Program description	4
Core qualification	6
Module M0575: Procedural Programming	6
Module M0577: Nontechnical Complementary Courses for Bachelors	8
Module M0690: Analysis for Technomathematicians	10
Module M0718: Linear Algebra for Technomathematicians	12
Module M0774: Electrical Engineering for Technomathematicians	14
Module M1111: Mechanics for Technomathematicians	16
Module M0553: Objectoriented Programming, Algorithms and Data Structures	18
Module M1113: Proseminar Technomathematics  Module M1075: Numerical Mathematics	20 21
Module M1085: Mathematical Stochastics	23
Module M1074: Higher Analysis	25
Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific Regulations)	27
Module M0829: Foundations of Management	28
Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific Regulations)	31
Module M0945: Bioprocess Engineering - Advanced	32
Module M0675: Introduction to Communications and Random Processes	34
Module M1020: Numerics of Partial Differential Equations	36
Module M0808: Finite Elements Methods	37
Module M0625: Databases	39
Module M1078: Geometry	41
Module M0783: Measurements: Methods and Data Processing	43
Module M1050: Graph Theory  Module M1087: Mathematics of Life Insurance	45
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	47
Module M0863: Numerics and Computer Algebra	50
Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields	52
Module M0538: Heat and Mass Transfer	55
Module M0688: Technical Thermodynamics II	57
Module M1129: Mathematical Systems Theory	59
Module M1106: Vibration Theory (GES)	61
Module M1114: Seminar Technomathematics	63
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics)	64
Module M1280: MED II: Introduction to Physiology	65
Module M0594: Fundamentals of Mechanical Engineering Design	66
Module M0777: Semiconductor Circuit Design	68
Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	70
Module M0668: Algebra and Control	72
Module M0758: Application Security Module M0562: Computability and Complexity Theory	74 76
Module M1005: Enhanced Fundamentals of Materials Science	77
Module M0709: Electrical Engineering IV: Transmission Lines and Research Seminar	80
Module M0734: Electrical Engineering Project Laboratory	82
Module M0807: Boundary Element Methods	83
Module M1053: Introductory Number Theory	85
Module M0606: Numerical Algorithms in Structural Mechanics	87
Module M1077: Foundations of Mathematical Logic	89
Module M1054: Topology	90
Module M1086: Practical Statistics	92
Module M1076: Set Theory	94
Specialization I. Mathematics	95
Module M1052: Algebra	95
Module M0715: Solvers for Sparse Linear Systems	97
Module M1056: Functional Analysis	98
Module M0692: Approximation and Stability	100
Module M1062: Mathematical Statistics Module M1079: Differential Geometry	102
Madula Mt 000, Ordinary Differential Equations and Dynamical Cystems	106
Madula M1060: Optimization	108
Modulo M0952: Graph Theory and Optimization	110
Module M1061: Measure Theory and Stochastics	112
Module M0714: Numerical Treatment of Ordinary Differential Equations	114
Module M1083: Discrete Mathematics	116
Module M0561: Discrete Algebraic Structures	118
Module M0716: Hierarchical Algorithms	119
Module M0881: Mathematical Image Processing	121
Module M1063: Stochastic Processes	123
Module M1059: Approximation	125
Module M1058: Introduction to Mathematical Modeling	127

Module M0941: Combinatorial Structures and Algorithms	129
Module M1055: Complex Analysis	131
Module M1051: Combinatorial Optimization	133
Module M0720: Matrix Algorithms	135
Module M0711: Numerical Mathematics II	137
Specialization II. Informatics	139
Module M0732: Software Engineering	139
Module M0624: Logic, Automata and Formal Languages	141
Module M0731: Functional Programming	143
Module M0953: Introduction to Information Security	145
Module M0972: Distributed Systems	147
Module M0549: Scientific Computing and Accuracy	148
Module M0730: Computer Engineering	150
Module M0834: Computernetworks and Internet Security	153
Module M0754: Compiler Construction	155
Module M0971: Operating Systems	156
Module M1307: Cryptography	157
Specialization III. Engineering Science	158
Module M0536: Fundamentals of Fluid Mechanics	158
Module M0634: Introduction into Medical Technology and Systems	160
Module M0680: Fluid Dynamics	162
Module M0757: Biochemistry and Microbiology	164
Module M1277: MED I: Introduction to Anatomy	167
Module M0938: Bioprocess Engineering - Fundamentals	169
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	171
Module M0671: Technical Thermodynamics I	173
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	175
Module M0672: Signals and Systems	178
Module M0580: Principles of Building Materials and Building Physics	180
Module M0646: BIO I: Implants and Testing	182
Module M0687: Chemistry	184
Module M0740: Structural Analysis I	186
Module M0933: Fundamentals of Materials Science	188
Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	190
Module M0655: Computational Fluid Dynamics I	192
Module M0833: Introduction to Control Systems	194
Module M0708: Electrical Engineering III: Circuit Theory and Transients	197
Thesis	199
Module M-001: Bachelor Thesis	199

### **Program description**

#### Content

#### Technomathematics

Technomathematics is the true key technology inside the key technologies. Whenever new airplanes, artificial blood vessels or smartphones are designed, then surely mathematics is substantially involved in this process. Technomathematics denotes those areas of mathematics that are most needed at the interfaces to engineering sciences or industry. Technomathematicians enter the stage to help engineers or technicians when mathematical problems in applications can no longer be solved with standard strategies and new mathematical approaches are required.

Students with a degree in Technomathematics possess the unique combination of a deep and enduring understanding of the mathematical foundations on the one side with indispensable engineering knowledge on the other side.

#### Study goals

The Bachelor of Science in Technomathematics is a joint study programme of TUHH and UHH, preparing the students for a job in industry or a subsequent MSc programme. Students are therefore trained in analytical thinking and precise research, but they are also highly competent in communicating and cooperating, and thus able to adjust and implement their approaches to what is needed in different application scenarios.

#### Learning outcomes

The proposed learning outcomes are derived from the above study goals. In the following, we group them according to the categories knowledge, skills, social competence and self-reliance.

#### Knowledge

- The students can name and describe the concepts and methods in Mathematics, Computer Science, Mechanics and Electrical Engineering.
- The students can give an overview on these subjects and are capable of illustrating their foundations with the help of examples
- The students are able to discuss connections between the concepts of the individual subjects. They can explain how Technomathematics combines these concepts.

#### Skills

- The students are able to discover and verify further logical connections between the concepts studied in the programme.
- . The students can model problems from the application areas of Technomathematics with the help of the established methods.
- The students can develop appropriate approaches for their models and apply them to solve the respective problems. They can evaluate their results and document their solution process.

#### Social competence

- The students are able to communicate the concepts in Technomathematics in written and oral form in a suitable way for varying recipients. They can use examples to check and deepen the understanding of their counterparts. They can adequately respond to further questions and comments.
- The students are capable of working together in teams. They master Mathematics as their joint language. They can define, distribute and integrate jobs, while reaching agreements and interacting socially.

#### Self-reliance

- The students are capable of gathering necessary information and can put it into the right context.
- The students can check their understanding of complex concepts on their own. They can encapsulate open questions and, if necessary, seek specific advice.
- The students can work in a target-oriented, self-organized and self-motivated manner over extended periods on hard problems.

### Contents of the Programme

The Bachelor of Science in Technomathematics at TUHH offers a scientifically well-founded study programme that is oriented towards the fundamental principles of the field. If differs from other programmes in Technomathematics in that the students are taught the foundations of Computer Science and Engineering right from their first semester onwards, through lecture courses in Programming, Mechanics and Electrical Engineering. The courses in the two latter subjects are individually designed for the Technomathematics students and well-connected to their courses in Mathematics and Computer Science. In this way, analytical, creative and constructive skills to research and develop technical systems are promoted and demanded on a broad basis with in-depth studies in Mathematics, Computer Science and Engineering.

### Curriculum

The first part of the BSc in Technomathematics consists of the obligatory foundation courses, followed by a combination of in-depth studies that can be used to specialise in subdisciplines of Technomathematics, concluded by the Bachelor Thesis.

### Foundation courses (1.-3. Semester)

The foundation courses are taken during the first three semesters. They comprise a set of obligatory courses in Mathematics, Computer Science and Engineering. The first two semesters are taught at TUHH, the third at UHH.

### Mathematics (59 LP)

- Linear Algebra
- Analysis
- Higher Analysis
- Numerics
- Stochastics

### Computer Science (12 LP)

- Procedural und objektorientierted programming
- Datastructures und algorithms

### Engineering (16 LP)

- Mechanics
- Electrical Engineering

## Proseminar Technomathematics (2LP)

### Specialisation(4.-6. Semester)

In the second half of the Bachelor Programme, the students are allowed and expected to compile their individual study plan. Within a set of minimum requirements concerning the three basic directions Mathematics, Computer Science and Engineering, they can choose freely from the broad variety of courses offered at TUHH and UHH. The following list only gives a few examples of the possible directions. In addition to these modules, further competence is acquired in the areas of presentation techniques (taught in the module 'Seminar in Technomathematics' and in the problem solving classes), Management Science and other non-technical complementary courses.

Mathematics (at least 27 LP)

- Numerics of differential equations
- Approximation
- Functional Analysis
- Complex Analysis
- Probability Theory
- Optimization
- Discrete Mathematics
- Differential Geometry

### Computer Science (at least 12 LP)

- Automata and Formal Languages
- Computability and Complexity
- Distributed Systems
- Software Engineering
- Databases
- IT-security
- Computer Engineering
- Computer Algebra

### Engineering (at least 12 LP)

- Mechanics
- Electrical Engineering
- Fluid Dynamics
- Control Systems
- · Process Engineering
- Medical Technology
- Computer networks
- Thermodynamics

Seminar Technomathematics (4 LP)

Foundations of Management (6 LP)

Non-technical complementary courses (6 LP)

Bachelor thesis (12 LP)

### Subsequent MSc programmes

Studets with a BSc in Technomathematics are able to continue their studies in the Master of Science in Technomathematics. This is again a joint programme of UHH and TUHH. Moreover, the students can change to other MSc programmes offered at TUHH, provided that they have acquired a sufficient respective background during their specialization. In the following, we again list a few possible examples.

- Technomathematics
- Computational Science and Engineering
- Computer Science
- International Management and Engineering
- MechatronicsLogistics Infrastructure and Mobility
- Process Engineering
- Mathematics (UHH)

## Core qualification

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence  Knowledge	The Non-technical Elective Study Area
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-relia management, collaboration and professional and personnel management competences. The department implements these training objectiteaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students of by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two catalogues for nontechnical complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" is specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semester of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdist and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication stu sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will opportunity to learn about business management and start-ups in a goal-oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented common skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of B and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	<ul> <li>locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area</li> <li>different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the sp sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	<ul> <li>apply basic methods of the said scientific disciplines,</li> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>to handle simple questions in aforementioned scientific disciplines in a sucsessful manner,</li> <li>justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationsl subject.</li> </ul>

### Social Competence | Personal Competences (Social Skills)

Students will be able

• to learn to collaborate in different manner,

	• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
	• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-
	focus would be chosen),
	to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
Autonomy	Personal Competences (Sen-reliance)
	Students are able in selected areas
	<ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> </ul>
	to reflect their own profession and professionalism in the context of rear-life fields of application.      to organize themselves and their own learning processes.
	to organize trenserves and tren own rearning processes     to reflect and decide questions in front of a broad education background
	to reflect and decide questions in nort of a broad education background     to communicate a nontechnical item in a competent way in writen form or verbaly
	to communicate a nontecrinical item in a competent way in whiteh form of verbary     to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
	to organize themselves as an embepremental subject country (as iai as this study-locus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

## Courses

Knowledge				
Educational Objectives	After taking part successfully, students have reached t	he following learning results		
Professional Competence				
Knowledge	The students know the basic theory, relations, and r	methods of electric and magnetic field computation	n and linear network t	heory. This includes, in
	particular:			
	the Maxwell equations in integral form			
	the Maxwell equations in integral form,     the formulation of electric and magnetic fields of	as vester fields in different enerdinate evetems		
	<ul> <li>the formulation of electric and magnetic fields a</li> <li>the constitutive relations.</li> </ul>	as vector fields in different coordinate systems,		
	• the Gauss law,			
	the Ampère law,			
	the induction law,			
	the Kirchhoff's laws,			
	the Ohm's law,			
	<ul> <li>the concepts and definitions of resistance, cap.</li> </ul>			
	<ul> <li>methods for the simplification and analysis of linear networks,</li> </ul>			
	complex numbers and their use in steady state	sinusoidal analysis,		
	<ul> <li>the concept of impedance,</li> </ul>			
	<ul> <li>the concept of resonance,</li> </ul>			
	<ul> <li>locus plots,</li> </ul>			
	<ul> <li>energy and power in steady state sinusoidal are</li> </ul>	nalysis,		
	<ul> <li>3-phase systems,</li> </ul>			
	<ul><li>transients</li></ul>			
Skille	The students are able to apply the basic laws of elec	stramagneticm to electric and magnetic field compu	station. They are able to	to rolate the various field
OKINS	quantities to each other. The studens are able to calcu			
	to apply network theory to calculate the currents and v			. The students know now
	to apply hetwork theory to calculate the currents and v	orages of linear networks and now to design simple	e circuits.	
Personal Competence				
Social Competence	Students are able to solve specific problems, alone or	in a group, and to present the results accordingly. S	Students can explain co	oncepts and, on the basis
	of examples and exercises, verify and deepen their un	derstanding.		
Autonomy	Students are able to acquire particular knowledge us		te, present, and assoc	ciate this knowledge with
	other fields. The students develop persistency to also	solve more complicated problems.

Knowledge				
Educational Objectives	After taking part successfully, students have reached the following lea	rning results		
Professional Competence				
Knowledge	After taking this module, students know the important basics of many Marketing and Innovation, and also to Investment and Controlling. In p		nagement, from Planr	ning and Organisation
	explain the differences between Economics and Management	and the sub-disciplines in Manageme	ent and to name impo	ortant definitions from
	field of Management			
	explain the most important aspects of and goals in Manageme	nt and name the most important aspe	cts of entreprneurial p	orojects
	describe and explain basic business functions as production	, procurement and sourcing, supply	chain management, o	organization and hum
	ressource management, information management, innovation			
	explain the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and decision making in Branch and the relevance of planning and the relevance of planning and the relevance of planning and the relevance of the relevance o	usiness, esp. in situations under mul	tiple objectives and	uncertainty, and expl
	some basic methods from mathematical Finance  state basics from accounting and costing and selected controll	ing mathods		
	state basics from accounting and costing and selected control	ing metrous.		
Skills	Students are able to analyse business units with respect to d Entrepreneurship project in a team. In particular, they are able to	fferent criteria (organization, objec	tives, strategies etc.	.) and to carry out
	analyse Management goals and structure them appropriately			
	analyse organisational and staff structures of companies			
	apply methods for decision making under multiple objectives,	under uncertainty and under risk		
	analyse production and procurement systems and Business in	formation systems		
	analyse and apply basic methods of marketing			
	select and apply basic methods from mathematical finance to p			
	apply basic methods from accounting, costing and controlling to	o predefined problems		
Personal Competence				
Social Competence	Students are able to			
	work successfully in a team of students			
	to apply their knowledge from the lecture to an entrepreneursh	ip project and write a coherent report	on the project	
	to communicate appropriately and			
	to cooperate respectfully with their fellow students.			
Autonomy	Students are able to			
natonomy	olddonio are able to			
	work in a team and to organize the team themselves			
	to write a report on their project.

Тур	Problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Christoph Ihl
Language	DE
Cycle	WiSe/SoSe
Content	In this project module, students work on an Entrepreneurship project. They are required to go through all relevant steps, from the first idea to the concept,
	using their knowledge from the corresponding lecture.
	Project work is carried out in teams with the support of a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Admission Requirements	none			
Recommended Previous	Content of module "Biochemical Engineering I"			
Knowledge	Affected the control of the state of the sta			
Educational Objectives	After taking part successfully, students have reached the following leading to the following lea	earning results		
Professional Competence				
Knowledge	After successful completion of this module, students should be able	to		
	<ul> <li>describe and explain different kinetic approaches for growth</li> </ul>	and substrate-uptake		
	3 · ·			
	identification of scientific problems with concrete industrial to	se (cultivation of microorganisms and	nammalian cells)	
	·		,	
	<ul> <li>describe and explain important downstreaming steps for pro</li> </ul>	teins and their application as well as b	asic immobilization m	ethods
Skills	After successful completion of this module, students should be able	to		
	·			
	- to identifiy scientific questions or possible practical problems for	concrete industrial applications (eg cu	Itivation of microorga	nisms and animal ce
	and to formulate solutions,			
	- To assess the application of scale-up criteria for different types of	bioreactors and processes and to appl	y these criteria to give	en problems (anaero
	aerobic or microaerobically)			
	- to formulate questions for the analysis and optimization of real biotechnological production processes appropriate solutions,			
	- To describe the effects of the energy generation, the regeneration of reduction equivalents, and the growth inhibition of the behavior of microorganism			
	and to the total fermentation process qualitatively			
	and to the total leffilefitation process quantatively			
	- Establish material flow balance equations and solve them to dete	rmine the kinetic parameters of differe	nt approaches and to	calculate immobiliza
	and activity yields,			
	- to select process control strategies (batch, fed-batch, continuity)	appropriately and to calculate basic type	es and evaluate then	٦.
Personal Competence				
Social Competence	After completion of this module participants should be able to deb	ate technical questions in small teams	to enhance the abilit	y to take position to t
	own opinions and increase their capacity for teamwork.			
Autonomy	After completion of this module participants are able to aquire new	sources of knowledge and apply their	knowledge to previou	usly unknown issues
	to present these.

In the PBL part of the class the students discuss scientific questions in teams. They acquire knowledge and apply it to unknown questions, present their results and argue their opinions.

Module M0625: Databases				
Courses				
Title		Тур	Hrs/wk	CP
Databases (L0337)		Lecture	4	5
Databases (L1150)		Problem-based Learning	1	1
Module Responsible	Dr. Sandro Schulze			
Admission Requirements	None			
Recommended Previous	Students should habe basic knowledge in the following areas:			
Knowledge	a Disercte Algebraia Structures			
	Discrete Algebraic Structures     Procedural Programming			
	Logic, Automata, and Formal Languages			
	Object-Oriented Programming, Algorithms and Data Stru	ctures		
	,			
Educational Objectives	After taking part successfully, students have reached the following	g learning results		
Professional Competence				
Knowledge	Students can explain the general architecture of an application s	•	•	
	Relationship conceptual modeling languages, and they can en	·		
	captured with ER and which features cannot be represented. F			
	describe how ER models can be systematically transformed in		•	
	operators of relational algebra, and they know how to use relati		•	
	architecture of a database system from an implementation point of view. Storage and index structures as well as query answering and optimization			
	techniques can be explained. The role of transactions can be described in terms of ACID conditions and common recovery mechanisms can be characterized. The students can recall why recursion is important for query languages and describe how Datalog can be used and implemented. They			
	demonstrate how Datalog can be used for information integration. For solving ER decision problems the students can explain description logics with			
	their syntax and semantics, they describe description logic decision problems and explain how these problems can be mapped onto each other. They			
	can sketch the idea of ontology-based data access and can name the main complexity measure in database theory. Last but not least, the students can			
	describe the main features of XML and can explain XPath and X	Query as query languages.		
Skills	Students can apply ER for describing domains for which they re	ceive a textual description, and student	e can transform relation	al schemata with a give
OKIIIS	set of functional dependencies into third normal form or even	•		-
	specify queries. Using specific datasets, they can explain how in	•		
	or deleted. They can rewrite queries for better performance of q	, -, ,		-
	which application problem. Description logics can be applied for	or domain modeling, and students can	transform ER diagrams	into description logics
	order to check for consistency and implicit subsumption relation	s. They solve data integration problem	s using Datalog and LA	V or GAV rules. Studen
	can apply XPath and Xquery to retrieve certain patterns in XML of	lata.		
Personal Competence				
Social Competence	Students develop an understanding of social structures in a co	mnany used for developing real-world	nroducts. They know th	e responsibilities of da
Journ Competence	analysts, programmers, and managers in the overall production		p. cadoto. Triey know (i	o .ooponoiomileo oi da

Numerical Mathematics and Computer Algorithm	ebra (L0115)	Lecture	2	3
Numerics and Computer Algebra (L1060)		Seminar	2	2
Numerical Mathematics and Computer Alg		Recitation Section (small)	1	1
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	none			
Recommended Previous	Basic knowledge in numerics and discre	te mathematics		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The students know the difference between precision and accuracy. For several basic problems they know how to solve them approximatively and exactly. They can distinguish between efficiently, not efficiently and principally unsolvable problems.			
Skills	The students are able to analyze complex problems in mathematics and computer science. In particular they can analyze the sensitivity of the solution. For several problems they can derive best possible algorithms with respect to the accuracy of the computed result.			
Personal Competence				
Social Competence	The students have the skills to solve problems together in small groups and to present the achieved results in an appropriate manner.			
Autonomy	The students are able to retrieve necessary informations from the given literature and to combine them with the topics of the lecture. Throughout the lecture they can check their abilities and knowledge on the basis of given exercises and test questions providing an aid to optimize their learning process.

neoretical Electrical Engineering II: Time	Dependent Fields (L0182)	Lecture	3	5
neoretical Electrical Engineering II: Time		Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	None			
Recommended Previous	Electrical Engineering I, Electrical Engineering II, Theor	retical Electrical Engineering I		
Knowledge	Mathematics I, Mathematics III, Mathemat	atics IV		
Educational Objectives	After taking part successfully, students have reached the	e following learning results		
Professional Competence	2.			
Knowledge				
Skills	Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependent field problems. The can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret their with regard to practical applications.			
Personal Competence Social Competence	Students are able to work together on subject related sessions).	d tasks in small groups. They are able to pres	ent their results effective	ely (e.g. during exerc
Autonomy	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continua reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections betwe acquired knowledge and ongoing research at the Hamburg University of Technology (TUHH), e.g. in the area of high frequency engineering and optics

	Systems Theory treats the mathematical background and foundations of the engineering discipline 'Cybernetics'. Thereby one wants to exert influence on a dynamical system (which is usually given by an ordinary differential equation (ODE)), such that a desired behavior is achieved.  For instance, in classical mechanics, the motion of a mass point is determined by acting forces. In 'Systems and Control Theory', one wonders how these forces have to be chosen such that a prescribed movement of the mass point is accomplished.  • Introduction and motivation • Controllability • Stabilization by feedback • Obervability • Observer and controller design • Linear-quadratic optimal control

Admission Requirements	Linear algebra, calculus, engineering/applied mechanics (espe	cially kinematics and kinetics)			
Recommended Previous					
Knowledge					
Educational Objectives	After taking part successfully, students have reached the following	ng learning results			
Professional Competence					
Knowledge	The primary purpose of the study of Vibration Theory is to deve				
	and control vibrations, which is needed by the engineers invo	blved in the analysis and design of macl	nines and their suppor	rting structures, vehicles	
	aircraft, etc.The particular objectives of this course are to:				
	1. Analyse mechanical structures taking into account the ef	fects of dynamic loads.			
	Appreciate the importance of vibration in structures and mechanical devices.				
	Formulate and solve the equations of motion of mechanical systems.				
	Determine the natural frequencies and normal modes of complex mechanical systems.				
Skills	At the end of this course the student should be able to:				
	Develop simple mathematical models for vibration anal	lysis of complex systems; formulate and	solve the equation of	motion to determine the	
	dynamic response.				
	Carry out the linearization of equations of motion.				
	1. Determine natural frequencies and normal modes of multi-degree of freedom and continuous auctoms (rade chafts tout chines because)				
	Determine natural frequencies and normal modes of multi-degree-of-freedom and continuous systems (rods, shafts, taut strings, beams).     Carry out modal analysis to predict the dynamic response of linear mechanical systems to external excitations.				
	Carry out modal analysis to predict the dynamic response of linear mechanical systems to external excitations.     Analyse, in terms of eigenvalues, stability of time-invariant linear dynamic systems.				
	o. Analyse, in terms of eigenvalues, stability of time invali	antimodi dynamio systems.			
Personal Competence					
Social Competence	Students can work in small groups and report on the findings.				
Autonomy	Students are able to solve the problems independently.

Fechnical Acoustics I (Acoustic Waves, N	oise Protection, Psycho Acoustics ) (L0518)	Recitation Section (large)	2	3	
Module Responsible	Prof. Otto von Estorff				
Admission Requirements	none				
Recommended Previous	Mechanics I (Statics, Mechanics of Materials) and Mechanics	anics II (Hydrostatics, Kinematics, Dynamics)			
Knowledge	Mathematics I, II, III (in particular differential equations)				
Educational Objectives	After taking part successfully, students have reached the	following learning results			
Professional Competence					
Knowledge	The students possess an in-depth knowledge in acous	tics regarding acoustic waves, noise protection	n, and psycho acoustics	and are able to give	
	overview of the corresponding theoretical and methodical basis.				
Ckillo	The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.				
Skills					
	procedures acated warm are module.				
Personal Competence					
Social Competence					
Autonomy	The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues are				
	limitations can be identified and the results are critically s	scrutinized.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Courses			
Title	Тур	Hrs/wk 2	СР
Introduction to Physiology (L0385)	Lecture	2	3
Module Responsible			
Admission Requirements			
Recommended Previous			
Knowledge			
Educational Objectives			
Professional Competence			
Knowledge			
	The students can		
	describe the basics of the energy metabolism;		
	describe physiological connections in select fields of muscle, heart/circulation, neuro- and sensory ph	ysiology.	
Skills			
	The students can		
	describe the effects of basic bodily functions (sensory, transmission and processing of information, described them to similar technical avertoms.	velopment of forces	and vital functions) and
	relate them to similar technical systems.		
Personal Competence			
Social Competence			
	The students can conduct discussions in research and medicine on a technical level.		
	The attidents can find calificate to explain in the field of physiology, both applytical and matrological		
	The students can find solutions to problems in the field of physiology, both analytical and metrological		
Autonomy	The students can develop understanding of topics from the course, using technical literature, by themselves

Module W1005. Elillanced	undamentals of Materials Science			
Courses				
Title		Тур	Hrs/wk	СР
Fundamentals of Metallic Materials (L1086	5)	Lecture	2	3
Fundamentals of Ceramic and Polymer Ma		Lecture	2	2
Fundamentals of Ceramic and Polymer Ma	aterials (L1234)	Recitation Section (large)	1	1
Module Responsible	Prof. Gerold Schneider			
Admission Requirements	None			
Recommended Previous	Module "Fundamentals of Materials Science"			
Knowledge	Module "Materials Science Laboratory"			
	Module "Advanced Materials"			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The students are able to give an enhanced overview	v over the following topics		
	in metals, polymers and ceramics: Atomic bonds, of	rystal and amorphous structures, defects, electrica	I and mass transport, r	microstructure and phase
	diagrams. They are capable to explain the correspond	nding technical terms.		
Skills	The students are able to apply the appropriate physi	cal and chemical methods for the above mentioned	subjects.	
	,		,	
Personal Competence				
Social Competence				
Autonomy	The students are capable to understand independent evaluate the profoundness of their knowledge.	ently the structure and propeties of ceramics, metal	s and polymers. They	should be able to critally

Research Seminar Electrical Engineering, Transmission Line Theory (L0570)	Computer Science, Mathematics (LU5/1)	Seminar Lecture	2	2
Transmission Line Theory (L0570)		Recitation Section (large)	2	1
Module Responsible	Prof. Arne Jacob			
Admission Requirements	none			
Recommended Previous	Electrical Engineering I-III, Mathematics I-III			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	ne following learning results		
Professional Competence				
Knowledge	Students can explain the fundamentals of wave prop	agation on transmission lines at low and high fre	quencies. They are ab	le to analyze circuits with
	transmission lines in time and frequency domain. The	ey can describe simple equivalent circuits of tran	smission lines. They a	re able to solve problems
	with coupled transmission lines. They can present and	discuss a self-chosen research topic.		
Skills	Students can analyze and calculate the propagation	of waves in simple circuits with transmission line	s. They are able to ana	alyze circuits in frequency
	domain and with the Smith chart. They can analyze	e equivalent circuits of transmission lines. They	are able to solve pro	blems including coupled
	transmission lines using the vectorial transmission line	e equations. They are able to give a talk to profess	ionals.	
Personal Competence				
Social Competence	Students can analyze and solve problems in small g	roups and discuss their solutions. They can com	pare the learned theor	y with experiments in the
•	lecture and discuss it in small groups. They are able to	·		,
Autonomy	The students can solve problems by their own and a	re able to acquire skills from the lecture and the	literature. They are ab	le to test their knowledge
ricionomy	using computer animations. They can test their level o	·	•	-
	acquired knowledge to other lectures (e.g. Electrical			
	can prepare a presentation.

Module M0734: Electrical E	ngineering Project Laboratory			
Courses				
Title		Тур	Hrs/wk	CP
Electrical Engineering Project Laboratory (	L0640)	Laboratory Course	5	6
Module Responsible	Prof. Christian Becker			
Admission Requirements	None			
Recommended Previous	Electrical Engineering I, Electrical Engineering II			
Knowledge				
Educational Objectives	After taking part augeogafully, at idente have reached	the following learning regults		
Educational Objectives Professional Competence	After taking part successfully, students have reached	are lonowing learning results		
Knowledge	Students are able to give a summary of the technica	details of projects in the area of electrical engines	ering and illustrate respo	ective relationships. The
rinowicago	are capable of describing and communicating relevant			
	process of solving practical problems and present rel		3.19.	, ,
Skills	The students can transfer their fundamental know	edge on electrical engineering to the process o	f solving practical prob	lems. They identify an
	overcome typical problems during the realization of p	projects in the context of electrical engineering. Stu	dents are able to devel	op, compare, and choos
	conceptual solutions for non-standardized problems.			
Personal Competence				
Social Competence	Students are able to cooperate in small, mixed-subj	act groups in order to independently derive solution	one to given probleme i	the context of electrics
oodal oompelence	engineering. They are able to effectively present and			
	develop alternative approaches to an electrical engir		•	•
Autonomy	Students are capable of independently solving elect	rical engineering problems using provided literatur	re. They are able to fill	gaps in as well as exter
	their knowledge using the literature and other soul		y can meaningfully ext	end given problems an
	pragmatically solve them by means of corresponding	solutions and concepts.

Cycle	SoSe
Content	This course is about solving the following basic problems of Linear Algebra,
	systems of linear equations,
	least squares problems,
	eigenvalue problems
	but now in function spaces (i.e. vector spaces of infinite dimension) by a stable approximation of the problem in a space of finite dimension.
	Contents:
	crash course on Hilbert spaces: metric, norm, scalar product, completeness
	crash course on operators: boundedness, norm, compactness, projections
	uniform vs. strong convergence, approximation methods
	<ul> <li>applicability and stability of approximation methods, Polski's theorem</li> </ul>
	Galerkin methods, collocation, spline interpolation, truncation
	convolution and Toeplitz operators
	crash course on C*-algebras
	convergence of condition numbers
	convergence of spectral quantities: spectrum, eigen values, singular values, pseudospectra
	regularisation methods (truncated SVD, Tichonov)

Module M0561: Discrete Al	gebraic Structures			
Courses				
Title		Тур	Hrs/wk	CP
Discrete Algebraic Structures (L0164)		Lecture	2	3
Discrete Algebraic Structures (L0165)		Recitation Section (small)	2	3
Module Responsible	Prof. Karl-Heinz Zimmermann			
Admission Requirements	None.			
Recommended Previous	Mathematics from High School.			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ving learning results		
Professional Competence				
Knowledge	The students know the important basics of discrete algebrai	c structures including elementary combinate	orial structures, mono	ids, groups, rings, fields
	finite fields, and vector spaces. They also know specific structures like sub sum-, and quotient structures and homomorphisms.			
Skilla				
Skills	Students are able to formalize and analyze basic discrete algo-	ebraic structures.		
Personal Competence				
Social Competence	Students are able to solve specific problems alone or in a group and to present the results accordingly.			
Automorphi				
Autonomy	Students are able to acquire new knowledge from specific standard books and to associate the aquired knowledge to other classes.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points				
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following	General Engineering Science (German program): Specialisati	on Computer Science: Compulsory		
Curricula	General Engineering Science (German program, 7 semester)	Specialisation Computer Science: Compuls	sory	
	Computer Science: Core qualification: Compulsory			
	General Engineering Science (English program): Specialisation	on Computer Science: Compulsory		
	General Engineering Science (English program, 7 semester):	Specialisation Computer Science: Compuls	ory	
	Computational Science and Engineering: Core qualification: 0	Compulsory		
	Technomathematics: Specialisation I. Mathematics: Elective C	ompulsory		

Course L0164: Discrete Algebraic Structures

Module M0716: Hierarchica	al Algorithms			
Courses				
Title		Тур	Hrs/wk	CP
Hierarchical Algorithms (L0585)		Lecture	2	3
Hierarchical Algorithms (L0586)	Der Corticular Deriva	Recitation Section (small)	2	3
Module Responsible	Prof. Sabine Le Borne			
Admission Requirements	None			
Recommended Previous Knowledge	Mathematics I, II, III for Engineering students (german or english) or Analysis & Linear Algebra I + II as well as Analysis III fo Technomathematicians     Programming experience in C			
Educational Objectives	After taking part successfully, students have reached the follow	owing learning results		
Professional Competence				
Knowledge	Students are able to			
	name representatives of hierarchical algorithms and l     explain construction techniques for hierarchical algor     discuss aspects regarding the efficient implementatio	ithms,		
Skills	Students are able to			
	implement the hierarchical algorithms discussed in th     analyse the storage and computational complexities     adapt algorithms to problem settings of various applic	of the algorithms,	riants.	
Personal Competence Social Competence	Students are able to  work together in heterogeneously composed teams	(i.e., teams from different study programs an	d background knowle	rdge), explain theoretica
Autonomy	foundations and support each other with practical asp.  Students are capable  to assess whether the supporting theoretical and practical to work on complex problems over an extended periodent to assess their individual progess and, if necessary, to	ctical excercises are better solved individually ad of time,

## Specialization II. Informatics

Module M0732: Software E	ngineering			
Courses				
Title		Тур	Hrs/wk	СР
Software Engineering (L0627)		Lecture	2	3
Software Engineering (L0628)		Recitation Section (small)	2	3
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous	Automate the consist formal language			
Knowledge	Automata theory and formal languages			
	Procedural programming or Functional programming			
	Object-oriented programming, algorithms, and data structures			
Educational Objectives	After taking part successfully, students have reached the following learning	ig results		
Professional Competence				
Knowledge	Students explain the phases of the software life cycle, describe the funda-	amental terminology and concepts	of software engineer	ing, and paraphrase the
	principles of structured software development. They give examples of so	ftware-engineering tasks of existi	ng large-scale systen	ns. They write test cases
	for different test strategies and devise specifications or models using diff	erent notations, and critique both.	They explain simple	design patterns and the
	major activities in requirements analysis, maintenance, and project plann	ing.		
Skilla	For a given tack in the coffware life evels, students identify the correct	conding phase and coloct an a	ppropriate method 1	Thou choose the prope
Skills	For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply an			
	modify non-executable artifacts. They integrate components based on interface specifications.			
Personal Competence				
Social Competence	Students practice peer programming. They explain problems and solution	ns to their peer. They communicate	e in English.	
Autonomy	Using on-line quizzes and accompanying material for self study, student	e can access their level of knowle	idae continuously and	d adjust it appropriately
Autonomy	Working on exercise problems, they receive additional feedback.	3 Call assess their level of knowle	age continuously and	a adjust it appropriately
	romang on exercise problems, and recent additional recentage

Module M0624: Logic, Auto	omata and Formal Languages			
Courses				
Title		Тур	Hrs/wk	CP
Logic, Automata Theory and Formal Lang	uanes (I 0332)	Lecture	2	4
Logic, Automata Theory and Formal Lang		Recitation Section (small)	2	2
Module Responsible	Prof. Tobias Knopp	, ,		
Admission Requirements	None			
Recommended Previous	Participating students should be able to			
Knowledge	- specify algorithms for simple data structures (such as, e.g., ar	rays) to solve computational problems		
	- apply propositional logic and predicate logic for specifying at	nd understanding mathematical proofs		
	- apply the knowledge and skills taught in the module Discrete	Algebraic Structures		
Educational Objectives	After taking part successfully, students have reached the follow	ving learning results		
<b>Professional Competence</b>				
	Students can show correspondences to Boolean algebra. St logic, and therefore, the students can motivate predicate logi Students can explain unification and resolution for solving the decision problems for various kinds of temporal logic, and idea automata and can identify relationships to logic and form nondeterministic finite automata and pushdown automata to expressive than determinism. They are also able to demonstransform decision problems w.r.t. one formalism into decisic algorithms whereas others are best suited for specifying systems logic, automata, or grammars.	c, and define syntax, semantics, and decisi predicate logic SAT decision problem. Stuc ntify their application areas. The participants al grammars. The spectrum that students Turing machines. Students can name those trate which decision problems require which problems w.r.t. other formalisms. They un	on problems for this re- lents can also describe s of the course can defi- can explain ranges e formalism for which ch expressivity, and, in derstand that some for	epresentation formalism e syntax, semantics, and ne various kinds of finite from deterministic and nondeterminism is more n addition, students car ormalisms easily induce
Skills	Students can apply propositional logic as well as predicate lo derive propositional logic, predicate logic, or temporal logic fo application problem, and they can demonstrate the application nondeterministic automata into deterministic ones, or derive apply algorithms for the language emptiness problem in case	rmulas to represent them. They can evaluate on of algorithms for decision problems to s grammars from automata and vice versa. Th	e which formalism is be specific formulas. Stud	est suited for a particula ents can also transform

Тур	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Tobias Knopp
Language	EN .
Cycle	SoSe
Content	
	Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	4. Deterministic finite automata, definition and construction
	Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata, elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive enough to solve a word
	problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping lemma for context-free
	grammars, transformation of formalisms (from pushdown automata to context-free grammars and back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification w.r.t. temporal logic
	specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)

Knowledge	
	The successful completion of the labs will be honored during the evaluation of the module's examination according to the following rules:
	1. Upon a passed module examination, the student is granted a bonus on the examination's marks due to the successful labs, such th
	examination's marks are lifted by 0,3 or 0,4, respectively, up to the next-better grade.
	2. The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is not possible.
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	
Milowieuge	gates. The module includes the following topics:
	gates. The module moludes the following topics.
	Introduction
	Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks
	Sequential logic: Flip-flops, automata, systematic hardware design
	Technological foundations
	Computer arithmetic: Integer addition, subtraction, multiplication and division      Design of computer arithmetic and the NIPS significant and the subtraction and division.
	Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining     Memoring: Margan; histographics, SPAM, pRAM, caches
	<ul> <li>Memories: Memory hierarchies, SRAM, DRAM, caches</li> <li>Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses</li> </ul>
	input/output: #O from the perspective of the GFO, principles of passing data, point-to-point confineditoris, busses
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composit
	computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and s
	components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and components.
	up to complete processors.
	After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the so
	executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layer
	the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire sy
	performance and to propose feasible options.
Personal Competence	
Social Competence	
	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Social Competence Autonomy	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.
Social Competence Autonomy Workload in Hours	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Independent Study Time 124, Study Time in Lecture 56
Social Competence Autonomy Workload in Hours Credit points	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Independent Study Time 124, Study Time in Lecture 56
Social Competence Autonomy Workload in Hours Credit points Examination	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Independent Study Time 124, Study Time in Lecture 56  6  Written exam
Social Competence Autonomy Workload in Hours Credit points	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Independent Study Time 124, Study Time in Lecture 56  6  Written exam
Social Competence Autonomy Workload in Hours Credit points Examination Examination duration and scale Assignment for the Following	Students are able to solve similar problems alone or in a group and to present the results accordingly.  Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.  Independent Study Time 124, Study Time in Lecture 56  6  Written exam  90 minutes, contents of course and labs  General Engineering Science (German program): Core qualification: Compulsory

Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Heiko Falk
Language	DE
Cycle	
Content	1. Introduction
	Principles of digital design
	Analog versus Digital
	Gates and flip-flops
	Aspects of digital design
	Integrated cicuits
	Digital devices
	Time-to-market
	2. Number Systems and Codes
	General positional number systems
	Representation of numbers
	Binary arithmetic
	Number and character codes
	Codes for detecting and correcting errors
	Codes for serial data transmission
	Binary prefixes
	3. Digital Circuits
	Logic signals and gates
	Logic families
	CMOS logic
	CMOS circuits: electrical behavior
	CMOS input and output structures

- Bipolar logic
- CMOS logic families
- CMOS/TLL interfacing

### 4. Combinational Logic Design (Principles)

- · Switching algebra
- Combinational-circuit analysis
- Combinational-circuit synthesis
- Minimization
- Timing hazards

#### 5. Combinational Logic Design (Practices)

- Documentation standards
  - Timing of digital circuits
  - Decoders and encoders
  - Three-state devices
  - Multiplexers and demultiplexers
  - Exclusive-OR gates and parity circuits
  - Comparators
  - Adders and subtractors
  - · Combinational multiplier
  - Barrel shifte
  - Arithmetic and logic unit (ALU)

#### 6. Sequential Logic Design (Principles)

- · State concept and clock signal
- Bistable elements
- Asynchronous latches
- Synchronous latches
- Synchronous flip-flops
- Overview: latches and flip-flops
- Clocked synchronous state-machine analysis
- Clocked synchronous state-machine design
- Designing state machines using state diagrams
- Sequential-circuit design with VHDL
- Decomposing state machines

## 7. Sequential Logic Design (Practices)

- Sequential-circuit documentation standards
- Latches and flip-flops
- Counters
- Shift registers
- Iterative versus sequential circuits
- Synchronous design methodology
- Impediments to synchronous design

# 8. Memory, PLDs, CPLDs und FPGAs

- ROM, SRAM, DRAM, SDRAM
- Programmable logic devices (PLDs)
- Complex programmable logic devices (CPLDs)
- Field-programmable gate arrays (FPGAs)

# 9. Microprocessor Technology (Principles)

- Computer history
- Von Neumann architecture
- Components of a microprocessor system

CP	5
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Andreas Timm-Giel, Prof. Dieter Gollmann
Language	EN
Cycle	WiSe
Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.  In the second part of the lecture an introduction to Internet security is given.  This class comprises:  Application layer protocols (HTTP, FTP, DNS)  Transport layer protocols (TCP, UDP)  Network Layer (Internet Protocol, routing in the Internet)  Data link layer with media access at the example of Ethernet  Multimedia applications in the Internet  Network management  Internet security: IPSec

Title		Тур	Hrs/wk	СР
Compiler Construction (L0703)		Lecture	2	2
Compiler Construction (L0704)		Recitation Section (small)	2	4
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous	- Dreatical assessment assessment			
Knowledge	Practical programming experience     Automate the armond formal learnings.			
	Automata theory and formal languages			
	Functional programming or procedural programming			
	Object-oriented programming, algorithms, and data structure	ctures		
	Basic knowledge of software engineering			
Educational Objectives	After taking part successfully, students have reached the followi	ng learning results		
Professional Competence				
Knowledge	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for			
	compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks			
	and experiment with frameworks and tools.			
Skills	Students design and implement arbitrary compilation phases.	They integrate their eads in existing comp	ilor framawarka. Tha	v arganiza thair campilar
Skills	code properly as a software project. They generalize algorithms			
	code property as a software project. They generalize algorithms	tion compiler construction to algorithms that	analyze of Synthesiz	e sollware.
Personal Competence				
Social Competence	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class.			
	They communicate in English.			
Autonomy	Students develop their software independently and define miles	stance by the meeting. They receive feedbase	ok throughout the ent	ra project They ergenize
Autonomy	the software project so that they can assess their progress them		K imoughout the ent	re project. They organize
	the software project so that they can assess their progress them	serves.

# Specialization III. Engineering Science

Module M0536: Fundamen	tals of Fluid Mechanics			
Courses				
Title		Тур	Hrs/wk	CP
Fundamentals of Fluid Mechanics (L0091)		Lecture	2	4
Fluid Mechanics for Process Engineering		Recitation Section (large)	2	2
Module Responsible	Prof. Michael Schlüter			
Admission Requirements	None			
Recommended Previous				
Knowledge	Mathematics I+II+III			
	Technical Mechanics I+II  To the LTT			
	Technical Thermodynamics I+II     Washing with face belonged.			
	Working with force balances     Simplification and solving of partial differential equations			
	Integration     Integration			
	- Integration			
Educational Objectives	After taking part successfully, students have reached the following I	earning results		
Professional Competence				
Knowledge	Students are able to:			
	explain the difference between different types of flow			
	give an overview for different applications of the Reynolds T	ransport-Theorem in process engine	erina	
	explain simplifications of the Continuity- and Navier-Stokes-		-	
	explain empirical entre estimation and realist elections	_quality of acting projected boardary	00110110110	
Skills	The students are able to			
	describe and model incompressible flows mathematically			
	reduce the governing equations of fluid mechanics by simple	ifications to archive quantitative soluti	ons e.a. by integration	
	notice the dependency between theory and technical applic			
	use the learned basics for fluid dynamical applications in fie	lds of process engineering		
Personal Competence				
Social Competence	The students			
	are capable to gather information from subject related, profe	essional publications and relate that in	formation to the contex	t of the lecture and
	able to work together on subject related tasks in small group	os. They are able to present their resu	Its effectively in Englis	h (e.g. during small group
	exercises)			
	are able to work out solutions for exercises by themselves, t	o discuss the solutions orally and to p	resent the results.	
Autonomy	The students are able to			
Autonomy	The students are able to			
	search further literature for each topic and to expand their kills.	nowledge with this literature,		
	work on their exercises by their own and to evaluate their actions.	tual knowledge with the feedback.

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Course L0342: Introduction into Medical Technology and Systems		
Тур	Lecture	
Hrs/wk	2	
CP	3	
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28	
Lecturer	Prof. Alexander Schlaefer	
Language	DE	
Cycle	SoSe	
Content	- imaging systems	
	- computer aided surgery	
	- medical sensor systems	
	- medical information systems	
	- regulatory affairs	
	- standard in medical technology	
	The students will work in groups to apply the methods introduced during the lecture using problem based learning.	
Literature	Wird in der Veranstaltung bekannt gegeben.

modulo modoti i idia byilai				
Courses				
Title		Тур	Hrs/wk	СР
Fluid Mechanics (L0454)		Lecture	3	4
Fluid Mechanics (L0455)		Recitation Section (large)	2	2
Module Responsible	Prof. Thomas Rung			
Admission Requirements	none			
Recommended Previous	Sound knowledge of engineering mathematics, engineering mechanisms	anics and thermodynamics.		
Knowledge				
Educational Objectives	$\label{part:eq:action} \mbox{ After taking part successfully, students have reached the following}$	learning results		
Professional Competence				
Knowledge	Students will have the required sound knowledge to explain the g	eneral principles of fluid engineering ar	d physics of fluids. S	Students can scientifically
	outline the rationale of flow physics using mathematical models a	and are familiar with methods for the pe	formance analysis a	and the prediciton of fluid
	engineering devices.			
Skills	Students are able to apply fluid-engineering principles and flow-pl	aveics models for the analysis of technic	al evetems. The lectu	re enables the student to
Okins	carry out all necessary theoretical calculations for the fluid dynamic			re chables the stadent to
	can'y car an necessary meet calculations for the find dynamic	accign or originacing actions on a con-	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	
Personal Competence				
Social Competence	The students are able to discuss problems and jointly develop solu	tion strategies.		
Autonomy	The students are able to develop solution strategies for complex pr	oblems self-consistent and crtically anal	yse results.

Admission Requirements	none			
Recommended Previous	none			
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reached the foll	owing learning results		
Professional Competence				
Knowledge	At the end of this module the students can:			
	- explain the methods of biological and biochemical researc	h to determine the properties of biomolecules		
	- name the basic components of a living organism			
	- explain the principles of metabolism			
	- describe the structure of living cells			
	-			
Chille				
Skills				
Personal Competence				
Social Competence	The students are able,			
	- to gather knowledge in groups of about 10 students			
	- to introduce their own knowledge and to argue their view in	n discussions in teams		
	- to divide a complex task into subtasks, solve these and to p	present the combined results		
Autonomy	The students are able to present the results of their subtasks	in a written report

Module M0567: Theoretical	Electrical Engineering I: Time-Independent Fields			
Courses				
Title		Тур	Hrs/wk	СР
Theoretical Electrical Engineering I: Time-	Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I: Time-		Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster			
Admission Requirements	Elektrotechnik I, Elektrotechnik II, Mathematik I, Mathematik II, Mathem	atik III		
Recommended Previous Knowledge	Basic principles of electrical engineering and advanced mathematics			
Educational Objectives	After taking part successfully, students have reached the following lear	rning results		
Professional Competence				
Knowledge	Students can explain the fundamental formulas, relations, and method principal behavior of electrostatic, magnetostatic, and current densi complex electromagnetic fields by means of superposition of solution independent electromagnetic fields and are able to explicate these.	ty fields with regard to respective	sources. They can de	escribe the properties of
Skills	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.			
Personal Competence				
Social Competence	Students are able to work together on subject related tasks in sma sessions).	Il groups. They are able to presen	t their results effective	ely (e.g. during exercise
Autonomy	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90-150 minutes			
Assignment for the Following	General Engineering Science (German program): Specialisation Elect	rical Engineering: Compulsory

Principles of Building Materials (L0215)		Lecture	2	2
Module Responsible	Prof. Frank Schmidt-Döhl			
Admission Requirements	None			
Recommended Previous	Knowledge of physics, chemistry and mathematics from	school		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	The students are able to identify fundamental effects of action to materials and structures, to explain different types of mechanical behaviour, to describe the structure of building materials and the correlations between structure and other properties, to show methods of joining and of corrosion processes and to describe the most important regularities and properties of building materials and structures and their measurement in the field of protection against moisture, coldness, fire and noise.			
Skills	The students are able to work with the most important standardized methods and regularities in the field of moisture protection, the German regulation for energy saving, fire protection and noise protection in the case of a small building.			
Personal Competence				
Social Competence	The students are able to support each other to learn the	very extensive specialist knowledge.		
Autonomy	The students are able to make the timing and the operat	ion steps to learn the specialist knowledge of a ver	y extensive field.

Module M0646: BIO I: Impla	nts and Testing			
Courses				
Title		Тур	Hrs/wk	CP
Experimental Methods in Biomechanics (L	0377)	Lecture	2	3
Implants and Fracture Healing (L0376)		Lecture	2	3
Module Responsible	Prof. Michael Morlock			
Admission Requirements	None			
Recommended Previous	It is recommended to participate in "Implantate und Frakturheilu	ng" before attending "Experimentelle	e Methoden".	
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ng learning results		
Professional Competence				
Knowledge	The students can describe the different ways how bones heal, a	and the requirements for their exister	nce.	
	The students can name different treatments for the spine and he	ollow bones under given fracture mo	orphologies.	
	The students can describe different measurement techniques for	or forces and movements, and choos	se the adequate technique for	a given task.
Skills	The students can determine the forces acting within the human	body under quasi-static situations u	nder specific assumptions.	
	The students can describe the basic handling of several experimental techniques used in biomechanics.			
Personal Competence				
Social Competence	The students can, in groups, solve basic experimental tasks.			
Autonomy	The students can, in groups, solve basic experimental tasks.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 minutes, many questions			
Assignment for the Following	General Engineering Science (German program): Specialisatio	n Mechanical Engineering, Focus Bi	iomechanics: Compulsory	
Curricula	General Engineering Science (German program): Specialisatio	n Biomedical Engineering: Compuls	sory

Lecturer	Independent Study Time 62, Study Time in Lecture 28 Prof. Michael Morlock	
Language	J. MICHAEL MULTOCK	
Cycle	WiSe	
Content	Topics to be covered include:	
	Introduction (history, definitions, background importance)	
	2. Bone (anatomy, properties, biology, adaptations in femur, tibia, humerus, radius)	
	3. Spine (anatomy, biomechanics, function, vertebral bodies, intervertebral disc, ligaments)	
	3.1 The spine in its entirety	
	3.2 Cervical spine	
	3.3 Thoracic spine	
	3.4 Lumbar spine	
	3.5 Injuries and diseases	
	4. Pelvis (anatomy, biomechanics, fracture treatment)	
	5 Fracture Healing	
	5.1 Basics and biology of fracture repair	
	5.2 Clinical principals and terminology of fracture treatment	
	5.3 Biomechanics of fracture treatment	
	5.3.1 Screws	
	5.3.2 Plates	
	5.3.3 Nails	
	5.3.4 External fixation devices	
	5.3.5 Spine implants	
	6.0 New Implants

Module M0687: Chemistry				
Courses				
Title		Тур	Hrs/wk	CP
Chemistry I (L0460)		Lecture	2	2
Chemistry I (L0475)		Recitation Section (large)	1	1
Chemistry II (L0465)		Lecture	2	2
Chemistry II (L0476)		Recitation Section (large)	1	1
Module Responsible	Prof. Gerrit A. Luinstra			
Admission Requirements	none			
Recommended Previous	none			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	owing learning results		
Professional Competence				
Knowledge	The students are able to name and to describe basic principles and applications of general chemistry (structure of matter, periodic table, chemical bonds), physical chemistry (aggregate states, separating processes, thermodynamics, kinetics), inorganic chemistry (acid/base, pH-value, salts, solubility, redox, metals) and organic chemistry (aliphatic hydrocarbons, functional groups, carbonyl compounds, aromates, reaction mechanisms, natural products, synthetic polymers). Furthermore students are able to explain basic chemical terms.			
Skills	After successful completion of this module students are able to describe substance groups and chemical compounds. On this basis, they are capable of explaining, choosing and applying specific methods and various reaction mechanisms.			
Personal Competence				
Social Competence	Students are able to take part in discussions on chemical issues and problems as a member of an interdisciplinary team. They can contribute to those			
·	discussion by their own statements.			
Autonomy	After successful completion of this module students are a arguments. They can also document their approaches.	ble to solve chemical problems independen	tly by defending pro	posed approaches with

Admission Requirements	None			
Recommended Previous	Highschool-level physics, chemistry und mathematics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following	g learning results		
Professional Competence				
Knowledge	The students have acquired a fundamental knowledge on i			
	Fundamental knowledge here means specifically the issues of			
	mechanical properties. The students know about the key aspe		•	
	characterizing specific properties. They are able to trace materia	s phenomena back to the underlyi	ng physical and chemical lav	ws of nature.
Skills	The students are able to trace materials phenomena back to the	underlying physical and chemica	al laws of nature. Materials p	henomena here refers
	mechanical properties such as strength, ductility, and stiffness,	chemical properties such as corros	sion resistance, and to phase	transformations such
	solidification, precipitation, or melting. The students can explain	the relation between processing	conditions and the materials	microstructure, and t
	can account for the impact of microstructure on the material's bel	navior.		
Personal Competence

General Engineering Science (English program, 7 semester): Specialisation Energy and Enviromental Engineering: Compulsory		Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineer Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Product Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory Bioprocess Engineering: Core qualification: Compulsory Computer Science: Specialisation Computational Mathematics: Elective Compulsory Electrical Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory General Engineering Science (English program): Core qualification: Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Compulsory General Engineering Science (English program, 7 semester): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory General Engineering Science (English program, 7 semester): Specialisation Civil Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Flectrical Engineering: Compulsory		

 $General\ Engineering\ Science\ (English\ program, 7\ semester): Specialisation\ Process\ Engineering:\ Compulsory$ 

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory
General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences:
Compulsory

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory

General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory

Computational Science and Engineering: Core qualification: Compulsory

Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory

Mechanical Engineering: Core qualification: Compulsory

Mechatronics: Core qualification: Compulsory

Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Theoretical Mechanical Engineering: Technical Complementary Course Core Studies: Elective Compulsory

Process Engineering: Core qualification: Compulsory

Тур	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE .
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	First and second order systems, poles and zeros, impulse and step response
	• Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants
	Internal model principle
	Root locus techniques
	Root locus plots
	Root locus design of PID controllers
	Frequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	Root locus and frequency response of time delay systems
	Smith predictor
	onnut production
	Digital control
	Sampled-data systems, difference equations
	Tustin approximation, digital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course
Literature	
Encludie	Werner, H., Lecture Notes "Introduction to Control Systems"
	G.F. Franklin, J.D. Powell and A. Emami-Naeini "Feedback Control of Dynamic Systems", Addison Wesley, Reading, MA, 2009
	<ul> <li>K. Ogata "Modern Control Engineering", Fourth Edition, Prentice Hall, Upper Saddle River, NJ, 2010</li> </ul>
	<ul> <li>R.C. Dorf and R.H. Bishop, "Modern Control Systems", Addison Wesley, Reading, MA 2010</li> </ul>

Course L0655: Introduction to Control Systems

Module M0708: Electrical E	ngineering III: Circuit Theory and Transients			
Courses				
Title		Тур	Hrs/wk	СР
Circuit Theory (L0566)		Lecture	3	4
Circuit Theory (L0567)		Recitation Section (small)	2	2
Module Responsible	Prof. Arne Jacob			
Admission Requirements	none			
Recommended Previous	Electrical Engineering I and II, Mathematics I and II			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following	learning results		
Professional Competence				
Knowledge	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of linear networks driven by			
	periodic signals. They know the methods for transient analysis of linear networks in time and in frequency domain, and they are able to explain the			
	frequency behaviour and the synthesis of passive two-terminal-circuits.			
Skills	Skills The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven by periodic signals. They able to calculate transients in electrical circuits in time and frequency domain and are able to explain the respective transient behaviour. They are also			
	analyse and to synthesize the frequency behaviour of passive two	-terminal-circuits.		
Personal Competence				
Social Competence	Students work on exercise tasks in small guided groups. They are	encouraged to present and discuss their	r results within the gro	up.
Autonomy	The students are able to find out the required methods for solving	the given practice problems. Possibiliti	es are given to test the	eir knowledge during the
•	lectures continuously by means of short-time tests. This allows the	nem to control independently their educ	cational objectives. Th	ney can link their gaine
	knowledge to other courses like Electrical Engineering I and Mathe		,	,

## Thesis

Module M-001: Bachelor Th	hesis			
Courses				
Title	Typ Hrs/wk	CP		
Module Responsible				
Admission Requirements				
·	According to General Regulations §24 (1):			
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.			
Recommended Previous				
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts).			
	theories, and methods).			
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and			
	establishing links with extended specialized expertise.			
	The students are able to outline the state of research on a selected issue in their subject area.			
Skills				
	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related to the students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related to the students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related to the students of the stude			
	<ul><li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, an</li></ul>			
	develop solutions.	ecillical issues, alic		
	The students can take up a critical position on the findings of their own research work from a specialized perspective.			
Personal Competence				
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in	a structured way.		
	The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addresses.	ees. In doing so the		
	can uphold their own assessments and viewpoints convincingly.			
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a spec	ified time frame.		
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific probler.			
	The students can apply the essential techniques of scientific work to research of their own.
