Program description	3
Core qualification	8
Module M0523: Business & Management	8
Module M0524: Nontechnical Elective Complementary Courses for Master	10
Module M0540: Transport Processes	13
Module M0542: Fluid Mechanics in Process Engineering	17
Module M1036: Practical Course on Energy and Environmental Engineering	20
Module M1120: Seminar energy and environmental engineering	22
Specialization Energy and Environmental Engineering	24
Module M0801: Water Resources and -Supply	24
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	28
Module M1037: Steam Turbines in Energy, Environmental and Power Train Engineering	31
Module M0512: Use of Solar Energy	34
Module M0513: System Aspects of Renewable Energies	38
Module M0721: Air Conditioning	42
Module M0749: Waste Treatment and Solid Matter Process Technology	45
Module M0906: Molecular Modeling and Computational Fluid Dynamics	48
Module M0900: Examples in Solid Process Engineering	52
Module M0904: Process Design Project	55
Module M0802: Membrane Technology	57
Module M1294: Bioenergy	60
Module M1287: Risk Management, Hydrogen and Fuel Cell Technology	66
Specialization Energy Engineering	70
Module M0742: Thermal Engineering	70
Module M0511: Electricity Generation from Wind and Hydro Power	73
Module M0641: Steam Generators	79
Module M1000: Combined Heat and Power and Combustion Technology	82
Module M1235: Electrical Power Systems I	86
Specialization Environmental Engineering	89
Module M0830: Environmental Protection and Management	89
Module M0902: Wastewater Treatment and Air Pollution Abatement	93
Module M0874: Wastewater Systems	96
Module M0857: Geochemical Engineering	100
Module M0619: Waste Treatment Technologies	103
Module M0519: Particle Technology and Solid Matter Process Technology	106
Thesis	109
Module M-002: Master Thesis	109

## Program description

---

---

### Content

Building on the competences acquired during the Bachelor study the TUHH Master study program in Energy and Environmental Engineering prepares the graduates for leading roles in the energy producing and consuming

industry, for undertaking environmental protection tasks or for independent research activities. The Master program is characterized by its scientific orientation, focus building and acquisition of effective and structured interdisciplinary work methods. The focal points of the syllabus relate closely with the research subjects of the participating TUHH institutes from the Mechanical Engineering, Process Engineering and Civil Engineering deanships. This reflects the close link between research and teaching and ensures that the contents of the lectures always remain up to date. It also offers possibilities for contributing work to the research of the TUHH, for example within the framework of study projects, seminar themes or the project course.

The Master degree in Energy and Environmental Engineering is based on the fundamental skills acquired in the Bachelor degree with the same name. After a joint familiarization in core competences in energy and environmental engineering, the students have the possibility to specialize by choosing independently lectures from three disciplines: Energy Engineering, Environmental Engineering or Energy and Environmental Engineering.

A further goal of the Master of Energy and Environmental Engineering is to prepare the graduates by also strengthening interpersonal competences through practice in technical communication. The theoretical knowledge is supplemented by practical laboratory courses. In addition, skills are conveyed that allow a subsequent appointment in a responsible position in industry or research.

## Career prospects

The operating conditions of the energy market and the environmental protection are subjected to increasingly accelerating changes. To account for this in the degree study, special attention is given to convey future-proof knowledge. This enables the students to be easily adaptable to market changes, so that also in future developments they can react autonomously, adapt successfully to their desired placement targets and extend independently their professional horizons. Towards this aim the Master of Energy and Environmental Engineering covers a wide scientific and methodological advanced curriculum.

After successful graduation the graduates are in a position to interpret in depth methods and techniques from the core disciplines of thermodynamics, fluid mechanics and process engineering. They also possess well-founded knowledge in energy engineering and environmental engineering, encompassing both conventional and renewable energy sources. The theoretical skills are complemented by practical assignments within laboratory courses and seminars. The graduates are in a position to utilize specialist methods and tools, to draw whole process balances and design the corresponding apparatus. They can identify the environmental impact in general and develop specific strategies for mitigating the various environmental pressures emanating from industrial plant. The students become practice in critically studying a problem from their discipline, classifying it within their subject area and orally elaborate suitable solution procedures.

The graduates are in a position to undertake responsibly engineering tasks in various fields of activity within energy and environmental engineering and carry them out competently. They can perform engineering work in industry or embark into a research career.

Continuous interaction with Industry within the framework of joint research or through further contact opportunities enables to closely follow the increasingly accelerating changes in qualification profiling demanded by the market. This facilitates the continuous adjustment of the curricular contents of the Master study in Energy and Environmental Engineering to the prevailing market conditions.

## Learning target

The students acquire advanced and comprehensive knowledge in engineering, mathematical and natural sciences that can be used for scientific work in Energy Engineering, Environmental Engineering or neighboring disciplines. They have developed a critical awareness of the most modern developments in their subject area and on the basis of this they can then perform responsibly in professional activities and the society as a whole. The key competences for practical engineering assignments, obtained already in the Bachelor study program, are in the Master study program further strengthened.

## Knowledge

Knowledge consists of facts, basic fundamentals and theories, which are conveyed during the Master of Energy and Environmental Engineering in the following manner:

- The graduates obtain the capability to describe at greater depth methods and procedures from the core subjects Thermodynamics, Fluid Mechanics and Process Engineering, as an enabling basis for embarking in more advanced courses in energy and environmental engineering. The latter cover conventional as well as renewable energy.
- The specialist theoretical knowledge of the graduates is strengthened through practical assignments (laboratory practical courses and seminars).
- The graduates can describe the structure, operation and organization of conventional and regenerative energy plants and describe the construction characteristics of their components. They are competent to identify the facets for an energetically and economically optimal operation of energy systems, while also considering the additional criteria for conserving resources and enabling sustainability, environmental compatibility and cost effectiveness.
- The graduates are able to assess the environmental impact and choose suitable means for minimizing environmental risks and achieve resource savings.
- In the framework of a project course the graduates are trained in solving in teamwork complex process engineering assignments.
- Through the non-technical lectures or the Master thesis the graduates are put in a position to expand their knowledge beyond the purely technical level and win a social perspective on the profession.

## Skills

The ability to utilize learnt knowledge for solving specific problems is strengthened in the Master of Energy and Environmental Engineering in various ways:

- The graduates are able to tackle the balancing and design configuration of processes and their components, by using appropriate specialized methods and tools.
- The graduates can convert an orally expressed context into an abstract formal description, to break down a general problem description to partial problems within their discipline or adjoining disciplines, in order to then select the most suitable method for solving the problem.
- The graduates are competent to identify the goals of an energy technical project, a plant or the society as a whole, aimed at satisfying the energy demand in a balanced and sustainable manner. They can set responsibly priorities and select the optimal problem solution approaches.
- The graduates have learned to consider critically a problem from their specialization, to categorize it within their discipline and orally explain solution approaches.

## Social skills

Social competence includes the individual ability and desire to work together with others in achieving set targets, to consider the interests of others, to express oneself clearly, and ultimately to contribute to the common work and living environments.

- The graduates can find themselves within a disciplinary homogeneous team, work out a solution approach, undertake specific partial tasks and deliver responsibly part results. They can also deliberate on their own contribution.
- The graduates are capable to undertake responsibility within the group, to contribute to the group effort and discuss and present their results.
- The graduates know how to interactively and multidisciplinary discuss the results of their scientific work, to present them to an audience and defend them.
- The graduates are able to communicate with specialists and the public on contents and problems in energy and environmental engineering. They can respond appropriately to questions, additions and comments on it.

## Independence

The interpersonal skills encompass, beyond autonomous handling, also the ability to further develop one's own capacity to act. Also included are the capability and preparedness to reflect on the work of others and

contribute one's own share in specialized discussions:

- The graduates can investigate independently a narrowly focused part of energy and environmental engineering and summarize in a seminar the results in detail, using current presentation techniques or a written essay observing the fundamental principles of good scientific practice.
- The graduates can work autonomously and deliver results on time.
- The graduates are able to perform responsibly research assignments under time constraints and with limited resources, embodying all knowledge obtained during the study program. They also undertake full responsibility for the deliverables.

## Program structure

The curriculum of the Master degree in Energy and Environmental Engineering is split into three parts:

- Teaching of advanced knowledge supplementary to the Bachelor of Energy and Environmental Engineering for deepening the core qualification (36 LP of compulsory lectures, including also the practical course in Energy and Environmental Engineering) and further strengthening of the specialist and interpersonal competences already acquired during the Bachelor.
- Advanced lectures in the framework of three branches of study (elective lectures). The students must choose, depending on their particularly chosen study focus, a total of always 3 Modules à 6 LP from each of the available thematic areas: Energy Systems (a total of 30 LP are available), Environmental Technology (a total of 36 LP are available) and Energy and Environmental Engineering (a total of 78 LP are available). The elective part of the curriculum includes also a total of 10 LP of practical courses.
- The Master thesis (compulsory).

The modules that belong to the Master of Energy and Environmental Engineering are in turn allocated as follows:

- Mathematical, natural scientific and engineering fundamentals and applications (seven modules)
  - o six Process Engineering modules
  - o one module on Environmental Protection and Management.
- Engineering applications (20 modules)
  - o five modules on thermal energy systems
  - o one module on electrical engineering
  - o four modules on renewable energies
  - o four modules on water and wastewater engineering
  - o four modules on environmental engineering
  - o two modules on the acquisition of practical skills (Practical Course on Energy and Environmental Engineering, Seminar Energy and Environmental Engineering).
- Interdisciplinary lectures from the non-technical catalogue (two modules)
  - o Business and Management
  - o Nontechnical Elective Complementary Courses for Master.

In addition the students have to complete the following modules:

- Process Design Project in the 3<sup>th</sup> semester
- Master thesis in the 4<sup>th</sup> semester.

The Master of Energy and Environmental Engineering places the emphasis on advancing the mathematical and natural scientific as well as engineering qualifications of the students and expose them to applications. Particular focus is placed on the advanced study directions of Energy Systems and Environmental Engineering, which can be studied in Module ratios of 3:6, 4:5, 5:4 or 6:3. It is furthermore provided that during the preparation of projects such as the Seminar Energy and Environmental Engineering or the Process Design Project additional "soft skills" are conveyed. At the end of the course the capacity for independent scientific work is attained through the Master thesis.

## Core qualification

The Master course in Energy and Environmental Engineering aims at preparing the students for addressing successfully energy and environmental problems. The curriculum combines wide specialised process engineering and mechanical engineering syllabuses with a scientific education specialisation. The degree is focused at the requirements of the ensuing professional praxis, as these emerge from the technical, economic, ecologic and societal developments. In addition, the students must choose compulsory elective lectures within the three specialisation paths available. In this selection you may choose to place the focus either on Environmental Technology, on Renewable Energies or on Conventional Energy Systems without, however, neglecting the other two subject areas.

As basis qualification and on the basis of compulsory lectures become all graduates deep and extensive engineering knowledge in the fundamental subject areas of transport processes and fluid mechanics. The theoretical knowledge is supplemented by a related to real life practical laboratory course. This laboratory course covers subjects from both energy systems and environmental technology.

A further key aspect within the basis qualification for the degree are technical communication skills. These are cultivated within the framework of the Seminar in Energy and Environmental Engineering, a course that strengthens the “soft skills” of the graduates and prepares them for independent working.

The technical content of the basis qualification is complemented by a number of non-technical supplementary courses as well as compulsory elective Business & Management lectures. These widen the horizon and expertise of the graduates with qualifications which are important for a successful subsequent entry into the profession.

<b>Module M0523: Business &amp; Management</b>	
<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>• Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>• Students are able to interrelate technical and management knowledge.</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>• Students are able to apply basic methods in selected areas of business management.</li> <li>• Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul>
<b>Personal Competence</b>	

<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems</li>   <li>• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>
<i>Autonomy</i>	
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Courses</b>
----------------

<p><b>Information regarding lectures and courses can be found in the corresponding module handbook published separately.</b></p>
--

## Module M0524: Nontechnical Elective Complementary Courses for Master

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p>

*Knowledge*

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

**Specialized Competence (Knowledge)**

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

**Professional Competence (Skills)**

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

*Skills*

**Personal Competence**

**Personal Competences (Social Skills)**

Students will be able

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

*Social Competence*

**Personal Competences (Self-reliance)**

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of

<i>Autonomy</i>	<p>application</p> <ul style="list-style-type: none"> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

## Module M0540: Transport Processes

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Multiphase Flows (L0104)	Lecture	2	2
Reactor Design Using Local Transport Processes (L0105)	Project-/problem-based Learning	2	2
Heat & Mass Transfer in Process Engineering (L0103)	Lecture	2	2
<b>Module Responsible</b>	Prof. Michael Schlüter		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	All lectures from the undergraduate studies, especially mathematics, chemistry, thermodynamics, fluid mechanics, heat- and mass transfer.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>describe transport processes in single- and multiphase flows and they know the analogy between heat- and mass transfer as well as the limits of this analogy.</li> <li>explain the main transport laws and their application as well as the limits of application.</li> <li>describe how transport coefficients for heat- and mass transfer can be derived experimentally.</li> <li>compare different multiphase reactors like trickle bed reactors, pipe reactors, stirring tanks and bubble column reactors.</li> <li>are known. The Students are able to perform mass and energy balances for different kind of reactors. Further more the industrial application of multiphase reactors for heat- and mass transfer are known.</li> </ul>		
<i>Knowledge</i>			
<b>Skills</b>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>optimize multiphase reactors by using mass- and energy balances,</li> <li>use transport processes for the design of technical processes,</li> <li>to choose a multiphase reactor for a specific application.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	<p>The students are able to discuss in international teams in english and develop an approach under pressure of time.</p>		
<i>Social Competence</i>			
<b>Autonomy</b>	<p>Students are able to define independently tasks, to solve the problem "design of a multiphase reactor". The knowledge that s necessary is worked out by the students themselves on the basis of the existing knowledge from the lecture. The students are able to decide by themselves what kind of equation and model is applicable to their certain problem. They are able to organize their own team and to define priorities for different tasks.</p>		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration</b>	15 min Presentation + 90 min multiple choice written examen		

<b>and scale</b>	
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. <b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Applications of Fluid Mechanics in Process Engineering (L0106)	Recitation Section (large)	2	2
Fluid Mechanics II (L0001)	Lecture	2	4
<b>Module Responsible</b>	Prof. Michael Schlüter		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics I-III</li> <li>• Fundamentals in Fluid Mechanics</li> <li>• Technical Thermodynamics I-II</li> <li>• Heat- and Mass Transfer</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to describe different applications of fluid mechanics in Process Engineering, Bioprocess Engineering, Energy- and Environmental Process Engineering and Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity in an example of free jets, empirical solutions in an example with the Forchheimer equation, numerical methods in an example of Large Eddy Simulation).		
<i>Skills</i>	Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss a given problem in small groups and to develop an approach.		
<i>Autonomy</i>	Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M1036: Practical Course on Energy and Environmental Engineering

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Practical Course on Energy and Environmental Engineering (L1386)	Practical Course	6	6
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	"Gas and Steam Power Plants"		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The practical course aims at consolidating the knowledge obtained in the Bachelor Energy and Environmental Engineering. Aim is the application of methods and techniques for the analysis and evaluation of test results in the praxis. Special emphasis is given to the quantitative evaluation of the environmental impact from energy and industrial systems.</p> <p>By performing laboratory experiments the students are exposed to taking reliable measurements in real equipment and get training in the reporting and quality assurance of the measurement results. From the parameters being monitored they conclude quantitatively on key performance indices of the test facility. The students formulate subsequently a laboratory report with the conclusions and the critical evaluation of the rig.</p> <p>Within the framework of team work the students learn to analyse and evaluate the plant and the physical and chemical phenomena tested. By means of presentations on the test procedures followed and the results obtained, accompanied by discussion and critical results' evaluation, the students practice furthermore technical communication and professional argumentation.</p>		
<i>Knowledge</i>	<p>The participants must take within the group responsibility for partial aspects of the practical course, which in case of inadequate fulfilment may have negative consequences for the whole group. In this manner the sense of responsibility together with the teamwork and communication abilities of the participants are cultivated and their ability to undertake leadership responsibilities strengthened.</p>		
<i>Skills</i>	<p>In addition, the participants are trained in the compilation of test transcripts and the analysis and critical evaluation of measurements, taken in part at large facilities. In this way they are exposed to plant scales corresponding to the later profession. Out of the requirement to prepare laboratory transcripts on the experiments, the students practice written technical communication skills.</p> <p>In the framework of certain experiments the students must also cultivate presentation skills, to present technical aspects of the tests performed and discuss them technically. In this process it is expected that students exercise an analytic and critical way of thinking.</p>		
<b>Personal Competence</b>	<p>The organising together in a group of the test analysis and the preparation of the transcript for the experiment in direct responsibility strengthen the social competence of the group participants. The definition of the solution methodologies and the splitting to sub-problems takes place in teamwork. For the preparation of the joint transcript and the reaching of the final conclusions over the experiment performed, communication as well as teamworking abilities are essential.</p>		
<i>Social Competence</i>	<p>Each student must contribute to the selection of the transcript author(s) and to the planning</p>		

<i>Autonomy</i>	and timely performance of the analysis and evaluation of the results. The short presentations of the results for certain experiments are, in turn, direct personal contributions of the individual student.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Studienleistung</b>	None
<b>Examination</b>	Written elaboration
<b>Examination duration and scale</b>	Submission of transcript and debriefing (120 min) incl. questioning of the students
<b>Assignment for the Following Curricula</b>	Energy and Environmental Engineering: Core qualification: Compulsory

<b>Course L1386: Practical Course on Energy and Environmental Engineering</b>	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	6
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Lecturer</b>	Prof. Alfons Kather, Dozenten des SD V
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>In the Practical Course on Energy Systems the following experiments are offered:</p> <ul style="list-style-type: none"> <li>• Combined heat, power and chill production in the district heating plant of the TUHH</li> <li>• Measurement of the fine particulate emissions from a biomass boiler</li> <li>• Acceptance test of a steam turbine plant</li> <li>• Heat transfer on a flat plate</li> <li>• Energy balance of a condensation boiler</li> <li>• Formation of heavy metal complexes</li> </ul>
<b>Literature</b>	Skripte werden für jeden Versuch zur Verfügung gestellt

## Module M1120: Seminar energy and environmental engineering

### Courses

Title	Typ	Hrs/wk	CP
Seminar energy and environmental engineering (L1456)	Seminar	6	6
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic lectures in: Heat Transfer, Gas-Steam Power Plants. The participation in the introductory session is mandatory.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students, based on a literature survey, learn to study in detail a subject theme from the disciplines of Energy and Environmental Engineering and deliver afterwards a summary presentation to a specialised audience. Environmental issues and their multidisciplinary linkages are preferred, when selecting the thematic area of these studies. Through their own written contribution the students communicate an overview over the subject and practice technical writing. With the discussion the students practice scientific debating on a specialised subject matter.</p> <p><i>Skills</i></p> <p>The students can, when working on a technical topic not familiar to them:</p> <ul style="list-style-type: none"> <li>• conduct a literature survey</li> <li>• choose the relevant information for their presentation</li> <li>• prepare a written summary</li> <li>• present results in front of peers and staff</li> <li>• correctly cite and reference sources.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students practice a critical assessment of the literature in a predefined specialised theme and learn to give presentations on their own technical sub-topic tailored to their public and discuss with the audience. When attending technical presentations, the students can formulate questions to other speakers and participate in the ensuing discussion.</p> <p>The fulfilment of the tasks combines independent work with group and teamwork.</p> <p><i>Autonomy</i></p> <p>The students can, guided by instructors, critically reflect on their learning and work status, and write a scientific report.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	According to the participation in group discussions and an individual presentation + Written report.		

<b>Assignment for the Following Curricula</b>	Energy and Environmental Engineering: Core qualification: Compulsory

<b>Content</b>	<ul style="list-style-type: none"> <li>- Introductory lecture with choice of the subject, fixing the dates, etc.</li> <li>- Literature Survey on the subject of the talk</li> <li>- Preparing the presentation with Powerpoint</li> <li>- Submission of an extended summary of between 12 to 20 pages (ca. 18 000 to 25 000 characters excluding spaces), the literature used and the presentation in an electronic version</li> <li>- Oral presentation (15 minutes) and discussion (10 minutes)</li> </ul>
<b>Literature</b>	

## Specialization Energy and Environmental Engineering

In this specialisation path three Modules must be chosen out of a number of compulsory selective lectures covering a wide spectrum of practically relevant aspects of both Energy Systems and Environmental Technology. With the chosen Modules the student can focus in Energy Systems, Environmental Technology or even a combination of both subject areas.

On the one hand the graduates obtain further extensive knowledge over key aspects of Energy Systems – both conventional as well as renewable. On the other hand, they become in-depth coverage of environmental engineering aspects relating to solid wastes handling and wastewater technology. This includes also the sustainable utilisation of resources, so that an environmentally friendly energy generation can occur.

The curriculum is further complemented by lectures in thematically relevant subjects. These encompass solid particle technology, wastewater analysis and membrane technology, which play a fundamental role in Energy Systems and Environmental Engineering.

The specialisation path is rounded up with participation in a process design project, in which the students learn how to work together for solving a complex process engineering problem and how to use specialised tools for designing processes. They also experience what obstacles may be faced and difficulties tackled, whilst designing a process.

### Module M0801: Water Resources and -Supply

#### Courses

Title	Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)	Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)	Recitation Section (large)	1	2
Water Resource Management (L0402)	Lecture	2	2
Water Resource Management (L0403)	Recitation Section (small)	1	1

<b>Module Responsible</b>	Prof. Mathias Ernst
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Knowledge of water management and the key processes involved in water treatment.
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.
<i>Skills</i>	Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.
<b>Personal Competence</b>	

<i>Social Competence</i>	Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.
<i>Autonomy</i>	Students will be in a position to work on a subject independently and present on this subject.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Studienleistung</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	60 min (chemistry) + presentation
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Course L0311: Chemistry of Drinking Water Treatment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>
<b>Literature</b>	<p><b>MHW (rev. by Crittenden, J. et al.):</b> Water treatment principles and design. John Wiley &amp; Sons, Hoboken, 2005.</p> <p><b>Stumm, W., Morgan, J.J.:</b> Aquatic chemistry. ## Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones

### Courses

Title	Typ	Hrs/wk	CP
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)	Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)	Lecture	2	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.</p> <p>Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.</p> <p><i>Skills</i></p> <p>Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>The students are able to develop a specific topic in a team and to work out milestones according to a given plan.</p> <p><i>Autonomy</i></p> <p>Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.

# Module M1037: Steam Turbines in Energy, Environmental and Power Train Engineering

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Steam turbines in energy, environmental and Power Train Engineering (L1286)	Lecture	3	5
Steam turbines in energy, environmental and Power Train Engineering (L1287)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Gas and Steam Power Plants"</li> <li>"Technical Thermodynamics I &amp; II"</li> <li>"Fluid Mechanics"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>After successful completion of the module the students must be in a position to:</p> <ul style="list-style-type: none"> <li>name and identify the various parts and constructive groups of steam turbines</li> <li>describe and explain the key operating conditions for the application of steam turbines</li> <li>classify different construction types and differentiate among steam turbines according to size and operating ranges</li> <li>describe the thermodynamic processes and the constructive and operational repercussions resulting from the latter</li> <li>calculate thermodynamically a turbine stage and a stage assembly</li> <li>calculate or estimate and further evaluate sections of the turbine</li> <li>outline diagrams describing the operating range and the constructive characteristics</li> <li>investigate the constructive aspects and develop from the thermodynamic requirements the required construction characteristics</li> <li>discuss and argue on the operation characteristics of different turbine types</li> <li>evaluate thermodynamically the integration of different turbine designs in heat cycles.</li> </ul>		
<i>Knowledge</i>	<p>In the module the students learn the fundamental approaches and methods for the design and operational evaluation of complex plant, and gain in particular confidence in seeking optimisations. They specifically:</p> <ul style="list-style-type: none"> <li>obtain the ability to analyse the potential of various energy sources that can be utilised thermodynamically, from the energetic-economic and technical viewpoints</li> <li>can evaluate the performance and technical limitations in using various energy sources, for supplying base load and balancing reserve power to the electricity grid</li> <li>on the basis of the impact of power plant operation on the integrity of components, can describe the precautionary principles for damage prevention</li> <li>can describe the key requirements for the Management and Design of Thermal Power Plants, based on the overriding demands imposed by various legislative frameworks.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>			

<i>Social Competence</i>	<p>In the module the students learn:</p> <ul style="list-style-type: none"> <li>• to work together with others whilst seeking a solution</li> <li>• to assist each other in problem solving</li> <li>• to conduct discussions</li> <li>• to present work results</li> <li>• to work respectfully within the team.</li> </ul>
<i>Autonomy</i>	<p>In the module the students learn the independent working of a complex theme whilst considering various aspects. They also learn how to combine independent functions in a system.</p> <p>The students become the ability to gain independently knowledge and transfer it also to new problem solving.</p>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Energy Meteorology (L0016)	Lecture	1	1
Energy Meteorology (L0017)	Recitation Section (small)	1	1
Collector Technology (L0018)	Lecture	2	2
Solar Power Generation (L0015)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>With the completion of this module, students will be able to deal with technical foundations and current issues and problems in the field of solar energy and explain and evaluate these critically in consideration of the prior curriculum and current subject specific issues. In particular they can professionally describe the processes within a solar cell and explain the specific features of application of solar modules. Furthermore, they can provide an overview of the collector technology in solar thermal systems.</p> <p><i>Skills</i></p> <p>Students can apply the acquired theoretical foundations of exemplary energy systems using solar radiation. In this context, for example they can assess and evaluate potential and constraints of solar energy systems with respect to different geographical assumptions. They are able to dimension solar energy systems in consideration of technical aspects and given assumptions. Using module-comprehensive knowledge students can evaluate the economic and ecologic conditions of these systems. They can select calculation methods within the radiation theory for these topics.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p><i>Autonomy</i></p> <p>Students can independently exploit sources and acquire the particular knowledge about the subject area with respect to emphasis for the lectures. Furthermore, with the assistance of lecturers, they can discrete use calculation methods for analysing and dimensioning solar energy systems. Based on this procedure they can concrete assess their specific learning level and can consequently define the further workflow.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	3 hours written exam		
	Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective		

<b>Assignment for the Following Curricula</b>	Compulsory International Management and Engineering: Specialisation II. ## Module M0513: System Aspects of Renewable Energies

### Courses

Title	Typ	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Energy Trading (L0019)	Lecture	1	1
Energy Trading (L0020)	Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I Module: Technical Thermodynamics II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.</p> <p><i>Skills</i></p> <p>Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.</p> <p>Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energie markets and energy trades.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p>Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p><i>Autonomy</i></p> <p>Students can independently exploit sources , acquire the particular knowledge about the subject area and transform it to new questions.</p>

## Module M0721: Air Conditioning

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Air Conditioning (L0594)	Lecture	3	5
Air Conditioning (L0595)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a <math>h_1+x,x</math>-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.</p> <p><i>Skills</i></p> <p>Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0749: Waste Treatment and Solid Matter Process Technology

### Courses

Title	Typ	Hrs/wk	CP
Solid Matter Process Technology for Biomass (L0052)	Lecture	2	2
Thermal Waste Treatment (L0320)	Lecture	2	2
Thermal Waste Treatment (L1177)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Kerstin Kuchta		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of <ul style="list-style-type: none"> <li>• thermo dynamics</li> <li>• fluid dynamics</li> <li>• chemistry</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students can name, describe current issue and problems in the field of thermal waste treatment and particle process engineering and contemplate them in the context of their field.</p> <p>The industrial application of unit operations as part of process engineering is explained by actual examples of waste incineration technologies and solid biomass processes. Compostion, particle sizes, transportation and dosing, drying and agglomeration of renewable resources and wastes are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, electricity , heat and mineral recyclables.</p> <p>The students are able to select suitable processes for the treatment of wastes or raw material with respect to their characteristics and the process aims. They can evaluate the efforts and costs for processes and select economically feasible treatment concepts.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>	Students can		
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• respectfully work together as a team and discuss technical tasks</li> <li>• participate in subject-specific and interdisciplinary discussions,</li> <li>• develop cooperated solutions</li> <li>• promote the scientific development and accept professional constructive criticism.</li> </ul>		
<i>Autonomy</i>	Students can independently tap knowledge of the subject area and transform it to new questions. They are capable, in consultation with supervisors, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory		

<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. ---	---

Course L0052: Solid Matter Process Technology for Biomass	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Werner Sitzmann
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture.

## Module M0906: Molecular Modeling and Computational Fluid Dynamics

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computational Fluid Dynamics - Exercises in OpenFoam (L1375)	Recitation Section (small)	1	1
Computational Fluid Dynamics in Process Engineering (L1052)	Lecture	2	2
Statistical Thermodynamics and Molecular Modelling (L0099)	Lecture	2	3
<b>Module Responsible</b>	Prof. Michael Schlüter		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics I-IV</li> <li>Basic knowledge in Fluid Mechanics</li> <li>Basic knowledge in chemical thermodynamics</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>After successful completion of the module the students are able to</p> <ul style="list-style-type: none"> <li>explain the the basic principles of statistical thermodynamics (ensembles, simple systems)</li> <li>describe the main approaches in classical Molecular Modeling (Monte Carlo, Molecular Dynamics) in various ensembles</li> <li>discuss examples of computer programs in detail,</li> <li>evaluate the application of numerical simulations,</li> <li>list the possible start and boundary conditions for a numerical simulation.</li> </ul>		
<i>Knowledge</i>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>set up computer programs for solving simple problems by Monte Carlo or molecular dynamics,</li> <li>solve problems by molecular modeling,</li> <li>set up a numerical grid,</li> <li>perform a simple numerical simulation with OpenFoam,</li> <li>evaluate the result of a numerical simulation.</li> </ul>		
<i>Skills</i>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>develop joint solutions in mixed teams and present them in front of the other students,</li> <li>to collaborate in a team and to reflect their own contribution toward it.</li> </ul>		
<b>Personal Competence</b>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>evaluate their learning progress and to define the following steps of learning on that basis,</li> <li>evaluate possible consequences for their profession.</li> </ul>		
<i>Social Competence</i>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>evaluate their learning progress and to define the following steps of learning on that basis,</li> <li>evaluate possible consequences for their profession.</li> </ul>		
<i>Autonomy</i>	<p>The students are able to:</p> <ul style="list-style-type: none"> <li>evaluate their learning progress and to define the following steps of learning on that basis,</li> <li>evaluate possible consequences for their profession.</li> </ul>

Module M0904: Process Design Project			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Process Design Project (L1050)	Projection Course	6	6
<b>Module Responsible</b>	Dozenten des SD V		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Particle Technology and Solid Process Engineering</li> <li>• Transport Processes</li> <li>• Process- and Plant Design II</li> <li>• Fluid Mechanics for Process Engineering</li> <li>• Chemical Reaction Engineering</li> <li>• Bioprocess- and Biosystems-Engineering</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>After the students passed the project course successfully they know:</p> <ul style="list-style-type: none"> <li>• how a team is working together so solve a complex task in process engineering</li> <li>• what kind of tools are necessary to design a process</li> <li>• what kind of drawbacks and difficulties are coming up by designing a process</li> </ul> <p>After passing the Module successfully the students are able to:</p> <ul style="list-style-type: none"> <li>• utilize tools for process design for a specific given process engineering task,</li> <li>• choose and connect apparatuses for a complete process,</li> <li>• collecting all relevant data for an economical and ecological evaluation,</li> <li>• optimization of calculation sequence with respect to flowsheet simulation.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss in international teams in english and develop an approach under pressure of time.		
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice. They are able to organize their own team and to define priorities.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	.		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Core qualification: Compulsory Chemical and Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory Process Engineering: Core qualification: Compulsory		

<b>Course L1050: Process Design Project</b>	
<b>Typ</b>	Projection Course
<b>Hrs/wk</b>	6
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Lecturer</b>	NN
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	In the Process Design Project the students have to design in teams an energy or process engineering plant by calculating and designing single plant components. The calculation of costs as well as the process safety is another important aspect of this course. Furthermore the approval procedures have to be taken into account.
<b>Literature</b>	

## Module M0802: Membrane Technology

### Courses

Title	Typ	Hrs/wk	CP
Membrane Technology (L0399)	Lecture	2	3
Membrane Technology (L0400)	Recitation Section (small)	1	2
Membrane Technology (L0401)	Practical Course	1	1
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of water chemistry. Knowledge of the core processes involved in water, gas and steam treatment		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students will be able to rank the technical applications of industrially important membrane processes. They will be able to explain the different driving forces behind existing membrane separation processes. Students will be able to name materials used in membrane filtration and their advantages and disadvantages. Students will be able to explain the key differences in the use of membranes in water, other liquid media, gases and in liquid/gas mixtures.</p> <p><i>Skills</i></p> <p>Students will be able to prepare mathematical equations for material transport in porous and solution-diffusion membranes and calculate key parameters in the membrane separation process. They will be able to handle technical membrane processes using available boundary data and provide recommendations for the sequence of different treatment processes. Through their own experiments, students will be able to classify the separation efficiency, filtration characteristics and application of different membrane materials. Students will be able to characterise the formation of the fouling layer in different waters and apply technical measures to control this.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>Students will be able to work in diverse teams on tasks in the field of membrane technology. They will be able to make decisions within their group on laboratory experiments to be undertaken jointly and present these to others.</p> <p><i>Autonomy</i></p> <p>Students will be in a position to solve homework on the topic of membrane technology independently. They will be capable of finding creative solutions to technical questions.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None

Course L0399: Membrane Technology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Mathias Ernst
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture on membrane technology supply provides students with a broad understanding of existing membrane treatment processes, encompassing pressure driven membrane processes, membrane application in electrodialysis, pervaporation as well as membrane distillation. The lectures main focus is the industrial production of drinking water like particle separation or desalination; however gas separation processes as well as specific wastewater oriented applications such as membrane bioreactor systems will be discussed as well.</p> <p>Initially, basics in low pressure and high pressure membrane applications are presented (microfiltration, ultrafiltration, nanofiltration, reverse osmosis). Students learn about essential water quality parameter, transport equations and key parameter for pore membrane as well as solution diffusion membrane systems. The lecture sets a specific focus on fouling and scaling issues and provides knowledge on methods how to tackle with these phenomena in real water treatment application. A further part of the lecture deals with the character and manufacturing of different membrane materials and the characterization of membrane material by simple methods and advanced analysis.</p> <p>The functions, advantages and drawbacks of different membrane housings and modules are explained. Students learn how an industrial membrane application is designed in the succession of treatment steps like pre-treatment, water conditioning, membrane integration and post-treatment of water. Besides theory, the students will be provided with knowledge on membrane demo-site examples and insights in industrial practice.</p>

## Module M1294: Bioenergy

### Courses

Title	Typ	Hrs/wk	CP
Biofuels Process Technology (L0061)	Lecture	1	1
Biofuels Process Technology (L0062)	Recitation Section (small)	1	1
Thermal Utilization of Biomass (L1767)	Lecture	2	2
Thermal Utilization of Biomass (L1768)	Recitation Section (small)	1	1
World Market for Commodities from Agriculture and Forestry (L1769)	Lecture	1	1
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to reproduce an in-depth outline of energy production from biomass, aerobic and anaerobic waste treatment processes, the gained products and the treatment of produced emissions.		
<i>Skills</i>	Students can apply the learned theoretical knowledge of biomass-based energy systems to explain relationships for different tasks, like dimesioning and design of biomass power plants. In this context, students are also able to solve computational tasks for combustion, gasification and biogas, biodiesel and bioethanol use.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can participate in discussions to design and evaluate energy systems using biomass as an energy source.		
<i>Autonomy</i>	Students can independently exploit sources with respect to the emphasis of the lectures. They can choose and aquire the for the particular task useful knowledge. Furthermore, they can solve computational tasks of biomass-based energy systems independently with the assistance of the lecture. Regarding to this they can assess their specific learning level and can consequently define the further workflow.

<b>Content</b>	<p>1) Markets for Agricultural Commodities            What are the major markets and how are markets functioning            Recent trends in world production and consumption.            World trade is growing fast. Logistics. Bottlenecks.            The major countries with surplus production            Growing net import requirements, primarily of China, India and many other countries.            Tariff and non-tariff market barriers. Government interferences.</p> <p>2) Closer Analysis of Individual Markets            Thomas Mielke will analyze in more detail the global vegetable oil markets, primarily palm oil, soya oil, rapeseed oil, sunflower oil. Also the raw material (the oilseed) as well as the by-product (oilmeal) will be included. The major producers and consumers.            Vegetable oils and oilmeals are extracted from the oilseed. The importance of vegetable oils and animal fats will be highlighted, primarily in the food industry in Europe and worldwide. But in the past 15 years there have also been rapidly rising global requirements of oils &amp; fats for non-food purposes, primarily as a feedstock for biodiesel but also in the chemical industry.            Importance of oilmeals as an animal feed for the production of livestock and aquaculture            Oilseed area, yields per hectare as well as production of oilseeds. Analysis of the major oilseeds worldwide. The focus will be on soybeans, rapeseed, sunflowerseed, groundnuts and cottonseed.            Regional differences in productivity. The winners and losers in global agricultural production.</p> <p>3) Forecasts: Future Global Demand &amp; Production of Vegetable Oils            Big challenges in the years ahead: Lack of arable land for the production of oilseeds, grains and other crops. Competition with livestock. Lack of water. What are possible solutions? Need for better education &amp; management, more mechanization, better seed varieties and better inputs to raise yields.</p>

	<p>The importance of prices and changes in relative prices to solve market imbalances (shortage situations as well as surplus situations). How does it work? Time lags.</p> <p>Rapidly rising population, primarily the number of people considered "middle class" in the years ahead.</p> <p>Higher disposable income will trigger changing diets in favour of vegetable oils and livestock products.</p> <p>Urbanization. Today, food consumption per caput is partly still very low in many developing countries, primarily in Africa, some regions of Asia and in Central America. What changes are to be expected?</p> <p>The myth and the realities of palm oil in the world of today and tomorrow.</p> <p>Labour issues curb production growth: Some examples: 1) Shortage of labour in oil palm plantations in Malaysia. 2) Structural reforms overdue for the agriculture in India, China and other countries to become more productive and successful, thus improving the standard of living of smallholders.</p>

## Module M1287: Risk Management, Hydrogen and Fuel Cell Technology

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Applied Fuel Cell Technology (L1831)	Lecture	2	2
Risk Management in the Energy Industry (L1748)	Lecture	2	2
Hydrogen Technology (L0060)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>With completion of this module students can explain basics of risk management involving thematical adjacent contexts and can describe an optimal management of energy systems.</p> <p><i>Knowledge</i> Furthermore, students can reproduce solid theoretical knowledge about the potentials and applications of new information technologies in logistics and explain technical aspects of the use, production and processing of hydrogen.</p> <p><i>Skills</i> With completion of this module students are able to evaluate risks of energy systems with respect to energy economic conditions in an efficient way. This includes that the students can assess the risks in operational planning of power plants from a technical, economic and ecological perspective.</p> <p>In this context, students can evaluate the potentials of logistics and information technology in particular on energy issues.</p> <p>In addition, students are able to describe the energy transfer medium hydrogen according to its applications, the given security and its existing service capacities and limits as well as to evaluate these aspects from a technical, environmental and economic perspective.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p><i>Autonomy</i> Students can independently exploit sources on the emphasis of the lectures and acquire the contained knowledge. In this way, they can recognize their lacks of knowledge and can consequently define the further workflow.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

<b>Course L1831: Applied Fuel Cell Technology</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Bonhoff
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture provide an insight into the various possibilities of fuel cells in the energy system (electricity, heat and transport). These are presented and discussed for individual fuel types and application-oriented requirements; also compared with alternative technologies in the system. These different possibilities will be presented regardind the state-of-the-art development of the technologies and exemplary applications from Germany and worldwide. Also the emerging trends and lines of development will be discussed. Besides to the technical aspects, which are the focus of the event, also energy, environmental and industrial policy aspects are discussed - also in the context of changing circumstances in the German and international energy system.</p>

## Specialization Energy Engineering

In this specialisation path three Modules must be chosen out of a number of compulsory selective lectures covering a wide spectrum of aspects of Energy Systems with practical professional relevance. Training in this specialisation path is concentrated mainly on electricity generation from conventional and renewable energy sources, encompassing electricity distribution too.

<b>Module M0742: Thermal Engineering</b>	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Thermal Engineering (L0023)	Lecture
Thermal Engineering (L0024)	Recitation Section (large)
<b>Hrs/wk</b>	<b>CP</b>
3	5
1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.</p> <p><i>Skills</i></p> <p>Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0511: Electricity Generation from Wind and Hydro Power

### Courses

Title	Typ	Hrs/wk	CP
Renewable Energy Projects in Emerged Markets (L0014)	Project Seminar	1	1
Hydro Power Use (L0013)	Lecture	1	1
Wind Turbine Plants (L0011)	Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)	Lecture	1	1
<b>Module Responsible</b>	Dr. Joachim Gerth		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.</p> <p>Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.</p> <p><i>Skills</i></p> <p>Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students can discuss scientific tasks sujet-specificly and multidisciplinary within a seminar.</p> <p><i>Autonomy</i></p> <p>Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.</p>

## Module M0641: Steam Generators

Courses			
Title	Typ	Hrs/wk	CP
Steam Generators (L0213)	Lecture	3	5
Steam Generators (L0214)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Technical Thermodynamics I and II"</li> <li>"Heat Transfer"</li> <li>"Fluid Mechanics"</li> <li>"Steam Power Plants"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students know the thermodynamic base principles for steam generators and their types. They are able to describe the basic principles of steam generators and sketch the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as they are able to define the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these in the context of related disciplines.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students will be able, using detailed knowledge on the calculation, design, and construction of steam generators, linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formalisation, modelling of processes, and training in the solution methodology for partial problems a good overview of this key component of the power plant will be obtained.</p> <p>Within the framework of the exercise the students obtain the ability to draw the balances, and design the steam generator and its components. For this purpose small but close to lifelike tasks are solved, to highlight aspects of the design of steam generators.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i>	<p>Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.</p>		
<i>Autonomy</i>	<p>The students will be able to perform basic calculations covering aspects of the steam generator, with only the help of smaller clues, on their own. This way the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions are highlighted.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
			Den Studierenden wird eine kleine

<b>Studienleistung</b>	No	5 %	Exercises	Aufgabe (in ca. 5 min lösbar) zur Vorlesung der Vorwoche gestellt. Die Antworten müssen üblicherweise als Freitext gegeben werden, aber auch Zeichnungen, Stichpunkte oder, in seltenen Fällen, Multiple Choice sind möglich.

## Module M1000: Combined Heat and Power and Combustion Technology

### Courses

Title	Typ	Hrs/wk	CP
Combined Heat and Power and Combustion Technology (L0216)	Lecture	3	5
Combined Heat and Power and Combustion Technology (L0220)	Recitation Section (large)	1	1

<b>Module Responsible</b>	Prof. Alfons Kather
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Gas-Steam Power Plants"</li> <li>"Technical Thermodynamics I and II"</li> <li>"Heat Transfer"</li> <li>"Fluid Mechanics"</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO<sub>x</sub> and the primary NO<sub>x</sub> reduction measures, and evaluate the impact of regulations and allowable limit levels.</p>
<i>Knowledge</i>	<p>The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, or even district heating plants with an internal combustion engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the ecological significance of district CHP generation, as well as its economics.</p>
<i>Skills</i>	<p>Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to holistically consider energy utilisation. Examples taken from the praxis, such as the CHP energy supply facility of the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p>
<b>Personal Competence</b>	<p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover, the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON Professional™. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>

<i>Social Competence</i>	Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.		
<i>Autonomy</i>	The students assisted by the tutors will be able to perform estimating calculations. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential impact of different process arrangements and boundary conditions highlighted.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	No	10 %	Written elaboration
			Am Ende jeder Vorlesung wird schriftlich eine zu auswertende Kurzfrage (5-10 min) zu der Vorlesung der Vorwoche gestellt. In den Kurzfragen werden kleine Rechenaufgaben, Skizzen oder auch kleine Freitexte zur Beantwortung gestellt.
<b>Examination</b>	Written exam

## Module M1235: Electrical Power Systems I

### Courses

Title	Typ	Hrs/wk	CP
Electrical Power Systems I (L1670)	Lecture	3	4
Electrical Power Systems I (L1671)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Christian Becker		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of Electrical Engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.		
<i>Skills</i>	With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of electric power systems and to assess the results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.		
<i>Autonomy</i>	Students can independently tap knowledge of the emphasis of the lectures.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam

## Specialization Environmental Engineering

In this specialisation path three Modules must be chosen out of a number of compulsory selective lectures covering a wide spectrum of aspects of Environmental Engineering with practical professional relevance. Training in this specialisation path is concentrated mainly on the environmental protection of soil, water and air. An extensive overview of the various technical solutions in these areas is offered, to prepare the graduates for a successful subsequent entry into the profession of Environmental Engineer.

<b>Module M0830: Environmental Protection and Management</b>	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Integrated Pollution Control (L0502)	Lecture
Health, Safety and Environmental Management (L0387)	Lecture
Health, Safety and Environmental Management (L0388)	Recitation Section (small)
<b>Hrs/wk</b>	<b>CP</b>
2	2
2	3
1	1
<b>Module Responsible</b>	Prof. Ralf Otterpohl
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Good knowledge in Technologies for Environmental Protection (end-of-pipe, integrated solutions)</li> <li>Good knowledge of the relevant Environmental Legislation</li> <li>Basic knowledge of instruments for Environmental Assessment</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p>The students are able to describe the basics of regulations, economic instruments, voluntary initiatives, fundamentals of HSE legislation ISO 14001, EMAS and Responsible Care ISO 14001 requirements. They can analyse and discuss industrial processes, substance cycles and approaches from end-of-pipe technology to eco-efficiency and eco-effectiveness, showing their sound knowledge of complex industry related problems. They are able to judge environmental issues and to widely consider, apply or carry out innovative technical solutions, remediation measures and further interventions as well as conceptual problem solving approaches in the full range of problems in different industrial sectors.</p>
<i>Knowledge</i>	
<i>Skills</i>	<p>Students are able to assess current problems and situations in the field of environmental protection. They can consider the best available techniques and to plan and suggest concrete actions in a company- or branch-specific context. By this means they can solve problems on a technical, administrative and legislative level.</p>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>The students can work together in international groups.</p>
	<p>Students are able to organize their work flow to prepare themselves for presentations and</p>

<i>Autonomy</i>	contributions to the discussions. They can acquire appropriate knowledge by making enquiries independently.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Studienleistung</b>	None

-------------------	--

Course L0203: Air Pollution Abatement	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Ernst-Ulrich Hartge
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants form flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.
<b>Literature</b>	<p>Handbook of air pollution prevention and control, Nicholas P. ## Module M0874: Wastewater Systems

### Courses

Title	Typ	Hrs/wk	CP
Wastewater Systems - Collection, Treatment and Reuse (L0934)	Lecture	2	2
Wastewater Systems - Collection, Treatment and Reuse (L0943)	Recitation Section (large)	1	1
Advanced Wastewater Treatment (L0357)	Lecture	2	2
Advanced Wastewater Treatment (L0358)	Recitation Section (large)	1	1

<b>Module Responsible</b>	Prof. Ralf Otterpohl
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Knowledge of wastewater management and the key processes involved in wastewater treatment.
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	
<i>Knowledge</i>	Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.
<i>Skills</i>	Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.
<b>Personal Competence</b>	
<i>Social Competence</i>	Social skills are not targeted in this module.
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.

<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
--------------------------	---

<b>Credit points</b>	6
----------------------	---

<b>Studienleistung</b>	None
------------------------	------

<b>Examination</b>	Written exam
--------------------	--------------

<b>Examination duration and scale</b>	120 min
---------------------------------------	---------

<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Compulsory Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. ## Module M0857: Geochemical Engineering

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Contaminated Sites and Landfilling (L0906)	Lecture	2	2
Contaminated Sites and Landfilling (L0907)	Recitation Section (large)	1	2
Geochemical Engineering (L0904)	Lecture	2	2
<b>Module Responsible</b>	Dr. Joachim Gerth		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Module: General and Inorganic Chemistry, Module: Organic Chemistry, Biology (Basic Knowledge)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	With the completion of this module students acquire profound knowledge of biogeochemical processes, the fate of pollutants in soil and groundwater, and techniques to deposit contaminated waste material. They are able to describe in principle the behaviour of chemicals in the environment. Students can explain and report the approach to remediate contaminated sites.		
<i>Skills</i>	With the completion of this module students can apply the acquired theoretical knowledge to model cases of site pollution and critically assess the situation technically and conceptually. They are able to draw comparisons on different remediation strategies and techniques. Model projects can be devised and treated.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can discuss technical and scientific tasks within a seminar subject specific and interdisciplinary .		
<i>Autonomy</i>	Students can independently exploit sources , acquire the particular knowledge of the subject and apply it to new problems.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2 hours		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Energy and Environmental Engineering: Specialisation Environmental Engineering: Elective Compulsory Environmental Engineering: Core qualification: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory		

Course L0906: Contaminated Sites and Landfilling	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Gerth, Dr. Marco Ritzkowski
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The part Contaminated Sites gives an introduction into different scales of pollution and identifies key pollutants. Geochemical attenuation mechanisms and the role of organisms are highlighted affecting the fate of pollutants in leachate and groundwater. Techniques for site characterization and remediation are discussed including economical aspects.</p> <p>The part Landfilling is introduced by discussing fundamental aspects and the worldwide situation of waste management. The lecture highlights transformation processes in landfill bodies, emissions of gases and leachate, and the long-term behaviour of landfill sites with measures of aftercare.</p>
<b>Literature</b>	<p>1 ) <b>Waste Management.</b> Bernd Bilitewski; Georg Härdtle; Klaus Marek (Eds.), ISBN: 9783540592105 , Springer Verlag Lehrbuchsammlung der TUB, Signatur USH-305</p> <p>2) <b>Solid Waste Technology and Management.</b> Thomas Christensen (Ed.), ISBN: 978-1-4051-7517-3 , Wiley Verlag Lesesaal 2: US - Umweltschutz, Signatur USH-332</p> <p>3 ) <b>Natural attenuation of fuels and chlorinated solvents in the subsurface.</b> Todd H. <b>Course L0904: Geochemical Engineering</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Joachim Gerth
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	As an introduction cases are presented in which geochemical engineering was used to solve environmental problems. Environmentally important minerals are discussed and methods for their detection. It is demonstrated how solution equilibria can be modified to eliminate elevated concentrations of unwanted species in solution and how carbon dioxide concentration affects pH and the dissolution of carbonate minerals. Modifications of redox conditions, pH, and electrolyte concentration are shown to be effective tools for controlling the mobility and fate of hazardous species in the environment.

## Module M0619: Waste Treatment Technologies

### Courses

Title	Typ	Hrs/wk	CP
Waste and Environmental Chemistry (L0328)	Practical Course	2	2
Biological Waste Treatment (L0318)	Project-/problem-based Learning	3	4
<b>Module Responsible</b>	Prof. Kerstin Kuchta		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	chemical and biological basics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.		
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherch� and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.		
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Studienleistung</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes      None	Subject    theoretical    and practical work	
<b>Examination</b>	Presentation		
<b>Examination duration and scale</b>	Elaboration and Presentation (15-25 minutes in groups)		

<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Civil Engineering: Specialisation Water and Traffic: Elective Compulsory Energy and Environmental Engineering: Specialisation Environmental Engineering: Elective Compulsory Environmental Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. ## Module M0519: Particle Technology and Solid Matter Process Technology

### Courses

Title	Typ	Hrs/wk	CP
Advanced Particle Technology II (L0051)	Project-/problem-based Learning	1	1
Advanced Particle Technology II (L0050)	Lecture	2	2
Experimental Course Particle Technology (L0430)	Practical Course	3	3
<b>Module Responsible</b>	Prof. Stefan Heinrich		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of solids processes and particle technology		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> After completion of the module the students will be able to describe and explain processes for solids processing in detail based on microprocesses on the particle level.</p> <p><i>Skills</i> Students are able to choose process steps and apparatuses for the focused treatment of solids depending on the specific characteristics. They furthermore are able to adapt these processes and to simulate them.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to present results from small teamwork projects in an oral presentation and to discuss their knowledge with scientific researchers.</p> <p><i>Autonomy</i> Students are able to analyze and solve problems regarding solid particles independently or in small groups.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	<b>Compulsory Bonus</b> Yes            None	<b>Form</b> Written elaboration	<b>Description</b> fünf Berichte (pro Versuch ein Bericht) à 5-10 Seiten
<b>Examination</b>	Written exam

## Thesis

### Module M-002: Master Thesis

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<b>Personal Competence</b>	Students can		
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> </ul>		

	<ul style="list-style-type: none"> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0
