

Module Manual

Master of Science (M.Sc.)

Information and Communication Systems

Cohort: Winter Term 2022 Updated: 27th January 2023

Table of Contents

Program description 3 Core Qualification 5 Module M0523: Businese & Management 5 Module M0524: Non-technical Courses for Mater 33 Module M0524: Non-technical Courses for Mater 33 Module M0575: Infranction Theory and Coding 55 Module M0575: Infranction Theory and Coding 30 Module M0575: Infranction Theory and Coding 33 Module M0573: Advanced Concepts of Wireless Communications 30 Module M0537: Advanced Concepts of Wireless Communications 37 Module M0537: Simulation of Communication Networks 39 Module M0537: Digital Signal Processing and Digital Filters 41 Module M0537: Signal Processing and Digital Filters 45 Module M1598: Inage Processing and Digital Filters 45 Module M05373: Software Analysis 66 Module M1598: Inage Processing 66 Module M1593: Software Analysis 66 Module M1593: Software Analysis 66 Module M1533: Software Analysis <th>Table of Contents</th> <th>2</th>	Table of Contents	2
Core Qualification S Module M0524: Non-technical Courses for Master S Module M0544: Non-technical Courses for Master S Module M0573: Information Theory and Coding S Module M0673: Information Theory and Coding S Module M0676: Digital Communication Systems 30 Module M0676: Digital Communication Networks 33 Module M0776: Advanced Concepts of Wineless Communications 37 Module M0737: Simulation of Communication Networks 39 Module M0738: Advanced Concepts of Wineless Communications 37 Module M0738: Advanced Concepts of Wineless Communications 37 Module M0738: Biglial Adulo Signal Processing and Digital Filters 43 Module M0738: Biglial Adulo Signal Processing and Digital Filters 43 Module M0738: Biglial Adulo Signal Processing and Digital Filters 45 Module M0738: Signal Processing and Digital Filters 45 Module M0733: Software Verification 49 Module M0733: Software Verification 58 Module M0733: Software Verificat	Program description	3
Module M0523: Business & Management S Module M0248: Non-technical Courses for Master 23 Module M1246: Technical Complementary Course for IMPICS (according to Subject Specific Regulations) 26 Module M075: Information Theory and Coding. 26 Module M076: Digital Communication Systems. 30 Module M075: Digital Communication Networks 33 Module M037: Simulation of Communication Networks 33 Module M037: Advanced Concepts of Wireless Communication Technology 40 Module M038: Modern Wireless Systems 41 Focus Signal Processing 43 Module M058: Digital Judio Signal Processing 43 Module M057: Digital Signal Processing and Digital Filters 45 Module M057: Digital Signal Processing and Digital Filters 45 Module M057: Signal Processing and Digital Filters 45 Module M057: Signal Processing and Digital Filters 46 Module M057: Signal Processing 56 Focus Signal Processing 56 Module M053: Software Analysis 60 Module M053: Software Analysis 60 Module M053: Software Analysis 60 <	Core Qualification	5
Module M024: Non-technical Courses for MARCY Course for IMPLCS (according to Subject Specific Regulations) 25 Module M0673: Information Theory and Coding 26 Module M0767: Information Theory and Coding 29 Specialization Communication Systems 30 Module M0856: Communication Systems 30 Module M0837: Advanced Cancepts of Wireless Communications 37 Module M0837: Advanced Cancepts of Wireless Communications 37 Module M033: Multiston of Communication Networks 40 Module M0357: Digital Signal Processing 43 Module M0358: Modern Wireless Systems 41 Focus Signal Processing and Digital Filters 45 Module M0538: Modern Wireless Systems 43 Module M0538: Digital Audio Signal Processing and Digital Filters 45 Module M0556: Computer Graphics 47 Module M0533: Software Communications and Navigation 49 Module M0533: Software Verification 56 Focus Signal Processing 56 Module M0533: Software Verification 60 Module M0533: Software Verification 66 Module M0534: Software Verification 76	Module M0523: Business & Management	5
Module M1246: Technical Complementary Course for IMPICS (according to Subject Specific Regulations) 25 Module M1776: Research Project ICS 29 Specialization Communication Systems 30 Module M0676: Digital Communication Networks 33 Module M0675: Digital Communication Networks 33 Module M0673: Advanced Concepts of Wireless Communications 37 Module M057: Advanced Concepts of Wireless Communications 37 Module M057: Advanced Seminars Computer Science and Communication Technology 40 Module M057: Digital Signal Processing 43 Module M057: Digital Signal Processing and Digital Filters 45 Module M057: Digital Signal Processing 43 Module M057: Digital Signal Processing 43 Module M057: Digital Signal Processing 45 Module M057: Software Verification 47 Module M170: Satellite Communications and Navigation 49 Module M053: Software Verification 56 Module M1793: Software Verification 56 Module M1793: Software Profe Engines and Algorithms 62 Module M1794: Applied Cryptography 68 Module M1794: Applied Cryptography	Module M0524: Non-technical Courses for Master	23
Module M073: Information Theory and Coding 26 Module M0716: Research Project ICS 29 Specialization Communication Systems 30 Module M076: Digital Communications 33 Module M076: Digital Concepts of Wireless Communications 33 Module M083: Advanced Concepts of Wireless Communications 37 Module M083: Advanced Concepts of Wireless Communication Technology 40 Module M083: Advanced Seminars Computer Science and Communication Technology 40 Module M073: Digital Audio Signal Processing and Digital Filters 43 Module M073: Digital Audio Signal Processing and Digital Filters 45 Module M072: Process Imaging 58 Module M1702: Process Imaging 58 Module M073: Software Verification 58 Module M173: Software Verification 58 Module M173: Software Verification 64 Module M173: Software Verification 64 Module M173: Software Verification 68 Module M173: Software Computing 66 Module M173: Software Computing 68 Module M174: Advanced Internet Computing 76 Module M174: Advanced I	Module M1246: Technical Complementary Course for IMPICS (according to Subject Specific Regulations)	25
Module M1776: Research Project ICS 29 Specialization Communication Systems, 30 Module M0636: Communication Networks 33 Module M037: Simulation of Communication Networks 35 Module M037: Advanced Seminars Computer Science and Communication Technology 40 Module M0537: Simulation of Communication Networks 39 Module M0537: Advanced Seminars Computer Science and Communication Technology 40 Module M0537: Simulation of Communication Second 43 Module M0538: Ingital Judio Signal Processing 43 Module M0577: Digital Signal Processing and Digital Filters 45 Module M1706: Stellite Communications and Navigation 49 Module M17073: Software Verification 56 Poccus Software 58 Module M1733: Software Analysis 60 Module M1324: Software Verification 58 Module M1324: Software Verification 68 Module M1324: Software Nearing in Electrical Engineering 68 Module M1324: Software Analysis 68 Module M1324: Software Nearing in Electrical Engineering and Information Technology 73 Module M1324: Software Software Sortware Somputer Scien	Module M0673: Information Theory and Coding	26
Specialization Communication Systems 30 Module M065: Digital Communication Networks 33 Module M0637: Advanced Concepts of Wireless Communications 35 Module M0537: Advanced Concepts of Wireless Communications 37 Module M0537: Advanced Seminars Computer Science and Communication Technology 40 Module M0538: Modern Wireless Systems 41 Focus Signal Processing 43 Module M0738: Digital Audio Signal Processing and Digital Filters 45 Module M0738: Digital Audio Signal Processing and Digital Filters 45 Module M0709: Stellite Communications and Navigation 49 Module M1702: Process Imaging 54 Module M1702: Process Imaging 58 Module M1733: Software Verification 58 Module M1733: Software Verification 58 Module M1733: Software Analysis 60 Module M1734: Applied Crybtoraphy 68 Module M1734: Applied Crybtorap	Module M1776: Research Project ICS	29
Module M0676: Digital Communications 30 Module M0736: Communication Networks 33 Module M0737: Mounced Concepts of Wireless Communications 37 Module M0537: Simulation of Communication Networks 39 Module M0537: Simulation of Communication Networks 39 Module M0538: Modern Wireless Systems 41 Focus Signal Processing 43 Module M0538: Digital Judio Signal Processing and Digital Filters 45 Module M0737: Digital Signal Processing and Digital Filters 45 Module M1700: Stellite Communications and Navigation 49 Module M17038: Software Verification 56 Focus Software 58 Module M0733: Software Verification 58 Module M17931: Model Checking - Proof Engines and Algorithms 62 Module M1794: Applied Cryptography 68 Module M1794: Applied Cryptography 71 Module M1795: Machine Learning in Electrical Engineering and Information Technology 73 Module M1795: Model	Specialization Communication Systems	30
Module M036: Communication Networks 33 Module M057: Advanced Concepts of Wireless Communications 37 Module M053: Advanced Concepts of Wireless Communications 39 Module M1564: Advanced Seminars Computer Science and Communication Technology 40 Module M058: Modern Wireless Systems 41 Focus Signal Processing 43 Module M0738: Digital Audio Signal Processing and Digital Filters 45 Module M0758: Digital Audio Signal Processing and Digital Filters 45 Module M0709: Statelite Communications and Navigation 49 Module M1702: Process imaging 54 Module M0738: Software Verification 58 Module M1393: Software Verification 58 Module M1393: Software Testing 64 Module M1394: Applied Cryptography 68 Module M1397: Model Checking - Proof Engineering and Information Technology 73 Module M1394: Applied Cryptography 68 Module M1397: Model Checking - Proof Engineering and Information Technology 73 <td>Module M0676: Digital Communications</td> <td>30</td>	Module M0676: Digital Communications	30
Module MO210: Microwave Engineering 35 Module MO837: Simulation of Communication Networks 39 Module MO837: Simulation of Communication Networks 39 Module MO538: Modern Wireless Systems 41 Focus Signal Processing 43 Module MO538: Modern Wireless Systems 43 Module MO738: Digital Audio Signal Processing 43 Module MO573: Digital Audio Signal Processing and Digital Filters 45 Module MD736: Digital Signal Processing and Digital Filters 45 Module MD728: Process Imaging 56 Module MD728: Process Imaging 56 Module MD738: Software Verification 58 Module MD733: Software Verification 58 Module MD733: Software Verification 58 Module MD733: Software Testing 62 Module MD734: Applied Cryptography 68 Module MD744: Applied Cryptography 68 Module MD744: Applied Cryptography 69 Module MD738: Software for Embedded Systems 70 Module MD738: Software Security 73 Specialization Secure and Dependable IT Systems 76 Module MD434: Software Security 78 M	Module M0836: Communication Networks	33
Module M0537: Advanced Concepts of Wireless Communications 37 Module M1564: Advanced Seminars Computer Science and Communication Technology 40 Module M058: Modern Wireless Systems 41 Focus Signal Processing 43 Module M0738: Digital Audio Signal Processing and Digital Filters 45 Module M0738: Digital Audio Signal Processing and Digital Filters 45 Module M0700: Satellite Communications and Navigation 49 Module M1702: Process Imaging 56 Focus Software Verification 58 Module M133: Software Analysis 60 Module M133: Software Paralysis 60 Module M133: Software Engineering 64 Module M153: Software Engineering 64 Module M153: Software Engineering 66 Module M153: Software Festing 68 Module M153: Software Festing 68 Module M153: Software Verification 68 Module M174: Applied Cryptography 68 Module M1	Module M0710: Microwave Engineering	35
Module M037: Simulation of Communication Networks 39 Module M0536: Modern Wireless Systems 41 Focus Signal Processing 43 Module M0738: Digital Audio Signal Processing and Digital Filters 43 Module M0738: Digital Signal Processing and Digital Filters 45 Module M0738: Digital Signal Processing and Digital Filters 47 Module M1700: Satellite Communications and Navigation 49 Module M1702: Process Imaging 56 Module M1598: Image Processing 56 Module M1598: Image Processing 56 Module M1598: Software Verification 58 Module M1598: Software Verification 58 Module M1597: Model Checking - Proof Engines and Algorithms 62 Module M1594: Applied Cryptography 68 Module M1794: Applied Cryptography 68 Module M1793: Software Verification 76 Module M1794: Applied Cryptography 68 Module M1793: Software Verification 76 Module M1793: Software Verification 76 Module M1793: Software Verification 76 Module M1793: Software Verification 76 <tr< td=""><td>Module M0637: Advanced Concepts of Wireless Communications</td><td>37</td></tr<>	Module M0637: Advanced Concepts of Wireless Communications	37
Module M1544: Advanced Seminars Computer Science and Communication Lechnology 40 Module M0538: Modern Wirnlerss Systems 41 Focus Signal Processing 43 Module M0577: Digital Signal Processing and Digital Filters 45 Module M0578: Digital Addio Signal Processing and Digital Filters 45 Module M1700: Satelite Communications and Navigation 49 Module M1702: Process Imaging 54 Module M1798: Image Processing 56 Focus Software 58 Module M1793: Software Verification 58 Module M1997: Model Checking - Proof Engines and Algorithms 60 Module M1997: Model Checking - Proof Engines and Algorithms 62 Module M1997: Model Checking - Proof Engines and Algorithms 63 Module M1794: Applied Cryptography 68 Module M1794: Applied Cryptography 68 Module M1793: Software Verification 71 Module M1793: Software Verification 76 Module M1793: Applied Cryptography 68 Module M1793: Software Verification 76 Module M1793: Software Verification 76 Module M1793: Software Verification 76 <	Module M0837: Simulation of Communication Networks	39
Module MU038: Modern Wireless Systems41Focus Signal Processing43Module M0738: Digital Audio Signal Processing and Digital Filters45Module M1700: Statellite Communications and Navigation49Module M1700: Process Imaging54Module M1700: Process Imaging54Module M1700: Statellite Communications and Navigation49Module M1701: Process Imaging54Module M1702: Process Imaging56Focus Software58Module M0753: Software Verification58Module M0733: Software Analysis60Module M1797: Model Checking - Proof Engines and Algorithms62Module M1794: Applied Cryptography68Module M1794: Advanced Internet Computing69Module M1774: Advanced Internet Computing69Module M024: Software for Embedded Systems76Module M1773: Cybersecurity Data Science80Module M1773: Software Verification76Module M1773: Software Verification76Module M1773: Software Verification76Module M1773: Cybersecurity Data Science80Module M1773: Software Security78Module M1774: Advanced Seminars Computer Science and Communication Technology86Module M1774: Advanced Internet Computing93Module M1773: Software Acience82Module M1773: Software Science87Module M1774: Advanced Internet Computing93Module M1774: Advanced Internet Computing93Module M036: Communication Networks97Mod	Module M1564: Advanced Seminars Computer Science and Communication Technology	40

Program description

Content

Among the industries with the greatest growth rates is the communications industry which, over the years, has achieved in its products the synergy of the classical disciplines of computer science and networking. The International Master Program Information and Communication Systems addresses this rapidly evolving area by laying in-depth foundations for the design and implementation of networking infrastructures, networked Cyber Physical Systems and the applications and services running on them.

The program is organized as a two-year course (four semesters) which starts on 1st of October each year. It includes around two semesters of lectures and practical courses and almost two semesters devoted to work in a research team (project work) and to the preparation of a master's thesis. The "Master of Science" degree will be awarded. Language of the program is English.

Graduates of the program are provided with the basics and knowledge that are required for a successful engineering activity in the information and communication technology in an international environment. They acquire extensive knowledge in the mathematical, engineering and scientific basic principles of this discipline based on a solid theoretical foundation including all the essential application-oriented aspects. Graduates are qualified to independently resolve problems in the information and communications technology and related disciplines.

The graduates are able to apply methods and procedures required to work on technical issues, as well as critically examine new insights to further develop and incorporate in their work. In this way, they are qualified to carry out their duties for society responsibly.

Career prospects

The study of Information and Communication Systems provides the in-depth training in the areas of Information and Communication Technology, Software Systems, IT Security and Signal Processing. This enables excellent career prospects both in the industrial as well as on the academic job market. The Master's degree qualifies graduates for doctoral studies.

Learning target

Knowledge

The students gain common knowledge from the core qualification and more specific knowledge depending on the selected specialisation. All students are able to describe information theory and coding basics.

Specialisation Communication Systems

Students can

- show their profound knowledge in digital communications,
- describe their specialized knowledge in communication networks,
- explain software development principles,
- explain signal processing fundamentals.

Specialisation Secure and Dependable IT Systems:

Students can

- give an overview of software verification,
- describe security principles for information and communication systems,
- explain their specialized knowledge in communication networks,
- · describe software development and signal processing principles.

Skills

The ability to apply knowledge in order to perform tasks and solve problems will be supported in this course. Information and Communication Systems graduates are capable to

- solve problems in information and communication systems by applying and adapting techniques, procedures and methods that are required for a successful professional activity and by using engineering systematics,
- organize the planning of theoretical and experimental studies in order to develop optimal solutions for complex applications in information and communication technology and evaluate the solutions analyse problems using scientific systematics and solve them most effectively to develop economically viable approaches for products and systematically reflect non-technical implications of engineering activity to responsibly involve them in their actions,
- evaluate reliability of developed systems, prepare and review results of practical applications so that they can be used for systems optimization
- Investigate, evaluate and integrate new technologies, systems, architecture, services and applications for information and communication systems.

Social skills

The ability of target-oriented work in collaboration with others, communication, and understanding their interests and social situations are goals of this course. The students can

- present and argue the results of their work in written and oral form in an comprehensible way,
- communicate and collaborate with international professionals, also of other disciplines,
- collaborate in challenging projects of information and communications technology in a responsible position,
- develop ideas and solutions in team work.

Autonomy

The course helps to improve ability and readiness to act independently and responsibly, reflect own actions and the actions of others, and to develop the own functioning. Information and Communication Systems students are capable to

- identify knowledge gaps and propose solutions to overcome these gaps,
- expand and deepen their knowledge and skills independently, taking into account ecological and economic demands responsibly,
- familiarize themselves with complex tasks, define new tasks and develop the necessary knowledge for solving it and to systematically apply appropriate means.

Program structure

The four-semester program is designed modularly and is based on the university-wide standardized course structure with uniform module sizes (multiples of six credit points (CP)).

Core qualification: 48 CP

Specialization: 42 CP Master thesis: 30 CP

Total: 120 CP

The core qualification consists of the module Information Theory and Coding (6 CP), technical complementary courses (12 CP), Business & Management (6 CP), nontechnical complementary courses (6 CP) and research project with seminar (18 CP). The research project with seminar consists of a scientific thesis with documentation and accompanying presentations in a seminar among fellow students.

The students choose between two specialisations (42 CP each):

Communication Systems

Containing: Communications, software, and signal processing

Secure and Dependable IT Systems

Containing: IT security, networks, software and signal processing

Students write a master thesis (30 CP).

Core Qualification

Module M0523: Busin	ess & Management
Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge Skills	 Students are able to find their way around selected special areas of management within the scope of business management. Students are able to explain basic theories, categories, and models in selected special areas of business management. Students are able to interrelate technical and management knowledge. Students are able to apply basic methods in selected areas of business management. Students are able to apply basic methods in selected areas of business management. Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.
Personal Competence Social Competence	• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems
Autonomy	• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.

Cycle	WiSe
Content	Digital economics is the targeted approach to meeting human needs in the face of scarcity based on the use of digital information
	and communication technologies. The goal of the seminar is to discuss current issues in digital economics and their underlying
	economic theory. To do so, students will read a current popular science book (in German or English) as well as the relevant
	scientific literature (in English) prior to the seminar. During the seminar, individual topics will be presented by the students and
	critically discussed.

Content	The course offers an introduction to the methods and techniques of online experiments used in experimental Economics, Psychology, and Business Administration. The course is targeted at participants with no or limited experience. It pursues the agenda of providing the practical, theoretical and tool knowledge to find a research question, deduce hypotheses and design and run an experiment. Hence, the focus will be on general methodological, design and process issues. The course is not surveying the existing experimental evidence but rather pinpoints towards selected well knowns experiments. We will follow a learning-by-doing approach. We will have a short introduction to data evaluation using non-parametric statistics as well as to relevant software tools (oTree). At the end of this course you will have gained not only the know-how needed to develop and implement an experimental

Content	Digital:
	In this module we provide you with a practical overview of digital tools & methods, new business models & strategies,
	technological trends and legal aspects in 3 intensive phases - the conception, implementation and establishment of projects. The
	whole thing is consolidated with practical exercises, so that you already develop your own business model in the course of the
	seminar and test it on the market with the right techniques
	Human Factors:
	With practical exercises, you will learn about methodical user-centredness through the user-centred design process and learn in
	which project phases which LICD methods are useful to apply in addition, you will get to know the subject area of "Human
	inter project pridacy, mich ob methods are donie to apply in darktering, you might be whether a subject and in market
	factors and understand why we also tak about socio-technical systems in digitalisation, why these represent an important
	success factor and which phases have to be gone through to integrate the principles into the organisational structure of a
	company.
	New Londorshim
	New Leadership:
	In the New Leadership module, you will learn about a new leadership approach that supports you in mastering the challenges of
	digitalisation. With the help of agile methodology and interactive exercises, you will learn how to anchor the principles of the new
	leadership approach and increase the empowerment and self-organisation of the team in order to create the framework for
	innovative work.

Content	Scientific knowledge grows continuously but also experiences certain alignments over time. For example, early cultures had the	
	believe of a flat earth while latest research has a spherical earth model. Also in social science and business management, from	
	time to time certain concepts that have even been the predominant paradigm are challenged by new observations and models.	
	Consequently, certain controversies emerge and build the base for advancing theory and managerial practice. With this lecture,	
	we put ourselves in the middle of heated debates for informed academics and practitioners of the day after tomorrow.	
	The lecture targets several controversies in the domain of technology strategy and innovation management. By the classical	
	academic method and the novel problem based learning format of a structured discussion, a given controversy is scrutinized. On	
	selected topics, students will discuss a dispute and gain a thorough understanding. Specifically, based on a brief introduction of a	
	motion, a affirmative constructive as well as a negative constructive is presented by two different student groups. Each	
	presentation is followed by a response of the other group and questions from the class. Topics range from latest theories and	
	concepts for value capture, to the importance of operating within a global marketplace, to cutting edge approaches for innovation	
	stimulation and technology management. Consequently, this lecture deepens the knowledge in technology strategy and	
	innovation management (TIM), enables a critical thinking and thought leadership.

	relevant skills needed to manage innovation at both strategic and operational levels. It provides evidence of different approaches based on leading research, real world examples and experiences of firms and organizations from around the world. The management of innovation is one of the most important and challenging aspects of modern organization. Innovation is a fundamental driver of competitiveness and it plays a large part in improving quality of life. Innovation, and particularly technological innovation, is inherently difficult, uncertain and risky, and most new technologies fail to be translated into successful products and services. Given this, it is essential that students understand the strategies, tools and techniques for managing innovation, which often requires a different set of management knowledge and skills from those employed in everyday business administration. The course itself draws upon research activities of the Innovation Management Group within TUHH, the Institute for Technology and Innovation Management (TIM, W-7, www.tuhh.de/tim)
	1. Understand definitions and concepts of innovation, 2. Explore major models and theories of innovation, 3. Use and apply tools for innovation management. Skill Objectives:
	 Diagnostic and analytical skills, Enhance verbal skills through class and syndicate discussions, Build up critical and interpretation skills, Learn how to evaluate different options, Formulate and develop strategy,
	 6. Assess and resolve managerial challenges. Learning Outcomes At the end of the course students will be able to demonstrate understanding, and make critical assessments of the following: Assess and interpret innovation processes, Develop and formulate managerial strategies to shape innovative performance, Utilize tools of innovation management to map and measure innovative activities, Diagnose different innovation challenges and make recommendations for resolving them.
	Course Outline - Lecture Topics: 1. The Management of (Technological) Innovation, 2. Strategy and Organization for Innovation, 3. Innovation of Products, Services and Business Models, 4. Managing the Innovation Process, 5. Networks, Communities of Innovators and Lead User-Innovation, 6. Innovation in the Age of Circular Economy (C2C), 7. Market-Research for Innovation and Design-thinking, 8. Capturing value from R&D, Open Innovation and IP, 9. Creativity and mindfulness in Innovation, 10. Conclusions and Future Challenges.

Content	Most managerial decision problems require answers to questions such as "what happens to Y if we do X?", or "was it X that caused	
	Y to change?" In other words, practical business decision-making requires knowledge about cause-and-effect. While most data	
	science and machine learning approaches are designed to efficiently detect patterns in high-dimensional data, they are not able to	
	distinguish causal relationships from simple correlations. That means, commonly used approaches to business analytics often fall	
	short to provide decision makers with important causal knowledge. Therefore, many leading companies currently try to develop	
	specific causal data science capabilities. This module will provide an introduction into the topic of causal inference with the help of	
	modern data science and machine learning approaches and with a focus on applications to practical business problems from	
	various management areas. Based on an overarching framework for causal data science, the course will guide students to detect	
	sources of confounding influence factors, understand the problem of selective measurement in data collection, and extrapolate	
	causal knowledge across different business contexts. We also cover several tools for causal inference, such as A/B testing and	
	experiments, difference-in-differences, instrumental variables, matching, regression discontinuity designs, etc. A variety of hands-	
	on examples will be discussed that allow students to apply their newly obtained knowledge and carry out state-of-the-art causal	
	analyses by themselves.

Content	Contents
	Basics of Marketing

[13]

	The philosophy and fundamental aims of marketing. Contrasting different marketing fields (e.g. business-to-consumer versus business-to-business marketing). The process of marketing planning, implementation and controlling
	Strategic Marketing Planning
	How to find profit opportunities? How to develop cooperation, internationalization, timing, differentiation and cost leadership strategies?
	Market-oriented Design of products and services
	How can companies get valuable customer input on product design and development? What is a service? How can companies design innovative services supporting the products?
	Pricing
	What are the underlying determinants of pricing decision? Which pricing strategies should companies choose over the life cycle of products? What are special forms of pricing on business-to-business markets (e.g. competitive bidding, auctions)?
	Marketing Communication
	What is the role of communication and advertising in business-to-business markets? Why advertise? How can companies manage communication over advertisement, exhibitions and public relations?
	Sales and Distribution
	How to build customer relationship? What are the major requirements of industrial selling? What is a distribution channel? How to design and manage a channel strategy on business-to-business markets?
	Knowledge
	Students will gain an introduction and good overview of
	 Specific challenges in the marketing of innovative goods and services Key strategic areas in strategic marketing planning (cooperation, internationalization, timing) Tools for information gathering about future customer needs and requirements
	 Fundamental pricing theories and pricing methods Main communication instruments
	Marketing channels and main organizational issues in sales management
	Basic approaches for managing customer relationship
	Skills
	Based on the acquired knowledge students will be able to:
	 Design market timing decisions Make decisions for marketing-related cooperation and internationalization activities Manage the challenges of market-oriented development of new products and services Translate customer needs into concepts, prototypes and marketable offers Determine the perceived quality of an existing product or service using advanced elicitation and measurement techniques that fit the given situation Analyze the pricing alternatives for products and services Make strategic sales decisions for products and services (i.e. selection of sales channels) Analyze the value of customers and apply customer relationship management technical
	The students will be able to
	 have fruitful discussions and exchange arguments present results in a clear and concise way carry out respectful team work
	Self-reliance
	The students will be able to
	 Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem fields. Consider proposed business actions in the field of marketing and reflect on them.

Course L1385: Project Management in Industrial Practice		
Тур	Lecture	
Hrs/wk	2	
CP	2	
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28	
Examination Form	Schriftliche Ausarbeitung	
Examination duration and	Gruppenarbeit: Erstellung eines Poster sowie eines Aufgabenblatts (inkl. Lösungen)	
scale		
Lecturer	DiplIng. Wilhelm Radomsky	
Language	DE	
Cycle	WiSe	
Content	The event will cover current knowledge and trends in project management:	
	Basics of project management (competences, methods, tools) are practised, e.g. EVA, MTA, KTA, FMEA, PDCA, MPM	
	Project management culture with lessons learned, optimisation of theory and process	
	Project management theory mirrored by experiences from project management practice	
	Development, implementation and operation of a PM system in small and large companies, e.g. Siemens	
	The aim is to inform about current challenges in PM.	
	Modern agile project management in dynamic markets	
	Meeting challenges in turbulent times, project management in VUCA and BANI environments	
	Managing change and transformation	
	Securing the future through professional action	
	Ensuring health and results in job and project	
	With the main topics	
	Project management in industry, SMEs, studies and private life	
	Project life cycle, process and organisation, agile or 'agile'	
	Integration, content and scope management, environment and stakeholder management	
	Contract, risk and change management	
	Schedule, cost and personnel management	
	Quality management, success factors in the project environment	
	The human factor, corporate culture	
	Communication management, team development, leadership theories	
	Project management is presented as a proven means of solving tasks and problems in private and professional environments.	
	Project management is increasingly used as an agile goal-oriented leadership concept in companies and businesses. The	
	participants are presented with competences and solutions to better cope with their tasks. The application of project management	
	can already lead to an improvement of structure, communication and results during studies and prepare for the start of a career.	
	The lecture serves as a basis for project management certification with the corresponding certification bodies such as GPM or PMI.	
	The project management process is presented according to the basic international project management standards of IPMA and PMI	
	and the Siemens project management system adapted for practical use.	
Literature	PMI - PMBOK-Guide 7th Edition (A Guide to the Project Management Body of Knowledge) 2021	
	GPM - Kompetenzbasiertes Projektmanagement (PM4) 2019

Course L1897: Project Manag	gement and Agile Methods
Тур	Seminar
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Fachtheoretisch-fachpraktische Arbeit
Examination duration and scale	Ausarbeitung eines Projektplans in Kleingruppen (ca. 5-10 Seiten)
Lecturer	Christian Bussler
Language	DE
Cvcle	SoSe
Content	The Seminar teaches the basics of project management, which constitutes the foundations for technical as well as for business
	projects. It also includes a sideline about process management. The participants will work on the following questions:
	What is a project and what challenges does it imply?
	What methods have been developed to meet those challenges?
	How have this methods evolved over time? What is "state of the art" today?
	What basic skills should project members have?
	What is the difference between project and process? How can the latter be analyzed?
	The approaches are not just taught theoretically, but put to use in group work. Through this approach, participants are enabled to work successfully on actual projects - and manage projects later on. As project work is increasingly important in work life, project management is a key skill for job applicants.
	Main topics of the seminar include:
	 The "magic triangle" of project objectives Typical project phases Key instruments and mathematical (arrivations plan, PAC). (Capit short)
	Rey instruments and methods (project structure plan, RAC), Gante chart) Project organization and steering
	Team communication and collaboration The cells acrossed of Communication
	The agric approach of scrum Process levels and caseading
	Process improvement
	With the knowledge and experience from the seminar, participants should be able to acquire a basic certificate in project management with relatively little additional effort. The certification is available through institutions like GPM.
	Participants already start working on their homework paper in the group work. It comprises 5 to 10 pages and a structure plan for the chosen project, which can be done in Excel for example. Ideally, the members of the work groups write their homework paper together. The expected scale of the paper would increase in this case, yet not proportionally with the number of group members (4 participants would be expected to hand in a paper of 15-20 pages).

Content	The Management Consulting lecture teaches students knowledge that is complementary to their technical and business administration studies. They learn the basics of consulting and agent-principal theory and are given an overview of the consulting market. They are also shown how management consulting works and which methodical building blocks (processes) are needed to deal with a client's concerns and to undertake a consulting process. By means of practical examples students gain an insight into the extensive range of management consultancy services and of functional consulting.

Content	General description of course content and course goals

We negotiaate everday in privat and professional contexts. Leading negotiations successfully has a significant impact on future careers. Yet, we tend to have limited knowledge about the theory and empirical evidence regarding successful negotiating. Many people approach negotiations in a rather intuitive and unplanned way which often results in sub-optimal negotiation outcomes.

The purpose of this interactive and problem-based course is to theortically understand the strategies and process of negotiation as practiced in a variety of business-related settings (e.g. negotiations about working conditions, negotiations with customers and suppliers). The course will highlight the components of an effective negotiation (strategy, perparation, execution, evaluation) and offer the students the opportunity to analyze their own behavior in negotiations in order to improve.

The course structure is experiential and problem-based, combining lectures, class discussion, mini-cases and small erxercises, and more comprehensive negotiation practices in longer sessions. Through participation in negotiation exercises, students will have the opportunity to practice their communication and persuasion skills and to experiment with a variety of negotiating strategies and tactics. Students will apply the lessons learned to ongoing, real-world negotiations.

Content:

The students will find answers to the following fundamental questions of negotiation strategies in theory and practice:

- How do negotiations influence everyday life and business processes?
- What are key features of negotiations?
- What are different forms of negotiations? What kinds of negotiation can be distinguished?
- Which theoretical approaches to a theory of negotiation can be distinguished?
- How can game theory be applied to negotiation?
- What makes an effective negotiator?
- Which factors should be considered when planning negotiations?
- What steps must be followed to reach a deal?
- Are there specific negotiation tactics?
- What are the typical barriers to an agreement and how to deal with them?
- What are possible cognitive (mental) errors and how to correct them?

Knowledge

Students know...

- the theory basics of negotiations (e.g. game theory, behavioral theories)
- the types and the pros and cons of diffrent negotiation strategies
- the process of negotiation, inlcuding goal formulation, preparation/planning, execution and evaluation
- about some key issues impacting negotiations (e.g. team building and roles, barriers to reaching a deal, cognitive biases, multi-phase negotiations)

Skills

Students are capable of ...

- simultaneously considering multiple factors in negotiation situations and taking reasoned actions when preparing and conducting negotiations.
- Analyzing and handling the key challenges of uncertainty, risk, intercultural differences, and time pressure in realistic negotiation situations.
- assessing the typical barriers to an agreement (e.g. lack of trust), dealing with hardball tactics (e.g. good cop, bad cop; lowball, highball; intimidation), and avoiding cognitive traps (e.g. unchecked emotions, overconfidence).
- reflecting on their decision-making in uncertain negotiation situations and derive actions for future decisions.

Social Competence

Students can...

- provide appropriate feedback and handle feedback on their own performance constructively.
- constructively interact with their team members in role playing in negotiations sessions
- develop joint solutions in mixed teams and present them to others in real-world negotiation situatio Self-Reliance

Students are able to ...

- assess possible consequences of their own negotiation behavior
- define own positions and tasks in the negotiation preparation process.
- justify and make elaborated decisions in authentic negotiation situations.

Module M0524: Non-t	echnical Courses for Master		
Module Responsible	Dagmar Richter		
Admission Requirements	None		
Recommended Previous	None		
Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	The Nontechnical Academic Programms (NTA)		
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully.		
	Self-reliance, self-management, collaboration and professional and personnel management competences. The department		
	areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.		
	The Learning Architecture		
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.		
	The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".		
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.		
	Teaching and Learning Arrangements		
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.		
	Fields of Teaching		
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.		
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal- oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.		
	The Competence Level		
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.		
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.		
	Specialized Competence (Knowledge)		
	Students can		
	 explain specialized areas in context of the relevant non-technical disciplines, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, 		
	 different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject. 		
Skills	Professional Competence (Skills)		
	In selected sub-areas students can		
	 apply basic and specific methods of the said scientific disciplines, aquestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist 		
	 to handle simple and advanced questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject. 		

Personal Competence

Social Competence Personal Competences (Social Skills)

	 Students will be able to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	 Personal Competences (Self-reliance) Students are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes to reflect and decide questions in front of a broad education background to communicate a nontechnical item in a competent way in writen form or verbaly to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

Content	 Introduction to information theory and coding Definitions of information: Self information, entropy Binary entropy function Source coding theorem Entropy of continuous random variables: Differential entropy, differential entropy of uniformly and Gaussian distributed random variables Source coding Principles of lossless source coding Optimal source codes Prefix codes, prefix-free codes, instantaneous codes Morse code Huffman code Shannon code Bounds on the average codeword length Relative entropy, Kullback-Leibler distance, Kullback-Leibler divergence Cross entropy Lempel-Ziv algorithm 	

- Text compression and image compression using variants of the Lempel-Ziv algorithm
- Channel models
 - AWGN channel
 - Binary-input AWGN channel
 - Binary symmetric channel (BSC)
 - Relationship between AWGN channel and BSC
 - Binary error and erasure channel (BEEC) Binary erasure channel (BEC)
 - Discrete memoryless channels (DMC)
- Definitions of information for multiple random variables
 - Mutual information and channel capacity
 - Entropy, conditional entropy
 - Chain rules for entropy and mutual information
- · Channel coding theorem
- Channel capacity of fundamental channels: BSC, BEC, AWGN channel, binary-input AWGN channel etc.
- Power-limited vs. bandlimited transmission
- · Capacity of parallel AWGN channels
 - Waterfilling
 - Examples: Multiple input multiple output (MIMO) channels, complex equivalent baseband channels, orthogonal frequency division multiplex (OFDM)
- Source-channel coding theorem, separation theorem
- Multiuser information theory
 - Multiple access channel (MAC)
 - Broadcast channel
 - · Principles of multiple access, time division multiple access (TDMA), frequency division multiple access (FDMA), nonorthogonal multiple access (NOMA), hybrid multiple access
 - · Achievable rate regions of TDMA and FDMA with power constraint, energy constraint, power spectral density constraint, respectively
 - Achievable rate region of the two-user and K-user multiple access channels
 - Achievable rate region of the two-user and K user broadcast channels
 - Multiuser diversity
- Channel coding
 - Principles and types of channel coding
 - Code rate, data rate, Hamming distance, minimum Hamming distance, Hamming weight, minimum Hamming weight
 - · Error detecting and error correcting codes
 - Simple block codes: Repetition codes, single parity check codes, Hamming code, etc.
 - Syndrome decoding
 - Representations of binary data
 - Non-binary symbol alphabets and non-binary codes
 - Code and encoder, systematic and non-systematic encoders

Specialization Communication Systems

Graduates of the Communication Systems specialisation are qualified to independently resolve problems in communication networks and digital communications. They also have profound knowledge in software development principles and signal processing. Graduates are qualified to independently resolve problems in communication systems technology and related disciplines.

The Communication Systems specialisation is recommended for students who already bring along a good mathematical foundation, basic knowledge in computer science and/or electrical engineering with focus on information and communication technology.

Educational Objectives	After taking part succ	essfully, students h	nave reached the follow	ing learning results		
Professional Competence						
Knowledge Skills Personal Competence Social Competence Autonomy	The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes. The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems. The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier transmission scheme and trade the properties of both approaches against each other. The students can jointly solve specific problems.

Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence				
Knowledge	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.			
Skills	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.			
Personal Competence				
Social Competence	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They			
	can present the obtained results. They are able to discuss and critically analyse the solutions.			
Autonomy	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.

Recommended Previous	Fundamentals of communication engineering, semico	nductor devices and circuits. Basics of	Wave propagation	on from transmission
Knowledge	line theory and theoretical electrical engineering.			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students can explain the propagation of electromagnetic waves and related phenomena. They can describe transmission systems and components. They can name different types of antennas and describe the main characteristics of antennas. They can explain noise in linear circuits, compare different circuits using characteristic numbers and select the best one for specific scenarios.			
Skills	Students are able to calculate the propagation of electromagnetic waves. They can analyze complete transmission systems und configure simple receiver circuits. They can calculate the characteristic of simple antennas and arrays based on the geometry. They can calculate the noise of receivers and the signal-to-noise-ratio of transmission systems. They can apply their theoretical knowledge to the practical courses.			
Personal Competence Social Competence	Students work together in small groups during the pra	ctical courses. Together they document	, evaluate and d	iscuss their results.
Autonomy	Students are able to relate the knowledge gained in the course to contents of previous lectures. With given instructions they can extract data needed to solve specific problems from external sources. They are able to apply their knowledge to the laboratory courses using the given instructions.

Admission Requirements	None						
Recommended Previous Knowledge	 Lecture "Signals and Systems" Lecture "Fundamentals of Telecommunications and Stochastic Processes" Lecture "Digital Communications" 						
Educational Objectives	After taking part successfully, students have reached t	ne following learning results					
Professional Competence Knowledge Skills	Students are able to explain the general as well as advanced principles and techniques that are applied to wireless communications. They understand the properties of wireless channels and the corresponding mathematical description. Furthermore, students are able to explain the physical layer of wireless transmission systems. In this context, they are proficient in the concepts of multicarrier transmission (OFDM), modulation, error control coding, channel estimation and multi-antenna techniques (MIMO). Students can also explain methods of multiple access. On the example of contemporary communication systems (LTE, 5G) they can put the learnt content into a larger context. The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems. Using the acquired knowledge, students are able to understand the design of current and future wireless systems. Moreover, given certain constraints, they can choose appropriate parameter settings of communication systems. Students are also able to assess						
Personal Competence							
Social Competence	Students can jointly elaborate tasks in small groups an	d present their results in an adequate f	ashion.				
Autonomy	Students are able to extract necessary information from given literature sources and put it into the perspective of the lecture. They can continuously check their level of expertise with the help of accompanying measures (such as online tests, clicker questions, exercise tasks) and, based on that, to steer their learning process accordingly. They can relate their acquired knowledge to topics of other lectures, e.g., "Fundamentals of Communications and Stochastic Processes" and "Digital Communications".

Content	The lecture deals with technical principles and related concepts of mobile communications. In this context, the main focus is put on the physical and data link layer of the ISO-OSI stack. In the lecture, the transmission medium, i.e., the mobile radio channel, serves as the starting point of all considerations. The characteristics and the mathematical descriptions of the radio channel are discussed in detail. Subsequently, various physical layer aspects of wireless transmission are covered, such as channel coding, modulation/demodulation, channel estimation, synchronization, and equalization. Moreover, the different uses of multiple antennas at the transmitter and receiver, known as MIMO techniques, are described. Besides these physical layer topics, concepts of multiple access schemes in a cellular network are outlined. In order to illustrate the above-mentioned technical solutions, the lecture will also provide a system view, highlighting the basics of some contemporary wireless systems, including LTE, LTE Advanced, and 5G New Radio.

Тур	Project-/problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Rainer Grünheid
Language	EN
Cycle	WiSe
Content	In this course, selected "hot" topics of modern wireless systems will be covered. For that purpose, students work in small groups to elaborate a given subject, including a quantitative analysis with provided simulation tools. The results will be presented in a poster session or a talk towards the end of the semester. Possible topics can include various system concepts and related technical principles, such as: • WLAN sytems • 5G systems • Millimeter wave communication • Visible light communication • Cooperative Multipoint • Massive machine-type communication • Interference cancellation • Non-orthogonal multiple access • Heterogeneous networks •
Literature	will be provided, depending on the given topics

Course L0296: Modern Wireless Systems					
Тур	Lecture				
Hrs/wk	3				
CP	3				
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42				
Lecturer	Dr. Rainer Grünheid				
Language	EN				
Cycle	WiSe				
Content	The lecture gives an overview of contemporary wireless communication concepts and related techniques from a system point of				
	view. For that purpose, different systems, ranging from Wireless Personal to Wide Area Networks, are covered, mainly discussing				
	the physical and data link layer.				
	Systems under consideration include:				
	- Near Field Communication (NFC)				
	- ZiqBee / IEEE 802.15.4				
	- Bluetooth				
	- IEEE 802.11 family				
	- L-band Digital Aeronautical Communication System (LDACS)				
	- Long Term Evolution (LTE) and LTE Advanced				
	- 5G New Radio				
	A special focus is placed on 4th and 5th generation networks; in particular, an in-depth view into the technical principles of the 5G				
	New Radio standard is given.

Recommended Previous Knowledge	 Mathematics 1-3 Signals and Systems Fundamentals of signal and system theory as well as random processes. Fundamentals of spectral transforms (Fourier series, Fourier transform, Laplace transform) 				
Educational Objectives	After taking part successfully, students have	ve reached the following learn	ng results		
Professional Competence Knowledge Skills Personal Competence Social Competence Autonomy	The students know and understand basic algorithms of digital signal processing. They are familiar with the spectral transforms of discrete-time signals and are able to describe and analyse signals and systems in time and image domain. They know basic structures of digital filters and can identify and assess important properties including stability. They are aware of the effects caused by quantization of filter coefficients and signals. They are familiar with the basics of adaptive filters. They can perform traditional and parametric methods of spectrum estimation, also taking a limited observation window into account. The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems. The students are able to apply methods of digital signal processing to new problems. They can choose and parameterize suitable filter structures. In particular, the can design adaptive filters according to the minimum mean squared error (MMSE) criterion and develop an efficient implementation, e.g. based on the LMS or RLS algorithm. Furthermore, the students are able to apply methods to a limited observation window into account.

Module M1700: Satel	lite Communications and Navigation			
Courses				
Title		Тур	Hrs/wk	СР
Radio-Based Positioning and Navig	ation (L2711)	Lecture	2	3
Satellite Communications (L2710)		Lecture	3	3
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous	The module is designed for a diverse audience, i.e.	students with different background. Ba	sic knowledge	of communications
Knowledge	engineering and signal processing are of advantage	e but not required. The course inte	nds to provide	e the chapters on
	communications techniques such that on the one hand	students with a communications engine	ering backgrou	und learn additional
	concepts and examples (e.g. modulation and coding so	hemes or signal processing concepts) w	hich have not c	or in a different way
	been treated in our other bachelor and master courses	On the other hand, students with other	background sh	nall be able to grasp
	the ideas but may not be able to understand in the s	ame depth. The individual background	of the students	s will be taken into
	consideration in the oral exam.			
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	The students are able to understand, compare and	analyse digital satellite communicatio	ns system as	well as navigation
	techniques. They are familiar with principal ideas of the	e respective communications, signal pro	ocessing and p	ositioning methods.
	They can describe distortions and resulting limitation	s caused by transmission channels and	hardware com	nponents. They can
	describe how fundamental communications and naviga	ion techniques are applied in selected pr	actical systems	s.
	The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems			
Skills	The students are able to describe and analyse digital satellite communications systems and navigation systems. They are able to			
	analyse transmission chains including link budget calcu	lations. They are able to choose appropr	iate transmissio	on technologies and
	system parameters for given scenarios.			
Personal Competence				
Social Competence	The students can jointly solve specific problems.			
Autonomy	The students are able to acquire relevant information fr	om appropriate literature sources.

Module M1702: Proce	ss Imaging				
Courses					
Title		Тур	Hrs/wk	СР	
Process Imaging (L2723)		Lecture	3	3	
Process Imaging (L2724)		Project-/problem-based Learning	3	3	
Module Responsible	Prof. Alexander Penn				
Admission Requirements	None				
Recommended Previous	No special prerequisites needed				
Knowledge					
Educational Objectives	After taking part successfully, students have reached the f	ollowing learning results			
Professional Competence					
Knowledge	 Content: The module focuses primarily on discussing established imaging techniques including (a) optical and infrared (b) magnetic resonance imaging, (c) X-ray imaging and tomography, and (d) ultrasound imaging but also covers a range recent imaging modalities. The students will learn: 				
	 what these imaging techniques can measure (su composition, temperature), 	ch as sample density or concentrat	ion, material	transport, chemi	
	 how the measurements work (physical measurements) how to determine the most suited imaging methods 	it principles, hardware requirements, i for a given problem.	mage reconst	ruction), and	
	Learning goals: After the successful completion of the co	urse, the students shall:			
	 understand the physical principles and practical aspects of the most common imaging methods, be able to assess the pros and cons of these methods with regard to cost, complexity, expected cont temporal resolution, and based on this assessment be able to identify the most suited imaging modality for any specific engineering challenge in the field bioprocess engineering. 				
Skills Personal Competence					
Social Competence	In the problem-based interactive course, students work in	n small teams and set up two proces	s imaging sy	stems and use the	
	systems to measure relevant process parameters in difference	ent chemical and bioprocess engineeri	ng applicatior	ns. The teamwork	
	foster interpersonal communication skills.				
Autonomy	Students are guided to work in self-motivation due to the	challenge-based character of this mod	ule. A final pr	resentation improv	
	presentation skills.

Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous Knowledge	 Basic knowledge of software-engineering activities Discrete algebraic structures Object-oriented programming, algorithms, and data Functional programming or Procedural programmin 	a structures g		
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.			
Skills	s Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.			
Personal Competence				
Social Competence	Students discuss relevant topics in class. They defend the	ir solutions orally. They communica	te in English.	
Autonomy	V Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.

Content	Correctness is a major concern in embedded systems. Model checking can fully automatically proof formal properties about digital hardware or software. Such properties are given in temporal logic, e.g., to prove "No two orthogonal traffic lights will ever be green."			
	And how do the underlying reasoning algorithms work so effectively in practice despite a computational complexity of NP hardness and beyond?			
	But what are the limitations of model checking?			
	How are the models generated from a given design?			
	The lecture will answer these questions. Open source tools will be used to gather a practical experience.			
	Among other topics, the lecture will consider the following topics:			
	Modelling digital Hardware, Software, and Cyber Physical Systems			
	Data structures, decision procedures and proof engines			
	Binary Decision Diagrams			
	And-Inverter-Graphs			
	Boolean Satisfiability			
	Satisfiability Modulo Theories			
	Specification Languages			
	• CTL

Content	This module provides a comprehensive knowledge in modern cryptography and how it plays a key role in securing the digital world we live in today. We will thoroughly treat cryptographic primitives such as symmetric and asymmetric encryption schemes, cryptographic hash functions, message authentication codes, and digital signatures. Moreover, we will cover aspects of practical deployment such as key management, public key infrastructures, and secure storage of keys. We will see how everything comes together in applications such as the ubiquitous security protocols of the Internet (e.g. TLS and WPA3) and/or the Internet-of-things. We also discuss current challenges such as the need for post-quantum cryptography.

Content	Electromagnetic Compatibility (EMC) Engineering deals with design, simulation, measurement, and certification of electronic and	
	electric components and systems in such a way that their operation is safe, reliable, and efficient in any possible application.	
	Safety is hereby understood as safe with respect to parasitic effects of electromagnetic fields on humans as well as on the	
	operation of other components and systems nearby. Examples for components and systems range from the wiring in aircraft and	
	ships to high-speed interconnects in server systems and wirless interfaces for brain implants. In this part of the course we will give	
	an introduction to the physical basics of EMC engineering and then show how methods of Machine Learning (ML) can be applied to	
	expand todays physcis-based approaches in EMC Engineering.

Specialization Secure and Dependable IT Systems

Graduates of the Secure and Dependable IT Systems specialisation acquire extensive knowledge in software verification and IT security. They also have knowledge in communication networks and signal processing. They are able to apply methods and procedures required to work on secure and dependable IT systems, as well as critically examine new insights to further develop and incorporate in their work.

The Secure and Dependable IT Systems specialisation is recommended for students who already have a good mathematical foundation and basic knowledge in computer science and software development.

Content	Correctness is a major concern in embedded systems. Model checking can fully automatically proof formal properties about digital hardware or software. Such properties are given in temporal logic, e.g., to prove "No two orthogonal traffic lights will ever be green."
	And how do the underlying reasoning algorithms work so effectively in practice despite a computational complexity of NP hardness and beyond?
	But what are the limitations of model checking?
	How are the models generated from a given design?
	The lecture will answer these questions. Open source tools will be used to gather a practical experience.
	Among other topics, the lecture will consider the following topics:
	Modelling digital Hardware, Software, and Cyber Physical Systems
	Data structures, decision procedures and proof engines
	Binary Decision Diagrams
	• And-Inverter-Graphs
	Boolean Satisfiability
	Satisfiability Modulo Theories
	Specification Languages
	• CTL
	• LTL
	System Verilog Assertions
	Algorithms for
	Reachability Analysis
	Symbolic CTL Checking
	Bounded LTL-Model Checking
	 Optimizations, e.g., induction, abstraction
	Quality assurance

Content	Description
	The term dependability comprises various aspects of a system. These are typically:
	Reliability
	Availability
	Maintainability
	• Safety
	Security
	This makes dependability a core aspect that has to be considered early in system design, no matter whether software, embedded
	systems or full scale cyber-physical systems are considered.
	Contents
	The module introduces the basic concepts for the design and the analysis of dependable systems. Design examples for getting
	practical hands-on-experience in dependable design techniques. The module focuses towards embedded systems. The following
	topics are covered:
	Modelling
	Fault Tolerance
	Design Concepts
	Analysis Techniques

Content	In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for
	communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture.
	Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the
	course increasingly complex networks and protocols are considered and their performance is determined by simulation.

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28	
Lecturer	Prof. Stefan Schulte	
Language	EN	
Cycle	SoSe	
Content	This project-/problemoriented part of the module augments the theoretical content of the lecture by a concrete technical problem,	
	which needs to be solved by the students in group work during the semester. Possible topics are (blockchain-based) sensor data	
	integration, big Data processing, Cioud-based redundant data storages, and Cloud-based Onion Routing.	
Literature	Will be discussed in the lecture.

Module Responsible	Prof. Andreas Timm-Giel			
Admission Requirements	None			
Recommended Previous	. Fundamentals of communication on			
Knowledge	Fundamentals of communication of a	computer networks		
	• Stochastics			
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	Students are able to describe methods for	planning, optimisation and performance evaluatior	n of communicati	on networks.
Skills	Students are able to solve typical planning	ng and optimisation tasks for communication net	works. Furtherm	ore they are able to
	evaluate the network performance using queuing theory			
	Students are able to apply independently what they have learned to other and new problems. They can present their res		esent their results in	
	front of experts and discuss them.			
Personal Competence				
Social Competence				
Autonomy	Students are able to acquire the neces	ssary expert knowledge to understand the fur	ctionality and p	performance of new
	communication networks independently.

Module M0738: Digita	al Audio Signal Processing			
Courses				
Title Digital Audio Signal Processing (L06	650)	Тур Lecture	Hrs/wk 3	CP 4
Digital Audio Signal Processing (L06	651)	Recitation Section (large)	1	2
Module Responsible	Prof. Udo Zölzer			
Admission Requirements	None			
Recommended Previous	Signals and Systems			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	Die Studierenden können die grundlegenden Verfahren	und Methoden der digitalen Audiosig	nalverarbeitung	erklären. Sie können
	die wesentlichen physikalischen Effekte bei der Sprach	- und Audiosignalverarbeitung erläut	ern und in Kateg	gorien einordnen. Sie
	können einen Überblick der numerischen Metho	den und messtechnischen Chara	<terisierung th="" vo<=""><th>n Algorithmen zur</th></terisierung>	n Algorithmen zur
	Audiosignalverarbeitung geben. Sie können die ei	arbeiteten Algorithmen auf weite	re Anwendunge	en im Bereich der
	Informationstechnik und Informatik abstrahieren.			
Skills	The students will be able to apply methods and tech	niques from audio signal processing	in the fields of	mobile and internet
	communication. They can rely on elementary algorithm	ns of audio signal processing in form	of Matlab code	and interactive JAVA
	applets. They can study parameter modifications and e	valuate the influence on human perc	eption and techr	nical applications in a
	variety of applications beyond audio signal processing	. Students can perform measuremer	nts in time and	frequency domain in
	order to give objective and subjective quality measures	with respect to the methods and appl	ications.	
Personal Competence				
Social Competence	The students can work in small groups to study speci	al tasks and problems and will be a	nforced to pres	ant their results with
Social Competence	adequate methods during the exercise		norced to prese	ent then results with
	ducquate methods during the excretse.			
Autonomy	The students will be able to retrieve information out o	f the relevant literature in the field a	and putt hem inf	to the context of the
	lecture. They can relate their gathered knowledge and	relate them to other lectures (signals	and systems, d	igital communication
	systems, image and video processing, and pattern reco	gnition). They will be prepared to un	derstand and co	mmunicate problems
	and effects in the field audio signal processing.

Content	Computer graphics and animation are leading to an unprecedented visual revolution. The course deals with its technological foundations: Object-oriented Computer Graphics Projections and Transformations Polygonal and Parametric Modelling Illuminating, Shading, Rendering Computer Animation Techniques Kinematics and Dynamics Effects Students will be be working on a series of mini-projects which will eventually evolve into a final project. Learning computer graphics and animation resembles learning a musical instrument. Therefore, doing your projects well and in time is essential for performing well on this course.

Module M1700: Satel	lite Communications and Navigation			
Courses				
Title		Тур	Hrs/wk	СР
Radio-Based Positioning and Navig	ation (L2711)	Lecture	2	3
Satellite Communications (L2710)		Lecture	3	3
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous	The module is designed for a diverse audience, i.e.	students with different background. Ba	sic knowledge	of communications
Knowledge	engineering and signal processing are of advantage	e but not required. The course inte	nds to provide	e the chapters on
	communications techniques such that on the one hand	students with a communications engine	ering backgrou	und learn additional
	concepts and examples (e.g. modulation and coding so	hemes or signal processing concepts) w	hich have not c	or in a different way
	been treated in our other bachelor and master courses	On the other hand, students with other	background sh	nall be able to grasp
	the ideas but may not be able to understand in the s	ame depth. The individual background	of the students	s will be taken into
	consideration in the oral exam.			
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	The students are able to understand, compare and	analyse digital satellite communicatio	ns system as	well as navigation
	techniques. They are familiar with principal ideas of the	e respective communications, signal pro	ocessing and p	ositioning methods.
	They can describe distortions and resulting limitation	s caused by transmission channels and	hardware com	nponents. They can
	describe how fundamental communications and naviga	ion techniques are applied in selected pr	actical systems	s.
	The students are familiar with the contents of lecture a	nd tutorials. They can explain and apply t	hem to new pro	oblems
Skills	The students are able to describe and analyse digital s	atellite communications systems and na	vigation system	ns. They are able to
	analyse transmission chains including link budget calcu	lations. They are able to choose appropr	iate transmissio	on technologies and
	system parameters for given scenarios.			
Personal Competence				
Social Competence	The students can jointly solve specific problems.			
Autonomy	The students are able to acquire relevant information fr	om appropriate literature sources.

Content		
	Introduction to satellite communications	
	What is a satellite	
	 Overview orbits, Van Allen Belt, components of a satellite 	
	Satellite services	
	 Frequency bands for satellite services 	
	International Telecommunications Union (ITU)	
	Influence of atmospheric impairments	
	Milestones in satellite communications	
	Components or a satellite communications system	
	• Ground segment	
	• space segment	
	Commission	
	Performance measures	
	 Effective isotropic radiated power (EIRP), antenna gain, figure of merit. G/T, carrier to noise ratio 	
	 Signal to noise power ratio vs. carrier to noise ratio 	
	Single beam and multibeam satellites	
	- Beam coverage	
	 Examples for beam coverage of LEO and GEO satellites (Iridium, Viasat) 	
	Transparent vs. regenerative payload	
	 Utilities Low earth orbit (LEO) medium earth orbit (MEO) geosynchronoous and geostationary orbits (CEO) highly elliptical 	
	 Low earth obdi (LEO), medium earth orbit (MEO), geosynchroneous and geostationally orbits (GEO), mgmy empirical orbit: (HEO) 	
	o Favourable orbits:	
	- revenues or loc.	
	Circular Lo arbits Circular Lo arbits	
	Circular REO Orbits (Intermediate Circular Orbits (ICO))	
	Foundational orbits (execution orbits (GEO) Foundational orbits (GEO)	
	Important aspects of LEO. MEO and GEO satellites	
	Kepler's laws of planetary motion	
	Gravitational force	
	Parameters of ellipses and elliptical orbits	
	Major and minor half axis	
	• Foci	
	• Eccentricity	
	 Eccentric anomaly, mean anomaly, true anomaly 	
	• Area	
	Orbit period	
	Perigee, apogee	
	 Distance of satellite from center of earth 	

- Construction of ellipses according to de La Hire
- Orbital plane in space, inclination, right ascension (longitude) of ascending node, Vernal equinox

- Newton's laws of motion
- Newton's universal law of gravitation
- Energy of satellites: Potential energy, kinetic energy, total energy
- Instantaneous speed of a satellite
- Kepler's equation
- Satellite visibility, elevation
- Required number of LEO, MEO or GEO satellites for continuous earth coverage
- Satellite altitude and distance from a point on earth
- Choice of orbits
 - LEO, HEO, GEO
 - Elliptical orbits with non-zero inclination, Molnya orbits, Tundra orbits
 - Geosynchronous orbits
 - Parameters of geosynchronous orbits
 - Circular geosynchronous orbits
 - Inclined geosynchronous orbits
 - Quasi-zenith satellite systems (QZSS)
 - Syb-synchronous circular equatorial orbits
 - Geostationary orbit
 - Parameters of the geostationary orbit
 - Visibility
 - Propagation delay
 - Applications and system examples
- Perturbations of orbits
 - Station keeping
 - Station keeping box
 - Estimation of orbit parameters
- Fundamentals of digital communications techniques
 - Components of a digital communications system
 - Principles of encryption
 - Scrambling
 - Scrambling vs. interleaving for randomization of data sequences
 - $\circ \ \ \, \mbox{Interleaving: Block interleaver, convolutional interleaver, random interleaver}$
 - Digital modulation methods
 - Linear and non-linear digital modulation methods
 - Linear digital modulation methods
 - QAM modulator and demodulator
 - Pulse shaping, square-root raised-cosine pulses
 - Average power spectral density
 - Signal space constellation
 - Examples: M-ary phase shift keying (M-PSK), M-ary quadrature amplitude shift keying (M-QAM)
 - M-PSK in noisy channels
 - Bit error probabilities of M-PSK and M-QAM
 - M-PSK vs. M-QAM
 - M-ary amplitude and phase shift keying (M-APSK)
 - M-APSK vs. M-QAM
 - Differential phase shift keying (DPSK)

Error control coding (channel coding)

- Error detecting and forward error correcting (FEC) codes
- Principle of channel coding
- Data rate, code rate, Baud rate, spectral efficiency of modulation and coding schemes
- Bandwidth-power trade-off, bandwidth-limited vs. power-limited transmission
- Coding and modulation for transparent vs. regenerative payload
- Block codes and convolutional codes
- Concatenated codes
- Bit-interleaved coded modulation
- Convolutional codes
- Low density parity check (LDPC) codes, principle of message passing decoding, bit error rate performance
- Cyclic block codes
 - Examples for cyclic block codes
 - Single errors vs. block errors, cyclic block codes for burst errors
 - Generator matrix, generator polynomials
 - Systematic encoding and syndrome determination with shift registers
 - Cyclic redundancy check (CRC) codes
- Automatic repeat request (ARQ)
 - Principle of ARQ
 - Stop-and-wait ARQ
 - Go-back-N ARQ
 - Selective-repeat ARQ
- Transmission gains and losses

Antenna gain
 Antenna radiation pattern
 Maximum antenna gain, 3dB beamwidth
 Maximum antenna gain of circular aperture
 Maximum antenna gain of a geostationary satellite with global coverage
 Effective isotropic radiated power (EIRP)
 Power flux density
Path loss
 Free space loss, free space loss for geostationary satellites
 Atmospheric loss
 Received power
Losses in transmit and receive equipment
Feeder loss
 Depointing loss Delovination mismatch loss
Combined effect of lesses
Noice
White noise
 Noise power spectral density and noise power
 Additive white Gaussian noise (AWGN) channel model
Antenna noise temperature
Earth brightness temperature
 Signal to noise ratios
Atmospheric distortions
• Atmosphere of the earth: Troposphere, stratosphere, mesosphere, thermosphere, exosphere
 Attenuation and depolarization due to rain, fog, rain and ice clouds, sandstorms
 Scintillation
 Faraday effect
 Multipath contributions
Link budget calculations
• GEO clear sky uplink and downlink
GEO uplink and downlink under rain conditions
 Iransparent vs. regenerative payload Lisk evaluative improvement through site diversity and edentive transmission
Link availability improvement through site diversity and adaptive transmission
 Indisparent vs. regenerative payload Non-linear amplifiers
 Input and output back-off factor
 Single carrier and multicarrier operation
 Dimensioning of transmission parameters
 Sources of noise: Thermal noise, interference, intermodulation products
 Signal to noise ratio and bit error probability
 Robustness against interference and non-linear channels
a Catallita naturaliza
Satellite network reference architectures
Network topologies
Network connectivity
 Types of network connectivity
 On-board connectivity
 Inter-satellite links
 Broadcast networks
Satellite-based internet
 Catallite communications sustants and standards events les
Jaccinic communications systems and standards examples The role of standards in satellite communications

Previous	• Software Engineering			
Knowledge	ge • Object-Oriented Programming			
	Algorithms and Data Structures			
	Experience with (Small) Software Projects			
	Statistics			
Educational	After taking part successfully, students have reached the following learning results			
Objectives	es			
Professional	lal			
Competence	ce			
Knowledge	<i>ige</i> Students explain the different phases of testing, describe fundamental			
	techniques of different types of testing, and paraphrase the basic			
	principles of the corresponding test process. They give examples of			
	software development scenarios and the corresponding test type and			
	technique. They explain algorithms used for particular testing			
	techniques and describe possible advantages and limitations.			
Skills	ills			
	problem. They adapt and execute respective algorithms to execute a			
	concrete test technique properly. They interpret testing results and			
	execute corresponding steps for proper re-test scenarios. They write and			
	analyze test specifications. They apply bug finding techniques for			
	non-trivial problems.			
Personal	lal			
Competence	ce			
Social	Social Students discuss relevant topics in class. They defend their solutions orally.			
Competence	nce They communicate in English.			
Autonomy	$m\nu$ Students can assess their level of knowledge continuously and adjust it appropriately, based	on feedback and o	on self-quided	studies Within limits they
	own learning goals. Upon successful completion, students can identify and precisely formula	te new problems ir	academic or	applied research in the fiel
	testing. Within this field, they can conduct independent studies to acquire the necessary c	competencies and	compile their	findings in academic repo
	devise plans to arrive at new solutions or assess existing ones

Courses							
Title Security of Cyber-Physical Systems Security of Cyber-Physical Systems	; (L2691) ; (L2692)			Typ Lecture Recitation Section (small)	Hrs/wk 2 2	CP 3 3	
Module Responsible	Prof. Sibylle Fröschle						
Admission Requirements	None						
Recommended Previous Knowledge	IT security, programming	skills, statistics					
Educational Objectives	After taking part success	After taking part successfully, students have reached the following learning results					
Professional Competence Knowledge	The students know and can explain						
	- the threats posed by cyber attacks to cyber-physical systems (CPS)						
	- concrete attacks at a te	crete attacks at a technical level, e.g. on bus systems					
	- security solutions specific to CPS with their capabilities and limitations						
	- examples of security architectures for CPS and the requirements they guarantee						
	- standard security engin	eering processes for C	CPS				
Skills	The students are able to						
	- identify security threat	s and assess the risks	for a given CPS				
	- apply attack toolkits to	analyse a networked	control system, a	nd detect attacks beyond th	ose taught in class		
	 identify and apply secu 	urity solutions suitable	to the requirement	nts			
	- follow security enginee	ering processes to dev	elop a security arc	chitecture for a given CPS			
	 recognize challenges a 	nd limitations, e.g. po	sed by novel type	s of attack			
Personal Competence							
Social Competence	The students are able to						
	- expertly discuss securi	ity risks and incidents	s of CPS and thei	r mitigation in a solution-o	riented fashion wi	th experts and non-	
	experts						
	 foster a security culture 	e with respect to CPS a	and the correspond	ding critical infrastructures			
Autonomy	The students are able to						
	- follow up and critically a	assess current develop	oments in the sec	urity of CPS including releva	nt security inciden	ts	
	- master a new topic with	nin the area by self-stu	udy and self-initiat	ed interaction with experts	and peers.

Cycle	WiSe	
Content	Embedded systems in energy, production, and transportation are currently undergoing a technological transition to highly networked automated cyber-physical systems (CPS). Such systems are potentially vulnerable to cyber attacks, and these can have physical impact. In this course we investigate security threats, solutions and architectures that are specific to CPS. The topics are as follows:	
	Fundamentals and motivating examples	
	Networked and embedded control systems	
	Bus system level attacks	
	Intruder detection systems (IDS), in particular physics-based IDS	
	System security architectures, including cryptographic solutions	
	Adversarial machine learning attacks in the physical world	
	Aspects of Location and Localization	
	Wireless networks and infrastructures for critical applications	
	Communication security architectures and remaining threats	
	Intruder detection systems (IDS), in particular data-centric IDS	
	Resilience against multi-instance attacks	
	Security Engineering of CPS: Process and Norms	
Literature	Recent scientific papers and reports in the public domain.	

Course L2692: Security of Cyber-Physical Systems

Thesis				
Module M-002: Maste	er Thesis			
Courses				
Title				
Modulo Posponsiblo	Drafassoran dar TIIIII			
Admission Requirements				
Admission Requirements	According to General Regulations §21 (1):			
	At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.			
Recommended Previous				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledae				
	• The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized			
	issues.			
	 The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical pacifican on them. 			
	 The students can place a research task in their subject area in its context and describe and critically assess the state of 			
	research.			
Skills	The students are able:			
	• To select apply and if necessary, develop further methods that are suitable for solving the specialized problem in question			
	 To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or 			
	incompletely defined problems in a solution-oriented way.			
	 To develop new scientific findings in their subject area and subject them to a critical assessment. 			
Borsonal Compotonco				
Social Competence	Students can			
occiai competence				
	Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured			
	Way.			
	Deal with issues completency in an expert discussion and answer them in a manner that is appropriate to the addressees while unholding their own assessments and viewpoints convincingly			
	······································			
Autonomy	Students are able:			
	• To structure a project of their own in work packages and to work them off accordingly			
	 To work their way in depth into a largely unknown subject and to work their on access the information required for them to do so. 			
	To apply the techniques of scientific work comprehensively in research of their own.
