Module M0561: Discre	ete Algebraic Structures				
Courses					
Title		Т	ур	Hrs/wk	СР
Discrete Algebraic Structures (L016	4)	L	ecture	2	3
Discrete Algebraic Structures (L016	5)	R	ecitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann				
Admission Requirements	None				
Recommended Previous	Mathematics from High School.				
Knowledge					
Educational Objectives	After taking part successfully, students have	ve reached the following	learning results		
Professional Competence					
Knowledge	The students know the important basics o	of discrete algebraic stru	ctures including elementa	ry combinatorial	structures, monoids,
	groups, rings, fields, finite fields, and vector	or spaces. They also know	w specific structures like s	ub sum-, and quo	otient structures and
	homomorphisms.				
Skille	Students are able to formalize and analyze	hasis discrete algebraic	ctructuros		
SKIIIS	Students are able to formalize and analyze	basic discrete algebraic	. structures.		
Personal Competence					
Social Competence	Students are able to solve specific problem	ns alone or in a group an	d to present the results ac	cordingly.	
Autonomy	Students are able to acquire new knowle	adae from specific stand	dard books and to associ	ate the acquired	knowledge to other
Autonomy	classes.	sage from specific stand	dara books and to associ	ate the acquired	knowledge to other
	ciusses.

Educational Objectives	After taking part successfully students have reache	ed the following learning results		
Professional Competence	After taking part successfully, students have reache	ed the following learning results		
•				
Knowledge	Students can name the basic concepts in a	analysis and linear algebra. They are able	to explain the	m using appropriate
	examples.			
	Students can discuss logical connections betoe.	ween these concepts. They are capable of	of illustrating the	ese connections with
	the help of examples.	, , , ,	3	
	They know proof strategies and can reproduce.	te them.		
Skills				
Simis	 Students can model problems in analysis an 	d linear algebra with the help of the conce	pts studied in th	nis course. Moreover,
	they are capable of solving them by applying	established methods.		
	 Students are able to discover and verify furth 	er logical connections between the concep	ts studied in the	e course.
	For a given problem, the students can dev	elop and execute a suitable approach, an	d are able to c	ritically evaluate the
	results.			
Personal Competence				
Social Competence				
•	 Students are able to work together in teams. 			-
	In doing so, they can communicate new con-	cepts according to the needs of their coope	erating partners	. Moreover, they can
	design examples to check and deepen the ur	nderstanding of their peers.		
Autonomy	Students are capable of checking their under	retanding of complex concents on their ov	un Thoy can en	ocify open guestions
			vii. Tiley call sp	ecity open questions
	 precisely and know where to get help in solvi Students have developed sufficient persiste 		in a goal orion	tod manner on hard
	problems.	fice to be able to work for longer periods	iii a goai-orieii	teu manner on naru
	problems.

Module M0577: Non-technical Courses for Bachelors	
Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	

Knowledae

The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

Autonomy	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. Personal Competences (Self-reliance) Students are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses

Automata Theory and Formal Lang	uages (L0332)	Lecture	2	4
Automata Theory and Formal Lang	uages (L0507)	Recitation Section (small)	2	2
Module Responsible	Prof. Tobias Knopp			
Admission Requirements	None			
Recommended Previous	Participating students should be able to			
Knowledge	- specify algorithms for simple data structures (su	ich as, e.g., arrays) to solve computational	problems	
	- apply propositional logic and predicate logic for	specifying and understanding mathematica	l proofs	
	- apply the knowledge and skills taught in the mo	dule Discrete Algebraic Structures		
Educational Objectives	After taking part successfully, students have read	hed the following learning results		
Professional Competence				
	problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problems. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.			
Skills	Students can apply propositional logic as well as problems in order to derive propositional logic, which formalism is best suited for a particular a decision problems to specific formulas. Students grammars from automata and vice versa. They emptiness problem in case of infinite words.	oredicate logic, or temporal logic formulas pplication problem, and they can demons can also transform nondeterministic autor	to represent them trate the applicati nata into determin	n. They can evaluate ion of algorithms for nistic ones, or derive

Course L0332: Automata The	eory and Formal Languages
Тур	Lecture
Hrs/wk	
СР	
	Independent Study Time 92, Study Time in Lecture 28
	Prof. Tobias Knopp
Language	
Cycle	3036
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	Deterministic finite automata, definition and construction
	Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and
	back) 12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
Literature	Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.

Course L0882: Management Tutorial Тур Recitation Section (large)

Hrs/wk СР

Workload Independent Study Time 62, Study Time in Lecture 28

in Hours

Lecturer Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek

Language

WiSe/SoSe Cycle

In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools

If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ving learning results		
Professional Competence				
	The students have a fundamental understanding of object orientated and generic programming and can apply it in small programming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have a fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can use exceptions and apply generic programming in order to make existing data structures generic. The students know the pros and cons of both programming paradigms. Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriented programming language based on these subproblems. They can design a public and private interface and implement the implementation generically and extensible by abstraction. They can distinguish different language constructs of a modern programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
Social Competence	Students can work in teams and communicate in forums.			
Autonomy	In a programming internship, students learn object-oriented p and independent solutions and receive feedback.	rogramming under supervision.	In exercises the	y develop individual

Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given.
	This class comprises: • Application layer protocols (HTTP, FTP, DNS)
	Transport layer protocols (TCP, UDP)
	Network Layer (Internet Protocol, routing in the Internet)
	Data link layer with media access at the example of Ethernet
	Multimedia applications in the Internet
	Network management Internet security: IPSec
	Internet security: Firewalls

Knowledge	Mathematik I + II for Engineering Students (german or english) or Analysis & Linear Algebra I + II for Technomathematician
	basic MATLAB knowledge
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
•	Students are able to
	 name numerical methods for interpolation, integration, least squares problems, eigenvalue problems, nonlinear root findin
	 problems and to explain their core ideas, repeat convergence statements for the numerical methods,
	 explain aspects for the practical execution of numerical methods with respect to computational and storage complexitx.
Skills	Students are able to
	in all and the same of the sam
	implement, apply and compare numerical methods using MATLAB, institutes convergence behaviour of numerical methods with respect to the problem and solution algorithm.
	 justify the convergence behaviour of numerical methods with respect to the problem and solution algorithm, select and execute a suitable solution approach for a given problem.
	Select and execute a suitable solution approach for a given problem.
Personal Competence	
Social Competence	Students are able to
	work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge)
	explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.
Autonomy	Students are capable
	to assess whether the supporting theoretical and practical excercises are better solved individually or in a team,
	to assess their individual progess and, if necessary, to ask questions and seek help.

Module Responsible	e Prof. Heiko Falk	
Admission Requirements	s None	
Recommended Previous		
Knowledge		
Educational Objectives		
Professional Competence	e This module deals with the foundations of the functionality of computing systems. It covers the layers from the	o assembly love
Knowieage	programming down to gates. The module includes the following topics:	e assembly-leve
	 Introduction Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational network 	
	Sequential logic: Flip-flops, automata, systematic hardware design	.5
	Technological foundations	
	Computer arithmetic: Integer addition, subtraction, multiplication and division	
	Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining	
	Memories: Memory hierarchies, SRAM, DRAM, caches	
	Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, bus	sses
Skills	Is The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure	and the physical
	composition of computer systems. The students can analyze, how highly specific and individual computers can be	built based on a
	collection of few and simple components. They are able to distinguish between and to explain the different abst	traction layers of
	today's computing systems - from gates and circuits up to complete processors.	
	After successful completion of the module, the students are able to judge the interdependencies between a ph	nysical computer
	system and the software executed on it. In particular, they shall understand the consequences that the execution	of software has
	on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be ena	bled to evaluate
	the impact that these low abstraction levels have on an entire system's performance and to propose feasible option	ins.
Personal Competence	e	
Social Competence	e Students are able to solve similar problems alone or in a group and to present the results accordingly.	
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other cla	accoc.
Autonomy	y Students are able to acquire new knowledge from specific filerature and to associate this knowledge with other cla	15565.
Workload in Hours	s Independent Study Time 124, Study Time in Lecture 56

Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence	Anter taking part succession, stadents have reached the	Tonowing rearring results		
Knowledge				
Knowleage	 Students can name the basic concepts in the area 	of analysis and differential equations.	They are able	to explain them using
	appropriate examples.			
	Students can discuss logical connections between	these concepts. They are capable of	of illustrating th	ese connections with
	the help of examples.			
	They know proof strategies and can reproduce the	m.		
Skills				
SKIIIS	Students can model problems in the area of analy	sis and differential equations with the	help of the co	ncepts studied in this
	course. Moreover, they are capable of solving ther	n by applying established methods.		
	Students are able to discover and verify further local		ts studied in the	e course.
	For a given problem, the students can develop			
	results.	,		
	results.			
Personal Competence				
Social Competence	 Students are able to work together in teams. They 	are canable to use mathematics as a	common langu	age
	In doing so, they can communicate new concepts			-
			rating partners	i. Moreover, they can
	design examples to check and deepen the unders	anding of their peers.		
Autonomy	Students are capable of checking their understan	ding of complex concepts on their ov	n They can sn	ecify open questions
	precisely and know where to get help in solving th		viii. Triey can sp	recity open questions
	Students have developed sufficient persistence to		in a goal orion	tod mannor on hard
	· · ·	o be able to work for longer periods	iii a goai-orieii	ited manner on nard
	problems.

Module M0672: Signa	lls and Systems		
Courses			
Title	Typ Hrs/wk CP		
Signals and Systems (L0432)	Lecture 3 4		
Signals and Systems (L0433)	Recitation Section (small) 2 2		
Module Responsible	Prof. Gerhard Bauch		
Admission Requirements	None		
Recommended Previous	Mathematics 1-3		
Knowledge	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik		
	1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful		
	but not required.		
	·		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system		
	theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They		
	can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they		
	understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.		
Sville	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and		
Skills	system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase		
	response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency domain.		
Personal Competence			
Social Competence	The students can jointly solve specific problems.		
Autonomy	The students are able to acquire relevant information from appropriate literature sources. They can control their level of		
	knowledge during the lecture period by solving tutorial problems, software tools, clicker system.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Content	Introduction to signal and system theory	
	• Signals	
	Classification of signals	
	 Continuous-time and discrete-time signals 	
	 Analog and digital signals 	

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- o Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- · Correlation functions of deterministic signals
 - Autocorrelation function
 - Crosscorrelation function
 - Orthogonal signals
 - Applications of correlation
- Linear time-invariant (LTI) systems
 - Linearity
 - Time-invariance
 - Description of LTI systems by impulse response and frequency response
 - Convolution
 - o Convolution and correlation
 - Properties of LTI-systems
 - Causal systems
 - Stable systems
 - · Memoryless systems
- Fourier Series and Fourier Transform
 - $\circ \quad \text{Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals} \\$
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - o Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - · Bandwidth definitions
 - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - · Linear-phase systems
 - o Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - $\circ\hspace{0.1cm}$ Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - $\circ~$ Relation of Fourier transform and DTFT $\,$
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - $\circ~$ Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - $\circ \ \ \, \text{Z-transform of digital filters}$
 - $\circ\hspace{0.1in}$ Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters

	 Minimum-phase, maximum-phase and mixed-phase filters Linear phase filters

Courses				
Title		Тур	Hrs/wk	СР
Embedded Systems (L0805)		Lecture	3	4
Embedded Systems (L0806)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Computer Engineering			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	Embedded systems can be defined as information proc	essing systems embedded into enclosi	ng products. This	course teaches the
-	foundations of such systems. In particular, it deals with			
	their specification languages (models of computation,			
	specification of real-time applications, translations betw	een different models).		
	Another part covers the hardware of embedded syste			
	hardware, embedded processors, memories, energy di			
	introduction into real-time operating systems, middle			
	systems using hardware/software co-design (hardware		formations of spe	ecincations, energy-
	efficient realizations, compilers for embedded processo	s) is covered.		
Skills	After having attended the course, students shall be al	ole to realize simple embedded system	ns. The students	shall realize which
	relevant parts of technological competences to use in	order to obtain a functional embedded	systems. In part	icular, they shall be
	able to compare different models of computations and	feasible techniques for system-level d	esign. They shall	be able to judge in
	which areas of embedded system design specific risks e	exist.		
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in	a group and to present the results acco	rdingly.	
A	Charles to a ship to a suring many language from a series		de deservitate este es	-1
Autonomy	Students are able to acquire new knowledge from speci	ric literature and to associate this know	neage with other	ciasses.

Courses			
Title	Тур	Hrs/wk	СР
Practical Course IIW (L2160)	Project-/problem-based Learning	8	6
Module Responsible	Prof. Görschwin Fey		
Admission Requirements	None		
Recommended Previous	Successful participation in the modules:		
Knowledge	Procedural Programming		
	Algorithms and Data Structures		
	Embedded Systems		
	Computer Engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	Students get to know tools used by development teams to		
	plan development flows,		
	manage task distribution,		
	manage source code, and		
	test software.		
Skills	Students work in teams on a larger project. The required competences are learned and practically	y applied. The	ese are for example:
	specifying software based on user requirements		
	creating a software architecture		
	implementing and testing software in a team, and		
	using the related development tools.		
Personal Competence			
Social Competence	Team work has its own challenges with respect to interaction of team members as well as finding	the necessa	ry agreement during
	joint software development. During the project students learn the required competences and exp	erience the p	ractical needs.
Autonomy	During team work it is mandatory to take and explain a certain position, to independently comple	ete assigned	tasks, and to present
	results to the team. Open issues must be identified and returned into the team to find an agreed	resolution.

Cycle	WiSe
Content	A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project. The project is split into regular plenary sessions and into independent team work.
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

	duction to Control Systems			
Courses				
Title	Тур		Hrs/wk	СР
Introduction to Control Systems (LC			2	4
Introduction to Control Systems (LC	0655) Recitatio	n Section (small)	2	2
Module Responsible	Prof. Herbert Werner			
Admission Requirements	None			
Recommended Previous	Representation of signals and systems in time and frequency domain, Lap	lace transform		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning	g results		
Professional Competence				
Knowledge	Students can represent dynamic system behavior in time and freq	iency domain, and ca	n in particular	explain properties (
	first and second order systems	, ,		
	They can explain the dynamics of simple control loops and interpretation.	t dynamic properties	in terms of fred	uency response an
	root locus			
	They can explain the Nyquist stability criterion and the stability ma	rgins derived from it.		
	They can explain the role of the phase margin in analysis and synth	esis of control loops		
	They can explain the way a PID controller affects a control loop in t	erms of its frequency	response	
	They can explain issues arising when controllers designed in contin	uous time domain are	implemented of	digitally
Skills				
Skilis	Students can transform models of linear dynamic systems from time	e to frequency domai	n and vice vers	a
	They can simulate and assess the behavior of systems and control	loops		
	They can design PID controllers with the help of heuristic (Ziegler-N	ichols) tuning rules		
	They can analyze and synthesize simple control loops with the help	of root locus and free	luency respons	e techniques
	They can calculate discrete-time approximations of controllers	designed in contir	nuous-time and	d use it for digital
	implementation			
	They can use standard software tools (Matlab Control Toolbox, Sim	ulink) for carrying out	these tasks	
Personal Competence				
	Students can work in small groups to jointly solve technical problems, and	experimentally valida	ate their contro	ller designs
Autonomy				
,	when solving given problems.			
	They can assess their knowledge in weekly on-line tests and thereby cont	rol their learning prog	ress.

Course L0654: Introduction t	to Control Systems
Тур	Lecture
Hrs/wk	2
СР	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	First and second order systems, poles and zeros, impulse and step response
	Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants Internal model principle.
	Internal model principle
	Root locus techniques
	Root locus plots
	Root locus design of PID controllers
	Frequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	Root locus and frequency response of time delay systems
	Smith predictor
	Digital control
	Sampled-data systems, difference equations
	Tustin approximation, digital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course
Literature	Werner, H., Lecture Notes "Introduction to Control Systems"
	G.F. Franklin, J.D. Powell and A. Emami-Naeini "Feedback Control of Dynamic Systems", Addison Wesley, Reading, MA, 2009

e mathematics	s at high-school	level				
king part succ	essfully, studen	ts have reached	the following learning result	S		
ts apply the pr	rinciples, constru	ucts, and simple	e design techniques of function	nal programm	ing. They dem	onstrate their ability
to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.						
Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.						
			peers. They explain problems	s and solution	s to their pee	r. They defend their
In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Courses				
Title		Тур	Hrs/wk	СР
Operating Systems (L1153)		Lecture	2	3
Operating Systems (L1154)		Recitation Section (small)	2	3
Module Responsible				
Admission Requirements	None			
Recommended Previous	Object-oriented programming, algorithms, and da	ta structures		
Knowledge	Procedural programming			
	Experience in using tools related to operating syst	ems such as editors, linkers, compi	ers	
	Experience in using C-libraries			
	After taking part successfully, students have reached the	e following learning results		
Professional Competence				
Knowledge	Students explain the main abstractions process, virtual	•		
	process states and their transitions, and paraphrase	·		
	existing operating systems and explain their architecture conditional variables and semaphores. Students can des			-
	different scheduling algorithms.	cribe the variants of realizing a me	system. Students e	explain at least tillee
	different scriedding digoritims.			
Skills	Students are able to use the POSIX libraries for concurre	ent programming in a correct and e	ficient way. They a	re able to judge the
	efficiency of a scheduling algorithm for a given scheduling	ng task in a given environment.		
Personal Competence				
Social Competence				
Autonomy

Recommended Previous	a Dysochical macayananing ayyayiana			
Knowledge	Practical programming experience Automata theory and formal languages			
	Automata theory and formal languages Functional programming or procedural programm	ing		
		-		
	1	ta structures		
	Basic knowledge of software engineering			
Educational Objectives	After taking part successfully, students have reached the	e following learning results		
Professional Competence				
Knowledge	Students explain the workings of a compiler and break	down a compilation task in differen	t phases. They a	pply and modify the
	major algorithms for compiler construction and code imp	provement. They can re-write those a	lgorithms in a pro	gramming language,
	run and test them. They choose appropriate internal I	anguages and representations and j	ustify their choic	e. They explain and
	modify implementations of existing compiler frameworks	and experiment with frameworks ar	id tools.	
Civilia	Charles to decise and involved to the control of th	alanca Theoretical and the investor and a fee		f
SKIIIS	Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They			
	organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.			
	that analyze or synthesize software.			
Personal Competence				
Social Competence	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend			
	their software in class. They communicate in English.			
Autonomy	Students develop their software independently and define	ne milestones by themselves. Thou re	ceive feedback t	hroughout the entire
Autonomy	project. They organize the software project so that they	· ·		in oughout the entire
	project. They organize the software project so that they	can assess their progress themselves	•

Module M1235: Electi	rical Power Systems I: Introduction	to Electrical Power Systems	;		
Courses					
Title		Тур	Hrs/wk	СР	
Electrical Power Systems I: Introduc	ction to Electrical Power Systems (L1670)	Lecture	3	4	
Electrical Power Systems I: Introdu	ction to Electrical Power Systems (L1671)	Recitation Section (small)	2	2	
Module Responsible	Prof. Christian Becker				
Admission Requirements	None				
Recommended Previous	Fundamentals of Electrical Engineering				
Knowledge					
Educational Objectives	After taking part successfully, students have reach	ed the following learning results			
Professional Competence					
Knowledge	Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.				
Skills	With completion of this module the students are able to apply the acquired skills in applications of the design, integratio development of electric power systems and to assess the results.				
Personal Competence					
Social Competence	The students can participate in specialized and inte front of others.	erdisciplinary discussions, advance ideas a	nd represent the	ir own work results in	
Autonomy	Students can independently tap knowledge of the ϵ	emphasis of the lectures.

Courses				
Title	Typ Hrs/wk CP			
Circuit Theory (L0566)	Lecture 3 4			
Circuit Theory (L0567)	Recitation Section (small) 2 2			
Module Responsible	Prof. Alexander Kölpin			
Admission Requirements	None None			
Recommended Previous	s Electrical Engineering I and II, Mathematics I and II			
Knowledge	2			
Educational Objectives	s After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of line networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in freque domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.			
Skills	The students are able to calculate currents and voltages in linear networks by means of basic methods, also when dri periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to exp respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-te circuits.	lain th		
Personal Competence Social Competence	e Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results wit group.	hin th		
Autonomy	y The students are able to find out the required methods for solving the given practice problems. Possibilities are given to te knowledge during the lectures continuously by means of short-time tests. This allows them to control independentl educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics	ly the

Courses	
Title Lab Cyber-Physical Systems (L1740)	Typ Hrs/wk CP Project-/problem-based Learning 4 6
Module Responsible	
-	None
	Module "Embedded Systems"
Knowledge	Module Effibedded Systems
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	······································
Knowledge	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, and actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, there is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches. Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. The lab introduces into the area (basic notions, characteristical properties) and their specification techniques (models of computation, hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the lab's experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification tools (MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors and actors.
Skills	After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies between a CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converters, digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate their advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these techniques to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specification tools and in the area of simple control applications.
Personal Competence	
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Course achievement	None
	Written elaboration
	Execution and documentation of all lab experiments

	Basic principles of electrical engineering and adva	anced mathematics		
Knowledge				
Educational Objectives	After taking part successfully, students have reac	hed the following learning results		
Professional Competence				
Knowleage	Students can explain the fundamental formulas, They can explicate the principal behavior of ele sources. They can describe the properties of co fields. The students are aware of applications for these.	ectrostatic, magnetostatic, and current den mplex electromagnetic fields by means of	sity fields with superposition of	regard to respectiv solutions for simpl
Skills	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.			
Personal Competence Social Competence	Students are able to work together on subject rel during exercise sessions).	ated tasks in small groups. They are able to	present their re	sults effectively (e.ç
Autonomy	Students are capable to gather necessary information able to continually reflect their knowledge by meal lectures and exercises that are related to the exallearning process. They are able to draw connect lectures (e.g. Electrical Engineering I, Linear Algel	ans of activities that accompany the lecture, m. Based on respective feedback, students a cions between their knowledge obtained in	such as short or are expected to a	al quizzes during the

Content	- Maxwell's Equations in integral and differential notation
	- Boundary conditions
	- Laws of conservation for energy and charge
	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence Knowledge	
Knowieuge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	 On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve
	subject-related problems.
	With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	
	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured use.
	 in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	specified time frame.
	• The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific
	problem.
	The students can apply the essential techniques of scientific work to research of their own.
