Module M0881: Mathematical Image Processing	41
Module M0711: Numerical Mathematics II	43
Module M1405: Randomised Algorithms and Random Graphs	45
Module M1552: Mathematics of Neural Networks	48
Specialization IV. Subject Specific Focus	50
Module M1434: Technical Complementary Course I for Computational Science and Engineering	50
Module M1435: Technical Complementary Course II for Computational Science and Engineering	51
Thesis	52
Module M-002: Master Thesis	52

## Program description

---

---

### Content

Engineering disciplines utilize the results of computer science and mathematics research to an ever greater extent, both in the development of products and in the products themselves. This trend will certainly continue. New results in computer science and mathematics thus become an important innovation factor in engineering and are therefore central areas of competence for an engineer and a technical university. This has a direct impact on the objectives of the computer science and engineering course.

The main objective of the course is to provide the knowledge and skills necessary for the successful application of engineering techniques in industry, trade and administration at a very high level, so that the productivity of graduates is promoted in the long term.

The master's degree programme in Computer Science and Engineering provides a broad, well-founded and in-depth basic knowledge in the fields of mathematical modelling in computer science, IT systems and engineering sciences. In addition, further knowledge in business administration and management as well as non-technical subjects is acquired in order to increase the skills required to master extensive engineering IT projects. The Master's programme prepares students for practical professional fields of computer science as well as for a doctorate.

### Career prospects

The master degree course in Computer Science and Engineering offers excellent prospects on both the industrial and academic job market thanks to its in-depth training in the fields of information and communication technology, systems engineering and scientific computing. The Master's degree qualifies graduates for a doctorate.

### Learning target

The desired learning outcomes of the programme are based on the objectives listed above. All the learning outcomes listed represent competences that are required in both corporate and research environments. To differentiate it from the Computer Science and Engineering Bachelor's programme, the competences listed here refer to complex problems, to the consideration of uncertainty and to working under under-specified conditions. In the following, the learning objectives are divided into the categories knowledge, skills, social competence and independence.

#### Knowledge

Knowledge is composed of facts, principles and theories in the subjects of computer science, mathematics and engineering.

1. Students are able to reproduce, define and explain (syntax, semantics, decision problems) new and advanced representation languages of computer science and mathematics necessary for the formal modelling of application problems, so that non-standard application cases can also be treated.
2. Students can reproduce advanced data and index structures for sequential and parallel algorithms and name their advantages and disadvantages for special tasks. Students can specify optimal algorithms for solving decision problems for formal modelling techniques, so that (in typical cases) an acceptable runtime behaviour is obtained.
3. Students know how to integrate components so that a desired behaviour is obtained

(reductionistic and self-organising approach) while taking into account safety, reliability and fault tolerance aspects.

4. Students also know non-classical use cases of computer science and mathematical modelling techniques in engineering and can explain them.
5. The graduates are able to reflect research objectives, to explain relevant planning to achieve them, and to name the organisational and personnel structures in research projects.

### **Technical Skills**

The ability to apply acquired knowledge in order to master tasks and thus solve problems is supported in many facets in the Computer Science and Engineering degree program.

1. Students can design interfaces that allow large and distributed systems to be built from modules whose internals can be adapted without changing the interfaces. Students are able to specify or develop communication structures that have desired properties and connect the modules in an appropriate way.
2. Students can design and develop formal representational languages to solve complex problems (syntax, semantics, decision problems), and they can assess and determine the expressiveness required for specific applications. Students can map decision problems of different expressive formalisms to each other and thus compare the expressiveness of formalisms.
3. Students can examine algorithms for complex decision problems for completeness and correctness or convergence behaviour and approximation quality, and they can demonstrate whether an algorithm is optimal or for which types of inputs the worst case or the typical case occurs with respect to the runtime behaviour of an algorithm.
4. The student can use formal modelling techniques for engineering applications to create, verify or evaluate robust systems to solve non-trivial problems from an application context (using simulation, in terms of a data management system, as an application, etc.).
5. Students can demonstrate that desired states of a complex system (in the probable case) are achieved in time (controllability, accessibility with time constraints), and that undesired states are never achieved in any case or that their achievement is unlikely (safety and liveness properties).

### **Social Competence**

The ability and willingness to work together with others in a goal-oriented manner, to understand their interests and social situations, to communicate and to help shape the working environment and life is broken down as follows for the degree course in Computer Science Engineering

1. Students describe scientific questions in a subject area of computer science, engineering or mathematics and explain in a lecture an approach they have developed to solve them, reacting appropriately to questions, additions and comments.
2. Students can form teams to solve non-trivial problems in groups with possibly vague task descriptions, define and distribute subtasks, make time arrangements, integrate partial solutions. They are able to communicate efficiently and interact in a socially appropriate manner.
3. Students explain the problems described in a scientific essay and the solutions developed in the essay in a field of computer science or mathematics, evaluate the proposed solutions in a lecture and react to scientific questions, additions and comments.

### **Competence to work independently**

The ability and willingness to act independently and responsibly, to reflect on one's own actions and the actions of others, and also to further develop one's own ability to act, can be broken down as follows

1. Students independently evaluate the advantages and disadvantages of representation formalisms for specific tasks, compare different algorithms and data structures as well as

- programming languages and programming tools, and independently select the best solution in each case.
2. The graduates work independently on a scientific subfield, can present scientific approaches and results in a presentation and actively follow the presentations of other students, so that an interactive discourse on a scientific topic is created.
  3. Students integrate themselves independently into a project context and take on tasks in a software or hardware development project on their own responsibility.

## Program structure

The curriculum of the master's degree program in Computer Science and Engineering is structured as follows. A minimum number of credits must be earned in each of the three core areas of computer science, engineering and mathematics:

1. Computer Science: 18 credits
2. Engineering sciences: 12 credit points
3. Mathematics: 12 credit points

To deepen their studies, students can choose lectures from the entire catalogue of technical courses offered by TUHH. A total of 24 credit points must be achieved. Practical knowledge and skills are taught in a research project (12 credit points). A further 12 credit points must be earned in the courses Operation & Management and a non-technical supplementary course. The master thesis is assessed with 30 credit points. This results in a total effort of 120 credit points. The curriculum contains a mobility window in such a way that students can spend the third semester abroad.

The following three study plans describe special characteristics of the master's programme in Computer Science and Engineering.

### A. Networked Embedded Systems

1. Core subjects computer science
  - Software security
  - Design of dependable systems
  - Communication networks
2. Core subjects engineering sciences
  - Digital communications
  - Information theory and coding
3. Core subjects mathematics
  - Linear and nonlinear optimization
  - Randomized algorithms and random graphs
4. Supplementary technical courses
  - Software for embedded systems
  - Simulation of communication networks
  - Wireless sensor networks
  - Network security

### B. Dependable and Secure Systems

1. Core subjects computer science
  - Software security
  - Software verification
  - Design of dependable systems
2. Core subjects engineering sciences

## Module Manual M.Sc. "Computational Science and Engineering"

- Digital signal processing and filters
- Theory and design of control systems

### 3. Core subjects mathematics

- Linear and nonlinear optimization
- Numerical mathematics II

### 4. Supplementary technical courses

- Robotics & navigation
- Application safety
- Reliability in engineering dynamics
- Process automation technology

## C. Algorithms for Data Engineering

### 1. Core subjects computer science

- Software verification
- Algorithms for networks
- Distributed algorithms

### 2. Core subjects engineering sciences

- Information theory and coding
- Theory and design of control systems

### 3. Core subjects mathematics

- Mathematical image processing
- Hierarchical algorithms

### 4. Supplementary technical courses

- Digital image analysis
- Numerical mathematics II
- Quantitative methods: statistics & operations research
- Algorithmic algebra

## Core qualification

### Module M0523: Business & Management

<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>• Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>• Students are able to interrelate technical and management knowledge.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able to apply basic methods in selected areas of business management.</li> <li>• Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems</li> </ul> <ul style="list-style-type: none"> <li>• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

#### Courses

**Information regarding lectures and courses can be found in the corresponding module handbook published separately.**

## Module M0524: Non-technical Courses for Master

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective</p>

*Knowledge*

in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

### **Specialized Competence (Knowledge)**

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

### **Professional Competence (Skills)**

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

*Skills*

### **Personal Competence**

#### **Personal Competences (Social Skills)**

Students will be able

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

*Social Competence*

#### **Personal Competences (Self-reliance)**

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of application

<i>Autonomy</i>	<ul style="list-style-type: none"><li>• to organize themselves and their own learning processes</li><li>• to reflect and decide questions in front of a broad education background</li><li>• to communicate a nontechnical item in a competent way in written form or verbally</li><li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li></ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

Module M0753: Software Verification				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Verification (L0629)		Lecture	2	3
Software Verification (L0630)		Recitation (small)	Section 2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Automata theory and formal languages</li> <li>• Computational logic</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or procedural programming</li> <li>• Concurrency</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.			
<i>Skills</i>	Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.			
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.

<b>Course L2060: Algorithmic game theory</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Matthias Mnich
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Algorithmic game theory is a topic at the intersection of economics and computation. It deals with analyzing the behavior and interactions of strategic agents, who often try to maximize their incentives. The environment in which those agents interact is referred to as a game. We wish to understand if the agents can reach an "equilibrium", or steady state of the game, in which agents have no incentive to deviate from their chosen strategies. The algorithmic part is to design efficient methods to find equilibria in games, and to make recommendations to the agents so that they can quickly reach a state of personal satisfaction.</p> <p>We will also study mechanism design. In mechanism design, we wish to design markets and auctions and give strategic options to agents, so that they have an incentive to act rationally. We also wish to design the markets and auctions so that they are efficient, in the sense that all goods are cleared and agents do not overpay for the goods which they acquire.</p> <p>Topics:</p> <ul style="list-style-type: none"> <li>• basic equilibrium concepts (Nash equilibria, correlated equilibria, ...)</li> <li>• strategic actions (best-response dynamics, no-regret dynamics, ...)</li> <li>• auction design (revenue-maximizing auctions, Vickrey auctions)</li> <li>• stable matching theory (preference aggregations, kidney exchanges, ...)</li> <li>• price of anarchy and selfish routing (Braess' paradox, congestion games, ...)</li> </ul>

## Module M1400: Design of Dependable Systems

### Courses

Title	Typ	Hrs/wk	CP								
Designing Dependable Systems (L2000)	Lecture	2	3								
Designing Dependable Systems (L2001)	Recitation (small)	Section 2	3								
<b>Module Responsible</b>	Prof. Görschwin Fey										
<b>Admission Requirements</b>	None										
<b>Recommended Previous Knowledge</b>	Basic knowledge about data structures and algorithms										
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results										
<b>Professional Competence</b>	<p>In the following "dependable" summarizes the concepts Reliability, Availability, Maintainability, Safety and Security.</p> <p>Knowledge about approaches for designing dependable systems, e.g.,</p> <ul style="list-style-type: none"> <li>• Structural solutions like modular redundancy</li> <li>• Algorithmic solutions like handling byzantine faults or checkpointing</li> </ul> <p>Knowledge about methods for the analysis of dependable systems</p> <p>Ability to implement dependable systems using the above approaches.</p> <p><i>Skills</i> Ability to analyze the dependability of systems using the above methods for analysis.</p>										
<b>Personal Competence</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• discuss relevant topics in class and</li> <li>• present their solutions orally.</li> </ul>										
<i>Social Competence</i>											
<i>Autonomy</i>	Using accompanying material students independently learn in-depth relations between concepts explained in the lecture and additional solution strategies.										
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56										
<b>Credit points</b>	6										
<b>Course achievement</b>	<table border="0" style="width: 100%;"> <tr> <th style="text-align: left;">Compulsor</th> <th style="text-align: left;">Bonus</th> <th style="text-align: left;">Form</th> <th style="text-align: left;">Description</th> </tr> <tr> <td>Yes</td> <td>None</td> <td>Subject theoretical and practical work</td> <td>Die Lösung einer Aufgabe ist Zulassungsvoraussetzung für die Prüfung. <b>Cycle</b>	SoSe
<b>Content</b>	<p>Description</p> <p>The term dependability comprises various aspects of a system. These are typically:</p> <ul style="list-style-type: none"> <li>• Reliability</li> <li>• Availability</li> <li>• Maintainability</li> <li>• Safety</li> <li>• Security</li> </ul> <p>This makes dependability a core aspect that has to be considered early in system design, no matter whether software, embedded systems or full scale cyber-physical systems are considered.</p> <p>Contents</p> <p>The module introduces the basic concepts for the design and the analysis of dependable systems. Design examples for getting practical hands-on-experience in dependable design techniques. The module focuses towards embedded systems. The following topics are covered:</p> <ul style="list-style-type: none"> <li>• Modelling</li> <li>• Fault Tolerance</li> <li>• Design Concepts</li> <li>• Analysis Techniques</li> </ul>

## Module M0836: Communication Networks

### Courses

Title	Typ	Hrs/wk	CP
Selected Topics of Communication Networks (L0899)	Project-/problem-based Learning	2	2
Communication Networks (L0897)	Lecture	2	2
Communication Networks Exercise (L0898)	Project-/problem-based Learning	1	2

<b>Module Responsible</b>	Prof. Andreas Timm-Giel
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Fundamental stochastics</li> <li>• Basic understanding of computer networks and/or communication technologies is beneficial</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.
<i>Skills</i>	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.
<i>Autonomy</i>	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Presentation
<b>Examination duration and scale</b>	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.
	Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic Systems: Elective Compulsory Computational Science and Engineering: Specialisation I. ## Module M0926: Distributed Algorithms

### Courses

Title	Typ	Hrs/wk	CP
Distributed Algorithms (L1071)	Lecture	2	3
Distributed Algorithms (L1072)	Recitation (large)	Section 2	3
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Algorithms and data structures</li> <li>Distributed systems</li> <li>Discrete mathematics</li> <li>Graph theory</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the main abstractions of distributed algorithms (synchronous/asynchronous model, message passing and shared memory model). They are able to describe complexity measures for distributed algorithms (round , message and memory complexity). They explain well known distributed algorithms for important problems such as leader election, mutual exclusion, graph coloring, spanning trees. They know the fundamental techniques used for randomized algorithms.</p> <p><i>Skills</i></p> <p>Students design their own distributed algorithms and analyze their complexity. They make use of known standard algorithms. They compute the complexity of randomized algorithms.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>

## Specialization II. Engineering Science

### Module M0676: Digital Communications

#### Courses

Title	Typ	Hrs/wk	CP
Digital Communications (L0444)	Lecture	2	3
Digital Communications (L0445)	Recitation (large)	Section 2	2
Laboratory Digital Communications (L0646)	Practical Course	1	1

<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of Communications and Random Processes</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.</p> <p><i>Skills</i></p> <p>The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students can jointly solve specific problems.</p> <p><i>Autonomy</i></p> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

## Module M0673: Information Theory and Coding

### Courses

Title	Typ	Hrs/wk	CP
Information Theory and Coding (L0436)	Lecture	3	4
Information Theory and Coding (L0438)	Recitation (large)	Section 2	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Probability theory and random processes</li> <li>Basic knowledge of communications engineering (e.g. from lecture "Fundamentals of Communications and Random Processes")</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.		
<i>Skills</i>	The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can jointly solve specific problems.		
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Module M0846: Control Systems Theory and Design

### Courses

Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation (small)	Section 2	2

<b>Module Responsible</b>	Prof. Herbert Werner
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Introduction to Control Systems
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space</li> <li>They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively</li> <li>They can explain the significance of a minimal realisation</li> <li>They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection</li> <li>They can extend all of the above to multi-input multi-output systems</li> <li>They can explain the z-transform and its relationship with the Laplace Transform</li> <li>They can explain state space models and transfer function models of discrete-time systems</li> <li>They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation</li> <li>They can explain how a state space model can be constructed from a discrete-time impulse response</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can transform transfer function models into state space models and vice versa</li> <li>They can assess controllability and observability and construct minimal realisations</li> <li>They can design LQG controllers for multivariable plants</li> <li>They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate</li> <li>They can identify transfer function models and state space models of dynamic systems from experimental data</li> <li>They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink)</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>Students can work in small groups on specific problems to arrive at joint solutions.</p> <p>Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p>

<i>Autonomy</i>	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

## Module M0677: Digital Signal Processing and Digital Filters

### Courses

Title	Typ	Hrs/wk	CP
Digital Signal Processing and Digital Filters (L0446)	Lecture	3	4
Digital Signal Processing and Digital Filters (L0447)	Recitation (large)	Section 2	2

<b>Module Responsible</b>	Prof. Gerhard Bauch
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Signals and Systems</li> <li>Fundamentals of signal and system theory as well as random processes.</li> <li>Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform)</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	
<i>Knowledge</i>	The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account.
<i>Skills</i>	The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, they can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods of spectrum estimation and to take the effects of a limited observation window into account.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can jointly solve specific problems.
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
--------------------------	--

<b>Credit points</b>	6
----------------------	---

<b>Course achievement</b>	None
---------------------------	------

<b>Examination</b>	Written exam
--------------------	--------------

<b>Examination duration and scale</b>	90 min

## Specialization IV. Subject Specific Focus

### Module M1434: Technical Complementary Course I for Computational Science and Engineering

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	12		
<b>Assignment for the Following Curricula</b>	Computational Science and Engineering: Specialisation IV. Subject Specific Focus: Elective Compulsory		

## Module M1435: Technical Complementary Course II for Computational Science and Engineering

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	12		
<b>Assignment for the Following Curricula</b>	Computational Science and Engineering: Specialisation IV. Subject Specific Focus: Elective Compulsory		

# Thesis

## Module M-002: Master Thesis

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul> <p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul> <p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul> <p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>			

	<ul style="list-style-type: none"> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0
<b>Credit points</b>	30
<b>Course achievement</b>	None
<b>Examination</b>	Thesis
<b>Examination duration and scale</b>	According to General Regulations
<b>Assignment for the Following Curricula</b>	Civil Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Energy and Environmental Engineering: Thesis: Compulsory Energy Systems: Thesis: Compulsory Environmental Engineering: Thesis: Compulsory Aircraft Systems Engineering: Thesis: Compulsory Global Innovation Management: Thesis: Compulsory Computational Science and Engineering: Thesis: Compulsory Information and Communication Systems: Thesis: Compulsory International Management and Engineering: Thesis: Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Thesis: Compulsory Logistics, Infrastructure and Mobility: Thesis: Compulsory Materials Science: Thesis: Compulsory Mathematical Modelling in Engineering: Theory, Numerics, Applications: Thesis: Compulsory Mechanical Engineering and Management: Thesis: Compulsory Mechatronics: Thesis: Compulsory Biomedical Engineering: Thesis: Compulsory Microelectronics and Microsystems: Thesis: Compulsory Product Development, Materials and Production: Thesis: Compulsory Renewable Energies: Thesis: Compulsory Naval Architecture and Ocean Engineering: Thesis: Compulsory Ship and Offshore Technology: Thesis: Compulsory Teilstudiengang Lehramt Metalltechnik: Thesis: Compulsory Theoretical Mechanical Engineering: Thesis: Compulsory Process Engineering: Thesis: Compulsory Water and Environmental Engineering: Thesis: Compulsory Certification in Engineering & Advisory in Aviation: Thesis: Compulsory
