

# **Module Manual**

Bachelor of Science (B.Sc.)

# **Technomathematics**

Cohort: Winter Term 2019

Updated: 12th August 2022

# **Table of Contents**

| Table of Contents   | 2          |
|---|------------|
| Program description   | 4          |
| Core Qualification  | 5          |
| Module M0718: Linear Algebra for Technomathematicians   | 5          |
| Module M0690: Analysis for Technomathematicians   | 7          |
| Module M1553: Mechanics and object-oriented Programming for Technomathematicians  | 9          |
| Module M0575: Procedural Programming  | 11         |
| Module M0577: Non-technical Courses for Bachelors   | 13         |
| Module M1519: Introduction to Electrical Engineering (Technomathematics)  | 15         |
| Module M1113: Proseminar Technomathematics Module M1075: Numerical Mathematics  | 16<br>17   |
| Module M1085: Mathematical Stochastics  | 19         |
| Module M1074: Higher Analysis   | 21         |
| Module M0829: Foundations of Management   | 24         |
| Module M1114: Seminar Technomathematics   | 27         |
| Specialization I. Mathematics   | 28         |
| Module M1052: Algebra   | 28         |
| Module M0715: Solvers for Sparse Linear Systems   | 30         |
| Module M1429: Complex Functions   | 32         |
| Module M1056: Functional Analysis   | 34         |
| Module M0692: Approximation and Stability Module M1062: Mathematical Statistics   | 36<br>38   |
| Module M1079: Differential Geometry   | 40         |
| Module M1080: Ordinary Differential Equations and Dynamical Systems   | 42         |
| Module M1060: Optimization  | 44         |
| Module M0852: Graph Theory and Optimization   | 46         |
| Module M1061: Measure Theory and Stochastics  | 48         |
| Module M0714: Numerical Treatment of Ordinary Differential Equations  | 50         |
| Module M1083: Discrete Mathematics  | 52         |
| Module M1020: Numerics of Partial Differential Equations Module M0881: Mathematical Image Processing                      | 54<br>55   |
| Module M0661: Mathematics of Neural Networks  | 57         |
| Module M0716: Hierarchical Algorithms   | 59         |
| Module M1063: Stochastic Processes  | 61         |
| Module M1059: Approximation   | 63         |
| Module M1058: Introduction to Mathematical Modeling   | 65         |
| Module M1078: Geometry  | 67         |
| Module M1129: Mathematical Systems Theory   | 69         |
| Module M0941: Combinatorial Structures and Algorithms   | 71         |
| Module M1055: Complex Analysis<br>Module M1050: Graph Theory  | 73<br>75   |
| Module M1050: Graph Theory  Module M1051: Combinatorial Optimization  | 77         |
| Module M0720: Matrix Algorithms   | 79         |
| Module M0711: Numerical Mathematics II  | 81         |
| Module M1053: Introductory Number Theory  | 83         |
| Module M1086: Practical Statistics  | 85         |
| Module M1054: Topology  | 87         |
| Module M1556: Set Theory and Mathematical Logic   | 89         |
| Module M1668: Probability Theory  | 91         |
| Specialization II. Informatics  | 93<br>93   |
| Module M0732: Software Engineering<br>Module M0624: Automata Theory and Formal Languages                                  | 95         |
| Module M1586: Scientific Programming  | 97         |
| Module M0834: Computernetworks and Internet Security  | 99         |
| Module M0972: Distributed Systems   | 101        |
| Module M0730: Computer Engineering  | 102        |
| Module M0731: Functional Programming  | 104        |
| Module M1423: Algorithms and Data Structures  | 106        |
| Module M0625: Databases Module M0668: Algebra and Control   | 108<br>110 |
| Modulo MO754. Compiler Construction   | 112        |
| Module M0734. Compiler Constitution  Module M0562: Computability and Complexity Theory                                    | 114        |
| Module M0971: Operating Systems   | 115        |
| Specialization III. Engineering Science   | 116        |
| Module M0536: Fundamentals of Fluid Mechanics   | 116        |
| Module M0634: Introduction into Medical Technology and Systems  | 118        |
| Module M0680: Fluid Dynamics  | 120        |
| Module M0757: Biochemistry and Microbiology   | 122        |
| Module M1277: MED I: Introduction to Anatomy  | 126        |
| Module M0938: Bioprocess Engineering - Fundamentals  Module M1278: MED I: Introduction to Radiology and Radiation Therapy | 128<br>131 |
|   | I          |

| Module M0671: Technical Thermodynamics I  | 133 |
|---|-----|
|   | 135 |
| Module M0567: Theoretical Electrical Engineering I: Time-Independent Fields                             | 137 |
|   | 139 |
| Module M0672: Signals and Systems   | 141 |
|   | 144 |
|   | 146 |
|   | 148 |
| Module M0808: Finite Elements Methods   | 150 |
| Module M0933: Fundamentals of Materials Science   | 152 |
| Module M1279: MED II: Introduction to Biochemistry and Molecular Biology                                | 154 |
|   | 155 |
|   | 157 |
| Module M0688: Technical Thermodynamics II   | 159 |
| Module M0568: Theoretical Electrical Engineering II: Time-Dependent Fields                              | 161 |
|   | 163 |
| Module M0675: Introduction to Communications and Random Processes                                       | 165 |
|   | 167 |
|   | 169 |
|   | 171 |
| Module M0708: Electrical Engineering III: Circuit Theory and Transients                                 | 174 |
|   | 176 |
| Module M0755: Geotechnics II  | 178 |
| Module M0807: Boundary Element Methods  | 180 |
| Module M1280: MED II: Introduction to Physiology  | 182 |
| Module M0734: Electrical Engineering Project Laboratory   | 183 |
| Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )               | 184 |
| Module M1005: Enhanced Fundamentals of Materials Science  | 185 |
| Module M0606: Numerical Algorithms in Structural Mechanics  | 189 |
| Module M0594: Fundamentals of Mechanical Engineering Design   | 190 |
| Module M0960: Mechanics IV (Oscillations, Analytical Mechanics, Multibody Systems, Numerical Mechanics) | 192 |
| Module M0777: Semiconductor Circuit Design  | 194 |
| Module M1332: BIO I: Experimental Methods in Biomechanics   | 196 |
|   | 197 |
| Module M1573: Modeling, Simulation and Optimization (EN)  | 199 |
| Specialization IV. Subject Specific Focus 2   | 00  |
| Module M1321: Technical Complementary Course I for Technomathematics (according to Subject Specific     |     |
|   | 200 |
|   | 201 |
| Module M1322: Technical Complementary Course II for Technomathematics (according to Subject Specific    |     |
|   | 202 |
| Thesis 2  | 03  |
| Module M-001: Bachelor Thesis   | 203 |

# Program description

## Content

# **Core Qualification**

| Module M0718: Linea                            | r Algebra for Technomathematicians  |  |                    |                      |
|--|---|--|--------------------|----------------------|
| Courses  |   |  |                    |                      |
| Courses  |   |  |                    |                      |
| <b>Title</b> Linear Algebra 1 for Technomather | naticiona (LOEGZ)   | <b>Typ</b><br>Lecture                        | Hrs/wk<br>4        | <b>CP</b><br>5       |
| Linear Algebra 1 for Technomather              |   | Recitation Section (small)                   | 2                  | 4                    |
| Linear Algebra 2 for Technomather              |   | Lecture                                      | 4                  | 4                    |
| Linear Algebra 2 for Technomather              |   | Recitation Section (small)                   | 2                  | 5                    |
| Module Responsible                             | Prof. Sabine Le Borne   |  |                    |                      |
| Admission Requirements                         | None  |  |                    |                      |
| Recommended Previous                           | High school mathematics   |  |                    |                      |
| Knowledge                                      |   |  |                    |                      |
| Educational Objectives                         | After taking part successfully, students have reached the   | following learning results                   |                    |                      |
| Professional Competence                        |   |  |                    |                      |
| Knowledge                                      | Students are able to  |  |                    |                      |
|  |   | the are with a consequence and deback in the |                    |                      |
|  | define the basic terms of Linear Algebra, illustrate  | them with examples and detect inter          | relations,         |                      |
|  | list techniques for proofs,     cleated making changing proofs of control theorems.   |  |                    |                      |
|  | <ul> <li>sketch main steps in proofs of central theorems.</li> </ul>  |  |                    |                      |
|  | Students can furthermore explain the basic steps that aris  | se in modelling and relate them to ap        | plication scena    | rios.                |
| Skills   | Students are capable to   |  |                    |                      |
|  |   |  |                    |                      |
|  | apply the tools of Linear Algebra,  |  |                    |                      |
|  | implement (MATLAB) and test algorithms (e.g. so   | olution of linear systems of equation        | ns, computation    | of the determinant,  |
|  | computation of eigenvalues and eigenvectors),   |  |                    |                      |
|  | develop proofs for propositions in Linear Algebra as  | nd to document them in a comprehe            | nsible manner.     |                      |
|  |   |  |                    |                      |
| Personal Competence                            |   |  |                    |                      |
| -  | Students are able to  |  |                    |                      |
| Social competence                              | Students are usic to  |  |                    |                      |
|  | <ul> <li>work together in heterogeneously composed team</li> </ul>  | s (i.e., teams from different study pr       | ograms and bac     | kground knowledge),  |
|  | explain theoretical foundations and support each o  | ther with practical aspects regarding        | the implementa     | ation of algorithms, |
|  | <ul> <li>explain solutions/proofs of the excercises at the bla</li> </ul>   | ackboard in a way suitable for the au        | dience (in the ex  | cercise sessions).   |
| Autonomy                                       | Students are capable  |  |                    |                      |
|  | a to access whether the supporting the existing and and   | ventical avenueines are batter calved        | individually on i  |                      |
|  | <ul> <li>to assess whether the supporting theoretical and p</li> <li>to work on complex problems over an extended pe</li> </ul> |  | individually of it | i a teaiii,          |
|  | to work on complex problems over an extended pe     to assess their individual progess and, if necessary                        |  |                    |                      |
|  | to assess their marriada progess and, if necessary  | , to ask questions and seek neip.            |                    |                      |
| Workload in Hours                              | Independent Study Time 372, Study Time in Lecture 168   |  |                    |                      |
| Credit points                                  |   |  |                    |                      |
| Course achievement                             |   |  |                    |                      |
| Examination                                    |   |  |                    |                      |
| Examination duration and                       | 30 min  |  |                    |                      |
| scale  |   |  |                    |                      |
| Assignment for the                             | -   | llsory                                       |                    |                      |
| Following Curricula                            | Technomathematics: Core Qualification: Compulsory   |  |                    |                      |

| Course L0587: Linear Algebra 1 for Technomathematicians |   |  |

| Brofossional Competence                           |  |  |

Knowledae

#### The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

#### The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

#### Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

#### Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

#### The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

#### Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

### Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

#### Personal Competence

Social Competence

#### Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

| Autonomy          | <ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> </ul> |
|-------------------|--|
|                   | to organize themselves and their own learning processes     to reflect and decide questions in front of a broad education background   |
|                   | to communicate a nontechnical item in a competent way in writen form or verbaly  |
|                   | to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)  |
| Workload in Hours | Depends on choice of courses   |
| Credit points     | 6  |

# Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

|                          | After taking part successfully, students have reached the | ne following learning results                       |                              |                        |
| Professional Competence  |   |   |                              |                        |
| Knowledge                | Students can describe basic concepts in Highe             | r Analysis such as submanifolds, tan                | gential bundles, L           | ebesgue integration    |
|                          | theory, fundamentals of funktional analysis, th           | ne Hilbert space L <sup>2</sup> , Fourier analysis, | L <sup>p</sup> spaces, class | ical inequalities and  |
|                          | fundamentals of general measure and integratio            | on theory. They are able to explain the             | m using appropria            | ite examples.          |
|                          | Students can discuss logical connections between          | en these concepts. They are capable                 | of illustrating the          | ese connections with   |
|                          | the help of examples.                                     |   |                              |                        |
|                          | They know proof strategies and can reproduce tl           | hem   |                              |                        |
|                          | They know proof strategies and carrieproduce to           | nem.  |                              |                        |
|                          |   |   |                              |                        |
| Skills                   |   |   |                              |                        |
|                          | Students can model problems in Higher Analysi             | is with the help of the concepts stud               | ied in this course           | . Moreover, they are   |
|                          | capable of solving them by applying established           |   |                              |                        |
|                          | Students are able to discover and verify further          |   |                              |                        |
|                          | For a given problem, the students can develop             | o and execute a suitable approach, a                | and are able to c            | ritically evaluate the |
|                          | results.  |   |                              |                        |
|                          |   |   |                              |                        |
| Personal Competence      |   |   |                              |                        |
| Social Competence        |   |   |                              |                        |
| Social competence        | Students are able to work together in teams. The          | ey are capable to use mathematics as                | a common langua              | age.                   |
|                          | In doing so, they can communicate new concept             | ts according to the needs of their coo              | perating partners            | . Moreover, they can   |
|                          | design examples to check and deepen the under             | rstanding of their peers.                           |                              |                        |
|                          |   |   |                              |                        |
|                          |   |   |                              |                        |
| Autonomy                 | Students are capable of checking their understa           | anding of complex concepts on their                 | own. They can sp             | ecify open questions   |
|                          | precisely and know where to get help in solving           |   |                              |                        |
|                          | Students have developed sufficient persistence            | to be able to work for longer period                | ds in a goal-orien           | ted manner on hard     |
|                          | problems.   |   |                              |                        |
|                          |   |   |                              |                        |
|                          |   |   |                              |                        |
|                          | Independent Study Time 186, Study Time in Lecture 84      | 1   |                              |                        |
| Credit points            | 9   |   |                              |                        |

#### b) Analysis 3: Maß- und Integrationstheorie, Integralsätze im IRn und Anwendungen (Aufbaukurs Mathematik)

- Autor: Otto Forster
- Vieweg+Teubner Verlag; Auflage: 7., überarb. Aufl. 2012
- Sprache: Deutsch
- ISBN-10: 3834823732
- ISBN-13: 978-3834823731

#### c) Höhere Analysis,

Autor: R. Lauterbach

 $(Skript,\,WS\,\,09/10,\,verf\ddot{u}gbar\,\,auf\,\,http://www.math.uni-hamburg.de/home/lauterbach/analysis3\_WS0910.html\#skript)$ 

#### d) Real and complex analysis

- Autor: Walter Rudin
- Verlag: Oldenbourg Wissenschaftsverlag (25. August 1999)
- Sprache: Deutsch
- ISBN-10: 3486247891
- ISBN-13: 978-3486247893

#### oder

#### Real and complex analysis

- Autor: Walter Rudin
- McGraw-Hill, 1987 , 3. illustrierte Neuauflage
- Sprache: Englisch
- Digitalisiert: 2. Febr. 2010
- ISBN: 0070542341, 9780070542341

#### e) An Introduction to Measure Theory (Graduate Studies in Mathematics)

- Autor: Terence Tao
- Verlag: American Mathematical Society (15. September 2011)
- Sprache: Englisch
- ISBN-10: 0821869191
- ISBN-13: 978-0821869192

### f) Maß- und Integrationstheorie

- Autor: Heinz Bauer
- Verlag: de Gruyter; Auflage: 2., überarb. A. (1. Juli 1992)
- Sprache: Englisch
- ISBN-10: 3110136252
- ISBN-13: 978-3110136258

### g) Maß- und Integrationstheorie

- Autor: Jürgen Elstrodt
- Springer, 2004
- ISBN-10: 3540213902
- ISBN-13: 9783540213901

| СР                   | 3  |
| Workload<br>in Hours | Independent Study Time 62, Study Time in Lecture 28  |
| Lecturer             | Prof. Christoph Ihl, Katharina Roedelius   |
| Language             | DE   |
| Cycle                | WiSe/SoSe  |
| Content              | In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.  If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on so selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor. |

| Content                    | This course is about solving the following basic problems of Linear Algebra,  |
|                            | systems of linear equations,  |
|                            | least squares problems,   |
|                            | eigenvalue problems   |
|                            | e.gen. dide p. oxie.n.s   |
|                            | but now in function spaces (i.e. vector spaces of infinite dimension) by a stable approximation of the problem in a space of finite |
|                            | dimension.  |
|                            | Contents:   |
|                            | crash course on Hilbert spaces: metric, norm, scalar product, completeness  |
|                            | crash course on operators: boundedness, norm, compactness, projections  |
|                            | uniform vs. strong convergence, approximation methods   |
|                            | <ul> <li>applicability and stability of approximation methods, Polski's theorem</li> </ul>  |
|                            | Galerkin methods, collocation, spline interpolation, truncation   |
|                            | convolution and Toeplitz operators  |
|                            | crash course on C*-algebras   |
|                            | convergence of condition numbers  |
|                            | convergence of spectral quantities: spectrum, eigen values, singular values, pseudospectra  |
|                            | regularisation methods (truncated SVD, Tichonov)  |

| Educational Objectives       | After taking part successfully, students have            | ve reached the following learning results          |                       |                      |
| Professional Competence      |  |  |                       |                      |
| Knowledge                    | Students can describe basic concep                       | ots in Discrete Mathematics such as elementary     | combinatorics and     | counting coefficient |
|                              |  | etwork algorithms, complexity, asymptotic ana      |                       |                      |
|                              |  | of inclusion and exclusion, ordered sets, counting |                       |                      |
|                              | in coding theory or cryptography.                        |  |                       |                      |
|                              | They are able to explain them using                      | g appropriate examples.                            |                       |                      |
|                              | Students can discuss logical connection                  | ctions between these concepts. They are capab      | le of illustrating th | nese connections wi  |
|                              | the help of examples.                                    |  |                       |                      |
|                              | They know proof strategies and can                       | reproduce them.                                    |                       |                      |
|                              |  |  |                       |                      |
|                              |  |  |                       |                      |
| Skills                       |  |  |                       |                      |
|                              |  | Combinatorics with the help of the concepts stu    | died in this course   | . Moreover, they a   |
|                              | capable of solving them by applying                      |  |                       |                      |
|                              |  | erify further logical connections between the con  |                       |                      |
|                              |  | can develop and execute a suitable approach,       | and are able to c     | ritically evaluate t |
|                              | results.   |  |                       |                      |
|                              |  |  |                       |                      |
|                              |  |  |                       |                      |
| Personal Competence          |  |  |                       |                      |
| Social Competence            | Students are able to work together in                    | in teams. They are capable to use mathematics a    | as a common langu     | lage                 |
|                              |  | new concepts according to the needs of their co    |                       |                      |
|                              |  | pen the understanding of their peers.              | roperating partitions | , indicaver, they co |
|                              | acongni examples to effect and acep                      | en the understanding of their peers.               |                       |                      |
|                              |  |  |                       |                      |

|                            | Systems Theory treats the mathematical background and foundations of the engineering discipline 'Cybernetics'. Thereby one wants to exert influence on a dynamical system (which is usually given by an ordinary differential equation (ODE)), such that a desired behavior is achieved.  For instance, in classical mechanics, the motion of a mass point is determined by acting forces. In 'Systems and Control Theory', one wonders how these forces have to be chosen such that a prescribed movement of the mass point is accomplished.  • Introduction and motivation • Controllability • Stabilization by feedback • Obervability • Observer and controller design • Linear-quadratic optimal control |

| Module Responsible             |  |  |  |   |
| Admission Requirements         |  |  |  |   |
| Recommended Previous           | Participating students should be able to   |  |  |   |
| Knowledge                      | - specify algorithms for simple data structures (s   | such as, e.g., arrays) to solve computational p  | oroblems   |   |
|                                | - apply propositional logic and predicate logic fo   | r specifying and understanding mathematical  | proofs   |   |
|                                | - apply the knowledge and skills taught in the m   | nodule Discrete Algebraic Structures   |  |   |
| <b>Educational Objectives</b>  | After taking part successfully, students have rea  | ached the following learning results   |  |   |
| <b>Professional Competence</b> |  |  |  |   |
|                                | syntax, semantics, and decision problems for t solving the predicate logic SAT decision problem kinds of temporal logic, and identify their app automata and can identify relationships to log deterministic and nondeterministic finite auto formalism for which nondeterminism is more or problems require which expressivity, and, in add problems w.r.t. other formalisms. They understate for specifying systems and their properties. Stu or grammars. | n. Students can also describe syntax, semant<br>olication areas. The participants of the cour<br>gic and formal grammars. The spectrum the<br>mata and pushdown automata to Turing n<br>expressive than determinism. They are also<br>dition, students can transform decision proble<br>and that some formalisms easily induce algor | ics, and decision se can define vat students can nachines. Studen able to demonsems w.r.t. one for ithms whereas o | problems for variou arious kinds of fini explain ranges fro nts can name thosetrate which decision rmalism into decision thers are best suited. |
| Skills                         | Students can apply propositional logic as well as problems in order to derive propositional logic, which formalism is best suited for a particular decision problems to specific formulas. Student grammars from automata and vice versa. The emptiness problem in case of infinite words.   | predicate logic, or temporal logic formulas t<br>application problem, and they can demonst<br>s can also transform nondeterministic autom  | o represent ther<br>rate the applicat<br>ata into determi  | m. They can evalua<br>tion of algorithms f<br>inistic ones, or deriv  |

| Lecturer                   | Prof. Tobias Knopp  |
| Language                   |   |
| Cycle                      |   |
| Content                    |   |
|                            | 1. Propositional logic, Boolean algebra, propositional resolution, SAT-2KNF   |
|                            | Predicate logic, unification, predicate logic resolution  |
|                            | 3. Temporal Logics (LTL, CTL)   |
|                            | 4. Deterministic finite automata, definition and construction   |
|                            | 5. Regular languages, closure properties, word problem, string matching   |
|                            | 6. Nondeterministic automata:   |
|                            | Rabin-Scott transformation of nondeterministic into deterministic automata  |
|                            | 7. Epsilon automata, minimization of automata,  |
|                            | elimination of e-edges, uniqueness of the minimal automaton (modulo renaming of states)   |
|                            | 8. Myhill-Nerode Theorem:   |
|                            | Correctness of the minimization procedure, equivalence classes of strings induced by automata   |
|                            | 9. Pumping Lemma for regular languages:   |
|                            | provision of a tool which, in some cases, can be used to show that a finite automaton principally cannot be expressive enough to solve a word problem for some given language |
|                            | Regular expressions vs. finite automata:  |
|                            | Equivalence of formalisms, systematic transformation of representations, reductions   |
|                            | 11. Pushdown automata and context-free grammars:  |
|                            | Definition of pushdown automata, definition of context-free grammars, derivations, parse trees, ambiguities, pumping  |
|                            | lemma for context-free grammars, transformation of formalisms (from pushdown automata to context-free grammars and  |
|                            | back)   |
|                            | 12. Chomsky normal form   |
|                            | 13. CYK algorithm for deciding the word problem for context-free grammrs  |
|                            | 14. Deterministic pushdown automata   |
|                            | 15. Deterministic vs. nondeterministic pushdown automata:   |
|                            | Application for parsing, LL(k) or LR(k) grammars and parsers vs. deterministic pushdown automata, compiler compiler   |
|                            | 16. Regular grammars  |
|                            | 17. Outlook: Turing machines and linear bounded automata vs general and context-sensitive grammars  |
|                            | 18. Chomsky hierarchy   |
|                            | 19. Mealy- and Moore automata:  |
|                            | Automata with output (w/o accepting states), infinite state sequences, automata networks  |
|                            | 20. Omega automata: Automata for infinite input words, Büchi automata, representation of state transition systems, verification   |
|                            | w.r.t. temporal logic specifications (in particular LTL)  |
|                            | 21. LTL safety conditions and model checking with Büchi automata, relationships between automata and logic  |
|                            | 22. Fixed points, propositional mu-calculus   |
|                            | 23. Characterization of regular languages by monadic second-order logic (MSO)   |
| Literature                 |   |

| Content                    | In this class an introduction to computer networks with focus on the Internet and its security is given. Basic functionality of complex protocols are introduced. Students learn to understand these and identify common principles. In the exercises these basic principles and an introduction to performance modelling are addressed using computing tasks and (virtual) labs.  In the second part of the lecture an introduction to Internet security is given.  This class comprises:  Application layer protocols (HTTP, FTP, DNS)  Transport layer protocols (TCP, UDP)  Network Layer (Internet Protocol, routing in the Internet)  Data link layer with media access at the example of Ethernet  Multimedia applications in the Internet  Network management |

| Module Responsible Prof. Heiko Falk  Admission Requirements None  Recommended Previous Knowledge Basic knowledge in electrical engineering  Knowledge After taking part successfully, students have reached the following learning results  Professional Competence  Knowledge This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-lev programming down to gates. The module includes the following topics:  Introduction Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks Sequential logic: Flip-flops, automata, systematic hardware design Technological foundations Computer arithmetic: Integer addition, subtraction, multiplication and division Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining Memories: Memory hierarchies, SRAM, DRAM, caches Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses  Skills The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physic composition of computer systems. The students can analyze, how highly specific and individual computers can be built based or collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers today's computing systems - from gates and circuits up to complete processors.  After successful completion of the module, the students are able to judge the interdependencies between a physical compute system and the software executed on it. In particular, they shall understand the consequences that the execution of software ho on the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options. | Recommended Previous Knowledge  Educational Objectives  After taking part successfully, students have reached the following learning results  Professional Competence  Knowledge  This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly-lev programming down to gates. The module includes the following topics:  Introduction  Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks  Sequential logic: Flip-flops, automata, systematic hardware design  Technological foundations  Computer arithmetic: Integer addition, subtraction, multiplication and division  Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining  Memories: Memory hierarchies, SRAM, DRAM, caches  Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses  Skills  The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physic composition of computer systems. The students can analyze, how highly specific and individual computers can be built based or collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers today's computing systems - from gates and circuits up to complete processors.  After successful completion of the module, the students are able to judge the interdependencies between a physical compute system and the software executed on it. In particular, they shall understand the consequences that the execution of software hon the hardware-centric abstraction layers from the assembly language down to gates. This way, they will be enabled to evaluate the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.  Personal Competence  Social Competence  Social Competence  Autonomy  Students are able to solve similar problems alone or in a group and to present |

| Admission Requirements            | None   |  |                   |        |
| Recommended Previous<br>Knowledge | Object-oriented programming, algorithms, and     Procedural programming     Experience in using tools related to operating s     Experience in using C-libraries   |  | ers               |        |
| Educational Objectives            | After taking part successfully, students have reached  | the following learning results         |                   |        |
| Professional Competence           |  |  |                   |        |
|                                   | Students explain the main abstractions process, virtual memory, deadlock, lifelock, and file of operations systems, describe the process states and their transitions, and paraphrase the architectural variants of operating systems. They give examples of existing operating systems and explain their architectures. The participants of the course write concurrent programs using threads, conditional variables and semaphores. Students can describe the variants of realizing a file system. Students explain at least three different scheduling algorithms. |  |                   |        |
| SKIIIS                            | Students are able to use the POSIX libraries for concurrent programming in a correct and efficient way. They are able to judge the efficiency of a scheduling algorithm for a given scheduling task in a given environment.  |  |                   |        |
| Personal Competence               |  |  |                   |        |

| Content                     | In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.  |

| Module M1277: MED               | I: Introduction to Anatomy   |
|---------------------------------|--|
| Courses                         |  |
| Title                           | Typ Hrs/wk CP  |
| Introduction to Anatomy (L0384) | Lecture 2 3  |
| Module Responsible              | Prof. Udo Schumacher   |
| Admission Requirements          | None   |
| Recommended Previous            | None   |
| Knowledge                       |  |
| Educational Objectives          | After taking part successfully, students have reached the following learning results   |
| Professional Competence         |  |
| Knowledge                       | The students can describe basal structures and functions of internal organs and the musculoskeletal system.  |
|                                 | The students can describe the basic macroscopy and microscopy of those systems.  |
| Skills                          | The students can recognize the relationship between given anatomical facts and the development of some common diseases; the  |
| Skiiis                          | can explain the relevance of structures and their functions in the context of widespread diseases.   |
|                                 |  |
| Personal Competence             |  |
| Social Competence               | The students can participate in current discussions in biomedical research and medicine on a professional level.   |
| Autonomy                        | The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire  |
|                                 | the relevant knowledge themselves.   |
|                                 | , and the second |

| Content   | In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out.  The students document their experiments and results in a protocol. |  |

|                   | The students will be given an understanding of the technological possibilities in the field of medical imaging interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments |

| Knowledge   |  |   |                    |                        |
| <b>Educational Objectives</b>                                     | After taking part successfully, students have reached th | e following learning results            |                    |                        |
| Professional Competence   |  |   |                    |                        |
| Knowledge   | Students are familiar with the laws of Thermodynamic     | s. They know the relation of the kind   | ls of energy acc   | ording to 1 st law of  |
|   | Thermodynamics and are aware about the limits of ene     |   |                    |                        |
|   | distinguish between state variables and process varia    | -                                       | -                  | -                      |
|   | enthalpy, entropy and also the meaning of exergy an      |   |                    |                        |
|   | related diagram. They know the physical difference bet   | ** *                                    | -                  | -                      |
|   | state. They know the meaning of a fundamental state of   |   |                    |                        |
|   | state. They know the meaning of a fundamental state of   | equation and know the basics of two     | phase memody       | /Hallics.              |
|   |  |   |                    |                        |
|   |  |   |                    |                        |
| Skills  | Students are able to calculate the internal energy, the  |   |                    |                        |
|   | simple change of states and to use this calculations for | the Carnot cycle. They are able to call | culate state varia | ibles for an ideal and |
|   | for a real gas from measured thermal state variables.    |   |                    |                        |
|   |  |   |                    |                        |
|   |  |   |                    |                        |
| Personal Competence   |  |   |                    |                        |
| Social Competence   | The students are able to discuss in small groups and de  | velop an approach.                      |                    |                        |
| Autonomy  | Students are able to define independently tasks, to get  | new knowledge from existing knowled     | dge as well as to  | find ways to use the   |
|   | knowledge in practice.                                   |   |                    |                        |
| Workload in Hours   | Independent Study Time 124, Study Time in Lecture 56     |   |                    |                        |

| Admission Requirements                            | None   |  |  |   |
| Recommended Previous                              | Basics of mathematics, in particular complex   | ke numbers, integrals, differentials   |  |   |
| Knowledge   |  |  |  |   |
|   | Basics of electrical engineering and mechani   | ical engineering   |  |   |
| Educational Objectives                            | After taking part successfully, students have  | reached the following learning results   |  |   |
| <b>Professional Competence</b>                    |  |  |  |   |
| Knowledge   | Students can to draw and explain the basic   | principles of electric and magnetic fields.  |  |   |
|   | The control of the state of the state of the state of  | and and thousand the state of t |  |   |
|   |  | andard types of electric machines and prese  |  |   |
|   | from the power grid to the driven engine.  | es they can explain the major parameters of the  | energy emclency  | of the whole syste  |
|   | Them the power gird to the driven engine.  |  |  |   |
| Skills  | Students arw able to calculate two-dimension   | onal electric and magnetic fields in particular fe   | rromagnetic circu  | uits with air gap. F  |
|   | this they apply the usual methods of the des   | ign auf electric machines.   |  |   |
|   | They can calulate the operational performa   | nce of electric machines from their given chara  | cteristic data and   | d selected quantiti   |
|   |  | ual equivalent circuits and graphical methods.   |  | <b></b>   |
|   |  |  |  |   |
|   |  |  |  |   |
| Personal Competence                               |  |  |  |   |
| Social Competence                                 | none   |  |  |   |
| Autonomy  | Students are able independently to calculate   | e electric and magnatic fields for applications. The   | ney are able to ar   | nalyse independen   |
|   | the operational performance of electric machines from the characteristic data and theycan calculate thereof se   |  |  | f selected quantiti   |
|   | and characteristic curves.   |  |  |   |
|   |  |  |  |   |

| Recommended Previous<br>Knowledge  | Basic principles of electrical engineering and advanced mathematics  |   |                                       |                       |
| Educational Objectives   | After taking part successfully, students have reache   | d the following learning results  |                                       |                       |
| Professional Competence Knowledge  | Students can explain the fundamental formulas, relations, and methods of the theory of time-independent electromagnetic fields. They can explicate the principal behavior of electrostatic, magnetostatic, and current density fields with regard to respective sources. They can describe the properties of complex electromagnetic fields by means of superposition of solutions for simple fields. The students are aware of applications for the theory of time-independent electromagnetic fields and are able to explicate these.  |   |                                       |                       |
| Skills   | Students can apply Maxwell's Equations in integral notation in order to solve highly symmetrical, time-independe electromagnetic field problems. Furthermore, they are capable of applying a variety of methods that require solving Maxwe Equations for more general problems. The students can assess the principal effects of given time-independent sources of fields analyze these quantitatively. They can deduce meaningful quantities for the characterization of electrostatic, magnetostatic, a electrical flow fields (capacitances, inductances, resistances, etc.) from given fields and dimension them for practical application |   |                                       |                       |
| Personal Competence Social Competence  | Students are able to work together on subject relate during exercise sessions).  | ed tasks in small groups. They are able to  | present their re                      | sults effectively (e. |
| Autonomy   | Students are capable to gather necessary information able to continually reflect their knowledge by means lectures and exercises that are related to the exam. Itearning process. They are able to draw connection lectures (e.g. Electrical Engineering I, Linear Algebra   | s of activities that accompany the lecture,<br>Based on respective feedback, students<br>as between their knowledge obtained in | such as short or<br>are expected to a | al quizzes during the |

| Admission Requirements   | None  |                                       |                   |                       |
| Recommended Previous     | Modules :   |                                       |                   |                       |
| Knowledge                | Mechanics I-II  |                                       |                   |                       |
| Educational Objectives   | After taking part successfully, students have reached the fol | llowing learning results              |                   |                       |
| Professional Competence  |   |                                       |                   |                       |
| Knowledge                | The students know the basics of soil mechanics as the struc   | ture and characteristics of soil, st  | ress distribution | due to weight, water  |
|                          | or structures, consolidation and settlement calculations, as  | well as failure of the soil due to gr | ound- or slope fa | ilure.                |
| Skills                   | After the successful completion of the module the students    | should be able to describe the m      | nechanical prope  | rties and to evaluate |
|                          | them with the help of geotechnical standard tests. They       | can calculate stresses and defor      | mation in the so  | oils due to weight or |
|                          | influence of structures. They are are able to prove the usabi | lity (settlements) for shallow foun   | dations.          |                       |
|                          |   |                                       |                   |                       |
| Personal Competence      |   |                                       |                   |                       |
| Social Competence        |   |                                       |                   |                       |

| Module M0672: Signa               | lls and Systems  |   |  |  |
|-----------------------------------|--|---|--|--|
| Courses                           |  |   |  |  |
| Title Signals and Systems (L0432) |  | Typ<br>Lecture  | Hrs/wk   | <b>CP</b> 4  |
| Signals and Systems (L0433)       | T  | Recitation Section (small)  | 2  | 2  |
| Module Responsible                | Prof. Gerhard Bauch  |   |  |  |
| Admission Requirements            |  |   |  |  |
| Recommended Previous              | Mathematics 1-3  |   |  |  |
| Knowledge                         | The modul is an introduction to the theory of signals and syste  | ems. Good knowledge in maths  | as covered by the  | e moduls Mathematik  |
|                                   | 1-3 is expected. Further experience with spectral transforma   | tions (Fourier series, Fourier tra  | ansform, Laplace   | transform) is useful   |
|                                   | but not required.  |   |  |  |
| Educational Objectives            | After taking part successfully, students have reached the follo  | wing learning results   |  |  |
| Professional Competence           | Anter taking part succession, stadents have reached the following  | ming rearring results   |  |  |
| -                                 | The students are able to classify and describe signals and line  | ear time-invariant (ITI) systems  | using methods o  | of signal and system   |
| Miowicage                         | theory. They are able to apply the fundamental transformation  |   |  |  |
|                                   | can describe and analyse deterministic signals and systems   |   | _  |  |
|                                   | understand the effects in time domain and image domain w   |   |  | -  |
|                                   | discrete-time signal.  |   |  | -  |
| Skills                            | The students are able to describe and analyse deterministic s  | ignals and linear time-invariant  | systems using m  | ethods of signal and   |
|                                   | system theory. They can analyse and design basic system  | ns regarding important proper   | ties such as ma  | gnitude and phase  |
|                                   | response, stability, linearity etc They can assess the impact of   | of LTI systems on the signal pro  | perties in time an   | d frequency domain.  |
| Personal Competence               |  |   |  |  |
| Social Competence                 | The students can jointly solve specific problems.  |   |  |  |
| Autonomy                          | The students are able to acquire relevant information fro  | m appropriate literature source   | es. They can co  | ontrol their level of  |
|                                   | knowledge during the lecture period by solving tutorial proble   | ms, software tools, clicker syste   | m.   |  |
| Workload in Hours                 | Independent Study Time 110, Study Time in Lecture 70   |   |  |  |

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- o Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- o Power and energy of signals
- Correlation functions of deterministic signals
  - Autocorrelation function
  - Crosscorrelation function
  - Orthogonal signals
  - Applications of correlation
- Linear time-invariant (LTI) systems
  - Linearity
  - Time-invariance
  - Description of LTI systems by impulse response and frequency response
  - Convolution
  - o Convolution and correlation
  - Properties of LTI-systems
  - Causal systems
  - Stable systems
  - · Memoryless systems
- Fourier Series and Fourier Transform
  - $\circ \quad \text{Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals} \\$
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - o Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - · Bandwidth definitions
  - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - · Linear-phase systems
  - o Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - $\circ\hspace{0.1cm}$  Properties of the Laplace transform
  - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - o Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
  - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - $\circ~$  Relation of Fourier transform and DTFT  $\,$
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - · Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolutionFast Fourier Transform (FFT)
  - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - $\circ \ \ \, \text{Z-transform of digital filters}$
  - $\circ\hspace{0.1in}$  Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability
  - Allpass filters

| Content    | Chemistry I:  |
|            | - Structure of matter   |
|            | - Periodic table  |
|            | - Electronegativity   |
|            | - Chemical bonds  |
|            | - Solid compounds and solutions   |
|            | - Chemistry of water  |
|            | - Chemical reactions and equilibria   |
|            | - Acid-base reactions   |
|            | - Redox reactions   |
|            | Chemistry II:   |
|            | - Simple compounds of carbon, aliphatic hydrocarbons, aromatic hydrocarbons,                                  |
|            | - Alkohols, phenols, ether, aldehydes, ketones, carbonic acids, ester, amines, amino acids, fats, sugars      |
|            | - Reaction mechanisms, radical reactions, nucleophilic substitution, elimination reactions, addition reaction |
|            | - Practical apllications and examples   |

| Knowledge  |  |   |                  |                    |  |
| <b>Educational Objectives</b>                                      | After taking part successfully, students have rea  | ached the following learning results            |                  |                    |  |
| <b>Professional Competence</b>                                     |  |   |                  |                    |  |
| Knowledge  | After successful completion of this module, stud   | ents should be able to                          |                  |                    |  |
|  | describe and explain different kinetic app   | proaches for growth and substrate-uptake        |                  |                    |  |
|  | identification of scientific problems with a   | concrete industrial use (cultivation of microor | ganisms and mar  | nmalian cells)     |  |
|  | <ul> <li>describe and explain important downst methods</li> </ul>  | creaming steps for proteins and their applic    | ation as well as | basic immobilizati |  |
| Skills   | After successful completion of this module, stud   | lents should be able to                         |                  |                    |  |
|  | - to identifiy scientific questions or possible practical problems for concrete industrial applications (eg cult microorganisms and animal cells ) and to formulate solutions ,  |   |                  |                    |  |
|  | <ul> <li>To assess the application of scale-up criteria for different types of bioreactors and processes and to apply these criteria to problems (anaerobic, aerobic or microaerobically)</li> <li>to formulate questions for the analysis and optimization of real biotechnological production processes appropriate solutions</li> <li>To describe the effects of the energy generation, the regeneration of reduction equivalents, and the growth inhibition behavior of microorganisms and to the total fermentation process qualitatively</li> <li>Establish material flow balance equations and solve them to determine the kinetic parameters of different approaches calculate immobilization and activity yields,</li> <li>to select process control strategies (batch, fed-batch, continuity) appropriately and to calculate basic types and evaluate</li> </ul> |   |                  |                    |  |
|  |  |   |                  |                    |  |
|  |  |   |                  |                    |  |
|  |  |   |                  |                    |  |
|  |  |   |                  |                    |  |
| Personal Competence  |  |   |                  |                    |  |
| Social Competence  | After completion of this module participants should be able to debate technical questions in small teams to enhance the ability take position to their own opinions and increase their capacity for teamwork.  |   |                  |                    |  |
| Autonomy   | After completion of this module participants are able to aquire new sources of knowledge and apply their knowledge to previou unknown issues and to present these.   |   |                  |                    |  |

| <b>Educational Objectives</b>     | After taking part successfully, students have reach  | ed the following learning results                 |                   |                     |
| <b>Professional Competence</b>    |  |   |                   |                     |
| Knowledge                         | Students are familiar with different cycle processes | s like Joule, Otto, Diesel, Stirling, Seiliger ar | nd Clausius-Rank  | ine. They are able  |
|                                   | derive energetic and exergetic efficiencies and l    | know the influence different factors. The         | y know the diffe  | erence between a    |
|                                   | clockwise and clockwise cycles (heat-power cycle,    | cooling cycle). They have increased knowl         | edge of steam cy  | cles and are able   |
|                                   | draw the different cycles in Thermodynamics rela     | ated diagrams. They know the laws of g            | as mixtures, esp  | ecially of humid    |
|                                   | processes and are able to perform simple combus      | tion calculations. They are provided with b       | asic knowledge    | in gas dynamics a   |
|                                   | know the definition of the speed of sound and know   | v about a Laval nozzle.                           |                   |                     |
|                                   |  |   |                   |                     |
|                                   |  |   |                   |                     |
| Skills                            | Students are able to use thermodynamic laws for t    | the design of technical processes. Especial       | ly they are able  | to formulate ener   |
|                                   | exergy- and entropy balances and by this to optim    | nise technical processes. They are able to        | perform simple s  | safety calculations |
|                                   | regard to an outflowing gas from a tank. They        | are able to transform a verbal formulate          | ed message into   | an abstract forr    |
|                                   | procedure.   |   |                   |                     |
|                                   |  |   |                   |                     |
|                                   |  |   |                   |                     |
|                                   |  |   |                   |                     |
|                                   |  |   |                   |                     |
| Personal Competence               |  |   |                   |                     |
| Social Competence                 | The students are able to discuss in small groups an  | nd develop an approach.                           |                   |                     |
| Autonomy                          | Students are able to define independently tasks, to  | a get new knowledge from existing knowled         | dge as well as to | find ways to use t  |
| Autonomy                          | knowledge in practice.                               | get new knowledge from existing knowled           | age as well as to | illia ways to use t |
|                                   | knowledge in practice.                               |   |                   |                     |
|                                   |  |   |                   |                     |
|                                   |  |   |                   |                     |

| Educational Objectives                      | After taking part successfully, students have r   | eached the following learning results  |  |  |
| Professional Competence                     |   |  |  |  |
| Knowledge                                   | Students are able to explain fundamenta electromagnetic fields. They can assess the p regard to respective sources. They can desc solutions for simple fields. The students are a able to explicate these.  | rincipal behavior and characteristics of qua<br>ribe the properties of complex electromagr | sistationary and fully<br>netic fields by mean | y dynamic fields with<br>s of superposition of |
| Skills                                      | Students are able to apply a variety of procedures in order to solve the diffusion and the wave equation for general time-dependen field problems. They can assess the principal effects of given time-dependent sources of fields and analyze these quantitatively. They can deduce meaningful quantities for the characterization of fully dynamic fields (wave impedance, skin depth, Poynting-vector, radiation resistance, etc.) from given fields and interpret them with regard to practical applications.   |  |  |  |
| Personal Competence Social Competence       | Students are able to work together on subject during exercise sessions).  | related tasks in small groups. They are abl  | e to present their re                          | sults effectively (e.g.                        |
| Autonomy                                    | Students are capable to gather necessary information from provided references and relate this information to the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as short oral quizzes during the lectures and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between acquired knowledge and ongoing research at the Hambur University of Technology (TUHH), e.g. in the area of high frequency engineering and optics. |  |  |  |

| Educational Objectives   | After taking part successfully, students have reache   | d the following learning results                      |                   |                       |
| Professional Competence  |  |   |                   |                       |
| Knowledge  | The students know and understand the fundamental building blocks of a communications system. They can describe and analyse the individual building blocks using knowledge of signal and system theory as well as the theory of stochastic processes. The are aware of the essential resources and evaluation criteria of information transmission and are able to design and evaluate a basic communications system. |   |                   |                       |
| Skills   | The students are able to design and evaluate a basic communications system. In particular, they can estimate the required resources in terms of bandwidth and power. They are able to assess essential evaluation parameters of a basic communications system such as bandwidth efficiency or bit error rate and to decide for a suitable transmission method.   |   |                   |                       |
| Personal Competence  |  |   |                   |                       |
| Social Competence  | The students can jointly solve specific problems.  |   |                   |                       |
| Autonomy   | The students are able to acquire relevant inform knowledge during the lecture period by solving tuto   |   | -                 | ontrol their level of |

| Title                              | Typ Hrs/wk CP   |
| Implants and Fracture Healing (L03 | 76) Lecture 2 3   |
| Module Responsible                 | Prof. Michael Morlock   |
| Admission Requirements             | None  |
| Recommended Previous               | It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".  |
| Knowledge                          |   |
| <b>Educational Objectives</b>      | After taking part successfully, students have reached the following learning results  |
| Professional Competence            |   |
| Knowledge                          | The students can describe the different ways how bones heal, and the requirements for their existence.  |
|                                    | The students can name different treatments for the spine and hollow bones under given fracture morphologies.  |
| Chille                             | The abundants can determine the forces acting within the bursan hadrounder guest attained and a new file account in a   |
| SKIIIS                             | The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.                                    |
| Personal Competence                |   |
| Social Competence                  | The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.   |
| 4                                  |   |
| Autonomy                           | The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.   |

| Content                                     | Topics to be covered include:  |
|   | Introduction (history, definitions, background importance)                                   |
|   | 2. Bone (anatomy, properties, biology, adaptations in femur, tibia, humerus, radius)         |
|   | 3. Spine (anatomy, biomechanics, function, vertebral bodies, intervertebral disc, ligaments) |
|   | 3.1 The spine in its entirety  |
|   | 3.2 Cervical spine   |
|   | 3.3 Thoracic spine   |
|   | 3.4 Lumbar spine   |
|   | 3.5 Injuries and diseases  |
|   | 4. Pelvis (anatomy, biomechanics, fracture treatment)  |
|   | 5 Fracture Healing   |
|   | 5.1 Basics and biology of fracture repair  |
|   | 5.2 Clinical principals and terminology of fracture treatment                                |
|   | 5.3 Biomechanics of fracture treatment   |
|   | 5.3.1 Screws   |
|   | 5.3.2 Plates   |
|   | 5.3.3 Nails  |
|   | 5.3.4 External fixation devices  |
|   | 5.3.5 Spine implants   |
|   | 6.0 New Implants   |

| Title                              | Typ Hrs/wk CP  |
| Introduction to Physiology (L0385) | Lecture 2 3  |
| Module Responsible                 | Dr. Roger Zimmermann   |
| Admission Requirements             | None   |
| Recommended Previous               | None   |
| Knowledge                          |  |
| <b>Educational Objectives</b>      | After taking part successfully, students have reached the following learning results   |
| <b>Professional Competence</b>     |  |
| Knowledge                          | The students can   |
|                                    | describe the basics of the energy metabolism;  |
|                                    | <ul> <li>describe the basis of the chergy includes in selected fields of muscle, heart/circulation, neuro- and sensory physiology.</li> </ul>  |
|                                    |  |
| Skills                             | The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, developmen   |
|                                    | of forces and vital functions) and relate them to similar technical systems.   |
| Personal Competence                |  |
| Social Competence                  | The students can conduct discussions in research and medicine on a technical level.  |
|                                    | The students can find solutions to problems in the field of physiology, both analytical and metrological.  |
| Autonomy                           | The students can derive answers to questions arising in the course and other physiological areas, using technical literature, b  |
|                                    | themselves.  |
| Workload in Hours                  | Independent Study Time 62, Study Time in Lecture 28  |

|   |  |
|   |  |
|   |  |
|   |  |
| Educational Objectives                            | After taking part successfully, students have reached the following learning results   |
| Professional Competence                           | Students are able to give a summary of the technical details of projects in the area of electrical engineering and illustrate  |
| Knowieuge   | respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate   |
|   | technical language. They can explain the typical process of solving practical problems and present related results.  |
|   |  |
|   |  |
| Skills  | The students can transfer their fundamental knowledge on electrical engineering to the process of solving practical problems.  |
|   | They identify and overcome typical problems during the realization of projects in the context of electrical engineering. Students are  |
|   | able to develop, compare, and choose conceptual solutions for non-standardized problems.   |
|   |  |
| Davisanal Commetence                              |  |
| Personal Competence Social Competence             | Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the  |
| Social competence                                 | context of electrical engineering. They are able to effectively present and explain their results alone or in groups in front of a   |
|   | qualified audience. Students have the ability to develop alternative approaches to an electrical engineering problem   |
|   | independently or in groups and discuss advantages as well as drawbacks.  |
|   |  |
|   |  |
| Autonomy  | Students are capable of independently solving electrical engineering problems using provided literature. They are able to fill gaps  |
|   | in as well as extent their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can<br>meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts. |
|   | meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.  |

| Module M1332: BIO I:             | Experimental Methods in Biomechanics   |  |  |  |
|----------------------------------|--|--|--|--|
| Courses                          |  |  |  |  |
| Title                            | Typ Hrs/wk CP  |  |  |  |
| Experimental Methods in Biomecha | nics (L0377) Lecture 2 3   |  |  |  |
| Module Responsible               | Prof. Michael Morlock  |  |  |  |
| Admission Requirements           | None   |  |  |  |
| Recommended Previous             | It is recommended to participate in "Implantate und Frakturheilung" before attending "Experimentelle Methoden".                                  |  |  |  |
| Knowledge                        |  |  |  |  |
| Educational Objectives           | After taking part successfully, students have reached the following learning results   |  |  |  |
| Professional Competence          |  |  |  |  |
| Knowledge                        | The students can describe the different ways how bones heal, and the requirements for their existence.   |  |  |  |
|                                  | The students can name different treatments for the spine and hollow bones under given fracture morphologies.                                     |  |  |  |
|                                  | The students can describe different measurement techniques for forces and movements, and choose the adequate technique for a                     |  |  |  |
|                                  | given task.  |  |  |  |
|                                  |  |  |  |  |
| Skills                           | The students can describe the basic handling of several experimental techniques used in biomechanics.  |  |  |  |
| Personal Competence              |  |  |  |  |
| Social Competence                | The students can, in groups, solve basic experimental tasks.   |  |  |  |
|                                  |  |  |  |  |
| Autonomy                         | The students can, in groups, solve basic experimental tasks.   |  |  |  |
| Workload in Hours                | Independent Study Time 62, Study Time in Lecture 28  |  |  |  |
| Credit points                    | 3  |  |  |  |
| Course achievement               | None   |  |  |  |
| Examination                      | Written exam   |  |  |  |
| Examination duration and         | 90 min   |  |  |  |

|---|---|--|
| Courses                                       |   |  |
| Title   | Typ Hrs/wk CP   |  |
| Module Responsible                            | Dozenten der Mathematik   |  |
| Admission Requirements                        | None  |  |
| Recommended Previous                          | Analysis for Technomathematicians, Higher Analysis, Linear Algebra for Technomathematicians, Numerical Mathematics,   |  |
| Knowledge                                     | Mathematical Stochastics, Mechanics für Technomathematicians, Elektrical Engineering for Technomathematicians, Procedural   |  |
|   | Programming, Objectoriented Programming, Algorithms and Data Structures   |  |
|   |   |  |
|   |   |  |
|   |   |  |
|   |   |  |
| Educational Objectives                        | After taking part successfully, students have reached the following learning results  |  |
| Professional Competence                       |   |  |
| Knowledge                                     | Students are able to evaluate in which cases the use of technomathematical knowledge can help to solve practical problems. For  |  |
|   | relevant questions, they have the necessary background and appropriate technical language at their disposal. They know the  |  |
|   | typical process of solving practical problems and are able to present related results.  |  |
|   |   |  |
| Ckilla  | The students can transfer their fundamental lineuladus cancering mathematics and consultar science to the   |  |
| SKIIIS  | The students can transfer their fundamental knowledge concerning mathematics, engineering and computer science to the process of solving practical problems. They are able to build mathematical models for relevant, non-standard problems, they can |  |
|   | develop and implement algorithmic strategies, and are able to document and present their results.   |  |
|   |   |  |
| Personal Competence                           |   |  |
| Social Competence                             | Students are able to cooperate with partners from outside mathematics (e.g. in industry) to develop models and solutions for  |  |
|   | practical problems. They can present and explain these in front of a qualified audience. Students have the ability to develop alternative approaches and can discuss their advantages as well as their drawbacks.                                     |  |
|   | alternative approaches and can discuss their advantages as well as their drawbacks.   |  |
|   |   |  |
| Autonomy                                      | Students are capable of independently identifying practical problems that are suitable for the use of technomathematical methods  |  |
|   | and results. They can work their way into such problems, and are able to develop solutions under the guidance of their  |  |
|   | supervisor. They are able to fill in gaps as well as to extend their knowledge using provided sources. Furthermore, they can  |  |
|   | meaningfully extend given problems and solve them by means of concepts and approaches that they have to develop   |  |
|   | independently.  |  |
|   |   |  |

## **Thesis**

| Module M-001: Bachelor Thesis |   |  |
|-------------------------------|---|--|
| Courses                       |   |  |
| Title                         | Typ Hrs/wk CP   |  |
| Module Responsible            | Professoren der TUHH  |  |
| Admission Requirements        | According to General Regulations §21 (1):   |  |
|                               | According to defleral Regulations 921 (1).  |  |
|                               | At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.   |  |
| Recommended Previous          |   |  |
| Knowledge                     |   |  |
| Educational Objectives        | After taking part successfully, students have reached the following learning results  |  |
| Professional Competence       |   |  |
| Knowledge                     | The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course   |  |
|                               | of study (facts, theories, and methods).  |  |
|                               | On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of  |  |
|                               | opening up and establishing links with extended specialized expertise.  |  |
|                               | The students are able to outline the state of research on a selected issue in their subject area.   |  |
| Skills                        | The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve  |  |
|                               | subject-related problems.   |  |
|                               | With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on  |  |
|                               | technical issues, and develop solutions.  |  |
|                               | The students can take up a critical position on the findings of their own research work from a specialized perspective.   |  |
|                               |   |  |
|                               |   |  |
| Personal Competence           |   |  |
| Social Competence             | Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and  |  |
|                               | in a structured way.  |  |
|                               | • The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the  |  |
|                               | addressees. In doing so they can uphold their own assessments and viewpoints convincingly.  |  |
|                               |   |  |
| Autonomy                      |   |  |
|                               | The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a  |  |
|                               | <ul> <li>specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific</li> </ul> |  |
|                               | problem.  |  |
|                               | The students can apply the essential techniques of scientific work to research of their own.  |  |
