Bachelor of Science (B.Sc.)

# Computational Science and Engineering

Cohort: Winter Term 2019

Updated: 31st May 2021

### **Table of Contents**

Table of Contents	2
Program description	3
Core qualification	4
Module M0561: Discrete Algebraic Structures	4
Module M0850: Mathematics I	5
Module M0575: Procedural Programming	8
Module M0577: Non-technical Courses for Bachelors	10
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	12
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0624: Automata Theory and Formal Languages	16
Module M0829: Foundations of Management	18
Module M0851: Mathematics II	21
Module M1432: Objectoriented Programming	24
Module M0834: Computernetworks and Internet Security	26
Module M0662: Numerical Mathematics I	28
Module M0730: Computer Engineering	30
Module M0853: Mathematics III	32
Module M1423: Algorithms and Data Structures	35
Module M1441: Seminars Computer Science and Mathematics	37
Module M0672: Signals and Systems	39
Module M0803: Embedded Systems	42
Module M0727: Stochastics	44
Module M0675: Introduction to Communications and Random Processes	46
Module M1431: Practical Course IIW	48
Module M0833: Introduction to Control Systems	49
Specialization I. Computer Science	52
Module M0731: Functional Programming	52
Module M0972: Distributed Systems	55
Module M0791: Computer Architecture	56
Module M0562: Computability and Complexity Theory	58
Module M0971: Operating Systems	59
Module M0754: Compiler Construction	60
Module M0732: Software Engineering	62
Module M1300: Software Development	64
Specialization II. Mathematics & Engineering Science	66
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	66
Module M0760: Electronic Devices	69
Module M0708: Electrical Engineering III: Circuit Theory and Transients	71
Module M0941: Combinatorial Structures and Algorithms	73
Module M0569: Engineering Mechanics I	75
Module M0634: Introduction into Medical Technology and Systems	76
Module M0715: Solvers for Sparse Linear Systems	78
Module M0777: Semiconductor Circuit Design	80
Module M1269: Lab Cyber-Physical Systems	82
Module M0854: Mathematics IV	83
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	86
Specialization III. Subject Specific Focus	88
Module M1433: Technical Complementary Course for Computational Science and Engineering Bachelor	88
Thesis	89
Module M-001: Bachelor Thesis	89

### Program description

#### Content

### Core qualification

Module M0561: Discre	ete Algebraic Structures				
Courses					
Title		Тур		Hrs/wk	СР
Discrete Algebraic Structures (L016	64)	Lecture		2	3
Discrete Algebraic Structures (L016	55)	Recitation Sec	tion (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann				
Admission Requirements	None				
Recommended Previous	Mathematics from High School.				
Knowledge					
Educational Objectives	After taking part successfully, students ha	ve reached the following learning res	sults		
<b>Professional Competence</b>					
Knowledge	The students know the important basics	of discrete algebraic structures inclu	ding elementary o	combinatorial	structures, monoids,
	groups, rings, fields, finite fields, and vect	or spaces. They also know specific st	ructures like sub	sum-, and qu	otient structures and
	homomorphisms.				
Skills	Students are able to formalize and analyze basic discrete algebraic structures.				
Skiiis	Students are usic to formulae and unaryz	e busic discrete digebrate structures.			
Personal Competence					
Social Competence	Students are able to solve specific probler	ns alone or in a group and to present	the results accord	dingly.	
Δutonomy	Students are able to acquire new knowl	edge from specific standard books	and to associate	the acquired	knowledge to other
, incomenny	classes.	cage nom specime standard books	and to appoint	are acquired	morreage to outer
	elasses.				
Workload in Hours	Independent Study Time 124, Study Time	in Lecture 56			
Credit points					
Course achievement					
Examination	Written exam				
Examination duration and	120 min				
scale

Module Responsible	Prof. Anusch Taraz				
Admission Requirements	None				
Recommended Previous Knowledge	School mathematics				
Educational Objectives	After taking part successfully, students have reached	the following learning results			
Professional Competence					
Knowledge					
3	Students can name the basic concepts in ana	alysis and linear algebra. They are able	e to explain the	em using appropriate	
	examples.				
	Students can discuss logical connections between	een these concepts. They are capable	of illustrating th	ese connections with	
	the help of examples.				
	They know proof strategies and can reproduce	them.			
Skills	Students can model problems in analysis and I	inear algebra with the help of the conce	pts studied in th	nis course. Moreover.	
	they are capable of solving them by applying e		,		
	Students are able to discover and verify further		ts studied in the	e course.	
	For a given problem, the students can develo				
	results.			,	
Personal Competence					
Social Competence					
, , , , , , , , , , , , , , , , , , , ,	Students are able to work together in teams. They are capable to use mathematics as a common language.				
	• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can				
	design examples to check and deepen the unde	erstanding of their peers.			
Autonomy	Students are capable of checking their underst	anding of complex concepts on their ov	vn. Thev can sp	ecify open guestions	
	precisely and know where to get help in solving		,	, , ,	
	Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard				
	problems.				
Workload in Hours	Independent Study Time 128, Study Time in Lecture 1	12	•		
Credit points	8				
Course achievement	None

Module M0577: Non-technical Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results	
Buefessianal Commetense		

Knowledae

#### The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

#### The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

#### Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

#### Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

#### The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

#### Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

#### Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

#### Personal Competence

Social Competence

#### Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

	<ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>to organize themselves and their own learning processes</li> <li>to reflect and decide questions in front of a broad education background</li> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> <li>to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
Workload in Hours	Depends on choice of courses
Credit points	6

Knowledge				
	Mathematics I			
	Direct current networks, complex numbers			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students are able to reproduce and explain fundam	ental theories, principles, and methods	related to the	theory of alternating
	currents. They can describe networks of linear eleme	ents using a complex notation for voltag	es and currents.	They can reproduce
	an overview of applications for the theory of alterna	ating currents in the area of electrical of	engineering. Stu	dents are capable o
	explaining the behavior of fundamental passive and a	ctive devices as well as their impact on	simple circuits.	
Skills	Students are capable of calculating parameters within simple electrical networks at alternating currents by means of a complex notation for voltages and currents. They can appraise the fundamental effects that may occur within electrical networks a alternating currents. Students are able to analyze simple circuits such as oscillating circuits, filter, and matching networks quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of an electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified to dimension their main features.			
Personal Competence Social Competence	Students are able to work together on subject related	tasks in small groups. They are able to	present their res	ults effectively.
Autonomy	Students are capable to gather necessary information the lecture. They are able to continually reflect their k tests and exercises that are related to the exam. Baselearning process. They are able to draw connections lectures (e.g. Electrical Engineering I, Linear Algebra,	knowledge by means of activities that ac sed on respective feedback, students a between their knowledge obtained in	ccompany the led re expected to a	cture, such as online- djust their individua

Automata Theory and Formal Languages (L0332)		Lecture		2	4
Automata Theory and Formal Lang		Recitation Section	n (small)	2	2
Module Responsible	Prof. Tobias Knopp				
Admission Requirements	None				
Recommended Previous	Participating students should be able to				
Knowledge	- specify algorithms for simple data structur	res (such as, e.g., arrays) to solve com	putational prob	lems	
	- apply propositional logic and predicate log	ic for specifying and understanding m	athematical pro	oofs	
	- apply the knowledge and skills taught in the	ne module Discrete Algebraic Structur	es		
<b>Educational Objectives</b>	After taking part successfully, students hav	e reached the following learning result	ts		
<b>Professional Competence</b>					
	problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and def syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for variously kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of fir automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name the formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decise problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suit for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automator grammars.			problems for various rious kinds of finite explain ranges from its can name those rate which decision nalism into decisioners are best suited	
Skills Personal Competence	Students can apply propositional logic as w problems in order to derive propositional low which formalism is best suited for a partic decision problems to specific formulas. Тур	Lecture
Hrs/wk	
СР	
	Independent Study Time 92, Study Time in Lecture 28
	Prof. Tobias Knopp
Language	
Cycle	3036
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	Deterministic finite automata, definition and construction
	Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and
	back) 12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)

#### Course L0882: Management Tutorial Тур Recitation Section (large)

Hrs/wk

СР

Workload Independent Study Time 62, Study Time in Lecture 28

in Hours

Lecturer Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek

Language

WiSe/SoSe Cycle

In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools

If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Knowledge						
<b>Educational Objectives</b>	After taking part successfully, students have reached	the following learning results				
<b>Professional Competence</b>						
Knowledge						
	Students can name further concepts in anal     .	ysis and linear algebra. They are able	to explain the	m using appropriate		
	examples.		£ ::::			
	Students can discuss logical connections betw	een these concepts. They are capable (	or illustrating th	ese connections with		
	the help of examples.	thom				
	They know proof strategies and can reproduce	them.				
Chille						
Skills	Students can model problems in analysis and	linear algebra with the help of the conce	pts studied in th	nis course. Moreover,		
	they are capable of solving them by applying established methods.					
	Students are able to discover and verify further logical connections between the concepts studied in the course.					
	• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the					
	results.					
Personal Competence						
Social Competence						
	<ul> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can</li> </ul>					
	design examples to check and deepen the understanding of their peers.					
Autonomy						
Autonomy	Students are capable of checking their understanding of complex concepts on their own. They can specify open questions					
	precisely and know where to get help in solving them.					
	• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard					
	problems.

Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reached the follow	ving learning results		
<b>Professional Competence</b>				
	The students have a fundamental understanding of object orientated and generic programming and can apply it in small programming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have a fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can use exceptions and apply generic programming in order to make existing data structures generic. The students know the pros and cons of both programming paradigms.  Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a modern programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
Social Competence	Students can work in teams and communicate in forums.			
Autonomy	In a programming internship, students learn object-oriented programming under supervision. In exercises they develop individual and independent solutions and receive feedback.

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann, DrIng. Koojana Kuladinithi
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.  In the second part of the lecture an introduction to Internet security is given.
	This class comprises:  • Application layer protocols (HTTP, FTP, DNS)
	Transport layer protocols (TCP, UDP)
	Network Layer (Internet Protocol, routing in the Internet)
	Data link layer with media access at the example of Ethernet
	Multimedia applications in the Internet
	Network management     Internet security: IPSec
	Internet security: Firewalls

Recommended Previous  Knowledge	Mathematik I + II for Engineering Students (german or english) or Analysis & Linear Algebra I + II for Technomathematician
Kilowicuge	basic MATLAB knowledge
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	The taking part succession, y state its interest and to to to the time y country.
•	Students are able to
, and the second	
	name numerical methods for interpolation, integration, least squares problems, eigenvalue problems, nonlinear root findir      problems and to combine their consistency.
	problems and to explain their core ideas,
	<ul> <li>repeat convergence statements for the numerical methods,</li> <li>explain aspects for the practical execution of numerical methods with respect to computational and storage complexitx.</li> </ul>
	explain aspects for the practical execution of numerical methods with respect to computational and storage complexity.
Skills	Students are able to
SKIIIS	
	implement, apply and compare numerical methods using MATLAB,
	justify the convergence behaviour of numerical methods with respect to the problem and solution algorithm,
	select and execute a suitable solution approach for a given problem.
Personal Competence	
Social Competence	Students are able to
	a week basekbas in bakasasanaa sah, samaaa dibanaa (i.a. kaanaa fuona diffasankak, du, nyaasanaa and baaksasand kaasaladaa
	<ul> <li>work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.</li> </ul>
	explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.
Autonomy	Students are capable
	to assess whether the supporting theoretical and practical excercises are better solved individually or in a team,
	to assess their individual progess and, if necessary, to ask questions and seek help.

Knowledge				
Educational Objectives		earning results		
Professional Competence	This module deals with the foundations of the functionality of com	anuting systems. It sovers t	ho layors from	the assembly love
Knowledge	programming down to gates. The module includes the following topi		ile layers iroin	the assembly-leve
	Introduction     Combinational logic: Gates, Boolean algebra, Boolean function	ne hardwaro synthosis com	hinational notw	orks
	Sequential logic: Flip-flops, automata, systematic hardware de		Dillacional netw	TOTAS
	Technological foundations			
	Computer arithmetic: Integer addition, subtraction, multiplica	tion and division		
	Basics of computer architecture: Programming models, MIPS s	single-cycle architecture, pip	elining	
	Memories: Memory hierarchies, SRAM, DRAM, caches			
	<ul> <li>Input/output: I/O from the perspective of the CPU, principles of the CPU.</li> </ul>	of passing data, point-to-poir	nt connections,	busses
Skills	The students perceive computer systems from the architect's perspe	ective, i.e., they identify the	internal structu	ure and the physica
	composition of computer systems. The students can analyze, how h	ighly specific and individual	computers can	be built based on a
	collection of few and simple components. They are able to distingu	•	the different a	abstraction layers o
	today's computing systems - from gates and circuits up to complete	processors.		
	After successful completion of the module, the students are able	to judge the interdependen	cies between a	a physical compute
	system and the software executed on it. In particular, they shall un			
	on the hardware-centric abstraction layers from the assembly langu			
	the impact that these low abstraction levels have on an entire system	m's performance and to pro	pose reasible of	ptions.
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a group and	to present the results accord	lingly.	
Autonomy	Students are able to acquire new knowledge from specific literature	and to associate this knowle	edge with other	classes.

Engineering	
Module M0672: Signa	lls and Systems
Courses	
Title	Typ Hrs/wk CP
Signals and Systems (L0432)	Lecture 3 4
Signals and Systems (L0433)	Recitation Section (small) 2 2
Module Responsible	Prof. Gerhard Bauch
Admission Requirements	None
Recommended Previous	Mathematics 1-3
Knowledge	
	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik
	1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful
	but not required.
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system
	theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They
	can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they
	understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a
	discrete-time signal.
Skills	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and
	system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase
	response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency domain.
Personal Competence	
Social Competence	The students can jointly solve specific problems.
Autonomy	The students are able to acquire relevant information from appropriate literature sources. They can control their level of
	knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Content	Introduction to signal and system theory
	• Signals
	Classification of signals
	■ Continuous-time and discrete-time signals
	<ul> <li>Analog and digital signals</li> </ul>

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- o Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- · Correlation functions of deterministic signals
  - Autocorrelation function
  - Crosscorrelation function
  - Orthogonal signals
  - Applications of correlation
- Linear time-invariant (LTI) systems
  - Linearity
  - Time-invariance
  - o Description of LTI systems by impulse response and frequency response
  - Convolution
  - o Convolution and correlation
  - Properties of LTI-systems
  - Causal systems
  - Stable systems
  - · Memoryless systems
- Fourier Series and Fourier Transform
  - $\circ \quad \text{Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals} \\$
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - o Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - o Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - · Bandwidth definitions
  - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - · Linear-phase systems
  - o Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - $\circ\hspace{0.1cm}$  Properties of the Laplace transform
  - $\circ\hspace{0.1cm}$  Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - o Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
  - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - $\circ~$  Relation of Fourier transform and DTFT  $\,$
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolution
  - Fast Fourier Transform (FFT)
     Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transforn
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - $\circ \ \ \, \text{Z-transform of digital filters}$
  - $\circ\hspace{0.1in}$  Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability
  - Allpass filters

Knowledge				
Educational Objectives	After taking part successfully, students ha	ave reached the following learning results		
<b>Professional Competence</b>				
Knowledge	Embedded systems can be defined as info	ormation processing systems embedded into enclos	ing products. This	s course teaches the
	foundations of such systems. In particular	r, it deals with an introduction into these systems (	notions, common	characteristics) and
		their specification languages (models of computation, hierarchical automata, specification of distributed systems, task graphs		
	specification of real-time applications, trai	nslations between different models).		
	Another part covers the hardware of en	nbedded systems: Sonsors, A/D and D/A converte	rs, real-time cap	able communication
	hardware, embedded processors, memor	ries, energy dissipation, reconfigurable logic and ac	ctuators. The cou	rse also features a
	introduction into real-time operating sys	stems, middleware and real-time scheduling. Finall	y, the implement	tation of embedded
	systems using hardware/software co-desi	ign (hardware/software partitioning, high-level trans	sformations of sp	ecifications, energy
	efficient realizations, compilers for embed	ided processors) is covered.		
Skille	After having attended the course stude	nts shall be able to realize simple embedded syste	ms. The student	s shall realize which
Skills		ces to use in order to obtain a functional embedder		
		putations and feasible techniques for system-level		
	which areas of embedded system design s	•		,
Personal Competence				
Social Competence	Students are able to solve similar problem	ns alone or in a group and to present the results acc	ordingly.	
Autonomy	Students are able to acquire new knowled	lge from specific literature and to associate this kno	wledge with other	r classes.

Educational Objectives	After taking part successfully, students have reached the fo	llowing learning results		
<b>Professional Competence</b>				
	Students can explain the main definitions of probability, and they can give basic definitions of modeling elements (random variables, events, dependence, independence assumptions) used in discrete and continuous settings (joint and marginal distributions, density functions). Students can describe characteristic notions such as expected values, variance, standard deviation, and moments. Students can define decision problems and explain algorithms for solving these problems (based on the chain rule or Bayesian networks). Algorithms, or estimators as they are caller, can be analyzed in terms of notions such as bias of an estimator, etc. Student can describe the main ideas of stochastic processes and explain algorithms for solving decision and computation problem for stochastic processes. Students can also explain basic statistical detection and estimation techniques.  Students can apply algorithms for solving decision problems, and they can justify whether approximation techniques are good enough in various application contexts, i.e., students can derive estimators and judge whether they are applicable or reliable.  - Students are able to work together (e.g. on their regular home work) in heterogeneously composed teams (i.e., teams from different study programs and background knowledge) and to present their results appropriately (e.g. during exercise class).			
	- Students can put their knowledge in relation to the conten	ts of other lectures.		
	- Students have developed sufficient persistence to be able	to work for longer periods in a go	pal-oriented manne	er on hard problems.

Knowledge	
	Procedural Programming
	Algorithms and Data Structures     Systematical Systems
	Embedded Systems     Generator Facility and a second
	Computer Engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students get to know tools used by development teams to
	plan development flows,
	manage task distribution,
	manage source code, and
	• test software.
Skills	Students work in teams on a larger project. The required competences are learned and practically applied. These are for example:
	specifying software based on user requirements
	creating a software architecture
	implementing and testing software in a team, and
	using the related development tools.
Personal Competence	
Social Competence	Team work has its own challenges with respect to interaction of team members as well as finding the necessary agreement during
	joint software development. During the project students learn the required competences and experience the practical needs.
Autonomy	During team work it is mandatory to take and explain a certain position, to independently complete assigned tasks, and to present
	results to the team. Open issues must be identified and returned into the team to find an agreed resolution.

Content	A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project.  The project is split into regular plenary sessions and into independent team work.			
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

#### Specialization I. Computer Science

Module M0731: Funct	ional Programming			
Courses				
Title		Тур	Hrs/wk	СР
Functional Programming (L0624)		Lecture	2	2
Functional Programming (L0625)		Recitation Section (large)	2	2
Functional Programming (L0626)		Recitation Section (small)	2	2
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
<b>Recommended Previous</b>	Discrete mathematics at high-school level			
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have	re reached the following learning results		
<b>Professional Competence</b>				
Knowledge	Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.			
Skills	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.			
Personal Competence				
Social Competence	Students practice peer programming with programs orally. They communicate in Eng	varying peers. They explain problems and sollish.	utions to their pee	er. They defend their
Autonomy	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Module Responsible	Prof. Karl-Heinz Zimmermann				
Admission Requirements	None				
Recommended Previous	Discrete Algebraic Structures, Automata Theory	y, Logic, and Forma	al Language Theory.		
Knowledge					
<b>Educational Objectives</b>	After taking part successfully, students have re-	ached the followin	g learning results		
Professional Competence					
Knowledge	The students known the important machine models of computability, the class of partial recursive functions, universal computability, Gödel numbering of computations, the theorems of Kleene, Rice, and Rice-Shapiro, the concept of decidable and undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post correspondence systems, Hilbert's 10-th problem, and the basic concepts of complexity theory.				
	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.				
· ·	Students are able to solve specific problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge with other classes.

Responsible		
Admission		
Requirements		
Recommended		
Previous	Introduction to Software Engineering  Programming Chilles	
Knowledge	Programming Skills     Experience with Developing Small to Medium-Size Programs	
Educational Objectives		
Professional		
Competence		
Knowledge	Students explain the fundamental concepts of agile methods, describe the process of test-driven development, and explain how continuous integration can be used in different scenarios. They give examples of selected pitfalls in software development, regarding scalability and other non-functional requirements. They write unit tests and build scripts and combine them in a corresponding integration environment. They explain major activities in requirements analysis, program comprehension, and agile project development.	
Skills	For a given task on a legacy system, students identify the corresponding parts in the system and select an appropriate method for understanding the details. They choose the proper approach of splitting a task in independent testable and extensible pieces and, thus, solve the task with proper methods for quality assurance. They design tests for legacy systems, create automated builds, and find errors at different levels. They integrate the resulting artifacts in a continuous development environment

#### Specialization II. Mathematics & Engineering Science

Module M1235: Electr	ical Power Systems I: Introduction to	<b>Electrical Power System</b>	S	
Courses				
Title		Тур	Hrs/wk	СР
Electrical Power Systems I: Introduction to Electrical Power Systems (L1670)		Lecture	3	4
Electrical Power Systems I: Introduc	ction to Electrical Power Systems (L1671)	Recitation Section (small)	2	2
Module Responsible	Prof. Christian Becker			
Admission Requirements	None			
<b>Recommended Previous</b>	Fundamentals of Electrical Engineering			
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reached t	he following learning results		
<b>Professional Competence</b>				
Knowledge	Students are able to give an overview of conventional	and modern electric power systems.	They can explain	in detail and critically
	evaluate technologies of electric power generation, tra	nsmission, storage, and distribution a	as well as integra	tion of equipment into
	electric power systems.			
Skills	With completion of this module the students are at	ale to apply the acquired skills in a	nnlications of th	e design integration
SKIIIS	development of electric power systems and to assess t		ppileditions of the	e design, meegracion
Personal Competence				
Social Competence	The students can participate in specialized and interdis	sciplinary discussions, advance ideas	and represent the	eir own work results ir
	front of others.			
Autonomy	Students can independently tap knowledge of the emp	hasis of the lectures.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70	)		
Credit points	6

Skills  After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies betwee CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D convert digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate to advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these technic to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specifications and in the area of simple control applications.  Personal Competence  Social Competence  Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Workload in Hours  Independent Study Time 124, Study Time in Lecture 56  Credit points  Course achievement  None  Examination  Written elaboration

Content	- Maxwell's Equations in integral and differential notation	
	- Boundary conditions	
	- Laws of conservation for energy and charge	
	- Classification of electromagnetic field properties	
	- Integral characteristics of time-independent fields (R, L, C)	
	- Generic approaches to solving Poisson's Equation	
	- Electrostatic fields and specific methods of solving	
	- Magnetostatic fields and specific methods of solving	
	- Fields of electrical current density and specific methods of solving	
	- Action of force within time-independent fields	
	- Numerical methods for solving time-independent problems	
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

Admission Requirements	
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	
	<ul> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> </ul>
	<ul> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on</li> </ul>
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	
	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	<ul> <li>specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific</li> </ul>
	problem.
	The students can apply the essential techniques of scientific work to research of their own.
