Table of Contents	2
Program description	3
Core Qualification	4
Module M0561: Discrete Algebraic Structures	4
Module M0850: Mathematics I	5
Module M0575: Procedural Programming	8
Module M0577: Non-technical Courses for Bachelors	10
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	12
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0624: Automata Theory and Formal Languages	16
Module M0829: Foundations of Management	18
Module M0851: Mathematics II	21
Module M1432: Objectoriented Programming	24
Module M0834: Computernetworks and Internet Security	26
Module M0662: Numerical Mathematics I	28
Module M0730: Computer Engineering	30
Module M0853: Mathematics III	32
Module M1423: Algorithms and Data Structures	35
Module M1441: Seminars Computer Science and Mathematics	37
Module M0672: Signals and Systems	39
Module M0803: Embedded Systems	42
Module M0727: Stochastics	44
Module M0675: Introduction to Communications and Random Processes	46
Module M1431: Practical Course IIW	48
Module M0833: Introduction to Control Systems	49
Specialization I. Computer Science	52
Module M0731: Functional Programming	52
Module M0972: Distributed Systems	55
Module M0791: Computer Architecture	56
Module M0562: Computability and Complexity Theory	58
Module M0971: Operating Systems	59
Module M0754: Compiler Construction	60
Module M0732: Software Engineering	62
Module M1300: Software Development	64
Specialization II. Mathematics & Engineering Science	66
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	66
Module M0760: Electronic Devices	69
Module M0708: Electrical Engineering III: Circuit Theory and Transients	71
Module M0941: Combinatorial Structures and Algorithms	73
Module M0569: Engineering Mechanics I	75
Module M0634: Introduction into Medical Technology and Systems	76
Module M0715: Solvers for Sparse Linear Systems	78
Module M0777: Semiconductor Circuit Design	80
Module M1269: Lab Cyber-Physical Systems	82
Module M0854: Mathematics IV	83
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	86
Specialization III. Subject Specific Focus	88
Module M1433: Technical Complementary Course for Computational Science and Engineering Bachelor	88
Thesis	89
Module M-001: Bachelor Thesis	89

Core Qualification

Module M0561: Discre	ete Algebraic Structures			
Courses				
Title		Тур	Hrs/wk	СР
Discrete Algebraic Structures (L016		Lecture	2	3
Discrete Algebraic Structures (L016	5)	Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous	Mathematics from High School.			
Knowledge				
Educational Objectives	After taking part successfully, students have reache	d the following learning results		
Professional Competence				
Knowledge	The students know the important basics of discrete	algebraic structures including elementa	ry combinatorial	structures, monoids,
	groups, rings, fields, finite fields, and vector spaces.	They also know specific structures like s	ub sum-, and qu	otient structures and
	homomorphisms.			
Skills	Students are able to formalize and analyze basic dis	crete algebraic structures		
5Kino				
Personal Competence				
Social Competence	Students are able to solve specific problems alone of	r in a group and to present the results ac	cordingly.	
Διιτοποπιγ	Students are able to acquire new knowledge from	specific standard books and to associ	ate the acquired	knowledge to other
Autonomy	classes.	specific standard books and to associ		knowledge to other

Recommended Previous Knowledge	School mathematics			
•				
Educational Objectives	After taking part successfully, students have reached the	e following learning results		
Professional Competence				
Knowledge				
	 Students can name the basic concepts in analy 	sis and linear algebra. They are abl	e to explain the	em using appropriate
	examples.			
	 Students can discuss logical connections between 	n these concepts. They are capable	of illustrating th	ese connections with
	the help of examples.			
	 They know proof strategies and can reproduce the 	em.		
Skills				
581115	 Students can model problems in analysis and line 	ear algebra with the help of the conce	epts studied in th	nis course. Moreover,
	they are capable of solving them by applying esta			
	 Students are able to discover and verify further lo 		nts studied in the	COURSE
	• For a given problem, the students can develop	and execute a suitable approach, a	nu are able to c	filically evaluate the
	results.			
Personal Competence				
Social Competence				
Social competence	 Students are able to work together in teams. The 	are capable to use mathematics as a	a common langu	age.
	 In doing so, they can communicate new concepts 	according to the needs of their coop	erating partners	. Moreover, they can
	design examples to check and deepen the unders		51	
	g			
Autonomy	 Students are capable of checking their understar 	ding of complex concepts on their o	wn They can sn	ecify open questions
			wii. They can sp	eeiry open questions
	precisely and know where to get help in solving the			
	 Students have developed sufficient persistence 	to be able to work for longer period	s in a goal-orien	ted manner on hard
	problems.			
	Independent Study Time 128, Study Time in Lecture 112

Courses			
Title	Тур	Hrs/wk	СР
Procedural Programming (L0197)	Lecture	1	2
Procedural Programming (L0201)	Recitation Section (large)	1	1
Procedural Programming (L0202)	Practical Course	2	3
Module Responsible	Prof. Siegfried Rump		
Admission Requirements	None		
Recommended Previous	Elementary PC handling skills		
Knowledge			
	Elementary mathematical skills		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
	The students acquire the following knowledge:		
Knowledge	 They know basic elements of the programming language C. T and know how to use them. 	hey know the	basic data type
	 They have an understanding of elementary compiler tas programming environment and know how those interact. 	ks, of the pr	eprocessor an
	 They know how to bind programs and how to include externa packages. 	l libraries to e	nhance softwar
	 They know how to use header files and how to declare funct programming projects. 	ion interfaces	to create large
	 The acquire some knowledge how the program interacts wire allows them to develop programs interacting with the program 		
	 They learnt several possibilities how to model and implement algorithms. 	frequently oc	curring standa
Skills			
	 The students are able to model and implement algorithms for a number of standar functionalities. Moreover, they are able to adapt a given API. 		
Personal Competence Social Competence	The students acquire the following skills:		
	tasks, to iden	tify and analyz	
	• They are able to explain simple phenomena to each other directly at the PC.		
	They are able to plan and to work out a project in small teams		
	 They communicate final results and present programs to their tutor. 		
Autonomy			
Autonomy	 The students take individual examinations as well as a final written examn to prove their programming skills and ability to solve new tasks. 		
	 The students have many possibilities to check their abilitie programming exercises. 	s when solvin	g several give
	 In order to solve the given tasks efficiently, the students ha within their group, where every student solves his or her part in 	•	se appropriate

Course L0332: Automata The	ory and Formal Languages
Тур	Lecture
Hrs/wk	2
СР	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
	Prof. Tobias Knopp
Language	
Cycle	
Content	3036
content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and
	back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	 Mealy- and Moore automata: Automata with output (w/o accepting states), infinite state sequences, automata networks
	 Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
	23. Enalucterization of regular languages by monaule second-order logic (H50)
Literature	
	1. Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.
	2. Logik für Informatiker Martin Kreuzer, Stefan Kühling, Pearson Studium, 2006
	3. Grundkurs Theoretische Informatik, Gottfried Vossen, Kurt-Ulrich Witt, Vieweg-Verlag, 2010.
	4. Principles of Model Checking, Christel Baier, Joost-Pieter Katoen, The MIT Press, 2007

ītle	Typ Hrs/wk CP
Ianagement Tutorial (L0882)	Recitation Section (large) 2 3
ntroduction to Management (L088)	
Module Responsible	
•	
	s Basic Knowledge of Mathematics and Business
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	After taking this module, students know the important basics of many different areas in Business and Management, from PI and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to
	 explain the differences between Economics and Management and the sub-disciplines in Management and to important definitions from the field of Management explain the most important aspects of and goals in Management and name the most important aspects of entrepr projects describe and explain basic business functions as production, procurement and sourcing, supply chain manage organization and human ressource management, information management, innovation management and marketing explain the relevance of planning and decision making in Business, esp. in situations under multiple objective uncertainty, and explain some basic methods from mathematical Finance
	 state basics from accounting and costing and selected controlling methods.
Skills	S Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to out an Entrepreneurship project in a team. In particular, they are able to
	analyse Management goals and structure them appropriately
	analyse organisational and staff structures of companies
	apply methods for decision making under multiple objectives, under uncertainty and under risk
	analyse production and procurement systems and Business information systems
	analyse and apply basic methods of marketing
	 select and apply basic methods from mathematical finance to predefined problems
	 apply basic methods from accounting, costing and controlling to predefined problems
Personal Competence	
	Students are able to
	work successfully in a team of students
	to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project
	 to communicate appropriately and
	 to cooperate respectfully with their fellow students.
Autonomy	Students are able to
,	
	 work in a team and to organize the team themselves
	 to write a report on their project.

Course L08	82: Management Tutorial
Тур	Recitation Section (large)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busine knowledge from the lecture should come to practical use. The group projects are guided by a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Module Responsible	Prof. Tobias Knopp			
Admission Requirements	None			
Recommended Previous	Lecture on procedural programming or equi	valent programming skills		
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning resul	ts	
Professional Competence				
Knowledge	The students have a fundamental understanding of object orientated and generic programming and can apply it in smaprogramming projects. The can design own class hierarchies and differentiate between different ways of inheritance. They have fundamental understanding of polymorphism and can differentiate between run-time and compile-time polymorphism. The students know the concept of information hiding and can design interfaces with public and private methods. They can us exceptions and apply generic programming in order to make existing data structures generic. The students know the pros arcons of both programming paradigms.			
Skills	5 Students can break down a medium-sized problem into subproblems and create their own classes in an object-oriente programming language based on these subproblems. They can design a public and private interface and implement th implementation generically and extensible by abstraction. They can distinguish different language constructs of a mode programming language and use these suitably in the implementation. They can design and implement unit tests.			
Personal Competence				
Social Competence	Students can work in teams and communicate in forums.			
Autonomy	In a programming internship, students lear	n object oriented programming unde	r suponvision. In ovorsis	os thoy doyalan individ
Autonomy	and independent solutions and receive feed		supervision. In exercise	es they develop individ
		buck.

Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given. This class comprises: Application layer protocols (HTTP, FTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol, routing in the Internet) Data link layer with media access at the example of Ethernet Multimedia applications in the Internet Network management

	 name numerical methods for interpolation, integra problems and to explain their core ideas, repeat convergence statements for the numerical i explain aspects for the practical execution of numerical explain aspects for the practical execution of numerical execution execution of numerical execution exe	nethods,		
Skills	Students are able to			
Skillo				
	 implement, apply and compare numerical methods justify the convergence behaviour of numerical methods select and execute a suitable solution approach for 	thods with respect to the problem a	nd solution algori	thm,
Personal Competence				
Social Competence	Students are able to			
	 work together in heterogeneously composed team explain theoretical foundations and support each o 			
				-
Autonomy	Students are capable			
	 to assess whether the supporting theoretical and p 	ractical excercises are better solved	individually or in	a team,
	 to assess their individual progess and, if necessary 		2

Module Responsible	Prof. Heiko Falk			
Admission Requirements				
Recommended Previous	Basic knowledge in electrical engineering			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence Knowledge	This module deals with the foundations of the funct	tionality of computing systems. It cover	s the layors from	a the accomply is
Knowledge	programming down to gates. The module includes the		s the layers non	T the assembly-le
		5		
	Introduction			
	 Combinational logic: Gates, Boolean algebra, B Sequential logic: Flip-flops, automata, systema 		ombinational net	WORKS
	Technological foundations			
	 Computer arithmetic: Integer addition, subtract 	tion, multiplication and division		
	Basics of computer architecture: Programming		pipelining	
	Memories: Memory hierarchies, SRAM, DRAM, or a second	caches		
	• Input/output: I/O from the perspective of the C	PU, principles of passing data, point-to-p	oint connections,	busses
Skille	The students perceive computer systems from the ar	chitact's parapastiva i.a. they identify t	ha internal struct	ture and the phys
SKIIIS	composition of computer systems. The students can			
	collection of few and simple components. They are a			
	today's computing systems - from gates and circuits			
	After successful completion of the module, the stud			
	system and the software executed on it. In particular			
	on the hardware-centric abstraction layers from the a the impact that these low abstraction levels have on			
	the impact that these low abstraction levels have on	an entire system's performance and to p		ptions.
Personal Competence				
Social Competence	Students are able to solve similar problems alone or i	in a group and to present the results acc	ordingly.	
Autonomv	Students are able to acquire new knowledge from spe	ecific literature and to associate this kno	wledge with othe	r classes.
, laconomy			meage mar oare	, eldssesi

Ĵ	
Courses	
Title	Typ Hrs/wk CP
Signals and Systems (L0432)	Lecture 3 4
Signals and Systems (L0433)	Recitation Section (small) 2 2
Module Responsible	Prof. Gerhard Bauch
Admission Requirements	None
Recommended Previous	
Knowledge	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathem
	1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is use
	but not required.
Educational Objections	After helden menter von erfelle, etwalende herre menske ditte following berming generalte
Educational Objectives	
Professional Competence	
Knowleage	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and systemetry theory. They are able to apply the fundamental transformations of continuous time and discrete time signals and systeme.
	theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. The can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, the
	understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to
	discrete-time signal.
Skills	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal a
	system theory. They can analyse and design basic systems regarding important properties such as magnitude and pha
	response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency dom
Personal Competence	
Social Competence	The students can jointly solve specific problems.
Autonomy	The students are able to acquire relevant information from appropriate literature sources. They can control their level
	knowledge during the lecture period by solving tutorial problems, software tools, clicker system.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6

Course L0432: Signals and Systems			
Тур	Lecture		
Hrs/wk	3		
СР	4		
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42		
Lecturer	Prof. Gerhard Bauch		
Language	DE/EN		
Cycle	SoSe		
Content	Introduction to signal and system theory		
	• Signals		
	Classification of signals		
	 Continuous-time and discrete-time signals 		
	 Analog and digital signals 		

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- Correlation functions of deterministic signals
 - Autocorrelation function
 - Crosscorrelation function
 - Orthogonal signals
 - Applications of correlation
- Linear time-invariant (LTI) systems
 - LinearityTime-invariance
 - Description of LTI systems by impulse response and frequency response
 - Convolution
 - Convolution and correlation
 - Properties of LTI-systems
 - Causal systems
 - Stable systems
 - Memoryless systems
- Fourier Series and Fourier Transform
 - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
- Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters

	 Minimum-phase, maximum-phase and mixed-phase filters Linear phase filters

	Another part covers the hardware of embedded	systems: Sonsors, A/D and D/A converte	rs, real-time cap	able communica
	hardware, embedded processors, memories, ene	rgy dissipation, reconfigurable logic and a	ctuators. The cou	rse also features
	introduction into real-time operating systems, m	iddleware and real-time scheduling. Final	ly, the implemen	tation of embed
	systems using hardware/software co-design (hard		sformations of sp	ecifications, ene
	efficient realizations, compilers for embedded pro-	cessors) is covered.		
Skills	After having attended the course, students shall	be able to realize simple embedded syste	ms The student	s shall realize w
U.M.S	relevant parts of technological competences to us			
	able to compare different models of computations			
	which areas of embedded system design specific r			
Personal Competence				
	Students are able to solve similar problems alone	or in a group and to present the results acc	ordingly.	
Autonomy	Students are able to acquire new knowledge from	specific literature and to associate this kno	wledge with othe	r classes.

Stochastics (L0778)		Recitation Section (small)	2	2
Module Responsible	Prof Marko Lindner		_	
Admission Requirements				
Recommended Previous	None			
Knowledge	Calculus			
Kilomeuge	 Discrete algebraic structures (combinatorics) 			
	Propositional logic			
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Students can explain the main definitions of probabilit	y, and they can give basic definit	ions of modelin	ig elements (random
	variables, events, dependence, independence assump	tions) used in discrete and conti	nuous settings	(joint and marginal
	distributions, density functions). Students can describ	e characteristic notions such as e	expected values	, variance, standard
	deviation, and moments. Students can define decision pr	oblems and explain algorithms for s	solving these pro	oblems (based on the
	chain rule or Bayesian networks). Algorithms, or estimate	ors as they are caller, can be analyzed	ed in terms of n	otions such as bias of
	an estimator, etc. Student can describe the main ideas	of stochastic processes and explain	n algorithms for	solving decision and
	computation problem for stochastic processes. Students of	an also explain basic statistical dete	ection and estim	ation techniques.
Skills	Students can apply algorithms for solving decision prob	lems, and they can justify whether	approximation	techniques are good
	enough in various application contexts, i.e., students can	derive estimators and judge whethe	r they are applic	able or reliable.
Personal Competence				
-	- Students are able to work together (e.g. on their reg	ular home work) in heterogeneously	v composed tea	ms (i.e., teams from
,	different study programs and background knowledge) an			
Autonomy		g of complex concepts on their ow	n. They can sp	ecify open questions
	precisely and know where to get help in solving them.			
	- Students can put their knowledge in relation to the cont	ents of other lectures.		
	- Students have developed sufficient persistence to be ab	le to work for longer periods in a goa	al-oriented mann	ner on hard problems.

	 Signals and Systems 			
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	The students know and understand the fun	damental building blocks of a communications s	system. They can	describe and analys
	the individual building blocks using knowled	dge of signal and system theory as well as the t	heory of stochast	ic processes. The ar
	aware of the essential resources and evalu	ation criteria of information transmission and a	re able to design	and evaluate a basi
	communications system.			
Skills	The students are able to design and eval	luate a basic communications system. In parti	cular, they can e	stimate the require
	resources in terms of bandwidth and powe	r. They are able to assess essential evaluation p	parameters of a b	asic communication
	system such as bandwidth efficiency or bit e	error rate and to decide for a suitable transmission	on method.	
Personal Competence				
Social Competence	The students can jointly solve specific prob	lems.		
Autonomy	The students are able to acquire relevan	nt information from appropriate literature sou	rces. They can c	ontrol their level o
	knowledge during the lecture period by solv	ving tutorial problems, software tools, clicker syst	tem.

Courses	
Title Practical Course IIW (L2160)	Typ Hrs/wk CP Project-/problem-based Learning 8 6
Module Responsible	Prof. Görschwin Fey
Admission Requirements	
	Successful participation in the modules:
Knowledge	
2	Procedural Programming
	Algorithms and Data Structures
	Embedded Systems
	Computer Engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Students get to know tools used by development teams to
	plan development flows,
	manage task distribution,
	manage source code, and
	• test software.
Skills	Students work in teams on a larger project. The required competences are learned and practically applied. These are for example
	specifying software based on user requirements
	creating a software architecture
	 implementing and testing software in a team, and
	using the related development tools.
Personal Competence	
Social Competence	Team work has its own challenges with respect to interaction of team members as well as finding the necessary agreement during
	joint software development. During the project students learn the required competences and experience the practical needs.
Autonomy	During team work it is mandatory to take and explain a certain position, to independently complete assigned tasks, and to preser
	results to the team. Open issues must be identified and returned into the team to find an agreed resolution.

Content	A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project. The project is split into regular plenary sessions and into independent team work.
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

Courses				
Courses				
Title Introduction to Control Systems (L0	654) Typ Lecture	Hrs/wk	CP 4	
Introduction to Control Systems (L			2	
Module Responsible	Prof. Herbert Werner			
Admission Requirements	None			
Recommended Previous	Representation of signals and systems in time and frequency domain, Laplace transform	ı		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	 Students can represent dynamic system behavior in time and frequency domain, 	and can in particula	ar explain properties	
	first and second order systems	and can in particule	in explain properties	
	They can explain the dynamics of simple control loops and interpret dynamic pro	perties in terms of fr	equency response ar	
	root locus			
	They can explain the Nyquist stability criterion and the stability margins derived f	rom it.		
	They can explain the role of the phase margin in analysis and synthesis of control			
	They can explain the way a PID controller affects a control loop in terms of its free			
	They can explain issues arising when controllers designed in continuous time dom	nain are implemente	d digitally	
Skills	• Students can transform models of linear dynamic systems from time to frequency	domain and vice ve	FC 2	
	 Students can transform models of linear dynamic systems from time to frequency They can simulate and assess the behavior of systems and control loops 	domain and vice ve	150	
	 They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning 	rules		
	They can analyze and synthesize simple control loops with the help of root locus a		nse techniques	
	• They can calculate discrete-time approximations of controllers designed in	continuous-time a	nd use it for digit	
	implementation			
	They can use standard software tools (Matlab Control Toolbox, Simulink) for carry	ing out these tasks		
Personal Competence				
Social Competence	Students can work in small groups to jointly solve technical problems, and experimental	ly validate their cont	roller designs	
Autonomy	Students can obtain information from provided sources (lecture notes, software docu	Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs

Course L0654: Introduction to Control Systems				
Тур	Lecture			
Hrs/wk	2			
CP	4			
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28			
Lecturer	Prof. Herbert Werner			
Language	DE			
Cycle	WiSe			
Content	Signals and systems			
	 Linear systems, differential equations and transfer functions First and second order systems, poles and zeros, impulse and step response Stability Feedback systems Bringiple of feedback, epon loop vorsus closed loop control 			
	 Principle of feedback, open-loop versus closed-loop control Reference tracking and disturbance rejection Types of feedback, PID control System type and steady-state error, error constants Internal model principle 			
	Root locus techniques			
	 Root locus plots Root locus design of PID controllers			
	Frequency response techniques			
	 Bode diagram Minimum and non-minimum phase systems Nyquist plot, Nyquist stability criterion, phase and gain margin Loop shaping, lead lag compensation Frequency response interpretation of PID control 			
	Time delay systems			
	Root locus and frequency response of time delay systemsSmith predictor			
	Digital control			
	 Sampled-data systems, difference equations Tustin approximation, digital implementation of PID controllers 			
	Software tools			
	 Introduction to Matlab, Simulink, Control toolbox Computer-based exercises throughout the course 			
Literature	 Werner, H., Lecture Notes "Introduction to Control Systems" G.F. Franklin, J.D. Powell and A. Emami-Naeini "Feedback Control of Dynamic Systems", Addison Wesley, Reading, MA, 2009 K. Specialization I. Computer Science

Module M0731: Funct	ional Program	ning				
Courses						
Title				Тур	Hrs/wk	СР
Functional Programming (L0624)				Lecture	2	2
Functional Programming (L0625)				Recitation Section (large)	2	2
Functional Programming (L0626)				Recitation Section (small)	2	2
Module Responsible	Prof. Sibylle Schupp					
Admission Requirements	None					
Recommended Previous	Discrete mathematics	at high-school l	evel			
Knowledge						
Educational Objectives	After taking part succ	essfully, student	s have reached the follow	ng learning results		
Professional Competence						
Knowledge	Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.					
Skills	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.					
Personal Competence						
Social Competence	Students practice per programs orally. They			explain problems and solut	ions to their pee	er. They defend their
Autonomy	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Module M0972: Distri	buted Systems			
Courses				
Title		Тур	Hrs/wk	СР
Distributed Systems (L1155)		Lecture	2	3
Distributed Systems (L1156)		Recitation Section (small)	2	3
Module Responsible				
	None			
Recommended Previous	 Procedural programming 			
Knowledge	Object-oriented programming with Java			
	Networks			
	 Socket programming 			
Educational Objectives	After taking part successfully, students have r	eached the following learning results		
Professional Competence		5 5		
Knowledge	Students explain the main abstractions of Distributed Systems (Marshalling, proxy, service, address, Remote procedure cal synchron/asynchron system). They describe the pros and cons of different types of interprocess communication. They give examples of existing middleware solutions. The participants of the course know the main architectural variants of distribute systems, including their pros and cons. Students can describe at least three different synchronization mechanisms.			
Skills	Students can realize distributed systems using at least three different techniques:			
	 Proprietary protocol realized with TCP 			
	HTTP as a remote procedure call			
	RMI as a middleware			
Personal Competence				
Social Competence

Module Responsible	Prof. Heiko Falk					
Admission Requirements	None					
Recommended Previous	Module "Computer Engineerin	'g"				
Knowledge						
Educational Objectives	After taking part successfully,	students have re	eached the followi	ng learning results		
Professional Competence						
Knowledge	This module presents advance	ed concepts fror	n the discipline of	f computer architecture. In the	beginning, a l	proad overview ove
	various programming model	s is given, both	for general-purp	oose computers and for specia	al-purpose ma	chines (e.g., signa
	processors). Next, foundation	al aspects of the	micro-architecture	e of processors are covered. Her	e, the focus pa	articularly lies on the
	so-called pipelining and the r	nethods used for	the acceleration	of instruction execution used in	this context.	The students get to
	know concepts for dynamic	scheduling, bra	nch prediction, s	uperscalar execution of mach	ine instructior	ns and for memory
	hierarchies.					
Skills		-		. They know the different archite		
				ocessor architectures and are at	-	
	analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies,					
	know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.					
Personal Competence						
Social Competence	Students are able to solve sim	ilar problems ald	one or in a group a	nd to present the results accord	ingly.	
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Computability and Complexity The	ory (L0167)	Recitatio	on Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann				
Admission Requirements	None				
Recommended Previous	Discrete Algebraic Structures, Automat	ta Theory, Logic, and Formal Langu	uage Theory.		
Knowledge					
Educational Objectives	After taking part successfully, students	s have reached the following learni	ng results		
Professional Competence					
	The students known the important machine models of computability, the class of partial recursive functions, univers computability, Gödel numbering of computations, the theorems of Kleene, Rice, and Rice-Shapiro, the concept of decidable ar undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post correspondence system. Hilbert's 10-th problem, and the basic concepts of complexity theory.				
Skills	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.				
Personal Competence					
Social Competence	Students are able to solve specific prol	blems alone or in a group and to p	resent the results ac	cordingly.	
Autonomy	Students are able to acquire new know	vledge from newer literature and to	associate the acqu	ired knowledge w	ith other classes.

Operating Systems (L1153)		Lecture	2	3
Operating Systems (L1154)		Recitation Section (small)	2	3
Module Responsible	Prof. Volker Turau			
Admission Requirements	None			
Recommended Previous Knowledge	 Object-oriented programming, algorithms, and c Procedural programming Experience in using tools related to operating sy Experience in using C-libraries 		rs	
Educational Objectives	After taking part successfully, students have reached t	he following learning results		
Professional Competence				
	Students explain the main abstractions process, virtual memory, deadlock, lifelock, and file of operations systems, describe the process states and their transitions, and paraphrase the architectural variants of operating systems. They give examples of existing operating systems and explain their architectures. The participants of the course write concurrent programs using threads, conditional variables and semaphores. Students can describe the variants of realizing a file system. Students explain at least three different scheduling algorithms. Students are able to use the POSIX libraries for concurrent programming in a correct and efficient way. They are able to judge the efficiency of a scheduling algorithm for a given scheduling task in a given environment.

Courses				
Fitle		Тур	Hrs/wk	СР
Compiler Construction (L0703)		Lecture	2	2
Compiler Construction (L0704)		Recitation Section (small)	2	4
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous				
Knowledge	 Practical programming experience 			
2	 Automata theory and formal languages 			
	 Functional programming or procedural program 	ming		
	 Object-oriented programming, algorithms, and 	data structures		
	Basic knowledge of software engineering			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students explain the workings of a compiler and bre	ak down a compilation task in different	phases. They a	pply and modify th
2	major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language			
	run and test them. They choose appropriate interna	I languages and representations and ju	ustify their choic	e. They explain ar
	modify implementations of existing compiler frameworks and experiment with frameworks and tools.			
Skills	Students design and implement arbitrary compilation	n phases. They integrate their code in	existing compile	er frameworks. The
	organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms			
	that analyze or synthesize software.			
Personal Competence				
Social Competence	Students develop the software in a team. They expla	in problems and solutions to their team	members. They	present and defer
	their software in class. They communicate in English.			
Autonomi	Chudonka douglan their cofficients independently and da	fine milestence by the meeting. They re		han and and the enti
Autonomy				nroughout the enti
	project. They organize the software project so that the	ey can assess their progress themselves

Courses				
litle		Тур	Hrs/wk	СР
Circuit Theory (L0566)		Lecture	3	4
Circuit Theory (L0567)		Recitation Section (small)	2	2
Module Responsible	Prof. Alexander Kölpin			
Admission Requirements	None			
Recommended Previous	Electrical Engineering I and II, Mathematics I and II			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students are able to explain the basic methods for c	alculating electrical circuits. They know	the Fourier ser	ies analysis of line
	networks driven by periodic signals. They know the	methods for transient analysis of linea	r networks in tir	ne and in frequen
	domain, and they are able to explain the frequency be	ehaviour and the synthesis of passive tw	o-terminal-circui	ts.
Skills	The students are able to calculate currents and vol	tages in linear networks by means of	basic methods, a	also when driven
	periodic signals. They are able to calculate transients	in electrical circuits in time and frequen	cy domain and a	re able to explain
	respective transient behaviour. They are able to an	alyse and to synthesize the frequency	behaviour of p	assive two-termin
	circuits.			
Personal Competence				
Social Competence	Students work on exercise tasks in small guided gro	oups. They are encouraged to present	and discuss the	ir results within t
	group.			
Autonomy	The students are able to find out the required method	ds for solving the given practice problen	ns. Possibilities a	re given to test th
	knowledge during the lectures continuously by means of short-time tests. This allows them to control independently the			
	educational objectives. They can link their gained know	wledge to other courses like Electrical E	ngineering I and	Mathematics I.

Module M1269: Lab C	Cyber-Physical Systems
Courses	
Title	Typ Hrs/wk CP
Lab Cyber-Physical Systems (L1740	0) Project-/problem-based Learning 4 6
Module Responsible	Prof. Heiko Falk
Admission Requirements	None
Recommended Previous	Module "Embedded Systems"
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sensors, A/D and D/A converters, a actors. Due to their particular application areas, highly specialized sensors, processors and actors are common. Accordingly, the is a large variety of different specification approaches for CPS - in contrast to classical software engineering approaches. Based on practical experiments using robot kits and computers, the basics of specification and modelling of CPS are taught. T lab introduces into the area (basic notions, characteristical properties) and their specification techniques (models of computation hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequently perform control tasks, the la experiments will base on simple control applications. The experiments will use state-of-the-art industrial specification to (MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with the environment via sensors are actors. After successful attendance of the lab, students are able to develop simple CPS. They understand the interdependencies betweet CPS and its surrounding processes which stem from the fact that a CPS interacts with the environment via sensors, A/D converter digital processors, D/A converters and actors. The lab enables students to compare modelling approaches, to evaluate the advantages and limitations, and to decide which technique to use for a concrete task. They will be able to apply these technique to use for a concrete task.
Personal Competence	to practical problems. They obtain first experiences in hardware-related software development, in industry-relevant specifical tools and in the area of simple control applications.
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Course L1043: Differential E	quations 2 (Partial Differential Equations)
Тур	Lecture
Hrs/wk	2
СР	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	Main features of the theory and numerical treatment of partial differential equations
literature	 Examples of partial differential equations First order quasilinear differential equations Normal forms of second order differential equations Harmonic functions and maximum principle Maximum principle for the heat equation Wave equation Liouville's formula Special functions Difference methods Finite elements
Literature	 http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html

Course L1044: Differential Equations 2 (Partial Differential Equations)	
Тур	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH

Theoretical Electrical Engineering I	: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I	: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	None			
Recommended Previous	Basic principles of electrical engineering and advance	d mathematics		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students can explain the fundamental formulas, relation			
	They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective			
	sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simp			
	fields. The students are aware of applications for the these.	theory of time-independent electroma	gnetic fields and a	are able to explica
	uiese.			
Skille	Students can apply Maxwell's Equations in inte	aral notation in order to solve his	ably symmetrical	time_independe
JKIIIS				
	electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell' Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields ar			
	analyze these quantitatively. They can deduce mean			
	electrical flow fields (capacitances, inductances, resis			
Demonstration of the second seco				
Personal Competence	Students are able to work together on subject related	tasks in small groups. They are able t	o procont their rea	sults offectively (e
Social Competence	during exercise sessions).		o present their res	suits effectively (e
	during exercise sessions).			
Autonomy	Students are capable to gather necessary informatior	from provided references and relate th	nis information to t	the lecture. They a
,	able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the			
	lectures and exercises that are related to the exam. E	ased on respective feedback, students	are expected to a	djust their individ
	learning process. They are able to draw connections	between their knowledge obtained in	this lecture and	the content of oth
	lectures (e.g. Electrical Engineering I, Linear Algebra,	and Analysis).		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and	1 90-150 minutes

	Computational Science and Engineering: Specialisation	n II. Mathematics & Engineering Scienc	e: Elective Compu	lsory

Course L0180: Theoretical El	ectrical Engineering I: Time-Independent Fields	
Тур	Lecture	
Hrs/wk	3	
CP	5	
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42	
Lecturer	Prof. Christian Schuster	
Language	DE	
Cycle		
Content	- Maxwell's Equations in integral and differential notation	
	- Boundary conditions	
	- Laws of conservation for energy and charge	
	- Classification of electromagnetic field properties	
	- Integral characteristics of time-independent fields (R, L, C)	
	- Generic approaches to solving Poisson's Equation	
	- Electrostatic fields and specific methods of solving	
	- Magnetostatic fields and specific methods of solving	
	- Fields of electrical current density and specific methods of solving	
	- Action of force within time-independent fields	
	- Numerical methods for solving time-independent problems	
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

	Thesis	
Module M-001: Bache	lor Thesis	
Courses		
Title	Typ Hrs/wk CP	
Module Responsible	Professoren der TUHH	
Admission Requirements		
	According to General Regulations §21 (1):	
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.	
Recommended Previous Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge Skills Personal Competence	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their cour of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to sol subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 	
Social Competence Autonomy	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understar in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropria addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 	
	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scien problem. The students can apply the essential techniques of scientific work to research of their own. 	
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0	
Credit points	12
