Module M0718: Linear Algebra for Technomathematicians	12
Module M0774: Electrical Engineering for Technomathematicians	14
Module M1111: Mechanics for Technomathematicians	16
Module M0553: Objectoriented Programming, Algorithms and Data Structures	18
Module M1074: Higher Analysis	20
Module M1113: Proseminar Technomathematics	22
Module M1075: Numerical Mathematics	23
Module M1085: Mathematical Stochastics	25
Module M0829: Foundations of Management	27
Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific Regulations)	29
Module M0675: Introduction to Communications and Random Processes	30
Module M1020: Numerics of Partial Differential Equations	32
Module M0945: Bioprocess Engineering - Advanced	33
Module M0808: Finite Elements Methods	35
Module M0625: Databases	37
Module M1078: Geometry	39
Module M0783: Measurements: Methods and Data Processing	41
Module M1050: Graph Theory	43
Module M1106: Vibration Theory (GES)	45
Module M1087: Mathematics of Life Insurance	47
Module M0863: Numerics and Computer Algebra	49
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	51
Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields	52
Module M0538: Heat and Mass Transfer	55
Module M0688: Technical Thermodynamics II	57
Module M1129: Mathematical Systems Theory	59
Module M1114: Seminar Technomathematics	61
Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific Regulations)	62
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics)	63
Module M1280: MED II: Introduction to Physiology	64
Module M0594: Fundamentals of Mechanical Engineering Design	65
Module M0777: Semiconductor Circuit Design	67
Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	69
Module M0668: Algebra and Control	71
Module M0758: Application Security	73
Module M0562: Computability and Complexity Theory	75
Module M1005: Enhanced Fundamentals of Materials Science	76
Module M0709: Electrical Engineering IV: Transmission Lines and Research Seminar	79
Module M0734: Electrical Engineering Project Laboratory	81
Module M0807: Boundary Element Methods	82
Module M1053: Introductory Number Theory	84
Module M0606: Numerical Algorithms in Structural Mechanics	86
Module M1077: Foundations of Mathematical Logic	88
Module M1054: Topology	89
Module M1086: Practical Statistics	91
Module M1076: Set Theory	93
Specialization I. Mathematics	94
Module M0715: Solvers for Sparse Linear Systems	94
Module M0692: Approximation and Stability	96
Module M0852: Graph Theory and Optimization	98
Module M1052: Algebra	100
Module M1056: Functional Analysis	101
Module M1060: Optimization	103
Module M1061: Measure Theory and Stochastics	105
Module M1062: Mathematical Statistics	107
Module M1079: Differential Geometry	109
Module M1080: Ordinary Differential Equations and Dynamical Systems	111
Module M1083: Discrete Mathematics	113
Module M0714: Numerical Treatment of Ordinary Differential Equations	115
Module M0561: Discrete Algebraic Structures	117
Module M0716: Hierarchical Algorithms	118
Module M0881: Mathematical Image Processing	120
Module M1063: Stochastic Processes	122
Module M1059: Approximation	124
Module M1058: Introduction to Mathematical Modeling	126

Module M0941: Combinatorial Structures and Algorithms	128
Module M1055: Complex Analysis	130
Module M1051: Combinatorial Optimization	132
Module M0720: Matrix Algorithms	134
Module M0711: Numerical Mathematics II	136
Specialization II. Informatics	138
Module M0732: Software Engineering	138
Module M0624: Logic, Automata and Formal Languages	139
Module M0731: Functional Programming	141
Module M0953: Introduction to Information Security	143
Module M0972: Distributed Systems	145
Module M0549: Scientific Computing and Accuracy	146
Module M0730: Computer Engineering	148
Module M0834: Computernetworks and Internet Security	151
Module M0754: Compiler Construction	153
Module M0971: Operating Systems	154
Module M1307: Cryptography	155
Specialization III. Engineering Science	156
Module M0536: Fundamentals of Fluid Mechanics	156
Module M0634: Introduction into Medical Technology and Systems	158
Module M0648: MED I: Medical Basics I	159
Module M0680: Fluid Dynamics	162
Module M0757: Biochemistry and Microbiology	164
Module M0938: Bioprocess Engineering - Fundamentals	167
Module M0671: Technical Thermodynamics I	169
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	171
Module M0672: Signals and Systems	174
Module M0580: Principles of Building Materials and Building Physics	176
Module M0646: BIO I: Implants and Testing	178
Module M0687: Chemistry	180
Module M0740: Structural Analysis I	182
Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	184
Module M0933: Fundamentals of Materials Science	186
Module M0655: Computational Fluid Dynamics I	188
Module M0833: Introduction to Control Systems	190
Module M0708: Electrical Engineering III: Circuit Theory and Transients	193
Thesis	195
Module M-001: Bachelor Thesis	195

Program description

Content

Technomathematics

Technomathematics is the true key technology inside the key technologies. Whenever new airplanes, artificial blood vessels or smartphones are designed, then surely mathematics is substantially involved in this process. Technomathematics denotes those areas of mathematics that are most needed at the interfaces to engineering sciences or industry. Technomathematicians enter the stage to help engineers or technicians when mathematical problems in applications can no longer be solved with standard strategies and new mathematical approaches are required.

Students with a degree in Technomathematics possess the unique combination of a deep and enduring understanding of the mathematical foundations on the one side with indispensable engineering knowledge on the other side.

Study goals

The Bachelor of Science in Technomathematics is a joint study programme of TUHH and UHH, preparing the students for a job in industry or a subsequent MSc programme. Students are therefore trained in analytical thinking and precise research, but they are also highly competent in communicating and cooperating, and thus able to adjust and implement their approaches to what is needed in different application scenarios.

Learning outcomes

The proposed learning outcomes are derived from the above study goals. In the following, we group them according to the categories knowledge, skills, social competence and self-reliance.

Knowledge

- The students can name and describe the concepts and methods in Mathematics, Computer Science, Mechanics and Electrical Engineering.
- The students can give an overview on these subjects and are capable of illustrating their foundations with the help of examples.
- The students are able to discuss connections between the concepts of the individual subjects. They can explain how Technomathematics combines these concepts.

Skills

- The students are able to discover and verify further logical connections between the concepts studied in the programme.
- The students can model problems from the application areas of Technomathematics with the help of the established methods.
- The students can develop appropriate approaches for their models and apply them to solve the respective problems. They can evaluate their results and document their solution process.

Social competence

- The students are able to communicate the concepts in Technomathematics in written and oral form in a suitable way for varying recipients. They can use examples to check and deepen the understanding of their counterparts. They can adequately respond to further questions and comments.
- The students are capable of working together in teams. They master Mathematics as their joint language. They can define, distribute and integrate jobs, while reaching agreements and interacting socially.

Self-reliance

- The students are capable of gathering necessary information and can put it into the right context.
- The students can check their understanding of complex concepts on their own. They can encapsulate open questions and, if necessary, seek specific advice.
- The students can work in a target-oriented, self-organized and self-motivated manner over extended periods on hard problems.

Contents of the Programme

The Bachelor of Science in Technomathematics at TUHH offers a scientifically well-founded study programme that is oriented towards the fundamental principles of the field. It differs from other programmes in Technomathematics in that the students are taught the foundations of Computer Science and Engineering right from their first semester onwards, through lecture courses in Programming, Mechanics and Electrical Engineering. The courses in the two latter subjects are individually designed for the Technomathematics students and well-connected to their courses in Mathematics and Computer Science. In this way, analytical, creative and constructive skills to research and develop technical systems are promoted and demanded on a broad basis with in-depth studies in Mathematics, Computer Science and Engineering.

Curriculum

The first part of the BSc in Technomathematics consists of the obligatory foundation courses, followed by a combination of in-depth studies that can be used to specialise in subdisciplines of Technomathematics, concluded by the Bachelor Thesis.

Foundation courses (1.-3. Semester)

The foundation courses are taken during the first three semesters. They comprise a set of obligatory courses in Mathematics, Computer Science and Engineering. The first two semesters are taught at TUHH, the third at UHH.

Mathematics (59 LP)

- Linear Algebra
- Analysis
- Higher Analysis
- Numerics
- Stochastics

Computer Science (12 LP)

- Procedural und objektorientiert programming
- Datastructures und algorithms

Engineering (16 LP)

- Mechanics
- Electrical Engineering

Proseminar Technomathematics (2LP)

Specialisation(4.-6. Semester)

In the second half of the Bachelor Programme, the students are allowed and expected to compile their individual study plan. Within a set of minimum requirements concerning the three basic directions Mathematics, Computer Science and Engineering, they can choose freely from the broad variety of courses offered at TUHH and UHH. The following list only gives a few examples of the possible directions. In addition to these modules, further competence is acquired in the areas of presentation techniques (taught in the module 'Seminar in Technomathematics' and in the problem solving classes), Management Science and other non-technical complementary courses.

Mathematics (at least 27 LP)

- Numerics of differential equations
- Approximation
- Functional Analysis
- Complex Analysis
- Probability Theory
- Optimization
- Discrete Mathematics
- Differential Geometry

Computer Science (at least 12 LP)

- Automata and Formal Languages
- Computability and Complexity
- Distributed Systems
- Software Engineering
- Databases
- IT-security
- Computer Engineering
- Computer Algebra

Engineering (at least 12 LP)

- Mechanics
- Electrical Engineering
- Fluid Dynamics
- Control Systems
- Process Engineering
- Medical Technology
- Computer networks
- Thermodynamics

Seminar Technomathematics (4 LP)

Foundations of Management (6 LP)

Non-technical complementary courses (6 LP)

Bachelor thesis (12 LP)

Subsequent MSc programmes

Students with a BSc in Technomathematics are able to continue their studies in the Master of Science in Technomathematics. This is again a joint programme of UHH and TUHH. Moreover, the students can change to other MSc programmes offered at TUHH, provided that they have acquired a sufficient respective background during their specialization. In the following, we again list a few possible examples.

- Technomathematics
- Computational Science and Engineering
- Computer Science
- International Management and Engineering
- Mechatronics
- Logistics Infrastructure and Mobility
- Process Engineering
- Mathematics (UHH)

Core qualification

Module M0575: Procedural Programming
Courses

Title	Typ	Hrs/wk	CP
Procedural Programming (L0197)	Lecture	1	2
Procedural Programming (L0201)	Recitation Section (small)	1	1
Procedural Programming (L0202)	Laboratory Course	2	3
Module Responsible	Prof. Siegfried Rump		
Admission Requirements	None		
Recommended Previous Knowledge	Elementary PC handling skills Elementary mathematical skills		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	The students acquire the following knowledge: <ul style="list-style-type: none"> • They know basic elements of the programming language C. They know the basic data types and know how to use them. • They have an understanding of elementary compiler tasks, of the preprocessor and programming environment and know how those interact. • They know how to bind programs and how to include external libraries to enhance software packages. • They know how to use header files and how to declare function interfaces to create larger programming projects. • They acquire some knowledge how the program interacts with the operating system. This allows them to develop programs interacting with the programming environment as well. • They learnt several possibilities how to model and implement frequently occurring standard algorithms. 		
<i>Skills</i>	<ul style="list-style-type: none"> • The students know how to judge the complexity of an algorithms and how to program algorithms efficiently. • The students are able to model and implement algorithms for a number of standard functionalities. Moreover, they are able to adapt a given API. 		
Personal Competence <i>Social Competence</i>	The students acquire the following skills: <ul style="list-style-type: none"> • They are able to work in small teams to solve given weekly tasks, to identify and analyze programming errors and to present their results. • They are able to explain simple phenomena to each other directly at the PC. • They are able to plan and to work out a project in small teams. • They communicate final results and present programs to their tutor. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> • The students take individual examinations as well as a final written exam to prove their programming skills and ability to solve new tasks. • The students have many possibilities to check their abilities when solving several given programming exercises. • In order to solve the given tasks efficiently, the students have to split those appropriately within their group, where every student solves his or her part individually.

Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<p>The Non-technical Elective Study Area</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p>Specialized Competence (Knowledge)</p> <p>Students can</p> <ul style="list-style-type: none"> • locate selected specialized areas with the relevant non-technical mother discipline, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
Professional Competence <i>Skills</i>	<p>Professional Competence (Skills)</p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> • apply basic methods of the said scientific disciplines, • question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple questions in aforementioned scientific disciplines in a successful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence <i>Social Competence</i>	<p>Personal Competences (Social Skills)</p> <p>Students will be able</p> <ul style="list-style-type: none"> • to learn to collaborate in different manner,

<i>Autonomy</i>	<ul style="list-style-type: none"> • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge. <p>Personal Competences (Self-reliance)</p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses

Module M0774: Electrical Engineering for Technomathematicians	
Courses	
Title	Typ Hrs/wk CP
Electrical Engineering I for Technomathematicians (L0754)	Lecture 2 3
Electrical Engineering I for Technomathematicians (L0755)	Recitation Section (small) 1 1
Electrical Engineering II for Technomathematicians (L0756)	Lecture 2 3
Electrical Engineering II for Technomathematicians (L0757)	Recitation Section (small) 1 1
Module Responsible	Prof. Frank Gronwald
Admission Requirements	None
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students know the basic theory, relations, and methods of electric and magnetic field computation and linear network theory. This includes, in particular: <ul style="list-style-type: none"> • the Maxwell equations in integral form, • the formulation of electric and magnetic fields as vector fields in different coordinate systems, • the constitutive relations, • the Gauss law, • the Ampère law, • the induction law, • the Kirchhoffs laws, • the Ohm's law, • the concepts and definitions of resistance, capacitance, and inductance, • methods for the simplification and analysis of linear networks, • complex numbers and their use in steady state sinusoidal analysis, • the concept of impedance, • the concept of resonance, • locus plots, • energy and power in steady state sinusoidal analysis, • 3-phase systems, • transients
<i>Skills</i>	The students are able to apply the basic laws of electromagnetism to electric and magnetic field computation. They are able to relate the various field quantities to each other. The students are able to calculate resistances, capacitances, and inductances of simple configurations. The students know how to apply network theory to calculate the currents and voltages of linear networks and how to design simple circuits.
Personal Competence	
<i>Social Competence</i>	Students are able to solve specific problems, alone or in a group, and to present the results accordingly. Students can explain concepts and, on the basis of examples and exercises, verify and deepen their understanding.
<i>Autonomy</i>	Students are able to acquire particular knowledge using textbooks in a self-learning process, to integrate, present, and associate this knowledge with other fields. The students develop persistency to also solve more complicated problems.
Workload in Hours	Independent Study Time 156, Study Time in Lecture 84
Credit points	8
Examination	Written exam
Examination duration and scale	120 minutes
Assignment for the Following Curricula	Technomathematics: Core qualification: Compulsory

Mechanics II for Technomathematicians (L1439)	Recitation Section (small)	2	1
Module Responsible	Prof. Robert Seifried		
Admission Requirements	none		
Recommended Previous Knowledge	Elementary knowledge in mathematics and physics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can <ul style="list-style-type: none"> describe the axiomatic procedure used in mechanical contexts; explain important steps in model design; present technical knowledge in stereostatics and elastostatics. 		
<i>Skills</i>	The students can <ul style="list-style-type: none"> explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems; apply basic statical and elastostatic methods to engineering problems; estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets. 		
Personal Competence			
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.		
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.

Module M0553: Objectoriented Programming, Algorithms and Data Structures			
Courses			
Title	Typ	Hrs/wk	CP
Objectoriented Programming, Algorithms and Data Structures (L0131)	Lecture	4	4
Objectoriented Programming, Algorithms and Data Structures (L0132)	Recitation Section (small)	1	2
Module Responsible	Prof. Rolf-Rainer Grigat		
Admission Requirements	Lecture Prozedurale Programmierung or equivalent proficiency in imperative programming		
Recommended Previous Knowledge	<p>Mandatory prerequisite for this lecture is proficiency in imperative programming (C, Pascal, Fortran or similar). You should be familiar with simple data types (integer, double, char), arrays, if-then-else, for, while, procedure calls or function calls, pointers, and you should have used all those in your own programs and therefore should be proficient with editor, compiler, linker and debugger. In this lecture we will immediately start with the introduction of objects and we will not repeat the basics mentioned above.</p> <p>This remark is especially important for AIW, GES, LUM because those prerequisites are not part of the curriculum. They are prerequisites for the start of those curricula in general. The programs ET, CI and IIW include those prerequisites in the first semester in the lecture Prozedurale Programmierung.</p>		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can explain the essentials of software design and the design of a class architecture with reference to existing class libraries and design patterns.</p> <p>Students can describe fundamental data structures of discrete mathematics and assess the complexity of important algorithms for sorting and searching.</p> <p><i>Skills</i> Students are able to</p> <ul style="list-style-type: none"> • Design software using given design patterns and applying class hierarchies and polymorphism • Carry out software development and tests using version management systems and Google Test • Sort and search for data efficiently • Assess the complexity of algorithms. <p>Personal Competence</p> <p><i>Social Competence</i> Students can work in teams and communicate in forums.</p> <p><i>Autonomy</i> Students are able to solve programming tasks such as LZW data compression using SVN Repository and Google Test independently and over a period of two to three weeks.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	60 Minutes, Content of Lecture, exercises and material in StudIP		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computer Science: Core qualification: Compulsory</p> <p>Electrical Engineering: Core qualification: Compulsory</p> <p>General Engineering Science (English program): Specialisation Computer Science and Engineering: Compulsory</p> <p>Computational Science and Engineering: Core qualification: Compulsory</p> <p>Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory</p> <p>Technomathematics: Core qualification: Compulsory</p>

Course L0880: Introduction to Management	
Typ	Lecture
Hrs/wk	4
CP	4
Workload in Hours	Independent Study Time 64, Study Time in Lecture 56
Lecturer	Prof. Christoph Ihl, Prof. Thorsten Blecker, Prof. Christian L��thje, Prof. Christian Ringle, Prof. Kathrin Fischer, Prof. Cornelius Herstatt, Prof. Wolfgang Kersten, Prof. Matthias Meyer, Prof. Thomas Wrona
Language	DE
Cycle	WiSe/SoSe
Content	<ul style="list-style-type: none"> • Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management • Important definitions from Management, • Developing Objectives for Business, and their relation to important Business functions • Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation Management, Marketing and Sales Cross-sectional Functions, e.g. Organisation, Human Ressource Management, Supply Chain Management, Information Management • Definitions as information, information systems, aspects of data security and strategic information systems • Definition and Relevance of innovations, e.g. innovation opportunities, risks etc. • Relevance of marketing, B2B vs. B2C-Marketing • different techniques from the field of marketing (e.g. scenario technique), pricing strategies • important organizational structures • basics of human ressource management • Introduction to Business Planning and the steps of a planning process • Decision Analysis: Elements of decision problems and methods for solving decision problems • Selected Planning Tasks, e.g. Investment and Financial Decisions • Introduction to Accounting: Accounting, Balance-Sheets, Costing • Relevance of Controlling and selected Controlling methods • Important aspects of Entrepreneurship projects

Course L0882: Project Entrepreneurship	
Typ	Problem-based Learning
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Christoph Ihl
Language	DE
Cycle	WiSe/SoSe
Content	In this project module, students work on an Entrepreneurship project. They are required to go through all relevant steps, from the first idea to the concept, using their knowledge from the corresponding lecture. Project work is carried out in teams with the support of a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific Regulations)			
Courses			
Title	Typ	Hrs/wk	CP
Module Responsible	Prof. Anusch Taraz		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42		
Credit points	6		
Examination	according to Subject Specific Regulations		
Examination duration and scale	according to Subject Specific Regulations		
Assignment for the Following Curricula	Technomathematics: Specialisation IV. Subject Specific Focus: Compulsory Technomathematics: Core qualification: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory		

Module M0675: Introduction to Communications and Random Processes			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Communications and Random Processes (L0442)	Lecture	3	4
Introduction to Communications and Random Processes (L0443)	Recitation Section (large)	1	2
Module Responsible	Prof. Gerhard Bauch		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Mathematics 1-3 • Signals and Systems • Basic knowledge of probability theory 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know and understand the fundamental building blocks of a communications system. They can describe and analyse the individual building blocks using knowledge of signal and system theory as well as the theory of stochastic processes. They are aware of the essential resources and evaluation criteria of information transmission and are able to design and evaluate a basic communications system.		
<i>Skills</i>	The students are able to design and evaluate a basic communications system. In particular, they can estimate the required resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communications system such as bandwidth efficiency or bit error rate and to decide for a suitable transmission method.		
Personal Competence			
<i>Social Competence</i>	The students can jointly solve specific problems.		
<i>Autonomy</i>	The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Technomathematics: Specialisation III. Module M0945: Bioprocess Engineering - Advanced			
Courses			
Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Advanced (L1107)	Lecture	2	4
Bioprocess Engineering - Advanced (L1108)	Recitation Section (small)	2	2
Module Responsible	Prof. An-Ping Zeng		
Admission Requirements	none		
Recommended Previous Knowledge	Content of module "Biochemical Engineering I"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	After successful completion of this module, students should be able to <ul style="list-style-type: none"> • describe and explain different kinetic approaches for growth and substrate-uptake • identification of scientific problems with concrete industrial use (cultivation of microorganisms and mammalian cells) • describe and explain important downstreaming steps for proteins and their application as well as basic immobilization methods 		
<i>Skills</i>	After successful completion of this module, students should be able to <ul style="list-style-type: none"> - to identify scientific questions or possible practical problems for concrete industrial applications (eg cultivation of microorganisms and animal cells) and to formulate solutions , - To assess the application of scale-up criteria for different types of bioreactors and processes and to apply these criteria to given problems (anaerobic , aerobic or microaerobically) - to formulate questions for the analysis and optimization of real biotechnological production processes appropriate solutions , - To describe the effects of the energy generation, the regeneration of reduction equivalents , and the growth inhibition of the behavior of microorganisms and to the total fermentation process qualitatively - Establish material flow balance equations and solve them to determine the kinetic parameters of different approaches and to calculate immobilization and activity yields , - to select process control strategies (batch , fed-batch , continuity) appropriately and to calculate basic types and evaluate them. 		
Personal Competence			
<i>Social Competence</i>	After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork.		
<i>Autonomy</i>	After completion of this module participants are able to acquire new sources of knowledge and apply their knowledge to previously unknown issues and to present these.

Admission Requirements	none		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.

Module M0625: Databases			
Courses			
Title		Typ	Hrs/wk
Databases (L0337)		Lecture	4
Databases (L1150)		Problem-based Learning	1
Module Responsible	Dr. Sandro Schulze		
Admission Requirements	None		
Recommended Previous Knowledge	Students should have basic knowledge in the following areas: <ul style="list-style-type: none"> • Discrete Algebraic Structures • Procedural Programming • Logic, Automata, and Formal Languages • Object-Oriented Programming, Algorithms and Data Structures 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can explain the general architecture of an application system that is based on a database. They describe the syntax and semantics of the Entity Relationship conceptual modeling languages, and they can enumerate basic decision problems and know which features of a domain model can be captured with ER and which features cannot be represented. Furthermore, students can summarize the features of the relational data model, and can describe how ER models can be systematically transformed into the relational data model. Student are able to discuss dependency theory using the operators of relational algebra, and they know how to use relational algebra as a query language. In addition, they can sketch the main modules of the architecture of a database system from an implementation point of view. Storage and index structures as well as query answering and optimization techniques can be explained. The role of transactions can be described in terms of ACID conditions and common recovery mechanisms can be characterized. The students can recall why recursion is important for query languages and describe how Datalog can be used and implemented. They demonstrate how Datalog can be used for information integration. For solving ER decision problems the students can explain description logics with their syntax and semantics, they describe description logic decision problems and explain how these problems can be mapped onto each other. They can sketch the idea of ontology-based data access and can name the main complexity measure in database theory. Last but not least, the students can describe the main features of XML and can explain XPath and XQuery as query languages.</p> <p><i>Skills</i> Students can apply ER for describing domains for which they receive a textual description, and students can transform relational schemata with a given set of functional dependencies into third normal form or even Boyce-Codd normal form. They can also apply relational algebra, SQL, or Datalog to specify queries. Using specific datasets, they can explain how index structures work (e.g., B-trees) and how index structures change while data is added or deleted. They can rewrite queries for better performance of query evaluation. Students can analyse which query language expressivity is required for which application problem. Description logics can be applied for domain modeling, and students can transform ER diagrams into description logics in order to check for consistency and implicit subsumption relations. They solve data integration problems using Datalog and LAV or GAV rules. Students can apply XPath and Xquery to retrieve certain patterns in XML data.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students develop an understanding of social structures in a company used for developing real-world products. They know the responsibilities of data analysts, programmers, and managers in the overall production process.</p> <p><i>Autonomy</i></p>

EE Experimental Lab (L0781)		Laboratory Course	2
Measurements: Methods and Data Processing (L0779)		Lecture	2
Measurements: Methods and Data Processing (L0780)		Recitation Section (small)	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	none		
Recommended Previous Knowledge	principles of mathematics principles of electrical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students are able to explain the purpose of metrology and the acquisition and processing of measurements. They can detail aspects of probability theory and errors, and explain the processing of stochastic signals. Students know methods to digitalize and describe measured signals.		
<i>Skills</i>	The students are able to evaluate problems of metrology and to apply methods for describing and processing of measurements.		
Personal Competence			
<i>Social Competence</i>	The students solve problems in small groups.		
<i>Autonomy</i>	The students can reflect their knowledge and discuss and evaluate their results.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Technomathematics: Specialisation III. Module M1106: Vibration Theory (GES)			
Courses			
Title	Typ	Hrs/wk	CP
Vibration Theory (GES) (L1423)	Lecture	2	3
Vibration Theory (GES) (L1433)	Recitation Section (large)	1	3
Module Responsible	Prof. Radoslaw Iwankiewicz		
Admission Requirements	Linear algebra, calculus, engineering/applied mechanics (especially kinematics and kinetics)		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The primary purpose of the study of Vibration Theory is to develop the capacity to understand vibrations and the capacity to analyse, measure, predict and control vibrations, which is needed by the engineers involved in the analysis and design of machines and their supporting structures, vehicles, aircraft, etc. The particular objectives of this course are to:</p> <ol style="list-style-type: none"> 1. Analyse mechanical structures taking into account the effects of dynamic loads. 1. Appreciate the importance of vibration in structures and mechanical devices. 2. Formulate and solve the equations of motion of mechanical systems. <p>Determine the natural frequencies and normal modes of complex mechanical systems.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>At the end of this course the student should be able to:</p> <ol style="list-style-type: none"> 1. Develop simple mathematical models for vibration analysis of complex systems; formulate and solve the equation of motion to determine the dynamic response. 2. Carry out the linearization of equations of motion. 1. Determine natural frequencies and normal modes of multi-degree-of-freedom and continuous systems (rods, shafts, taut strings, beams). 2. Carry out modal analysis to predict the dynamic response of linear mechanical systems to external excitations. 3. Analyse, in terms of eigenvalues, stability of time-invariant linear dynamic systems. 		
Personal Competence			
<i>Social Competence</i>	Students can work in small groups and report on the findings.		
<i>Autonomy</i>	Students are able to solve the problems independently.		
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2 hours: 2. MDOF systems: Newton- Euler and Lagrange's equations of motion. Linear systems: eigenvalue problem, general solution and stability. Linear MDOF systems: free and forced vibrations. Continuous systems. Energy methods or random vibrations.		
Assignment for the Following Curricula	Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory

Title	Typ Hrs/wk CP
Numerical Mathematics and Computer Algebra (L0115)	Lecture 2 3
Numerics and Computer Algebra (L1060)	Seminar 2 2
Numerical Mathematics and Computer Algebra (L0117)	Recitation Section (small) 1 1
Module Responsible	Prof. Siegfried Rump
Admission Requirements	none
Recommended Previous Knowledge	Basic knowledge in numerics and discrete mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students know the difference between precision and accuracy. For several basic problems they know how to solve them approximatively and exactly. They can distinguish between efficiently, not efficiently and principally unsolvable problems.
<i>Skills</i>	The students are able to analyze complex problems in mathematics and computer science. In particular they can analyze the sensitivity of the solution. For several problems they can derive best possible algorithms with respect to the accuracy of the computed result.
Personal Competence	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields			
Courses			
Title	Typ	Hrs/wk	CP
Theoretical Electrical Engineering II: Time-Dependent Fields (L0182)	Lecture	3	5
Theoretical Electrical Engineering II: Time-Dependent Fields (L0183)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	None		
Recommended Previous Knowledge	Electrical Engineering I, Electrical Engineering II, Theoretical Electrical Engineering I Mathematics I, Mathematics II, Mathematics III, Mathematics IV		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to explain fundamental formulas, relations, and methods related to the theory of time-dependent electromagnetic fields. They can assess the principal behavior and characteristics of quasistationary and fully dynamic fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-dependent electromagnetic fields and are able to explicate these.		
<i>Skills</i>	Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependent field problems. They can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret them with regard to practical applications.		
Personal Competence			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).		
<i>Autonomy</i>	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between acquired knowledge and ongoing research at the Hamburg University of Technology (TUHH), e.g. in the area of high frequency engineering and optics.

Module M0538: Heat and Mass Transfer			
Courses			
Title	Typ	Hrs/wk	CP
Heat and Mass Transfer (L0101)	Lecture	2	4
Heat and Mass Transfer (L0102)	Recitation Section (small)	1	2
Module Responsible	Prof. Irina Smirnova		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge: Technical Thermodynamics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> The students are capable of explaining qualitative and determining quantitative heat transfer in procedural apparatus (e. g. heat exchanger, chemical reactors). They are capable of distinguish and characterize different kinds of heat transfer mechanisms namely heat conduction, heat transfer and thermal radiation. The students have the ability to explain the physical basis for mass transfer in detail and to describe mass transfer qualitative and quantitative by using suitable mass transfer theories. They are able to depict the analogy between heat- and mass transfer and to describe complex linked processes in detail. 		
<i>Knowledge</i>			
<i>Skills</i>			
<i>Autonomy</i>			
Personal Competence	<ul style="list-style-type: none"> The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balance the corresponding energy and mass flow, respectively. They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calculate the corresponding heat flows. Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus. They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for the description and design of apparatus (e.g. extraction column, rectification column). In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application considering their advantages and disadvantages, respectively. In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus. The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the courses thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems. 		
<i>Social Competence</i>			
<i>Autonomy</i>	<ul style="list-style-type: none"> The students are able to work on subject-specific challenges in teams and to present the results orally in a reasonable manner to tutors and other students. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> The students are able to find and evaluate necessary information from suitable sources They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker-system, exam-like assignments) and on this basis they can control their learning processes.

Module M0688: Technical Thermodynamics II			
Courses			
Title	Typ	Hrs/wk	CP
Technical Thermodynamics II (L0449)	Lecture	2	4
Technical Thermodynamics II (L0450)	Recitation Section (large)	1	1
Technical Thermodynamics II (L0451)	Recitation Section (small)	1	1
Module Responsible	Prof. Gerhard Schmitz		
Admission Requirements	none		
Recommended Previous Knowledge	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.		
<i>Skills</i>	Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.		
Personal Competence			
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.		
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program): Core qualification: Compulsory General Engineering Science (German program, 7 semester): Core qualification: Compulsory Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory General Engineering Science (English program): Core qualification: Compulsory General Engineering Science (English program, 7 semester): Core qualification: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Mechanical Engineering: Core qualification: Compulsory Mechatronics: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory Process Engineering: Core qualification: Compulsory		

Course L0449: Technical Thermodynamics II	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Gerhard Schmitz
Language	DE
Cycle	WiSe
Content	8. Cycle processes 7. Gas - vapor - mixtures 10. Open systems with constant flow rates 11. Combustion processes 12. Special fields of Thermodynamics

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	EN
Cycle	WiSe
Content	<p>Systems Theory treats the mathematical background and foundations of the engineering discipline 'Cybernetics'. Thereby one wants to exert influence on a dynamical system (which is usually given by an ordinary differential equation (ODE)), such that a desired behavior is achieved. For instance, in classical mechanics, the motion of a mass point is determined by acting forces. In 'Systems and Control Theory', one wonders how these forces have to be chosen such that a prescribed movement of the mass point is accomplished.</p> <ul style="list-style-type: none"> Introduction and motivation Controllability Stabilization by feedback Observability Observer and controller design Linear-quadratic optimal control

Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific Regulations)			
Courses			
Title	Typ	Hrs/wk	CP
Module Responsible	Prof. Anusch Taraz		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i> Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42		
Credit points	6		
Examination	according to Subject Specific Regulations		
Examination duration and scale	according to Subject Specific Regulations		
Assignment for the Following Curricula	Technomathematics: Specialisation IV. Subject Specific Focus: Compulsory Technomathematics: Core qualification: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory		

Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics)			
Courses			
Title		Typ	Hrs/wk
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) (L0516)		Lecture	2
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) (L0518)		Recitation Section (large)	2
CP			3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	none		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.		
<i>Skills</i>	The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.		
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>	The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1280: MED II: Introduction to Physiology	
Courses	
Title	Typ
Introduction to Physiology (L0385)	Lecture
	Hrs/wk
	2
	CP
	3
Module Responsible	Dr. Roger Zimmermann
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students can <ul style="list-style-type: none"> describe the basics of the energy metabolism; describe physiological connections in select fields of muscle, heart/circulation, neuro- and sensory physiology.
<i>Skills</i>	The students can <ul style="list-style-type: none"> describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.
Personal Competence	
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological
<i>Autonomy</i>	The students can develop understanding of topics from the course, using technical literature, by themselves

Module M0758: Application Security	
Courses	
Title	Typ Hrs/wk CP
Application Security (L0726)	Lecture 3 3
Application Security (L0729)	Recitation Section (small) 2 3
Module Responsible	Prof. Dieter Gollmann
Admission Requirements	None
Recommended Previous Knowledge	Familiarity with Information security, fundamentals of cryptography, Web protocols and the architecture of the Web
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students can name current approaches for securing selected applications, in particular of web applications
<i>Skills</i>	Students are capable of <ul style="list-style-type: none"> performing a security analysis developing security solutions for distributed applications recognizing the limitations of existing standard solutions
Personal Competence	
<i>Social Competence</i>	Students are capable of appreciating the impact of security problems on those affected and of the potential responsibilities for their resolution.
<i>Autonomy</i>	Students are capable of acquiring knowledge independently from professional publications, technical standards, and other sources, and are capable of applying newly acquired knowledge to new problems.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	120 minutes

Module M0562: Computability and Complexity Theory			
Courses			
Title	Typ	Hrs/wk	CP
Computability and Complexity Theory (L0166)	Lecture	2	3
Computability and Complexity Theory (L0167)	Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann		
Admission Requirements	None.		
Recommended Previous Knowledge	Discrete Algebraic Structures, Automata Theory, Logic, and Formal Language Theory.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know the important machine models of computability, the class of partial recursive functions, universal computability, Gödel numbering of computations, the theorems of Kleene, Rice, and Rice-Shapiro, the concept of decidable and undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post correspondence systems, Hilbert's 10-th problem, and the basic concepts of complexity theory.		
<i>Skills</i>	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge with other classes.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1005: Enhanced Fundamentals of Materials Science	
Courses	
Title	Typ Hrs/wk CP
Fundamentals of Metallic Materials (L1086)	Lecture 2 3
Fundamentals of Ceramic and Polymer Materials (L1233)	Lecture 2 2
Fundamentals of Ceramic and Polymer Materials (L1234)	Recitation Section (large) 1 1
Module Responsible	Prof. Gerold Schneider
Admission Requirements	None
Recommended Previous Knowledge	Module "Fundamentals of Materials Science" Module "Materials Science Laboratory" Module "Advanced Materials"
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to give an enhanced overview over the following topics in metals, polymers and ceramics: Atomic bonds, crystal and amorphous structures, defects, electrical and mass transport, microstructure and phase diagrams. They are capable to explain the corresponding technical terms.
<i>Skills</i>	The students are able to apply the appropriate physical and chemical methods for the above mentioned subjects.
Personal Competence	
<i>Social Competence</i>	
<i>Autonomy</i>	The students are capable to understand independently the structure and properties of ceramics, metals and polymers. They should be able to critically evaluate the profoundness of their knowledge.

Module M0709: Electrical Engineering IV: Transmission Lines and Research Seminar			
Courses			
Title		Typ	Hrs/wk
Research Seminar Electrical Engineering, Computer Science, Mathematics (L0571)		Seminar	2
Transmission Line Theory (L0570)		Lecture	2
Transmission Line Theory (L0572)		Recitation Section (large)	2
CP			
			2
			3
			1
Module Responsible	Prof. Arne Jacob		
Admission Requirements	none		
Recommended Previous Knowledge	Electrical Engineering I-III, Mathematics I-III		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the fundamentals of wave propagation on transmission lines at low and high frequencies. They are able to analyze circuits with transmission lines in time and frequency domain. They can describe simple equivalent circuits of transmission lines. They are able to solve problems with coupled transmission lines. They can present and discuss a self-chosen research topic.		
<i>Skills</i>	Students can analyze and calculate the propagation of waves in simple circuits with transmission lines. They are able to analyze circuits in frequency domain and with the Smith chart. They can analyze equivalent circuits of transmission lines. They are able to solve problems including coupled transmission lines using the vectorial transmission line equations. They are able to give a talk to professionals.		
Personal Competence			
<i>Social Competence</i>	Students can analyze and solve problems in small groups and discuss their solutions. They can compare the learned theory with experiments in the lecture and discuss it in small groups. They are able to present a research topic to professionals and discuss it with them.		
<i>Autonomy</i>	The students can solve problems by their own and are able to acquire skills from the lecture and the literature. They are able to test their knowledge using computer animations. They can test their level of knowledge by answering short questions and tests during the lecture. They are able to relate their acquired knowledge to other lectures (e.g. Electrical Engineering I-III and Mathematics I-III). They can familiarize themselves with a research topic and can prepare a presentation.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0734: Electrical Engineering Project Laboratory			
Courses			
Title		Typ	Hrs/wk
Electrical Engineering Project Laboratory (L0640)		Laboratory Course	5
CP			6
Module Responsible	Prof. Christian Becker		
Admission Requirements	None		
Recommended Previous Knowledge	Electrical Engineering I, Electrical Engineering II		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.		
<i>Skills</i>	The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.		
Personal Competence			
<i>Social Competence</i>	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Students have the ability to develop alternative approaches to an electrical engineering problem independently or in groups and discuss advantages as well as drawbacks.		
<i>Autonomy</i>	Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Project		
Examination duration and scale	based on task + presentation		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory Technomathematics: Specialisation III. Lecturer	Prof. Christian Becker, Dozenten des SD E
Language	DE
Cycle	SoSe
Content	Topics and projects cover the entire field of applications of electrical engineering. Typically, the students will prototype functional units and self-contained systems, such as radar devices, networks of sensors, amateur radio transceiver, discrete computers, or atomic force microscopes. Different projects are devised on a yearly basis.
Literature	Alle zur Durchführung der Projekte sinnvollen Quellen (Skripte, Fachbücher, Manuals, Datenblätter, Internetseiten). / All sources that are useful for completion of the projects (lecture notes, textbooks, manuals, data sheets, internet pages).

Module M0807: Boundary Element Methods	
Courses	
Title	Typ Hrs/wk CP
Boundary Element Methods (L0523)	Lecture 2 3
Boundary Element Methods (L0524)	Recitation Section (large) 2 3
Module Responsible	Prof. Otto von Estorff
Admission Requirements	none
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.
Personal Competence	
<i>Social Competence</i>	-
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1061: Measure Theory and Stochastics			
Courses			
Title	Typ	Hrs/wk	CP
Measure Theory and Stochastics (L1335)	Lecture	3	4
Measure Theory and Stochastics (L1338)	Recitation Section (small)	1	2
Module Responsible	Prof. Anusch Taraz		
Admission Requirements	none		
Recommended Previous Knowledge	Mathematical Stochastics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can name the basic concepts in Stochastics. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can reproduce them. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> Students can model problems in Stochastics with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are able to work together in teams. They are capable to use mathematics as a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Courses			
Title	Typ	Hrs/wk	CP
Discrete Algebraic Structures (L0164)	Lecture	2	3
Discrete Algebraic Structures (L0165)	Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann		
Admission Requirements	None.		
Recommended Previous Knowledge	Mathematics from High School.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know the important basics of discrete algebraic structures including elementary combinatorial structures, monoids, groups, rings, fields, finite fields, and vector spaces. They also know specific structures like sub-, sum-, and quotient structures and homomorphisms.		
<i>Skills</i>	Students are able to formalize and analyze basic discrete algebraic structures.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire new knowledge from specific standard books and to associate the acquired knowledge to other classes.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Software Engineering (L0627)	Lecture	2	3
Software Engineering (L0628)	Recitation Section (small)	2	3
Module Responsible	Prof. Sibylle Schupp		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Automata theory and formal languages 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning.</p> <p><i>Skills</i> For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students practice peer programming. They explain problems and solutions to their peer. They communicate in English.</p> <p><i>Autonomy</i> Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback.</p>

Courses			
Title	Typ	Hrs/wk	CP
Logic, Automata Theory and Formal Languages (L0332)	Lecture	2	4
Logic, Automata Theory and Formal Languages (L0507)	Recitation Section (small)	2	2
Module Responsible	Prof. Tobias Knopp		
Admission Requirements	None		
Recommended Previous Knowledge	<p>Participating students should be able to</p> <ul style="list-style-type: none"> - specify algorithms for simple data structures (such as, e.g., arrays) to solve computational problems - apply propositional logic and predicate logic for specifying and understanding mathematical proofs - apply the knowledge and skills taught in the module Discrete Algebraic Structures 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students can explain syntax, semantics, and decision problems of propositional logic, and they are able to give algorithms for solving decision problems. Students can show correspondences to Boolean algebra. Students can describe which application problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.</p> <p><i>Skills</i> Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluate which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language emptiness problem in case of infinite words.</p>

Module M0731: Functional Programming	
Courses	
Title	Typ Hrs/wk CP
Functional Programming (L0624)	Lecture 2 2
Functional Programming (L0625)	Recitation Section (large) 2 2
Functional Programming (L0626)	Recitation Section (small) 2 2
Module Responsible	Prof. Sibylle Schupp
Admission Requirements	None
Recommended Previous Knowledge	Discrete mathematics at high-school level
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.
<i>Skills</i>	Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.
Personal Competence	
<i>Social Competence</i>	Students practice peer programming with varying peers. They explain problems and solutions to their peer. They defend their programs orally. They communicate in English.
<i>Autonomy</i>	In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.

Title	Typ Hrs/wk CP
Verification Methods (L0122)	Lecture 2 3
Verification Methods (L1208)	Recitation Section (small) 2 3
Module Responsible	Prof. Siegfried Rump
Admission Requirements	None
Recommended Previous Knowledge	Basic knowledge in numerics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students have deeper knowledge of numerical and semi-numerical methods with the goal to compute principally exact and accurate error bounds. For several fundamental problems they know algorithms with the verification of the correctness of the computed result.
<i>Skills</i>	The students can devise algorithms for several basic problems which compute rigorous error bounds for the solution and analyze the sensitivity with respect to variation of the input data as well.
Personal Competence	
<i>Social Competence</i>	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.
<i>Autonomy</i>	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

Courses			
Title	Typ	Hrs/wk	CP
Computer Engineering (L0321)	Lecture	3	4
Computer Engineering (L0324)	Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge in electrical engineering The successful completion of the labs will be honored during the evaluation of the module's examination according to the following rules: <ol style="list-style-type: none"> Upon a passed module examination, the student is granted a bonus on the examination's marks due to the successful labs, such that the examination's marks are lifted by 0,3 or 0,4, respectively, up to the next-better grade. The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is not possible. 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:</p> <ul style="list-style-type: none"> • Introduction • Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks • Sequential logic: Flip-flops, automata, systematic hardware design • Technological foundations • Computer arithmetic: Integer addition, subtraction, multiplication and division • Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining • Memories: Memory hierarchies, SRAM, DRAM, caches • Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses <p><i>Skills</i></p> <p>The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.</p> <p>After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i></p> <p>Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>

Compiler Construction (L0703)	Lecture 2 2
Compiler Construction (L0704)	Recitation Section (small) 2 4
Module Responsible	Prof. Sibylle Schupp
Admission Requirements	None
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Practical programming experience • Automata theory and formal languages • Functional programming or procedural programming • Object-oriented programming, algorithms, and data structures • Basic knowledge of software engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools.
<i>Skills</i>	Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.
Personal Competence	
<i>Social Competence</i>	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class. They communicate in English.
<i>Autonomy</i>	Students develop their software independently and define milestones by themselves. They receive feedback throughout the entire project. They organize the software project so that they can assess their progress themselves.

Module M0971: Operating Systems	
Courses	
Title	Typ Hrs/wk CP
Operating Systems (L1153)	Lecture 2 3
Operating Systems (L1154)	Recitation Section (small) 2 3
Module Responsible	Prof. Volker Turau
Admission Requirements	None
Recommended Previous Knowledge	<ul style="list-style-type: none"> Object-oriented programming, algorithms, and data structures Procedural programming Experience in using tools related to operating systems such as editors, linkers, compilers Experience in using C-libraries
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students explain the main abstractions process, virtual memory, deadlock, lifelock, and file of operations systems, describe the process states and their transitions, and paraphrase the architectural variants of operating systems. They give examples of existing operating systems and explain their architectures. The participants of the course write concurrent programs using threads, conditional variables and semaphores. Students can describe the variants of realizing a file system. Students explain at least three different scheduling algorithms.
<i>Skills</i>	Students are able to use the POSIX libraries for concurrent programming in a correct and efficient way. They are able to judge the efficiency of a scheduling algorithm for a given scheduling task in a given environment.
Personal Competence	
<i>Social Competence</i>	
<i>Autonomy</i>	
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam

Module M0634: Introduction into Medical Technology and Systems			
Courses			
Title		Typ	Hrs/wk
Introduction into Medical Technology and Systems (L0342)		Lecture	2
Introduction into Medical Technology and Systems (L0343)		Problem-based Learning	4
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	none		
Recommended Previous Knowledge	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain medical technology and its principles, including imaging systems, computer aided surgery, medical sensor systems, medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to apply principles of medical technology to solving actual problems.		
Personal Competence			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation Computer Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Technomathematics: Specialisation Engineering Science: Elective Compulsory

Module M0648: MED I: Medical Basics I			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	None.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	<p>Therapy</p> <p>The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain complex treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p>The students can describe the patients' passage from their initial admittance through to follow-up care.</p> <p>Diagnostics</p> <p>The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p> <p>Anatomy</p> <p>The students can describe</p> <p>basal structures and functions of internal organs and the musculoskeletal system</p> <p>.</p> <p>The students can describe the basic macroscopy and microscopy of those systems.</p>		
<i>Skills</i>	<p>Therapy</p> <p>The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p>Diagnostics</p> <p>The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p> <p>The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.</p> <p>Anatomy</p> <p>The students can recognize the relationship between given anatomical facts and the development of common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.</p>		
Personal Competence			
<i>Social Competence</i>	<p>The students can assess the special social situation of tumor patients and interact with them in a professional way.</p> <p>The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.</p> <p>The students can participate in current discussions in biomedical research and medicine on a professional level.</p>		
<i>Autonomy</i>	<p>The students can apply their new knowledge and skills to a concrete therapy case.</p> <p>The students can introduce younger students to the clinical daily routine.</p> <p>The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.</p>

CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Ulrich Carl, Prof. Thomas Vestring
Language	DE
Cycle	SoSe
Content	The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments

Module M0680: Fluid Dynamics	
Courses	
Title	Typ Hrs/wk CP
Fluid Mechanics (L0454)	Lecture 3 5
Fluid Mechanics (L0455)	Recitation Section (large) 1 1
Module Responsible	Prof. Heinz Herwig
Admission Requirements	none
Recommended Previous Knowledge	Technical Thermodynamics I, II
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to - distinguish the different physical mechanism of fluid dynamics, - understand the different mathematic modeling of fluid flow, - to apply and calculate fluid flow processes in different problems in nature and techniques.
<i>Skills</i>	The students are able to - understand the physics of Fluid Dynamics, - calculate and evaluate complex Fluid Dynamics processes, - solve excersises self-consistent and in small groups.
Personal Competence	
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.
<i>Autonomy</i>	The students are able to develop a complex problem self-consistent and analyse the results in a critical way. A qualified exchange with other students is given.

Courses			
Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Laboratory Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	none		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.		
<i>Skills</i>	After successful completion of this module, students should be able to <ul style="list-style-type: none"> • describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters • predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process • analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations • distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem • propose solutions to complicated biotechnological problems and to deduce the corresponding models • to explore new knowledge resources and to apply the newly gained contents • identify scientific problems with concrete industrial use and to formulate solutions. 		
Personal Competence			
<i>Social Competence</i>	After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.		
<i>Autonomy</i>	After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in aplenum.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Chemical Engineering: Compulsory General Engineering Science (German program): Specialisation Bioprocess Engineering: Compulsory Bioprocess Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (English program): Specialisation Chemical Engineering: Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Technomathematics: Specialisation Engineering Science: Elective Compulsory Process Engineering: Core qualification: Compulsory		

Course L0841: Bioprocess Engineering - Fundamentals	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Andreas Liese, Prof. An-Ping Zeng
Language	DE

Course L0843: Bioprocess Engineering - Fundamental Practical Course	
Typ	Laboratory Course
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Andreas Liese, Prof. An-Ping Zeng
Language	DE
Cycle	SoSe
Content	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out.
Literature	Skript

Module M0671: Technical Thermodynamics I	
Courses	
Title	Typ Hrs/wk CP
Technical Thermodynamics I (L0437)	Lecture 2 4
Technical Thermodynamics I (L0439)	Recitation Section (large) 1 1
Technical Thermodynamics I (L0441)	Recitation Section (small) 1 1
Module Responsible	Prof. Gerhard Schmitz
Admission Requirements	none
Recommended Previous Knowledge	Elementary knowledge in Mathematics and Mechanics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students are familiar with the laws of Thermodynamic. They know the relation of the kinds of energy according to 1 st law of Thermodynamic and are aware about the limits of energy conversions according to 2 nd law of Thermodynamic. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamic related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamic.
<i>Skills</i>	Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.
Personal Competence	
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields			
Courses			
Title	Typ	Hrs/wk	CP
Theoretical Electrical Engineering I: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	Elektrotechnik I, Elektrotechnik II, Mathematik I, Mathematik II, Mathematik III		
Recommended Previous Knowledge	Basic principles of electrical engineering and advanced mathematics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic fields. They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explicate these.		
<i>Skills</i>	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.		
Personal Competence			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).		
<i>Autonomy</i>	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6

Module M0672: Signals and Systems			
Courses			
Title	Typ	Hrs/wk	CP
Signals and Systems (L0432)	Lecture	3	4
Signals and Systems (L0433)	Recitation Section (large)	1	2
Module Responsible	Prof. Gerhard Bauch		
Admission Requirements	None		
Recommended Previous Knowledge	The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> <p><i>Skills</i> The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p>		
Personal Competence	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Module M0580: Principles of Building Materials and Building Physics			
Courses			
Title	Typ	Hrs/wk	CP
Building Physics (L0217)	Lecture	2	2
Building Physics (L0219)	Recitation Section (large)	1	1
Building Physics (L0247)	Recitation Section (small)	1	1
Principles of Building Materials (L0215)	Lecture	2	2
Module Responsible	Prof. Frank Schmidt-Döhl		
Admission Requirements	None		
Recommended Previous Knowledge	Knowledge of physics, chemistry and mathematics from school		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students are able to identify fundamental effects of action to materials and structures, to explain different types of mechanical behaviour, to describe the structure of building materials and the correlations between structure and other properties, to show methods of joining and of corrosion processes and to describe the most important regularities and properties of building materials and structures and their measurement in the field of protection against moisture, coldness, fire and noise.		
<i>Skills</i>	The students are able to work with the most important standardized methods and regularities in the field of moisture protection, the German regulation for energy saving, fire protection and noise protection in the case of a small building.		
Personal Competence			
<i>Social Competence</i>	The students are able to support each other to learn the very extensive specialist knowledge.		
<i>Autonomy</i>	The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Courses	
Title	Typ Hrs/wk CP
Experimental Methods in Biomechanics (L0377)	Lecture 2 3
Implants and Fracture Healing (L0376)	Lecture 2 3
Module Responsible	Prof. Michael Morlock
Admission Requirements	None
Recommended Previous Knowledge	It is recommended to participate in "Implantate und Frakturheilung" before attending "Experimentelle Methoden".
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students can describe the different ways how bones heal, and the requirements for their existence. The students can name different treatments for the spine and hollow bones under given fracture morphologies. The students can describe different measurement techniques for forces and movements, and choose the adequate technique for a given task.
<i>Skills</i>	The students can determine the forces acting within the human body under quasi-static situations under specific assumptions. The students can describe the basic handling of several experimental techniques used in biomechanics.
Personal Competence	
<i>Social Competence</i>	The students can, in groups, solve basic experimental tasks.
<i>Autonomy</i>	The students can, in groups, solve basic experimental tasks.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Courses	
Title	Typ Hrs/wk CP
Chemistry I (L0460)	Lecture 2 2
Chemistry I (L0475)	Recitation Section (large) 1 1
Chemistry II (L0465)	Lecture 2 2
Chemistry II (L0476)	Recitation Section (large) 1 1
Module Responsible	Prof. Gerrit A. Luinstra
Admission Requirements	none
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to name and to describe basic principles and applications of general chemistry (structure of matter, periodic table, chemical bonds), physical chemistry (aggregate states, separating processes, thermodynamics, kinetics), inorganic chemistry (acid/base, pH-value, salts, solubility, redox, metals) and organic chemistry (aliphatic hydrocarbons, functional groups, carbonyl compounds, aromates, reaction mechanisms, natural products, synthetic polymers). Furthermore students are able to explain basic chemical terms.
<i>Skills</i>	After successful completion of this module students are able to describe substance groups and chemical compounds. On this basis, they are capable of explaining, choosing and applying specific methods and various reaction mechanisms.
Personal Competence	
<i>Social Competence</i>	Students are able to take part in discussions on chemical issues and problems as a member of an interdisciplinary team. They can contribute to those discussion by their own statements.
<i>Autonomy</i>	After successful completion of this module students are able to solve chemical problems independently by defending proposed approaches with arguments. They can also document their approaches.

Module M0740: Structural Analysis I			
Courses			
Title	Typ	Hrs/wk	CP
Structural Analysis I (L0666)	Lecture	2	3
Structural Analysis I (L0667)	Recitation Section (large)	2	3
Module Responsible	Prof. Uwe Starossek		
Admission Requirements	none		
Recommended Previous Knowledge	Mechanics I, Mathematics I		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> After successfully completing this module, students can express the basic aspects of linear frame analysis of statically determinate systems.</p> <p><i>Skills</i> After successful completion of this module, the students are able to distinguish between statically determinate and indeterminate structures. They are able to analyze state variables and to construct influence lines of statically determinate plane and spatial frame and truss structures.</p>		
Personal Competence	<p><i>Social Competence</i></p> <p><i>Autonomy</i> The students are able work in-term homework assignments. Due to the in-term feedback, they are enabled to self-assess their learning progress during the lecture period, already.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 Minuten		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Civil- and Environmental Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory Civil- and Environmental Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Civil- and Environmental Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Civil Engineering: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0666: Structural Analysis I	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Uwe Starossek
Language	DE
Cycle	WiSe
Content	Statically determinate structural systems <ul style="list-style-type: none"> • basics: statically determinacy, equilibrium, method of sections • forces: determination of support reactions and internal forces • influence lines of forces • displacements: calculation of discrete displacements and rotations, calculation of deflection curves • principle of virtual displacements and virtual forces • work-energy theorem • differential equation of beam

Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	
Courses	
Title	Typ Hrs/wk CP
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1134)	Lecture 3 3
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1135)	Recitation Section (small) 2 2
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1136)	Recitation Section (large) 1 1
Module Responsible	Prof. Robert Seifried
Admission Requirements	none
Recommended Previous Knowledge	Mathematics I, II, Mechanics I (Statics), Mechanics II (Elastostatics)
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students can <ul style="list-style-type: none"> describe the axiomatic procedure used in mechanical contexts; explain important steps in model design; present technical knowledge in stereostatics.
<i>Skills</i>	The students can <ul style="list-style-type: none"> explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems; apply basic hydrostatical, kinematic and kinetic methods to engineering problems; estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.
Personal Competence	
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0933: Fundamentals of Materials Science	
Courses	
Title	Typ Hrs/wk CP
Fundamentals of Materials Science I (L1085)	Lecture 2 2
Fundamentals of Materials Science II (Advanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture 2 2
Physical and Chemical Basics of Materials Science (L1095)	Lecture 2 2
Module Responsible	Prof. Jörg Weißmüller
Admission Requirements	None
Recommended Previous Knowledge	Highschool-level physics, chemistry und mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students have acquired a fundamental knowledge on metals, ceramics and polymers and can describe this knowledge comprehensively. Fundamental knowledge here means specifically the issues of atomic structure, microstructure, phase diagrams, phase transformations, corrosion and mechanical properties. The students know about the key aspects of characterization methods for materials and can identify relevant approaches for characterizing specific properties. They are able to trace materials phenomena back to the underlying physical and chemical laws of nature.
<i>Skills</i>	The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena here refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to phase transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and the materials microstructure, and they can account for the impact of microstructure on the material's behavior.
Personal Competence	
<i>Social Competence</i>	-
<i>Autonomy</i>	-
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0833: Introduction to Control Systems			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Control Systems (L0654)	Lecture	2	4
Introduction to Control Systems (L0655)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner		
Admission Requirements	none		
Recommended Previous Knowledge	Representation of signals and systems in time and frequency domain, Laplace transform		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus They can explain the Nyquist stability criterion and the stability margins derived from it. They can explain the role of the phase margin in analysis and synthesis of control loops They can explain the way a PID controller affects a control loop in terms of its frequency response They can explain issues arising when controllers designed in continuous time domain are implemented digitally 		
<i>Knowledge</i>			
<i>Skills</i>	<ul style="list-style-type: none"> Students can transform models of linear dynamic systems from time to frequency domain and vice versa They can simulate and assess the behavior of systems and control loops They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks 		
Personal Competence	<p><i>Social Competence</i> Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs</p> <p><i>Autonomy</i> Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p> <p>They can assess their knowledge in weekly on-line tests and thereby control their learning progress.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0708: Electrical Engineering III: Circuit Theory and Transients			
Courses			
Title		Typ	Hrs/wk
Circuit Theory (L0566)		Lecture	3
Circuit Theory (L0567)		Recitation Section (small)	2
Module Responsible	Prof. Arne Jacob		
Admission Requirements	none		
Recommended Previous Knowledge	Electrical Engineering I and II, Mathematics I and II		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of linear networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in frequency domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.		
<i>Skills</i>	The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven by periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to explain the respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-terminal-circuits.		
Personal Competence			
<i>Social Competence</i>	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within the group.		
<i>Autonomy</i>	The students are able to find out the required methods for solving the given practice problems. Possibilities are given to test their knowledge during the lectures continuously by means of short-time tests. This allows them to control independently their educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.

Module M-001: Bachelor Thesis	
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §24 (1): <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"> The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area.
Skills	<ul style="list-style-type: none"> The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence <i>Social Competence</i>	<ul style="list-style-type: none"> Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
<i>Autonomy</i>	<ul style="list-style-type: none"> The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own.
