Thesis	71
Module M-001: Bachelor Thesis	71

Program description

Content

The TUHH Bachelor study programme in Energy and Environmental Engineering prepares the students not only for a professional career but also for a relevant postgraduate Master study. During the study the necessary fundamental methodological knowledge for this purpose is conveyed. The learning outcomes of the study programme are achieved by combining fundamental and advanced Modules from both Mechanical Engineering and Process Engineering.

The graduates after completion of the study programme possess a wide spectrum of fundamental knowledge in the subject areas of energy systems and environmental engineering. They are thus in a position to articulate the fundamental principles of modelling and simulating energy conversion systems and of energy, mass and impulse transport processes, while they pay particular attention to sustainability.

The graduates are able to analyse energy processes, evaluate the energetically and economically optimal operation of energy systems, draw balances of energy plants and comprehend the technical and economic interplay between conventional and renewable energy technologies. The graduates are in a position to describe the construction, operation and organisation of power plant processes and to explain the constructive characteristics of energy systems and their components. They can also explain the control measures necessary. They can identify the environmental impact in general and develop specific strategies for mitigating the various environmental pressures emanating from industrial plant.

Overall the graduates command relevant methods and specialised tools for the subject areas and can apply them in energy systems, by using appropriate programming software from the actual professional praxis.

Besides these specialised technical skills, the graduates obtain during the study programme also personal competences. This enables them to communicate with both specialists and lay persons in German and English, to prepare as a team solutions to technical problems and present the results of their work to others in an appropriate to the end-user manner. Through projects within the study programme the graduates are able to organise themselves independently, define partial tasks and obtain from appropriate literature sources the necessary information for their particular work.

Furthermore, the graduates can evaluate technical issues in the light of the larger societal context and estimate the non-technical consequences of engineering activities.

The graduates are in a position to undertake responsibly engineering tasks in various activity fields within energy and environmental engineering and carry them out competently. They furthermore acquire the necessary scientific knowledge for a subsequent, more detailed Master study.

Core qualification

The graduates gain a fundamental knowledge of the physical and engineering basics of Mathematics, Physics, Chemistry, Mechanics, Thermodynamics and Materials Science. This enables them to understand phenomena present in Energy Systems, Environmental Engineering and associated disciplines. They understand the fundamental principles of energy and environmental technology for modelling and simulating energy conversion and energy, material and impulse transport processes under consideration of sustainability. They are proficient also in measurement, regulation and control techniques as well as constructive methods.

The graduates are able to:

П

- formulate and solve technical problems from first principles:
- deepen systematically into processes and methods of their discipline, in order to analyse and evaluate them;
- choose and apply appropriate analysis, modelling, simulation and optimisation methods;
 perform literature surveys and use for their studies databases and other information sources;
- independently plan and perform experiments and interpret the results;
- successfully embark in a Master degree in Energy and Environmental Engineering.

The graduates can perform competently and responsibly various engineering tasks in Energy and Environmental Engineering and become the right to carry the professional title of "Engineer" along the lines of the engineering regulations of the German Federal Lands (IngG).

Module M0569: Engineeri	ng Mechanics I			
Courses				
Title		Тур	Hrs/wk	CP
Engineering Mechanics I (L0187)		Lecture	3	3
Engineering Mechanics I (L0190)		Recitation Section (small)	2	3
Module Responsible	Prof. Uwe Weltin			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in mathematics and physics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	wing learning results		
Professional Competence				
Knowledge	Students are able to describe fundamental connections, theor	ies and methods to calculate forces in st	atically determined m	nounted systems of rigid
	bodies and fundamentals in elastostatics.			
Skills	Students are able to apply theories and methods to calculate	forces in statically determined mounted	systems of rigid bodi	es and fundamentals of
	elastostatics.			
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mixed groups	s, learning and broadening teamwork ab	ilities.	
Autonomy	Students are able to solve individually exercises related to this	s lecture.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6

Recommended Previous Knowledge Educational Objectives Professional Competence	None None
Knowledge Educational Objectives Professional Competence	None
Educational Objectives Professional Competence	
Professional Competence	After taking part successfully, students have reached the following learning results
	The Non-technical Elective Study Area
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance management, collaboration and professional and personnel management competences. The department implements these training object its teaching architecture , in its teaching and learning arrangements , in teaching areas and by means of teaching offerings in which st can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are por two different catalogues for nontechnical complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical depar follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development of competences. provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semes view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealin interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in s courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studie sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses wi the opportunity to learn about business management and start-ups in a goal-oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-or communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These difference reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scienti theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership funct Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 locate selected specialized areas with the relevant non-technical mother discipline, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning a different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	 apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, to handle simple questions in aforementioned scientific disciplines in a successful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relation the subject.
Personal Competence	Personal Competences (Social Skills)

	 to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	• to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	 to communicate a nontechnical item in a competent way in writen form or verbaly
	• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Linear Algebra I (L0914)		Recitation Section (large)	1	1
Module Responsible	Prof. Anusch Taraz			
Admission Requirements	none School mathematics			
Recommended Previous Knowledge	School mathematics			
Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence				
Knowledge				
-	 Students can name the basic concepts in analysis and I 	inear algebra. They are able to explain t	nem using appropr	iate examples.
	 Students can discuss logical connections between the 	ese concepts. They are capable of illus	strating these conr	ections with the help of
	examples.			
	They know proof strategies and can reproduce them.			
Skills				
	Students can model problems in analysis and linear	algebra with the help of the concepts	studied in this cou	irse. Moreover, they are
	capable of solving them by applying established metho	ds.		
	 Students are able to discover and verify further logical of 	connections between the concepts studie	d in the course.	
	• For a given problem, the students can develop and exe	cute a suitable approach, and are able to	critically evaluate	the results.
Poroanal Competence				
Personal Competence				
Social Competence	 Students are able to work together in teams. They are c 	apable to use mathematics as a commor	language.	
	 In doing so, they can communicate new concepts a 			eover, they can design
	examples to check and deepen the understanding of th		01	, , , ,
Autonomy	Students are capable of checking their understanding	of complex concepts on their own. They	can specify open	questions precisely and
	know where to get help in solving them.	· · · · · · · · · · · · · · · · · · ·		·····
	 Students have developed sufficient persistence to be at 	ble to work for longer periods in a goal-or	iented manner on l	hard problems

Courses				
Title		Тур	Hrs/wk	СР
Fundamentals of Mechanical Engineerin	na Desian (L0258)	Lecture	2	3
Fundamentals of Mechanical Engineerin		Recitation Section (large)	2	3
Module Responsible	Prof. Dieter Krause			
Admission Requirements	None			
Recommended Previous				
Knowledge	Basic knowledge about mechanics and production e	ngineering		
	Internship (Stage I Practical)			
Educational Objectives	After taking part successfully, students have reached the foll	owing learning results		
Professional Competence				
Knowledge	After passing the module, students are able to:			
	 explain basic working principles and functions of ma 	chine elements		
	 explain basic working principles and functions of ma explain requirements, selection criteria, application s 		machine elemente	indicate the background
	of dimensioning calculations.		indonne cientento,	
Skills	After passing the module, students are able to:			
	accomplish dimensioning calculations of covered machine elements,			
	 transfer knowledge learned in the module to new requirements and tasks (problem solving skills), 			
	 recognize the content of technical drawings and school 	ematic sketches,		
	• technically evaluate basic designs.			
Personal Competence				
Social Competence				
Social Competence	• Students are able to discuss technical information in	the lecture supported by activating metho	ds.	
Autonomi				
Autonomy	Students are able to independently deepen their acc	uired knowledge in exercises.		
	Students are able to acquire additional knowledge a	and to recapitulate poorly understood con	tent e.g. by using the	video recordings of the
	lectures.

Knowledge				
Educational Objectives	After taking part successfully, students have re	ached the following learning results		
Professional Competence				
Skills	describe the respective synthesis routes. Fundamental reaction mechanisms like nucleophilic substitution, eliminations, additions and aromatic substitution can be described. Students are capable to describe in general modern reaction mechanisms. Students are able to use basics of organic chemistry for the design of technical processes. Especially they are able to formulate basic routes to synthesize small organic molecules and by this to optimise technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.			
	The students are able to discuss in small groups and develop an approach for given tasks. Students are able to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Fitle		Тур	Hrs/wk	CP
Fundamentals of Materials Science I (L	085)	Lecture	2	2
	dvanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture	2	2
Physical and Chemical Basics of Materi	als Science (L1095)	Lecture	2	2
Module Responsible	Prof. Jörg Weißmüller			
Admission Requirements	None			
Recommended Previous Knowledge	Highschool-level physics, chemistry und mathematics			
Educational Objectives	After taking part successfully, students have reached the following	learning results		
Professional Competence				
Knowledge	The students have acquired a fundamental knowledge on meta Fundamental knowledge here means specifically the issues of at and mechanical properties. The students know about the key approaches for characterizing specific properties. They are able t of nature.	omic structure, microstructure, aspects of characterization	, phase diagrams, phase tra methods for materials ar	ansformations, corro
Skills	The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to pl transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and materials microstructure, and they can account for the impact of microstructure on the material's behavior.			
Personal Competence

Content	In the lab, the content from the lecture is practiced and deepened with practical assignments. Every week one or two programming tasks are assigned. These are solved by the students on computers independently, coached by a tutor.

Module M0536: Fundamer	tals of Fluid Mechanics			
Courses				
Title		Тур	Hrs/wk	СР
Fundamentals of Fluid Mechanics (L009	1)	Lecture	2	4
Fluid Mechanics for Process Engineering	g (L0092)	Recitation Section (large)	2	2
Module Responsible	Prof. Michael Schlüter			
Admission Requirements	None			
Recommended Previous	Mathematics I+II+III			
Knowledge	Technical Mechanics I+II			
	Technical Thermodynamics I+II			
	Working with force balances			
	Simplification and solving of partial diffe	rential equations		
	Integration			
Educational Objectives	After taking part successfully, students have rea	ached the following learning results		
Professional Competence				
Knowledge	Students are able to:			
	avalain the difference between different	tunos of flow		
	 explain the difference between different give an overview for different application 	types of now ns of the Reynolds Transport-Theorem in process engi	neering	
		and Navier-Stokes-Equation by using physical bound	-	
01:11-			2	
Skills	The students are able to			
	describe and model incompressible flow	vs mathematically		
		mechanics by simplifications to archive quantitative so	lutions e.g. by integra	ation
	notice the dependency between theory			
	 use the learned basics for fluid dynamic 	al applications in fields of process engineering		
Personal Competence				
Social Competence	The students			
	 are capable to gather information from s 	subject related, professional publications and relate that	at information to the c	ontext of the lecture :
		I tasks in small groups. They are able to present their r		
	group exercises)		,	0 (0 0
	are able to work out solutions for exercise	ses by themselves, to discuss the solutions orally and t	o present the results.	
Autonomi	The students are ship to			
Autonomy	The students are able to			
	 search further literature for each topic ar 	nd to expand their knowledge with this literature,		
	 work on their exercises by their own and 	d to evaluate their actual knowledge with the feedback		
Workload in Hours	Independent Study Time 124, Study Time in Le	cture 56

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Content	
Content	 Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management
	Important definitions from Management,
	Developing Objectives for Business, and their relation to important Business functions
	 Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation Management Marketing and Sales
	Cross-sectional Functions, e.g. Organisation, Human Ressource Management, Supply Chain Management, Information Management
	 Definitions as information, information systems, aspects of data security and strategic information systems
	Definition and Relevance of innovations, e.g. innovation opporunities, risks etc.
	Relevance of marketing, B2B vs. B2C-Marketing
	 different techniques from the field of marketing (e.g. scenario technique), pricing strategies
	important organizational structures
	basics of human ressource management
	 Introduction to Business Planning and the steps of a planning process
	Decision Analysis: Elements of decision problems and methods for solving decision problems
	Selected Planning Tasks, e.g. Investment and Financial Decisions
	 Introduction to Accounting: Accounting, Balance-Sheets, Costing
	Relevance of Controlling and selected Controlling methods
	Important aspects of Entrepreneurship projects

	The experiment demonstrates the effect of ionic strength on the binding of dissolved zinc and phosphate by soil surfaces. From the results it can be inferred that the potential of soil surfaces is modified by the application of salt. This has consequences for the retention of nutrients and pollutants. The experiment is carried out with iron oxide rich soil material. Within the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.

Module Responsible	Prof. Irina Smirnova			
Admission Requirements	None			
Recommended Previous	Basic knowledge: Technical Thermodynamics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge				
	The students are capable of explaining qua	litative and determining quantitative heat tran	nsfer in procedural	apparatus (e. g. he
	exchanger, chemical reactors).			
	They are capable of distinguish and characteriate the surged as distinguish as d	ize different kinds of heat transfer mechanisms	namely heat condu	iction, heat transfer ai
	thermal radiation.	abusiant basis for more transfer in detail and	to departing manage	transfer qualitative a
	The students have the ability to explain the		to describe mass	transier qualitative at
	quantitative by using suitable mass transfer the		inked processes in a	dotoil
	They are able to depict the analogy between he		inkeu processes in c	Jelan.
Skills				
	The students are able to set reasonable system		sing the gained kno	owledge and to balan
	the corresponding energy and mass flow, respe	•		
	They are capable to solve specific heat transfer	r problems (e.g. heated chemical reactors, temp	erature alteration in	n fluids) and to calcula
	the corresponding heat flows.			
	Using dimensionless quantities, the students ca			
	They are able to distinguish between diffusion		fer. They can use	this knowledge for t
	description and design of apparatus (e.g. extrac			
	In this context, the students are capable to cho		I mass exchanger to	or a specific applicati
	considering their advantages and disadvantage			
	In addition, they can calculate both, steady-state			
		wledge obtained in this course with knowlegde		in particular the cours
	thermodynamics, fluid mechanics and chemical	process engineering) to solve concrete technica	ai problems.	
D 10 1				
Personal Competence				
Social Competence	• The students are capable to work on subject-sp	ecific challenges in teams and to present the re-	sults orally in a reas	onable manner to tuto
	and other students.		,	
Autonomy				
hatonomy	The students are able to find and evaluate nece	essary information from suitable sources		
	They are able to prove their level of knowledge	e during the course with accompanying proced	ure continuously (cl	licker-system, exam-l
	assignments) and on this basis they can control	their learning processes.

Course work	Compulsory attendence of the colloquia of all experiments and compulsory report.
Lecturer	Prof. Irina Smirnova
Language	
Cycle	
Content	The students work on eight different experiments in this practical course. For every one of the eight experiments, a colloquium takes place in which
	the students explain and discuss the theoretical background and its translation into practice with staff and fellow students.
	The students work small groups with a high degree of division of labor. For every experiment, the students write a report. They receive instructions
	in terms of scientific writing as well as feedback on their own reports and level of scientific writing so they can increase their capabilities in this
	area.
	Topics of the practical course:
	 Introduction in the thermal process engineering and to the main features of separation processes
	Simple equilibrium processes, several steps processes
	Distillation of binary mixtures, enthalpy-concentration diagrams
	Extractive and azeotrope distillation, water vapor distillation, stepwise distillation
	Extraction: separation ternary systems, ternary diagram
	Multiphase separation including complex mixtures
	 Designing of separation devices without discrete stages
	Drying
	Chromatographic separation processes
	Membrane separation
	Energy demand of separation processes
	Advance overview of separation processes
	Selection of separation processes

	 "Fluid Mechanics" 			
Educational Objectives	After taking part successfully, students have reache	ed the following learning results		
Professional Competence				
Knowledge	The students can evaluate the development of the	e electricity demand and the energy conversion rou	tes in the thermal po	ower plant, describe t
	various types of power plant and the layout of	the steam generator block and determine the op	eration characterist	ics of the power pla
		leaning apparatus and other environmental protec		-
	possibilities of conventional fossil-fuelled power p Storage.	lants and regenerative (solar, wind) power plants o	r plants equipped w	ith Carbon Capture a
		ples, operation and design of turbomachinery. Th issions and the resulting climatic effects. They are a		
	plant operation from interconnecting conventional power plants and renewable energy sources and can name the optimal technical options for providing security of supply and network stability, also with economics considered.			
Skills	The students are able using theories and method	s of the energy technology from fossil fuels and bas	ed on deen knowle	dae on the function a
Okilis		entify basic associations in the production of heat an		-
		posure to the inherent interconnections between h		
		o develop realistic optimal concepts for the environment		
	the production of heat. From the technical basics th	e students become the ability to follow better the de	iberations on the el	ectricity mix composit
	within the energy-political triangle (economy, secu	re supply and environmental protection).		
	The students are able to highlight aspects of the	design and development of power plant cycles wi	th the specialised of	offwara quita EBSII (
			in the specialised a	
	Professional TM and to independently program sim			
	The students are able to do simplified calculations	of turbo machinery as either an overall plant or as in	dividual stages.	
Personal Competence				
Social Competence	The students are able to solve subject-specific exe	rcises in smalls groups and can present their comm	on results orally.	
	The students are able to analyze suitable technica	I alternatives to reduce the environmental and socia	al footprint of their er	ngineering activities a
	to support the energy revolution effectively.			0 0

ourse L0206: Gas and Steam Por	ver Plants
Тур	Lecture
Hrs/wk	
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Alfons Kather
	DE
Language	
Cycle	
Content	In the 1 st part of the lecture an overview on thermal power plants is offered, including:
	Electricity demand and Forecasting
	Thermodynamic fundamentals
	Energy Conversion in thermal power plants
	Types of power plant
	Layout of the power plant block
	Individual elements of the power plant
	Cooling systems
	Flue gas cleaning
	Operation characteristics of the power plant
	Construction materials for power plants
	Location of power plants
	Solar shermal plants/geothermal plants/Carbon Capture and Storage plants
	These are complemented in the 2 nd part of the module by the more specialised issues:
	Energy balance of a fluid-flow machine
	Theory of turbine and compressor stage
	Equal and positive pressure blading
	Flow losses
	Characteristic numbers
	Axial and radial design
	Design features
	Hydraulic fluid-flow machines
	Pump and water turbine designs
	Design examples of reciprocating engines and turbomachinery
	Steam power plants
	Gas turbine systems
	The environmental impact of acidification, fine particulate or CO2 emissions and the resulting climatic effects are a special focus of the lecture a
	the lecture hall exercise. The challenges in plant operation from interconnecting conventional power plants and renewable energy sources
	discussed and the technical options for providing security of supply and network stability are presented, also under consideration of o effectiveness. In this critical review, focus is especially placed on the compatibility of the different solutions with the environment and climate. W this, the awareness for the responsibility of an engineer's own actions are emphasized and the potential extent of the different solutions present
	clearly.
	A multi-day excursion within the framework of the lecture is planned for those students that are interested. The students thus get direct contact we the whole subject field of gas and steam power plants. Through discussions with plant personnel the students are able to obtain an overview daily operation problems and their solution approach.
	This activity hinges, however, upon the availability of support financing and as such it cannot always be guaranteed.

troduction to Control Systems (L0654		2	4	
troduction to Control Systems (L0655) Recitation Section (small) 2	2	2	
Module Responsible	Prof. Herbert Werner			
Admission Requirements	none			
Recommended Previous	Representation of signals and systems in time and frequency domain, Laplace transform			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge				
	Students can represent dynamic system behavior in time and frequency domain, and can in particular experimentation of the system of the s	explain proper	ties of first and seco	
	order systems			
	They can explain the dynamics of simple control loops and interpret dynamic properties in terms of freq	uency respons	se and root locus	
	They can explain the Nyquist stability criterion and the stability margins derived from it.			
	They can explain the role of the phase margin in analysis and synthesis of control loops			
	They can explain the way a PID controller affects a control loop in terms of its frequency response			
	They can explain issues arising when controllers designed in continuous time domain are implemented	d digitally		
Skills				
	Students can transform models of linear dynamic systems from time to frequency domain and vice versa	а		
	They can simulate and assess the behavior of systems and control loops			
	They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules			
	 They can analyze and synthesize simple control loops with the help of root locus and frequency respon 			
	 They can calculate discrete-time approximations of controllers designed in continuous-time and use it for 	or digital imple	ementation	
	They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks			
Personal Competence

Admission Requirements	None			
Recommended Previous	keine			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	After successful completion of the module students	are able to		
	 name and explain processes and unit-operative 	ations of solids process engineering.		
	 characterize particles, particle distributions a 			
Skills	Students are able to			
	• • • • •	ses for solids processing according to the desired	solids properties of t	ne product
	 asses solids with respect to their behavior in document their work scientifically. 	solids processing steps		
	 document their work scientifically. 			
Personal Competence				
Social Competence	The students are able to discuss scientific topics o	rally with other students or scientific personal and	d to develop solution	is for technical-scientifi
	issues in a group.			
Autonomy

Knowledge				
Educational Objectives	After taking part successfully, students have reach	ed the following learning results		
Professional Competence				
Knowledge	With completion of this module, the students can p	provide an overview of characteristics of energy s	ystems and their econo	mic efficiency. They
	explain the issues occurring in this context. Furth	ermore, they can explain details of power generation	ation, power distributior	and power trading
	regard to subject-related contexts. The students ca	an explain these aspects, which are applicable to	many energy systems i	n general, especially
	renewable energy systems and critical discuss t	them. Furthermore, the students can explain the	environmental benefi	ts from the use of s
	systems.			
Skills	Students are able to apply methodologies for deta	ailed determination of energy demand or energy	production for various t	ypes of energy syste
	Furthermore, they can evaluate energy systems t	technically, environmentally and economically ar	d design them under o	certain given conditi
	Therefore, they can choose the necessary subject-specific calculation rules, also for not standardized solutions of a problem.			
	The students are able to explain questions and po	ossible approaches to its processing from the fiel	d of renewable energie	es orally and to put the
	them into the right context.			
Personal Competence				
	The students are able to analyze suitable teach	vicel alternatives and to appear them with techn	ical accommission and a	aclogical critoria ur
Social Competence	The students are able to analyze suitable techn			cological criteria ur
	sustainability aspects. This allows them to make a	In effective contribuition to a more sustainable pov	ver supply.	
Autonomy	Students can independently exploit sources, acqu	uire the particular knowledge about the subject ar	ea and transform it to ne	ew questions.
	Independent Study Time 96, Study Time in Lecture	e 84

Admission Requirements				
Recommended Previous	Fundamentals of inorganic/organic chemistry and biol	οαν		
Knowledge		-9)		
Educational Objectives	After taking part successfully, students have reached t	he following learning results		
Professional Competence				
	With the completion of this module the students acqui	re in-depth knowledge of important cause-effer	ct chains of potential e	environmental proble
hitowicage	which might occur from production processes, project			
	are competent in dealing with different methods and		-	
	complexity of these environmental processes as well			
Skills	The students are able to select a suitable method for			ereby they can deve
	suitable solutions for managing and mitigating envi			
	Assessments independently and can apply the softwa			
	have the competence to critically judge research result	ts or other publications on environmental impac	cts.	
Personal Competence				
Social Competence	The students are able to discuss the various technic			
	jointly different solutions and to discuss their theore			
	insights into the multi-layered issues of the environment protection and the concept of sustainability. Their sensitivity and consciousness toward these subjects are raised and which helps to raise their awareness of their future social responsibilities in their role as engineers.			
	these subjects are raised and which helps to raise the	ir awareness of their future social responsibilitie	es in their role as engli	neers.
Autonomy	The students learn to research, process and present			ent scientific work. T
	can solve an environmental problem in a business co	ntext and are able to judge results of other publi	ications.	
Workload in Hours				
Credit points				
Examination	Written exam			
Examination duration and scale	1 hour written exam			
Assignment for the Following

Course L0860: Environmental Ass	ourse L0860: Environmental Assessment	
Тур	Lecture	
Hrs/wk	2	
CP	2	
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28	
Lecturer	Anne Rödl, Dr. Christoph Hagen Balzer	
Language	DE/EN	
Cycle	SoSe	
Content	Contaminants: Impact- and Risk Assessment	
	Environmental damage & precautionary principle: Environmental Risk Assessment (ERA)	
	Resource and water consumption: Material flow analysis	
	Energy consumption: Cumulated energy demand (CED), cost analysis	
	Life cycle concept: Life cycle assessment (LCA)	
	Sustainability: Comprehensive product system assessment , SEE-Balance	
	Management: Environmental and Sustainability management (EMAS)	
	Complex systems: MCDA and scenario method	
Literature	Foliensätze der Vorlesung	
	Studie: Instrumente zur Nachhaltigkeitsbewertung - Eine Synopse (Forschungszentrum Jülich GmbH)	

Course L1054: Environmental Ass	sessment
Тур	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Martin Kaltschmitt
Language	DE
Cycle	SoSe
Content	Presentation and application of free software programs in order to understand the concepts of environmental assessment methods better.
	Within the group exercise students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.
Literature	Power point Präsentationen

Thesis

Courses			
ïtle	Тур	Hrs/wk	CP
Module Responsible	Professoren der TUHH		
Admission Requirements	According to General Regulations §24 (1):		
	At least 126 ECTS credit points have to be achieved in study programme. The examinations I	poard decides on exce	ptions.
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (fac theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up a 		
	establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area 	1.	
Skills	 The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-reliproblems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical iss and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 		
Personal Competence Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience a way. The students can deal with issues in an expert discussion and answer them in a manner tha they can uphold their own assessments and viewpoints convincingly. 		
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of frame. The students are able to identify, open up, and connect knowledge and material necessary for The students can apply the essential techniques of scientific work to research of their own. 	-
