Program description	3
Core qualification	4
Module M0575: Procedural Programming	4
Module M0577: Nontechnical Complementary Courses for Bachelors	6
Module M0743: Electrical Engineering I: Direct Current Networks and Electromagnetic Fields	8
Module M0889: Mechanics I (Statics)	9
Module M0850: Mathematics I	11
Module M0933: Fundamentals of Materials Science	14
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	16
Module M0594: Fundamentals of Mechanical Engineering Design	19
Module M0696: Mechanics II: Mechanics of Materials	21
Module M0851: Mathematics II	23
Module M0598: Mechanical Engineering: Design	26
Module M0725: Production Engineering	29
Module M0708: Electrical Engineering III: Circuit Theory and Transients	32
Module M0730: Computer Engineering	34
Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	36
Module M0853: Mathematics III	38
Module M0671: Technical Thermodynamics I	41
Module M0672: Signals and Systems	43
Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	45
Module M0854: Mathematics IV	47
Module M0688: Technical Thermodynamics II	50
Module M0956: Measurement Technology for Mechanical and Process Engineers	52
Module M0829: Foundations of Management	55
Module M0833: Introduction to Control Systems	58
Module M1320: Simulation and Design of Mechatronic Systems	61
Module M0610: Electrical Machines	63
Module M0777: Semiconductor Circuit Design	65
Thesis	68
Module M-001: Bachelor Thesis	68

# **Program description**

#### Content

The graduate students of the Bachelor program Mechatronics are able to demonstrate an overview of fundamental knowledge in the fields of material science, production, thermodynamics, mechanical design and computer science. They are able to express in detail basic approaches in the fields of mathematics, mechanics and electrical engineering, to explain the basics of metrology and control theory and to describe the interdisciplinary aspects of Mechatronics. This knowledge and the methods learned enable them to examine problems in Mechatronics, the sub-disciplines of Mechatronics and the adjacent disciplines.

## **Career prospects**

The graduates of the Bachelor program Mechatronics are directly able to enter a career in the field of Mechatronics and work responsibly as Engineer. They are entitled to use the professional title Ingenieurin or Ingenieur (Engineer) pursuant to the Engineers Acts (Ingenieurgesetzen) of the states in Germany.

Possible employers include manufacturing companies in mechanical and electrical engineering as well as engineering firms.

The degree allows access to a Master program, for example the consecutive International Master in Mechantronics.

# Learning target

Graduates are able

- to identify, abstract, formulate and solve technical problems on basic research;
- to select, combine and interdisciplinary apply suitable methods for analysis, modeling, simulation and optimization;
- to understand, analyze and evaluate products and methods in Mechatronics and its sub-disciplines in a systematic manner;
- to apply design methods in Mechatronics;
- to plan and carry out experiments and to interpret their results;
- · and to estimate the boundaries of methods and techniques

#### Graduates can

- interdisciplinarily and responsibly apply and independently expand their knowledge within the sub-disciplines of Mechatronics accounting for economic requirements;
- evaluate Mechatronic problems in a wider societal context and assess the non-technical effects of their engineering work;
- cooperate with experts of other disciplines and laypersons and to communicate in German and English;
- conduct literary research and use databases and other information sources for their work and can express the results of their work understandably both in written and oral presentation;
- expand and deepen their acquired knowledge throughout their lives.

# Program structure

The program is split into the core qualifications and Bachelor thesis.

The interdisciplinary final thesis is scheduled for the sixth semester.

At the Hamburg University of Technology the graduates can continue their studies with, among others, the Master program "International Master Mechatronics".

# Core qualification

Module M0575: Procedura	al Programming
Courses	
Title	Typ         Hrs/wk         CP           Lecture         1         2
Procedural Programming (L0197) Procedural Programming (L0201)	Recitation Section (large) 1 1
Procedural Programming (L0202)	Laboratory Course 2 3
Module Responsible	Prof. Siegfried Rump
Admission Requirements	None
Recommended Previous	Elementary PC handling skills
Knowledge	Elementary mathematical skills
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
-	The students acquire the following knowledge:
	<ul> <li>They know basic elements of the programming language C. They know the basic data types and know how to use them.</li> </ul>
	<ul> <li>They have an understanding of elementary compiler tasks, of the preprocessor and programming environment and know how those interact.</li> </ul>
	They know how to bind programs and how to include external libraries to enhance software packages.
	<ul> <li>They know how to use header files and how to declare function interfaces to create larger programming projects.</li> </ul>
	<ul> <li>The acquire some knowledge how the program interacts with the operating system. This allows them to develop programs interacting with the programming environment as well.</li> </ul>
	They learnt several possibilities how to model and implement frequently occurring standard algorithms.
Skills	The students know how to judge the complexity of an algorithms and how to program algorithms efficiently
	<ul> <li>The students are able to model and implement algorithms for a number of standard functionalities Moreover, they are able to adapt a given API.</li> </ul>
Personal Competence	The et idente convirs the fallouing skiller
Social Competence	The students acquire the following skills:
	<ul> <li>They are able to work in small teams to solve given weekly tasks, to identify and analyze programming errors and to present their results.</li> </ul>
	They are able to explain simple phenomena to each other directly at the PC.
	They are able to plan and to work out a project in small teams.
	They communicate final results and present programs to their tutor.
Autonomy	<ul> <li>The students take individual examinations as well as a final written examn to prove their programming skills and ability to solve new tasks.</li> </ul>
	<ul> <li>The students have many possibilities to check their abilities when solving several given programming exercises.</li> </ul>
	<ul> <li>In order to solve the given tasks efficiently, the students have to split those appropriately within their group where every student solves his or her part individually.</li> </ul>

Module M0577: Nontechnical Complementary Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge	The Non-technical Academic Programms (NTA)	

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, selfmanagement, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

#### The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies

### **Teaching and Learning Arrangements**

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses

### Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

# The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

# Specialized Competence (Knowledge)

# Students can

- locate selected specialized areas with the relevant non-technical mother discipline.
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

# Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

# Personal Competence

Social Competence

# Personal Competences (Social Skills)

Students will be able

Autonomy	<ul> <li>to learn to collaborate in different manner,</li> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>to organize themselves and their own learning processes</li> <li>to reflect and decide questions in front of a broad education background</li> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> </ul>
Workload in Hours	to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)  Depends on choice of courses
Credit points	6

Content	Motivation: "Atoms in Mechanical Engineering?" Basics: Force and Energy The electromagnetic Interaction "Detour": Mathematics (complex e-funktion etc.) The atom: Bohr's model of the atom Chemical bounds The multi part problem: Solutions and strategies Descriptions of using statistical thermodynamics Elastic theory of atoms Consequences of atomar properties on makroskopic Properties: Discussion of examples (metals, semiconductors, hybrid systems)
Literature	Für den Elektromagnetismus:  Bergmann-Schäfer: "Lehrbuch der Experimentalphysik", Band 2: "Elektromagnetismus", de Gruyter  Für die Atomphysik:  Haken, Wolf: "Atom- und Quantenphysik", Springer  Für die Materialphysik und Elastizität:  Hornbogen, Warlimont: "Metallkunde", Springer

Module M0547: Electrical	Engineering II: Alternating Current Netv	works and Bas	sic Devices		
0					
Courses			_		
Title	rent Networks and Basic Devices (L0178)		Typ Lecture	Hrs/wk 3	<b>CP</b> 5
	rent Networks and Basic Devices (L0176)		Recitation Section (small)	2	1
	Prof. Christian Becker		,		
Admission Requirements	None				
Recommended Previous	Electrical Engineering I				
Knowledge	Mathematics I				
	Direct current networks, complex numbers				
Educational Objectives	After taking part successfully, students have reached	tne tollowing learni	ng results		
Professional Competence  Knowledge	Students are able to reproduce and explain fundame	antal theories pring	sinles, and methods related to	the theory of alternat	ing currents. Thou see
Knowieuge	describe networks of linear elements using a comple				
	theory of alternating currents in the area of electrica				
	active devices as well as their impact on simple circui	its.			
Skills	Students are capable of calculating parameters wit		_		
	voltages and currents. They can appraise the funda			_	
	able to analyze simple circuits such as oscillating of				
	design. They can motivate and justify the fundamental elements of an electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified to dimension their main features.				
Personal Competence					
Social Competence	· · · · · · · · · · · · · · · · · · ·	I tasks in small grou	ups. They are able to present	their results effectively	(e.g. during a week o
	project work).				
Autonomy	Students are capable to gather necessary information	n from the reference	ces provided and relate that i	nformation to the cont	ext of the lecture. The
	are able to continually reflect their knowledge by m				
	related to the exam. Based on respective feedback	x, students are exp	ected to adjust their individu	al learning process.	They are able to draw
	connections between their knowledge obtained in th	is lecture and the c	content of other lectures (e.g.	Electrical Engineering	I, Linear Algebra, and
	Analysis).				
Workload in Hours	Independent Study Time 110, Study Time in Lecture 7	70			
Credit points	6	• •			
Examination	Written exam				
Examination duration and scale	90 - 150 minutes				
Assignment for the Following	General Engineering Science (German program): Co	re qualification: Co	mpulsory		
Curricula	General Engineering Science (German program, 7 se	•			
	Electrical Engineering: Core qualification: Compulsor	γ			
	Computational Science and Engineering: Core qualif	ication: Compulsor	у		
	Mechatronics: Core qualification: Compulsory

Тур	Lecture			
Hrs/wk	3			
CP	5			
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42			
	Prof. Christian Becker			
Language				
Cycle				
Content	- General time-dependency of electrical networks			
	- Representation and properties of harmonic signals			
	- RLC-elements at alternating currents/voltages			
	- Complex notation for the representation of RLC-elements			
	- Power in electrical networks at alternating currents, compensation of reactive power			
	- Frequency response locus (Nyquist plot) and Bode-diagrams  - Measurement instrumentation for assessing alternating currents			
	- Oscillating circuits, filters, electrical transmission lines			
	- Transformers, three-phase current, energy converters			
	- Simple non-linear and active electrical devices			
Literature	- M. Albach, "Elektrotechnik", Pearson Studium (2011)			
	- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)			
	- R. Kories, H. Schmidt-Walter, "Taschenbuch der Elektrotechnik", Harri Deutsch (2010)

Knowledge				
Educational Objectives	After taking part successfully, students have it	reached the following learning results		
Professional Competence				
Knowledge	The students name the fundamental concept	s and laws of statics such as stresses, strains, Hooke's	inear law.	
Skills	The students apply the mathematical/mechan	nical analysis and modeling.		
	The students apply the fundamental methods of elasto statics to simply engineering problems.			
	The students estimate the validity and limitations of the introduced methods.

Linear Algebra II (L0917)		Recitation Section (large)	1	1
Module Responsible	Prof. Anusch Taraz			
Admission Requirements	none			
Recommended Previous	Mathematics I			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follo	wing learning results		
Professional Competence				
-				
Knowledge	Students can name further concepts in analysis and lii	near algebra. They are able to explain the	m using appropriate	e examples.
	Students can discuss logical connections between the students can discuss logical connections.	nese concepts. They are capable of illu	strating these conn	ections with the help of
	examples.		Ü	·
	They know proof strategies and can reproduce them.			
	moj mon procretatiogree and carrieproduce monit			
Skills	Students can model problems in analysis and linea	r algebra with the help of the concepts	studied in this cou	irse. Moreover, they are
	capable of solving them by applying established meth		5ta a. 5 a	moor moreover, andy are
			d in the source	
	Students are able to discover and verify further logical			
	<ul> <li>For a given problem, the students can develop and ex</li> </ul>	ecute a suitable approach, and are able to	critically evaluate	tne results.
Personal Competence				
Social Competence				
	Students are able to work together in teams. They are			
	In doing so, they can communicate new concepts		ating partners. More	eover, they can design
	examples to check and deepen the understanding of t	heir peers.		
Autonomy				
,	<ul> <li>Students are capable of checking their understanding</li> </ul>	g of complex concepts on their own. They	can specify open	questions precisely and
	know where to get help in solving them.			
	<ul> <li>Students have developed sufficient persistence to be</li> </ul>	able to work for longer periods in a goal-o	riented manner on I	hard problems.
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112			
Credit points	8			
Examination	Written exam

eam Project Design Methodology (L020	37)	Problem-based Learning	2	1	
Module Responsible	Prof. Dieter Krause				
Admission Requirements	None				
Recommended Previous	Fundamentals of Mechanical Engineering Design				
Knowledge	Mechanics				
	Fundamentals of Materials Science				
	Production Engineering				
Educational Objectives	After taking part successfully, students have reached the follow	ng learning results			
Professional Competence					
Knowledge	After passing the module, students are able to:				
	<ul> <li>explain design guidelines for machinery parts e.g. cons</li> </ul>	dering load situation, materials and m	nanufacturing requirem	nents,	
	<ul> <li>describe basics of 3D CAD,</li> </ul>				
	<ul> <li>explain basics methods of engineering designing.</li> </ul>				
Skilla	After passing the module, students are able to:				
Skills	Aller passing the module, students are able to.				
	<ul> <li>independently create sketches, technical drawings and documentations e.g. using 3D CAD,</li> </ul>				
	<ul> <li>design components based on design guidelines autonomously,</li> </ul>				
	dimension (calculate) used components,				
	<ul> <li>use methods to design and solve engineering design to</li> </ul>	sks systamtically and solution-oriente	d,		
	<ul> <li>apply creativity techniques in teams.</li> </ul>				
Personal Competence					
Social Competence	After passing the module, students are able to:				
	develop and evaluate solutions in groups including making and documenting decisions,      made at the use of exist title methods.				
	moderate the use of scientific methods,     present and discuss solutions and technical drawings within groups.				
	<ul> <li>present and discuss solutions and technical drawings within groups,</li> <li>reflect the own results in the work groups of the course.</li> </ul>				
	Tellecture dwill results in the work groups of the course.				
Autonomy	Students are able				
	to estimate their level of knowledge using activating m	ethods within the lectures (e.g. with cli	ckers).		
	To solve engineering design tasks systematically.				
	To come originating doorgin action of oto-matically.				
Workload in Hours	Independent Study Time 40, Study Time in Lecture 140

Computer Engineering (L0321)		_ecture	3	4
Computer Engineering (L0324)	J	Recitation Section (small)	1	2
Module Responsible	Prof. Heiko Falk			
Admission Requirements	None			
Recommended Previous	Basic knowledge in electrical engineering			
Knowledge				
	The successful completion of the labs will be honored during the evaluation	n of the module's examination	according to the fo	ollowing rules:
	Upon a passed module examination, the student is granted a bor	us on the examination's marks	due to the succes	ssful labs, such that
	examination's marks are lifted by 0,3 or 0,4, respectively, up to the			
	2. The improvement of the grade 5,0 up to 4,3 and of 4,3 up to 4,0 is a	ot possible.		
Educational Objectives	After taking part successfully, students have reached the following learnin	j results		
Professional Competence				
Knowledge	This module deals with the foundations of the functionality of computing s	ystems. It covers the layers from	m the assembly-le	vel programming do
	to gates. The module includes the following topics:			
	Introduction			
	Combinational logic: Gates, Boolean algebra, Boolean functions, I	ardware synthesis, combinatio	nal networks	
	Sequential logic: Flip-flops, automata, systematic hardware design			
	Technological foundations			
	Computer arithmetic: Integer addition, subtraction, multiplication as	nd division		
	Basics of computer architecture: Programming models, MIPS singl	e-cycle architecture, pipelining		
	Memories: Memory hierarchies, SRAM, DRAM, caches			
	<ul> <li>Input/output: I/O from the perspective of the CPU, principles of pass</li> </ul>	ing data, point-to-point connec	tions, busses	
0.111				
Skills	The students perceive computer systems from the architect's perspective			
	computer systems. The students can analyze, how highly specific and in	•		
	components. They are able to distinguish between and to explain the di	lerent abstraction layers of tod	ay's computing sy	stems - from gates
	circuits up to complete processors.			
	After successful completion of the module, the students are able to judg	e the interdependencies between	een a physical co	mputer system and
	software executed on it. In particular, they shall understand the const	equences that the execution of	of software has or	n the hardware-cer
	abstraction layers from the assembly language down to gates. This way	, they will be enabled to evalu	ate the impact tha	at these low abstrac
	levels have on an entire system's performance and to propose feasible op	tions.		
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a group and to pre	sent the results accordingly.		
Autonomy	Students are able to acquire new knowledge from specific literature and to	associate this knowledge with	other classes.

Courses				
Title		Тур	Hrs/wk	СР
Mechanics III (Hydrostatics, Kinematics,	Kinetics I) (L1134)	Lecture	3	3
Mechanics III (Hydrostatics, Kinematics,	Kinetics I) (L1135)	Recitation Section (small)	2	2
Mechanics III (Hydrostatics, Kinematics,	Kinetics I) (L1136)	Recitation Section (large)	1	1
Module Responsible	Prof. Robert Seifried			
Admission Requirements	none			
Recommended Previous	Mathematics I, II, Mechanics I (Statics)			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the fo	llowing learning results		
Professional Competence				
Knowledge	The students can			
	describe the axiomatic procedure used in mechanic	and contexts:		
		car contexts,		
	<ul> <li>present technical knowledge in stereostatics.</li> </ul>			
Skills	The students can			
	explain the important elements of mathematical /	mechanical analysis and model formation	n, and apply it to tr	ne context of their own
	problems;			
	apply basic hydrostatical, kinematic and kinetic met			
	<ul> <li>estimate the reach and boundaries of statical method</li> </ul>	ods and extend them to be applicable to wid	er problem sets.	
Personal Competence				
Social Competence	The students can work in groups and support each other to	overcome difficulties.		
4.4	Objects and a second last of determining the sign of the second last o			
Autonomy	Students are capable of determining their own strengths are	nd weaknesses and to organize their time at	nd learning based or	i tnose.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0671: Technical	Thermodynamics I			
Courses				
Title		Тур	Hrs/wk	СР
Technical Thermodynamics I (L0437)		Lecture	2	4
Technical Thermodynamics I (L0439)		Recitation Section (large)	1	1
Technical Thermodynamics I (L0441)		Recitation Section (small)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in Mathematics and Mechanics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ring learning results		
Professional Competence				
Knowledge	Students are familiar with the laws of Thermodynamics. They k	know the relation of the kinds of energy	according to 1st law	of Thermodynamics and
	are aware about the limits of energy conversions according to	2 <sup>nd</sup> law of Thermodynamics. They are	e able to distinguish I	petween state variables
	and process variables and know the meaning of different state		-	
	anergy. They are able to draw the Carnot cycle in a Thermody	namics related diagram. They know the	e physical difference	between an ideal and a
	real gas and are able to use the related equations of state. The	ey know the meaning of a fundamental	state of equation and	know the basics of two
	phase Thermodynamics.			
Skills	Students are able to calculate the internal energy, the enthalp	y, the kinetic and the potential energy a	s well as work and he	eat for simple change of
	states and to use this calculations for the Carnot cycle. They	are able to calculate state variables fo	r an ideal and for a r	eal gas from measured
	thermal state variables.			
Personal Competence				
Social Competence	The students are able to discuss in small groups and develop	an approach.		
Autonomy	Students are able to define independently tasks, to get new k	nowledge from existing knowledge as	well as to find ways t	o use the knowledge in
	practice.

Course L0432: Signals and System	ns
Тур	Lecture
Hrs/wk	3
СР	4
Workload in Hours	
Lecturer	Prof. Gerhard Bauch DE/EN
Language	
Content	Basic classification and description of continuous-time and discrete-time signals and systems
	Concvolution
	Power and energy of signals
	Correlation functions of deterministic signals
	Linear time-invariant (LTI) systems
	Signal transformations:
	Fourier-Series
	Fourier Transform
	Laplace Transform
	Discrete-time Fourier Transform
	Discrete Fourier Transform (DFT), Fast Fourier Transform (FFT)
	Z-Transform
	Analysis and design of LTI systems in time and frequency domain
	Basic filter types
	Sampling, sampling theorem
	Fundamentals of recursive and non-recursive discrete-time filters
Literature	T. Frey , M. Bossert , Signal- und Systemtheorie, B.G. Teubner Verlag 2004

Module M0688: Technical	Thermodynamics II			
Courses				
Title		Тур	Hrs/wk	СР
Technical Thermodynamics II (L0449)		Lecture	2	4
Technical Thermodynamics II (L0450)		Recitation Section (large)	1	1
Technical Thermodynamics II (L0451)		Recitation Section (small)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in Mathematics, Mechanics and Technica	Thermodynamics I		
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following	learning results		
Professional Competence				
Knowledge	Students are familiar with different cycle processes like Joule,	Otto, Diesel, Stirling, Seiliger and O	lausius-Rankine. T	hey are able to derive
	energetic and exergetic efficiencies and know the influence dif	erent factors. They know the different	nce between anti cl	ockwise and clockwise
	cycles (heat-power cycle, cooling cycle). They have increase	d knowledge of steam cycles and	are able to draw	the different cycles in
	Thermodynamics related diagrams. They know the laws of ga	s mixtures, especially of humid air p	processes and are	able to perform simple
	combustion calculations. They are provided with basic knowledge	e in gas dynamics and know the defin	ition of the speed of	sound and know abou
	a Laval nozzle.			
Skills	Students are able to use thermodynamic laws for the design of	technical processes. Especially they	are able to formula	ite energy, exergy- and
	entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing ga			
	from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.			
	•	3 · · · · · · · · · · · · · · · · · · ·		
Personal Competence				
Social Competence	The students are able to discuss in small groups and develop an	approach.		
Autonomy	Students are able to define independently tasks, to get new know	vledge from existing knowledge as w	ell as to find ways t	o use the knowledge in
	practice.

Module Responsible		riectation dection (large)	1		
Admission Requirements	none				
Recommended Previous		erina			
Knowledge	basis knownedge of physics, chemically and clocation engine	Sining .			
Educational Objectives	After taking part successfully, students have reached the folion	wing learning results			
Professional Competence	The taking part successiony, stadents have reastred the lone	wing rearring results			
Knowledge	Students are able to name the most important fundmentals of	of the Measurement Technology (Quantitie	se and Unite Uncorts	ainty Calibration St	
Miowieage	and Dynamic Properties of Sensors and Systems).	The Measurement recimology (Quantum	ss and omis, oncert	unty, Canbration, Gt	
	and Bynamio i roponice of consort and cystems).				
	They can outline the most important measuring methods	or different kinds of quantities to be ma	esured (Electrical C	uantities, Temperatu	
	mechanical quantities, Flow, Time, Frequency).				
	They can describe important methods of chemical Analysis (	Gas Sensors Spectroscopy Gas Chroma	tography)		
	mey can accome important methods of chemical vinaryore (	ado 30, 3p00000p), ado 3	log.up.ij)		
Skills	Students can select suitable measuring methods to given pro	shlems and can use refering measuremen	it devices in practice		
Onno	Students can select suitable measuring methods to given problems and can use refering measurement devices in practice.				
	The students are able to orally explain issues in the subject area of measurement technology and solution approaches as well as place the issu				
	into the right context and application area.				
Personal Competence					
Social Competence	Students can arrive at work regults in groups and decument to	ham in a common report			
Social Competence	Students can arrive at work results in groups and document to	пентні а сопшної тероп.			
Autonomy	Chudanta are able to familiarize the machine with new machine	ramant tach nalasiaa			
Autonomy	Students are able to familiarize themselves with new measur	ement technologies.

roject Entrepreneurship (L0882)		Problem-based Learning	2	3
Module Responsible	Prof. Christoph Ihl			
Admission Requirements	None			
Recommended Previous	Basic Knowledge of Mathematics and Business			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
-	After taking this module, students know the importan		_	nt, from Planning a
	Organisation to Marketing and Innovation, and also to Inv	restment and Controlling. In particular they are	e able to	
	explain the differences between Economics and	Management and the sub-disciplines in Mar	nagement and to nar	ne important definitio
	from the field of Management			
	<ul> <li>explain the most important aspects of and goals in</li> </ul>			
	describe and explain basic business functions a			ment, organization a
	human ressource management, information mana		_	ativos and uncortair
	<ul> <li>explain the relevance of planning and decision</li> <li>and explain some basic methods from mathematic</li> </ul>		under munipie obje	clives and uncertain
	state basics from accounting and costing and sele			
	g	,		
	Students are able to analyse business units with res		ctives, strategies etc	and to carry out
l l	Entrepreneurship project in a team. In particular, they are	able to		
	analyse Management goals and structure them appropriate to the structure of the struct	propriately		
	analyse organisational and staff structures of com	panies		
	<ul> <li>apply methods for decision making under multiple</li> </ul>	objectives, under uncertainty and under risk		
	analyse production and procurement systems and	Business information systems		
	analyse and apply basic methods of marketing			
	select and apply basic methods from mathematical			
	apply basic methods from accounting, costing and	a controlling to predefined problems		
Personal Competence				
Social Competence	Students are able to			
	work successfully in a team of students			
	to apply their knowledge from the lecture to an en	trepreneurship project and write a coherent re	eport on the project	
	<ul> <li>to communicate appropriately and</li> </ul>			
	to cooperate respectfully with their fellow students	i.		
Autonomy	Students are able to			
	work in a team and to organize the team themselv	res		
	<ul> <li>to write a report on their project.</li> </ul>

ntroduction to Control Systems (L0654)		Lecture	2	4
ntroduction to Control Systems (L0655)		Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner			
Admission Requirements	none			
Recommended Previous	Representation of signals and systems in time and free	quency domain, Laplace transform		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	ne following learning results		
Professional Competence	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,			
Knowledge				
	Students can represent dynamic system behav	ior in time and frequency domain, and can in pa	articular explain prope	erties of first and se
	order systems			
	They can explain the dynamics of simple control     They can explain the bluggiet stability exitation.		ns of frequency respo	nse and root locus
	<ul> <li>They can explain the Nyquist stability criterion</li> <li>They can explain the role of the phase margin</li> </ul>	· -		
	They can explain the role of the phase margin     They can explain the way a PID controller affect		nce	
	They can explain its way a rib controller affect     They can explain issues arising when controller			
	- may dan explain located alloning when donatione	no designed in continuous time demain are imp	nomented digitally	
Skills	Students can transform models of linear dynam	nic systems from time to frequency domain and	vice veres	
	They can simulate and assess the behavior of:		vice versa	
	They can design PID controllers with the help of the series of the			
		ol loops with the help of root locus and frequency	cv response technique	es
	They can calculate discrete-time approximation			
	They can use standard software tools (Matlab 0)	•		
	,			
Personal Competence				
Social Competence	Students can work in small groups to jointly solve tech		_	
Autonomy	Students can obtain information from provided source	s (lecture notes, software documentation, expe	riment guides) and us	se it when solving o
	problems.			
	They can assess their knowledge in weekly on-line tes	sts and thereby control their learning progress.

Module M1320: Simulation	and Design of Mechatronic Systems			
Courses				
Title		Тур	Hrs/wk	CP
Simulation and Design of Mechatronic Systems (L1822)		Lecture	2	2
Simulation and Design of Mechatronic S		Laboratory	1	2
Simulation and Design of Mechatronic S		Recitation Section (large)	1	2
Module Responsible				
Admission Requirements	None			
	Fundatmentals of mechanics, control theory and electrical engin	eering		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following	ng learning results		
Professional Competence				
Knowledge	Students are able to describe methods and calculations for desi	gn, modeling, simulation and optimiza	tion of mechatronic sy	ystems.
Skills	Students are able to apply modern algorithms for modeling of	mechatronic systems. They can ident	ify, simulate and desi	gn simple systems and
	implement those in laboratory conditions.	,	**	
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mixed groups a	and present results to target groups.		
Autonomy	Students are able to recognize and improve knowledge deficits	independently.		
	With instructor assistance, students are able to evaluate their ow	n knowledge level and define a furthe	er course of study.	
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following	General Engineering Science (German program): Specialisation	n Mechanical Engineering, Focus Med	hatronics: Compulsor	у
Curricula	General Engineering Science (German program): Specialisation General Engineering Science (German program): Specialis Compulsory	sation Mechanical Engineering, Fo	ocus Theoretical Me	chanical Engineering

## **Thesis**

Module M-001: Bachelor T	Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to General Regulations §24 (1):  At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge Skills	<ul> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> </ul>
	<ul> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>
Personal Competence Social Competence	<ul> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> </ul>
Autonomy	<ul> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
Credit points	12
Examination	according to Subject Specific Regulations
