledge</b>	Mathematics from High School Diploma.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the important basics of discrete algebraic structures including elementary combinatorial structures, groups, rings, and vector spaces. They also know specific structures like sub-, sum-, and quotient structures and homomorphisms.</p> <p><i>Skills</i> Students are able to formalize and analyze basic discrete algebraic structures.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to solve specific problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> <li>•</li> <li>•</li> <li>•</li> </ul> <p>Students are able to acquire new knowledge from specific standard books and to associate this knowledge with other classes.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Computer Science and Engineering: Compulsory Computer Science: Core qualification: Compulsory General Engineering Science (English program): Specialisation Computer Science and Engineering: Compulsory Computational Science and Engineering: Core qualification: Compulsory Technomathematics: Specialisation Mathematics: Elective Compulsory		

**Course L0164: Discrete Algebraic Structures**

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Karl-Heinz Zimmermann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	

**Course L0165: Discrete Algebraic Structures**

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Karl-Heinz Zimmermann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0575: Procedural Programming	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Procedural Programming (L0197)	Lecture                                      1                                      2
Procedural Programming (L0201)	Recitation Section (small)                      1                                      1
Procedural Programming (L0202)	Laboratory Course                                      2                                      3
<b>Module Responsible</b>	Prof. Siegfried Rump
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Elementary PC handling skills Elementary mathematical skills
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	The students acquire the following knowledge: <ul style="list-style-type: none"> <li>• They know basic elements of the programming language C. They know the basic data types and know how to use them.</li> <li>• They have an understanding of elementary compiler tasks, of the preprocessor and programming environment and know how those interact.</li> <li>• They know how to bind programs and how to include external libraries to enhance software packages.</li> <li>• They know how to use header files and how to declare function interfaces to create larger programming projects.</li> <li>• They acquire some knowledge how the program interacts with the operating system. This allows them to develop programs interacting with the programming environment as well.</li> <li>• They learnt several possibilities how to model and implement frequently occurring standard algorithms.</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>• The students know how to judge the complexity of an algorithms and how to program algorithms efficiently.</li> <li>• The students are able to model and implement algorithms for a number of standard functionalities. Moreover, they are able to adapt a given API.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	The students acquire the following skills: <ul style="list-style-type: none"> <li>• They are able to work in small teams to solve given weekly tasks, to identify and analyze programming errors and to present their results.</li> <li>• They are able to explain simple phenomena to each other directly at the PC.</li> <li>• They are able to plan and to work out a project in small teams.</li> <li>• They communicate final results and present programs to their tutor.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• The students take individual examinations as well as a final written exam to prove their programming skills and ability to solve new tasks.</li> <li>• The students have many possibilities to check their abilities when solving several given programming exercises.</li> <li>• In order to solve the given tasks efficiently, the students have to split those appropriately within their group, where every student solves his or her part individually.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 minutes
<b>Assignment for the Following Curricula</b>	Computer Science: Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory Mechatronics: Core qualification: Compulsory Technomathematics: Core qualification: Compulsory

Course L0197: Procedural Programming	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• basic data types (integers, floating point format, ASCII-characters) and their dependencies on the CPU architecture</li> <li>• advanced data types (pointers, arrays, strings, structs, lists)</li> <li>• operators (arithmetical operations, logical operations, bit operations)</li> <li>• control flow (choice, loops, jumps)</li> <li>• preprocessor directives (macros, conditional compilation, modular design)</li> <li>• functions (function definitions/interface, recursive functions, "call by value" versus "call by reference", function pointers)</li> <li>• essential standard libraries and functions (stdio.h, stdlib.h, math.h, string.h, time.h)</li> <li>• file concept, streams</li> <li>• basic algorithms (sorting functions, series expansion, uniformly distributed permutation)</li> <li>• exercise programs to deepen the programming skills</li> </ul>
<b>Literature</b>	<p><b>Kernighan, Brian W</b> (Ritchie, Dennis M.)            The C programming language            ISBN: 9780131103702  <i>Upper Saddle River, NJ [u.a.] : Prentice Hall PTR, 2009</i></p> <p><b>Sedgewick, Robert</b>            Algorithms in C            ISBN: 0201316633  <i>Reading, Mass. Module M0577: Nontechnical Complementary Courses for Bachelors	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<p><b>Professional Competence</b> <i>Knowledge</i></p>	<p><b>The Non-technical Elective Study Area</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
<p><i>Skills</i></p>	<p><b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic methods of the said scientific disciplines,</li> <li>• question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple questions in aforementioned scientific disciplines in a successful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul>
<p><b>Personal Competence</b> <i>Social Competence</i></p>	<p><b>Personal Competences (Social Skills)</b></p> <p>Students will be able</p> <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul>

<i>Autonomy</i>	<p><b>Personal Competences (Self-reliance)</b></p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Courses</b>
<b>Information regarding lectures and courses can be found in the corresponding module handbook published separately.</b>

Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electrical Engineering I: Direct Current Networks and Electromagnetic Fields (L0675)	Lecture	3	5
Electrical Engineering I: Direct Current Networks and Electromagnetic Fields (L0676)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Manfred Kasper		
<b>Admission Requirements</b>	None

Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices			
Courses			
Title	Typ	Hrs/wk	CP
Electrical Engineering II: Alternating Current Networks and Basic Devices (L0178)	Lecture	3	5
Electrical Engineering II: Alternating Current Networks and Basic Devices (L0179)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Becker		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Direct current networks, complex numbers		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to reproduce and explain fundamental theories, principles, and methods related to the theory of alternating currents. They can describe networks of linear elements using a complex notation for voltages and currents. They can reproduce an overview of applications for the theory of alternating currents in the area of electrical engineering. Students are capable of explaining the behavior of fundamental passive and active devices as well as their impact on simple circuits.		
<i>Skills</i>	Students are capable of calculating parameters within simple electrical networks at alternating currents by means of a complex notation for voltages and currents. They can appraise the fundamental effects that may occur within electrical networks at alternating currents. Students are able to analyze simple circuits such as oscillating circuits, filter, and matching networks quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of an electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified to dimension their main features.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during a week of project work).		
<i>Autonomy</i>	Students are capable to gather necessary information from the references provided and relate that information to the context of the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as online-tests and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 - 150 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Mechatronics: Core qualification: Compulsory		

Course L0178: Electrical Engineering II: Alternating Current Networks and Basic Devices	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christian Becker
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- General time-dependency of electrical networks</li> <li>- Representation and properties of harmonic signals</li> <li>- RLC-elements at alternating currents/voltages</li> <li>- Complex notation for the representation of RLC-elements</li> <li>- Power in electrical networks at alternating currents, compensation of reactive power</li> <li>- Frequency response locus (Nyquist plot) and Bode-diagrams</li> <li>- Measurement instrumentation for assessing alternating currents</li> <li>- Oscillating circuits, filters, electrical transmission lines</li> <li>- Transformers, three-phase current, energy converters</li> <li>- Simple non-linear and active electrical devices</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>- M. Albach, "Elektrotechnik", Pearson Studium (2011)</li> <li>- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)</li> <li>- R. Kories, H. Schmidt-Walter, "Taschenbuch der Elektrotechnik", Harri Deutsch (2010)</li> <li>- C. Kautz, "Tutorien zur Elektrotechnik", Pearson (2009)</li> <li>- A. Hambley, "Electrical Engineering: Principles and Applications", Pearson (2013)</li> <li>- R. Dorf, "The Electrical Engineering Handbook", CRC (2006)</li> </ul>

Course L0179: Electrical Engineering II: Alternating Current Networks and Basic Devices	
<b>Typ</b>	Recitation Section (small)

Module M0553: Objectoriented Programming, Algorithms and Data Structures			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Objectoriented Programming, Algorithms and Data Structures (L0131)	Lecture	4	4
Objectoriented Programming, Algorithms and Data Structures (L0132)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Mandatory prerequisite for this lecture is proficiency in imperative programming (C, Pascal, Fortran or similar). You should be familiar with simple data types (integer, double, char), arrays, if-then-else, for, while, procedure calls or function calls, pointers, and you should have used all those in your own programs and therefore should be proficient with editor, compiler, linker and debugger. In this lecture we will immediately start with the introduction of objects and we will not repeat the basics mentioned above.</p> <p>This remark is especially important for AIW, GES, LUM because those prerequisites are <b>not</b> part of the curriculum. They are prerequisites for the start of those curricula in general. The programs ET, CI and IIW include those prerequisites in the first semester in the lecture Prozedurale Programmierung.</p>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can explain the essentials of software design and the design of a class architecture with reference to existing class libraries and design patterns.</p> <p>Students can describe fundamental data structures of discrete mathematics and assess the complexity of important algorithms for sorting and searching.</p> <p><i>Skills</i> Students are able to</p> <ul style="list-style-type: none"> <li>• Design software using given design patterns and applying class hierarchies and polymorphism</li> <li>• Carry out software development and tests using version management systems and Google Test</li> <li>• Sort and search for data efficiently</li> <li>• Assess the complexity of algorithms.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work in teams and communicate in forums.</p> <p><i>Autonomy</i> Students are able to solve programming tasks such as LZW data compression using SVN Repository and Google Test independently and over a period of two to three weeks.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture, exercises and material in StudIP		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computer Science: Core qualification: Compulsory</p> <p>Electrical Engineering: Core qualification: Compulsory</p> <p>General Engineering Science (English program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computational Science and Engineering: Core qualification: Compulsory</p> <p>Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory</p> <p>Technomathematics: Core qualification: Compulsory</p>		

Course L0131: Objectoriented Programming, Algorithms and Data Structures	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	DE

Module M0624: Logic, Automata and Formal Languages			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Logic, Automata Theory and Formal Languages (L0332)	Lecture	2	4
Logic, Automata Theory and Formal Languages (L0507)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Tobias Knopp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Participating students should be able to</p> <ul style="list-style-type: none"> <li>- specify algorithms for simple data structures (such as, e.g., arrays) to solve computational problems</li> <li>- apply propositional logic and predicate logic for specifying and understanding mathematical proofs</li> <li>- apply the knowledge and skills taught in the module Discrete Algebraic Structures</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can explain syntax, semantics, and decision problems of propositional logic, and they are able to give algorithms for solving decision problems. Students can show correspondences to Boolean algebra. Students can describe which application problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.</p> <p><i>Skills</i> Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluate which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language emptiness problem in case of infinite words.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p><i>Autonomy</i></p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computer Science: Core qualification: Compulsory</p> <p>General Engineering Science (English program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computational Science and Engineering: Core qualification: Compulsory</p> <p>Technomathematics: Specialisation Informatics: Elective Compulsory</p>		

Course L0332: Logic, Automata Theory and Formal Languages	
<b>Typ</b>	Lecture

<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Engineering Mechanics I (L0187)	Lecture 3 3
Engineering Mechanics I (L0190)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Uwe Weltin
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Elementary knowledge in mathematics and physics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to describe fundamental connections, theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals in elastostatics.
<i>Skills</i>	Students are able to apply theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals of elastostatics.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.
<i>Autonomy</i>	Students are able to solve individually exercises related to this lecture.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min.

Computer Networks and Internet Security (L1098)	Lecture 3 5
Computer Networks and Internet Security (L1099)	Recitation Section (small) 1 1
<b>Module Responsible</b>	Prof. Andreas Timm-Giel
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to explain important and common Internet protocols in detail and classify them, in order to be able to analyse and develop networked systems in further studies and job.
<i>Skills</i>	Students are able to analyse common Internet protocols and evaluate the use of them in different domains.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can select relevant parts out of high amount of professional knowledge and can independently learn and understand it.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.</p> <p>In the second part of the lecture an introduction to Internet security is given.</p> <p>This class comprises:</p> <ul style="list-style-type: none"> <li>• Application layer protocols (HTTP, FTP, DNS)</li> <li>• Transport layer protocols (TCP, UDP)</li> <li>• Network Layer (Internet Protocol, routing in the Internet)</li> <li>• Data link layer with media access at the example of Ethernet</li> <li>• Multimedia applications in the Internet</li> <li>• Network management</li> <li>• Internet security: IPSec</li> <li>• Internet security: Firewalls</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Kurose, Ross, Computer Networking - A Top-Down Approach, 6th Edition, Addison-Wesley</li> <li>• Kurose, Ross, Computernetzwerke - Der Top-Down-Ansatz, Pearson Studium; Auflage: 6. Auflage</li> <li>• W. Stallings: Cryptography and Network Security: Principles and Practice, 6th edition</li> </ul> <p>Further literature is announced at the beginning of the lecture.</p>

Module M0730: Computer Engineering	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Computer Engineering (L0321)	Lecture 3 4
Computer Engineering (L0324)	Recitation Section (small) 1 2
<b>Module Responsible</b>	Prof. Heiko Falk
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Basic knowledge in electrical engineering</p> <p>The successful completion of the labs will be honored during the evaluation of the module's examination according to the following rules:</p> <ol style="list-style-type: none"> <li>Upon a passed module examination, the student is granted a bonus on the examination's marks due to the successful labs, such that the examination's marks are lifted by 0,3 or 0,4, respectively, up to the next-better grade.</li> <li>The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is not possible.</li> </ol>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i> This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:</p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks</li> <li>• Sequential logic: Flip-flops, automata, systematic hardware design</li> <li>• Technological foundations</li> <li>• Computer arithmetic: Integer addition, subtraction, multiplication and division</li> <li>• Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining</li> <li>• Memories: Memory hierarchies, SRAM, DRAM, caches</li> <li>• Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses</li> </ul> <p><i>Skills</i> The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.</p> <p>After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.</p>
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0570: Engineering Mechanics II			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Engineering Mechanics II (L0191)		Lecture	3
Engineering Mechanics II (L0192)		Recitation Section (small)	2
<b>CP</b>			
			3
<b>Module Responsible</b>	Prof. Uwe Weltin		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Technical Mechanics I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe connections, theories and methods to calculate forces and motions of rigid bodies in 3D.		
<i>Skills</i>	Students are able to apply theories and method to calculate forces and motions of rigid bodies in 3D.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.		
<i>Autonomy</i>	Students are able to solve individually exercises related to this lecture with instructional direction.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min.		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Core qualification: Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory		

Course L0191: Engineering Mechanics II	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Uwe Weltin
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Method for calculation of forces and motion of rigid bodies in 3D <ul style="list-style-type: none"> <li>• Newton-Euler-Method</li> <li>• Energy methods</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 2: Elastostatik, Springer Verlag, 2011</li> <li>• Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 3: Kinetik, Springer Vieweg, 2012</li> <li>• Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Verlag, 2011</li> <li>• Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 3: Kinetik, Springer Vieweg, 2012</li> <li>• Hibbeler, Russel C.: Technische Mechanik 2 Festigkeitslehre, Pearson Studium, 2013</li> <li>• Hibbeler, Russel C.: Technische Mechanik 3 Dynamik, Pearson Studium, 2012</li> <li>• Hauger, W.; Mannl, V.; Wall, W.A.; Werner, E.: Aufgaben zu Technische Mechanik 1-3: Statik, Elastostatik, Kinetik, Springer Verlag, 2011</li> </ul>

Module M0672: Signals and Systems			
Courses			
Title	Typ	Hrs/wk	CP
Signals and Systems (L0432)	Lecture	3	4
Signals and Systems (L0433)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics 1-3 The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> <p><i>Skills</i> The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program): Specialisation Computer Science: Compulsory General Engineering Science (German program): Specialisation Process Engineering: Compulsory General Engineering Science (German program): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (German program): Specialisation Civil- and Environmental Engineering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory General Engineering Science (German program, 7 semester): Specialisation Process Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory Computer Science: Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Civil- and Environmental Engineering: Compulsory General Engineering Science (English program): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program): Specialisation Computer Science: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program): Specialisation Process Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Compulsory General Engineering Science (English program, 7 semester): Specialisation Process Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory Computational Science and Engineering: Core qualification: Compulsory Mechatronics: Core qualification: Compulsory

Module M0803: Embedded Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Embedded Systems (L0805)	Lecture 3 4
Embedded Systems (L0806)	Recitation Section (small) 1 2
<b>Module Responsible</b>	Prof. Heiko Falk
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Computer Engineering
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Embedded systems can be defined as information processing systems embedded into enclosing products. This course teaches the foundations of such systems. In particular, it deals with an introduction into these systems (notions, common characteristics) and their specification languages (models of computation, hierarchical automata, specification of distributed systems, task graphs, specification of real-time applications, translations between different models).  Another part covers the hardware of embedded systems: Sensors, A/D and D/A converters, real-time capable communication hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also features an introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-efficient realizations, compilers for embedded processors) is covered.
<i>Skills</i>	After having attended the course, students shall be able to realize simple embedded systems. The students shall realize which relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall be able to compare different models of computations and feasible techniques for system-level design. They shall be able to judge in which areas of embedded system design specific risks exist.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0727: Stochastics	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Stochastics (L0777)	Lecture 2 4
Stochastics (L0778)	Recitation Section (small) 2 2
<b>Module Responsible</b>	Prof. Marko Lindner
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Calculus</li> <li>• Discrete algebraic structures (combinatorics)</li> <li>• Propositional logic</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can explain the main definitions of probability, and they can give basic definitions of modeling elements (random variables, events, dependence, independence assumptions) used in discrete and continuous settings (joint and marginal distributions, density functions). Students can describe characteristic notions such as expected values, variance, standard deviation, and moments. Students can define decision problems and explain algorithms for solving these problems (based on the chain rule or Bayesian networks). Algorithms, or estimators as they are called, can be analyzed in terms of notions such as bias of an estimator, etc. Student can describe the main ideas of stochastic processes and explain algorithms for solving decision and computation problem for stochastic processes. Students can also explain basic statistical detection and estimation techniques.</p> <p><i>Skills</i> Students can apply algorithms for solving decision problems, and they can justify whether approximation techniques are good enough in various application contexts, i.e., students can derive estimators and judge whether they are applicable or reliable.</p>
<b>Personal Competence</b>	
<i>Social Competence</i> <i>Autonomy</i>	
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 min
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Computer Science: Compulsory General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory Computer Science: Core qualification: Compulsory General Engineering Science (English program): Specialisation Computer Science: Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory

Course L0777: Stochastics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Francisco Javier Hoecker-Escuti
<b>Language</b>	EN

## Specialization Computer Science

### Module M1254: Foundations of Computer Science

#### Courses

Title	Typ	Hrs/wk	CP
Foundations of Computer Science (L1699)	Lecture	2	3
Foundations of Computer Science (L1700)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None.		
<b>Recommended Previous Knowledge</b>	None.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the representation of numbers in computers, the concept of Boolean functions and combinatorial logic, the structure, organization, and behavior of the von Neumann computer, assembler and machine programming, and programming in a block structured language.</p> <p><i>Skills</i> Students are able to calculate with binary numbers, specify and analyze Boolean functions, design simple combinatorial networks, describe the workflow in a von Neumann computer, program in Assembler and in a block structured language, and be particularly able to think algorithmically.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to solve specific problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from newer literature and to associate this knowledge with other classes.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory		

#### Course L1699: Foundations of Computer Science

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	NN
<b>Language</b>	DE/EN

Module M0971: Operating Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Operating Systems (L1153)	Lecture 2 3
Operating Systems (L1154)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Volker Turau
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Object-oriented programming, algorithms, and data structures</li> <li>Procedural programming</li> <li>Experience in using tools related to operating systems such as editors, linkers, compilers</li> <li>Experience in using C-libraries</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students explain the main abstractions process, virtual memory, deadlock, lifelock, and file of operations systems, describe the process states and their transitions, and paraphrase the architectural variants of operating systems. They give examples of existing operating systems and explain their architectures. The participants of the course write concurrent programs using threads, conditional variables and semaphores. Students can describe the variants of realizing a file system. Students explain at least three different scheduling algorithms.
<i>Skills</i>	Students are able to use the POSIX libraries for concurrent programming in a correct and efficient way. They are able to judge the efficiency of a scheduling algorithm for a given scheduling task in a given environment.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0732: Software Engineering	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Software Engineering (L0627)	Lecture 2 3
Software Engineering (L0628)	Recitation Section (small) 2 3
<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Automata theory and formal languages</li> <li>Procedural programming or Functional programming</li> <li>Object-oriented programming, algorithms, and data structures</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning.
<i>Skills</i>	For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students practice peer programming. They explain problems and solutions to their peer. They communicate in English.
<i>Autonomy</i>	Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min

	1
	2
	1
	1
	1
<b>Module Responsible</b>	Prof. Anusch Taraz
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Mathematics 1 - III
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can name the basic concepts in Mathematics IV. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students can model problems in Mathematics IV with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>• Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 min (Complex Functions) + 60 min (Differential Equations 2)
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Naval Architecture: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory Computer Science: Specialisation Computational Mathematics: Elective Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program): Specialisation Naval Architecture: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Compulsory Mechanical Engineering: Specialisation Mechatronics: Compulsory Mechatronics: Core qualification: Compulsory Naval Architecture: Core qualification: Compulsory Theoretical Mechanical Engineering: Technical Complementary Course Core Studies: Elective Compulsory

<b>Module Responsible</b>	Prof. Heiko Falk
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Module "Computer Engineering"</p> <p>The successful completion of the labs will be honored during the evaluation of the module's examination according to the following rules:</p> <ol style="list-style-type: none"> <li>Upon a passed module examination, the student is granted a bonus on the examination's marks due to the successful labs, such that the examination's marks are lifted by 0,3 or 0,4, respectively, up to the next-better grade.</li> <li>The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is not possible.</li> </ol>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i> This module presents advanced concepts from the discipline of computer architecture. In the beginning, a broad overview over various programming models is given, both for general-purpose computers and for special-purpose machines (e.g., signal processors). Next, foundational aspects of the micro-architecture of processors are covered. Here, the focus particularly lies on the so-called pipelining and the methods used for the acceleration of instruction execution used in this context. The students get to know concepts for dynamic scheduling, branch prediction, superscalar execution of machine instructions and for memory hierarchies.</p> <p><i>Skills</i> The students are able to describe the organization of processors. They know the different architectural principles and programming models. The students examine various structures of pipelined processor architectures and are able to explain their concepts and to analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies, know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Numerical Mathematics and Computer Algebra (L0115)		Lecture	2 3
Numerics and Computer Algebra (L1060)		Seminar	2 2
Numerical Mathematics and Computer Algebra (L0117)		Recitation Section (small)	1 1
<b>Module Responsible</b>	Prof. Siegfried Rump		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Basic knowledge in numerics and discrete mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students know the difference between precision and accuracy. For several basic problems they know how to solve them approximatively and exactly. They can distinguish between efficiently, not efficiently and principally unsolvable problems.		
<i>Skills</i>	The students are able to analyze complex problems in mathematics and computer science. In particular they can analyze the sensitivity of the solution. For several problems they can derive best possible algorithms with respect to the accuracy of the computed result.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.		
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Module M0625: Databases	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Databases (L0337)	Lecture 4 5
Databases (L1150)	Problem-based Learning 1 1
<b>Module Responsible</b>	Dr. Sandro Schulze
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Students should have basic knowledge in the following areas:</p> <ul style="list-style-type: none"> <li>• Discrete Algebraic Structures</li> <li>• Procedural Programming</li> <li>• Logic, Automata, and Formal Languages</li> <li>• Object-Oriented Programming, Algorithms and Data Structures</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students can explain the general architecture of an application system that is based on a database. They describe the syntax and semantics of the Entity Relationship conceptual modeling languages, and they can enumerate basic decision problems and know which features of a domain model can be captured with ER and which features cannot be represented. Furthermore, students can summarize the features of the relational data model, and can describe how ER models can be systematically transformed into the relational data model. Student are able to discuss dependency theory using the operators of relational algebra, and they know how to use relational algebra as a query language. In addition, they can sketch the main modules of the architecture of a database system from an implementation point of view. Storage and index structures as well as query answering and optimization techniques can be explained. The role of transactions can be described in terms of ACID conditions and common recovery mechanisms can be characterized. The students can recall why recursion is important for query languages and describe how Datalog can be used and implemented. They demonstrate how Datalog can be used for information integration. For solving ER decision problems the students can explain description logics with their syntax and semantics, they describe description logic decision problems and explain how these problems can be mapped onto each other. They can sketch the idea of ontology-based data access and can name the main complexity measure in database theory. Last but not least, the students can describe the main features of XML and can explain XPath and XQuery as query languages.
<i>Skills</i>	Students can apply ER for describing domains for which they receive a textual description, and students can transform relational schemata with a given set of functional dependencies into third normal form or even Boyce-Codd normal form. They can also apply relational algebra, SQL, or Datalog to specify queries. Using specific datasets, they can explain how index structures work (e.g., B-trees) and how index structures change while data is added or deleted. They can rewrite queries for better performance of query evaluation. Students can analyse which query language expressivity is required for which application problem. Description logics can be applied for domain modeling, and students can transform ER diagrams into description logics in order to check for consistency and implicit subsumption relations. They solve data integration problems using Datalog and LAV or GAV rules. Students can apply XPath and Xquery to retrieve certain patterns in XML data.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students develop an understanding of social structures in a company used for developing real-world products. They know the responsibilities of data analysts, programmers, and managers in the overall production process.
<i>Autonomy</i>

Module M1269: Lab Cyber-Physical Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Lab Cyber-Physical Systems (L1740)	Problem-based Learning
<b>Hrs/wk</b>	<b>CP</b>
4	6
<b>Module Responsible</b>	Prof. Heiko Falk
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Module "Embedded Systems"
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, and actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, there is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches.  Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. The lab introduces into the area (basic notions, characteristic properties) and their specification techniques (models of computation, hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the lab's experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification tools (MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors and actors.
<i>Skills</i>	After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies between a CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converters, digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate their advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these techniques to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specification tools and in the area of simple control applications.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Project
<b>Examination duration and scale</b>	Execution and documentation of all lab experiments
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Computer Science: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory

Module M0754: Compiler Construction	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Compiler Construction (L0703)	Lecture 2 2
Compiler Construction (L0704)	Recitation Section (small) 2 4
<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Practical programming experience</li> <li>• Automata theory and formal languages</li> <li>• Functional programming or procedural programming</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Basic knowledge of software engineering</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools.
<i>Skills</i>	Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class. They communicate in English.
<i>Autonomy</i>	Students develop their software independently and define milestones by themselves. They receive feedback throughout the entire project. They organize the software project so that they can assess their progress themselves.

Module M1300: Software Development			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Software Development (L1790)		Problem-based Learning	2                  5
Software Development (L1789)		Lecture	1                  1
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Introduction to Software Engineering</li> <li>• Programming Skills</li> <li>• Experience with Developing Small to Medium-Size Programs</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence Knowledge</b>	Students explain the fundamental concepts of agile methods, describe the process of test-driven development, and explain how continuous integration can be used in different scenarios. They give examples of selected pitfalls in software development, regarding scalability and other non-functional requirements. They write unit tests and build scripts and combine them in a corresponding integration environment. They explain major activities in requirements analysis, program comprehension, and agile project development.		
<b>Skills</b>	For a given task on a legacy system, students identify the corresponding parts in the system and select an appropriate method for understanding the details. They choose the proper approach of splitting a task in independent testable and extensible pieces and, thus, solve the task with proper methods for quality assurance. They design tests for legacy systems, create automated builds, and find errors at different levels. They integrate the resulting artifacts in a continuous development environment		
<b>Personal Competence Social Competence</b>	Students discuss different design decisions in a group. They defend their solutions orally. They communicate in English.		
<b>Autonomy</b>	Using accompanying tools, students can assess their level of knowledge continuously and adjust it appropriately. Within limits, they can set their own learning goals. Upon su completion, students can identify and formulate concrete problems of software systems and propose solutions. Within this field, they can conduct independent studies to acc necessary competencies. They can devise plans to arrive at new solutions or assess existing ones.

<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics and Mechanics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are familiar with the laws of Thermodynamics. They know the relation of the kinds of energy according to 1 <sup>st</sup> law of Thermodynamics and are aware about the limits of energy conversions according to 2 <sup>nd</sup> law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamics related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.		
<i>Skills</i>	Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.		
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Module Responsible</b>	Prof. Gerhard Schmitz
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.
<i>Skills</i>	Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Introduction to Communications and Random Processes (L0442)	Lecture	3	4
Introduction to Communications and Random Processes (L0443)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Basic knowledge of probability theory</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students know and understand the fundamental building blocks of a communications system. They can describe and analyse the individual building blocks using knowledge of signal and system theory as well as the theory of stochastic processes. They are aware of the essential resources and evaluation criteria of information transmission and are able to design and evaluate a basic communications system.		
<i>Skills</i>	The students are able to design and evaluate a basic communications system. In particular, they can estimate the required resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communications system such as bandwidth efficiency or bit error rate and to decide for a suitable transmission method.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can jointly solve specific problems.		
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Module M1105: Mechanics III (GES)	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Mechanics III (GES) (L1421)	Lecture 3 3
Mechanics III (GES) (L1420)	Recitation Section (small) 2 2
Mechanics III (GES) (L1419)	Recitation Section (large) 1 1
<b>Module Responsible</b>	Prof. Radoslaw Iwankiewicz
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The primary purpose of the study of Mechanics III (Fluid Statics, Kinematics and Kinetics) is to develop the capacity to predict the effects of forces and motions, necessary for the analysis and design of moving machine parts, different machinery, vehicles, aircraft, spacecraft, automatic control systems, etc. The particular objectives of this course are to: <ol style="list-style-type: none"> <li>1. Determine the hydrostatic forces acting on different objects.</li> <li>2. Analyse stability of floating bodies.</li> <li>3. Analyse the kinematics and kinetics of a particle in different reference systems,</li> <li>4. Analyse the motion of the system of particles and forces acting on it,</li> <li>5. Analyse the plane motion of a rigid body (simple mechanism) and forces acting on it.</li> <li>6. Analyse the three-dimensional motion of a rigid body and forces acting on it.</li> </ol>
<i>Skills</i>	At the end of this course the student should be able to: <ol style="list-style-type: none"> <li>1. Solve the equilibrium problems with account for hydrostatic pressure forces.</li> <li>2. Analyse stability of simple floating bodies.</li> <li>3. Calculate the velocity and acceleration of a particle in different reference systems.               <ul style="list-style-type: none"> <li>• 4. Derive and solve the equation of motion of a particle in different reference systems.</li> </ul> </li> <li>5. Analyse the motion of the system of particles and forces acting on it with the aid of work-energy and impulse-momentum relationships,</li> <li>6. Calculate the instantaneous linear and angular velocities and accelerations of the planar mechanisms.</li> <li>7. Derive and solve the equations of a plane motion of a rigid body and find forces acting on it,</li> <li>8. Apply work-energy and impulse-momentum relationships to analyse plane kinetics of a rigid body.</li> <li>9. Calculate the instantaneous linear and angular velocities and accelerations of the three-dimensional motion of a rigid body.</li> <li>10. Derive the equations of a motion of a three-dimensional motion of a rigid body.</li> <li>11. Apply in three-dimensional kinematics and kinetics of rigid body both methods of vector algebra and matrix methods.</li> </ol>
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can: - work in groups and report on the findings, - develop joint solutions in mixed teams and present them to others, - assess the team collaboration and their share in it.
<i>Autonomy</i>	Students are able to: -solve the problems independently with the help of hints, - assess their own strengths and weaknesses, e.g. with the aid of the mid-term test.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	2 hours Fluid Statics: hydrostatic pressure, buoyancy, stability of floating vessels. Kinematics of particle, of plane and 3D rigid body. Kinetics of particle, system of particles, of plane and 3D rigid body. Vector and matrix algebra formulation.

Module M0708: Electrical Engineering III: Circuit Theory and Transients			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Circuit Theory (L0566)		Lecture	3
Circuit Theory (L0567)		Recitation Section (small)	2
<b>Module Responsible</b>	Prof. Arne Jacob		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Electrical Engineering I and II, Mathematics I and II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of linear networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in frequency domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.		
<i>Skills</i>	The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven by periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to explain the respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-terminal-circuits.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within the group.		
<i>Autonomy</i>	The students are able to find out the required methods for solving the given practice problems. Possibilities are given to test their knowledge during the lectures continuously by means of short-time tests. This allows them to control independently their educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Mechatronics: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0566: Circuit Theory	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Arne Jacob
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Circuit theorems</li> <li>- N-port circuits</li> <li>- Periodic excitation of linear circuits</li> <li>- Transient analysis in time domain</li> <li>- Transient analysis in frequency domain; Laplace Transform</li> <li>- Frequency behaviour of passive one-ports</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>- M. Albach, "Grundlagen der Elektrotechnik 1", Pearson Studium (2011)</li> <li>- M. Albach, "Grundlagen der Elektrotechnik 2", Pearson Studium (2011)</li> <li>- L. P. Schmidt, G. Schaller, S. Martius, "Grundlagen der Elektrotechnik 3", Pearson Studium (2011)</li> <li>- T. Module M0783: Measurements: Methods and Data Processing			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
EE Experimental Lab (L0781)		Laboratory Course	2
Measurements: Methods and Data Processing (L0779)		Lecture	2
Measurements: Methods and Data Processing (L0780)		Recitation Section (small)	1
<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	principles of mathematics principles of electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to explain the purpose of metrology and the acquisition and processing of measurements. They can detail aspects of probability theory and errors, and explain the processing of stochastic signals. Students know methods to digitalize and describe measured signals.		
<i>Skills</i>	The students are able to evaluate problems of metrology and to apply methods for describing and processing of measurements.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students solve problems in small groups.		
<i>Autonomy</i>	The students can reflect their knowledge and discuss and evaluate their results.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory		

Course L0781: EE Experimental Lab	
<b>Typ</b>	Laboratory Course
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer, Prof. Christian Schuster, Prof. Günter Ackermann, Prof. Rolf-Rainer Grigat, Prof. Arne Jacob, Prof. Herbert Werner, Dozenten des SD E, Prof. Heiko Falk
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	lab experiments: digital circuits, semiconductors, micro controllers, analog circuits, AC power, electrical machines
<b>Literature</b>	Wird in der Lehrveranstaltung festgelegt

Course L0779: Measurements: Methods and Data Processing	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	introduction, systems and errors in metrology, probability theory, measuring stochastic signals, describing measurements, acquisition of analog signals, applied metrology
<b>Literature</b>	Puente León, Kiencke: Messtechnik, Springer 2012 Lerch: Elektrische Messtechnik, Springer 2012  Weitere Literatur wird in der Veranstaltung bekanntgegeben.

<b>Course L0780: Measurements: Methods and Data Processing</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1

Module M1235: Electrical Power Systems I			
Courses			
Title	Typ	Hrs/wk	CP
Electrical Power Systems I (L1670)	Lecture	3	4
Electrical Power Systems I (L1671)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Christian Becker		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Fundamentals of Electrical Engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.		
<i>Skills</i>	With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of electric power systems and to assess the results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.		
<i>Autonomy</i>	Students can independently tap knowledge of the emphasis of the lectures.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 - 150 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Elective Compulsory Energy Systems: Specialisation Energy Systems: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Renewable Energies: Core qualification: Compulsory Renewable Energies: Core qualification: Compulsory

Module M1242: Quantum Mechanics for Engineers			
Courses			
Title	Typ	Hrs/wk	CP
Quantum Mechanics for Engineers (L1686)	Lecture	2	3
Quantum Mechanics for Engineers (L1688)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Wolfgang Hansen		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge in physics, particularly in optics and wave phenomena;</li> <li>• knowledge in mathematics, particularly linear algebra, vector calculus, complex numbers and Fourier expansion</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe and explain basic terms and principles of quantum mechanics. They can distinguish commons and differences to classical physics and know, in which situations quantum mechanical phenomena may be expected.</p> <p><i>Skills</i> The students get the ability to apply concepts and methods of quantum mechanics to simple problems and systems. Vice versa, they are also able to comprehend requirements and principles of quantum mechanical devices.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students discuss contents of the lectures and present solutions to simple quantum mechanical problems in small groups during the exercises.</p> <p><i>Autonomy</i> The students are able to independently find answers to simple questions on quantum mechanical systems. The students are able to independently comprehend literature to more complex subjects with quantum mechanical background.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam

<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computational Mathematics: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory		

Course L1686: Quantum Mechanics for Engineers					
<b>Typ</b>	Lecture				
<b>Hrs/wk</b>	2				
<b>CP</b>	3				
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28				
<b>Lecturer</b>	Prof. Wolfgang Hansen				
<b>Language</b>	DE				
<b>Cycle</b>	WiSe				
<b>Content</b>	<p>This lecture introduces into fundamental concepts, methods, and definitions in quantum mechanics, which are needed in modern material and device science. Applications will be discussed using examples in the field of electronic and optical devices.</p> <p>Central topics are:</p> <p>Schrödinger equation, wave function, operators, eigenstates, eigenvalues, quantum wells, harmonic oscillator, tunnel processes, resonant tunnel diode, band structure, density of states, quantum statistics, Zener-diode, stationary perturbation calculation with the quantum-confined Stark effect as an example, Fermi's golden rule and transition matrix elements, heterostructure laser, quantum cascade laser, many-particle physics, molecules and exchange interaction, quantum bits and quantum cryptography.</p>

Module M0680: Fluid Dynamics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fluid Mechanics (L0454)	Lecture	3	4
Fluid Mechanics (L0455)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Sound knowledge of engineering mathematics, engineering mechanics and thermodynamics.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students will have the required sound knowledge to explain the general principles of fluid engineering and physics of fluids. Students can scientifically outline the rationale of flow physics using mathematical models and are familiar with methods for the performance analysis and the prediction of fluid engineering devices.		
<i>Skills</i>	Students are able to apply fluid-engineering principles and flow-physics models for the analysis of technical systems. The lecture enables the student to carry out all necessary theoretical calculations for the fluid dynamic design of engineering devices on a scientific level.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss problems and jointly develop solution strategies.		
<i>Autonomy</i>	The students are able to develop solution strategies for complex problems self-consistent and critically analyse results.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam

Module M0748: Materials in Electrical Engineering	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Electrotechnical Experiments (L0714)	Lecture 1 1
Materials in Electrical Engineering (L0685)	Lecture 2 3
Materials in Electrical Engineering (Problem Solving Course) (L0687)	Recitation Section (small) 2 2
<b>Module Responsible</b>	Prof. Manfred Eich
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Highschool level physics and mathematics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students can explain the composition and the structural properties of materials used in electrical engineering. Students can explicate the relevance of mechanical, electrical, thermal, dielectric, magnetic and chemical properties of materials in view of their applications in electrical engineering.
<i>Skills</i>	Students can identify appropriate descriptive models and apply them mathematically. They can derive approximative solutions and judge factors influential on the performance of materials in electrical engineering applications.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can jointly solve subject related problems in groups. They can present their results effectively within the framework of the problem solving course.
<i>Autonomy</i>	Students are capable to extract relevant information from the provided references and to relate this information to the content of the lecture. They can reflect their acquired level of expertise with the help of lecture accompanying measures such as exam typical exam questions. Students are able to connect their knowledge with that acquired from other lectures.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Written exam

Course L0429: Algebra and Control	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Prashant Batra
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0634: Introduction into Medical Technology and Systems	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Introduction into Medical Technology and Systems (L0342)	Lecture 2 3
Introduction into Medical Technology and Systems (L0343)	Problem-based Learning 4 3
<b>Module Responsible</b>	Prof. Alexander Schlaefer
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students can explain medical technology and its principles, including imaging systems, computer aided surgery, medical sensor systems, medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.
<i>Skills</i>	The students are able to apply principles of medical technology to solving actual problems.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 minutes
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Course L0342: Introduction into Medical Technology and Systems	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	- imaging systems - computer aided surgery - medical sensor systems - medical information systems - regulatory affairs - standard in medical technology The students will work in groups to apply the methods introduced during the lecture using problem based learning.
<b>Literature</b>	Wird in der Veranstaltung bekannt gegeben.

Course L0343: Introduction into Medical Technology and Systems	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	4
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 34, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0610: Electrical Machines	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Electrical Machines (L0293)	Lecture 3 4
Electrical Machines (L0294)	Recitation Section (large) 2 2
<b>Module Responsible</b>	Prof. Günter Ackermann
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Basics of mathematics, in particular complex numbers, integrals, differentials Basics of electrical engineering and mechanical engineering
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students can draw and explain the basic principles of electric and magnetic fields. They can describe the function of the standard types of electric machines and present the corresponding equations and characteristic curves. For typically used drives they can explain the major parameters of the energy efficiency of the whole system from the power grid to the driven engine.
<i>Skills</i>	Students are able to calculate two-dimensional electric and magnetic fields in particular ferromagnetic circuits with air gap. For this they apply the usual methods of the design of electric machines. They can calculate the operational performance of electric machines from their given characteristic data and selected quantities and characteristic curves. They apply the usual equivalent circuits and graphical methods.
<b>Personal Competence</b>	
<i>Social Competence</i>	none
<i>Autonomy</i>	Students are able independently to calculate electric and magnetic fields for applications. They are able to analyse independently the operational performance of electric machines from the characteristic data and they can calculate thereof selected quantities and characteristic curves.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 Minuten
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Energy and Environmental Engineering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Energy and Environmental Engineering: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory Mechanical Engineering: Core qualification: Elective Compulsory Mechatronics: Core qualification: Compulsory

Course L0293: Electrical Machines	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Günter Ackermann
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Electric field: Coulomb's law, flux (field) line, work, potential, capacitor, energy, force</p> <p>Magnetic field: force, flux line, Ampere's law, field at boundaries, flux, magnetic circuit, hysteresis, induction, self-induction, mutual inductance, transformer</p> <p>DC-Machines: Construction and layout, torque generation mechanisms, torque vs speed characteristics, commutation,</p> <p>Asynchronous Machines. Magnetic field, construction and layout, equivalent single line diagram, complex stator current diagram (Heylands' diagram), torque vs. speed characteristics, rotor layout (Squirrelcage vs. sliprings),</p> <p>Synchronous machines, construction and layout, equivalent single line diagrams, no-load and short-circuit characteristics, vector diagrams, motor and generator operation</p> <p>drives with variable speed, inverter fed operation, special drives, step motors,</p>

Module M0709: Electrical Engineering IV: Transmission Lines and Research Seminar	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Research Seminar Electrical Engineering, Computer Science, Mathematics (L0571)	Seminar 2 2
Transmission Line Theory (L0570)	Lecture 2 3
Transmission Line Theory (L0572)	Recitation Section (large) 2 1
<b>Module Responsible</b>	Prof. Arne Jacob
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Electrical Engineering I-III, Mathematics I-III
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students can explain the fundamentals of wave propagation on transmission lines at low and high frequencies. They are able to analyze circuits with transmission lines in time and frequency domain. They can describe simple equivalent circuits of transmission lines. They are able to solve problems with coupled transmission lines. They can present and discuss a self-chosen research topic.
<i>Skills</i>	Students can analyze and calculate the propagation of waves in simple circuits with transmission lines. They are able to analyze circuits in frequency domain and with the Smith chart. They can analyze equivalent circuits of transmission lines. They are able to solve problems including coupled transmission lines using the vectorial transmission line equations. They are able to give a talk to professionals.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can analyze and solve problems in small groups and discuss their solutions. They can compare the learned theory with experiments in the lecture and discuss it in small groups. They are able to present a research topic to professionals and discuss it with them.
<i>Autonomy</i>	The students can solve problems by their own and are able to acquire skills from the lecture and the literature. They are able to test their knowledge using computer animations. They can test their level of knowledge by answering short questions and tests during the lecture. They are able to relate their acquired knowledge to other lectures (e.g. Electrical Engineering I-III and Mathematics I-III). They can familiarize themselves with a research topic and can prepare a presentation.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

**Thesis**

Module M-001: Bachelor Thesis				
Courses				
Title	Typ	Hrs/wk	CP	
<b>Module Responsible</b>	Professoren der TUHH			
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §24 (1):</li> </ul> <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>			
<b>Recommended Previous Knowledge</b>				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> </ul>			
<b>Skills</b>	<ul style="list-style-type: none"> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	<ul style="list-style-type: none"> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0			
<b>Credit points</b>	12			
<b>Examination</b>	according to Subject Specific Regulations
