

## **Module Manual**

Bachelor of Science (B.Sc.)

# **Technomathematics**

Cohort: Winter Term 2018

Updated: 4th May 2019

## Table of Contents

Table of Contents	2
Program description	4
Core qualification	5
Module M0575: Procedural Programming	5
Module M0577: Nontechnical Complementary Courses for Bachelors	9
Module M1111: Mechanics for Technomathematicians	12
Module M0718: Linear Algebra for Technomathematicians	15
Module M0774: Electrical Engineering for Technomathematicians	18
Module M0690: Analysis for Technomathematicians	21
Module M0553: Objectoriented Programming, Algorithms and Data Structures	24
Module M1113: Proseminar Technomathematics	27
Module M1075: Numerical Mathematics	29
Module M1085: Mathematical Stochastics	32
Module M1074: Higher Analysis	34
Module M0829: Foundations of Management	37
Module M1114: Seminar Technomathematics	41
Specialization I. Mathematics	43
Module M1429: Complex Functions	43
Module M1052: Algebra	45
Module M1056: Functional Analysis	47
Module M0715: Solvers for Sparse Linear Systems	49
Module M1062: Mathematical Statistics	51
Module M0692: Approximation and Stability	53
Module M1079: Differential Geometry	55
Module M1080: Ordinary Differential Equations and Dynamical Systems	57
Module M1060: Optimization	59
Module M0852: Graph Theory and Optimization	62
Module M1061: Measure Theory and Stochastics	64
Module M0714: Numerical Treatment of Ordinary Differential Equations	66
Module M1083: Discrete Mathematics	69
Module M0561: Discrete Algebraic Structures	72
Module M0716: Hierarchical Algorithms	74
Module M1020: Numerics of Partial Differential Equations	76
Module M1063: Stochastic Processes	78
Module M0881: Mathematical Image Processing	80
Module M1552: Mathematics of Neural Networks	82
Module M1059: Approximation	84
Module M1058: Introduction to Mathematical Modeling	86
Module M1078: Geometry	88
Module M1129: Mathematical Systems Theory	91
Module M0941: Combinatorial Structures and Algorithms	94
Module M1055: Complex Analysis	96
Module M1050: Graph Theory	99
Module M1051: Combinatorial Optimization	101
Module M0720: Matrix Algorithms	103
Module M0711: Numerical Mathematics II	105
Module M1310: Discrete Differential Geometry	107
Module M1053: Introductory Number Theory	109
Module M1054: Topology	111
Module M1086: Practical Statistics	114
Module M1556: Set Theory and Mathematical Logic	116
Specialization II. Informatics	118
Module M0732: Software Engineering	118
Module M0624: Automata Theory and Formal Languages	120
Module M0731: Functional Programming	123
Module M0972: Distributed Systems	126
Module M0625: Databases	128
Module M0730: Computer Engineering	131
Module M0834: Computernetworks and Internet Security	134
Module M0754: Compiler Construction	136
Module M0971: Operating Systems	138
Module M0562: Computability and Complexity Theory	140
Module M0668: Algebra and Control	142
Specialization III. Engineering Science	144
Module M0536: Fundamentals of Fluid Mechanics	144
Module M0634: Introduction into Medical Technology and Systems	148
Module M0680: Fluid Dynamics	151
Module M0757: Biochemistry and Microbiology	153
Module M1277: MED I: Introduction to Anatomy	158
Module M0938: Bioprocess Engineering - Fundamentals	160
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	164

Module M0671: Technical Thermodynamics I	167
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	170
Module M0672: Signals and Systems	173
Module M0706: Geotechnics I	177
Module M0580: Principles of Building Materials and Building Physics	180
Module M0687: Chemistry	183
Module M0740: Structural Analysis I	186
Module M0933: Fundamentals of Materials Science	188
Module M0808: Finite Elements Methods	191
Module M0945: Bioprocess Engineering - Advanced	193
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	196
Module M0783: Measurements: Methods and Data Processing	198
Module M0688: Technical Thermodynamics II	200
Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields	203
Module M0538: Heat and Mass Transfer	206
Module M0675: Introduction to Communications and Random Processes	209
Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	212
Module M0655: Computational Fluid Dynamics I	214
Module M1333: BIO I: Implants and Fracture Healing	216
Module M0833: Introduction to Control Systems	219
Module M0708: Electrical Engineering III: Circuit Theory and Transients	224
Module M0755: Geotechnics II	227
Module M0807: Boundary Element Methods	229
Module M0734: Electrical Engineering Project Laboratory	231
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	233
Module M0606: Numerical Algorithms in Structural Mechanics	235
Module M0594: Fundamentals of Mechanical Engineering Design	237
Module M0777: Semiconductor Circuit Design	240
Module M1280: MED II: Introduction to Physiology	243
Module M1005: Enhanced Fundamentals of Materials Science	245
Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	249
Module M1332: BIO I: Experimental Methods in Biomechanics	252
<b>Specialization IV. Subject Specific Focus</b>	<b>254</b>
Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific Regulations)	254
Module M1353: Mathematical Project Laboratory	255
Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific Regulations)	257
<b>Thesis</b>	<b>258</b>
Module M-001: Bachelor Thesis	258

### Content

## Core qualification

### Module M0575: Procedural Programming

**Courses**

Title	Typ	Hrs/wk	CP
Procedural Programming (L0197)	Lecture	1	2
Procedural Programming (L0201)	Recitation Section (large)	1	1
Procedural Programming (L0202)	Practical Course	2	3

<b>Module Responsible</b>	Prof. Siegfried Rump
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Elementary PC handling skills Elementary mathematical skills
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>The students acquire the following knowledge:</p> <ul style="list-style-type: none"> <li>• They know basic elements of the programming language C. They know the basic data types and know how to use them.</li> <li>• They have an understanding of elementary compiler tasks, of the preprocessor and programming environment and know how those interact.</li> <li>• They know how to bind programs and how to include external libraries to enhance software packages.</li> <li>• They know how to use header files and how to declare function interfaces to create larger programming projects.</li> <li>• They acquire some knowledge how the program interacts with the operating system. This allows them to develop programs interacting with the programming environment as well.</li> <li>• They learnt several possibilities how to model and implement frequently occurring standard algorithms.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<ul style="list-style-type: none"> <li>• The students know how to judge the complexity of an algorithms and how to program algorithms efficiently.</li> <li>• The students are able to model and implement algorithms for a number of standard functionalities. Moreover, they are able to adapt a given API.</li> </ul>

Course L0197: Procedural Programming	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• basic data types (integers, floating point format, ASCII-characters) and their dependencies on the CPU architecture</li> <li>• advanced data types (pointers, arrays, strings, structs, lists)</li> <li>• operators (arithmetical operations, logical operations, bit operations)</li> <li>• control flow (choice, loops, jumps)</li> <li>• preprocessor directives (macros, conditional compilation, modular design)</li> <li>• functions (function definitions/interface, recursive functions, "call by value" versus "call by reference", function pointers)</li> <li>• essential standard libraries and functions (stdio.h, stdlib.h, math.h, string.h, time.h)</li> <li>• file concept, streams</li> <li>• basic algorithms (sorting functions, series expansion, uniformly distributed permutation)</li> <li>• exercise programs to deepen the programming skills</li> </ul>
<b>Literature</b>	<p><b>Kernighan, Brian W</b> (Ritchie, Dennis M.): The C programming language ISBN: 9780131103702 <i>Upper Saddle River, NJ [u.a.] : Prentice Hall PTR, 2009</i></p> <p><b>Sedgewick, Robert</b> Algorithms in C ISBN: 0201316633 <i>Reading, Mass. [u.a.] : Addison-Wesley, 2007</i></p> <p><b>Kaiser, Ulrich</b> (Kecher, Christoph.): C/C++: Von den Grundlagen zur professionellen Programmierung ISBN: 9783898428392 <i>Bonn : Galileo Press, 2010</i></p> <p><b>Wolf, Jürgen</b> C von A bis Z : das umfassende Handbuch ISBN: 3836214113 <i>Bonn : Galileo Press, 2009</i></p>

Course L0201: Procedural Programming	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0202: Procedural Programming	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Siegfried Rump
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M0577: Nontechnical Complementary Courses for Bachelors

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Non-technical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p>
<i>Knowledge</i>	

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

**Specialized Competence (Knowledge)**

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

**Professional Competence (Skills)**

In selected sub-areas students can

*Skills*

- apply basic methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

**Personal Competence**

**Personal Competences (Social Skills)**

Students will be able

*Social Competence*

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

**Personal Competences (Self-reliance)**

Students are able in selected areas

*Autonomy*

- to reflect on their own profession and professionalism in the context of real-life fields of application
- to organize themselves and their own learning processes
- to reflect and decide questions in front of a broad education background
- to communicate a nontechnical item in a competent way in written form or verbally
- to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

**Workload in Hours**

Depends on choice of courses

— **Credit points** 6 —

<b>Courses</b>
<b>Information regarding lectures and courses can be found in the corresponding module handbook published separately.</b>

## Module M1111: Mechanics for Technomathematicians

### Courses

Title	Typ	Hrs/wk	CP
Mechanics I for Technomathematicians (L1436)	Lecture	2	3
Mechanics I for Technomathematicians (L1437)	Recitation Section (small)	2	1
Mechanics II for Technomathematicians (L1438)	Lecture	2	3
Mechanics II for Technomathematicians (L1439)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Dr. Marc-André Pick		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in mathematics and physics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students can</p> <ul style="list-style-type: none"> <li>• describe the axiomatic procedure used in mechanical contexts;</li> <li>• present technical knowledge in stereostatics and elastostatics;</li> <li>• explain important steps in model design with respect to applications in mechanics;</li> <li>• appraise the importance of techno-mathematicians in the business of engineering mechanics.</li> </ul>		
<i>Knowledge</i>			
<b>Skills</b>	<p>The students can</p> <ul style="list-style-type: none"> <li>• explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>• apply basic statical and elastostatic methods to engineering problems;</li> <li>• estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	The students can work in groups and support each other to overcome difficulties.		
<i>Social Competence</i>			
<b>Autonomy</b>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 128, Study Time in Lecture 112		
<b>Credit points</b>	8		
<b>Course achievement</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes 20 %	Exercises	
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	180 min		
<b>Assignment for the Following Curricula</b>	Technomathematics: Core qualification: Compulsory		

<b>Course L1436: Mechancis I for Technomathematicians</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marc-André Pick
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Forces and Equilibrium</p> <p>Gravity, center of gravity</p> <p>Constraints and reactions</p> <p>Trusses</p> <p>Static and dynamic friction</p> <p>Elastic bars</p> <p>State of stress</p> <p>State of strain</p>
<b>Literature</b>	D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

<b>Course L1437: Mechancis I for Technomathematicians</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marc-André Pick

## Module M0718: Linear Algebra for Technomathematicians

### Courses

Title	Typ	Hrs/wk	CP
Linear Algebra 1 for Technomathematicians (L0587)	Lecture	4	4
Linear Algebra 1 for Technomathematicians (L0588)	Recitation Section (small)	2	4
Linear Algebra 2 for Technomathematicians (L0589)	Lecture	4	4
Linear Algebra 2 for Technomathematicians (L0590)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Sabine Le Borne		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	High school mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>define the basic terms of Linear Algebra, illustrate them with examples and detect interrelations,</li> <li>list techniques for proofs,</li> <li>sketch main steps in proofs of central theorems.</li> </ul> <p>Students can furthermore explain the basic steps that arise in modelling and relate them to application scenarios.</p> <p>Students are capable to</p> <ul style="list-style-type: none"> <li>apply the tools of Linear Algebra,</li> <li>implement (MATLAB) and test algorithms (e.g. solution of linear systems of equations, computation of the determinant, computation of eigenvalues and eigenvectors),</li> <li>develop proofs for propositions in Linear Algebra and to document them in a comprehensible manner.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge), explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms,</li> <li>explain solutions/proofs of the exercises at the blackboard in a way suitable for the audience (in the exercise sessions).</li> </ul> <p>Students are capable</p> <ul style="list-style-type: none"> <li>to assess whether the supporting theoretical and practical exercises are better solved individually or in a team,</li> <li>to work on complex problems over an extended period of time,</li> <li>to assess their individual progress and, if necessary, to ask questions and seek help.</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 312, Study Time in Lecture 168		
<b>Credit points</b>	16		
<b>Course achievement</b>	None		

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 minutes
<b>Assignment for the Following Curricula</b>	Technomathematics: Core qualification: Compulsory

**Course L0587: Linear Algebra 1 for Technomathematicians**

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Sabine Le Borne, Prof. Anusch Taraz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Proofs, sets, relations</li> <li>2. Fields</li> <li>3. Vector spaces</li> <li>4. Applications of vector spaces</li> <li>5. Linear mappings</li> <li>6. Polynomials</li> <li>7. Determinants</li> <li>8. Groups</li> </ol>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• G. Fischer, Lineare Algebra: Eine Einführung für Studienanfänger</li> <li>• A. Beutelspacher: Lineare Algebra: Eine Einführung in die Wissenschaft der Vektoren, Abbildungen und Matrizen</li> <li>• J. Liesen, V. ## Module M0774: Electrical Engineering for Technomathematicians

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electrical Engineering I for Technomathematicians (L0754)	Lecture	2	3
Electrical Engineering I for Technomathematicians (L0755)	Recitation Section (small)	1	1
Electrical Engineering II for Technomathematicians (L0756)	Lecture	2	3
Electrical Engineering II for Technomathematicians (L0757)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Dr. Heinz-Dietrich Brüns		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students know the basic theory, relations, and methods of electric and magnetic field computation and linear network theory. This includes, in particular:</p> <ul style="list-style-type: none"> <li>• the Maxwell equations in integral form,</li> <li>• the formulation of electric and magnetic fields as vector fields in different coordinate systems,</li> <li>• the constitutive relations,</li> <li>• the Gauss law,</li> <li>• the Ampère law,</li> <li>• the induction law,</li> <li>• the Kirchhoff's laws,</li> <li>• the Ohm's law,</li> <li>• the concepts and definitions of resistance, capacitance, and inductance,</li> <li>• methods for the simplification and analysis of linear networks,</li> <li>• complex numbers and their use in steady state sinusoidal analysis,</li> <li>• the concept of impedance,</li> <li>• the concept of resonance,</li> <li>• locus plots,</li> <li>• energy and power in steady state sinusoidal analysis,</li> <li>• 3-phase systems,</li> <li>• transients</li> </ul> <p>The students can explain the basic steps that arise in modelling and relate them to application scenarios in electrical engineering.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students are able to apply the basic laws of electromagnetism to electric and magnetic field computation. They are able to relate the various field quantities to each other. The students are able to calculate resistances, capacitances, and inductances of simple configurations. The students know how to apply network theory to calculate the currents and voltages of linear networks and how to design simple circuits.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i>	<p>Students are able to solve specific problems, alone or in a group, and to present the results accordingly. Students can explain concepts and, on the basis of examples and exercises, verify and deepen their understanding.</p>		
<i>Autonomy</i>	<p>Students are able to acquire particular knowledge using textbooks in a self-learning process, to integrate, present, and associate this knowledge with other fields. The students develop</p>		

	persistence to also solve more complicated problems.
<b>Workload in Hours</b>	Independent Study Time 156, Study Time in Lecture 84
<b>Credit points</b>	8
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 minutes
<b>Assignment for the Following Curricula</b>	Technomathematics: Core qualification: Compulsory

#### Course L0754: Electrical Engineering I for Technomathematicians

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Heinz-Dietrich Brüns
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Electrostatics</li> <li>• Stationary electric currents</li> <li>• Basic concepts of network theory</li> <li>• Stationary magnetic fields</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• M. Albach, "Elektrotechnik", (Pearson, München, 2011).</li> </ul>

#### Course L0755: Electrical Engineering I for Technomathematicians

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Heinz-Dietrich Brüns
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	The exercise sessions serve to deepen the understanding of the concepts of the lecture.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• M. Albach, "Elektrotechnik", (Pearson, München, 2011).</li> </ul>

Course L0756: Electrical Engineering II for Technomathematicians	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Heinz-Dietrich Brüns
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Periodic and sinusoidal signals</li> <li>• Transients</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• M. Albach, "Elektrotechnik", (Pearson, München, 2011).</li> </ul>

Course L0757: Electrical Engineering II for Technomathematicians	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Dr. Heinz-Dietrich Brüns
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	The exercise sessions serve to deepen the understanding of the concepts of the lecture.
<b>Literature</b>	M. Albach, "Elektrotechnik", (Pearson, München, 2011).

## Module M0690: Analysis for Technomathematicians

### Courses

Title	Typ	Hrs/wk	CP
Analysis I for Technomathematicians (L0483)	Lecture	4	4
Analysis I for Technomathematicians (L0484)	Recitation Section (small)	2	4
Analysis II for Technomathematicians (L0485)	Lecture	4	4
Analysis II for Technomathematicians (L0486)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Marko Lindner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	High school mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>name, define and explain the basic properties of the field of real numbers,</li> <li>define and interrelate the basic topological terms in a metric space,</li> <li>in particular, describe their interrelation with the concepts of convergence and continuity,</li> <li>define, explain and use the basic terms of differential calculus in several variables and integral calculus in one variable,</li> </ul> <p>In particular, they are able to correctly define, explain and interrelate all these concepts and to sketch the main ideas in proofs of central theorems.</p> <p>Students can furthermore explain the basic steps that arise in modelling and relate them to application scenarios.</p>		
<i>Knowledge</i>			
<b>Skills</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>determine topological properties of concrete sets in metric space,</li> <li>determine and prove convergence and divergence of sequences and series - as well as continuity, uniform continuity and Lipschitz continuity of a given function between two metric spaces,</li> <li>differentiate a function in one or several variables,</li> <li>decide whether a given function is Riemann integrable and compute its integral,</li> <li>compute Taylor polynomial and Taylor series of a given, sufficiently smooth, function in one or more variables,</li> <li>find local and global extrema of a given function - possibly under constraints</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	<p>Students are able to solve specific problems in groups (e.g. in connection with their regular homework) and to present their results appropriately (e.g. during exercise class).</p>		
<i>Social Competence</i>			
<b>Autonomy</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>gain further information from additional literature and put it in context with the contents of the lecture,</li> <li>put their knowledge in relation to the contents of other lectures,</li> <li>work on difficult problems over a long period.</li> </ul>		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 312, Study Time in Lecture 168		
<b>Credit points</b>	16		

<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120
<b>Assignment for the Following Curricula</b>	Technomathematics: Core qualification: Compulsory

### Course L0483: Analysis I for Technomathematicians

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Marko Lindner, Prof. Sabine Le Borne
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• logic, sets</li> <li>• cardinalities</li> <li>• numbers</li> <li>• metric space and convergence</li> <li>• continuity</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• K. Königsberger: Analysis I und II</li> <li>• O. Forster: Analysis 1 und 2</li> <li>• H. Heuser: Lehrbuch der Analysis. Teile 1 und 2</li> </ul>

### Course L0484: Analysis I for Technomathematicians

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Marko Lindner, Prof. Sabine Le Borne
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0485: Analysis II for Technomathematicians	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Marko Lindner, Prof. Sabine Le Borne
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• differentiation in 1D</li> <li>• integration in 1D</li> <li>• sequences and series of functions</li> <li>• differentiation in several variables</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• K. Königsberger: Analysis I und II</li> <li>• O. Forster: Analysis 1 und 2</li> <li>• H. Heuser: Lehrbuch der Analysis. Teile 1 und 2</li> </ul>

Course L0486: Analysis II for Technomathematicians	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Marko Lindner, Prof. Sabine Le Borne
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M0553: Objectoriented Programming, Algorithms and Data Structures

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Objectoriented Programming, Algorithms and Data Structures (L0131)	Lecture	4	4
Objectoriented Programming, Algorithms and Data Structures (L0132)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Lecture Prozedurale Programmierung or equivalent proficiency in imperative programming</p> <p>Mandatory prerequisite for this lecture is proficiency in imperative programming (C, Pascal, Fortran or similar). You should be familiar with simple data types (integer, double, char), arrays, if-then-else, for, while, procedure calls or function calls, pointers, and you should have used all those in your own programs and therefore should be proficient with editor, compiler, linker and debugger. In this lecture we will immediately start with the introduction of objects and we will not repeat the basics mentioned above.</p> <p>This remark is especially important for AIW, GES, LUM because those prerequisites are <b>not</b> part of the curriculum. They are prerequisites for the start of those curricula in general. The programs ET, CI and IIW include those prerequisites in the first semester in the lecture Prozedurale Programmierung.</p>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students can explain the essentials of software design and the design of a class architecture with reference to existing class libraries and design patterns.</p> <p>Students can describe fundamental data structures of discrete mathematics and assess the complexity of important algorithms for sorting and searching.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>Design software using given design patterns and applying class hierarchies and polymorphism</li> <li>Carry out software development and tests using version management systems and Google Test</li> <li>Sort and search for data efficiently</li> <li>Assess the complexity of algorithms.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can work in teams and communicate in forums.		
<i>Autonomy</i>	Students are able to solve programming tasks such as LZW data compression using SVN Repository and Google Test independently and over a period of two to three weeks.		

<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture, exercises and material in StudIP
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Computer Science: Compulsory General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory Computer Science: Core qualification: Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program): Specialisation Computer Science: Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory Technomathematics: Core qualification: Compulsory

Course L0131: Objectoriented Programming, Algorithms and Data Structures	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 64, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p><b>Object oriented analysis and design:</b></p> <ul style="list-style-type: none"> <li>• Objectoriented programming in C++ and Java</li> <li>• generic programming</li> <li>• UML</li> <li>• design patterns</li> </ul> <p><b>Data structures and algorithmes:</b></p> <ul style="list-style-type: none"> <li>• complexity of algorithms</li> <li>• searching, sorting, hash tables,</li> <li>• stack, queues, lists,</li> <li>• trees (AVL, heap, 2-3-4, Trie, Huffman, Patricia, B),</li> <li>• sets, priority queues,</li> <li>• directed and undirected graphs (spanning trees, shortest and longest path)</li> </ul>
<b>Literature</b>	Skriptum

<b>Course L0132: Objectoriented Programming, Algorithms and Data Structures</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14

## Module M1113: Proseminar Technomathematics

### Courses

Title	Typ	Hrs/wk	CP
Proseminar Mathematics (L0919)	Seminar	2	2
<b>Module Responsible</b>	Prof. Anusch Taraz		
<b>Admission Requirements</b>	None		
<b>Recommended or Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Analysis &amp; Linear Algebra I + II for Technomathematicians</li> <li>• Mathematik I + II (for Engineering Students - German or English lecture series), and</li> <li>• an advanced course by the lecturer who is responsible for the proseminar</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students acquire a deep understanding of the mathematical subject under consideration.</p> <p><i>Skills</i> Students are able to</p> <ul style="list-style-type: none"> <li>• understand, analyze, classify and work on an advanced mathematical topic,</li> <li>• thoroughly study the recommended literature,</li> <li>• present their results in a mathematically correct and comprehensible way.</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to present their results in an appropriate way to the group.</p> <p><i>Autonomy</i> Students are able to prepare a written scientific presentation on their own; in particular to</p> <ul style="list-style-type: none"> <li>• find and critically check relevant literature,</li> <li>• make and incorporate their own thoughts,</li> <li>• complete the presentation in time.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28		
<b>Credit points</b>	2		
<b>Course achievement</b>	None		
<b>Examination</b>	Presentation		
<b>Examination duration and scale</b>	60 Minutes		
<b>Assignment for the Following Curricula</b>	Technomathematics: Core qualification: Compulsory		

<b>Course L0919: Proseminar Mathematics</b>	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Anusch Taraz, Prof. Sabine Le Borne, Prof. Marko Lindner, Dr. Christian Seifert, Prof. Heinrich Voß, Dozenten des Fachbereiches Mathematik der UHH, Dr. Mijail Guillemard
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>Selected topics from the fields</p> <ul style="list-style-type: none"> <li>• Applied Analysis</li> <li>• Numerical Linear Algebra</li> <li>• Computational mathematics</li> <li>• Discrete mathematics</li> </ul>
<b>Literature</b>	wird in der Lehrveranstaltung bekannt gegeben

# Module M1075: Numerical Mathematics

## Courses

Title	Typ	Hrs/wk	CP
Numerical Mathematics (L1357)	Lecture	4	6
Numerical Mathematics (L1358)	Recitation Section (small)	2	3

<b>Module Responsible</b>	Prof. Jens Struckmeier
---------------------------	------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Linear Algebra Analysis
---------------------------------------	----------------------------

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can describe basic concepts in Numerical Mathematics such as methods for linear systems of equations and their error analysis, interpolation by polynomials and splines, orthogonalization methods, linear regression, linear optimization, numerical integration, nonlinear equations and eigenvalue problems. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>Students can model problems in Numerical Mathematics with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul> <ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

# Module M0829: Foundations of Management

## Courses

Title	Typ	Hrs/wk	CP
Management Tutorial (L0882)	Recitation Section (large)	2	3
Introduction to Management (L0880)	Lecture	3	3

<b>Module Responsible</b>	Prof. Christoph Ihl
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Basic Knowledge of Mathematics and Business
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to</p> <ul style="list-style-type: none"> <li>• explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management</li> <li>• explain the most important aspects of and goals in Management and name the most important aspects of entrepreneurial projects</li> <li>• describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human resource management, information management, innovation management and marketing</li> <li>• explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance</li> <li>• state basics from accounting and costing and selected controlling methods.</li> </ul>
<i>Knowledge</i>	
<b>Skills</b>	<p>Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to</p> <ul style="list-style-type: none"> <li>• analyse Management goals and structure them appropriately</li> <li>• analyse organisational and staff structures of companies</li> <li>• apply methods for decision making under multiple objectives, under uncertainty and under risk</li> <li>• analyse production and procurement systems and Business information systems</li> <li>• analyse and apply basic methods of marketing</li> <li>• select and apply basic methods from mathematical finance to predefined problems</li> <li>• apply basic methods from accounting, costing and controlling to predefined problems</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• work successfully in a team of students</li> <li>• to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project</li> <li>• to communicate appropriately and</li> <li>• to cooperate respectfully with their fellow students.</li> </ul>
	<p>Students are able to</p>

<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• work in a team and to organize the team themselves</li> <li>• to write a report on their project.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Subject theoretical and practical work
<b>Examination duration and scale</b>	several written exams during the semester
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Process Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Bioprocess Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory</p> <p>Civil- and Environmental Engineering: Core qualification: Compulsory</p> <p>Bioprocess Engineering: Core qualification: Compulsory</p> <p>Computer Science: Core qualification: Compulsory</p> <p>Electrical Engineering: Core qualification: Compulsory</p> <p>Energy and Environmental Engineering: Core qualification: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Process Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Computer Science: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Bioprocess Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Civil Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Energy and</p>

	Enviromental Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory Computational Science and Engineering: Core qualification: Compulsory Logistics and Mobility: Core qualification: Compulsory Mechanical Engineering: Core qualification: Compulsory Mechatronics: Core qualification: Compulsory Orientierungsstudium: Core qualification: Elective Compulsory Naval Architecture: Core qualification: Compulsory Technomathematics: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory

Course L0882: Management Tutorial	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on self-selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>
<b>Literature</b>	Relevante Literatur aus der korrespondierenden Vorlesung.

Course L0880: Introduction to Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christoph Ihl, Prof. Thorsten Blecker, Prof. Christian Lühje, Prof. Christian Ringle, Prof. Kathrin Fischer, Prof. Cornelius Herstatt, Prof. Wolfgang Kersten, Prof. Matthias Meyer, Prof. Thomas Wrona
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management</li> <li>• Important definitions from Management,</li> <li>• Developing Objectives for Business, and their relation to important Business functions</li> <li>• Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation Management, Marketing and Sales</li> <li>• Cross-sectional Functions, e.g. Organisation, Human Ressource Management, Supply Chain Management, Information Management</li> <li>• Definitions as information, information systems, aspects of data security and strategic information systems</li> <li>• Definition and Relevance of innovations, e.g. innovation opporunities, risks etc.</li> <li>• Relevance of marketing, B2B vs. B2C-Marketing</li> <li>• different techniques from the field of marketing (e.g. scenario technique), pricing strategies</li> <li>• important organizational structures</li> <li>• basics of human ressource management</li> <li>• Introduction to Business Planning and the steps of a planning process</li> <li>• Decision Analysis: Elements of decision problems and methods for solving decision problems</li> <li>• Selected Planning Tasks, e.g. Investment and Financial Decisions</li> <li>• Introduction to Accounting: Accounting, Balance-Sheets, Costing</li> <li>• Relevance of Controlling and selected Controlling methods</li> <li>• Important aspects of Entrepreneurship projects</li> </ul>

# Module M1062: Mathematical Statistics

## Courses

Title	Typ	Hrs/wk	CP
Mathematical Statistics (L1339)	Lecture	3	4
Mathematical Statistics (L1340)	Recitation Section (small)	1	2

<b>Module Responsible</b>	Prof. Natalie Neumeyer
---------------------------	------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Mathematical Stochastics Measure Theory and Stochastics
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can describe basic concepts in Mathematical Statistics such as the substitution and Maximum-Likelihood methods for construction of estimators, optimal unfalsified estimators, optimal tests for parametric probability distributions, sufficiency and completeness and their application to estimation and test problems, tests in normal distribution and confidence domains and test families. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<i>Personal Competence</i>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students can model problems in Mathematical Statistics with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>• Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>
	<ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

### Course L1047: Graph Theory and Optimization

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Anusch Taraz
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M1061: Measure Theory and Stochastics

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Measure Theory and Stochastics (L1335)	Lecture	3	4
Measure Theory and Stochastics (L1338)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Holger Drees		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematical Stochastics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can describe basic concepts in Stochastics such as general densities, conditional expectation, martingals in discrete time, convergence of probability measures and integral transformations. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>Students can model problems in Stochastics with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>		
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		

<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 min
<b>Assignment for the Following Curricula</b>	Technomathematics: Specialisation I. Mathematics: Elective Compulsory

### Course L1335: Measure Theory and Stochastics

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• General densities, Radon-Nikodym theorem</li> <li>• Conditional expectation, Markov kernels</li> <li>• Martingals in discrete time</li> <li>• Convergence of probability measures</li> <li>• Integral transformations (e.g. generating functions, Fourier transformation, Laplace transformation)</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• H. Bauer, <b>Maß- und Integrationstheorie</b>, de Gruyter Lehrbuch, Auflage: 2., überarb. A. (1. Juli 1992)</li> <li>• H. Bauer, <b>Wahrscheinlichkeitstheorie</b>, de Gruyter Lehrbuch, Verlag: de Gruyter; Auflage: 5. durchges. und verb. (2002)</li> <li>• J. Estrodt, <b>Maß- und Integrationstheorie</b>, Springer, 7., korrigierte und aktualisierte Auflage 2011</li> </ul>

### Course L1338: Measure Theory and Stochastics

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M0714: Numerical Treatment of Ordinary Differential Equations

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Numerical Treatment of Ordinary Differential Equations (L0576)	Lecture	2	3
Numerical Treatment of Ordinary Differential Equations (L0582)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Sabine Le Borne		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematik I, II, III für Ingenieurstudierende (deutsch oder englisch) oder Analysis &amp; Lineare Algebra I + II sowie Analysis III für Technomathematiker</li> <li>Basic MATLAB knowledge</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>list numerical methods for the solution of ordinary differential equations and explain their core ideas,</li> <li>repeat convergence statements for the treated numerical methods (including the prerequisites tied to the underlying problem),</li> <li>explain aspects regarding the practical execution of a method.</li> <li>select the appropriate numerical method for concrete problems, implement the numerical algorithms efficiently and interpret the numerical results</li> </ul>		
<i>Knowledge</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>implement (MATLAB), apply and compare numerical methods for the solution of ordinary differential equations,</li> <li>to justify the convergence behaviour of numerical methods with respect to the posed problem and selected algorithm,</li> <li>for a given problem, develop a suitable solution approach, if necessary by the composition of several algorithms, to execute this approach and to critically evaluate the results.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge), explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>	<p>Students are capable</p> <ul style="list-style-type: none"> <li>to assess whether the supporting theoretical and practical exercises are better solved individually or in a team,</li> <li>to assess their individual progress and, if necessary, to ask questions and seek help.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Mathematical Modelling in Engineering: Theory, Numerics, Applications: Specialisation I. Numerics (TUHH): Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Technomathematics: Specialisation I. Mathematics: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory

Course L0576: Numerical Treatment of Ordinary Differential Equations	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sabine Le Borne, Dr. Christian Seifert
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	Numerical methods for Initial Value Problems <ul style="list-style-type: none"> <li>• single step methods</li> <li>• multistep methods</li> <li>• stiff problems</li> <li>• differential algebraic equations (DAE) of index 1</li> </ul> Numerical methods for Boundary Value Problems <ul style="list-style-type: none"> <li>• multiple shooting method</li> <li>• difference methods</li> <li>• variational methods</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• E. Hairer, S. Noersett, G. Wanner: Solving Ordinary Differential Equations I: Nonstiff Problems</li> <li>• E. Hairer, G. Wanner: Solving Ordinary Differential Equations II: Stiff and Differential-Algebraic Problems</li> </ul>

<b>Course L0582: Numerical Treatment of Ordinary Differential Equations</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2

### Course L1343: Stochastic Processes

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Classification and construction of stochastic processes, existence theorems</li> <li>• Markov processes with discrete state space in discrete and continuous time</li> <li>• Renewal theory</li> <li>• General Markov processes and Markov semigroups</li> <li>• Poisson processes, Brownian motion</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Asmussen, S.: Applied Probability and Queues, 2.ed., Springer, New York 2003</li> <li>• Chung, K.L.: Markov Chains, 2.ed., Springer Berlin 1967</li> <li>• Grimmett, G.; Stirzaker, D.R.: Probability and Random Processes, 3.ed., Oxford University Press, Oxford 2009</li> <li>• Karlin, S.; Taylor, H.M.: A First Course in Stochastic Processes, 2.ed., Academic Press, New York 1975</li> <li>• Resnick, S.I.: Adventures in Stochastic Processes, 2.pr., Birkhäuser, Boston 1994</li> <li>• Stroock, D.W.: An Introduction to Markov Processes, Springer, New York 2005</li> </ul>

### Course L1344: Stochastic Processes

<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M0881: Mathematical Image Processing

### Courses

Title	Typ	Hrs/wk	CP
Mathematical Image Processing (L0991)	Lecture	3	4
Mathematical Image Processing (L0992)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Marko Lindner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Analysis: partial derivatives, gradient, directional derivative</li> <li>• Linear Algebra: eigenvalues, least squares solution of a linear system</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <p><i>Knowledge</i></p> <ul style="list-style-type: none"> <li>• characterize and compare diffusion equations</li> <li>• explain elementary methods of image processing</li> <li>• explain methods of image segmentation and registration</li> <li>• sketch and interrelate basic concepts of functional analysis</li> </ul> <p><i>Skills</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>• implement and apply elementary methods of image processing</li> <li>• explain and apply modern methods of image processing</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge) and to explain theoretical foundations.</p> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	20 min		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Modeling and Simulation: Elective Compulsory Computational Science and Engineering: Specialisation III. Mathematics: Elective Compulsory Mechatronics: Technical Complementary Course: Elective Compulsory Technomathematics: Specialisation I. Mathematics: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory		

	Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory
--	---

Course L0991: Mathematical Image Processing	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Marko Lindner
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• basic methods of image processing</li> <li>• smoothing filters</li> <li>• the diffusion / heat equation</li> <li>• variational formulations in image processing</li> <li>• edge detection</li> <li>• de-convolution</li> <li>• inpainting</li> <li>• image segmentation</li> <li>• image registration</li> </ul>
<b>Literature</b>	Bredies/Lorenz: Mathematische Bildverarbeitung

Course L0992: Mathematical Image Processing	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Marko Lindner

<b>Literature</b>	See interlocking course

Module M1552: Mathematics of Neural Networks			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Mathematics of Neural Networks (L2322)	Lecture	2	3
Mathematics of Neural Networks (L2323)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Dr. Jens-Peter Zemke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ol style="list-style-type: none"> <li>1. Mathematics I-III</li> <li>2. Numerical Mathematics 1/ Numerics</li> <li>3. Programming skills, preferably in Python</li> </ol>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to name, state and classify state-of-the-art neural networks and their corresponding mathematical basics. They can assess the difficulties of different neural networks.		
<i>Skills</i>	Students are able to implement, understand, and, tailored to the field of application, apply neural networks.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can <ul style="list-style-type: none"> <li>• develop and document joint solutions in small teams;</li> <li>• form groups to further develop the ideas and transfer them to other areas of applicability;</li> <li>• form a team to develop, build, and advance a software library.</li> </ul>		
<i>Autonomy</i>	Students are able to <ul style="list-style-type: none"> <li>• correctly assess the time and effort of self-defined work;</li> <li>• assess whether the supporting theoretical and practical exercises are better solved individually or in a team;</li> <li>• define test problems for testing and expanding the methods;</li> <li>• assess their individual progress and, if necessary, to ask questions and seek help.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	25 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Technomathematics: Specialisation I. Mathematics: Elective Compulsory		

Course L2322: Mathematics of Neural Networks	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Jens-Peter Zemke
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Basics: analogy; layout of neural nets, universal approximation, NP-completeness</li> <li>2. Feedforward nets: backpropagation, variants of Stochastic Gradients</li> <li>3. Deep Learning: problems and solution strategies</li> <li>4. Deep Belief Networks: energy based models, Contrastive Divergence</li> <li>5. CNN: idea, layout, FFT and Winograds algorithms, implementation details</li> <li>6. RNN: idea, dynamical systems, training, LSTM</li> <li>7. ResNN: idea, relation to neural ODEs</li> <li>8. Standard libraries: Tensorflow, Keras, PyTorch</li> <li>9. Recent trends</li> </ol>
<b>Literature</b>	<ol style="list-style-type: none"> <li>1. Skript</li> <li>2. Online-Werke: <ul style="list-style-type: none"> <li>◦ <a href="http://neuralnetworksanddeeplearning.com/">http://neuralnetworksanddeeplearning.com/</a></li> <li>◦ <a href="https://www.deeplearningbook.org/">https://www.deeplearningbook.org/</a></li> </ul> </li> </ol>

Course L2323: Mathematics of Neural Networks

## Module M1059: Approximation

### Courses

Title	Typ	Hrs/wk	CP
Approximation (L1331)	Lecture	4	6
Approximation (L1332)	Recitation Section (small)	2	3

<b>Module Responsible</b>	Prof. Armin Iske
---------------------------	------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Linear Algebra Analysis Introduction to Numerical Analysis
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can describe basic concepts in Approximation such as <math>L^2</math> approximation, Tschebychev approximation and Remez methods, approximation of periodic functions, Fourier series, splines, representation of curves and surfaces, and wavelets and radial basis function. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>• Students can model problems in Approximation with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>• Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

<b>Workload in Hours</b>	Independent Study Time 186, Study Time in Lecture 84
<b>Credit points</b>	9
<b>Course achievement</b>	None
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 min
<b>Assignment for the Following Curricula</b>	Technomathematics: Specialisation I. Mathematics: Elective Compulsory

### Course L1331: Approximation

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• <math>L^2</math> approximation</li> <li>• Tschebychev approximation and Remez methods</li> <li>• Approximation of periodic functions, Fourier series</li> <li>• Interpolation and approximation by splines</li> <li>• Representation of curves and surfaces</li> <li>• Wavelets and radial basis functions</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• DeVore, Ronald A. und Lorentz, George G.: Constructive Approximation, Springer, 1993.</li> <li>• Powell, Michael J. # Module M1055: Complex Analysis

## Courses

Title	Typ	Hrs/wk	CP
Complex Analysis (L1325)	Lecture	4	6
Complex Analysis (L1326)	Recitation Section (small)	2	3

<b>Module Responsible</b>	Prof. Bernd Siebert
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Analysis</li> <li>Higher Analysis</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can describe basic concepts in Complex Analysis such as holomorphic functions, Cauchy's integral theorem and formula, the residue theorem, conformal maps, homology and homotopy versions of the residue theorem, analytic functions, Fourier series, harmonic functions, elliptic functions and integrals and the Gamma function. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>Students can model problems in Complex Analysis with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>

## Module M1310: Discrete Differential Geometry

### Courses

Title	Typ	Hrs/wk	CP
Discrete Differential Geometry (L1808)	Lecture	4	6
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Linear Algebra, Multivariate Calculus		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>These lectures are on geometrical aspects of the solutions of differential equations and their treatment on the computer. The required basics from linear algebra and analysis are reviewed at the beginning. Applications are to curved surfaces in space, to mechanics and mechatronics, to different types of field equations, and to the transfer of mathematical constructions to data types, compiler functions, programming languages, and special compute circuits.</p> <ul style="list-style-type: none"> <li>- basic prerequisites from linear algebra, tensors, exterior algebra, Clifford algebras</li> </ul>		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>- basic prerequisites from coordinate-free analysis, vector fields and differential forms, integration, discretization</li> <li>- local differential geometry: connections, symplectic geometry and Hamiltonian systems, Riemannian geometry, discretization</li> <li>- global differential geometry: manifolds, Lie groups, fiber bundles, random processes, space and time</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	25 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Technomathematics: Specialisation I. Mathematics: Elective Compulsory		

<b>Course L1808: Discrete Differential Geometry</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Georg Friedrich Mayer-Lindenberg
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>These lectures deal with geometric aspects of differential equations and with their treatment on the computer. The prerequisites from linear algebra and analysis are reviewed at the beginning. Applications are to curved surfaces, to classical mechanics and mechatronics, to various field equations, to computer graphics and to transferring mathematical constructions to data types, compiler functions, programming languages, and special hardware. Keywords:</p> <p>Basics from linear algebra, tensors, exterior algebra, Clifford algebras, tuple types</p> <p>Basics of coordinate-free analysis, vector fields and differential forms, integration, discrete exterior calculus</p> <p>Local differential geometry: connections, symplectic geometry, Riemannian geometry, discrete mechanics and connections</p> <p>Global differential geometry: manifolds, Lie groups, fibre bundles, Fourier decompositions, random processes, space and time</p>
<b>Literature</b>	<p>Agricola, Friedrich, Vektoranalysis, Vieweg/Teubner 2010</p> <p>A.C. Da Silva, Lectures on Symplectic Geometry, Springer L.N. Math. 1764</p> <p>J. Snycg, Differential Geometry using Clifford's Algebra, Birkhäuser 2010</p> <p>T. Frankel, The Geometry of Physics, Cambridge U. P. 2012</p> <p>M.Desbrun et al., Discrete exterior calculus, arXiv:math/0508341v2</p> <p>J.Marsden et al., Discrete Mechanics and Variational Integrators, Acta numerica. 2001</p>

## Module M1053: Introductory Number Theory

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Number Theory (L1319)	Lecture	4	6
Number Theory (L1320)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Ulf Kühn		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Linear Algebra		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can describe basic concepts in Number Theory such as congruences, quadratic remainders, ring of integers and diophantic problems. They are able to explain them using appropriate examples.</li> <li>Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>They know proof strategies and can reproduce them.</li> </ul> <ul style="list-style-type: none"> <li>Students can model problems in Number Theory with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul> <ul style="list-style-type: none"> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul> <ul style="list-style-type: none"> <li>Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>

## Specialization II. Informatics

### Module M0732: Software Engineering

#### Courses

Title	Typ	Hrs/wk	CP
Software Engineering (L0627)	Lecture	2	3
Software Engineering (L0628)	Recitation Section (small)	2	3

<b>Module Responsible</b>	Prof. Sibylle Schupp						
<b>Admission Requirements</b>	None						
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Automata theory and formal languages</li> <li>• Procedural programming or Functional programming</li> <li>• Object-oriented programming, algorithms, and data structures</li> </ul>						
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results						
<b>Professional Competence</b>							
<i>Knowledge</i>	Students explain the phases of the software life cycle, describe the fundamental terminology and concepts of software engineering, and paraphrase the principles of structured software development. They give examples of software-engineering tasks of existing large-scale systems. They write test cases for different test strategies and devise specifications or models using different notations, and critique both. They explain simple design patterns and the major activities in requirements analysis, maintenance, and project planning.						
<i>Skills</i>	For a given task in the software life cycle, students identify the corresponding phase and select an appropriate method. They choose the proper approach for quality assurance. They design tests for realistic systems, assess the quality of the tests, and find errors at different levels. They apply and modify non-executable artifacts. They integrate components based on interface specifications.						
<b>Personal Competence</b>							
<i>Social Competence</i>	Students practice peer programming. They explain problems and solutions to their peer. They communicate in English.						
<i>Autonomy</i>	Using on-line quizzes and accompanying material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback.						
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56						
<b>Credit points</b>	6

## Module M0624: Automata Theory and Formal Languages

### Courses

Title	Typ	Hrs/wk	CP
Automata Theory and Formal Languages (L0332)	Lecture	2	4
Automata Theory and Formal Languages (L0507)	Recitation Section (small)	2	2

<b>Module Responsible</b>	Prof. Tobias Knopp
---------------------------	--------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<p>Participating students should be able to</p> <ul style="list-style-type: none"> <li>- specify algorithms for simple data structures (such as, e.g., arrays) to solve computational problems</li> <li>- apply propositional logic and predicate logic for specifying and understanding mathematical proofs</li> <li>- apply the knowledge and skills taught in the module Discrete Algebraic Structures</li> </ul>
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>Students can explain syntax, semantics, and decision problems of propositional logic, and they are able to give algorithms for solving decision problems. Students can show correspondences to Boolean algebra. Students can describe which application problems are hard to represent with propositional logic, and therefore, the students can motivate predicate logic, and define syntax, semantics, and decision problems for this representation formalism. Students can explain unification and resolution for solving the predicate logic SAT decision problem. Students can also describe syntax, semantics, and decision problems for various kinds of temporal logic, and identify their application areas. The participants of the course can define various kinds of finite automata and can identify relationships to logic and formal grammars. The spectrum that students can explain ranges from deterministic and nondeterministic finite automata and pushdown automata to Turing machines. Students can name those formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision problems w.r.t. other formalisms. They understand that some formalisms easily induce algorithms whereas others are best suited for specifying systems and their properties. Students can describe the relationships between formalisms such as logic, automata, or grammars.</p>
<i>Knowledge</i>	
<i>Skills</i>	<p>Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluate which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms for decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the language emptiness problem in case of infinite words.</p>
<b>Personal Competence</b>	
<i>Social Competence</i>	

<i>Autonomy</i>

# Module M0731: Functional Programming

<b>Courses</b>			
Title	Typ	Hrs/wk	CP
Functional Programming (L0624)	Lecture	2	2
Functional Programming (L0625)	Recitation Section (large)	2	2
Functional Programming (L0626)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Discrete mathematics at high-school level		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students apply the principles, constructs, and simple design techniques of functional programming. They demonstrate their ability to read Haskell programs and to explain Haskell syntax as well as Haskell's read-eval-print loop. They interpret warnings and find errors in programs. They apply the fundamental data structures, data types, and type constructors. They employ strategies for unit tests of functions and simple proof techniques for partial and total correctness. They distinguish laziness from other evaluation strategies.</p> <p><i>Skills</i> Students break a natural-language description down in parts amenable to a formal specification and develop a functional program in a structured way. They assess different language constructs, make conscious selections both at specification and implementations level, and justify their choice. They analyze given programs and rewrite them in a controlled way. They design and implement unit tests and can assess the quality of their tests. They argue for the correctness of their program.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students practice peer programming with varying peers. They explain problems and solutions to their peer. They defend their programs orally. They communicate in English.</p> <p><i>Autonomy</i> In programming labs, students learn under supervision (a.k.a. "Betreutes Programmieren") the mechanics of programming. In exercises, they develop solutions individually and independently, and receive feedback.</p>

## Module M0972: Distributed Systems

### Courses

Title	Typ	Hrs/wk	CP
Distributed Systems (L1155)	Lecture	2	3
Distributed Systems (L1156)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Procedural programming</li> <li>• Object-oriented programming with Java</li> <li>• Networks</li> <li>• Socket programming</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students explain the main abstractions of Distributed Systems (Marshalling, proxy, service, address, Remote procedure call, synchron/asynchron system). They describe the pros and cons of different types of interprocess communication. They give examples of existing middleware solutions. The participants of the course know the main architectural variants of distributed systems, including their pros and cons. Students can describe at least three different synchronization mechanisms.</p> <p><i>Skills</i></p> <p>Students can realize distributed systems using at least three different techniques:</p> <ul style="list-style-type: none"> <li>• Proprietary protocol realized with TCP</li> <li>• HTTP as a remote procedure call</li> <li>• RMI as a middleware</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Computational Science and Engineering: Specialisation I. ## Module M0625: Databases

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Databases (L0337)	Lecture	4	5
Databases (L1150)	Project-/problem-based Learning	1	1
<b>Module Responsible</b>	NN		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Students should have basic knowledge in the following areas: <ul style="list-style-type: none"> <li>Discrete Algebraic Structures</li> <li>Procedural Programming</li> <li>Logic, Automata, and Formal Languages</li> <li>Object-Oriented Programming, Algorithms and Data Structures</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students can explain the general architecture of an application system that is based on a database. They describe the syntax and semantics of the Entity Relationship conceptual modeling languages, and they can enumerate basic decision problems and know which features of a domain model can be captured with ER and which features cannot be represented. Furthermore, students can summarize the features of the relational data model, and can describe how ER models can be systematically transformed into the relational data model. Student are able to discuss dependency theory using the operators of relational algebra, and they know how to use relational algebra as a query language. In addition, they can sketch the main modules of the architecture of a database system from an implementation point of view. Storage and index structures as well as query answering and optimization techniques can be explained. The role of transactions can be described in terms of ACID conditions and common recovery mechanisms can be characterized. The students can recall why recursion is important for query languages and describe how Datalog can be used and implemented. They demonstrate how Datalog can be used for information integration. For solving ER decision problems the students can explain description logics with their syntax and semantics, they describe description logic decision problems and explain how these problems can be mapped onto each other. They can sketch the idea of ontology-based data access and can name the main complexity measure in database theory. Last but not least, the students can describe the main features of XML and can explain XPath and XQuery as query languages.</p> <p><i>Skills</i></p> <p>Students can apply ER for describing domains for which they receive a textual description, and students can transform relational schemata with a given set of functional dependencies into third normal form or even Boyce-Codd normal form. They can also apply relational algebra, SQL, or Datalog to specify queries. Using specific datasets, they can explain how index structures work (e.g., B-trees) and how index structures change while data is added or deleted. They can rewrite queries for better performance of query evaluation. Students can analyse which query language expressivity is required for which application problem. Description logics can be applied for domain modeling, and students can transform ER diagrams into description logics in order to check for consistency and implicit subsumption relations. They solve data integration problems using Datalog and LAV or GAV rules. Students can apply XPath and Xquery to retrieve certain patterns in XML data.</p> <p><b>Personal Competence</b></p> <p>Students develop an understanding of social structures in a company used for developing</p>		

<i>Social Competence</i>	real-world products. They know the responsibilities of data analysts, programmers, and managers in the overall production process.
<i>Autonomy</i>	
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None

# Module M0730: Computer Engineering

## Courses

Title	Typ	Hrs/wk	CP
Computer Engineering (L0321)	Lecture	3	4
Computer Engineering (L0324)	Recitation Section (small)	1	2

<b>Module Responsible</b>	Prof. Heiko Falk
---------------------------	------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Basic knowledge in electrical engineering
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	
--------------------------------	--

*Knowledge*

This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-level programming down to gates. The module includes the following topics:

- Introduction
- Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks
- Sequential logic: Flip-flops, automata, systematic hardware design
- Technological foundations
- Computer arithmetic: Integer addition, subtraction, multiplication and division
- Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining
- Memories: Memory hierarchies, SRAM, DRAM, caches
- Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses

*Skills*

The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of today's computing systems - from gates and circuits up to complete processors.

After successful completion of the module, the students are able to judge the interdependencies between a physical computer system and the software executed on it. In particular, they shall understand the consequences that the execution of software has on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.

**Personal Competence**

*Social Competence*

Students are able to solve similar problems alone or in a group and to present the results accordingly.

*Autonomy*

Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.

## Module M0754: Compiler Construction

### Courses

Title	Typ	Hrs/wk	CP
Compiler Construction (L0703)	Lecture	2	2
Compiler Construction (L0704)	Recitation Section (small)	2	4
<b>Module Responsible</b>	Prof. Sibylle Schupp		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Practical programming experience</li> <li>• Automata theory and formal languages</li> <li>• Functional programming or procedural programming</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Basic knowledge of software engineering</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students explain the workings of a compiler and break down a compilation task in different phases. They apply and modify the major algorithms for compiler construction and code improvement. They can re-write those algorithms in a programming language, run and test them. They choose appropriate internal languages and representations and justify their choice. They explain and modify implementations of existing compiler frameworks and experiment with frameworks and tools.		
<i>Skills</i>	Students design and implement arbitrary compilation phases. They integrate their code in existing compiler frameworks. They organize their compiler code properly as a software project. They generalize algorithms for compiler construction to algorithms that analyze or synthesize software.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students develop the software in a team. They explain problems and solutions to their team members. They present and defend their software in class. They communicate in English.		
<i>Autonomy</i>	Students develop their software independently and define milestones by themselves. They receive feedback throughout the entire project. They organize the software project so that they can assess their progress themselves.

## Module M0971: Operating Systems

### Courses

Title	Typ	Hrs/wk	CP
Operating Systems (L1153)	Lecture	2	3
Operating Systems (L1154)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Volker Turau		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Procedural programming</li> <li>• Experience in using tools related to operating systems such as editors, linkers, compilers</li> <li>• Experience in using C-libraries</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students explain the main abstractions process, virtual memory, deadlock, lifelock, and file of operations systems, describe the process states and their transitions, and paraphrase the architectural variants of operating systems. They give examples of existing operating systems and explain their architectures. The participants of the course write concurrent programs using threads, conditional variables and semaphores. Students can describe the variants of realizing a file system. Students explain at least three different scheduling algorithms.</p> <p><i>Skills</i></p> <p>Students are able to use the POSIX libraries for concurrent programming in a correct and efficient way. They are able to judge the efficiency of a scheduling algorithm for a given scheduling task in a given environment.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>

## Module M0562: Computability and Complexity Theory

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computability and Complexity Theory (L0166)	Lecture	2	3
Computability and Complexity Theory (L0167)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Karl-Heinz Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Discrete Algebraic Structures, Automata Theory, Logic, and Formal Language Theory.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students know the important machine models of computability, the class of partial recursive functions, universal computability, Gödel numbering of computations, the theorems of Kleene, Rice, and Rice-Shapiro, the concept of decidable and undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post correspondence systems, Hilbert's 10-th problem, and the basic concepts of complexity theory.		
<i>Skills</i>	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire new knowledge from newer literature and to associate the acquired knowledge with other classes.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	20 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Computer Science: Elective Compulsory Computer Science: Core qualification: Compulsory General Engineering Science (English program, 7 semester): Specialisation Computer Science: Elective Compulsory Computational Science and Engineering: Specialisation I. Computer Science: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory		

Course L0166: Computability and Complexity Theory	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3

Module M0668: Algebra and Control			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Algebra and Control (L0428)	Lecture	2	4
Algebra and Control (L0429)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Dr. Prashant Batra		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of Real Analysis and Linear Algebra of Vector Spaces and either of: Introduction to Control Theory or: Discrete Mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Students can <ul style="list-style-type: none"> <li>• Describe input-output systems polynomially</li> <li>• Explain factorization approaches to transfer functions</li> <li>• Name stabilization conditions for systems in coprime stable factorization.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	Students are able to <ul style="list-style-type: none"> <li>• Undertake a synthesis of stable control loops</li> <li>• Apply suitable methods of analysis and synthesis to describe all stable control loops</li> <li>• Ensure the fulfillment of specified performance measurements.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	After completing the module, students are able to solve subject-related tasks and to present the results.		
<i>Autonomy</i>	Students are provided with tasks which are exam-related so that they can examine their learning progress and reflect on it.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computational Mathematics: Elective Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Technomathematics: Specialisation II. Informatics: Elective Compulsory		

Course L0428: Algebra and Control	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Prashant Batra
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Algebraic control methods, polynomial and fractional approach</li> <li>- Single input - single output (SISO) control systems synthesis by algebraic methods,</li> <li>- Simultaneous stabilization</li> <li>- Parametrization of all stabilizing controllers</li> <li>- Selected methods of pole assignment.</li> <li>- Filtering and sensitivity minimization</li> <li>- Polynomial matrices, left and right polynomial fractions.</li> <li>- Euclidean algorithm, diophantine equations over rings</li> <li>- Smith-McMillan normal form</li> <li>- Multiple input - multiple output control system synthesis by polynomial methods, condition of stability.</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Vidyasagar, M.: Control system synthesis: a factorization approach. The MIT Press, Cambridge/Mass. - London, 1985.</li> <li>• Vardulakis, A.I.G.: Linear multivariable control. ## Specialization III. Engineering Science

### Module M0536: Fundamentals of Fluid Mechanics

**Courses**

Title	Typ	Hrs/wk	CP
Fundamentals of Fluid Mechanics (L0091)	Lecture	2	4
Fluid Mechanics for Process Engineering (L0092)	Recitation Section (large)	2	2

<b>Module Responsible</b>	Prof. Michael Schlüter
---------------------------	------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics I+II+III</li> <li>• Technical Mechanics I+II</li> <li>• Technical Thermodynamics I+II</li> <li>• Working with force balances</li> <li>• Simplification and solving of partial differential equations</li> <li>• Integration</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• explain the difference between different types of flow</li> <li>• give an overview for different applications of the Reynolds Transport-Theorem in process engineering</li> <li>• explain simplifications of the Continuity- and Navier-Stokes-Equation by using physical boundary conditions</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<p>The students are able to</p> <ul style="list-style-type: none"> <li>• describe and model incompressible flows mathematically</li> <li>• reduce the governing equations of fluid mechanics by simplifications to archive quantitative solutions e.g. by integration</li> <li>• notice the dependency between theory and technical applications</li> <li>• use the learned basics for fluid dynamical applications in fields of process engineering</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>The students</p> <ul style="list-style-type: none"> <li>• are capable to gather information from subject related, professional publications and relate that information to the context of the lecture and</li> <li>• able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises)</li> <li>• are able to work out solutions for exercises by themselves, to discuss the solutions orally and to present the results.</li> </ul>
<i>Autonomy</i>	<p>The students are able to</p> <ul style="list-style-type: none"> <li>• search further literature for each topic and to expand their knowledge with this literature,</li> <li>• work on their exercises by their own and to evaluate their actual knowledge with the</li> </ul>

Course L0092: Fluid Mechanics for Process Engineering	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Michael Schlüter
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

## Module M0634: Introduction into Medical Technology and Systems

### Courses

Title	Typ	Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture	2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar	2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes 10 %	Written elaboration

## Module M0680: Fluid Dynamics

### Courses

Title	Typ	Hrs/wk	CP
Fluid Mechanics (L0454)	Lecture	3	4
Fluid Mechanics (L0455)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Sound knowledge of engineering mathematics, engineering mechanics and thermodynamics.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students will have the required sound knowledge to explain the general principles of fluid engineering and physics of fluids. Students can scientifically outline the rationale of flow physics using mathematical models and are familiar with methods for the performance analysis and the prediction of fluid engineering devices.</p> <p><i>Skills</i> Students are able to apply fluid-engineering principles and flow-physics models for the analysis of technical systems. The lecture enables the student to carry out all necessary theoretical calculations for the fluid dynamic design of engineering devices on a scientific level.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to discuss problems and jointly develop solution strategies.</p> <p><i>Autonomy</i> The students are able to develop solution strategies for complex problems self-consistent and critically analyse results.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6

## Module M1277: MED I: Introduction to Anatomy

### Courses

Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
<b>Module Responsible</b>	Prof. Udo Schumacher		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.		
<i>Skills</i>	The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can participate in current discussions in biomedical research and medicine on a professional level.		
<i>Autonomy</i>	The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.		
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28		
<b>Credit points</b>	3		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Technomathematics: Specialisation III. ## Module M0938: Bioprocess Engineering - Fundamentals

### Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
<b>Module Responsible</b>	Prof. Andreas Liese		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none, module "organic chemistry", module "fundamentals for process engineering"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p><i>Skills</i></p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> <li>describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters</li> <li>predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process</li> <li>analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations</li> <li>distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem</li> <li>propose solutions to complicated biotechnological problems and to deduce the corresponding models</li> <li>to explore new knowledge resources and to apply the newly gained contents</li> <li>identify scientific problems with concrete industrial use and to formulate solutions.</li> <li>to document and discuss their procedures as well as results in a scientific manner</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.</p> <p><i>Autonomy</i></p> <p>After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out.  The students document their experiments and results in a protocol.
<b>Literature</b>	Skript

## Module M1278: MED I: Introduction to Radiology and Radiation Therapy

### Courses

Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
<b>Module Responsible</b>	Prof. Ulrich Carl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><b>Therapy</b></p> <p>The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p><b>The students can describe the patients' passage from their initial admittance through to follow-up care.</b></p> <p><b>Diagnostics</b></p> <p>The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p> <p><b>Therapy</b></p> <p>The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p><b>Diagnostics</b></p> <p>The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p>		
<i>Knowledge</i>			
<i>Skills</i>			

<b>Personal Competence</b>	The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Credit points</b>	3
<b>Course achievement</b>	None

<b>Lecturer</b>	Prof. Ulrich Carl, Prof. Thomas Vestring
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments

## Module M0671: Technical Thermodynamics I

### Courses

Title	Typ	Hrs/wk	CP
Technical Thermodynamics I (L0437)	Lecture	2	4
Technical Thermodynamics I (L0439)	Recitation Section (large)	1	1
Technical Thermodynamics I (L0441)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics and Mechanics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are familiar with the laws of Thermodynamics. They know the relation of the kinds of energy according to 1<sup>st</sup> law of Thermodynamics and are aware about the limits of energy conversions according to 2<sup>nd</sup> law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamics related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.</p> <p><i>Skills</i></p> <p>Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

## Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Theoretical Electrical Engineering I: Time-Independent Fields (L0180)	Lecture	3	5
Theoretical Electrical Engineering I: Time-Independent Fields (L0181)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic principles of electrical engineering and advanced mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic fields. They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explicate these.		
<i>Skills</i>	Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independent, electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwell's Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, and electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).		
<i>Autonomy</i>	Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other lectures (e.g. Electrical Engineering I, Linear Algebra, and Analysis).		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		

<b>Examination duration and scale</b>	90-150 minutes
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

<b>Course L0180: Theoretical Electrical Engineering I: Time-Independent Fields</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christian Schuster, Prof. Frank Gronwald
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Maxwell's Equations in integral and differential notation</li> <li>- Boundary conditions</li> <li>- Laws of conservation for energy and charge</li> <li>- Classification of electromagnetic field properties</li> <li>- Integral characteristics of time-independent fields (R, L, C)</li> <li>- Generic approaches to solving Poisson's Equation</li> <li>- Electrostatic fields and specific methods of solving</li> <li>- Magnetostatic fields and specific methods of solving</li> <li>- Fields of electrical current density and specific methods of solving</li> <li>- Action of force within time-independent fields</li> <li>- Numerical methods for solving time-independent problems</li> </ul> <p>The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.</p>

# Module M0672: Signals and Systems

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Signals and Systems (L0432)	Lecture	3	4
Signals and Systems (L0433)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics 1-3 The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<div style="display: flex; justify-content: space-between;"> <div style="width: 15%;"><i>Knowledge</i></div> <div style="width: 85%;"> <p>The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> </div> </div> <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <div style="width: 15%;"><i>Skills</i></div> <div style="width: 85%;"> <p>The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p> </div> </div>		
<b>Personal Competence</b>	<div style="display: flex; justify-content: space-between;"> <div style="width: 15%;"><i>Social Competence</i></div> <div style="width: 85%;"> <p>The students can jointly solve specific problems.</p> </div> </div> <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <div style="width: 15%;"><i>Autonomy</i></div> <div style="width: 85%;"> <p>The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p> </div> </div>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Module M0580: Principles of Building Materials and Building Physics

### Courses

Title	Typ	Hrs/wk	CP
Building Physics (L0217)	Lecture	2	2
Building Physics (L0219)	Recitation Section (large)	1	1
Building Physics (L0247)	Recitation Section (small)	1	1
Principles of Building Materials (L0215)	Lecture	2	2
<b>Module Responsible</b>	Prof. Frank Schmidt-Döhl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of physics, chemistry and mathematics from school		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students are able to identify fundamental effects of action to materials and structures, to explain different types of mechanical behaviour, to describe the structure of building materials and the correlations between structure and other properties, to show methods of joining and of corrosion processes and to describe the most important regularities and properties of building materials and structures and their measurement in the field of protection against moisture, coldness, fire and noise.</p> <p><i>Skills</i></p> <p>The students are able to work with the most important standardized methods and regularities in the field of moisture protection, the German regulation for energy saving, fire protection and noise protection in the case of a small building.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to support each other to learn the very extensive specialist knowledge.</p> <p><i>Autonomy</i></p> <p>The students are able to make the timing and the operation steps to learn the specialist knowledge of a very extensive field.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

## Module M0687: Chemistry

### Courses

Title	Typ	Hrs/wk	CP
Chemistry I (L0460)	Lecture	2	2
Chemistry I (L0475)	Recitation Section (large)	1	1
Chemistry II (L0465)	Lecture	2	2
Chemistry II (L0476)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Dr. Dorothea Rechtenbach		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students are able to name and to describe basic principles and applications of general chemistry (structure of matter, periodic table, chemical bonds), physical chemistry (aggregate states, separating processes, thermodynamics, kinetics), inorganic chemistry (acid/base, pH-value, salts, solubility, redox, metals) and organic chemistry (aliphatic hydrocarbons, functional groups, carbonyl compounds, aromates, reaction mechanisms, natural products, synthetic polymers). Furthermore students are able to explain basic chemical terms.</p> <p><i>Skills</i></p> <p>After successful completion of this module students are able to describe substance groups and chemical compounds. On this basis, they are capable of explaining, choosing and applying specific methods and various reaction mechanisms.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to take part in discussions on chemical issues and problems as a member of an interdisciplinary team. They can contribute to those discussion by their own statements.</p> <p><i>Autonomy</i></p> <p>After successful completion of this module students are able to solve chemical problems independently by defending proposed approaches with arguments. They can also document their approaches.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

# Module M0740: Structural Analysis I

<b>Courses</b>																					
Title	Typ	Hrs/wk	CP																		
Structural Analysis I (L0666)	Lecture	2	3																		
Structural Analysis I (L0667)	Recitation Section (large)	2	3																		
<b>Module Responsible</b>	Prof. Uwe Starossek																				
<b>Admission Requirements</b>	None																				
<b>Recommended Previous Knowledge</b>	Mechanics I, Mathematics I																				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results																				
<b>Professional Competence</b>	<p>After successfully completing this module, students can express the basic aspects of linear frame analysis of statically determinate systems.</p> <p>After successful completion of this module, the students are able to distinguish between statically determinate and indeterminate structures. They are able to analyze state variables and to construct influence lines of statically determinate plane and spatial frame and truss structures.</p>																				
<i>Knowledge</i>																					
<i>Skills</i>																					
<b>Personal Competence</b>																					
<i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>participate in subject-specific and interdisciplinary discussions,</li> <li>defend their own work results in front of others</li> <li>promote the scientific development of colleagues</li> <li>Furthermore, they can give and accept professional constructive criticism</li> </ul>																				
<i>Autonomy</i>	<p>The students are able work in-term homework assignments. Due to the in-term feedback, they are enabled to self-assess their learning progress during the lecture period, already.</p>																				
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0933: Fundamentals of Materials Science

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fundamentals of Materials Science I (L1085)	Lecture	2	2
Fundamentals of Materials Science II (Advanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture	2	2
Physical and Chemical Basics of Materials Science (L1095)	Lecture	2	2
<b>Module Responsible</b>	Prof. Jörg Weißmüller		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Highschool-level physics, chemistry und mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students have acquired a fundamental knowledge on metals, ceramics and polymers and can describe this knowledge comprehensively. Fundamental knowledge here means specifically the issues of atomic structure, microstructure, phase diagrams, phase transformations, corrosion and mechanical properties. The students know about the key aspects of characterization methods for materials and can identify relevant approaches for characterizing specific properties. They are able to trace materials phenomena back to the underlying physical and chemical laws of nature.</p> <p>The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena here refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to phase transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and the materials microstructure, and they can account for the impact of microstructure on the material's behavior.</p>

## Module M0808: Finite Elements Methods

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>

## Module M0945: Bioprocess Engineering - Advanced

### Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Advanced (L1107)	Lecture	2	4
Bioprocess Engineering - Advanced (L1108)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. An-Ping Zeng		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Content of module "Biochemical Engineering I"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> <li>describe and explain different kinetic approaches for growth and substrate-uptake</li> <li>identification of scientific problems with concrete industrial use (cultivation of microorganisms and mammalian cells)</li> <li>describe and explain important downstreaming steps for proteins and their application as well as basic immobilization methods</li> </ul>		
<i>Knowledge</i>	<p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> <li>to identify scientific questions or possible practical problems for concrete industrial applications (eg cultivation of microorganisms and animal cells) and to formulate solutions,</li> <li>To assess the application of scale-up criteria for different types of bioreactors and processes and to apply these criteria to given problems (anaerobic, aerobic or microaerobically)</li> <li>to formulate questions for the analysis and optimization of real biotechnological production processes appropriate solutions,</li> </ul>		
<i>Skills</i>	<ul style="list-style-type: none"> <li>To describe the effects of the energy generation, the regeneration of reduction equivalents, and the growth inhibition of the behavior of microorganisms and to the total fermentation process qualitatively</li> <li>Establish material flow balance equations and solve them to determine the kinetic parameters of different approaches and to calculate immobilization and activity yields,</li> <li>to select process control strategies (batch, fed-batch, continuity) appropriately and to calculate basic types and evaluate them.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork.		

<i>Autonomy</i>	After completion of this module participants are able to acquire new sources of knowledge and apply their knowledge to previously unknown issues and to present these.
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0783: Measurements: Methods and Data Processing

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
EE Experimental Lab (L0781)	Practical Course	2	2
Measurements: Methods and Data Processing (L0779)	Lecture	2	3
Measurements: Methods and Data Processing (L0780)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Alexander Schlaefer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	principles of mathematics principles of electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to explain the purpose of metrology and the acquisition and processing of measurements. They can detail aspects of probability theory and errors, and explain the processing of stochastic signals. Students know methods to digitalize and describe measured signals.		
<i>Skills</i>	The students are able to evaluate problems of metrology and to apply methods for describing and processing of measurements.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students solve problems in small groups.		
<i>Autonomy</i>	The students can reflect their knowledge and discuss and evaluate their results.

## Module M0688: Technical Thermodynamics II

### Courses

Title	Typ	Hrs/wk	CP
Technical Thermodynamics II (L0449)	Lecture	2	4
Technical Thermodynamics II (L0450)	Recitation Section (large)	1	1
Technical Thermodynamics II (L0451)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.</p> <p><i>Skills</i></p> <p>Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

## Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Theoretical Electrical Engineering II: Time-Dependent Fields (L0182)	Lecture	3	5
Theoretical Electrical Engineering II: Time-Dependent Fields (L0183)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Electrical Engineering I, Electrical Engineering II, Theoretical Electrical Engineering I Mathematics I, Mathematics II, Mathematics III, Mathematics IV		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to explain fundamental formulas, relations, and methods related to the theory of time-dependent electromagnetic fields. They can assess the principal behavior and characteristics of quasistationary and fully dynamic fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-dependent electromagnetic fields and are able to explicate these.</p> <p><i>Skills</i></p> <p>Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependent field problems. They can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret them with regard to practical applications.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to work together on subject related tasks in small groups. They are able to present their results effectively (e.g. during exercise sessions).</p> <p><i>Autonomy</i></p> <p>Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between acquired knowledge and ongoing research at the Hamburg University of Technology (TUHH), e.g. in the area of high frequency engineering and optics.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90-150 minutes
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Course L0182: Theoretical Electrical Engineering II: Time-Dependent Fields	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christian Schuster
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- Theory and principal characteristics of quasistationary electromagnetic fields</li> <li>- Electromagnetic induction and law of induction</li> <li>- Skin effect and eddy currents</li> <li>- Shielding of time variable magnetic fields</li> <li>- Theory and principal characteristics of fully dynamic electromagnetic fields</li> <li>- Wave equations and properties of planar waves</li> <li>- Polarization and superposition of planar waves</li> <li>- Reflection and refraction of planar waves at boundary surfaces</li> <li>- Waveguide theory</li> <li>- Rectangular waveguide, planar optical waveguide</li> <li>- Electrical and magnetical dipol radiation</li> <li>- Simple arrays of antennas</li> </ul> <p>The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.</p>

## Module M0538: Heat and Mass Transfer

### Courses

Title	Typ	Hrs/wk	CP
Heat and Mass Transfer (L0101)	Lecture	2	2
Heat and Mass Transfer (L0102)	Recitation Section (small)	1	2
Heat and Mass Transfer (L1868)	Recitation Section (large)	1	2

<b>Module Responsible</b>	Prof. Irina Smirnova
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Basic knowledge: Technical Thermodynamics
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• The students are capable of explaining qualitative and determining quantitative heat transfer in procedural apparatus (e. g. heat exchanger, chemical reactors).</li> <li>• They are capable of distinguish and characterize different kinds of heat transfer mechanisms namely heat conduction, heat transfer and thermal radiation.</li> <li>• The students have the ability to explain the physical basis for mass transfer in detail and to describe mass transfer qualitative and quantitative by using suitable mass transfer theories.</li> <li>• They are able to depict the analogy between heat- and mass transfer and to describe complex linked processes in detail.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	<ul style="list-style-type: none"> <li>• The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balance the corresponding energy and mass flow, respectively.</li> <li>• They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calculate the corresponding heat flows.</li> <li>• Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus.</li> <li>• They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for the description and design of apparatus (e.g. extraction column, rectification column).</li> <li>• In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application considering their advantages and disadvantages, respectively.</li> <li>• In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus.</li> <li>• The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the courses thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems.</li> </ul>

<i>Social Competence</i>	<ul style="list-style-type: none"> <li>The students are capable to work on subject-specific challenges in teams and to present the results orally in a reasonable manner to tutors and other students.</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>The students are able to find and evaluate necessary information from suitable sources</li> <li>They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker-system, exam-like assignments) and on this basis they can control their learning processes.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 minutes; theoretical questions and calculations
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Process Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Bioprocess Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory</p> <p>Bioprocess Engineering: Core qualification: Compulsory</p> <p>Energy and Environmental Engineering: Core qualification: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Process Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Bioprocess Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory</p> <p>Technomathematics: Specialisation III. ## Module M0675: Introduction to Communications and Random Processes

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Introduction to Communications and Random Processes (L0442)	Lecture	3	4
Introduction to Communications and Random Processes (L0443)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Signals and Systems</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know and understand the fundamental building blocks of a communications system. They can describe and analyse the individual building blocks using knowledge of signal and system theory as well as the theory of stochastic processes. They are aware of the essential resources and evaluation criteria of information transmission and are able to design and evaluate a basic communications system.</p> <p><i>Skills</i> The students are able to design and evaluate a basic communications system. In particular, they can estimate the required resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communications system such as bandwidth efficiency or bit error rate and to decide for a suitable transmission method.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min

## Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)

### Courses

Title	Typ	Hrs/wk	CP
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1134)	Lecture	3	3
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1135)	Recitation Section (small)	2	2
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1136)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Robert Seifried		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics I, II, Mechanics I (Statics)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students can</p> <ul style="list-style-type: none"> <li>describe the axiomatic procedure used in mechanical contexts;</li> <li>explain important steps in model design;</li> <li>present technical knowledge in stereostatics.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students can</p> <ul style="list-style-type: none"> <li>explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>apply basic hydrostatical, kinematic and kinetic methods to engineering problems;</li> <li>estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.		
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	No 20 %	Midterm	Wird nur im WiSe angeboten
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min

## Module M0655: Computational Fluid Dynamics I

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computational Fluid Dynamics I (L0235)	Lecture	2	3
Computational Fluid Dynamics I (L0419)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematical Methods for Engineers</li> <li>Fundamentals of Differential/integral calculus and series expansions</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to list the basic numerics of partial differential equations.		
<i>Skills</i>	The students are able develop appropriate numerical integration in space and time for the governing partial differential equations. They can code computational algorithms in a structured way.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can arrive at work results in groups and document them.		
<i>Autonomy</i>	The students can independently analyse approaches to solving specific problems.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2h

## Module M1333: BIO I: Implants and Fracture Healing

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Implants and Fracture Healing (L0376)	Lecture	2	3
<b>Module Responsible</b>	Prof. Michael Morlock		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	The students can describe the different ways how bones heal, and the requirements for their existence.		
<i>Knowledge</i>	The students can name different treatments for the spine and hollow bones under given fracture morphologies.		
<i>Skills</i>	The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.		
<b>Personal Competence</b>	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.		
<i>Social Competence</i>	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.		
<i>Autonomy</i>	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.		
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28		
<b>Credit points</b>	3		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Orientierungsstudium: Core qualification: Elective Compulsory Technomathematics: Specialisation III. ## Module M0708: Electrical Engineering III: Circuit Theory and Transients

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Circuit Theory (L0566)	Lecture	3	4
Circuit Theory (L0567)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Arne Jacob		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Electrical Engineering I and II, Mathematics I and II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of linear networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in frequency domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.</p> <p><i>Skills</i></p> <p>The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven by periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to explain the respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-terminal-circuits.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within the group.</p> <p><i>Autonomy</i></p> <p>The students are able to find out the required methods for solving the given practice problems. Possibilities are given to test their knowledge during the lectures continuously by means of short-time tests. This allows them to control independently their educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Module M0734: Electrical Engineering Project Laboratory

### Courses

Title	Typ	Hrs/wk	CP
Electrical Engineering Project Laboratory (L0640)	Project-/problem-based Learning	8	6
<b>Module Responsible</b>	Prof. Christian Becker		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Electrical Engineering I, Electrical Engineering II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.		
<i>Skills</i>	The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Students have the ability to develop alternative approaches to an electrical engineering problem independently or in groups and discuss advantages as well as drawbacks.		
<i>Autonomy</i>	Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.		
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Subject theoretical and practical work		

<b>Examination duration and scale</b>	based on task + presentation
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory Electrical Engineering: Core qualification: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

<b>Course L0640: Electrical Engineering Project Laboratory</b>	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	8
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112
<b>Lecturer</b>	Prof. Christian Becker, Dozenten des SD E
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Topics and projects cover the entire field of applications of electrical engineering. Typically, the students will prototype functional units and self-contained systems, such as radar devices, networks of sensors, amateur radio transceiver, power electronics based inverters, discrete computers, or atomic force microscopes. Different projects are devised on a yearly basis.
<b>Literature</b>	Alle zur Durchführung der Projekte sinnvollen Quellen (Skripte, Fachbücher, Manuals, Datenblätter, Internetseiten). / All sources that are useful for completion of the projects (lecture notes, textbooks, manuals, data sheets, internet pages).

Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )			
Courses			
Title	Typ	Hrs/wk	CP
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0516)	Lecture	2	3
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0518)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.</p> <p><i>Skills</i> The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.</p>

Module M0606: Numerical Algorithms in Structural Mechanics			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Numerical Algorithms in Structural Mechanics (L0284)		Lecture	2            3
Numerical Algorithms in Structural Mechanics (L0285)		Recitation Section (small)	2            3
<b>Module Responsible</b>	Prof. Alexander Düster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of partial differential equations is recommended.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to + give an overview of the standard algorithms that are used in finite element programs. + explain the structure and algorithm of finite element programs. + specify problems of numerical algorithms, to identify them in a given situation and to explain their mathematical and computer science background.		
<i>Skills</i>	Students are able to + construct algorithms for given numerical methods. + select for a given problem of structural mechanics a suitable algorithm. + apply numerical algorithms to solve problems of structural mechanics. + implement algorithms in a high-level programming language (here C++). + critically judge and verify numerical algorithms.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to + solve problems in heterogeneous groups and to document the corresponding results.		
<i>Autonomy</i>	Students are able to + acquire independently knowledge to solve complex problems.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0777: Semiconductor Circuit Design

### Courses

Title	Typ	Hrs/wk	CP
Semiconductor Circuit Design (L0763)	Lecture	3	4
Semiconductor Circuit Design (L0864)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Matthias Kuhl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of electrical engineering Basics of physics, especially semiconductor physics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students are able to explain the functionality of different MOS devices in electronic circuits.</li> <li>• Students are able to explain how analog circuits functions and where they are applied.</li> <li>• Students are able to explain the functionality of fundamental operational amplifiers and their specifications.</li> <li>• Students know the fundamental digital logic circuits and can discuss their advantages and disadvantages.</li> <li>• Students have knowledge about memory circuits and can explain their functionality and specifications.</li> <li>• Students know the appropriate fields for the use of bipolar transistors.</li> </ul> <ul style="list-style-type: none"> <li>• Students can calculate the specifications of different MOS devices and can define the parameters of electronic circuits.</li> <li>• Students are able to develop different logic circuits and can design different types of logic circuits.</li> <li>• Students can use MOS devices, operational amplifiers and bipolar transistors for specific applications.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able work efficiently in heterogeneous teams.</li> <li>• Students working together in small groups can solve problems and answer professional questions.</li> </ul> <ul style="list-style-type: none"> <li>• Students are able to assess their level of knowledge.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 min
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory</p> <p>Electrical Engineering: Core qualification: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory</p> <p>Computational Science and Engineering: Specialisation II. ## Module M1280: MED II: Introduction to Physiology

### Courses

Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
<b>Module Responsible</b>	Dr. Roger Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students can</p> <ul style="list-style-type: none"> <li>describe the basics of the energy metabolism;</li> <li>describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.		
<i>Autonomy</i>	The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.		
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28		
<b>Credit points</b>	3		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 minutes		
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>Electrical Engineering: Specialisation Medical Technology: Elective Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Biomechanics: Compulsory</p> <p>Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory</p>		

	Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

## Module M1005: Enhanced Fundamentals of Materials Science

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Enhanced Fundamentals: Ceramics and Polymers (L1233)	Lecture	2	2
Enhanced Fundamentals: Ceramics and Polymers (L1234)	Recitation Section (large)	1	1
Enhanced Fundamentals: Metals (L1086)	Lecture	2	3
<b>Module Responsible</b>	Prof. Gerold Schneider		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module "Fundamentals of Materials Science" Module "Materials Science Laboratory" Module "Advanced Materials"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students are able to give an enhanced overview over the following topics in metals, polymers and ceramics: Atomic bonds, crystal and amorphous structures, defects, electrical and mass transport, microstructure and phase diagrams. They are capable to explain the corresponding technical terms.</p> <p>The students are able to apply the appropriate physical and chemical methods for the above mentioned subjects.</p> <p>The students are capable to understand independently the structure and properties of ceramics, metals and polymers. They should be able to critically evaluate the profundness of their knowledge.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam

## Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1137)	Lecture	3	3
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1138)	Recitation Section (small)	2	2
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1139)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Robert Seifried		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics I-III and Mechanics I-III		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	The students can		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>describe the axiomatic procedure used in mechanical contexts;</li> <li>explain important steps in model design;</li> <li>present technical knowledge.</li> </ul>		
<i>Skills</i>	<p>The students can</p> <ul style="list-style-type: none"> <li>explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>apply basic methods to engineering problems;</li> <li>estimate the reach and boundaries of the methods and extend them to be applicable to wider problem sets.</li> </ul>		
<b>Personal Competence</b>	The students can work in groups and support each other to overcome difficulties.		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	No 20 %	Midterm	Wird nur im SoSe angeboten

## Specialization IV. Subject Specific Focus

### Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific Regulations)

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Anusch Taraz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	see selected module according to FSPO		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	see selected module according to FSPO		
<i>Skills</i>	see selected module according to FSPO		
<b>Personal Competence</b>			
<i>Social Competence</i>	see selected module according to FSPO		
<i>Autonomy</i>	see selected module according to FSPO		
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	6		
<b>Assignment for the Following Curricula</b>	Technomathematics: Specialisation IV. Subject Specific Focus: Elective Compulsory		

## Module M1353: Mathematical Project Laboratory

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Dozenten der Mathematik		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Analysis for Technomathematicians, Higher Analysis, Linear Algebra for Technomathematicians, Numerical Mathematics, Mathematical Stochastics, Mechanics für Technomathematicians, Elektrical Engineering for Technomathematicians, Procedural Programming, Objectoriented Programming, Algorithms and Data Structures		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to evaluate in which cases the use of technomathematical knowledge can help to solve practical problems. For relevant questions, they have the necessary background and appropriate technical language at their disposal. They know the typical process of solving practical problems and are able to present related results.		
<i>Skills</i>	The students can transfer their fundamental knowledge concerning mathematics, engineering and computer science to the process of solving practical problems. They are able to build mathematical models for relevant, non-standard problems, they can develop and implement algorithmic strategies, and are able to document and present their results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to cooperate with partners from outside mathematics (e.g. in industry) to develop models and solutions for practical problems. They can present and explain these in front of a qualified audience. Students have the ability to develop alternative approaches and can discuss their advantages as well as their drawbacks.		
<i>Autonomy</i>	Students are capable of independently identifying practical problems that are suitable for the use of technomathematical methods and results. They can work their way into such problems, and are able to develop solutions under the guidance of their supervisor. They are able to fill in gaps as well as to extend their knowledge using provided sources. Furthermore, they can meaningfully extend given problems and solve them by means of concepts and approaches that they have to develop independently.		
<b>Workload in Hours</b>	Independent Study Time 180, Study Time in Lecture 0		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration</b>			

<b>and scale</b>	Report, approx. 15 pages
<b>Assignment for the Following Curricula</b>	Technomathematics: Specialisation IV. Subject Specific Focus: Elective Compulsory

## Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific Regulations)

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Prof. Anusch Taraz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	see selected module according to FSPO		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	see selected module according to FSPO		
<i>Skills</i>	see selected module according to FSPO		
<b>Personal Competence</b>			
<i>Social Competence</i>	see selected module according to FSPO		
<i>Autonomy</i>	see selected module according to FSPO		
<b>Workload in Hours</b>	Depends on choice of courses

<b>Assignment for the Following Curricula</b>	Technomathematics: Specialisation IV. Subject Specific Focus: Elective Compulsory		

## Thesis

### Module M-001: Bachelor Thesis

**Courses**

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<ul style="list-style-type: none"> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>		

<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0
<b>Credit points</b>	12
<b>Course achievement</b>	None
<b>Examination</b>	Thesis
<b>Examination duration and scale</b>	According to General Regulations
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Thesis: Compulsory</p> <p>Civil- and Environmental Engineering: Thesis: Compulsory</p> <p>Bioprocess Engineering: Thesis: Compulsory</p> <p>Computer Science: Thesis: Compulsory</p> <p>Electrical Engineering: Thesis: Compulsory</p> <p>Energy and Environmental Engineering: Thesis: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Thesis: Compulsory</p> <p>Computational Science and Engineering: Thesis: Compulsory</p> <p>Logistics and Mobility: Thesis: Compulsory</p> <p>Mechanical Engineering: Thesis: Compulsory</p> <p>Mechatronics: Thesis: Compulsory</p> <p>Naval Architecture: Thesis: Compulsory</p> <p>Technomathematics: Thesis: Compulsory</p> <p>Teilstudiengang Lehramt Elektrotechnik-Informationstechnik: Thesis: Compulsory</p> <p>Teilstudiengang Lehramt Metalltechnik: Thesis: Compulsory</p> <p>Process Engineering: Thesis: Compulsory</p>
