Table of Contents	2
Program description	3
Core Qualification	5
Module M0561: Discrete Algebraic Structures	5
Module M0850: Mathematics I	6
Module M1436: Procedural Programming for Computer Engineers	8
Module M0577: Non-technical Courses for Bachelors	10
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	12
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0624: Automata Theory and Formal Languages	16
Module M0829: Foundations of Management	18
Module M0851: Mathematics II	20
Module M1432: Programming Paradigms	22
Module M0834: Computernetworks and Internet Security	24
Module M0662: Numerical Mathematics I	26
Module M0730: Computer Engineering	28
Module M0853: Mathematics III	30
Module M1423: Algorithms and Data Structures	33
Module M1578: Seminars Computer Science	35
Module M0672: Signals and Systems	37
Module M0803: Embedded Systems	40
Module M0727: Stochastics	42
Module M0833: Introduction to Control Systems	44
Module M0675: Introduction to Communications and Random Processes	46
Module M1431: Practical Course IIW	50
Specialization I. Computer Science	51
Module M0731: Functional Programming	51
Module M0791: Computer Architecture	54
Module M0731. Computer Alcinecture Module M0625: Databases	56
Module M0023: Databases Module M2046: Introduction to Quantum Computing	58
Module M2040: Infoduction to Quantum Computing Module M0562: Computability and Complexity Theory	60
Module M1977: Logic in Computer Science	62
Module M1595: Machine Learning I	63
Module M0754: Compiler Construction	65
Module M1300: Software Development	66
Module M0732: Software Engineering	68
Specialization II. Mathematics & Engineering Science	70
Module M0852: Graph Theory and Optimization	70
Module M1962: Basics space electronics and primary mission	72
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	73
Module M0760: Electronic Devices	76
Module M0708: Electrical Engineering III: Circuit Theory and Transients	78
Module M1802: Engineering Mechanics I (Stereostatics)	80
Module M0941: Combinatorial Structures and Algorithms	82
Module M0783: Measurements: Methods and Data Processing	84
Module M1712: Green Technologies II	86
Module M0634: Introduction into Medical Technology and Systems	88
Module M0715: Solvers for Sparse Linear Systems	90
Module M0777: Semiconductor Circuit Design	92
Module M0610: Electrical Machines and Actuators	94
Module M1269: Lab Cyber-Physical Systems	96
Module M0854: Mathematics IV	97
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	100
Specialization III. Subject Specific Focus	102
Module M1433: Technical Complementary Course for Computational Science and Engineering Bachelor	102
Thesis	103
Module M-001: Bachelor Thesis	103

Program description

Content

Complex technical systems dominate application fields such as medical technology, energy technology, or aviation, as well as numerous others. Engineers and computer scientists must work hand-in-hand in system development. This is particularly true at the interfaces between networked computing systems and their physical environment - we speak of cyber-physical systems (CPS). Their proliferation and thus their importance for society as well as their complexity will continue to increase in the future as digitization progresses.

The Computer Science in Engineering program addresses cyber-physical systems with a combined, scientific education in the three pillars of computer science, mathematics, and engineering. In computer science, basic methods of software development, programming, and quality assurance are taught. In engineering, the fundamentals of electrical engineering and especially control as well as communications engineering are central to understand, characterize, and design interfaces to the physical world and digital networks in depth. Freedom in the advanced studies allows connecting points to other engineering disciplines and the latest computer science methods. Furthermore, methodical knowledge is imparted, so graduates can independently familiarize themselves with new technologies. Social skills for working in teams are also taught.

Study plans in (M) medical technology, (I) smart grid for energy systems, (E) embedded systems and (C) fundamentals of computation show possible focuses.

In this way, future-proof knowledge is acquired for almost all application areas.

Career prospects

Successful completion of the bachelor's degree program Computer Science in Engineering makes it possible, on the one hand, to take up a scientific master's degree program in Computer Science, Computer Science in Engineering, or a related subject. On the other hand, an early career entry in branches of trade, industry, and administration is possible. Graduates will primarily work as computer scientists or system developers of cyber-physical systems.

Learning target

The learning objectives listed below enable graduates to transfer their acquired specialist knowledge to new topics. They will be able to grasp and analyze problems in their discipline and solve them efficiently, either independently or in a team. Results can be assessed, evaluated, critically scrutinized and independent decisions can be made. The learning objectives are divided below into knowledge, skills, social competence and independence.

Knowledge

- Engineering Science: Graduates will know basic principles and methods of engineering with a focus in electrical engineering.
- Economics: Graduates know the basics and methods of economics.
 Computer Science: Graduates know basic methods and procedures for model building and problem solving in theoretical, practical and technical computer science.
- Mathematics: Graduates know the basics and methods of linear algebra, differential calculus in one and more variables, discrete mathematics, higher analysis, stochastics and numerics. They can describe these and outline their proofs.
- Bridging the gap between computer science and engineering: Graduates know basic methods and procedures to describe interfaces between
 engineering applications on the one hand and models of computer science on the other. Graduates are familiar with the basic features of
 information and communication technology systems, so-called cyber-physical systems. This includes relevant architectures of control systems,
 information transmission and storage, interaction mechanisms, sensors and actuators, and the extraction and processing of information,
 knowledge and insights from within the system.

Skills

- Engineering: Graduates are able to apply their knowledge of mathematical, scientific and systems engineering principles and methods to specific theoretical and practical problems and develop solutions.
- Computer Science: Graduates are able to develop instances of formal models in computer science using basic modeling approaches and to assess their computability and complexity. They can design software solutions and implement them using suitable programming tools. They can select, program, and integrate suitable hardware for the implementation.
- Mathematics: Graduates are able to solve problems from analysis, linear algebra, discrete mathematics, stochastics and numerics using the methods they have learned.
- Bridging the gap between computer science and engineering: Graduates will be able to identify interfaces between engineering disciplines and computer science, formalize and realize them. Graduates can implement software solutions for engineering applications. Graduates are able to realize simple cyber-physical systems.

Social competence

- Graduates are able to present the procedures and results of their work in written and oral form.
- Graduates are able to communicate with experts and laypersons about the contents and problems of engineering. They can respond appropriately to questions, additions and comments.
- Graduates are able to work in groups. They can define, distribute, document, and integrate subtasks. They are able to make time arrangements and interact socially.

Independence

- Graduates are able to obtain necessary technical information and place it in the context of their knowledge.
- Graduates can realistically assess their existing competencies and work on deficits independently.
- Graduates are able to learn complex topics and work on problems and projects in a self-organized and self-motivated manner (lifelong learning in engineering practice).

Program structure

The curriculum of the Bachelor's degree in Computer Science and Engineering is structured as follows. In addition to the compulsory courses from core qualification, a minimum number of credit points must be taken from each of the areas of computer science, mathematics and engineering:

- 1. Core qualification: 138 credit points
- 2. Computer science: 12 credit
- 3. Mathematics & Engineering: 6 credit points

To deepen their studies, students can choose lectures from the entire catalog of technical events at the TUHH. A total of 12 credit points must be

achieved. The bachelor thesis is also rated with 12 credit points. This results in a total effort of 180 credit points.

The following four course plans describe special features of the IIW Bachelor's degree

E. Embedded systems

- 1. Core subjects in computer science
- Computer architecture
- Operating systems
 Core subjects: mathematics and engineering
 Electronic components
- 3. Additional technical courses
- Semiconductor circuit technology - Compiler construction

I. Smart grids

- 1. Core subjects in computer science
- Operating systems
- Software development
- 2. Core subjects: mathematics and engineering
- Electrical energy systems I
- 3. Additional technical courses
- Theoretical electrical engineering I - Electrical engineering III: network theory and transients

M. Medical systems

- 1. Core subjects in computer science Introduction to information security
- Software engineering
- 2. Core subjects: mathematics and engineering
- Introduction to medical technology systems 3. Additional technical courses
- Cyber-physical systems laboratory
- Computer architecture

C. Computational Foundations

- 1. Core subjects in computer science
- Functional programming
- Predictability and complexity
- 2. Core subjects: mathematics and engineering
- Combinatorial structures and algorithms
 Additional technical courses
- Solvers for sparse linear equation systems
- Mathematics IV

Core Qualification

te Algebraic Structures

 different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of repressint the specialized sciences are subject to individual and socio-cultural interpretation and historicity, 	
Can communicate in a foreign language in a manner appropriate to the subject.	
Skills Professional Competence (Skills)	
In selected sub-areas students can	
 apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned s discipline, to handle simple questions in aforementioned scientific disciplines in a successful manner, justify their decisions on forms of organization and application in practical questions in contexts that go bey technical relationship to the subject. 	
Personal Competence	
Social Competence Personal Competences (Social Skills)	

	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	to communicate a nontechnical item in a competent way in writen form or verbaly
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
	Prof. Matthias Mnich
Language	
Cycle	
Content	
content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be express
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	 Pushdown automata and context-free grammars: Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pump
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars
	back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verifica
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
Literature	
Literature	1. Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.
	2. Logik für Informatiker Martin Kreuzer, Stefan Kühling, Pearson Studium, 2006
	3. Grundkurs Theoretische Informatik, Gottfried Vossen, Kurt-Ulrich Witt, Vieweg-Verlag, 2010.
	4. Principles of Model Checking, Christel Baier, Joost-Pieter Katoen, The MIT Press, 2007

Course L08	382: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business idea from the point of view of an established company or a startup.
	knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

СР	5
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Dr. Koojana Kuladinithi, Prof. Sibylle Fröschle
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionali complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these principles and an introduction to performance modelling are addressed using computing tasks and physical labs.
	In the second part of the lecture an introduction to Internet security is given. This class comprises: Introduction to the Internet (TCP/IP model) Application layer protocols (HTTP, SMTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol IPv4 & IPv6, routing in the Internet) Data link layer with media access at the example of WLAN Introduction to Internet Security Security Aspects of Address Resolution (DNS/DNSSEC, ARP/SEND
	 Security Aspects of Address Resolution (DNS/DISSEC, ARP/SEND Communication Security (IPSec) - From Address Resolution to Routing (Securing BGP) Botnets + Firewalls

Computer Engineering (L0321)		Typ Lecture	BIS/WK	4
Computer Engineering (L0324)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Basic knowledge in electrical engineering			
Knowledge				
	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
-	This module deals with the foundations of the	functionality of computing systems. It cove	ers the lavers fror	n the assembly-lev
	programming down to gates. The module include		, ,	, -
	Introduction			
	Combinational logic: Gates, Boolean algeb		combinational net	works
	Sequential logic: Flip-flops, automata, syst	ematic hardware design		
	Technological foundationsComputer arithmetic: Integer addition, sul	straction multiplication and division		
	Basics of computer architecture: Program		ninelining	
	 Memories: Memory hierarchies, SRAM, DR 		, pipeining	
	 Input/output: I/O from the perspective of t 		point connections	husses
	······································	···· -, F.····b··· -, F.···· -, F.····		
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physica			
	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on			
	collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of			
	today's computing systems - from gates and circ	uits up to complete processors.		
	After successful completion of the module, the	students are able to judge the interdepen	dencies between	a physical comput
	system and the software executed on it. In particular, they shall understand the consequences that the execution of software has			
	on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled t		enabled to evaluate	
	the impact that these low abstraction levels have	e on an entire system's performance and to	propose feasible o	options.
Devecuel Competence				
Personal Competence	Students are able to solve similar problems along	a or in a group and to procent the results as	cordinaly	
Social Competence	Students are able to solve similar problems alone	e of in a group and to present the results ac	cordingly.	
Autonomy	Students are able to acquire new knowledge from	n specific literature and to associate this kn	owledge with othe	r classes.

Signals and Systems (L0432)		Lecture	3	4
Signals and Systems (L0433)		Recitation Section (small)	2	2
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous	Mathematics 1-3			
Knowledge		y of signals and systems. Good knowledge in math spectral transformations (Fourier series, Fourier	-	
Educational Objectives	After taking part successfully, students ha	ave reached the following learning results		
Professional Competence				
	The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. The can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, the understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to discrete-time signal. The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems.			
Skills	The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc They can assess the impact of LTI systems on the signal properties in time and frequency domain			
Personal Competence				
Social Competence	The students can jointly solve specific pro	blems.		
			urces. They can c	ontrol their level o
	The students are able to acquire relevant information from appropriate literature sources. They can control their level o knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Course L0432: Signals and Systems Тур Lecture Hrs/wk 3 СР 4 Workload in Hours Independent Study Time 78, Study Time in Lecture 42 Lecturer Prof. Gerhard Bauch DE/EN Language Cycle SoSe Content • Introduction to signal and system theory Signals Classification of signals Continuous-time and discrete-time signals Analog and digital signals Deterministic and random signals • Description of LTI systems by differential equations or difference equations, respectively • Basic properties of signals and operations on signals • Elementary signals • Distributions (Generalized Functions) • Power and energy of signals • Correlation functions of deterministic signals Autocorrelation function Crosscorrelation function Orthogonal signals Applications of correlation • Linear time-invariant (LTI) systems

- Linearity
- Time-invariance
- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- Properties of LTI-systems
- Causal systems
- Stable systems
- Memoryless systems
- Fourier Series and Fourier Transform
 - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Stability
 Allpass filters
 - Minimum-phase, maximum-phase and mixed-phase filters
 - Linear phase filters
 - Enedi phase inc

Recommended Previous	Computer Engineering				
Knowledge					
Educational Objectives	After taking part succes	sfully, students have reach	ed the following learning results		
Professional Competence					
Knowledge	Embedded systems can	be defined as information	processing systems embedded into en	closing products. T	his course teaches t
	foundations of such sys	stems. In particular, it deal	s with an introduction into these syster	ns (notions, comm	on characteristics) a
	their specification lang	uages (models of comput	ation, hierarchical automata, specificat	ion of distributed	systems, task grapl
	specification of real-tim	e applications, translations	between different models).		
	Another part covers th	a bardwara of omboddad	systems: Sensors A/D and D/A sensu	ortors roal time s	anable communicati
			systems: Sonsors, A/D and D/A conve		
			gy dissipation, reconfigurable logic an		
	introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-				
				ransiormations of	specifications, energ
	efficient realizations, co	ompilers for embedded pro	cessors) is covered.		
Skills	After having attended	the course, students shall	be able to realize simple embedded s	ystems. The stude	nts shall realize wh
	relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall b				
	able to compare differe	ent models of computations	and feasible techniques for system-le	vel design. They sh	nall be able to judge
	which areas of embedde	ed system design specific r	isks exist.		
Personal Competence					
Social Competence	Students are able to sol	lve similar problems alone	or in a group and to present the results	accordingly.	
Autonomy	Students are able to acc	quire new knowledge from	specific literature and to associate this	knowledge with oth	ner classes.

- Continuous and discrete random variables
 - Probability density function (pdf), cululative distribution function (cdf)
 - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
 - Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution. Rayleigh distribution. etc.)
- Multiple random variables
 - Conditional probability, joint probability
 - Conditional and joint probability density function
 - Bayes' rule
 - Correlation coefficient
 - Two-dimensional Gaussian distribution
 - Statistically independent, uncorrelated and orthogonal random variables
 - Independent identically distributed (iid) random variables
 - Properties of expected value and variance
 - Covariance
 - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
 - Central limit theorem
- Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
 - Examples for random processes
 - Ensemble average and time average
 - Ergodic random processes
 - Quadratic mean and variance
 - Probability density function (pdf) and cumulative distribution function (cdf)
 - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
 - Statistically independent, uncorrelated and orthogonal random processes
 - Stationary random processes
 - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of nonstationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
 - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
 - Pseudo-noise sequences, example: Code division multiple access (CDMA)
 - Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khintchine relations
 - White (Gaussian) noise
- Filtering of random processes by LTI systems
 - Transformation of the probability density function (pdf)
 - Transformation of the mean
 - Transformation of the power spectral density (psd)
 - Correlation functions of input and output signal
 - · Filtering of white Gaussian noise
 - Bandlimitation for noise power limitation
 - Preemphasis and deemphasis
- Companding, mu-law, A-law
- Functions of random variables
 - Transformation of probabilities and of the probability density function (pdf)
 - Application: Non-linear amplifiers
- Functions of two random variables
 - Probability density function
 - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
 - Wireline channels: Telephone cable, coaxial cable, optical fiber
 - Wireless channels: Fading radio channel, underwater channels
 - Frequency-flat and frequency-selective channels
 - Additive white Gaussian noise (AWGN) channel
 - Signal to noise power ratio (SNR)
 - Discrete-time channel models
 - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
 - Sampling
 - Sampling theorem
 - Pulse modulation
 - Pulse-amplitude modulation (PAM)
 - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
 - Pulse-position modulation (PPM)
 - Pulse-code modulation (PCM)
 - Quantization
 - Linear quantizaton, midtread and midrise characteristic
 - Quantization error, quantization noise
 - Signal-to-quantization noise ratio
 - Non-linear quantization, compressor characteristics, mu-law, A-law
 - Speech transmission with PCM
 - Differential pulse-code modulation (DPCM)
 - Linear prediction according to the minimum mean squared error (MMSE) criterion.
 - DPCM with forward prediction and backward prediction

	SNR gain of DPCM over PCM
	 Delta modulation
	Fundamentals of information theory and coding
	 Definitions of information: Self-information, entropy
	 Binary entropy function
	Source coding theorem
	Source coding: Huffman code
	Mutual information and channel capacity
	Channel capacity of the AWGN channel and the binary input AWGN channel
	Channel coding theorem
	• Principles of channel coding: Code rate and data rate, Hamming distance, minimum Hamming distance, error
	detection and error correction
	 Examples for channel codes: Block codes and convolutional codes, repetition code, single parity check code,
	Hamming code, Turbo codes
	Combinatorics
	 Variation with and without repetition
	 Combination with and without repetition
	Permutation, Permutation of multisets
	 Word error probabilities of linear block codes
	Baseband transmission
	 Pulse shaping: Non-return to zero (NRZ) rectangular pulses, Manchester pulses, raised-cosine pulses, square-root
	raised-cosine pulses, Gaussian pulses
	 Transmit signal energy, average energy per symbol
	 Power spectral density (psd) of baseband signals
	 Definitions of signal bandwidth
	Bandwidth efficiency
	Intersymbol interference (ISI)
	 First and second Nyquist criterion
	• Eye patterns
	Receive filter design: Matched filter
	Matched-filter receiver and correlation receiver
	Square-root Nyquist pulse shaping
	Discrete-time AWGN channel model
	Maximum a posteriori probability (MAP) and maximum likelihood (ML) detection
	Bit error probability in AWGN channels for binary antipodal and on-off signaling
	Band-pass transmission via carrier modulation
	 Amplitude modulation, frequency modulation, phase modulation
	 Linear digital modulation methods: On-off keying (OOK), phase-shift keying (PSK), amplitude shift keying (ASK),
	quadrature amplitude shift keying (QAM)
	•

Content	Bridging the gap between disciplines and moving from theory to practice are essential in the Computer Science in Engineering programme. Exactly the relevant skills are learned in the IIW internship. A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project.		
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

		and modeling and database syste		
Skills	The students acquire the ability to model a database ar	nd to work with it. This comprises	especially the a	pplication of design
	methodologies and query and definition languages. Furthe	ermore, students are able to apply	basic functionali	ties needed to run a
	database.			
Personal Competence				
-	Students can work on complex problems both independent	ly and in teams. They can exchange	e ideas with eacl	other and use their
	individual strengths to solve the problem.	,		
Autonomy	Students are able to independently investigate a complex	problem and assess which compete	encies are require	d to solve it.

Course L3109: Introduction t	o Quantum Computing
Тур	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Martin Kliesch
Language	EN
Cycle	WiSe
Content	Quantum computing is among the most exciting applications of quantum mechanics. Quantum algorithms can efficiently solve computational problems that have a prohibitive runtime on traditional computers. Such problems include, for instance, factoring of integer numbers or energy estimation problems from quantum chemistry and material science. This course provides an introduction to the topic. An emphasis will be put on conceptual and mathematical aspects.
Literature	 Course specific lecture notes will be provided Nielsen and Chuang, Quantum Computation and Quantum Information Sevag Gharibian's lecture notes, Introduction to Quantum Computation

Content	 This course will cover some topics from mathematical logic that are relevant for computer scientists. These topics include for example: Logic programming, a logical paradigm used to write programs in a declarative form instead of the typical imperative or functional programming paradigms, Modal logics, the logic of possibility and necessity. These logics are used for example to formally describe the states of a system that can evolve, Temporal logics (LTL, CTL), close relatives to modal logics and which are for examples used to describe specifications that a system should satisfy at every point in time.

Educational Objectives	After taking part successfully, students have	reached the following learning results		
Professional Competence				
Skills :	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools. Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler construction to algorithms for compiler construction to algorithms that analyze or synthesize software.			
Personal Competence				
Social Competence	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class. They communicate in English.			
-	Students develop their software independently and define milestones by themselves. They receive feedback throughout the entire project. They organize the software project so that they can assess their progress themselves.

Title		Тур	Hrs/wk	СР	
Basics space electronics and prima	ry mission (L3204)	Project-/problem-based Learning	4	6	
Module Responsible					
Admission Requirements					
Recommended Previous					
Knowledge	 Electrical engineering / Fundamenta 				
-	Computer science / Computer scien	ce for engineers			
Educational Objectives	After taking part successfully, students ha	ve reached the following learning results			
Professional Competence					
Knowledge					
	Fundamentals of space electronics,				
	Subcomponents of satellite systems				
	Fragmentation and planning of prim	-			
	Active participation in CubeSat miss				
	 Soft skills in project management, p 	project planning and project communication			
Skills	Upon completion of the module, students	will have learned fundamentals of space electronics. T	hey also know	how to plan prim	
	missions and how to define subsystems to achieve this primary mission (requirements analysis, performance specification). The				
	will be actively involved in missions and will be expected to put what they have learned into practice there. Additional soft skills				
	the area of general project management will be taught and applied through collaboration with the students.				
	Basic teaching				
		description of requirements and services)			
	 Project planning and fragmentation Prostical application in CubaCat mic 				
	 Practical application in CubeSat mis 	SION			
Personal Competence					
Social Competence	The work takes place alternately in the e	ntire group, but also in small groups. This requires o	lose cooperat	ion and coordinat	
	within the individual teams. The goal is for students to gain a sound knowledge of space electronics and space missions on the or				
	hand, to apply this knowledge on the other hand and to generate sustainability of their results by working in small groups. The				
	can be, for example, the passing on of th	e requirement and performance specifications, which	act as a bas	is, starting point a	
	result across semesters.				
Autonomy	After completing the module, students wi	I be able to independently plan and carry out scientif	ic projects and	d processes. In ar	
		vation of hypotheses and thought processes are to			
	carried out.

Electrical Machines and Actuators	L0293)	Lecture	3	4
Electrical Machines and Actuators	L0294)	Recitation Section (large)	2	2
Module Responsible	Prof. Thorsten Kern			
Admission Requirements	None			
Recommended Previous	Basics of mathematics, in particular complexe n	umbers, integrals, differentials		
Knowledge				
	Basics of electrical engineering and mechanical	engineering		
Educational Objectives	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
Knowledge	Students can to draw and explain the basic princ	iples of electric and magnetic fields.		
	They can describe the function of the stand	and human of alastric parabinan and process	at the component	dina aquationa a
	They can describe the function of the stand			
	characteristic curves. For typically used drives the from the power grid to the driven engine.	ley can explain the major parameters of the	energy eniciency	of the whole syste
	nom the power gha to the unven engine.			
Skills	Students are able to calculate two-dimensional	electric and magnetic fields in particular fe	rromagnetic circu	uits with air gap. I
	this they apply the usual methods of the design	auf electric machines.		
	They can calulate the operational performance	of electric machines from their given chara	cteristic data and	d selected quantit
	and characteristic curves. They apply the usual			
Personal Competence				
Social Competence	none			
	Students are able independently to calculate ele	ectric and magnatic fields for applications. Th	iey are able to ar	nalyse independen
,	the operational performance of electric machin			
	and characteristic curves.

Module M1269: Lab C			
Courses			
Title	Тур	Hrs/wk	СР
Lab Cyber-Physical Systems (L174)) Project-/problem-based Learning	4	6
Module Responsible	Prof. Heiko Falk		
Admission Requirements	None		
Recommended Previous	Module "Embedded Systems"		
Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	Cyber-Physical Systems (CPS) are tightly integrated with their surrounding environment, via sense	sors, A/D and	D/A converters, a
	actors. Due to their particular application areas, highly specialized sensors, processors and actor	s are commor	n. Accordingly, th
	is a large variety of different specification approaches for CPS - in contrast to classical software en	ngineering ap	proaches.
	Based on practical experiments using robot kits and computers, the basics of specification and	modelling of	CDE are taught
	lab introduces into the area (basic notions, characteristical properties) and their specification and	-	-
	hierarchical automata, data flow models, petri nets, imperative approaches). Since CPS frequent		
	experiments will base on simple control applications. The experiments will use state-of-the		
	(MATLAB/Simulink, LabVIEW, NXC) in order to model cyber-physical models that interact with t		
	actors.		
Skille	After successful attendance of the lab, students are able to develop simple CPS. They upderstand	the interden	andoncios hotwo
SKIIIS	After successful attendance of the lab, students are able to develop simple CPS. They understand CPS and its surrounding processes which stem from the fact that a CPS interacts with the environ		
	digital processors, D/A converters and actors. The lab enables students to compare modellin		
	advantages and limitations, and to decide which technique to use for a concrete task. They will l		
	to practical problems. They obtain first experiences in hardware-related software development,		
	tools and in the area of simple control applications.	III IIIuusti y-it	elevant specifica
Personal Competence	tools and in the area of simple control applications.		
-	Students are able to solve similar problems alone or in a group and to present the results accordi	nalv	
Social competence	statents are able to solve similar problems alone of in a group and to present the results according	iigiy.	
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowled	dge with other	classes.

Theoretical Electrical Engineering I	: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	None			
Recommended Previous	ded Previous Basic principles of electrical engineering and advanced mathematics			
Knowledge				
Educational Objectives	After teling part successfully, students bays	reached the following looping requite		
	After taking part successfully, students have	reached the following learning results		
Professional Competence	s Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic			lastromagnetic fiel
Knowledge	They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respecti			
	sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superposition of solutions for simplex electromagnetic fields by means of superpositions for simplex electromagnetic fields by means of superpositions for simplex electromagnetic fields by means of superpositions for			
	fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explications for the theory of time-independent electromagnetic fields and are able to explicat			
	these.			
Skills	Students can apply Maxwell's Equations	in integral notation in order to solve I	nighly symmetrica	I, time-independe
	electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell			
	Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and			
	analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and			
	electrical flow fields (capacitances, inductanc	es, resistances, etc.) from given fields and dir	nension them for p	ractical application
Personal Competence				
Social Competence Students are able to work together on subject related tasks in small groups. They are able to present their			e to present their re	esults effectively (e
	during exercise sessions).			
4				
Autonomy	Students are capable to gather necessary inf			
		means of activities that accompany the lectu exam. Based on respective feedback, studen		
		nections between their knowledge obtained		
	lectures (e.g. Electrical Engineering I, Linear

ourse L0181: Theoretical Electrical Engineering I: Time-Independent Fields		
Тур	Recitation Section (small)	
Hrs/wk	2	
CP	1	
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28	
Lecturer	Prof. Christian Schuster	
Language	DE	
Cycle	SoSe	
Content	See interlocking course	
Literature	See interlocking course	

Specialization III. Subject Specific Focus

ourses				
tle		Тур	Hrs/wk	СР
Module Responsible	Prof. Görschwin Fey			
Admission Requirements	None			
Recommended Previous				
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge				
Skills				
Personal Competence				
Social Competence				
Autonomy				
Workload in Hours	Depends on choice of courses			
Credit points	12			
Assignment for the	Computer Science in Engineering: Specialisation III. Subje	ect Specific Focus: Elective (Compulsory	
Following Curricula				

Thesis					
Module M-001: Bachelor Thesis					
Courses					
Title	Typ Hrs/wk CP				
Module Responsible	Professoren der TUHH				
Admission Requirements	According to General Regulations §21 (1):				
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.				
Recommended Previous Knowledge					
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence Knowledge	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. 				
Skills	 The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 				
Personal Competence Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 				
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own. 				
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0				
Credit points	12				
Course achievement	None				
	Thesis According to General Regulations
