## Program description

---

---

### Content

Among the industries with the greatest growth rates is the communications industry which, over the years, has achieved in its products the synergy of the classical disciplines of computer science and networking. The

International Master Program Information and Communication Systems addresses this rapidly evolving area by laying in-depth foundations for the design and implementation of networking infrastructures, networked Cyber Physical Systems and the applications and services running on them.

The program is organized as a two-year course (four semesters) which starts on 1st of October each year. It includes around two semesters of lectures and practical courses and almost two semesters devoted to work in a research team (project work) and to the preparation of a master's thesis. The "Master of Science" degree will be awarded. Language of the program is English.

Graduates of the program are provided with the basics and knowledge that are required for a successful engineering activity in the information and communication technology in an international environment. They acquire extensive knowledge in the mathematical, engineering and scientific basic principles of this discipline based on a solid theoretical foundation including all the essential application-oriented aspects. Graduates are qualified to independently resolve problems in the information and communications technology and related disciplines.

The graduates are able to apply methods and procedures required to work on technical issues, as well as critically examine new insights to further develop and incorporate in their work. In this way, they are qualified to carry out their duties for society responsibly.

## Career prospects

The study of Information and Communication Systems provides the in-depth training in the areas of Information and Communication Technology, Software Systems, IT Security and Signal Processing. This enables excellent career prospects both in the industrial as well as on the academic job market. The Master's degree qualifies graduates for doctoral studies.

## Learning target

### Knowledge

The students gain common knowledge from the core qualification and more specific knowledge depending on the selected specialisation. All students are able to describe information theory and coding basics.

Specialisation Communication Systems:

Students can

- show their profound knowledge in digital communications,
- describe their specialized knowledge in communication networks,
- explain software development principles,
- explain signal processing fundamentals.

Specialisation Secure and Dependable IT Systems:

Students can

- give an overview of software verification,
- describe security principles for information and communication systems,
- explain their specialized knowledge in communication networks,
- describe software development and signal processing principles.

### Skills

The ability to apply knowledge in order to perform tasks and solve problems will be supported in this course. Information and Communication Systems graduates are capable to

- solve problems in information and communication systems by applying and adapting techniques,

procedures and methods that are required for a successful professional activity and by using engineering systematics,

- organize the planning of theoretical and experimental studies in order to develop optimal solutions for complex applications in information and communication technology and evaluate the solutions analyse problems using scientific systematics and solve them most effectively to develop economically viable approaches for products and systematically reflect non-technical implications of engineering activity to responsibly involve them in their actions,
- evaluate reliability of developed systems, prepare and review results of practical applications so that they can be used for systems optimization
- Investigate, evaluate and integrate new technologies, systems, architecture, services and applications for information and communication systems.

### **Social skills**

The ability of target-oriented work in collaboration with others, communication, and understanding their interests and social situations are goals of this course. The students can

- present and argue the results of their work in written and oral form in a comprehensible way,
- communicate and collaborate with international professionals, also of other disciplines,
- collaborate in challenging projects of information and communications technology in a responsible position,
- develop ideas and solutions in team work.

### **Autonomy**

The course helps to improve ability and readiness to act independently and responsibly, reflect own actions and the actions of others, and to develop the own functioning. Information and Communication Systems students are capable to

- identify knowledge gaps and propose solutions to overcome these gaps,
- expand and deepen their knowledge and skills independently, taking into account ecological and economic demands responsibly,
- familiarize themselves with complex tasks, define new tasks and develop the necessary knowledge for solving it and to systematically apply appropriate means.

## **Program structure**

The four-semester program is designed modularly and is based on the university-wide standardized course structure with uniform module sizes (multiples of six credit points (CP)).

Core qualification: 48 CP

Specialization: 42 CP

Master thesis: 30 CP

Total: 120 CP

The core qualification consists of the module Information Theory and Coding (6 CP), technical complementary courses (12 CP), Business & Management (6 CP), nontechnical complementary courses (6 CP) and research project with seminar (18 CP). The research project with seminar consists of a scientific thesis with documentation and accompanying presentations in a seminar among fellow students.

The students choose between two specialisations (42 CP each):

- Communication Systems

Containing: Communications, software, and signal processing

- Secure and Dependable IT Systems

Containing: IT security, networks, software and signal processing

Students write a master thesis (30 CP).

## Core qualification

### Module M0523: Business & Management

<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>• Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>• Students are able to interrelate technical and management knowledge.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able to apply basic methods in selected areas of business management.</li> <li>• Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

#### Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

## Module M0524: Nontechnical Elective Complementary Courses for Master

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p>

*Knowledge*

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

**Specialized Competence (Knowledge)**

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

**Professional Competence (Skills)**

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

*Skills*

**Personal Competence**

**Personal Competences (Social Skills)**

Students will be able

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

*Social Competence*

**Personal Competences (Self-reliance)**

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of

<i>Autonomy</i>	<p>application</p> <ul style="list-style-type: none"> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses

## Module M1246: Technical Complementary Course for IMPICS (according to Subject Specific Regulations)

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	12		
<b>Assignment for the Following Curricula</b>	Information and Communication Systems: Core qualification: Compulsory		

## Module M0673: Information Theory and Coding

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Information Theory and Coding (L0436)	Lecture	3	4
Information Theory and Coding (L0438)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Probability theory and random processes</li> <li>Basic knowledge of communications engineering (e.g. from lecture "Fundamentals of Communications and Random Processes")</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.</p> <p><i>Skills</i> The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

## Specialization Communication Systems

Graduates of the Communication Systems specialisation are qualified to independently resolve problems in communication networks and digital communications. They also have profound knowledge in software development principles and signal processing. Graduates are qualified to independently resolve problems in communication systems technology and related disciplines.

The Communication Systems specialisation is recommended for students who already bring along a good mathematical foundation, basic knowledge in computer science and/or electrical engineering with focus on information and communication technology.

<b>Module M0676: Digital Communications</b>	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Digital Communications (L0444)	Lecture                                      2                                      3
Digital Communications (L0445)	Recitation Section (large)              1                                      2
Laboratory Digital Communications (L0646)	Practical Course                              1                                      1
<b>Module Responsible</b>	Prof. Gerhard Bauch
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of Communications and Random Processes</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.
<i>Skills</i>	The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can jointly solve specific problems.
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.

## Module M0836: Communication Networks I - Analysis and Structure

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Analysis and Structure of Communication Networks (L0897)	Lecture	2	2
Selected Topics of Communication Networks (L0899)	Project-/problem-based Learning	2	2
Communication Networks Exercise (L0898)	Project-/problem-based Learning	1	2
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Fundamental stochastics</li> <li>Basic understanding of computer networks and/or communication technologies is beneficial</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.		
<i>Skills</i>	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.		
<i>Autonomy</i>	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Presentation		
<b>Examination duration and scale</b>	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory

<b>Module M0710: Microwave Engineering</b>	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Microwave Engineering (L0573)	Lecture                                      2                                      3
Microwave Engineering (L0574)	Recitation Section (large)              2                                      2
Microwave Engineering (L0575)	Practical Course                              1                                      1
<b>Module Responsible</b>	Prof. Arne Jacob
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Fundamentals of communication engineering, semiconductor devices and circuits. Basics of Wave propagation from transmission line theory and theoretical electrical engineering.
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students can explain the propagation of electromagnetic waves and related phenomena. They can describe transmission systems and components. They can name different types of antennas and describe the main characteristics of antennas. They can explain noise in linear circuits, compare different circuits using characteristic numbers and select the best one for specific scenarios.
<i>Skills</i>	Students are able to calculate the propagation of electromagnetic waves. They can analyze complete transmission systems and configure simple receiver circuits. They can calculate the characteristic of simple antennas and arrays based on the geometry. They can calculate the noise of receivers and the signal-to-noise-ratio of transmission systems. They can apply their theoretical knowledge to the practical courses.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students work together in small groups during the practical courses. Together they document, evaluate and discuss their results.
<i>Autonomy</i>	Students are able to relate the knowledge gained in the course to contents of previous lectures. With given instructions they can extract data needed to solve specific problems from external sources. They are able to apply their knowledge to the laboratory courses using the given instructions.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0837: Communication Networks II - Simulation and Modeling			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Simulation and Modelling of Communication Networks (L0887)		Project-/problem-based Learning	5            6
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge of computer and communication networks</li> <li>• Basic programming skills</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to explain the necessary stochastics, the discrete event simulation technology and modelling of networks for performance evaluation.		
<i>Skills</i>	Students are able to apply the method of simulation for performance evaluation to different, also not practiced, problems of communication networks. The students can analyse the obtained results and explain the effects observed in the network. They are able to question their own results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to acquire expert knowledge in groups, present the results, and discuss solution approaches and results. They are able to work out solutions for new problems in small teams.		
<i>Autonomy</i>	Students are able to transfer independently and in discussion with others the acquired method and expert knowledge to new problems. They can identify missing knowledge and acquire this knowledge independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	45-60 minutes colloquium with two students, therefore about 30 minutes per student.		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory

<b>Hrs/wk</b>	5
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture. Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the course increasingly complex networks and protocols are considered and their performance is determined by simulation.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Skript des Instituts für Kommunikationsnetze</li> </ul> Further literature is announced at the beginning of the lecture.

Module M0637: Advanced Concepts of Wireless Communications			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Advanced Concepts of Wireless Communications (L0297)	Lecture	3	4
Advanced Concepts of Wireless Communications (L0298)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Dr. Rainer Grünheid		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Lecture "Signals and Systems"</li> <li>• Lecture "Fundamentals of Telecommunications and Stochastic Processes"</li> <li>• Lecture "Digital Communications"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to explain the general as well as advanced principles and techniques that are applied to wireless communications. They understand the properties of wireless channels and the corresponding mathematical description. Furthermore, students are able to explain the physical layer of wireless transmission systems. In this context, they are proficient in the concepts of multicarrier transmission (OFDM), modulation, error control coding, channel estimation and multi-antenna techniques (MIMO). Students can also explain methods of multiple access. On the example of contemporary communication systems (UMTS, LTE) they can put the learnt content into a larger context.</p> <p><i>Skills</i></p> <p>Using the acquired knowledge, students are able to understand the design of current and future wireless systems. Moreover, given certain constraints, they can choose appropriate parameter settings of communication systems. Students are also able to assess the suitability of technical concepts for a given application.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>Students can jointly elaborate tasks in small groups and present their results in an adequate fashion.</p> <p><i>Autonomy</i></p> <p>Students are able to extract necessary information from given literature sources and put it into the perspective of the lecture. They can continuously check their level of expertise with the help of accompanying measures (such as online tests, clicker questions, exercise tasks) and, based on that, to steer their learning process accordingly. They can relate their acquired knowledge to topics of other lectures, e.g., "Fundamentals of Communications and Stochastic Processes" and "Digital Communications".</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 minutes; scope: content of lecture and exercise		
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory		

<b>Course L0297: Advanced Concepts of Wireless Communications</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Dr. Rainer Grünheid
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture deals with technical principles and related concepts of mobile communications. In this context, the main focus is put on the physical and data link layer of the ISO-OSI stack.</p> <p>In the lecture, the transmission medium, i.e., the mobile radio channel, serves as the starting point of all considerations. The characteristics and the mathematical descriptions of the radio channel are discussed in detail. Subsequently, various physical layer aspects of wireless transmission are covered, such as channel coding, modulation/demodulation, channel estimation, synchronization, and equalization. Moreover, the different uses of multiple antennas at the transmitter and receiver, known as MIMO techniques, are described. Besides these physical layer topics, concepts of multiple access schemes in a cellular network are outlined.</p> <p>In order to illustrate the above-mentioned technical solutions, the lecture will also provide a system view, highlighting the basics of some contemporary wireless systems, including UMTS/HSPA, LTE, LTE Advanced, and WiMAX.</p>

## Focus Signal Processing

### Module M0550: Digital Image Analysis

**Courses**

Title	Typ	Hrs/wk	CP
Digital Image Analysis (L0126)	Lecture	4	6

<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat
---------------------------	--------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	System theory of one-dimensional signals (convolution and correlation, sampling theory, interpolation and decimation, Fourier transform, linear time-invariant systems), linear algebra (Eigenvalue decomposition, SVD), basic stochastics and statistics (expectation values, influence of sample size, correlation and covariance, normal distribution and its parameters), basics of Matlab, basics in optics
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>Students can</p> <ul style="list-style-type: none"> <li>Describe imaging processes</li> <li>Depict the physics of sensorics</li> <li>Explain linear and non-linear filtering of signals</li> <li>Establish interdisciplinary connections in the subject area and arrange them in their context</li> <li>Interpret effects of the most important classes of imaging sensors and displays using mathematical methods and physical models.</li> </ul>
	<p>Students are able to</p> <ul style="list-style-type: none"> <li>Use highly sophisticated methods and procedures of the subject area</li> <li>Identify problems and develop and implement creative solutions.</li> </ul>
<b>Skills</b>	Students can solve simple arithmetical problems relating to the specification and design of image processing and image analysis systems.
	Students are able to assess different solution approaches in multidimensional decision-making areas.
	Students can undertake a prototypical analysis of processes in Matlab.
<b>Personal Competence</b>	
<i>Social Competence</i>	k.A.
<i>Autonomy</i>	Students can solve image analysis tasks independently using the relevant literature.

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0677: Digital Signal Processing and Digital Filters

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Digital Signal Processing and Digital Filters (L0446)	Lecture	3	4
Digital Signal Processing and Digital Filters (L0447)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Signals and Systems</li> <li>Fundamentals of signal and system theory as well as random processes.</li> <li>Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform)</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account.</p> <p><i>Skills</i></p> <p>The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, they can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods of spectrum estimation and to take the effects of a limited observation window into account.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>The students can jointly solve specific problems.</p> <p><i>Autonomy</i></p> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0738: Digital Audio Signal Processing

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Digital Audio Signal Processing (L0650)	Lecture	3	4
Digital Audio Signal Processing (L0651)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Udo Zölzer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Signals and Systems		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Die Studierenden können die grundlegenden Verfahren und Methoden der digitalen Audiosignalverarbeitung erklären. Sie können die wesentlichen physikalischen Effekte bei der Sprach- und Audiosignalverarbeitung erläutern und in Kategorien einordnen. Sie können einen Überblick der numerischen Methoden und messtechnischen Charakterisierung von Algorithmen zur Audiosignalverarbeitung geben. Sie können die erarbeiteten Algorithmen auf weitere Anwendungen im Bereich der Informationstechnik und Informatik abstrahieren.		
<i>Skills</i>	The students will be able to apply methods and techniques from audio signal processing in the fields of mobile and internet communication. They can rely on elementary algorithms of audio signal processing in form of Matlab code and interactive JAVA applets. They can study parameter modifications and evaluate the influence on human perception and technical applications in a variety of applications beyond audio signal processing. Students can perform measurements in time and frequency domain in order to give objective and subjective quality measures with respect to the methods and applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work in small groups to study special tasks and problems and will be enforced to present their results with adequate methods during the exercise.		
<i>Autonomy</i>	The students will be able to retrieve information out of the relevant literature in the field and put them into the context of the lecture. They can relate their gathered knowledge and relate them to other lectures (signals and systems, digital communication systems, image and video processing, and pattern recognition). They will be prepared to understand and communicate problems and effects in the field audio signal processing.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0556: Computer Graphics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computer Graphics (L0145)	Lecture	2	3
Computer Graphics (L0768)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Tobias Knopp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Students are expected to have a solid knowledge of object-oriented programming as well as of linear algebra and geometry.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students have acquired a theoretical basis in computer graphics and have a clear understanding of the process of computer animation.</p> <p><i>Skills</i> Students have acquired</p> <ul style="list-style-type: none"> <li>• solid skills in modelling and shading,</li> <li>• solid skills in computer animation techniques, and</li> <li>• a thorough command of Maya, a first-class animation system.</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are trained in communicating abstract ideas and are familiar with planning and conducting projects within a small team.</p> <p><i>Autonomy</i> Students are able to direct complex computer animation projects.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min

## Module M0551: Pattern Recognition and Data Compression

Courses			
Title	Typ	Hrs/wk	CP
Pattern Recognition and Data Compression (L0128)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	<p>Students can name the basic concepts of pattern recognition and data compression.</p> <p>Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.</p>		
<i>Skills</i>	<p>Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i>	k.A.		
<i>Autonomy</i>	<p>Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture and materials in StudIP		
<b>Assignment for the Following Curricula</b>	<p>Computer Science: Specialisation Intelligence Engineering: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory</p>

Course L0128: Pattern Recognition and Data Compression	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Structure of a pattern recognition system, statistical decision theory, classification based on statistical models, polynomial regression, dimension reduction, multilayer perceptron regression, radial basis functions, support vector machines, unsupervised learning and clustering, algorithm-independent machine learning, mixture models and EM, adaptive basis function models and boosting, Markov random fields  Information, entropy, redundancy, mutual information, Markov processes, basic coding schemes (code length, run length coding, prefix-free codes), entropy coding (Huffman, arithmetic coding), dictionary coding (LZ77/Deflate/LZMA2, LZ78/LZW), prediction, DPCM, CALIC, quantization (scalar and vector quantization), transform coding, prediction, decorrelation (DPCM, DCT, hybrid DCT, JPEG, JPEG-LS), motion estimation, subband coding, wavelets, HEVC (H.265,MPEG-H)
<b>Literature</b>	Schürmann: Pattern Classification, Wiley 1996 Murphy, Machine Learning, MIT Press, 2012 Barber, Bayesian Reasoning and Machine Learning, Cambridge, 2012 Duda, Hart, Stork: Pattern Classification, Wiley, 2001 Bishop: Pattern Recognition and Machine Learning, Springer 2006  Salomon, Data Compression, the Complete Reference, Springer, 2000 Sayood, Introduction to Data Compression, Morgan Kaufmann, 2006 Ohm, Multimedia Communication Technology, Springer, 2004 Solari, Digital video and audio compression, McGraw-Hill, 1997 Tekalp, Digital Video Processing, Prentice Hall, 1995

Module M0552: 3D Computer Vision			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
3D Computer Vision (L0129)	Lecture	2	3
3D Computer Vision (L0130)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge of the modules Digital Image Analysis and Pattern Recognition and Data Compression are used in the practical task</li> <li>• Linear Algebra (including PCA, SVD), nonlinear optimization (Levenberg-Marquardt), basics of stochastics and basics of Matlab are required and cannot be explained in detail during the lecture.</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can explain and describe the field of projective geometry.		
	Students are capable of		
	<ul style="list-style-type: none"> <li>• Implementing an exemplary 3D or volumetric analysis task</li> <li>• Using highly sophisticated methods and procedures of the subject area</li> <li>• Identifying problems and</li> <li>• Developing and implementing creative solution suggestions.</li> </ul>		
<i>Skills</i>	With assistance from the teacher students are able to link the contents of the three subject areas (modules)		
	<ul style="list-style-type: none"> <li>• Digital Image Analysis</li> <li>• Pattern Recognition and Data Compression and</li> <li>• 3D Computer Vision</li> </ul>		
	in practical assignments.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can collaborate in a small team on the practical realization and testing of a system to reconstruct a three-dimensional scene or to evaluate volume data sets.		
	Students are able to solve simple tasks independently with reference to the contents of the lectures and the exercise sets.		
<i>Autonomy</i>	Students are able to solve detailed problems independently with the aid of the tutorial's programming task.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Focus Software

### Module M0753: Software Verification

#### Courses

Title	Typ	Hrs/wk	CP
Software Verification (L0629)	Lecture	2	3
Software Verification (L0630)	Recitation Section (small)	2	3

<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Automata theory and formal languages</li> <li>• Computational logic</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or procedural programming</li> <li>• Concurrency</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.
<i>Skills</i>	Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration</b>	90 min

## Module M0733: Software Analysis

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Analysis (L0631)	Lecture	2	3
Software Analysis (L0632)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Basic knowledge of software-engineering activities</li> <li>Discrete algebraic structures</li> <li>Object-oriented programming, algorithms, and data structures</li> <li>Functional programming or Procedural programming</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.		
<i>Skills</i>	Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.		
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.

## Module M0758: Application Security

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Application Security (L0726)	Lecture	3	3
Application Security (L0729)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Dieter Gollmann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Familiarity with Information security, fundamentals of cryptography, Web protocols and the architecture of the Web		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can name current approaches for securing selected applications, in particular of web applications		
<i>Skills</i>	Students are capable of <ul style="list-style-type: none"> <li>performing a security analysis</li> <li>developing security solutions for distributed applications</li> <li>recognizing the limitations of existing standard solutions</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are capable of appreciating the impact of security problems on those affected and of the potential responsibilities for their resolution.		
<i>Autonomy</i>	Students are capable of acquiring knowledge independently from professional publications, technical standards, and other sources, and are capable of applying newly acquired knowledge to new problems.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 minutes

Module M1301: Software Testing			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Testing (L1791)	Lecture	2	3
Software Testing (L1792)	Project-/problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Software Engineering</li> <li>• Higher Programming Languages</li> <li>• Object-Oriented Programming</li> <li>• Algorithms and Data Structures</li> <li>• Experience with (Small) Software Projects</li> <li>• Statistics</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students explain the different phases of testing, describe fundamental techniques of different types of testing, and paraphrase the basic principles of the corresponding test process. They give examples of software development scenarios and the corresponding test type and technique. They explain algorithms used for particular testing techniques and describe possible advantages and limitations.		
<i>Skills</i>	Students identify the appropriate testing type and technique for a given problem. They adapt and execute respective algorithms to execute a concrete test technique properly. They interpret testing results and execute corresponding steps for proper re-test scenarios. They write and analyze test specifications. They apply bug finding techniques for non-trivial problems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.		
<i>Autonomy</i>	Students can assess their level of knowledge continuously and adjust it appropriately, based on feedback and on self-guided studies. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software testing. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones

## Specialization Secure and Dependable IT Systems

Graduates of the Secure and Dependable IT Systems specialisation acquire extensive knowledge in software verification and IT security. They also have knowledge in communication networks and signal processing. They are able to apply methods and procedures required to work on secure and dependable IT systems, as well as critically examine new insights to further develop and incorporate in their work.

The Secure and Dependable IT Systems specialisation is recommended for students who already have a good mathematical foundation and basic knowledge in computer science and software development.

Module M0753: Software Verification	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Software Verification (L0629)	Lecture
Software Verification (L0630)	Recitation Section (small)
	<b>Hrs/wk</b>
	<b>CP</b>
	2
	3
<b>Module Responsible</b>	Prof. Sibylle Schupp
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Automata theory and formal languages</li> <li>• Computational logic</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or procedural programming</li> <li>• Concurrency</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.
<i>Skills</i>	Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their

	findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min

## Module M1307: Cryptography

### Courses

Title	Typ	Hrs/wk	CP
Cryptography (L1806)	Lecture	2	3
Cryptography (L1807)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Chris Brzuska		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Prerequisites: Mathematical reasoning will be used throughout the course and is essential. It is helpful if you have been to introduction to IT Security and know that the concept of an algorithm can be formalized (e.g., via the concept of a Turing Maschine) and used to measure running time. It is also useful if you know the complexity classes P and NP. We will need some basic probability analysis, too.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Knowledge of cryptographic primitives such as one-way-functions, digital signatures, encryption, key exchange, zero-knowledge proofs as well as implications between the primitives, knowledge of formal security definitions of cryptographic primitives, connections between cryptography and complexity theory, in particular to the P vs. NP problem.		
<i>Skills</i>	Ability to discuss and develop security models for cryptographic primitives. Constructing reductions between cryptographic primitives and ability to say whether small tweaks might harm the security of a cryptographic primitive.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Ability to critically question schemes and methods that seem intuitively secure.		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory

## Focus Networks

### Module M0676: Digital Communications

#### Courses

Title	Typ	Hrs/wk	CP
Digital Communications (L0444)	Lecture	2	3
Digital Communications (L0445)	Recitation Section (large)	1	2
Laboratory Digital Communications (L0646)	Practical Course	1	1

<b>Module Responsible</b>	Prof. Gerhard Bauch
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics 1-3</li> <li>• Signals and Systems</li> <li>• Fundamentals of Communications and Random Processes</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.
<i>Skills</i>	The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can jointly solve specific problems.
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0836: Communication Networks I - Analysis and Structure

### Courses

Title	Typ	Hrs/wk	CP
Analysis and Structure of Communication Networks (L0897)	Lecture	2	2
Selected Topics of Communication Networks (L0899)	Project-/problem-based Learning	2	2
Communication Networks Exercise (L0898)	Project-/problem-based Learning	1	2
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Fundamental stochastics</li> <li>• Basic understanding of computer networks and/or communication technologies is beneficial</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.		
<i>Skills</i>	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.		
<i>Autonomy</i>	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Presentation		
<b>Examination duration and scale</b>	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory		

	Mechatronics: Technical Complementary Course: Elective Compulsory Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory
--	--

**Course L0897: Analysis and Structure of Communication Networks**

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Skript des Instituts für Kommunikationsnetze</li> <li>• Tannenbaum, Computernetzwerke, Pearson-Studium</li> </ul> <p>Further literature is announced at the beginning of the lecture.</p>

**Course L0899: Selected Topics of Communication Networks**

<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Maciej Mühleisen
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Example networks selected by the students will be researched on in a PBL course by the students in groups and will be presented in a poster session at the end of the term.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• see lecture</li> </ul>

**Course L0898: Communication Networks Exercise**

<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Maciej Mühleisen
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Part of the content of the lecture Communication Networks are reflected in computing tasks in groups, others are motivated and addressed in the form of a PBL exercise.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• announced during lecture</li> </ul>

Module M0837: Communication Networks II - Simulation and Modeling			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Simulation and Modelling of Communication Networks (L0887)		Project-/problem-based Learning	5            6
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge of computer and communication networks</li> <li>• Basic programming skills</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to explain the necessary stochastics, the discrete event simulation technology and modelling of networks for performance evaluation.		
<i>Skills</i>	Students are able to apply the method of simulation for performance evaluation to different, also not practiced, problems of communication networks. The students can analyse the obtained results and explain the effects observed in the network. They are able to question their own results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to acquire expert knowledge in groups, present the results, and discuss solution approaches and results. They are able to work out solutions for new problems in small teams.		
<i>Autonomy</i>	Students are able to transfer independently and in discussion with others the acquired method and expert knowledge to new problems. They can identify missing knowledge and acquire this knowledge independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	45-60 minutes colloquium with two students, therefore about 30 minutes per student.		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory		

<b>Course L0887: Simulation and Modelling of Communication Networks</b>	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	5
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture. Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the course increasingly complex networks and protocols are considered and their performance is determined by simulation.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Skript des Instituts für Kommunikationsnetze</li> </ul> Further literature is announced at the beginning of the lecture.

## Module M0839: Traffic Engineering

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Seminar Traffic Engineering (L0902)	Seminar	2	2
Traffic Engineering (L0900)	Lecture	2	2
Traffic Engineering Exercises (L0901)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Fundamentals of communication or computer networks</li> <li>• Stochastics</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe methods for planning, optimisation and performance evaluation of communication networks.		
<i>Skills</i>	Students are able to solve typical planning and optimisation tasks for communication networks. Furthermore they are able to evaluate the network performance using queuing theory.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to apply independently what they have learned to other and new problems. They can present their results in front of experts and discuss them.		
<i>Autonomy</i>	Students are able to acquire the necessary expert knowledge to understand the functionality and performance of new communication networks independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Information and Communication Technology: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory		

Course L0902: Seminar Traffic Engineering	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Selected applications of methods for planning, optimization, and performance evaluation of communication networks, which have been introduced in the traffic engineering lecture are prepared by the students and presented in a seminar.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• U. Killat, Entwurf und Analyse von Kommunikationsnetzen, Vieweg + Teubner</li> <li>• further literature announced in the lecture</li> </ul>

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Accompanying exercise for the traffic engineering course
<b>Literature</b>	Literatur: U. Killat, Entwurf und Analyse von Kommunikationsnetzen, Springer Weitere Literatur wird in der Lehrveranstaltung bekanntgegeben / Literature: U. Killat, Entwurf und Analyse von Kommunikationsnetzen, Springer further literature announced in the lecture

## Focus Software and Signal Processing

### Module M0550: Digital Image Analysis

**Courses**

Title	Typ	Hrs/wk	CP
Digital Image Analysis (L0126)	Lecture	4	6

<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat
---------------------------	--------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	System theory of one-dimensional signals (convolution and correlation, sampling theory, interpolation and decimation, Fourier transform, linear time-invariant systems), linear algebra (Eigenvalue decomposition, SVD), basic stochastics and statistics (expectation values, influence of sample size, correlation and covariance, normal distribution and its parameters), basics of Matlab, basics in optics
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<i>Knowledge</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>Describe imaging processes</li> <li>Depict the physics of sensorics</li> <li>Explain linear and non-linear filtering of signals</li> <li>Establish interdisciplinary connections in the subject area and arrange them in their context</li> <li>Interpret effects of the most important classes of imaging sensors and displays using mathematical methods and physical models.</li> </ul>
	<i>Skills</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>Use highly sophisticated methods and procedures of the subject area</li> <li>Identify problems and develop and implement creative solutions.</li> </ul> <p>Students can solve simple arithmetical problems relating to the specification and design of image processing and image analysis systems.</p> <p>Students are able to assess different solution approaches in multidimensional decision-making areas.</p> <p>Students can undertake a prototypical analysis of processes in Matlab.</p>
	<i>Personal Competence</i>	
<i>Social Competence</i>		k.A.
<i>Autonomy</i>		Students can solve image analysis tasks independently using the relevant literature.

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
--------------------------	--

<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture and materials in StudIP
<b>Assignment for the Following Curricula</b>	<p>Computer Science: Specialisation Intelligence Engineering: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Medical Technology: Elective Compulsory</p> <p>Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory</p> <p>Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory</p> <p>International Management and Engineering: Specialisation II. Information Technology: Elective Compulsory</p> <p>Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory</p> <p>Microelectronics and Microsystems: Specialisation Communication and Signal Processing: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory</p>

Course L0126: Digital Image Analysis	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Image representation, definition of images and volume data sets, illumination, radiometry, multispectral imaging, reflectivities, shape from shading</li> <li>• Perception of luminance and color, color spaces and transforms, color matching functions, human visual system, color appearance models</li> <li>• imaging sensors (CMOS, CCD, HDR, X-ray, IR), sensor characterization(EMVA1288), lenses and optics</li> <li>• spatio-temporal sampling (interpolation, decimation, aliasing, leakage, moiré, flicker, apertures)</li> <li>• features (filters, edge detection, morphology, invariance, statistical features, texture)</li> <li>• optical flow ( variational methods, quadratic optimization, Euler-Lagrange equations)</li> <li>• segmentation (distance, region growing, cluster analysis, active contours, level sets, energy minimization and graph cuts)</li> <li>• registration (distance and similarity, variational calculus, iterative closest points)</li> </ul>
<b>Literature</b>	<p>Bredies/Lorenz, Mathematische Bildverarbeitung, Vieweg, 2011</p> <p>Wedel/Cremers, Stereo Scene Flow for 3D Motion Analysis, Springer 2011</p> <p>Handels, Medizinische Bildverarbeitung, Vieweg, 2000</p> <p>Pratt, Digital Image Processing, Wiley, 2001</p> <p>Jain, Fundamentals of Digital Image Processing, Prentice Hall, 1989</p>

## Module M0738: Digital Audio Signal Processing

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Digital Audio Signal Processing (L0650)	Lecture	3	4
Digital Audio Signal Processing (L0651)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Udo Zölzer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Signals and Systems		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Die Studierenden können die grundlegenden Verfahren und Methoden der digitalen Audiosignalverarbeitung erklären. Sie können die wesentlichen physikalischen Effekte bei der Sprach- und Audiosignalverarbeitung erläutern und in Kategorien einordnen. Sie können einen Überblick der numerischen Methoden und messtechnischen Charakterisierung von Algorithmen zur Audiosignalverarbeitung geben. Sie können die erarbeiteten Algorithmen auf weitere Anwendungen im Bereich der Informationstechnik und Informatik abstrahieren.		
<i>Skills</i>	The students will be able to apply methods and techniques from audio signal processing in the fields of mobile and internet communication. They can rely on elementary algorithms of audio signal processing in form of Matlab code and interactive JAVA applets. They can study parameter modifications and evaluate the influence on human perception and technical applications in a variety of applications beyond audio signal processing. Students can perform measurements in time and frequency domain in order to give objective and subjective quality measures with respect to the methods and applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work in small groups to study special tasks and problems and will be enforced to present their results with adequate methods during the exercise.		
<i>Autonomy</i>	The students will be able to retrieve information out of the relevant literature in the field and put them into the context of the lecture. They can relate their gathered knowledge and relate them to other lectures (signals and systems, digital communication systems, image and video processing, and pattern recognition). They will be prepared to understand and communicate problems and effects in the field audio signal processing.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	45 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory

<b>Literature</b>	See interlocking course

Module M0733: Software Analysis			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software Analysis (L0631)	Lecture	2	3
Software Analysis (L0632)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of software-engineering activities</li> <li>• Discrete algebraic structures</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or Procedural programming</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.		
<i>Skills</i>	Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.		
<i>Autonomy</i>	Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0551: Pattern Recognition and Data Compression

### Courses

Title	Typ	Hrs/wk	CP
Pattern Recognition and Data Compression (L0128)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students can name the basic concepts of pattern recognition and data compression.</p> <p>Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.</p> <p>Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.</p>		
<b>Personal Competence</b>	k.A.		
<i>Social Competence</i>	k.A.		
<i>Autonomy</i>	Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam

**Course L0128: Pattern Recognition and Data Compression**

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Structure of a pattern recognition system, statistical decision theory, classification based on statistical models, polynomial regression, dimension reduction, multilayer perceptron regression, radial basis functions, support vector machines, unsupervised learning and clustering, algorithm-independent machine learning, mixture models and EM, adaptive basis function models and boosting, Markov random fields  Information, entropy, redundancy, mutual information, Markov processes, basic coding schemes (code length, run length coding, prefix-free codes), entropy coding (Huffman, arithmetic coding), dictionary coding (LZ77/Deflate/LZMA2, LZ78/LZW), prediction, DPCM, CALIC, quantization (scalar and vector quantization), transform coding, prediction, decorrelation (DPCM, DCT, hybrid DCT, JPEG, JPEG-LS), motion estimation, subband coding, wavelets, HEVC (H.265,MPEG-H)
<b>Literature</b>	Schürmann: Pattern Classification, Wiley 1996 Murphy, Machine Learning, MIT Press, 2012 Barber, Bayesian Reasoning and Machine Learning, Cambridge, 2012 Duda, Hart, Stork: Pattern Classification, Wiley, 2001 Bishop: Pattern Recognition and Machine Learning, Springer 2006  Salomon, Data Compression, the Complete Reference, Springer, 2000 Sayood, Introduction to Data Compression, Morgan Kaufmann, 2006 Ohm, Multimedia Communication Technology, Springer, 2004 Solari, Digital video and audio compression, McGraw-Hill, 1997 Tekalp, Digital Video Processing, Prentice Hall, 1995

Module M0556: Computer Graphics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computer Graphics (L0145)	Lecture	2	3
Computer Graphics (L0768)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Tobias Knopp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Students are expected to have a solid knowledge of object-oriented programming as well as of linear algebra and geometry.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students have acquired a theoretical basis in computer graphics and have a clear understanding of the process of computer animation.</p> <p><i>Skills</i> Students have acquired</p> <ul style="list-style-type: none"> <li>• solid skills in modelling and shading,</li> <li>• solid skills in computer animation techniques, and</li> <li>• a thorough command of Maya, a first-class animation system.</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are trained in communicating abstract ideas and are familiar with planning and conducting projects within a small team.</p> <p><i>Autonomy</i> Students are able to direct complex computer animation projects.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory		

Course L0145: Computer Graphics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Tobias Knopp
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Computer graphics and animation are leading to an unprecedented visual revolution. The course deals with its technological foundations:</p> <ul style="list-style-type: none"> <li>• Object-oriented Computer Graphics</li> <li>• Projections and Transformations</li> <li>• Polygonal and Parametric Modelling</li> <li>• Illuminating, Shading, Rendering</li> <li>• Computer Animation Techniques</li> <li>• Kinematics and Dynamics Effects</li> </ul> <p>Students will be working on a series of mini-projects which will eventually evolve into a final project. Learning computer graphics and animation resembles learning a musical instrument. Therefore, doing your projects well and in time is essential for performing well on this course.</p>

Module M0924: Software for Embedded Systems			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Software for Embedded Systems (L1069)	Lecture	2	3
Software for Embedded Systems (L1070)	Recitation Section (small)	3	3
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Good knowledge and experience in programming language C</li> <li>• Basis knowledge in software engineering</li> <li>• Basic understanding of assembly language</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the basic principles and procedures of software engineering for embedded systems. They are able to describe the usage and pros of event based programming using interrupts. They know the components and functions of a concrete microcontroller. The participants explain requirements of real time systems. They know at least three scheduling algorithms for real time operating systems including their pros and cons.</p> <p><i>Skills</i></p> <p>Students build interrupt-based programs for a concrete microcontroller. They build and use a preemptive scheduler. They use peripheral components (timer, ADC, EEPROM) to realize complex tasks for embedded systems. To interface with external components they utilize serial protocols.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>

## Module M1301: Software Testing

### Courses

Title	Typ	Hrs/wk	CP
Software Testing (L1791)	Lecture	2	3
Software Testing (L1792)	Project-/problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Software Engineering</li> <li>• Higher Programming Languages</li> <li>• Object-Oriented Programming</li> <li>• Algorithms and Data Structures</li> <li>• Experience with (Small) Software Projects</li> <li>• Statistics</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students explain the different phases of testing, describe fundamental techniques of different types of testing, and paraphrase the basic principles of the corresponding test process. They give examples of software development scenarios and the corresponding test type and technique. They explain algorithms used for particular testing techniques and describe possible advantages and limitations.</p> <p><i>Skills</i></p> <p>Students identify the appropriate testing type and technique for a given problem. They adapt and execute respective algorithms to execute a concrete test technique properly. They interpret testing results and execute corresponding steps for proper re-test scenarios. They write and analyze test specifications. They apply bug finding techniques for non-trivial problems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.</p> <p><i>Autonomy</i></p> <p>Students can assess their level of knowledge continuously and adjust it appropriately, based on feedback and on self-guided studies. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software testing. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Thesis

### Module M-002: Master Thesis

**Courses**

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul> <p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> </ul>		

	<ul style="list-style-type: none"> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0
<b>Credit points</b>	30
<b>Examination</b>	Thesis
<b>Examination duration and scale</b>	According to General Regulations
<b>Assignment for the Following Curricula</b>	<p>Civil Engineering: Thesis: Compulsory                      Bioprocess Engineering: Thesis: Compulsory                      Chemical and Bioprocess Engineering: Thesis: Compulsory                      Computer Science: Thesis: Compulsory                      Electrical Engineering: Thesis: Compulsory                      Energy and Environmental Engineering: Thesis: Compulsory                      Energy Systems: Thesis: Compulsory                      Environmental Engineering: Thesis: Compulsory                      Aircraft Systems Engineering: Thesis: Compulsory                      Global Innovation Management: Thesis: Compulsory                      Computational Science and Engineering: Thesis: Compulsory                      Computational Science and Engineering: Thesis: Compulsory                      Information and Communication Systems: Thesis: Compulsory                      International Production Management: Thesis: Compulsory                      International Management and Engineering: Thesis: Compulsory                      Joint European Master in Environmental Studies - Cities and Sustainability: Thesis: Compulsory                      Logistics, Infrastructure and Mobility: Thesis: Compulsory                      Materials Science: Thesis: Compulsory                      Mathematical Modelling in Engineering: Theory, Numerics, Applications: Thesis: Compulsory                      Mechanical Engineering and Management: Thesis: Compulsory                      Mechatronics: Thesis: Compulsory                      Biomedical Engineering: Thesis: Compulsory                      Microelectronics and Microsystems: Thesis: Compulsory                      Product Development, Materials and Production: Thesis: Compulsory                      Renewable Energies: Thesis: Compulsory                      Naval Architecture and Ocean Engineering: Thesis: Compulsory                      Ship and Offshore Technology: Thesis: Compulsory                      Theoretical Mechanical Engineering: Thesis: Compulsory                      Process Engineering: Thesis: Compulsory                      Water and Environmental Engineering: Thesis: Compulsory</p>
