Module M0850: Mathematics I	9
Module M1436: Procedural Programming for Computer Engineers	11
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0624: Automata Theory and Formal Languages	16
Module M0829: Foundations of Management	18
Module M0851: Mathematics II	20
Module M1432: Programming Paradigms	22
Module M0662: Numerical Mathematics I	24
Module M0730: Computer Engineering	26
Module M0834: Computernetworks and Internet Security	28
Module M0853: Mathematics III	30
Module M1423: Algorithms and Data Structures	33
Module M0727: Stochastics	35
Module M1578: Seminars Computer Science	37
Module M0672: Signals and Systems	39
Module M0803: Embedded Systems	42
Module M0833: Introduction to Control Systems	44
Module M0675: Introduction to Communications and Random Processes	46
Module M1431: Practical Course IIW	50
Specialization I. Computer Science	51
Module M0731: Functional Programming	51
Module M0791: Computer Architecture	54
Module M0625: Databases	56
Module M2046: Introduction to Quantum Computing	58
Module M0562: Computability and Complexity Theory	60
Module M1595: Machine Learning I	62
Module M0754: Compiler Construction	64
Module M1300: Software Development	65
Module M0732: Software Engineering	67
Module M1977: Logic in Computer Science	69
Specialization II. Mathematics & Engineering Science	70
Module M0852: Graph Theory and Optimization	70
Module M1962: Basics space electronics and primary mission	72
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	73
Module M0760: Electronic Devices	76
Module M0708: Electrical Engineering III: Circuit Theory and Transients	78
Module M0941: Combinatorial Structures and Algorithms	80
Module M1802: Engineering Mechanics I (Stereostatics)	82
Module M0783: Measurements: Methods and Data Processing	84
Module M1712: Green Technologies II	86
Module M0634: Introduction into Medical Technology and Systems	88
Module M0777: Semiconductor Circuit Design	90
Module M1269: Lab Cyber-Physical Systems	92
Module M0715: Solvers for Sparse Linear Systems	93
Module M0854: Mathematics IV	95
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	98
Module M0610: Electrical Machines and Actuators	100
Specialization III. Subject Specific Focus	102
Module M1433: Technical Complementary Course for Computational Science and Engineering Bachelor	102
Thesis	103
Module M-001: Bachelor Thesis	103

Program description

Content

Complex technical systems dominate application fields such as medical technology, energy technology, or aviation, as well as numerous others. Engineers and computer scientists must work hand-in-hand in system development. This is particularly true at the interfaces between networked computing systems and their physical environment - we speak of cyber-physical systems (CPS). Their proliferation and thus their importance for society as well as their complexity will continue to increase in the future as digitization progresses.

The Computer Science in Engineering program addresses cyber-physical systems with a combined, scientific education in the three pillars of computer science, mathematics, and engineering. In computer science, basic methods of software development, programming, and quality assurance are taught. In engineering, the fundamentals of electrical engineering and especially control as well as communications engineering are central to understand, characterize, and design interfaces to the physical world and digital networks in depth. Freedom in the advanced studies allows connecting points to other engineering disciplines and the latest computer science methods. Furthermore, methodical knowledge is imparted, so graduates can independently familiarize themselves with new technologies. Social skills for working in teams are also taught.

Study plans in (M) medical technology, (I) smart grid for energy systems, (E) embedded systems and (C) fundamentals of computation show possible focuses.

In this way, future-proof knowledge is acquired for almost all application areas.

Career prospects

Successful completion of the bachelor's degree program Computer Science in Engineering makes it possible, on the one hand, to take up a scientific master's degree program in Computer Science, Computer Science in Engineering, or a related subject. On the other hand, an early career entry in branches of trade, industry, and administration is possible. Graduates will primarily work as computer scientists or system developers of cyber-physical systems.

Learning target

The learning objectives listed below enable graduates to transfer their acquired specialist knowledge to new topics. They will be able to grasp and analyze problems in their discipline and solve them efficiently, either independently or in a team. Results can be assessed, evaluated, critically scrutinized and independent decisions can be made. The learning objectives are divided below into knowledge, skills, social competence and independence.

Knowledge

- Engineering Science: Graduates will know basic principles and methods of engineering with a focus in electrical engineering.
- Economics: Graduates know the basics and methods of economics.
 Computer Science: Graduates know basic methods and procedures for model building and problem solving in theoretical, practical and technical computer science.
- Mathematics: Graduates know the basics and methods of linear algebra, differential calculus in one and more variables, discrete mathematics, higher analysis, stochastics and numerics. They can describe these and outline their proofs.
- Bridging the gap between computer science and engineering: Graduates know basic methods and procedures to describe interfaces between
 engineering applications on the one hand and models of computer science on the other. Graduates are familiar with the basic features of
 information and communication technology systems, so-called cyber-physical systems. This includes relevant architectures of control systems,
 information transmission and storage, interaction mechanisms, sensors and actuators, and the extraction and processing of information,
 knowledge and insights from within the system.

Skills

- Engineering: Graduates are able to apply their knowledge of mathematical, scientific and systems engineering principles and methods to specific theoretical and practical problems and develop solutions.
- Computer Science: Graduates are able to develop instances of formal models in computer science using basic modeling approaches and to assess their computability and complexity. They can design software solutions and implement them using suitable programming tools. They can select, program, and integrate suitable hardware for the implementation.
- Mathematics: Graduates are able to solve problems from analysis, linear algebra, discrete mathematics, stochastics and numerics using the methods they have learned.
- Bridging the gap between computer science and engineering: Graduates will be able to identify interfaces between engineering disciplines and computer science, formalize and realize them. Graduates can implement software solutions for engineering applications. Graduates are able to realize simple cyber-physical systems.

Social competence

- Graduates are able to present the procedures and results of their work in written and oral form.
- Graduates are able to communicate with experts and laypersons about the contents and problems of engineering. They can respond appropriately to questions, additions and comments.
- Graduates are able to work in groups. They can define, distribute, document, and integrate subtasks. They are able to make time arrangements and interact socially.

Independence

- Graduates are able to obtain necessary technical information and place it in the context of their knowledge.
- Graduates can realistically assess their existing competencies and work on deficits independently.
- Graduates are able to learn complex topics and work on problems and projects in a self-organized and self-motivated manner (lifelong learning in engineering practice).

Program structure

The curriculum of the Bachelor's degree in Computer Science and Engineering is structured as follows. In addition to the compulsory courses from core qualification, a minimum number of credit points must be taken from each of the areas of computer science, mathematics and engineering:

- 1. Core qualification: 138 credit points
- 2. Computer science: 12 credit
- 3. Mathematics & Engineering: 6 credit points

To deepen their studies, students can choose lectures from the entire catalog of technical events at the TUHH. A total of 12 credit points must be

achieved. The bachelor thesis is also rated with 12 credit points. This results in a total effort of 180 credit points.

The following four course plans describe special features of the IIW Bachelor's degree

E. Embedded systems

- 1. Core subjects in computer science
- Computer architecture
- Operating systems
 Core subjects: mathematics and engineering
 Electronic components
- 3. Additional technical courses
- Semiconductor circuit technology - Compiler construction

I. Smart grids

- 1. Core subjects in computer science
- Operating systems
- Software development
- 2. Core subjects: mathematics and engineering
- Electrical energy systems I
- 3. Additional technical courses
- Theoretical electrical engineering I - Electrical engineering III: network theory and transients

M. Medical systems

- 1. Core subjects in computer science Introduction to information security
- Software engineering
- 2. Core subjects: mathematics and engineering
- Introduction to medical technology systems 3. Additional technical courses
- Cyber-physical systems laboratory
- Computer architecture

C. Computational Foundations

- 1. Core subjects in computer science
- Functional programming
- Predictability and complexity
- 2. Core subjects: mathematics and engineering
- Combinatorial structures and algorithms
 Additional technical courses
- Solvers for sparse linear equation systems
- Mathematics IV

Core Qualification

te Algebraic Structures

Knowledge	
-	After taking part successfully, students have reached the following learning results
Professional Competence Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu Self-reliance, self-management, collaboration and professional and personnel management competences. The departme implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teachi areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competen level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechni complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechni academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making t transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of deal with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberat encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migrat studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semes 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a go oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging go oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. The differences are reflected in the practical examples used, in content topics that refer to different professional application contex and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leaders functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 locate selected specialized areas with the relevant non-technical mother discipline, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in a learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representat in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
55	
	 In selected sub-areas students can apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specia discipline, to handle simple questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond t technical relationship to the subject.
Personal Competence	
Social Competence	Personal Competences (Social Skills)

	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	to communicate a nontechnical item in a competent way in writen form or verbaly
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Autonomy	Students are capable to gather necessary information	from the references provided and rel	ate that informat	ion to the context	
	the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as online				
	tests and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individu				
	learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other				
	lectures (e.g. Electrical Engineering I, Linear Algebra, a	and Analysis).

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Christian Becker
Language	DE
Cycle	SoSe
Content	- General time-dependency of electrical networks
	- Representation and properties of harmonic signals
	- RLC-elements at alternating currents/voltages
	- Complex notation for the representation of RLC-elements
	- Power in electrical networks at alternating currents, compensation of reactive power
	- Frequency response locus (Nyquist plot) and Bode-diagrams
	- Measurement instrumentation for assessing alternating currents
	- Oscillating circuits, filters, electrical transmission lines
	- Transformers, three-phase current, energy converters
	- Simple non-linear and active electrical devices
Literature	- M. Albach, "Elektrotechnik", Pearson Studium (2011)
	- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)
	- R. Kories, H. Schmidt-Walter, "Taschenbuch der Elektrotechnik", Harri Deutsch (2010)

Тур	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
	Prof. Matthias Mnich
Language	
Cycle	
Content	
content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be express
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	 Pushdown automata and context-free grammars: Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pump
	lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars
	back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verifica
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
Literature

Course L08	382: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business idea from the point of view of an established company or a startup.
	knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Recommended Previous	Mathematics I			
Knowledge				
	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	 Students can name further concepts in analy examples. Students can discuss logical connections between 			
	the help of examples. They know proof strategies and can reproduce 	hem.		
Skills	 Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreo they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate results. 			
Personal Competence Social Competence				
Autonomy	 Students are capable of checking their underst precisely and know where to get help in solving Students have developed sufficient persistence problems. 	them.

Module Responsible				
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in electrical engineering			
	After taking part successfully, students have reached	the following learning results		
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence	This module deals with the foundations of the function	ionality of approximate systems. It appear	ve the laware from	
Knowleage	This module deals with the foundations of the funct		rs the layers from	n the assembly-lev
	programming down to gates. The module includes the	e following topics.		
	Introduction			
	Combinational logic: Gates, Boolean algebra, E	oolean functions, hardware synthesis, o	combinational net	works
	 Sequential logic: Flip-flops, automata, systema 	tic hardware design		
	 Technological foundations 			
	 Computer arithmetic: Integer addition, subtraction 	tion, multiplication and division		
	 Basics of computer architecture: Programming 		pipelining	
	 Memories: Memory hierarchies, SRAM, DRAM, 			
	 Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses 			
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physica			
	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a			
collection of few and simple components. They are able to distinguish between and to explain the				
	today's computing systems - from gates and circuits up to complete processors.			
	After successful completion of the module, the stud			
	system and the software executed on it. In particular, they shall understand the consequences that the execution of software on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the assembly language down to gates.			
	the impact that these low abstraction levels have on	an entire system's performance and to	propose teasible o	options.
Personal Competence				
Social Competence	Students are able to solve similar problems alone or i	n a group and to present the results acc	cordingly.	
Autonomy	Students are able to acquire new knowledge from spe	ecific literature and to associate this kno	wledge with othe	r classes.

Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functional complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these principles and an introduction to performance modelling are addressed using computing tasks and physical labs.
	In the second part of the lecture an introduction to Internet security is given. This class comprises: Introduction to the Internet (TCP/IP model) Application layer protocols (HTTP, SMTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol IPv4 & IPv6, routing in the Internet) Data link layer with media access at the example of WLAN Introduction to Internet Security Security Aspects of Address Resolution (DNS/DNSSEC, ARP/SEND Communication Security (IPSec) - From Address Resolution to Routing (Securing BGP)

Recommended Previous	Basic knowledge of Computer Science a	nd Mathematics at the Bachelor's level.		
Knowledge				
Educational Objectives	After taking part successfully, students	have reached the following learning results		
Professional Competence				
Knowledge	The students are able to			
	 explicate a specific topic in the fit 	ald of Computer Science		
	 describe complex issues, 	eld of computer science,		
	 present different views and evaluation 	ate in a critical way.		
	P			
Skills	The students are able to			
	familiarize in a specific topic of C	omputer Science in limited time,		
		specific topic and cite in a correct way,		
	 elaborate a presentation and give 			
	• sum up the presentation in 10-15			
	answer questions in the final disc	ussion.		
Demonstration of the second se				
Personal Competence	The students are able to			
Social Competence				
	 elaborate and introduce a topic feedback 	or a certain audience,		
	 discuss the topic, content and str 	ucture of the presentation with the instructor,		
	 discuss certain aspects with the a 	audience, and		
	 as the lecturer listen and respond 	to questions from the audience.		
Autonomy	The students are able to			
	 define the task in question in an a 	autonomous way.		
	 develop the necessary knowledge 			
	 use appropriate work equipment, 			
	guided by an instructor critically

- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - $\circ~$ Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed-phase filters
 - Linear phase filters

	Probability according to van Mises, relative frequency
	Bertrand's paradox
	 Axiomatic definition of probability according to Kolmogorov Probability of disjoint and non-disjoint events

- Venn diagrams
- · Continuous and discrete random variables
 - Probability density function (pdf), cululative distribution function (cdf)
 - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
 - · Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution, Rayleigh distribution, etc.)
- Multiple random variables
 - Conditional probability, joint probability
 - Conditional and joint probability density function
 - Bayes' rule
 - Correlation coefficient
 - Two-dimensional Gaussian distribution
 - Statistically independent, uncorrelated and orthogonal random variables
 - Independent identically distributed (iid) random variables
 - Properties of expected value and variance
 - Covariance
 - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
 - Central limit theorem
- Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
 - Examples for random processes
 - · Ensemble average and time average
 - Ergodic random processes
 - Quadratic mean and variance
 - Probability density function (pdf) and cumulative distribution function (cdf)
 - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
 - · Statistically independent, uncorrelated and orthogonal random processes
 - Stationary random processes
 - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of nonstationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
 - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
 - Pseudo-noise sequences, example: Code division multiple access (CDMA)
 - · Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khintchine relations
 - White (Gaussian) noise
- Filtering of random processes by LTI systems
 - Transformation of the probability density function (pdf)
 - Transformation of the mean
 - Transformation of the power spectral density (psd)
 - · Correlation functions of input and output signal
 - Filtering of white Gaussian noise
 - · Bandlimitation for noise power limitation
 - Preemphasis and deemphasis
- · Companding, mu-law, A-law
- · Functions of random variables
 - Transformation of probabilities and of the probability density function (pdf)
 - Application: Non-linear amplifiers
- Functions of two random variables
 - Probability density function
 - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
 - · Wireline channels: Telephone cable, coaxial cable, optical fiber
 - Wireless channels: Fading radio channel, underwater channels

 - Additive white Gaussian noise (AWGN) channel
 - Signal to noise power ratio (SNR)
 - Discrete-time channel models
 - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
 - Sampling
 - Sampling theorem
 - Pulse modulation
 - Pulse-amplitude modulation (PAM)
 - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
 - Pulse-position modulation (PPM)
 - Pulse-code modulation (PCM)
 - Quantization
 - Linear guantizaton, midtread and midrise characteristic
 - Quantization error, quantization noise
 - Signal-to-guantization noise ratio
 - Non-linear quantization, compressor characteristics, mu-law, A-law
 - Speech transmission with PCM
 - Differential pulse-code modulation (DPCM)
 - Linear prediction according to the minimum mean squared error (MMSE) criterion.

- Frequency-flat and frequency-selective channels

- DPCM with forward prediction and backward prediction
- SNR gain of DPCM over PCM
- Delta modulation
- Fundamentals of information theory and coding
 - Definitions of information: Self-information, entropy
 - Binary entropy function
 - Source coding theorem
 - Source coding: Huffman code
 - Mutual information and channel capacity
 - $\circ~$ Channel capacity of the AWGN channel and the binary input AWGN channel
 - Channel coding theorem
 - Principles of channel coding: Code rate and data rate, Hamming distance, minimum Hamming distance, error detection and error correction
 - Examples for channel codes: Block codes and convolutional codes, repetition code, single parity check code, Hamming code, Turbo codes
- Combinatorics
 - Variation with and without repetition
 - Combination with and without repetition
 - Permutation, Permutation of multisets
 - Word error probabilities of linear block codes
- Baseband transmission
 - Pulse shaping: Non-return to zero (NRZ) rectangular pulses, Manchester pulses, raised-cosine pulses, square-root raised-cosine pulses, Gaussian pulses
 - Transmit signal energy, average energy per symbol
 - $\circ~$ Power spectral density (psd) of baseband signals
 - Definitions of signal bandwidth
 - Bandwidth efficiency
 - Intersymbol interference (ISI)
 - First and second Nyquist criterion
 - Eye patterns
 - Receive filter design: Matched filter
 - Matched-filter receiver and correlation receiver
 - Square-root Nyquist pulse shaping
 - Discrete-time AWGN channel model
- Maximum a posteriori probability (MAP) and maximum likelihood (ML) detection
- Bit error probability in AWGN channels for binary antipodal and on-off signaling
 Band-pass transmission via carrier modulation
 - Amplitude modulation, frequency modulation, phase modulation
 - Linear digital modulation methods: On-off keying (OOK), phase-shift keying (PSK), amplitude shift keying (ASK), quadrature amplitude shift keying (QAM)

Module M1431: Pract	ical Course IIW			
Courses				
Title		Тур	Hrs/wk	СР
Practical Course IIW (L2160)		Project-/problem-based Learning	8	6
Module Responsible	Prof. Görschwin Fey			
Admission Requirements	None			
Recommended Previous	Successful participation in the modules:			
Knowledge				
	Procedural Programming			
	Algorithms and Data Structures Embedded Systems			
	Embedded Systems Computer Engineering			
	Computer EngineeringElectrical Engineering I			
	 Signals and Systems 			
Educational Objectives	After taking part successfully, students hav	re reached the following learning results		
Professional Competence				
Knowledge	Students get to know tools used by develop	oment teams to		
	application-driven software developm			
	 deriving requirements and models ad contract plan development flows 	ccording to engineering disciplines		
	 software plan development flows, manage tack distribution 			
	manage task distribution,manage source code, and			
	 test software. 			
Skills		The required competences are learned and practical	v applied Th	ese are for example
			,	
	 specifying software based on user re 			
		mputer system with the physical environment		
	creating a software architecture			
	 implementing and testing software in 			
	 using the related development tools. 			
Personal Competence				
Social Competence	Team work has its own challenges with resp	pect to interaction of team members as well as finding	the necessa	ry agreement durin
	joint software development. During the pro	ject students learn the required competences and exp	erience the p	practical needs.
Autonomy	During team work it is mandatory to take a	nd explain a certain position, to independently compl	ete assigned	tasks, and to prese
	results to the team. Open issues must be id	lentified and returned into the team to find an agreed	resolution.

Content	Bridging the gap between disciplines and moving from theory to practice are essential in the Computer Science in Engineering programme. Exactly the relevant skills are learned in the IIW internship. A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project.				
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

Admission Requirements	None					
Recommended Previous	Discrete mathematics	at high-school le	evel			
Knowledge						
Educational Objectives	After taking part succe	essfully, students	s have reached the follow	ing learning results		
Professional Competence						
Knowledge	Students apply the pri	nciples, constru	cts, and simple design tee	chniques of functional program	nming. They dem	onstrate their ability
	to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.					
Skills	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.					
Personal Competence						
Social Competence	Students practice pee programs orally. They			y explain problems and solut	ions to their pee	r. They defend their
Autonomy	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Educational Objectives	After taking part succes	ssfully, students have r	eached the following	ng learning results		
Professional Competence						
	various programming models is given, both for general-purpose computers and for special-purpose machines (e.g., sign processors). Next, foundational aspects of the micro-architecture of processors are covered. Here, the focus particularly lies on so-called pipelining and the methods used for the acceleration of instruction execution used in this context. The students ge know concepts for dynamic scheduling, branch prediction, superscalar execution of machine instructions and for mem hierarchies.					
Skills	The students are able to describe the organization of processors. They know the different architectural principles and programmin models. The students examine various structures of pipelined processor architectures and are able to explain their concepts and analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.					
Personal Competence						
Social Competence	Students are able to so	lve similar problems al	one or in a group a	nd to present the results accord	ingly.	
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Module M0754: Comp	iler Construction				
Courses					
Title		Тур	Hrs/wk	СР	
Compiler Construction (L0703)		Lecture	2	2	
Compiler Construction (L0704)		Recitation Section (small)	2	4	
Module Responsible	Prof. Sibylle Schupp				
Admission Requirements	None				
Recommended Previous Knowledge	 Practical programming experience Automata theory and formal languages Functional programming or procedural programming, algorithms, Basic knowledge of software engineering 				
Educational Objectives	After taking part successfully, students have read	hed the following learning results			
Professional Competence					
	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language run and test them. They choose appropriate internal languages and representations and justify their choice. They explain an modify implementations of existing compiler frameworks and experiment with frameworks and tools. Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. The organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithm that analyze or synthesize software.				
Personal Competence					
Social Competence	Students develop the software in a team. They explain problems and solutions to their team members. They present and defer their software in class. They communicate in English.				
Autonomy	Students develop their software independently and define milestones by themselves. They receive feedback throughout the entir project. They organize the software project so that they can assess their progress themselves.

Cycle	SoSe		
Content	 This course will cover some topics from mathematical logic that are relevant for computer scientists. These topics include for example: Logic programming, a logical paradigm used to write programs in a declarative form instead of the typical imperative or functional programming paradigms, Modal logics, the logic of possibility and necessity. These logics are used for example to formally describe the states of a system that can evolve, Temporal logics (LTL, CTL), close relatives to modal logics and which are for examples used to describe specifications that a system should satisfy at every point in time.

Courses					
Title		Тур	Hrs/wk	СР	
Basics space electronics and prima	ry mission (L3204)	Project-/problem-based Learning	4	6	
Module Responsible					
Admission Requirements					
Recommended Previous					
Knowledge	 Electrical engineering / Eundamentals of electrical engineering 				
-	Computer science / Computer scien	ce for engineers			
Educational Objectives	After taking part successfully, students ha	ve reached the following learning results			
Professional Competence					
Knowledge					
	Fundamentals of space electronics,				
	Subcomponents of satellite systems				
	Fragmentation and planning of prim	-			
	Active participation in CubeSat miss				
	 Soft skills in project management, p 	project planning and project communication			
Skills	Upon completion of the module, students	will have learned fundamentals of space electronics. T	hey also know	how to plan prim	
	missions and how to define subsystems to achieve this primary mission (requirements analysis, performance specification). The				
	will be actively involved in missions and w	ill be expected to put what they have learned into pra	actice there. A	dditional soft skills	
	the area of general project management will be taught and applied through collaboration with the students.				
	Basic teaching				
		description of requirements and services)			
	 Project planning and fragmentation Prostical application in CubaCat mic 				
	 Practical application in CubeSat mis 	SION			
Personal Competence					
Social Competence	The work takes place alternately in the e	ntire group, but also in small groups. This requires o	lose cooperat	ion and coordinat	
	within the individual teams. The goal is for students to gain a sound knowledge of space electronics and space missions on the or				
	hand, to apply this knowledge on the other hand and to generate sustainability of their results by working in small groups. The				
	can be, for example, the passing on of th	e requirement and performance specifications, which	act as a bas	is, starting point a	
	result across semesters.				
Autonomy	After completing the module, students wi	I be able to independently plan and carry out scientif	ic projects and	d processes. In ar	
		vation of hypotheses and thought processes are to			
	carried out.			,

envi purp biolo fine wate noise phot	e practical course Environmental Engineering currently consists of 5 experiments, which deal with the different focal points o vironmental engineering in the areas of air, water, soil, energy and noise. The following experiments are carried out for this pose: logical degradation of artificial materials, e dust measurement in the air, ter analysis, se emission measurement, obvoltaic energy thin the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They cuss different approaches to the task as well as it's theoretical or practical implementation.

Тур	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Marvin Scherzinger
Language	DE
Cycle	WiSe
Content	In this course, modern analytical methods are presented that are used for the quantification of pollutants in the environmental compartments soil, water and air. In doing so, the students deepen their theoretical knowledge with regard to working with standardized methods and learn to make statements about the quality of test results.

Educational Objectives	After taking part successfully, students have reache	ed the following learning results		
Professional Competence				
Knowledge				
Knomedge	 Students can name the basic concepts in Ma 	thematics IV. They are able to explain the	em using appropri	ate examples.
	 Students can discuss logical connections be 	tween these concepts. They are capable	e of illustrating th	ese connections w
	the help of examples.		5	
		co thom		
	 They know proof strategies and can reproduce 	te menn.		
Skills				
	 Students can model problems in Mathematic 	ics IV with the help of the concepts stud	ied in this course	. Moreover, they a
	capable of solving them by applying establis	hed methods.		
	• Students are able to discover and verify furt	her logical connections between the conce	epts studied in the	e course.
	 For a given problem, the students can dev 			
		elop and execute a suitable approach, a		including evaluate t
	results.			
Personal Competence				
-				
Social Competence	 Students are able to work together in teams. 	. They are capable to use mathematics as	a common langu	age.
	 In doing so, they can communicate new con 			
			peracing partiers	. Moreover, they t
	design examples to check and deepen the u	nderstanding of their peers.		
Autonomy				
, laconomy	 Students are capable of checking their under 	erstanding of complex concepts on their	own. They can sp	ecify open questic
	precisely and know where to get help in solv	ing them.		
	 Students have developed sufficient persister 	-	de in a goal-orien	ted manner on ha
		ence to be able to work for longer perior	us in a goal-onen	
	problems.

Theoretical Electrical Engineering I	: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I	: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	None			
Recommended Previous	Basic principles of electrical engineering and ad	vanced mathematics		
Knowledge				
-	After taking part successfully, students have rea	ached the following learning results		
Professional Competence				
Knowleage	Students can explain the fundamental formulas	-		-
	They can explicate the principal behavior of a			
	sources. They can describe the properties of a fields. The students are aware of applications f			
	these.	or the theory of time-independent electronia	grietic fields and	are able to explici
Skills	Students can apply Maxwell's Equations in	integral notation in order to solve high	hly symmetrica	I, time-independe
	electromagnetic field problems. Furthermore, t			
	Equations for more general problems. The stude	ents can assess the principal effects of given	ime-independen	t sources of fields
	analyze these quantitatively. They can deduce	meaningful quantities for the characterizatio	n of electrostatic	, magnetostatic, a
	electrical flow fields (capacitances, inductances	, resistances, etc.) from given fields and dime	nsion them for p	ractical application
Personal Competence				
Social Competence	Students are able to work together on subject r	elated tasks in small groups. They are able to	o present their re	esults effectively (e
	during exercise sessions).			
Autonomy	Students are capable to gather necessary inform	nation from provided references and relate th	is information to	the lecture. They
	able to continually reflect their knowledge by m			-
	lectures and exercises that are related to the ex			
	learning process. They are able to draw conne	ctions between their knowledge obtained in	this lecture and	the content of ot
	lectures (e.g. Electrical Engineering I, Linear Alg	ebra, and Analysis).

	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Christian Schuster
Language	DE
Cycle	
Content	- Maxwell's Equations in integral and differential notation
	- Boundary conditions
	- Laws of conservation for energy and charge
	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

Course L0293: Electrical Machines and Actuators			
Тур	Lecture		
Hrs/wk	3		
CP	4		
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42		
Lecturer	Prof. Thorsten Kern, Dennis Kähler		
Language	DE		
Cycle	SoSe		
Content	Electric field: Coulomb's law, flux (field) line, work, potential, capacitor, energy, force, capacitive actuators		
	Magnetic field: force, flux line, Ampere´s law, field at bounderies, flux, magnetic circuit, hysteresis, induction, self-induction, mutual inductance, transformer, electromagnetic actuators		
	Synchronous machines, construction and layout, equivalent single line diagrams, no-load and short-cuircuit characteristics, vector diagrams, motor and generator operation, stepper motors		
	DC-Machines: Construction and layout, torque generation mechanismen, torque vs speed characteristics, commutation,		
	Asynchronous Machines. Magnetic field, construction and layout, equivalent single line diagram, complex stator current diagram (Heylands´diagram), torque vs. speed characteristics, rotor layout (squirrel-cage vs. sliprings),		
	Drives with variable speed, inverter fed operation, special drives

	Thesis				
Module M-001: Bachelor Thesis					
Courses					
Title	Typ Hrs/wk CP				
Module Responsible Admission Requirements	Professoren der TUHH				
Aumssion Requirements	According to General Regulations §21 (1):				
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.				
Recommended Previous					
Knowledge					
Educational Objectives Professional Competence	After taking part successfully, students have reached the following learning results				
Knowledge					
Skills	 The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to so subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 				
Personal Competence					
Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 				
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own. 				
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0				
Credit points	12				
Course achievement					
Examination	Thesis According to General Regulations				
scale					
Assignment for the Following Curricula	General Engineering Science (German program): Thesis: Compulsory General Engineering Science (German program, 7 semester): Thesis: Compulsory Civil- and Environmental Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Data Science: Thesis: Compulsory				
	Electrical Engineering: Thesis: Compulsory Electrical Engineering and Information Technology: Thesis: Compulsory Engineering Science: Thesis: Compulsory General Engineering Science (English program): Thesis: Compulsory General Engineering Science (English program, 7 semester): Thesis: Compulsory Green Technologies: Energy, Water, Climate: Thesis: Compulsory Computer Science in Engineering: Thesis: Compulsory Logistics and Mobility: Thesis: Compulsory				
	Mechanical Engineering: Thesis: Compulsory Mechatronics: Thesis: Compulsory Naval Architecture: Thesis: Compulsory Technomathematics: Thesis: Compulsory Teilstudiengang Lehramt Metalltechnik: Thesis: Compulsory Process Engineering: Thesis: Compulsory Engineering and Management - Major in Logistics and Mobility: Thesis: Compulsory
