Core Qualification	5
Module M0561: Discrete Algebraic Structures	5
Module M0301. Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	6
Module M1436: Procedural Programming for Computer Engineers	7
Module M0577: Non-technical Courses for Bachelors	9
Module M0870: Mathematics I	11
Module M0597: Electrical Engineering II: Alternating Current Networks and Basic Devices	13
Module M0624: Automata Theory and Formal Languages	15
Module M0829: Foundations of Management	18
Module M0821: Mathematics II	20
Module M1432: Programming Paradigms	20
Module M0662: Numerical Mathematics I	24
Module M0834: Computernetworks and Internet Security	26
Module M0730: Computer Engineering	28
Module M0730: Computer Engineering Module M0853: Mathematics III	30
Module M1423: Algorithms and Data Structures	33
Module M0672: Signals and Systems	35
Module M1578: Seminars Computer Science	38
Module M0803: Embedded Systems	40
Module M0003: Embedded Systems	42
Module M0727: Stochastics Module M0833: Introduction to Control Systems	44
Module M0035: Introduction to Communications and Random Processes	46
Module M10073: Infordaction to communications and Kandom Processes Module M1431: Practical Course IIW	50
	51
Specialization I. Computer Science	
Module M0731: Functional Programming	51
Module M0625: Databases	54
Module M0791: Computer Architecture	56
Module M1883: Introduction to Quantum Computing	58
Module M0562: Computability and Complexity Theory	60
Module M0754: Compiler Construction	62
Module M0732: Software Engineering	63
Module M1300: Software Development	65
Module M1995: Machine Learning I Module M1998: Fundamentals of Operating Systems	67
Module M1908: Fundamentals of Operating Systems	69
Module M1872: Operating System Construction for Single-Core Systems	71
Specialization II. Mathematics & Engineering Science	73
Module M0852: Graph Theory and Optimization	73
Module M1235: Electrical Power Systems I: Introduction to Electrical Power Systems	75
Module M0760: Electronic Devices	78
Module M1896: Machine Dynamics	80
Module M0708: Electrical Engineering III: Circuit Theory and Transients	83
Module M0941: Combinatorial Structures and Algorithms	85
Module M1802: Engineering Mechanics I (Stereostatics)	87
Module M0783: Measurements: Methods and Data Processing	89
Module M1712: Green Technologies II Module M0624: Introduction into Modical Technology and Systems	91 93
Module M0634: Introduction into Medical Technology and Systems Module M0715: Solvers for Sparse Linear Systems	
Module M0715: Solvers for Sparse Linear Systems Module M0777: Semiconductor Circuit Design	95 97
Module M1269: Lab Cyber-Physical Systems	97
Module M0854: Mathematics IV Module M0610: Electrical Machines and Actuators	100
Module M0510: Electrical Machines and Actuators Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	103
	105
Specialization III. Subject Specific Focus	107
Module M1433: Technical Complementary Course for Computational Science and Engineering Bachelor	107
Thesis	108
Module M-001: Bachelor Thesis	108

Program description

Content

Complex technical systems dominate application fields such as medical technology, energy technology, or aviation, as well as numerous others. Engineers and computer scientists must work hand-in-hand in system development. This is particularly true at the interfaces between networked computing systems and their physical environment - we speak of cyber-physical systems (CPS). Their proliferation and thus their importance for society as well as their complexity will continue to increase in the future as digitization progresses.

The Computer Science in Engineering program addresses cyber-physical systems with a combined, scientific education in the three pillars of computer science, mathematics, and engineering. In computer science, basic methods of software development, programming, and quality assurance are taught. In engineering, the fundamentals of electrical engineering and especially control as well as communications engineering are central to understand, characterize, and design interfaces to the physical world and digital networks in depth. Freedom in the advanced studies allows connecting points to other engineering disciplines and the latest computer science methods. Furthermore, methodical knowledge is imparted, so graduates can independently familiarize themselves with new technologies. Social skills for working in teams are also taught.

Study plans in (M) medical technology, (I) smart grid for energy systems, (E) embedded systems and (C) fundamentals of computation show possible focuses.

In this way, future-proof knowledge is acquired for almost all application areas.

Career prospects

Successful completion of the bachelor's degree program Computer Science in Engineering makes it possible, on the one hand, to take up a scientific master's degree program in Computer Science, Computer Science in Engineering, or a related subject. On the other hand, an early career entry in branches of trade, industry, and administration is possible. Graduates will primarily work as computer scientists or system developers of cyber-physical systems.

Learning target

The learning objectives listed below enable graduates to transfer their acquired specialist knowledge to new topics. They will be able to grasp and analyze problems in their discipline and solve them efficiently, either independently or in a team. Results can be assessed, evaluated, critically scrutinized and independent decisions can be made. The learning objectives are divided below into knowledge, skills, social competence and independence.

Knowledge

- Engineering Science: Graduates will know basic principles and methods of engineering with a focus in electrical engineering.
- Economics: Graduates know the basics and methods of economics.
 Computer Science: Graduates know basic methods and procedures for model building and problem solving in theoretical, practical and technical computer science.
- Mathematics: Graduates know the basics and methods of linear algebra, differential calculus in one and more variables, discrete mathematics, higher analysis, stochastics and numerics. They can describe these and outline their proofs.
- Bridging the gap between computer science and engineering: Graduates know basic methods and procedures to describe interfaces between
 engineering applications on the one hand and models of computer science on the other. Graduates are familiar with the basic features of
 information and communication technology systems, so-called cyber-physical systems. This includes relevant architectures of control systems,
 information transmission and storage, interaction mechanisms, sensors and actuators, and the extraction and processing of information,
 knowledge and insights from within the system.

Skills

- Engineering: Graduates are able to apply their knowledge of mathematical, scientific and systems engineering principles and methods to specific theoretical and practical problems and develop solutions.
- Computer Science: Graduates are able to develop instances of formal models in computer science using basic modeling approaches and to assess their computability and complexity. They can design software solutions and implement them using suitable programming tools. They can select, program, and integrate suitable hardware for the implementation.
- Mathematics: Graduates are able to solve problems from analysis, linear algebra, discrete mathematics, stochastics and numerics using the methods they have learned.
- Bridging the gap between computer science and engineering: Graduates will be able to identify interfaces between engineering disciplines and computer science, formalize and realize them. Graduates can implement software solutions for engineering applications. Graduates are able to realize simple cyber-physical systems.

Social competence

- Graduates are able to present the procedures and results of their work in written and oral form.
- Graduates are able to communicate with experts and laypersons about the contents and problems of engineering. Specifically, this conerns the interface between computer systems with the physical envrionment. Graduates can respond appropriately to questions, additions and comments.
- Graduates are able to work in groups. They can define, distribute, document, and integrate subtasks. They are able to make time arrangements and interact socially.

Independence

- Graduates are able to obtain necessary technical information and place it in the context of their knowledge.
- Graduates can realistically assess their existing competencies and work on deficits independently.
- Graduates are able to learn complex topics and work on problems and projects in a self-organized and self-motivated manner (lifelong learning in engineering practice).

Program structure

The curriculum of the Bachelor's degree in Computer Science and Engineering is structured as follows. In addition to the compulsory courses from core qualification, a minimum number of credit points must be taken from each of the areas of computer science, mathematics and engineering:

- 1. Core qualification: 138 credit points
- 2. Computer science: 12 credit
- 3. Mathematics & Engineering: 6 credit points

To deepen their studies, students can choose lectures from the entire catalog of technical events at the TUHH. A total of 12 credit points must be

achieved. The bachelor thesis is also rated with 12 credit points. This results in a total effort of 180 credit points.

The following four course plans describe special features of the IIW Bachelor's degree

E. Embedded systems

- 1. Core subjects in computer science
- Computer architecture
- Operating systems
 Core subjects: mathematics and engineering
 Electronic components
- 3. Additional technical courses
- Semiconductor circuit technology - Compiler construction

I. Smart grids

- 1. Core subjects in computer science
- Operating systems
- Software development
- 2. Core subjects: mathematics and engineering
- Electrical energy systems I
- 3. Additional technical courses
- Theoretical electrical engineering I - Electrical engineering III: network theory and transients

M. Medical systems

- 1. Core subjects in computer science Introduction to information security
- Software engineering
- 2. Core subjects: mathematics and engineering
- Introduction to medical technology systems 3. Additional technical courses
- Cyber-physical systems laboratory
- Computer architecture

C. Computational Foundations

- 1. Core subjects in computer science
- Functional programming
- Predictability and complexity
- 2. Core subjects: mathematics and engineering
- Combinatorial structures and algorithms
 Additional technical courses
- Solvers for sparse linear equation systems
- Mathematics IV

Core Qualification

Module M0561: Discre	ete Algebraic Structures			
Courses				
Title		Тур	Hrs/wk	СР
Discrete Algebraic Structures (L016	4)	Lecture	2	3
Discrete Algebraic Structures (L016	5)	Recitation Section (small)	2	3
Module Responsible	Prof. Antoine Mottet			
Admission Requirements	None			
Recommended Previous	Mathematics from High School.			
Knowledge				
Educational Objectives	After taking part successfully, students have re	eached the following learning results		
Professional Competence				
Knowledge	The students know the important basics of dis	screte algebraic structures including elementa	ry combinatorial	structures, monoids
	groups, rings, fields, finite fields, and vector sp	aces. They also know specific structures like su	ub sum-, and qu	otient structures and
	homomorphisms.			
CI-:!!-	Chudanha and abla to familiar and analysis has			
SKIIIS	Students are able to formalize and analyze bas	lic discrete algebraic structures.		
Personal Competence				
Social Competence	Students are able to solve specific problems al	one or in a group and to present the results ac	cordingly.	
4	Chudents and allo to accurate more larged	for an efficient of the state of the second st		l lucas da de la colo a
Autonomy	r Students are able to acquire new knowledge from specific standard books and to associate the acquired knowledge to oth classes.		knowledge to othe	
	classes.

Knowledge	
-	After taking part successfully, students have reached the following learning results
Professional Competence Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu Self-reliance, self-management, collaboration and professional and personnel management competences. The departme implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teachi areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competen level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechni complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechni academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making t transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of deal with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberat encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migrat studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semes 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a go oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging go oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. The differences are reflected in the practical examples used, in content topics that refer to different professional application contex and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leaders functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 locate selected specialized areas with the relevant non-technical mother discipline, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representat in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
	 In selected sub-areas students can apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specia discipline, to handle simple questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond t technical relationship to the subject.
Personal Competence	
Social Competence	Personal Competences (Social Skills)

	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	 to communicate a nontechnical item in a competent way in writen form or verbaly
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Title		Тур	Hrs/wk	СР	
Automata Theory and Formal Languages (L0332) Automata Theory and Formal Languages (L0507)		Lecture Recitation Section (small)	2	4 2	
Module Responsible					
Admission Requirements					
Recommended Previous	Participating students should be able to				
Knowledge	- specify algorithms for simple data structures (si	uch as e.g. arrays) to solve computation	nal problems		
	 apply propositional logic and predicate logic for 	specifying and understanding mathema	tical proofs		
	- apply the knowledge and skills taught in the mo	odule Discrete Algebraic Structures			
Educational Objectives	After taking part successfully, students have read	ched the following learning results			
Professional Competence		5 5			
Knowledge	Students can explain syntax, semantics, and de	ecision problems of propositional logic,	and they are able t	o give algorithms	
	solving decision problems. Students can show	correspondences to Boolean algebra.	Students can descri	be which application	
	problems are hard to represent with propositio	nal logic, and therefore, the students	can motivate predic	ate logic, and de	
	syntax, semantics, and decision problems for the	nis representation formalism. Students	can explain unificati	on and resolution	
	solving the predicate logic SAT decision problem.	. Students can also describe syntax, sem	nantics, and decision	problems for vari	
	kinds of temporal logic, and identify their appl				
	automata and can identify relationships to logi	- ,			
	deterministic and nondeterministic finite autor		-		
	formalism for which nondeterminism is more e problems require which expressivity, and, in add				
	problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suite for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automat				
	or grammars.	tents can describe the relationships bet	ween formalishis suc	in as logic, autoin	
	or grannals.				
Skills	Students can apply propositional logic as well as	predicate logic resolution to a given set	of formulas. Student	ts analyze applica	
	problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evalua				
	which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for				
	decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or deriv				
	grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language				
	emptiness problem in case of infinite words.				
Personal Competence					
Social Competence					
	 Students are able to work together in team 	ns. They are capable to use mathematics	s as a common langu	lage.	
	 In doing so, they can communicate new c 		cooperating partners	s. Moreover, they	
	design examples to check and deepen the	understanding of their peers.			
Autonomy					
	Students are capable of checking their un		eir own. They can sp	pecify open questi	
	precisely and know where to get help in soStudents have developed sufficient persist	-	riada in a goal ariar	atad mannar an h	
	problems.	stence to be able to work for longer pe		ited manner on n

Тур	Lecture
	2
CP	4
-	Independent Study Time 92, Study Time in Lecture 28
	Prof. Matthias Mnich
Language	
Cycle Content	2026
content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expres
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pum lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars
	back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verifica
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)
Literature	1. Logik für Informatiker Uwe Schöning, Spektrum, 5. Aufl.
	2. Logik für Informatiker Martin Kreuzer, Stefan Kühling, Pearson Studium, 2006
	3. Grundkurs Theoretische Informatik, Gottfried Vossen, Kurt-Ulrich Witt, Vieweg-Verlag, 2010.
	4. Principles of Model Checking, Christel Baier, Joost-Pieter Katoen, The MIT Press, 2007

Course L08	382: Management Tutorial			
Тур	Recitation Section (small)			
Hrs/wk	2			
СР	3			
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28			
Lecturer	Prof. Christoph Ihl, Katharina Roedelius			
Language	DE			
Cycle	WiSe/SoSe			
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.			
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on s selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	DrIng. Koojana Kuladinithi, Prof. Sibylle Fröschle
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these ba principles and an introduction to performance modelling are addressed using computing tasks and physical labs.
	In the second part of the lecture an introduction to Internet security is given.
	This class comprises:
	 Introduction to the Internet (TCP/IP model) Application layer protocols (HTTP, SMTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol IPv4 & IPv6, routing in the Internet) Data link layer with media access at the example of WLAN Introduction to Internet Security Security Aspects of Address Resolution (DNS/DNSSEC, ARP/SEND Communication Security (IPSec) - From Address Resolution to Routing (Securing BGP) Botnets + Firewalls
Literature	 Kurose, Ross, Computer Networking - A Top-Down Approach, 8th Edition, Addison-Wesley Kurose, Ross, Computernetzwerke - Der Top-Down-Ansatz, Pearson Studium; Auflage: 8. Auflage W. Stallings: Cryptography and Network Security: Principles and Practice, 6th edition
	Further literature is announced at the beginning of the lecture.

Title		Turn	Hrs/wk	СР	
Computer Engineering (L0321)		Typ Lecture	BIS/WK	4	
Computer Engineering (L0324)		Recitation Section (small)	1	2	
Module Responsible	Prof. Heiko Falk				
Admission Requirements	None				
Recommended Previous	Basic knowledge in electrical engineering				
Knowledge					
	After taking part successfully, students have rea	ched the following learning results			
Professional Competence					
-	This module deals with the foundations of the	functionality of computing systems. It cove	ers the lavers fror	n the assembly-lev	
	programming down to gates. The module include		, ,	, -	
	Introduction				
	Combinational logic: Gates, Boolean algeb		combinational net	works	
	Sequential logic: Flip-flops, automata, syst Tackhallagian foundations	ematic hardware design			
	 Technological foundations Computer arithmetic: Integer addition, sull 	straction multiplication and division			
	Computer arithmetic: Integer addition, subtraction, multiplication and division				
	 Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining Memories: Memory hierarchies, SRAM, DRAM, caches 				
	 Input/output: I/O from the perspective of t 		point connections	husses	
	······································	···· -, F.····b··· -, F.···· -, F.····			
Skills	The students perceive computer systems from the	ne architect's perspective, i.e., they identify	the internal struct	ture and the physi	
	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on				
	collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of				
	today's computing systems - from gates and circ	uits up to complete processors.			
	After successful completion of the module, the students are able to judge the interdependencies between a physical computer				
system and the software executed on it. In particular, they shall understand the consequences the		ces that the exec			
	on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to		enabled to evaluate		
	the impact that these low abstraction levels have	e on an entire system's performance and to	propose feasible o	options.	
Devecuel Competence					
Personal Competence	Students are able to solve similar problems along	a or in a group and to procent the results as	cordinaly		
Social Competence	Students are able to solve similar problems alone	e of in a group and to present the results ac	cordingly.		
Autonomy	Students are able to acquire new knowledge from	n specific literature and to associate this kn	owledge with othe	r classes.

	 Applications of correlation 		
	Linear time-invariant (LTI) systems		
	• Linearity		
ļ	l l		

- Time-invariance
- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- Properties of LTI-systems
- Causal systems
- Stable systems
- Memoryless systemsFourier Series and Fourier Transform
 - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
 - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
- Stability
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed-phase filters
- Linear phase filters

Admission Requirements	None			
Recommended Previous	Basic knowledge of Computer Science a	and Mathematics at the Bachelor's level.		
Knowledge				
Educational Objectives	After taking part successfully, students	have reached the following learning results		
Professional Competence				
Knowledge	The students are able to			
	 explicate a specific topic in the fi 	eld of Computer Science		
	 describe complex issues, 	en of computer science,		
	 present different views and evaluation 	uate in a critical way.		
	P			
Skills	The students are able to			
	 familiarize in a specific topic of C 	omputer Science in limited time,		
		specific topic and cite in a correct way,		
	 elaborate a presentation and giv 			
	 sum up the presentation in 10-15 			
	answer questions in the final disc	cussion.		
Demonstration of the second seco				
Personal Competence	The students are able to			
Social Competence				
	 elaborate and introduce a topic f 	or a certain audience,		
	 discuss the topic, content and str 	ructure of the presentation with the instructor,		
	 discuss certain aspects with the 	audience, and		
	 as the lecturer listen and respond 	d to questions from the audience.		
Autonomy	The students are able to			
	 define the task in question in an 	autonomous wav.		
	 develop the necessary knowledg 			
	 use appropriate work equipment 			
	guided by an instructor critically

Module M0803: Embe	dded Systems				
Courses					
Title			Тур	Hrs/wk	СР
Embedded Systems (L0805)			Lecture	3	3
Embedded Systems (L2938)			Project-/problem-based Le	arning 1	1
Embedded Systems (L0806)	1		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk				
Admission Requirements	None				
Recommended Previous	Computer Engineering				
Knowledge					
Educational Objectives	After taking part succes	sfully, students have reach	ed the following learning results		
Professional Competence					
Knowledge	Embedded systems can	be defined as information	processing systems embedded into en	closing products. T	his course teaches t
	foundations of such sys	stems. In particular, it deal	s with an introduction into these syster	ns (notions, comm	on characteristics) a
	their specification lang	uages (models of comput	ation, hierarchical automata, specificat	ion of distributed	systems, task grapl
	specification of real-tim	e applications, translations	between different models).		
	Another part covers th	a bardwara of omboddad	systems: Sensors A/D and D/A sensy	ortors roal time s	anable communicati
	Another part covers the hardware of embedded systems: Sonsors, A/D and D/A converters, real-time capable communication				
	hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also features ar				
	introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-				
				ransiormations of	specifications, energ
	efficient realizations, co	ompilers for embedded pro	cessors) is covered.		
Skills	After having attended	the course, students shall	be able to realize simple embedded s	ystems. The stude	nts shall realize wh
	relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall be				
	able to compare differe	ent models of computations	and feasible techniques for system-le	vel design. They sh	nall be able to judge
	which areas of embedde	ed system design specific r	isks exist.		
Personal Competence					
Social Competence	Students are able to sol	lve similar problems alone	or in a group and to present the results	accordingly.	
		·			
Autonomy	Students are able to acc	quire new knowledge from	specific literature and to associate this	knowledge with oth	ner classes.

Knowledge	Calculus			
	 Discrete algebraic structures (combinatorics) 			
	 Propositional logic 			
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence	Arter taking part successibility, stadents have redened in			
-				
Knowledge	 Students can name the basic concepts in Stocha 	stics. They are able to explain them us	sing appropriate e	examples.
	Students can discuss logical connections between	n these concepts. They are capable	of illustrating th	ese connections w
	the help of examples.			
	 They know proof strategies and can reproduce the 	em.		
Skills				
54115	Students can model problems from stochastics	with the help of the concepts studie	ed in this course	. Moreover, they a
	capable of solving them by applying established	methods.		
	 Students are able to discover and verify further I 	ogical connections between the conce	pts studied in the	e course.
	 For a given problem, the students can develop 	and execute a suitable approach, a	nd are able to c	ritically evaluate
	results.			
Personal Competence				
Social Competence	 Students are able to work together (e.g. on their 	regular home work) in heterogeneou	sly composed tea	ams (i.e., teams fr
	different study programs and background knowle			
	 In doing so, they can communicate new concept 			
	design examples to check and deepen the under	standing of their peers.		
Autonomy	 Students are capable of checking their understand 	nding of complex concepts on their of	own. They can sp	ecify open questio
	precisely and know where to get help in solving t		-,	
	 Students can put their knowledge in relation to t 			
	Students have developed sufficient persistence		s in a goal-orien	ted manner on h
	problems.		g

Lecturer	NN
Language	DE
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	 First and second order systems, poles and zeros, impulse and step response
	• Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants
	Internal model principle
	Root locus techniques
	Root locus plots
	Root locus design of PID controllers
	Frequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	 Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	Root locus and frequency response of time delay systems Social provide a statement of the second systems
	Smith predictor
	Digital control
	Sampled-data systems, difference equations
	Tustin approximation, digital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course

Recommended Previous	 Mathematics 1-3 					
Knowledge	 Signals and Systems 					
Educational Objectives	After taking part successfully, students have	e reached the following learning results				
Professional Competence						
Knowledge	The students know and understand the fund	damental building blocks of a communications sy	stem. They can	describe and anal		
	the individual building blocks using knowledge of signal and system theory as well as the theory of stochastic processes. The are					
	aware of the essential resources and evalu	ation criteria of information transmission and are	e able to design	and evaluate a b		
	communications system.					
	The students are familiar with the contents	of lecture and tutorials. They can explain and app	ly them to new p	oroblems.		
			,			
Skills	The students are able to design and evaluate a basic communications system. In particular, they can estimate the require					
	resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communication					
	system such as bandwidth efficiency or bit e	error rate and to decide for a suitable transmission	n method.			
Personal Competence						
Social Competence	The students can jointly solve specific problems.					
Autonomy	The students are able to acquire relevan	t information from appropriate literature sour	ces. They can o	ontrol their level		
hatonomy	omy The students are able to acquire relevant information from appropriate literature sources. They can control the knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Gerhard Bauch
Language	DE/EN
Cycle	WiSe
Content	 Introduction to communications engineering Open Systems Interconnection (OSI) reference model Components of a digital communications system Fundamentals of signals and systems
	 Analog and digital signals Principles of Analog-to-digital (A/D) conversion Deterministic and random signals
	Power and energy of signals Linear time-invariant (LTI) systems Quadrature amplitude modulation (QAM) Introduction to stochastics
	 Probability theory Random experiments Probability model, probability space, sample space
	 Definitions of probability Probability according to Bernoulli/Laplace Probability according to van Mises, relative frequency Bertrand's paradox Axiomatic definition of probability according to Kolmogorov Probability of disjoint and non-disjoint events
	 Venn diagrams

- Continuous and discrete random variables
 - Probability density function (pdf), cululative distribution function (cdf)
 - Expected value, mean, median, quadratic mean, variance, standard deviation, higher moments
 - Examples for probability distributions (Bernoulli distribution, two-point distribution, uniform distribution, Gaussian (normal) distribution. Rayleigh distribution. etc.)
- Multiple random variables
 - Conditional probability, joint probability
 - Conditional and joint probability density function
 - Bayes' rule
 - Correlation coefficient
 - Two-dimensional Gaussian distribution
 - Statistically independent, uncorrelated and orthogonal random variables
 - Independent identically distributed (iid) random variables
 - Properties of expected value and variance
 - Covariance
 - Probability density function (pdf) and cumulative distribution function (cdf) of the sum of statistically independent random variables
 - Central limit theorem
- Probability density functions (pdfs) in data transmission
- Continuous-time and discrete-time random processes
 - Examples for random processes
 - Ensemble average and time average
 - Ergodic random processes
 - Quadratic mean and variance
 - Probability density function (pdf) and cumulative distribution function (cdf)
 - Joint probability density function (pdf) and joint cumulative distribution function (cdf)
 - Statistically independent, uncorrelated and orthogonal random processes
 - Stationary random processes
 - Correlation functions: Autocorrelation function, crosscorrelation function, average autocorrelation function of nonstationary random processes, autocorrelation and crosscorrelation function of stationary processes, autocovariance function, crosscovariance function
 - Autocorrelation matrix, crosscorrelation matrix, autocovariance matrix, crosscovariance matrix
 - Pseudo-noise sequences, example: Code division multiple access (CDMA)
 - Autocorrelation function, power spectral density (psd), signal power, Einstein-Wiener-Khintchine relations
 - White (Gaussian) noise
- Filtering of random processes by LTI systems
 - Transformation of the probability density function (pdf)
 - Transformation of the mean
 - Transformation of the power spectral density (psd)
 - Correlation functions of input and output signal
 - · Filtering of white Gaussian noise
 - Bandlimitation for noise power limitation
 - Preemphasis and deemphasis
- Companding, mu-law, A-law
- Functions of random variables
 - Transformation of probabilities and of the probability density function (pdf)
 - Application: Non-linear amplifiers
- Functions of two random variables
 - Probability density function
 - Examples: Rayleigh distribution, magnitude of an OFDM signal, magnitude of a received radio signal
- Transmission channels and channel models
 - Wireline channels: Telephone cable, coaxial cable, optical fiber
 - Wireless channels: Fading radio channel, underwater channels
 - Frequency-flat and frequency-selective channels
 - Additive white Gaussian noise (AWGN) channel
 - Signal to noise power ratio (SNR)
 - Discrete-time channel models
 - Discrete memoryless channels (DMC)
- Analog-to-digital conversion
 - Sampling
 - Sampling theorem
 - Pulse modulation
 - Pulse-amplitude modulation (PAM)
 - Pulse-duration modulation (PDM), pulse-width modulation (PWM)
 - Pulse-position modulation (PPM)
 - Pulse-code modulation (PCM)
 - Quantization
 - Linear quantizaton, midtread and midrise characteristic
 - Quantization error, quantization noise
 - Signal-to-quantization noise ratio
 - Non-linear quantization, compressor characteristics, mu-law, A-law
 - Speech transmission with PCM
 - Differential pulse-code modulation (DPCM)
 - Linear prediction according to the minimum mean squared error (MMSE) criterion.
 - DPCM with forward prediction and backward prediction

	SNR gain of DPCM over PCM
	 Delta modulation
	Fundamentals of information theory and coding
	 Definitions of information: Self-information, entropy
	 Binary entropy function
	Source coding theorem
	Source coding: Huffman code
	Mutual information and channel capacity
	Channel capacity of the AWGN channel and the binary input AWGN channel
	Channel coding theorem
	• Principles of channel coding: Code rate and data rate, Hamming distance, minimum Hamming distance, error
	detection and error correction
	 Examples for channel codes: Block codes and convolutional codes, repetition code, single parity check code,
	Hamming code, Turbo codes
	Combinatorics
	 Variation with and without repetition
	 Combination with and without repetition
	Permutation, Permutation of multisets
	 Word error probabilities of linear block codes
	Baseband transmission
	 Pulse shaping: Non-return to zero (NRZ) rectangular pulses, Manchester pulses, raised-cosine pulses, square-root
	raised-cosine pulses, Gaussian pulses
	 Transmit signal energy, average energy per symbol
	 Power spectral density (psd) of baseband signals
	 Definitions of signal bandwidth
	Bandwidth efficiency
	Intersymbol interference (ISI)
	 First and second Nyquist criterion
	• Eye patterns
	Receive filter design: Matched filter
	Matched-filter receiver and correlation receiver
	 Square-root Nyquist pulse shaping
	Discrete-time AWGN channel model
	Maximum a posteriori probability (MAP) and maximum likelihood (ML) detection
	Bit error probability in AWGN channels for binary antipodal and on-off signaling
	Band-pass transmission via carrier modulation
	 Amplitude modulation, frequency modulation, phase modulation
	 Linear digital modulation methods: On-off keying (OOK), phase-shift keying (PSK), amplitude shift keying (ASK),
	quadrature amplitude shift keying (QAM)

Content	Bridging the gap between disciplines and moving from theory to practice are essential in the Computer Science in Engineering programme. Exactly the relevant skills are learned in the IIW internship. A software program, an embedded system or cyber physical system is developed during the course of the project. The respective lecturer provides the concrete task description. Participating students work as a team to solve the task. This induces a typical project flow as it occurs in enterprises as well. Typical steps like defining a specification, creating a hardware-software-architecture as well as implementation and testing are mandatory. Students are also responsible for project planning, defining and assigning sub tasks to team members. Common development tools supporting planning, management and realization are used within the project.			
Literature	Wird durch die jeweiligen DozentInnen zur Verfügung gestellt. Supplied by the respective lecturer.

Specialization I. Computer Science

Module M0731: Funct	ional Program	ning				
Courses						
Title				Тур	Hrs/wk	СР
Functional Programming (L0624)				Lecture	2	2
Functional Programming (L0625)				Recitation Section (large)	2	2
Functional Programming (L0626)				Recitation Section (small)	2	2
Module Responsible	Prof. Sibylle Schupp					
Admission Requirements	None					
Recommended Previous	Discrete mathematics	s at high-school l	evel			
Knowledge						
Educational Objectives	After taking part succ	essfully, student	s have reached the follow	ving learning results		
Professional Competence						
Knowledge	Students apply the pr	rinciples, constru	icts, and simple design te	chniques of functional program	nming. They dem	onstrate their ability
	to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.					
Skills	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.					
Personal Competence						
Social Competence	Students practice pe programs orally. They			y explain problems and solut	ions to their pee	r. They defend their
Autonomy	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Content	Quantum computing is among the most exciting applications of quantum mechanics. Quantum algorithms can solve computational problems efficiently that have a prohibitive runtime on traditional computers. Such problems include, for instance, factoring of integer numbers or energy estimation problems from quantum chemistry and material science. This course provides an introduction to the topic. An emphasize will be put on conceptual and mathematical aspects.
Literature	 Course specific lecture notes will be provided Nielsen and Chuang, Quantum Computation and Quantum Information Sevag Gharibian's lecture notes

Title Compiler Construction (L0703)		Typ Lecture	Hrs/wk 2	CP 2
Compiler Construction (L0704)		Recitation Section (small)	2	4
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous Knowledge	 Practical programming experience Automata theory and formal languages Functional programming or procedural Object-oriented programming, algorith Basic knowledge of software engineeri 	programming ms, and data structures		
Educational Objectives	After taking part successfully, students have	reached the following learning results		
Professional Competence				
	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language run and test them. They choose appropriate internal languages and representations and justify their choice. They explain an modify implementations of existing compiler frameworks and experiment with frameworks and tools. Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. The organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithm that analyze or synthesize software.			
Personal Competence				
	Students develop the software in a team. Th their software in class. They communicate in	ey explain problems and solutions to their tea English.	m members. They	v present and defend

	 Object-oriented program 	inning, algorithins, and uata su	uctures		
Educational Objectives	After taking part successfully,	students have reached the follo	owing learning results		
Professional Competence					
Knowledge	Students explain the phases	of the software life cycle,	describe the fundamental terr	minology and c	oncepts of softwa
	engineering, and paraphrase t	he principles of structured soft	ware development. They give ex	amples of softwa	are-engineering tas
	of existing large-scale system	ns. They write test cases for	different test strategies and de	evise specification	ons or models usi
	different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis				
	maintenance, and project plan	ning.			
Skills	For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. The				
Skiis	choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and fin				
	errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interfac				
	specifications.				
Personal Competence					
Social Competence	Students practice peer program	nming. They explain problems	and solutions to their peer. They	communicate ir	English.
Autonomy	Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously an				
-	adjust it appropriately. Workin		-		5

Modulo M1225, Electr	rical Power Systems I: Introduction	to Electrical Dower Systems			
Module M1255: Electi	ical Power Systems I: Introduction	to Electrical Power Systems			
Courses					
Title		Тур	Hrs/wk	СР	
-	ction to Electrical Power Systems (L1670)	Lecture	3	4	
Electrical Power Systems I: Introdu	ction to Electrical Power Systems (L1671)	Recitation Section (small)	2	2	
Module Responsible	Prof. Christian Becker				
Admission Requirements	None				
Recommended Previous	Fundamentals of Electrical Engineering				
Knowledge					
Educational Objectives	After taking part successfully, students have reache	ed the following learning results			
Professional Competence					
Knowledge	Students are able to give an overview of convention	nal and modern electric power systems. Th	ney can explain i	n detail and critical	
	evaluate technologies of electric power generation,	transmission, storage, and distribution as	well as integrati	on of equipment in	
	electric power systems.				
Skills	With completion of this module the students are		olications of the	design, integratio	
	development of electric power systems and to asse	ss the results.			
Personal Competence					
-	The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results				
	front of others.		·		
Autonomy	Students can independently tap knowledge of the e	mphasis of the lectures.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture	e 70			
Credit points	6				
Course achievement	None				
Examination	Written exam				
Examination duration and	90 - 150 minutes				
scale					
Assignment for the	General Engineering Science (German program, 7 s	emester): Specialisation Electrical Enginee	ring: Elective Co	mpulsory

Electronic Devices (L0721)			Proje	ct-/problem-based Learning	2	2
Module Responsible	Prof. Hoc Khiem Trieu					
Admission Requirements	None					
Recommended Previous	Atomic model and qua	intum theory, electrical	currents in solid state m	aterials, basics in solid-stat	te physics	
Knowledge	Successful participation of Physics for Engineers and Materials in Electrical Engineering or courses with equivalent contents					lent contents
Educational Objectives	After taking part succe	essfully, students have r	eached the following lea	rning results		
Professional Competence						
Knowledge						
	Students are able					
	Students are able					
	 to represent the 	e basics of semiconducto	or physics,			
	 to explain the or 	perating principle of imp	portant semiconductor d	evices,		
	 to outline devic 	e characteristics and eq	uivalent circuits as well	as to explain their derivatio	on and	
	 to outline device characteristics and equivalent circuits as well as to explain their derivation and 					
	 to discuss the li 	mitation of device mode	els.			
Skills						
	Students are capable					
	 to apply devices 	s in basic circuits				
	e to upply defice.	s in sable circuits,				
	 to realize the pl 	nysical context and to so	olve complex problems b	oy oneself		
Personal Competence						
Social Competence	Students are able to p	repare and perform the	ir lab experiments in tea	m work as well as to prese	ent and discus	ss the results in fro
	of audience.					
Autonomy	Students are capable t	to acquire knowledge ba	ased on literature in orde	er to prepare their experime	ents.

5: Cams
5.1 Introduction
5.2 Classification of Cams
5.3 Types of Followers
5.4 Cam Profile
5.5 Follower Different Motions
5.6 Cam Profile with Knife-Edge Follower
5.7 Cam Profile with Roller Follower
5.8 Cam Profile with Translational Flat-Faced Follower
5.9 Cam Profile with Swinging Roller Follower

- 5.10 Analytical Methods
- 5.11 Radius of Curvature and Undercutting
- 5.12 Cam Size
- 5.13 Initial Design of a Cam and its Profile Driving by Software

6: Static and Dynamic Force Analysis

- 6.1 Introduction
- 6.2 Static Force Analysis and Equilibrium
- 6.3 Dynamic Force Analysis
- 6.4 Force Convention and Free Body Diagrams
- 6.5 Principle of Superposition
- 6.6 Force Analyses in Softwares and drive the equations

7: Balancing

- 7.1 Introduction
- 7.2 Balancing of Rotating Masses and Analytical Method for Balancing
- 7.3 Reciprocating Masses
- 7.4 Reciprocating Engine
- 7.5 Primary Balance
- 7.6 Multicylinder In-Line Engines
- 7.7 Secondary Balancing
- 7.8 Balancing of Radial Engines, V-Engines, and Rotors
- 7.9 Static Balance
- 7.10 Dynamic Balance
- 7.11 Flexible Rotor Balancing
- 7.12 Balancing Machines
- 7.13 Balancing Analyse in Software

8: Gyroscopic and Precessional Motion

- 8.1 Introduction
- 8.2 Precessional Motion
- 8.3 Fundamentals of Gyroscopic Motion
- 8.4 Gyroscopic Couple of a Plane Disc
- 8.5 Effect of Gyroscopic Couple on Bearings
- 8.6 Gyroscopic Couple on an Aeroplane
- 8.7 Stability of a Two and Four-Wheel Vehicle Taking a Turn
- 8.8 Effect of Precession on a Disc Fixed at a Certain Angle to a Rotating Shaft

8.9 Gyroscopic Analysis in Software

9: Gear Trains

- 9.1 Introduction
- 9.2 Types of Gear Trains
- 9.3 Determination of Speed Ratio of Planetary Gear Trains
- 9.4 Sun and Planet Gears and Their equations
- 9.5 Epicyclics with Two Inputs
- 9.6 Compound Epicyclic Gear Train
- 9.7 Epicyclic Bevel Gear Trains
- 9.8 Torque in Epicyclic Gear Trains
- 9.9 Gear Movement analyses in Software

10: Kinematic Synthesis of Planar Mechanisms

10.1 Introduction

10.2 Movability (or Mobility) or Number Synthesis

Module Manual B.Sc. "Computer Science in Engineering"

	10.3 Transmission Angle in Different Mechanisms
	10.4 Limit Positions and Dead Centres of a Four-Bar Mechanism
	10.5 Dimensional Synthesis
	10.6 Graphical Method of Synthesis
	10.7 Design of Different Mechanisms by Relative Pole Method
	10.8 Errors in Kinematic Synthesis of Mechanisms
	10.9 Analytical Method (Function Generation, Chebyshev's Spacing, Freudenstein's Equation)
	10.10 Implementing Synthesis Methods in Softwares
	11: Mechanical Vibrations
	11.1 Introduction
	11.2 Definitions
	11.3 Types of Free Vibrations
	11.3 Types of Free Vibrations 11.4 Basic Elements of Vibrating System
	11.5 Degrees of Freedom
	11.6 Simple Harmonic Motion
	11.7 Free Longitudinal Vibrations
	11.8 Effect of the Spring Mass and Equivalent Stiffness
	11.9 Critical Speed
	11.10 Geared System

Knowledge					
Educational Objectives	After taking part successfully, students have reached t	he following learning results			
Professional Competence					
Knowledge	e With the completion of this modul the students obtain profound knowledge of environmental technology. They are able to descri the behaviour of chemicals in the environment. Students can give an overview of scientific disciplines involved. They can expl. terms and allocate them to related methods.				
	Additional students acquire in-depth knowledge of important cause-effect chains of potential environmental problems which r occur from production processes, projects or construction measures. They have knowledge about the methodological diversity are competent in dealing with different methods and instruments to assess environmental impacts. Besides the students are to estimate the complexity of these environmental processes as well as uncertainties and difficulties with their measurement.				
Skills Students are able to propose appropriate management and mitigation measures for environmental problems. The determine geochemical parameters and to assess the potential of pollutants to migrate and transform. The stud work out well founded opinions on how Environmental Technology contributes to sustainable development, and the and defend these opinons in front of and against the group.			students are able		
	The students are able to select a suitable method for the respective case from the variety of assessment methods. Thereby they can develop suitable solutions for managing and mitigating environmental problems in a business context. They are able to carry out Life Cycle Impact Assessments independently and can apply the software programs OpenLCA and the database Ecolnvent After finishing the course the students have the competence to critically judge research results or other publications or environmental impacts.				
Personal Competence					
Social Competence					
	Due to the selected lecture topics, the students receive concept of sustainability. Their sensitivity and consci awareness of their future social responsibilities in their	ousness towards these subjects a			
Autonomy	The students learn to research, process and present a scientific topic independently. They are able to carry out independer scientific work. They can solve an environmental problem in a business context and are able to judge results of other publications

Knowledge				
Educational Objectives	After taking part successfully, students have reach	ed the following learning results		
Professional Competence				
Knowledge				
	 Students can name the basic concepts in Ma 	athematics IV. They are able to explain the	m using appropri	ate examples.
	 Students can discuss logical connections be 	etween these concepts. They are capable	of illustrating th	ese connections w
	the help of examples.			
	 They know proof strategies and can reprodu 	ice them		
Skills	· Chudente con model problems in Mathemat	ice N/ with the belo of the concents studi	ad in this second	Maraayar thay
	 Students can model problems in Mathemat 		ed in this course	e. Moreover, they
	capable of solving them by applying establis	shed methods.		
	 Students are able to discover and verify furt 	her logical connections between the conce	pts studied in the	e course.
	 For a given problem, the students can deviate 	velop and execute a suitable approach, a	ind are able to c	ritically evaluate
	results.			
Personal Competence				
Social Competence				
	 Students are able to work together in teams 	5. They are capable to use mathematics as	a common langu	age.
	 In doing so, they can communicate new con 	ncepts according to the needs of their coo	perating partners	. Moreover, they o
	design examples to check and deepen the u	inderstanding of their peers.		
Autonomy	 Students are capable of checking their under 	erstanding of complex concepts on their of	wn They can sr	ecify open questi
			win. They can sp	eeny open questi
	precisely and know where to get help in solv	-		
	 Students have developed sufficient persister 	ence to be able to work for longer period	is in a goal-orien	ted manner on h
	problems.

Course L0293: Electrical Mac	hines and Actuators
Тур	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Thorsten Kern, Dennis Kähler
Language	DE
Cycle	SoSe
Content	Electric field: Coulomb's law, flux (field) line, work, potential, capacitor, energy, force, capacitive actuators
	Magnetic field: force, flux line, Ampere´s law, field at bounderies, flux, magnetic circuit, hysteresis, induction, self-induction, mutual inductance, transformer, electromagnetic actuators
	Synchronous machines, construction and layout, equivalent single line diagrams, no-load and short-cuircuit characteristics, vector diagrams, motor and generator operation, stepper motors
	DC-Machines: Construction and layout, torque generation mechanismen, torque vs speed characteristics, commutation,
	Asynchronous Machines. Magnetic field, construction and layout, equivalent single line diagram, complex stator current diagram (Heylands´diagram), torque vs. speed characteristics, rotor layout (squirrel-cage vs. sliprings),
	Drives with variable speed, inverter fed operation, special drives
Literature	Hermann Linse, Roland Fischer: "Elektrotechnik für Maschinenbauer", Vieweg-Verlag; Signatur der Bibliothek der TUHH: ETB 313

Theoretical Electrical Engineering I	: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I	: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	None			
Recommended Previous	Basic principles of electrical engineering and	advanced mathematics		
Knowledge				
	After telving port successfully, students have			
	After taking part successfully, students have	reached the following learning results		
Professional Competence	Students can explain the fundamental formu	lac relations and methods of the theory of t	indonondant o	lastromagnetic fiel
Knowledge		of electrostatic, magnetostatic, and current of		
		of complex electromagnetic fields by means		
		s for the theory of time-independent electron		-
	these.		-	
Skills	Students can apply Maxwell's Equations	in integral notation in order to solve I	nighly symmetrica	I, time-independe
	electromagnetic field problems. Furthermore	e, they are capable of applying a variety of	methods that requ	iire solving Maxwe
	Equations for more general problems. The st	udents can assess the principal effects of give	n time-independen	t sources of fields a
		ce meaningful quantities for the characterizat		-
	electrical flow fields (capacitances, inductanc	es, resistances, etc.) from given fields and dir	nension them for p	ractical application
Personal Competence				
Social Competence	Students are able to work together on subject	t related tasks in small groups. They are able	to present their re	esults effectively (e
	during exercise sessions).			
4	Chudanta an analysis to asthe an an inf			
Autonomy	Students are capable to gather necessary inf			
		means of activities that accompany the lecture exam. Based on respective feedback, studen		
		inections between their knowledge obtained		
	lectures (e.g. Electrical Engineering I, Linear

Course L0180: Theoretical El	ectrical Engineering I: Time-Independent Fields
Тур	Lecture
Hrs/wk	
СР	
	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Christian Schuster
Cycle	
	- Maxwell's Equations in integral and differential notation
	- Boundary conditions
	- Laws of conservation for energy and charge
	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

	Thesis
Module M-001: Bache	lor Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge Skills	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their cours of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solv subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions of technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably ar in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientifi problem. The students can apply the essential techniques of scientific work to research of their own.
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
Credit points	12
Course achievement	None
