

Module Manual

Master of Science (M.Sc.)

Computational Science and Engineering

Cohort: Winter Term 2018

Updated: 10th March 2022

Table of Contents

Table of Contents	2
Program description	4
Core Qualification	5
Module M0523: Business & Management	5
Module M0524: Nontechnical Elective Complementary Courses for Master	6
Module M0804: Research Project and Seminar	8
Specialization Information and Communication Technology	9
Module M1244: Technical Complementary Course for IIWMS (according to Subject Specific Regulations)	9
Module M0667: Algorithmic Algebra	10
Module M0676: Digital Communications	13
Module M0586: Efficient Algorithms	15
Module M0836: Communication Networks	17
Module M0926: Distributed Algorithms	19
Module M0942: Software Security	20
Module M1336: Soft Computing	22
Module M0753: Software Verification	23
Module M0637: Advanced Concepts of Wireless Communications	25
Module M1318: Wireless Sensor Networks	27
Module M1337: Curves, Codes and Cryptosystems	29
Module M0837: Simulation of Communication Networks	30
Module M1248: Compilers for Embedded Systems	31
Module M0673: Information Theory and Coding	33
Module M0943: Network Security	35
Module M0924: Software for Embedded Systems	37
Module M0556: Computer Graphics	39
Module M0758: Application Security	41
Module M1301: Software Testing	43
Module M1397: Model Checking - Proof Engines and Algorithms	45
Module M0711: Numerical Mathematics II	47
Module M1405: Randomised Algorithms and Random Graphs	49
Module M0551: Pattern Recognition and Data Compression	51
Module M0913: CMOS Nanoelectronics with Practice	53
Module M1395: Real-Time Systems	55
Module M0910: Advanced System-on-Chip Design (Lab)	57
Module M0919: Laboratory: Analog and Digital Circuit Design	58
Module M0839: Traffic Engineering	60
Module M0733: Software Analysis	62
Specialization Systems Engineering and Robotics	64
Module M1244: Technical Complementary Course for IIWMS (according to Subject Specific Regulations)	64
Module M0563: Robotics	65
Module M0846: Control Systems Theory and Design	67
Module M0667: Algorithmic Algebra	69
Module M0550: Digital Image Analysis	72
Module M0677: Digital Signal Processing and Digital Filters	74
Module M0881: Mathematical Image Processing	76
Module M0633: Industrial Process Automation	78
Module M0586: Efficient Algorithms	80
Module M0676: Digital Communications	82
Module M1336: Soft Computing	84
Module M0926: Distributed Algorithms	85
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	86
Module M1302: Applied Humanoid Robotics	88
Module M0747: Microsystem Design	89
Module M0840: Optimal and Robust Control	91
Module M0551: Pattern Recognition and Data Compression	93
Module M0630: Robotics and Navigation in Medicine	95
Module M1310: Discrete Differential Geometry	97
Module M0673: Information Theory and Coding	98
Module M0711: Numerical Mathematics II	100
Module M0627: Machine Learning and Data Mining	102
Module M1397: Model Checking - Proof Engines and Algorithms	104
Module M0552: 3D Computer Vision	106
Module M0832: Advanced Topics in Control	108
Module M0738: Digital Audio Signal Processing	110
Module M0623: Intelligent Systems in Medicine	112
Module M0746: Microsystem Engineering	114
Module M0768: Microsystems Technology in Theory and Practice	116
Module M1249: Numerical Methods for Medical Imaging	118
Module M0549: Scientific Computing and Accuracy	119
Specialization Scientific Computing	121
Module M1244: Technical Complementary Course for IIWMS (according to Subject Specific Regulations)	121

Module M0716: Hierarchical Algorithms	122
Module M0586: Efficient Algorithms	124
Module M0955: Matrix Theory	126
Module M0720: Matrix Algorithms	127
Module M0808: Finite Elements Methods	129
Module M1150: Continuum Mechanics	131
Module M0751: Vibration Theory	133
Module M1152: Modeling Across The Scales	134
Module M0692: Approximation and Stability	136
Module M0714: Numerical Treatment of Ordinary Differential Equations	138
Module M1281: Advanced Topics in Vibration	140
Module M0752: Nonlinear Dynamics	141
Module M0711: Numerical Mathematics II	142
Module M0807: Boundary Element Methods	144
Module M0653: High-Performance Computing	146
Module M1405: Randomised Algorithms and Random Graphs	147
Module M1268: Linear and Nonlinear Waves	149
Module M1020: Numerics of Partial Differential Equations	150
Module M1151: Material Modeling	152
Module M0549: Scientific Computing and Accuracy	154
Thesis	156
Module M-002: Master Thesis	156

Program description

Content

Core Qualification

Module M0523: Business & Management

Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students are able to find their way around selected special areas of management within the scope of business management. Students are able to explain basic theories, categories, and models in selected special areas of business management. Students are able to interrelate technical and management knowledge. <i>Skills</i> <ul style="list-style-type: none"> Students are able to apply basic methods in selected areas of business management. Students are able to explain and give reasons for decision proposals on practical issues in areas of business management. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems <i>Autonomy</i> <ul style="list-style-type: none"> Students are capable of acquiring necessary knowledge independently by means of research and preparation of material. 	
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0524: Nontechnical Elective Complementary Courses for Master	
Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<p>The Nontechnical Academic Programms (NTA)</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p>Specialized Competence (Knowledge)</p> <p>Students can</p> <ul style="list-style-type: none"> • explain specialized areas in context of the relevant non-technical disciplines, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
Skills	<p>Professional Competence (Skills)</p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> • apply basic and specific methods of the said scientific disciplines, • question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence <i>Social Competence</i>	<p>Personal Competences (Social Skills)</p>

<p><i>Autonomy</i></p>	<p>Students will be able</p> <ul style="list-style-type: none"> • to learn to collaborate in different manner, • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge. <p>Personal Competences (Self-reliance)</p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
<p>Workload in Hours</p>	<p>Depends on choice of courses</p>
<p>Credit points</p>	<p>6</p>

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0804: Research Project and Seminar				
Courses				
Title	Typ		Hrs/wk	CP
Project Work (L1761)	Projection Course		10	15
Seminar (L0817)	Seminar		2	3
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge and techniques in the chosen field of specialization.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	Students are able to acquire advanced knowledge in a specific field of Computer Science or a closely related subject.			
<i>Skills</i>	Students are able to work self-dependent in a field of Computer Science or a closely related field.			
Personal Competence <i>Social Competence</i>				
<i>Autonomy</i>				
Workload in Hours	Independent Study Time 372, Study Time in Lecture 168			
Credit points	18			
Course achievement	None			
Examination	Study work			
Examination duration and scale	Presentation of a current research topic (25-30 min and 5 min discussion).			
Assignment for the Following Curricula	Computer Science: Core Qualification: Compulsory Computational Science and Engineering: Core Qualification: Compulsory Information and Communication Systems: Core Qualification: Compulsory			

Course L1761: Project Work	
Typ	Projection Course
Hrs/wk	10
CP	15
Workload in Hours	Independent Study Time 310, Study Time in Lecture 140
Lecturer	Dozenten des SD E
Language	DE/EN
Cycle	WiSe
Content	Current research topics of the chosen specialization.
Literature	Aktuelle Literatur zu Forschungsthemen aus der gewählten Vertiefungsrichtung. / Current literature on research topics of the chosen specialization.

Course L0817: Seminar	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dozenten des SD E
Language	DE/EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> Seminar presentations by enrolled students about the research work carried out by the students Active participation in discussions
Literature	Wird vom Veranstalter bekanntgegeben.

Specialization Information and Communication Technology

Module M1244: Technical Complementary Course for IIWMS (according to Subject Specific Regulations)

Courses

Title	Typ	Hrs/wk	CP
Module Responsible	Prof. Volker Turau		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students acquire advanced knowledge in a technical subject available at TUHH.</p> <p>The students acquire professional competence in a technical subject available at TUHH.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Depends on choice of courses		
Credit points	12		
Assignment for the Following Curricula	Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory		

Module M0667: Algorithmic Algebra			
Courses			
Title	Typ	Hrs/wk	CP
Algorithmic Algebra (L0422)	Lecture	3	5
Algorithmic Algebra (L0423)	Recitation Section (small)	1	1
Module Responsible	Dr. Prashant Batra		
Admission Requirements	None		
Recommended Previous Knowledge	Mathe I-III (Real analysis, computing in Vector spaces , principle of complete induction) Diskrete Mathematik I (group, rings, ideals, fields; euclidean algorithm)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	Students can discuss logical connections between the following concepts and explain them by means of examples: Smith normal form, Chinese remainder theorem, grid point sets, integer solution of inequality systems. Students are able to access independently further logical connections between the concepts with which they have become familiar and are able to verify them. Students are able to develop a suitable solution approach to given problems, to pursue it and to evaluate the results critically, such as in solving multivariate equation systems and in grid point theory.		
<i>Skills</i>			
Personal Competence <i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Oral exam		
Examination duration and scale	30 min

Courses				
Title	Typ		Hrs/wk	CP
Digital Communications (L0444)	Lecture		2	3
Digital Communications (L0445)	Recitation Section (large)		1	2
Laboratory Digital Communications (L0646)	Practical Course		1	1
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Mathematics 1-3 Signals and Systems Fundamentals of Communications and Random Processes 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.</p> <p><i>Skills</i> The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Courses				
Title	Typ		Hrs/wk	CP
Efficient Algorithms (L0120)	Lecture		2	3
Efficient Algorithms (L1207)	Recitation Section (small)		2	3
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	None			
Recommended Previous Knowledge	Programming in Matlab and/or C Basic knowledge in discrete mathematics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students are able to explain the basic theory and methods of network algorithms and in particular their data structures. They are able to analyze the computational behavior and computing time of linear programming algorithms as well network algorithms. Moreover the students can distinguish between efficiently solvable and NP-hard problems.</p> <p><i>Skills</i> The students are able to analyze complex tasks and can determine possibilities to transform them into networking algorithms. In particular they can efficiently implement basic algorithms and data structures of LP- and network algorithms and identify possible weaknesses. They are able to distinguish between different efficient data structures and are able to use them appropriately.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.</p> <p><i>Autonomy</i> The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.</p>

Module M0836: Communication Networks				
Courses				
Title	Typ		Hrs/wk	CP
Analysis and Structure of Communication Networks (L0897)	Lecture		2	2
Selected Topics of Communication Networks (L0899)	Project-/problem-based Learning		2	2
Communication Networks Exercise (L0898)	Project-/problem-based Learning		1	2
Module Responsible	Prof. Andreas Timm-Giel			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Fundamental stochastics Basic understanding of computer networks and/or communication technologies is beneficial 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.</p> <p><i>Skills</i> Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.</p> <p><i>Autonomy</i> Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.</p>			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Presentation			
Examination duration and scale	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.			
Assignment for the Following Curricula	<p>Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Kernfächer Computer Science: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory</p> <p>Mechatronics: Technical Complementary Course: Elective Compulsory</p> <p>Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory</p>

Course L0899: Selected Topics of Communication Networks	
Typ	Project-/problem-based Learning
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Andreas Timm-Giel
Language	EN
Cycle	WiSe
Content	Example networks selected by the students will be researched on in a PBL course by the students in groups and will be presented in a poster session at the end of the term.
Literature	<ul style="list-style-type: none"> • see lecture

Course L0898: Communication Networks Exercise	
Typ	Project-/problem-based Learning
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Andreas Timm-Giel
Language	EN
Cycle	WiSe
Content	Part of the content of the lecture Communication Networks are reflected in computing tasks in groups, others are motivated and addressed in the form of a PBL exercise.
Literature	<ul style="list-style-type: none"> • announced during lecture

Title	Typ		Hrs/wk	CP
Distributed Algorithms (L1071)	Lecture		2	3
Distributed Algorithms (L1072)	Recitation Section (large)		2	3
Module Responsible	Prof. Volker Turau			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Algorithms and data structures Distributed systems Discrete mathematics Graph theory 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students know the main abstractions of distributed algorithms (synchronous/asynchronous model, message passing and shared memory model). They are able to describe complexity measures for distributed algorithms (round , message and memory complexity). They explain well known distributed algorithms for important problems such as leader election, mutual exclusion, graph coloring, spanning trees. They know the fundamental techniques used for randomized algorithms.</p> <p><i>Skills</i> Students design their own distributed algorithms and analyze their complexity. They make use of known standard algorithms. They compute the complexity of randomized algorithms.</p>			
Personal Competence				
<i>Social Competence</i>

Module M1336: Soft Computing				
Courses				
Title	Typ		Hrs/wk	CP
Soft Computing (L1869)	Lecture		4	6
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous Knowledge	Bachelor in Computer Science. Basics in higher mathematics are inevitable, like calculus, linear algebra, graph theory, and optimization.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	Students are able to formalize, compute, and analyze belief networks, alignments of sequences, hidden Markov models, phylogenetic tree models, neural networks, and fuzzy controllers. In particular, inference and learning in belief networks are important topics that the students should be able to master.			
<i>Skills</i>	Students can apply the relevant algorithms and determine their complexity, and they can make use of the statistics language R.			
Personal Competence <i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge to other fields.

Software Verification (L0629)	Lecture		2	3
Software Verification (L0630)	Recitation Section (small)		2	3
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Automata theory and formal languages Computational logic Object-oriented programming, algorithms, and data structures Functional programming or procedural programming Concurrency 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.</p> <p>Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.</p> <p>Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.</p> <p>Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.</p>

Module M0637: Advanced Concepts of Wireless Communications				
Courses				
Title		Typ	Hrs/wk	CP
Advanced Concepts of Wireless Communications (L0297)		Lecture	3	4
Advanced Concepts of Wireless Communications (L0298)		Recitation Section (large)	1	2
Module Responsible		Dr. Rainer Grünheid		
Admission Requirements		None		
Recommended Previous Knowledge		<ul style="list-style-type: none">• Lecture "Signals and Systems"• Lecture "Fundamentals of Telecommunications and Stochastic Processes"• Lecture "Digital Communications"		
Educational Objectives		After taking part successfully, students have reached the following learning results		
Professional Competence		<p><i>Knowledge</i> Students are able to explain the general as well as advanced principles and techniques that are applied to wireless communications. They understand the properties of wireless channels and the corresponding mathematical description. Furthermore, students are able to explain the physical layer of wireless transmission systems. In this context, they are proficient in the concepts of multicarrier transmission (OFDM), modulation, error control coding, channel estimation and multi-antenna techniques (MIMO). Students can also explain methods of multiple access. On the example of contemporary communication systems (UMTS, LTE) they can put the learnt content into a larger context.</p> <p><i>Skills</i> Using the acquired knowledge, students are able to understand the design of current and future wireless systems. Moreover, given certain constraints, they can choose appropriate parameter settings of communication systems. Students are also able to assess the suitability of technical concepts for a given application.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students can jointly elaborate tasks in small groups and present their results in an adequate fashion.</p> <p><i>Autonomy</i> Students are able to extract necessary information from given literature sources and put it into the perspective of the lecture. They can continuously check their level of expertise with the help of accompanying measures (such as online tests, clicker questions, exercise tasks) and, based on that, to steer their learning process accordingly. They can relate their acquired knowledge to topics of other lectures, e.g., "Fundamentals of Communications and Stochastic Processes" and "Digital Communications".</p>

Language	EN
Cycle	SoSe
Content	<p>The lecture deals with technical principles and related concepts of mobile communications. In this context, the main focus is put on the physical and data link layer of the ISO-OSI stack.</p> <p>In the lecture, the transmission medium, i.e., the mobile radio channel, serves as the starting point of all considerations. The characteristics and the mathematical descriptions of the radio channel are discussed in detail. Subsequently, various physical layer aspects of wireless transmission are covered, such as channel coding, modulation/demodulation, channel estimation, synchronization, and equalization. Moreover, the different uses of multiple antennas at the transmitter and receiver, known as MIMO techniques, are described. Besides these physical layer topics, concepts of multiple access schemes in a cellular network are outlined.</p> <p>In order to illustrate the above-mentioned technical solutions, the lecture will also provide a system view, highlighting the basics of some contemporary wireless systems, including UMTS/HSPA, LTE, LTE Advanced, and WiMAX.</p>

Content	In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture. Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the course increasingly complex networks and protocols are considered and their performance is determined by simulation.

Module M1248: Compilers for Embedded Systems				
Courses				
Title	Typ		Hrs/wk	CP
Compilers for Embedded Systems (L1692)	Lecture		3	4
Compilers for Embedded Systems (L1693)	Project-/problem-based Learning		1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous Knowledge	Module "Embedded Systems" C/C++ Programming skills			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<p>The relevance of embedded systems increases from year to year. Within such systems, the amount of software to be executed on embedded processors grows continuously due to its lower costs and higher flexibility. Because of the particular application areas of embedded systems, highly optimized and application-specific processors are deployed. Such highly specialized processors impose high demands on compilers which have to generate code of highest quality. After the successful attendance of this course, the students are able</p> <ul style="list-style-type: none"> to illustrate the structure and organization of such compilers, to distinguish and explain intermediate representations of various abstraction levels, and to assess optimizations and their underlying problems in all compiler phases. <p>The high demands on compilers for embedded systems make effective code optimizations mandatory. The students learn in particular,</p> <ul style="list-style-type: none"> which kinds of optimizations are applicable at the source code level, how the translation from source code to assembly code is performed, which kinds of optimizations are applicable at the assembly code level, how register allocation is performed, and how memory hierarchies can be exploited effectively. <p>Since compilers for embedded systems often have to optimize for multiple objectives (e.g., average- or worst-case execution time, energy dissipation, code size), the students learn to evaluate the influence of optimizations on these different criteria.</p>			
<i>Skills</i>	<p>After successful completion of the course, students shall be able to translate high-level program code into machine code. They will be enabled to assess which kind of code optimization should be applied most effectively at which abstraction level (e.g., source or assembly code) within a compiler.</p> <p>While attending the labs, the students will learn to implement a fully functional compiler including optimizations.</p>			
Personal Competence <i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.</p> <p>The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.</p> <p>The students can jointly solve specific problems.</p> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Courses			
Title	Typ	Hrs/wk	CP
Randomised Algorithms and Random Graphs (L2010)	Lecture	2	3
Randomised Algorithms and Random Graphs (L2011)	Recitation Section (large)	2	3
Module Responsible	Prof. Anusch Taraz		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can describe basic concepts in the area of Randomized Algorithms and Random Graphs such as random walks, tail bounds, fingerprinting and algebraic techniques, first and second moment methods, and various random graph models. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can apply them. <i>Skills</i> <ul style="list-style-type: none"> Students can model problems with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to explore and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable technique, and are able to critically evaluate the results. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are able to work together in teams. They are capable to establish a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. <i>Autonomy</i> <ul style="list-style-type: none"> Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.

Module M0551: Pattern Recognition and Data Compression				
Courses				
Title	Pattern Recognition and Data Compression (L0128)		Typ	Hrs/wk
			Lecture	4
				6
Module Responsible	Prof. Rolf-Rainer Grigat			
Admission Requirements	None			
Recommended Previous Knowledge	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can name the basic concepts of pattern recognition and data compression.			
	Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.			
<i>Skills</i>	Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.			
Personal Competence				
<i>Social Competence</i>	k.A.			
<i>Autonomy</i>	Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	60 Minutes, Content of Lecture and materials in StudIP			
Assignment for the Following Curricula	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory International Management and Engineering: Specialisation II. Courses				
Title	Typ		Hrs/wk	CP
CMOS Nanoelectronics (L0764)	Lecture		2	3
CMOS Nanoelectronics (L1063)	Practical Course		2	2
CMOS Nanoelectronics (L1059)	Recitation Section (small)		1	1
Module Responsible	Prof. Matthias Kuhl			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of MOS devices and electronic circuits			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can explain the functionality of very small MOS transistors and explain the problems occurring due to scaling-down the minimum feature size. Students are able to explain the basic steps of processing of very small MOS devices. Students can exemplify the functionality of volatile and non-volatile memories und give their specifications. Students can describe the limitations of advanced MOS technologies. Students can explain measurement methods for MOS quality control. <i>Skills</i> <ul style="list-style-type: none"> Students can quantify the current-voltage-behavior of very small MOS transistors and list possible applications. Students can describe larger electronic systems by their functional blocks. Students can name the existing options for the specific applications and select the most appropriate ones. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students can team up with one or several partners who may have different professional backgrounds Students are able to work by their own or in small groups for solving problems and answer scientific questions. <i>Autonomy</i> <ul style="list-style-type: none"> Students are able to assess their knowledge in a realistic manner. The students are able to draw scenarios for estimation of the impact of advanced mobile electronics on the future lifestyle of the society.

Module M1395: Real-Time Systems				
Courses				
Title		Typ	Hrs/wk	CP
Real-Time Systems (L1974)		Lecture	3	4
Real-Time Systems (L1975)		Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous Knowledge	Computer Engineering, Basic knowledge in embedded systems			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	Real-Time applications are an important class of embedded systems such as driver assistance systems in modern automobiles, medical devices, process plants and aircrafts. Their main feature is that they are required to complete work and deliver services on a timely basis. This course aims at introducing fundamental theories and concepts about real-time systems. As an introduction, the lecture describes several classes of real-time applications (e.g. digital controllers, signal processing, real-time databases and multimedia). It introduces the main characteristics of real-time systems and explains the relationship between timing requirements and functional requirements. Next, this is followed by a reference model used to characterize the main features of real-time applications. Several scheduling approaches (e.g clock-driven and priority-driven) and timing analysis techniques used for the verification and validation of the timing properties of real-time systems are introduced and discussed.		
		The last part of the course will focus on the timing behavior of communications networks taking into account properties such as the end-to-end latency and the delay jitter, and on shared resources access control and synchronization in multiprocessor/multicore architectures.		
	Skills	Students have solid notions about the basic properties of common real-time systems and the methods used to analyze them.		
		Students are able to characterize and model the timing features of a real-time system. They use schedulability analysis techniques to compute the response time of systems and check if this meets the timing requirements (I.e deadline) of the system.		
Personal Competence	Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.		
	Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

Module M0910: Advanced System-on-Chip Design (Lab)				
Courses				
Title	Advanced System-on-Chip Design (L1061)		Typ	Hrs/wk
			Project-/problem-based Learning	3
				6
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous Knowledge	Successful completion of the practical FPGA lab of module "Computer Architecture" is a mandatory prerequisite.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> This module provides in-depth, hands-on experience on advanced concepts of computer architecture. Using the Hardware Description Language VHDL and using reconfigurable FPGA hardware boards, students learn how to design complex computer systems (so-called systems-on-chip, SoCs), that are commonly found in the domain of embedded systems, in actual hardware.</p> <p>Starting with a simple processor architecture, the students learn to how realize instruction-processing of a computer processor according to the principle of pipelining. They implement different styles of cache-based memory hierarchies, examine strategies for dynamic scheduling of machine instructions and for branch prediction, and finally construct a complex MPSoC system (multi-processor system-on-chip) that consists of multiple processor cores that are connected via a shared bus.</p> <p><i>Skills</i> Students will be able to analyze, how highly specific and individual computer systems can be constructed using a library of given standard components. They evaluate the interferences between the physical structure of a computer system and the software executed thereon. This way, they will be enabled to estimate the effects of design decision at the hardware level on the performance of the entire system, to evaluate the whole and complex system and to propose design options to improve a system.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature, to transform this knowledge into actual implementations of complex hardware structures, and to associate this knowledge with contents of other classes.</p>			
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42			
Credit points	6			
Course achievement	None			
Examination	Subject theoretical and practical work

Module M0919: Laboratory: Analog and Digital Circuit Design			
Courses			
Title	Typ	Hrs/wk	CP
Laboratory: Analog Circuit Design (L0692)	Practical Course	2	3
Laboratory: Digital Circuit Design (L0694)	Practical Course	2	3
Module Responsible	Prof. Matthias Kuhl		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge of semiconductor devices and circuit design		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can explain the structure and philosophy of the software framework for circuit design. Students can determine all necessary input parameters for circuit simulation. Students know the basics physics of the analog behavior. Students are able to explain the functions of the logic gates of their digital design. Students can explain the algorithms of checking routines. Students are able to select the appropriate transistor models for fast and accurate simulations. <i>Skills</i> <ul style="list-style-type: none"> Students can activate and execute all necessary checking routines for verification of proper circuit functionality. Students are able to run the input desks for definition of their electronic circuits. Students can define the specifications of the electronic circuits to be designed. Students can optimize the electronic circuits for low-noise and low-power. Students can develop analog circuits for mobile medical applications. Students can define the building blocks of digital systems. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are trained to work through complex circuits in teams. Students are able to share their knowledge for efficient design work. Students can help each other to understand all the details and options of the design software. Students are aware of their limitations regarding circuit design, so they do not go ahead, but they involve experts when required. Students can present their design approaches for easy checking by more experienced experts. <i>Autonomy</i> <ul style="list-style-type: none"> Students are able to realistically judge the status of their knowledge and to define actions for improvements when necessary. Students can break down their design work in sub-tasks and can schedule the design work in a realistic way. Students can handle the complex data structures of their design task and document it in consice but understandable way. Students are able to judge the amount of work for a major design project.

Courses				
Title	Typ		Hrs/wk	CP
Software Analysis (L0631)	Lecture		2	3
Software Analysis (L0632)	Recitation Section (small)		2	3
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge of software-engineering activities • Discrete algebraic structures • Object-oriented programming, algorithms, and data structures • Functional programming or Procedural programming 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.</p> <p>Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.</p> <p>Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.</p> <p>Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.</p>

Recommended Previous Knowledge	Introduction to Control Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively They can explain the significance of a minimal realisation They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection They can extend all of the above to multi-input multi-output systems They can explain the z-transform and its relationship with the Laplace Transform They can explain state space models and transfer function models of discrete-time systems They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation They can explain how a state space model can be constructed from a discrete-time impulse response <i>Skills</i> <ul style="list-style-type: none"> Students can transform transfer function models into state space models and vice versa They can assess controllability and observability and construct minimal realisations They can design LQG controllers for multivariable plants They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate They can identify transfer function models and state space models of dynamic systems from experimental data They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink) Personal Competence <i>Social Competence</i> <p>Students can work in small groups on specific problems to arrive at joint solutions.</p> <i>Autonomy</i> <p>Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p> <p>They can assess their knowledge in weekly on-line tests and thereby control their learning progress.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0550: Digital Image Analysis				
Courses				
Title	Typ		Hrs/wk	CP
Digital Image Analysis (L0126)	Lecture		4	6
Module Responsible	Prof. Rolf-Rainer Grigat			
Admission Requirements	None			
Recommended Previous Knowledge	System theory of one-dimensional signals (convolution and correlation, sampling theory, interpolation and decimation, Fourier transform, linear time-invariant systems), linear algebra (Eigenvalue decomposition, SVD), basic stochastics and statistics (expectation values, influence of sample size, correlation and covariance, normal distribution and its parameters), basics of Matlab, basics in optics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	Students can <ul style="list-style-type: none"> Describe imaging processes Depict the physics of sensorics Explain linear and non-linear filtering of signals Establish interdisciplinary connections in the subject area and arrange them in their context Interpret effects of the most important classes of imaging sensors and displays using mathematical methods and physical models. 			
<i>Skills</i>	Students are able to <ul style="list-style-type: none"> Use highly sophisticated methods and procedures of the subject area Identify problems and develop and implement creative solutions. <p>Students can solve simple arithmetical problems relating to the specification and design of image processing and image analysis systems.</p> <p>Students are able to assess different solution approaches in multidimensional decision-making areas.</p> <p>Students can undertake a prototypical analysis of processes in Matlab.</p>			
Personal Competence <i>Social Competence</i>	k.A.			
<i>Autonomy</i>	Students can solve image analysis tasks independently using the relevant literature.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	60 Minutes, Content of Lecture and materials in StudIP

Title	Typ		Hrs/wk	CP
Digital Signal Processing and Digital Filters (L0446)	Lecture		3	4
Digital Signal Processing and Digital Filters (L0447)	Recitation Section (large)		1	2
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Mathematics 1-3 Signals and Systems Fundamentals of signal and system theory as well as random processes. Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform) 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account.</p> <p>The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, they can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods of spectrum estimation and to take the effects of a limited observation window into account.</p> <p>The students can jointly solve specific problems.</p> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Efficient Algorithms (L0120)	Lecture		2	3
Efficient Algorithms (L1207)	Recitation Section (small)		2	3
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	None			
Recommended Previous Knowledge	Programming in Matlab and/or C Basic knowledge in discrete mathematics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	The students are able to explain the basic theory and methods of network algorithms and in particular their data structures. They are able to analyze the computational behavior and computing time of linear programming algorithms as well network algorithms. Moreover the students can distinguish between efficiently solvable and NP-hard problems. The students are able to analyze complex tasks and can determine possibilities to transform them into networking algorithms. In particular they can efficiently implement basic algorithms and data structures of LP- and network algorithms and identify possible weaknesses. They are able to distinguish between different efficient data structures and are able to use them appropriately. The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner. The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Module M1336: Soft Computing				
Courses				
Title	Typ		Hrs/wk	CP
Soft Computing (L1869)	Lecture		4	6
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None			
Recommended Previous Knowledge	Bachelor in Computer Science. Basics in higher mathematics are inevitable, like calculus, linear algebra, graph theory, and optimization.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	Students are able to formalize, compute, and analyze belief networks, alignments of sequences, hidden Markov models, phylogenetic tree models, neural networks, and fuzzy controllers. In particular, inference and learning in belief networks are important topics that the students should be able to master.			
<i>Skills</i>	Students can apply the relevant algorithms and determine their complexity, and they can make use of the statistics language R.			
Personal Competence <i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge to other fields.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Oral exam			
Examination duration and scale	25 min

Module M0629: Intelligent Autonomous Agents and Cognitive Robotics				
Courses				
Title	Typ		Hrs/wk	CP
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture		2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)		2	2
Module Responsible	Rainer Marrone			
Admission Requirements	None			
Recommended Previous Knowledge	Vectors, matrices, Calculus			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.			
<i>Skills</i>	Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.			
Personal Competence				
<i>Social Competence</i>	Students are able to discuss their solutions to problems with others. They communicate in English			
<i>Autonomy</i>	Students are able of checking their understanding of complex concepts by solving varaints of concrete problems			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Microsystem Design (L0683)	Lecture		2	3
Microsystem Design (L0684)	Practical Course		3	3
Module Responsible	Prof. Manfred Kasper			
Admission Requirements	None			
Recommended Previous Knowledge	Mathematical Calculus, Linear Algebra, Microsystem Engineering			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p>The students know about the most important and most common simulation and design methods used in microsystem design. The scientific background of finite element methods and the basic theory of these methods are known.</p> <p>Students are able to apply simulation methods and commercial simulators in a goal oriented approach to complex design tasks. Students know to apply the theory in order achieve estimates of expected accuracy and can judge and verify the correctness of results. Students are able to develop a design approach even if only incomplete information about material data or constraints are available. Student can make use of approximate and reduced order models in a preliminary design stage or a system simulation.</p> <p>Students are able to solve specific problems alone or in a group and to present the results accordingly. Students can develop and explain their solution approach and subdivide the design task to subproblems which are solved separately by group members.</p> <p>Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.</p>

Courses			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Classical control (frequency response, root locus) State space methods Linear algebra, singular value decomposition 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can explain the significance of the matrix Riccati equation for the solution of LQ problems. They can explain the duality between optimal state feedback and optimal state estimation. They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints. They can explain how an LQG design problem can be formulated as special case of an H2 design problem. They can explain how model uncertainty can be represented in a way that lends itself to robust controller design They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant. They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities. <i>Skills</i> <ul style="list-style-type: none"> Students are capable of designing and tuning LQG controllers for multivariable plant models. They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it. They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design. They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller. They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them. They can carry out all of the above using standard software tools (Matlab robust control toolbox). Personal Competence <i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions. <i>Autonomy</i> Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0551: Pattern Recognition and Data Compression				
Courses				
Title	Pattern Recognition and Data Compression (L0128)		Typ	Hrs/wk
			Lecture	4
				6
Module Responsible	Prof. Rolf-Rainer Grigat			
Admission Requirements	None			
Recommended Previous Knowledge	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can name the basic concepts of pattern recognition and data compression.			
	Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.			
<i>Skills</i>	Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.			
Personal Competence				
<i>Social Competence</i>	k.A.			
<i>Autonomy</i>	Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.

Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Mathematics 1-3 Probability theory and random processes Basic knowledge of communications engineering (e.g. from lecture "Fundamentals of Communications and Random Processes") 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.</p> <p>The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.</p> <p>The students can jointly solve specific problems.</p> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	<p>Students can explain the difference between instance-based and model-based learning approaches, and they can enumerate basic machine learning technique for each of the two basic approaches, either on the basis of static data, or on the basis of incrementally incoming data . For dealing with uncertainty, students can describe suitable representation formalisms, and they explain how axioms, features, parameters, or structures used in these formalisms can be learned automatically with different algorithms. Students are also able to sketch different clustering techniques. They depict how the performance of learned classifiers can be improved by ensemble learning, and they can summarize how this influences computational learning theory. Algorithms for reinforcement learning can also be explained by students.</p>		
<i>Skills</i>	<p>Student derive decision trees and, in turn, propositional rule sets from simple and static data tables and are able to name and explain basic optimization techniques. They present and apply the basic idea of first-order inductive learning. Students apply the BME, MAP, ML, and EM algorithms for learning parameters of Bayesian networks and compare the different algorithms. They also know how to carry out Gaussian mixture learning. They can contrast kNN classifiers, neural networks, and support vector machines, and name their basic application areas and algorithmic properties. Students can describe basic clustering techniques and explain the basic components of those techniques. Students compare related machine learning techniques, e.g., k-means clustering and nearest neighbor classification. They can distinguish various ensemble learning techniques and compare the different goals of those techniques.</p>

Recommended Previous Knowledge	Signals and Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Die Studierenden können die grundlegenden Verfahren und Methoden der digitalen Audiosignalverarbeitung erklären. Sie können die wesentlichen physikalischen Effekte bei der Sprach- und Audiosignalverarbeitung erläutern und in Kategorien einordnen. Sie können einen Überblick der numerischen Methoden und messtechnischen Charakterisierung von Algorithmen zur Audiosignalverarbeitung geben. Sie können die erarbeiteten Algorithmen auf weitere Anwendungen im Bereich der Informationstechnik und Informatik abstrahieren.		
<i>Skills</i>	The students will be able to apply methods and techniques from audio signal processing in the fields of mobile and internet communication. They can rely on elementary algorithms of audio signal processing in form of Matlab code and interactive JAVA applets. They can study parameter modifications and evaluate the influence on human perception and technical applications in a variety of applications beyond audio signal processing. Students can perform measurements in time and frequency domain in order to give objective and subjective quality measures with respect to the methods and applications.		
Personal Competence			
<i>Social Competence</i>	The students can work in small groups to study special tasks and problems and will be enforced to present their results with adequate methods during the exercise.		
<i>Autonomy</i>	The students will be able to retrieve information out of the relevant literature in the field and put them into the context of the lecture. They can relate their gathered knowledge and relate them to other lectures (signals and systems, digital communication systems, image and video processing, and pattern recognition). They will be prepared to understand and communicate problems and effects in the field audio signal processing.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	45 min		
Assignment for the Following Curricula	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory		

Course L0650: Digital Audio Signal Processing	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Udo Zölzer
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Introduction (Studio Technology, Digital Transmission Systems, Storage Media, Audio Components at Home) • Quantization (Signal Quantization, Dither, Noise Shaping, Number Representation) • AD/DA Conversion (Methods, AD Converters, DA Converters, Audio Processing Systems, Digital Signal Processors, Digital Audio Interfaces, Single-Processor Systems, Multiprocessor Systems) • Equalizers (Recursive Audio Filters, Nonrecursive Audio Filters, Multi-Complementary Filter Bank) • Room Simulation (Early Reflections, Subsequent Reverberation, Approximation of Room Impulse Responses) • Dynamic Range Control (Static Curve, Dynamic Behavior, Implementation, Realization Aspects) • Sampling Rate Conversion (Synchronous Conversion, Asynchronous Conversion, Interpolation Methods) • Data Compression (Lossless Data Compression, Lossy Data Compression, Psychoacoustics, ISO-MPEG1 Audio Coding)
Literature	<p>- U. Zölzer, Digitale Audiosignalverarbeitung, 3. Aufl., B.G. Teubner, 2005 .</p> <p>- U. Zölzer, Digitale Audio Signal Processing, 2nd Edition, J. Wiley & Sons, 2005.</p> <p>- U. Zölzer (Ed), Digital Audio Effects, 2nd Edition, J. Wiley & Sons, 2011.</p>

Courses				
Title		Typ	Hrs/wk	CP
Intelligent Systems in Medicine (L0331)		Lecture	2	3
Intelligent Systems in Medicine (L0334)		Project Seminar	2	2
Intelligent Systems in Medicine (L0333)		Recitation Section (small)	1	1
Module Responsible		Prof. Alexander Schlaefer		
Admission Requirements		None		
Recommended Previous Knowledge		<ul style="list-style-type: none">• principles of math (algebra, analysis/calculus)• principles of stochastics• principles of programming, Java/C++ and R/Matlab• advanced programming skills		
Educational Objectives		After taking part successfully, students have reached the following learning results		
Professional Competence		<p><i>Knowledge</i> The students are able to analyze and solve clinical treatment planning and decision support problems using methods for search, optimization, and planning. They are able to explain methods for classification and their respective advantages and disadvantages in clinical contexts. The students can compare different methods for representing medical knowledge. They can evaluate methods in the context of clinical data and explain challenges due to the clinical nature of the data and its acquisition and due to privacy and safety requirements.</p> <p><i>Skills</i> The students can give reasons for selecting and adapting methods for classification, regression, and prediction. They can assess the methods based on actual patient data and evaluate the implemented methods.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.</p> <p><i>Autonomy</i> The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.</p>

Admission Requirements	None			
Recommended Previous Knowledge	Programming in Matlab and/or C Basic knowledge in discrete mathematics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	The students are able to explain the basic theory and methods of network algorithms and in particular their data structures. They are able to analyze the computational behavior and computing time of linear programming algorithms as well network algorithms. Moreover the students can distinguish between efficiently solvable and NP-hard problems. The students are able to analyze complex tasks and can determine possibilities to transform them into networking algorithms. In particular they can efficiently implement basic algorithms and data structures of LP- and network algorithms and identify possible weaknesses. They are able to distinguish between different efficient data structures and are able to use them appropriately. The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner. The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Credit points	6		
Course achievement	None		
Examination	Oral exam		
Examination duration and scale	30 min		
Assignment for the Following Curricula	Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory		

Course L0123: Numerical Analysis and Matrix Theory	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Siegfried Rump
Language	DE
Cycle	WiSe
Content	Selected chapters of matrix theory
Literature	<p>R.A. Horn and Ch. Johnson, Matrix Analysis. Cambridge University Press, 1985</p> <p>M. Fiedler: Special matrices and their applications in numerical mathematics. Martinus Nijhoff Publishers, Dordrecht, 1986</p> <p>G.H. Golub, Ch. Van Loan: Matrix Computations. third edition. Johns Hopkins University Press, Baltimore, 1996</p>

Course L1209: Numerical Analysis and Matrix Theory	
Typ	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Siegfried Rump
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M0720: Matrix Algorithms				
Courses				
Title	Typ		Hrs/wk	CP
Matrix Algorithms (L0984)	Lecture		2	3
Matrix Algorithms (L0985)	Recitation Section (small)		2	3
Module Responsible	Dr. Jens-Peter Zemke			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> Mathematics I - III Numerical Mathematics I/ Numerics Basic knowledge of the programming languages Matlab and C 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students are able to</p> <ol style="list-style-type: none"> name, state and classify state-of-the-art Krylov subspace methods for the solution of the core problems of the engineering sciences, namely, eigenvalue problems, solution of linear systems, and model reduction; state approaches for the solution of matrix equations (Sylvester, Lyapunov, Riccati). <p><i>Skills</i> Students are capable to</p> <ol style="list-style-type: none"> implement and assess basic Krylov subspace methods for the solution of eigenvalue problems, linear systems, and model reduction; assess methods used in modern software with respect to computing time, stability, and domain of applicability; adapt the approaches learned to new, unknown types of problem. <p>Personal Competence</p> <p><i>Social Competence</i> Students can</p> <ul style="list-style-type: none"> develop and document joint solutions in small teams; form groups to further develop the ideas and transfer them to other areas of applicability; form a team to develop, build, and advance a software library. <p><i>Autonomy</i> Students are able to</p> <ul style="list-style-type: none"> correctly assess the time and effort of self-defined work; assess whether the supporting theoretical and practical exercises are better solved individually or in a team; define test problems for testing and expanding the methods; assess their individual progress and, if necessary, to ask questions and seek help.

Module M0808: Finite Elements Methods				
Courses				
Title	Typ		Hrs/wk	CP
Finite Element Methods (L0291)	Lecture		2	3
Finite Element Methods (L0804)	Recitation Section (large)		2	3
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.</p> <p><i>Skills</i> The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.</p>

Module M1150: Continuum Mechanics				
Courses				
Title	Typ		Hrs/wk	CP
Continuum Mechanics (L1533)	Lecture		2	3
Continuum Mechanics Exercise (L1534)	Recitation Section (small)		2	3
Module Responsible	Prof. Christian Cyron			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of linear continuum mechanics as taught, e.g., in the module Mechanics II (forces and moments, stress, linear strain, free-body principle, linear-elastic constitutive laws, strain energy).			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<p>The students can explain the fundamental concepts to calculate the mechanical behavior of materials.</p> <p>The students can set up balance laws and apply basics of deformation theory to specific aspects, both in applied contexts as in research contexts.</p> <p>The students are able to develop solutions, to present them to specialists in written form and to develop ideas further.</p> <p>The students are able to assess their own strengths and weaknesses. They can independently and on their own identify and solve problems in the area of continuum mechanics and acquire the knowledge required to this end.</p>

Assignment for the Following Curricula	<p>Computer Science: Specialisation Intelligence Engineering: Elective Compulsory</p> <p>Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Kernfächer Mathematik (2 Kurse): Elective Compulsory</p> <p>Technomathematics: Specialisation I. Mathematics: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory</p>		

Course L0568: Numerical Mathematics II	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Sabine Le Borne, Dr. Jens-Peter Zemke, Dr. Patricio Farrell
Language	DE/EN
Cycle	SoSe
Content	<ol style="list-style-type: none"> 1. Error and stability: Notions and estimates 2. Interpolation: Rational and trigonometric interpolation 3. Quadrature: Gaussian quadrature, orthogonal polynomials 4. Linear systems: Perturbation theory of decompositions, structured matrices 5. Eigenvalue problems: LR-, QD-, QR-Algorithmus 6. Krylov space methods: Arnoldi-, Lanczos methods
Literature	<ul style="list-style-type: none"> • Stoer/Bulirsch: Numerische Mathematik 1, Springer • Dahmen, Reusken: Numerik für Ingenieure und Naturwissenschaftler, Springer

Course L0569: Numerical Mathematics II	
Typ	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Sabine Le Borne, Dr. Patricio Farrell
Language	DE/EN
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Module M0807: Boundary Element Methods				
Courses				
Title	Typ		Hrs/wk	CP
Boundary Element Methods (L0523)	Lecture		2	3
Boundary Element Methods (L0524)	Recitation Section (large)		2	3
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.</p> <p><i>Skills</i> The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	No	20 %	Midterm	
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Energy Systems: Core Qualification: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Mechanical Engineering and Management: Specialisation Product Development and Production: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Product Development, Materials and Production: Core Qualification: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Theoretical Mechanical Engineering: Core Qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory			

Course L0523: Boundary Element Methods	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Otto von Estorff
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> - Boundary value problems - Integral equations - Fundamental Solutions - Element formulations - Numerical integration - Solving systems of equations (statics, dynamics) - Special BEM formulations - Coupling of FEM and BEM - Hands-on Sessions (programming of BE routines) - Applications
Literature	Gaul, L.; Fiedler, Ch. (1997): Methode der Randelemente in Statik und Dynamik. Vieweg, Braunschweig, Wiesbaden Bathe, K.-J. (2000): Finite-Elemente-Methoden. Springer Verlag, Berlin

Module M0653: High-Performance Computing				
Courses				
Title	Typ		Hrs/wk	CP
Fundamentals of High-Performance Computing (L0242)	Lecture		2	3
Fundamentals of High-Performance Computing (L1416)	Project-/problem-based Learning		2	3
Module Responsible	Prof. Thomas Rung			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Basic knowledge in usage of modern IT environment • Programming skills 			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	Students are able to outline the fundamentals of numerical algorithms for high-performance computers by reference to modern hardware examples. Students can explain the relation between hard- and software aspects for the design of algorithms.			
<i>Skills</i>	Student can perform a critical assesment of the computational efficiency of simulation approaches.			
Personal Competence <i>Social Competence</i>	Students are able to develop and code algorithms in a team.			
<i>Autonomy</i>				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	1.5h			
Assignment for the Following Curricula	Electrical Engineering: Specialisation Modeling and Simulation: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Naval Architecture and Ocean Engineering: Core Qualification: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory			

Course L0242: Fundamentals of High-Performance Computing	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Thomas Rung
Language	DE/EN
Cycle	SoSe
Content	Fundamentals of modern hardware architectur, critical hard- & software aspects for efficient processing of exemplary algorithms, concepts for shared- and distributed-memory systems, implementations for accelerator hardware (GPGPUs)
Literature	1) Vortragsmaterialien und Problemanleitungen 2) G. Hager G. Wellein: Introduction to High Performance Computing for Scientists and Engineers CRC Computational Science Series, 2010

Module M1405: Randomised Algorithms and Random Graphs			
Courses			
Title	Typ	Hrs/wk	CP
Randomised Algorithms and Random Graphs (L2010)	Lecture	2	3
Randomised Algorithms and Random Graphs (L2011)	Recitation Section (large)	2	3
Module Responsible	Prof. Anusch Taraz		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can describe basic concepts in the area of Randomized Algorithms and Random Graphs such as random walks, tail bounds, fingerprinting and algebraic techniques, first and second moment methods, and various random graph models. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can apply them. <i>Skills</i> <ul style="list-style-type: none"> Students can model problems with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to explore and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable technique, and are able to critically evaluate the results. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are able to work together in teams. They are capable to establish a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. <i>Autonomy</i> <ul style="list-style-type: none"> Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.

Module M1268: Linear and Nonlinear Waves			
Courses			
Title	Typ	Hrs/wk	CP
Linear and Nonlinear Waves (L1737)	Project-/problem-based Learning	4	6
Module Responsible	Prof. Norbert Hoffmann		
Admission Requirements	None		
Recommended Previous Knowledge	Good Knowledge in Mathematics, Mechanics and Dynamics.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<i>Knowledge</i> Students are able to reflect existing terms and concepts in Wave Mechanics and to develop and research new terms and concepts. <i>Skills</i> Students are able to apply existing methods and procedures of Wave Mechanics and to develop novel methods and procedures. Personal Competence <i>Social Competence</i> Students can reach working results also in groups. <i>Autonomy</i> Students are able to approach given research tasks individually and to identify and follow up novel research tasks by themselves.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Christian Cyron
Language	DE
Cycle	WiSe
Content	<p>One of the most important questions when modeling mechanical systems in practice is how to model the behavior of the materials of their different components. In addition to simple isotropic elasticity in particular the following phenomena play key roles</p> <ul style="list-style-type: none"> - anisotropy (material behavior depending on direction, e.g., in fiber-reinforced materials) - plasticity (permanent deformation due to one-time overload, e.g., in metal forming) - viscoelasticity (absorption of energy, e.g., in dampers) - creep (slow deformation under permanent load, e.g., in pipes) <p>This lecture briefly introduces the theoretical foundations and mathematical modeling of the above phenomena. It is complemented by exercises where simple examples problems are solved by calculations and where the implementation of the content of the lecture in computer simulations is explained. It will also briefly discussed how important material parameters can be determined from experimental data.</p>

Courses				
Title			Typ	Hrs/wk CP
Verification Methods (L0122)			Lecture	2 3
Verification Methods (L1208)			Recitation Section (small)	2 3
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge in numerics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students have deeper knowledge of numerical and semi-numerical methods with the goal to compute principally exact and accurate error bounds. For several fundamental problems they know algorithms with the verification of the correctness of the computed result.			
<i>Skills</i>	The students can devise algorithms for several basic problems which compute rigorous error bounds for the solution and analyze the sensitivity with respect to variation of the input data as well.			
Personal Competence				
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.			
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Thesis

Module M-002: Master Thesis				
Courses				
Title		Typ	Hrs/wk	CP
Module Responsible	Professoren der TUHH			
Admission Requirements	<ul style="list-style-type: none">According to General Regulations §21 (1): At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.			
Recommended Previous Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none">The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.The students can place a research task in their subject area in its context and describe and critically assess the state of research.			
<i>Skills</i>	The students are able: <ul style="list-style-type: none">To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.To develop new scientific findings in their subject area and subject them to a critical assessment.			
Personal Competence <i>Social Competence</i>	Students can <ul style="list-style-type: none">Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.			
<i>Autonomy</i>	Students are able: <ul style="list-style-type: none">To structure a project of their own in work packages and to work them off accordingly.To work their way in depth into a largely unknown subject and to access the information required for them to do so.To apply the techniques of scientific work comprehensively in research of their own.
