Module M1278:	MED I: Introduction to Radiology and Radiation Therapy 1	32

Module M0671: Technical Thermodynamics I	134
Module M0610: Electrical Machines and Actuators	136
Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields	138
Module M0706: Geotechnics I	140
Module M0672: Signals and Systems	142
Module M0580: Principles of Building Materials and Building Physics	145
Module M0687: Chemistry	147
Module M0740: Structural Analysis I	149
Module M0808: Finite Elements Methods	151
Module M0933: Fundamentals of Materials Science	153
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	155
Module M0945: Bioprocess Engineering - Advanced	156
Module M0783: Measurements: Methods and Data Processing	158
Module M0688: Technical Thermodynamics II	160
Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields	162
Module M0538: Heat and Mass Transfer	164
Module M0675: Introduction to Communications and Random Processes	166
Module M0959: Mechanics III (Dynamics)	168
Module M0655: Computational Fluid Dynamics I	170
Module M0833: Introduction to Control Systems	172
Module M0708: Electrical Engineering III: Circuit Theory and Transients	175
Module M1333: BIO I: Implants and Fracture Healing	177
Module M0755: Geotechnics II	179
Module M0807: Boundary Element Methods	181
Module M1280: MED II: Introduction to Physiology	183
Module M0734: Electrical Engineering Project Laboratory	184
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	185
Module M1005: Enhanced Fundamentals of Materials Science	187
Module M0606: Numerical Algorithms in Structural Mechanics	191
Module M0594: Fundamentals of Mechanical Engineering Design	193
Module M0960: Mechanics IV (Oscillations, Analytical Mechanics, Multibody Systems, Numerical Mechanics)	195
Module M0777: Semiconductor Circuit Design	197
Module M1332: BIO I: Experimental Methods in Biomechanics	199
Module M0604: High-Order FEM	200
Module M1573: Modeling, Simulation and Optimization (EN)	202
Specialization IV. Subject Specific Focus	203
Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific	
Regulations)	203
Module M1353: Mathematical Project Laboratory	204
Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific	
Regulations)	205
Thesis	206
Module M-001: Bachelor Thesis	206

#### **Core Qualification**

Module M0718: Linea	r Algebra for Technomathematicians			
Courses				
Title		Тур	Hrs/wk	СР
Linear Algebra 1 for Technomather	naticians (L0587)	Lecture	4	5
Linear Algebra 1 for Technomather	naticians (L0588)	Recitation Section (small)	2	4
Linear Algebra 2 for Technomather	naticians (L0589)	Lecture	4	4
Linear Algebra 2 for Technomather	naticians (L0590)	Recitation Section (small)	2	5
Module Responsible	Prof. Sabine Le Borne			
Admission Requirements	None			
<b>Recommended Previous</b>	High school mathematics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	ne following learning results		
Professional Competence				
Knowledge	Students are able to			
	<ul> <li>define the basic terms of Linear Algebra, illustrat</li> </ul>	e them with examples and detect inte	rrelations.	
	<ul> <li>list techniques for proofs,</li> </ul>	·		
	<ul> <li>sketch main steps in proofs of central theorems.</li> </ul>			
	Chudanta can furthermore combin the basic stone that a	vice in produlling and values there to a	nulication cooper	iaa
	Students can furthermore explain the basic steps that a	irise in modelling and relate them to a	pplication scenal	105.
Skills	Students are capable to			
	- apply the tools of Lincory Alasha			
	<ul> <li>apply the tools of Linear Algebra,</li> <li>implement (MATLAB) and test algorithms (e.g.</li> </ul>	colution of linear systems of aquatio	nc computation	of the determinant
	<ul> <li>Implement (MATLAB) and test algorithms (e.g. computation of eigenvalues and eigenvectors),</li> </ul>	solution of inlear systems of equatio	ns, computation	or the determinant,
	<ul> <li>develop proofs for propositions in Linear Algebra</li> </ul>	and to document them in a comprehe	nciblo mannor	
			namer.	
Personal Competence				
-	Students are able to			
	<ul> <li>work together in heterogeneously composed tea</li> </ul>			
	explain theoretical foundations and support each			-
	explain solutions/proofs of the excercises at the l	blackboard in a way suitable for the au	idience (in the ex	(cercise sessions).
Autonomy	Students are capable			
			in dividure United	
	<ul> <li>to assess whether the supporting theoretical and</li> <li>to work on complex problems over an extended</li> </ul>		maiviaually or in	i a ceam,
	<ul> <li>to work on complex problems over an extended in the process their individual process and if process.</li> </ul>			
	<ul> <li>to assess their individual progess and, if necessa</li> </ul>	ry, to ask questions and seek help.		
Workload in Hours	Independent Study Time 372, Study Time in Lecture 16	8		
Credit points	18			
Course achievement	None			
Examination	Oral exam			
Examination duration and	30 min			
scale				
Assignment for the	Orientierungsstudium: Core Qualification: Elective Com	pulsory		
Following Curricula	Technomathematics: Core Qualification: Compulsory			

Course L0587: Linear Algebr	a 1 for Technomathematicians
Тур	Lecture
Hrs/wk	4
СР	5
Workload in Hours	Independent Study Time 94, Study Time in Lecture 56
Lecturer	Prof. Sabine Le Borne, Prof. Anusch Taraz
Language	DE
Cycle	WiSe
Content	<ol> <li>Proofs, sets, relations</li> <li>Fields</li> <li>Vector spaces</li> <li>Applications of vector spaces</li> <li>Linear mappings</li> <li>Polynomials</li> <li>Determinants</li> <li>Groups</li> </ol>
Literature	<ul> <li>G. Fischer, Lineare Algebra: Eine Einführung für Studienanfänger</li> <li>A. Beutelspacher: Lineare Algebra: Eine Einführung in die Wissenschaft der Vektoren, Abbildungen und Matrizen</li> <li>J. Liesen, V. Mehrmann: Lineare Algebra: Ein Lehrbuch über die Theorie mit Blick auf die Praxis</li> <li>G. Strang: Introduction to Linear Algebra</li> </ul>

Course L0588: Linear Algebra	Course L0588: Linear Algebra 1 for Technomathematicians

Analysis II for Technomathematicia	ns (L0485)	Lecture	4	5
Analysis II for Technomathematicia	ns (L0486)	Recitation Section (small)	2	4
Module Responsible	Prof. Marko Lindner			
Admission Requirements	None			
<b>Recommended Previous</b>	High school mathematics			
Knowledge				
Educational Objectives	After taking part successfully, students ha	ve reached the following learning results		
Professional Competence				
Knowledge	Students are able to			
	<ul> <li>name define and evolatin the basis</li> </ul>	properties of the field of real numbers		
		properties of the field of real numbers,		
	define and interrelate the basic top		in cluber	
		tion with the concepts of convergence and cont rms of differential calculus in several veriables a		in ono variablo
	• define, explain and use the basic te	This of differencial calculus in several vehables a	nu integral calculus	s in one variable,
	In particular, they are able to correctly de	fine, explain and interrelate all these concepts a	and to sketch the m	ain ideas in proofs
	central theorems.			
	Students can furthermore explain the basi	c steps that arise in modelling and relate them t	o application scena	rios.
Skills	Skills Students are able to			
	<ul> <li>determine topological properties of</li> </ul>	concrete sets in metric space,		
	<ul> <li>determine and prove convergence</li> </ul>	and divergence of sequences and series - as w	ell as continuity, u	niform continuity a
	Lipschitz continuity of a given funct	ion between two metric spaces,		
	<ul> <li>differentiate a function in one or sev</li> </ul>	veral variables,		
		Riemann integrable and compute its integral,		
		lor series of a given, sufficiently smooth, functio	n in one or more va	riables,
	<ul> <li>find local and global extrema of a gi</li> </ul>	iven function - possibly under constraints		
Personal Competence				
	Students are able to solve specific problen	ns in groups (e.g. in connection with their regula	r homework) and to	present their resu
	appropriately (e.g. during exercise class).	5 1 . 5	-	
Autonomy	Students are able to			
		onal literature and put it in context with the cont	ents of the lecture,	
	<ul> <li>put their knowledge in relation to the second second</li></ul>			
	<ul> <li>work on difficult problems over a lor</li> </ul>	ng period.

Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu
	Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b> , in its <b>teaching and learning arrangements</b> , in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competences</b> and a <b>competences</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnic complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechni
	academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making t transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of deali with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberati encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migrati studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semes 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a go oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging go oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. The differences are reflected in the practical examples used, in content topics that refer to different professional application contex and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leaders functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	<ul> <li>locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in t learning area,</li> <li>different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	<ul> <li>apply basic methods of the said scientific disciplines,</li> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned special discipline,</li> <li>to handle simple questions in aforementioned scientific disciplines in a sucsessful manner,</li> <li>justify their decisions on forms of organization and application in practical questions in contexts that go beyond t technical relationship to the subject.</li> </ul>
Personal Competence	
-	Personal Competences (Social Skills)

Autonomy	<ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect an their own profession and professionalism in the centert of scal life fields of application.</li> </ul>
	<ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>to organize themselves and their own learning processes</li> </ul>
	<ul> <li>to reflect and decide questions in front of a broad education background</li> </ul>
	<ul> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> </ul>
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

82: Management Tutorial
Recitation Section (small)
2
3
Independent Study Time 62, Study Time in Lecture 28
Prof. Christoph Ihl, Katharina Roedelius
DE
WiSe/SoSe
In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on s selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Content	This course is about solving the following basic problems of Linear Algebra,
	<ul> <li>systems of linear equations,</li> </ul>
	<ul> <li>least squares problems,</li> </ul>
	eigenvalue problems
	but now in function spaces (i.e. vector spaces of infinite dimension) by a stable approximation of the problem in a space of finite
	dimension.
	Contents:
	crash course on Hilbert spaces: metric, norm, scalar product, completeness
	<ul> <li>crash course on operators: boundedness, norm, compactness, projections</li> </ul>
	uniform vs. strong convergence, approximation methods
	<ul> <li>applicability and stability of approximation methods, Polski's theorem</li> </ul>
	Galerkin methods, collocation, spline interpolation, truncation
	convolution and Toeplitz operators
	crash course on C*-algebras
	convergence of condition numbers
	<ul> <li>convergence of spectral quantities: spectrum, eigen values, singular values, pseudospectra</li> </ul>
	regularisation methods (truncated SVD, Tichonov)
Literature	
	R. Hagen, S. Roch, B. Silbermann: C*-Algebras in Numerical Analysis

Admission Requirements						
Recommended Previous	Linear Algebra					
Knowledge	-					
	Geometry					
	Analysis					
Educational Objectives	After taking part successfully, students have	reached the following learning results				
<b>Professional Competence</b>						
Knowledge	<ul> <li>Students can describe basic concepts</li> </ul>	in Discrete Mathematics such as elementary	combinatorics and	counting coefficien		
		ork algorithms, complexity, asymptotic ana				
		nclusion and exclusion, ordered sets, counting				
	in coding theory or cryptography.					
	<ul> <li>They are able to explain them using approximation</li> </ul>	opropriate examples.				
	<ul> <li>Students can discuss logical connection</li> </ul>	ons between these concepts. They are capab	le of illustrating th	ese connections w		
	the help of examples.					
	<ul> <li>They know proof strategies and can re</li> </ul>	produce them.				
Skills	Skills     Students can model problems in Combinatorics with the help of the concepts studied in this course. Moreover					
	• Students are able to discover and verify further logical connections between the concepts studied in the course.					
	<ul> <li>For a given problem, the students ca</li> </ul>	in develop and execute a suitable approach,	and are able to c	ritically evaluate t		
	results.					
Devecuel Commetence						
Personal Competence Social Competence						
Social competence	Students are able to work together in teams. They are capable to use mathematics as a common language.					
<ul> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners.</li> </ul>						
	design examples to check and deepen	the understanding of their peers.				
A						
Autonomy	Students are capable of checking their understanding of complex concepts on their own. They can specify open questions					
	precisely and know where to get help in solving them.					
	<ul> <li>Students have developed sufficient p</li> </ul>	ersistence to be able to work for longer peri	ods in a goal-orier	ited manner on ha		
	problems.

Content	Systems Theory treats the mathematical background and foundations of the engineering discipline 'Cybernetics'. Thereby one wants to exert influence on a dynamical system (which is usually given by an ordinary differential equation (ODE)), such that a desired behavior is achieved. For instance, in classical mechanics, the motion of a mass point is determined by acting forces. In 'Systems and Control Theory', one wonders how these forces have to be chosen such that a prescribed movement of the mass point is accomplished. • Introduction and motivation • Controllability • Stabilization by feedback • Obervability • Observer and controller design • Linear-quadratic optimal control

Social Competence       Students are able to work together in teams. They are capable to use mathematics as a common language.         In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they codesign examples to check and deepen the understanding of their peers.         Autonomy       Students are capable of checking their understanding of complex concepts on their own. They can specify open question problems.         Sudents are capable of checking their understanding of complex concepts in a goal-oriented manner on he problems. <t< td=""><td>Admission Requirements</td><td>None</td><td></td><td></td><td></td></t<>	Admission Requirements	None				
Educational Objectives       After taking part successfully, students have reached the following learning results         Professional Competence       Students can describe basic concepts in Combinatorial Optimization such as network algorithms, linear programming a duality, polyhedrai combinatorics and NP-complexity theory. They are able to explain them using appropriate examples.         Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.       They know proof strategies and can reproduce them.         Skills       - Students can model problems in Combinatorial Optimization with the help of the concepts studied in this course. Moreov they are capable of solving them by applying established methods.         Skills       - Students are able to discover and verify further logical connections between the concepts studied in the course.         Personal Competence       - Students are able to discover and verify further logical connections between the concepts studied in the course.         Social Competence       - Students are able to work together in teams. They are capable to use mathematics as a common language.         Autonomy       - Students are capable of checking their understanding of their peers.         Autonomy       - Students are capable of checking their understanding of complex concepts on their own. They can specify open question precisely and know where to get help in solving them.         Students are capable of checking their understanding of complex concepts on their own. 	Participating students should be able to				
Knowledge					
-	<ul> <li>specify algorithms for simple data struct</li> </ul>	ctures (such as, e.g., arrays) to solve computational p	roblems		
	- apply propositional logic and predicate	logic for specifying and understanding mathematical	proofs		
		a tha ma dula Diamata Alasharia Churatana			
	<ul> <li>apply the knowledge and skills taught in</li> </ul>	n the module Discrete Algebraic Structures			
Educational Objectives	After taking part successfully, students h	ave reached the following learning results			
Professional Competence					
Knowledge	Students can explain syntax, semantics	, and decision problems of propositional logic, and	they are able to	give algorithms	
	solving decision problems. Students ca	in show correspondences to Boolean algebra. Stud	lents can describ	e which applicat	
	problems are hard to represent with p	ropositional logic, and therefore, the students can	motivate predica	te logic, and defi	
		ns for this representation formalism. Students can		-	
		problem. Students can also describe syntax, semanti			
		neir application areas. The participants of the cour	-		
		s to logic and formal grammars. The spectrum that			
		te automata and pushdown automata to Turing n			
	formalism for which nondeterminism is more expressive than determinism. They are also able to demonstrate which decision problems require which expressivity, and, in addition, students can transform decision problems w.r.t. one formalism into decision				
		inderstand that some formalisms easily induce algor			
		ies. Students can describe the relationships betweer		i as iogic, autorna	
	or grammars.				
CL ///					
SKIIIS	Students can apply propositional logic as well as predicate logic resolution to a given set of formulas. Students analyze application				
	problems in order to derive propositional logic, predicate logic, or temporal logic formulas to represent them. They can evaluat				
	which formalism is best suited for a particular application problem, and they can demonstrate the application of algorithms fo				
	decision problems to specific formulas. Students can also transform nondeterministic automata into deterministic ones, or derive				
	grammars from automata and vice versa. They can show how parsers work, and they can apply algorithms for the languag				
	emptiness problem in case of infinite wo	rds.

Language	EN
Cycle	SoSe
Content	1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF
	2. Predicate logic, unification, predicate logic resolution
	3. Temporal Logics (LTL, CTL)
	<ol> <li>Deterministic finite automata, definition and construction</li> </ol>
	5. Regular languages, closure properties, word problem, string matching
	6. Nondeterministic automata:
	Rabin-Scott transformation of nondeterministic into deterministic automata
	7. Epsilon automata, minimization of automata,
	elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)
	8. Myhill-Nerode Theorem:
	Correctness of the minimization procedure, equivalence classes of strings induced by automata
	9. Pumping Lemma for regular languages:
	provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expression
	enough to solve a word problem for some given language
	10. Regular expressions vs. finite automata:
	Equivalence of formalisms, systematic transformation of representations, reductions
	11. Pushdown automata and context-free grammars:
	Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumpi lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars a
	back)
	12. Chomsky normal form
	13. CYK algorithm for deciding the word problem for context-free grammrs
	14. Deterministic pushdown automata
	15. Deterministic vs. nondeterministic pushdown automata:
	Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler
	16. Regular grammars
	17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars
	18. Chomsky hierarchy
	19. Mealy- and Moore automata:
	Automata with output (w/o accepting states), infinite state sequences, automata networks
	20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification
	w.r.t. temporal logic specifications (in particular LTL)
	21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic
	22. Fixed points, propositional mu-calculus
	23. Characterization of regular languages by monadic second-order logic (MSO)

Knowledge				
Educational Objectives	After taking part successfully, students have read	ched the following learning results		
Professional Competence				
Knowledge	The students			
	can efficiently solve scientific problems in	a modern programming language.		
	<ul> <li>are familiar with the concept of reproducib</li> </ul>	le science.		
	can handle multidimensional arrays, sp	arse arrays, data frames and missing	data. They know t	the advantages ar
	disadvantages of specific data structures.			
	<ul> <li>know various ways of presenting data, d</li> </ul>	lata relationships and error measures ir	n a suitable way. Th	ey are familiar wi
	known data formats for storing scientific d	ata and can select a suitable format for s	pecific data.	
Skills	Students are able			
	<ul> <li>to translate complex problems from a mat</li> </ul>	hematical formulation into a suitable pro-	gram.	
	<ul> <li>to divide a complex problem into subprobl</li> </ul>	ems which can be implemented modular	у.	
	<ul> <li>to identify numerical standard problems and</li> </ul>	-		libraries.
	<ul> <li>to write maintainable program code, the c</li> </ul>			
	<ul> <li>to measure the runtime of programs, to id</li> </ul>	entify bottlenecks and to apply suitable a	cceleration techniqu	les.
Personal Competence				
Social Competence	Students can work on complex problems both inc	dependently and in teams. They can exch	ange ideas with eac	h other and use th
	individual strengths to solve the problem.			
Autonomy	Students are able to independently investigate a	complex problem and assess which com	netencies are require	ed to solve it

Content	In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs. In the second part of the lecture an introduction to Internet security is given. This class comprises: Application layer protocols (HTTP, FTP, DNS) Transport layer protocols (TCP, UDP) Network Layer (Internet Protocol, routing in the Internet) Data link layer with media access at the example of Ethernet Multimedia applications in the Internet Network management Internet security: IPSec Internet security: Firewalls

Educational Objectives	After taking part successfully, students have reached	d the following learning results		
Professional Competence	After taking part successivity, students have reached	the following learning results		
	This module deals with the foundations of the fund	tionality of computing systems. It cover	s the layers from	n the assembly-le
	programming down to gates. The module includes th	ne following topics:		
	Introduction			
	<ul> <li>Combinational logic: Gates, Boolean algebra,</li> </ul>	Boolean functions, hardware synthesis, cc	mbinational net	works
	<ul> <li>Sequential logic: Flip-flops, automata, system</li> </ul>			
	Technological foundations			
	Computer arithmetic: Integer addition, subtra	ction, multiplication and division		
	Basics of computer architecture: Programming		pipelining	
	<ul> <li>Memories: Memory hierarchies, SRAM, DRAM,</li> <li>Input/outputs I/O from the perspective of the Company of t</li></ul>		aint connections	husses
	Input/output: I/O from the perspective of the O	cro, principles of passing data, point-to-pr	Sinc connections,	busses
Skills	The students perceive computer systems from the a			
	composition of computer systems. The students can			
	collection of few and simple components. They are today's computing systems - from gates and circuits		ain the different	abstraction layers
	today's computing systems - nom gates and circuits	up to complete processors.		
	After successful completion of the module, the stu			
	system and the software executed on it. In particula			
	on the hardware-centric abstraction layers from the the impact that these low abstraction levels have on			
		an entire system's performance and to p		pelolis.
Personal Competence				
Social Competence	Students are able to solve similar problems alone or	in a group and to present the results acco	ordingly.	
Autonomy	Students are able to acquire new knowledge from sp	pecific literature and to associate this know	wledge with othe	r classes.

Module M0625: Datal	pases			
Courses				
Title	Тур		Hrs/wk	СР
Databases (L0337)		ture	3	5
Databases (L1150)		ject-/problem-based Learning	1	1
Module Responsible				
Admission Requirements	None			
	Students should have basic knowledge in the following areas:			
Knowledge	Discrete Algebraic Structures			
	Procedural Programming			
	Automata Theory and Formal Languages			
	Programming Paradigms			
	After taking part successfully, students have reached the following le	earning results		
Professional Competence				
Knowledge	After successful completion of the course, students know:			
	<ul> <li>Design instruments for relational databases</li> </ul>			
	The relational model			
	<ul> <li>Relational query languages, especially SQL</li> </ul>			
	Requirements on data integrity			
	<ul> <li>Possibilities for query optimization</li> </ul>			
	Aspects of transaction handling, fault handling and concurrency/synchronization in database systems			
	<ul> <li>Specific attributes and differences of object-oriented and object-relational databases</li> </ul>			
	Paradigms and concepts of current technologies for data mode	elling and database systems		
Skills	The students acquire the ability to model a database and to work	k with it. This comprises es	pecially the a	pplication of desig
	methodologies and query and definition languages. Furthermore, stu	udents are able to apply bas	sic functionali	ties needed to run
	database.			
Personal Competence				
Social Competence	Students can work on complex problems both independently and in t	eams. They can exchange id	leas with each	n other and use the
	individual strengths to solve the problem.			
Autonomy	Students are able to independently investigate a complex problem a	nd assess which competenci	es are require	d to solve it.

Knowledge				
Educational Objectives	After taking part successfully, student	s have reached the following learning results		
Professional Competence				
Knowledge	The students known the important	machine models of computability, the class of	partial recursive	functions, unive
	computability, Gödel numbering of co	omputations, the theorems of Kleene, Rice, and Rice	-Shapiro, the conc	ept of decidable
undecidable sets, the word problems for semi-Thue systems, Thue systems, semi-groups, and Post control Hilbert's 10-th problem, and the basic concepts of complexity theory.		ps, and Post corre	spondence syste	
Skills	Students are able to investigate the computability of sets and functions and to analyze the complexity of computable functions.			
Personal Competence				
Social Competence	Students are able to solve specific pro	blems alone or in a group and to present the results	accordingly.	
Autonomy	Students are able to acquire new know	vledge from newer literature and to associate the acc	uired knowledge v	with other classes.

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Content	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out. The students document their experiments and results in a protocol.

Content	The students will be given an understanding of the technological possibilities in the field of medical imaging interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments

Admission Requirements	None			
<b>Recommended Previous</b>	Elementary knowledge in Mathematics and	Mechanics		
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
<b>Professional Competence</b>				
Knowledge	Students are familiar with the laws of Ther	modynamics. They know the relation of the k	inds of energy acc	cording to 1 <sup>st</sup> law o
	Thermodynamics and are aware about the limits of energy conversions according to 2 <sup>nd</sup> law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamic related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.			
Skills	Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.			
Personal Competence				
Social Competence	The students are able to discuss in small gro	oups and develop an approach.		
Autonomy	Students are able to define independently to	asks, to get new knowledge from existing know	ledge as well as to	o find ways to use th
	knowledge in practice.

	- Classification of electromagnetic field properties
	- Integral characteristics of time-independent fields (R, L, C)
	- Generic approaches to solving Poisson's Equation
	- Electrostatic fields and specific methods of solving
	- Magnetostatic fields and specific methods of solving
	- Fields of electrical current density and specific methods of solving
	- Action of force within time-independent fields
	- Numerical methods for solving time-independent problems
	The practical application of numerical methods will be trained within specifically prepared lectures in an interactive manner using small MATLAB programs.

Content	Introduction to signal and system theory		
	• Signals		
	Classification of signals		
	<ul> <li>Continuous-time and discrete-time signals</li> </ul>		
	<ul> <li>Analog and digital signals</li> </ul>		

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- Correlation functions of deterministic signals
  - Autocorrelation function
  - Crosscorrelation function
  - Orthogonal signals
  - Applications of correlation
- Linear time-invariant (LTI) systems
  - LinearityTime-invariance
  - Description of LTI systems by impulse response and frequency response
  - Convolution
  - Convolution and correlation
  - Properties of LTI-systems
  - Causal systems
  - Stable systems
  - Memoryless systems
- Fourier Series and Fourier Transform
  - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - Bandwidth definitions
  - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - Linear-phase systems
  - Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - Properties of the Laplace transform
  - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
- Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - Relation of Fourier transform and DTFT
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolution
  - Fast Fourier Transform (FFT)
  - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - Z-transform of digital filters
  - Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability
  - Allpass filters

Admission Requirements	None				
<b>Recommended Previous</b>	Mathematics 1-3				
Knowledge	<ul> <li>Signals and Systems</li> </ul>				
	• Signals and Systems				
Educational Objectives	After taking part successfully, students have	reached the following learning results			
Professional Competence					
Knowledge	The students know and understand the fund	lamental building blocks of a communications sy	stem. They can	describe and analy	
	the individual building blocks using knowled	ge of signal and system theory as well as the th	eory of stochast	ic processes. The a	
	aware of the essential resources and evaluate	ation criteria of information transmission and are	e able to design	and evaluate a bas	
	communications system.				
Skills The students are able to design and evaluate a basic communications system. In particular, they car			ular, they can e	stimate the requir	
	resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communication				
	system such as bandwidth efficiency or bit error rate and to decide for a suitable transmission method.				
Personal Competence					
Social Competence	The students can jointly solve specific probl	ems.			
Autonomy	Autonomy The students are able to acquire relevant information from appropriate literature sources. They can control their leve knowledge during the lecture period by solving tutorial problems, software tools, clicker system.			ontrol their level	
Autonomy

Mechanics III (Dynamics) (L1135)			Recitation Section (small)	2	2
Mechanics III (Dynamics) (L1136)			Recitation Section (large)	1	1
Module Responsible	Prof. Robert Seifried				
Admission Requirements	None				
<b>Recommended Previous</b>	Mathematics I, II, Mechanics I (Statics)				
Knowledge					
Educational Objectives	After taking part successfully, students have	ve reached the followin	ig learning results		
Professional Competence					
Knowledge	The students can				
	e describe the suispectie pressdure u	and in machanical cant	evite.		
	describe the axiomatic procedure us		exts;		
	explain important steps in model de				
	present technical knowledge in stereostatics.				
Skills	The students can				
	<ul> <li>explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context their own problems;</li> <li>apply basis hydrostatical, kinematic and kinetic methods to apply problems;</li> </ul>				wit to the context of
					y it to the context t
	<ul> <li>apply basic hydrostatical, kinematic and kinetic methods to engineering problems;</li> <li>estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.</li> </ul>				
Personal Competence					
Social Competence	The students can work in groups and supp	ort each other to overc	ome difficulties.		
Autonomy	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.

ntroduction to Control Systems (L	0655)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner			
Admission Requirements				
Recommended Previous Knowledge	Representation of signals and systems in time a	nd frequency domain, Laplace transform		
Knowledge				
Educational Objectives	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
Knowledge				
	<ul> <li>Students can represent dynamic system first and second order systems</li> </ul>	behavior in time and frequency domain, and	can in particular	explain properties
	-	control loops and interpret dynamic propertie	s in terms of frea	iuency response a
	root locus			
	They can explain the Nyquist stability crit	erion and the stability margins derived from i	t.	
		argin in analysis and synthesis of control loop		
		affects a control loop in terms of its frequence		
	<ul> <li>They can explain issues arising when con</li> </ul>	trollers designed in continuous time domain a	re implemented o	digitally
Skills		lynamic systems from time to frequency dom	ain and vice vers	a
	<ul> <li>They can simulate and assess the behavior</li> </ul>			u
		help of heuristic (Ziegler-Nichols) tuning rules		
	• They can analyze and synthesize simple of	control loops with the help of root locus and fr	equency respons	e techniques
		oximations of controllers designed in con	tinuous-time and	d use it for digi
	implementation	the Control Teelboy Circuling) for comming o		
	They can use standard software tools (Ma	tlab Control Toolbox, Simulink) for carrying or	ut these tasks	
Personal Competence				
	Students can work in small groups to jointly solv			
Autonomy		sources (lecture notes, software document	ation, experimen	t guides) and use
	when solving given problems.			
	They can assess their knowledge in weekly on-li	ne tests and thereby control their learning pro	ogress.

Course L0654: Introduction t	o Control Systems
Тур	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE
Cycle	WiSe
Content	Signals and systems
	<ul> <li>Linear systems, differential equations and transfer functions</li> <li>First and second order systems, poles and zeros, impulse and step response</li> <li>Stability</li> <li>Feedback systems</li> </ul>
	<ul> <li>Principle of feedback, open-loop versus closed-loop control</li> <li>Reference tracking and disturbance rejection</li> <li>Types of feedback, PID control</li> <li>System type and steady-state error, error constants</li> <li>Internal model principle</li> </ul>
	Root locus techniques
	<ul><li>Root locus plots</li><li>Root locus design of PID controllers</li></ul>
	Frequency response techniques
	<ul> <li>Bode diagram</li> <li>Minimum and non-minimum phase systems</li> <li>Nyquist plot, Nyquist stability criterion, phase and gain margin</li> <li>Loop shaping, lead lag compensation</li> <li>Frequency response interpretation of PID control</li> </ul>
	Time delay systems
	<ul><li>Root locus and frequency response of time delay systems</li><li>Smith predictor</li></ul>
	Digital control
	<ul><li>Sampled-data systems, difference equations</li><li>Tustin approximation, digital implementation of PID controllers</li></ul>
	Software tools
	<ul> <li>Introduction to Matlab, Simulink, Control toolbox</li> <li>Computer-based exercises throughout the course</li> </ul>
Literature	<ul> <li>Werner, H., Lecture Notes "Introduction to Control Systems"</li> <li>G.F. Franklin, J.D. Powell and A. Emami-Naeini "Feedback Control of Dynamic Systems", Addison Wesley, Reading, MA, 2009</li> <li>K. Ogata "Modern Control Engineering", Fourth Edition, Prentice Hall, Upper Saddle River, NJ, 2010</li> <li>R.C. Dorf and R.H. Bishop, "Modern Control Systems", Addison Wesley, Reading, MA 2010</li> </ul>

Courses						
Title		Тур	Hrs/wk	СР		
Circuit Theory (L0566)		Lecture	3	4		
Circuit Theory (L0567)		Recitation Section (small)	2	2		
Module Responsible	Prof. Alexander Kölpin					
Admission Requirements	None					
	Electrical Engineering I and II, Mathematics I and II					
Knowledge						
Educational Objections		fallender harmine erstelle				
	After taking part successfully, students have reached the	following learning results				
Professional Competence	Chudonka are able to cuplein the basis methods for cold	ulating electrical sizewite. They know	, the Fermion co	ice enclusic of line		
Knowledge	Students are able to explain the basic methods for calc networks driven by periodic signals. They know the me					
	domain, and they are able to explain the frequency beha					
	domain, and they are able to explain the nequency bene	viour and the synthesis of passive to	io-terminal-circu			
Skills	The students are able to calculate currents and voltage	es in linear networks by means of	basic methods.	also when driven		
	periodic signals. They are able to calculate transients in					
	respective transient behaviour. They are able to analy					
	circuits.					
Personal Competence						
Social Competence	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within					
	group.					
Autonomy	The students are able to find out the required methods	or solving the given practice probler	ns. Possibilities a	are given to test th		
	knowledge during the lectures continuously by means of short-time tests. This allows them to control independently the					
	educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.

Module M1333: BIO I:	Implants and Fracture Healing			
Courses				
Title		Тур	Hrs/wk	СР
Implants and Fracture Healing (L03	76)	Lecture	2	3
Module Responsible	Prof. Michael Morlock			
Admission Requirements	None			
<b>Recommended Previous</b>	It is recommended to participate in "Introduction	into Anatomie" before attending "Imp	lants and Fracture Heal	ing".
Knowledge				
Educational Objectives	After taking part successfully, students have read	hed the following learning results		
Professional Competence				
Knowledge	The students can describe the different ways how	bones heal, and the requirements fo	r their existence.	
	The students can name different treatments for t	he spine and hollow bones under give	n fracture morphologies	5.
Skills	The students can determine the forces acting with	hin the human body under quasi-stati	c situations under speci	fic assumptions.
Personal Competence				
Social Competence	The students can, in groups, solve basic numerica	al modeling tasks for the calculation o	f internal forces.	
		-		
Autonomy	The students can, in groups, solve basic numerica	al modeling tasks for the calculation o	f internal forces.

Course L0376: Implants and	Fracture Healing			
Тур	Lecture			
Hrs/wk	2			
СР				
	Independent Study Time 62, Study Time in Lecture 28			
Lecturer	Prof. Michael Morlock DE			
Cycle				
	Topics to be covered include:			
	1. Introduction (history, definitions, background importance)			
	2. Bone (anatomy, properties, biology, adaptations in femur, tibia, humerus, radius)			
	3. Spine (anatomy, biomechanics, function, vertebral bodies, intervertebral disc, ligaments)			
	3.1 The spine in its entirety			
	3.2 Cervical spine			
	3.3 Thoracic spine			
	3.4 Lumbar spine			
	3.5 Injuries and diseases			
	4. Pelvis (anatomy, biomechanics, fracture treatment)			
	Fracture Healing			
	1 Basics and biology of fracture repair			
	2 Clinical principals and terminology of fracture treatment			
	5.3 Biomechanics of fracture treatment			
	5.3.1 Screws			
	5.3.2 Plates			
	5.3.3 Nails			
	5.3.4 External fixation devices			
	5.3.5 Spine implants			
	6.0 New Implants			
Literature	Cochran V.B.: Orthopädische Biomechanik

Content	Advanced understanding of metals:
	Physical materials properties
	o Materials behaviour - elastic, thermal, electrical
	o Superelasticity and shape memory effect
	<ul> <li>Fundamentals of electrical conductivity in metals and semiconductors</li> </ul>
	o Superconductivity
	Chemical (or "dry") corrosion
	o Driving forces and mechanisms
	o Passivation
	o Growth laws
	Introduction to electrochemistry
	o Electrolytes
	o lons
	o Solvatation
	o Dissolution and deposition of metals
	o Galvanic cells and cell voltage
	o Galvanic series
	o Nernst equation
	o Polarizable electrodes
	o Electrochemical double layer
	o Capacitive and pseudocapacitive processes
	o Capacitive currents and Faraday currents
	Electrochemical (or "wet") corrosion and corrosion protection
	o Basic observations
	o Galvanic corrosion
	o Protection against galvanic corrosion
	o Stainless steel
	o sacrificial anodes
	o Passivation and Pourbaix diagrams
	o Corrosion through gas reduction
	o Crevice corrosion
	o Stress corrosion cracking
	o Alloy corrosion and nanoporous metals
	Electrochemical energy storage
	o How a battery works
	o Lead accumulators
	o Alkaline batteries
	o Nickel-metal hydride accumulators
	o Flux batteries
	o Lithium-ion accumulators
	o Electrolytic and super capacitors
	Fuel cells     Materials for hydrogen storage
	Materials for hydrogen storage
	o Storage strategies
	o Requirements for storage materials
	o State of the art
	Magnetism and magnetic materials
	o Phenomenology: magnetic field and magnetization
	o Para-, ferro-, antiferromagnets; Curie transition
	o Magnetism at the atomic scale; exchange coupling
	o Magnetization isotherms, domains
	o Measurement methods

- o Measurement methods
- o Magnetocrystalline anisotropy and domain walls
- o Hard magnetic materials and their applications

	o Soft magnetic materials and their applications

Numerical Algorithms in Structural	Mechanics (L0284)	Lecture	2	3
Numerical Algorithms in Structural	Mechanics (L0285)	Recitation Section (small)	2	3
Module Responsible	Prof. Alexander Düster			
Admission Requirements	None			
<b>Recommended Previous</b>	Knowledge of partial differential equations is recor	nmended.		
Knowledge				
Educational Objectives	After taking part successfully, students have reach	ned the following learning results		
Professional Competence				
Knowledge	Students are able to			
	+ give an overview of the standard algorithms that	t are used in finite element programs.		
	+ explain the structure and algorithm of finite eler	nent programs.		
	+ specify problems of numerical algorithms, to ide	entify them in a given situation and to expl	ain their mathem	natical and comput
	science background.			
Skills	Students are able to			
	+ construct algorithms for given numerical method			
	+ select for a given problem of structural mechani	-		
	+ apply numerical algorithms to solve problems of			
	+ implement algorithms in a high-level programm	ing languate (here C++).		
	+ critically judge and verfiy numerical algorithms.			
Personal Competence				
Social Competence	Students are able to			
	+ solve problems in heterogeneous groups and to	document the corresponding results.		
Autonomy	Students are able to			
	+ acquire independently knowledge to solve comp	olex problems.

Experimental Methods in Biomecha	nics (L0377)	Lecture	2	3	
Module Responsible	Prof. Michael Morlock				
Admission Requirements	None				
<b>Recommended Previous</b>	It is recommended to participate in "Impl	antate und Frakturheilung" before attending	"Experimentelle Methode	en".	
Knowledge					
Educational Objectives	After taking part successfully, students h	ave reached the following learning results			
Professional Competence					
Knowledge	The students can describe the different v	vays how bones heal, and the requirements for	or their existence.		
	The students can name different treatme	ents for the spine and hollow bones under give	en fracture morphologies	5.	
	The students can describe different measurement techniques for forces and movements, and choose the adequate technique for				
	given task.	surement techniques for forces and movement			
	given task.				
Skills	The students can describe the basic hand	dling of several experimental techniques used	d in biomechanics.		
Personal Competence					
	The students can, in groups, solve basic	experimental tasks			
Social competence	The students can, in groups, solve basic	experimental tasks.			
Autonomy	The students can, in groups, solve basic	experimental tasks.			
Workload in Hours	Independent Study Time 62, Study Time	in Lecture 28

Module Responsible	Dozenten der Mathematik
Admission Requirements	None
<b>Recommended Previous</b>	Analysis for Technomathematicians, Higher Analysis, Linear Algebra for Technomathematicians, Numerical Mathematic
Knowledge	Mathematical Stochastics, Mechanics für Technomathematicians, Elektrical Engineering for Technomathematicians, Procedura Programming, Objectoriented Programming, Algorithms and Data Structures
Educational Objectives Professional Competence	After taking part successfully, students have reached the following learning results
	Students are able to evaluate in which cases the use of technomathematical knowledge can help to solve practical problems. F
	relevant questions, they have the necessary background and appropriate technical language at their disposal. They know the typical process of solving practical problems and are able to present related results.
Skills	The students can transfer their fundamental knowledge concerning mathematics, engineering and computer science to th
	process of solving practical problems. They are able to build mathematical models for relevant, non-standard problems, they ca develop and implement algorithmic strategies, and are able to document and present their results.
Personal Competence	
Social Competence	Students are able to cooperate with partners from outside mathematics (e.g. in industry) to develop models and solutions f practical problems. They can present and explain these in front of a qualified audience. Students have the ability to develo alternative approaches and can discuss their advantages as well as their drawbacks.
Autonomy	Students are capable of independently identifying practical problems that are suitable for the use of technomathematical metho and results. They can work their way into such problems, and are able to develop solutions under the guidance of the supervisor. They are able to fill in gaps as well as to extend their knowledge using provided sources. Furthermore, they ca meaningfully extend given problems and solve them by means of concepts and approaches that they have to develo independently.
Workload in Hours	Independent Study Time 180, Study Time in Lecture 0

Thesis Module M-001: Bachelor Thesis		
Title	Typ Hrs/wk CP	
Module Responsible	Professoren der TUHH	
Admission Requirements		
	According to General Regulations §21 (1):	
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.	
Recommended Previous		
Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence Knowledge		
Knowledge	• The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course	
	of study (facts, theories, and methods).	
	• On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue	
	opening up and establishing links with extended specialized expertise.	
	The students are able to outline the state of research on a selected issue in their subject area.	
Skills	• The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solv	
	subject-related problems.	
	• With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions	
	technical issues, and develop solutions.	
	• The students can take up a critical position on the findings of their own research work from a specialized perspective.	
Personal Competence		
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably a	
	in a structured way.	
	• The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to t	
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.	
Autonomy	• The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within	
	specified time frame.	
	• The students are able to identify, open up, and connect knowledge and material necessary for working on a scientif	
	problem.	
	The students can apply the essential techniques of scientific work to research of their own.
