Module M0725: Production Engineering	33
Module M0730: Computer Engineering	36
Module M0853: Mathematics III	38
Module M0960: Mechanics IV (Oscillations, Analytical Mechanics, Multibody Systems, Numerical Mechanics)	41
Module M0671: Technical Thermodynamics I	43
Module M0672: Signals and Systems	45
Module M0854: Mathematics IV	48
Module M0956: Measurement Technology for Mechanical Engineers	51
Module M1320: Simulation and Design of Mechatronic Systems	54
Module M0688: Technical Thermodynamics II	56
Module M0829: Foundations of Management	58
Module M0833: Introduction to Control Systems	61
Module M0610: Electrical Machines and Actuators	64
Module M0777: Semiconductor Circuit Design	66
Module M0803: Embedded Systems	68
Thesis	70
Module M-001: Bachelor Thesis	70

Program description

Content

The graduate students of the Bachelor program Mechatronics are able to demonstrate an overview of fundamental knowledge in the fields of material science, production, thermodynamics, mechanical design and computer science. They are able to express in detail basic approaches in the fields of mathematics, mechanics and electrical engineering, to explain the basics of metrology and control theory and to describe the interdisciplinary aspects of Mechatronics. This knowledge and the methods learned enable them to examine problems in Mechatronics, the sub-disciplines of Mechatronics and the adjacent disciplines.

Career prospects

The graduates of the Bachelor program Mechatronics are directly able to enter a career in the field of Mechatronics and work responsibly as Engineer. They are entitled to use the professional title Ingenieurin or Ingenieur (Engineer) pursuant to the Engineers Acts (Ingenieurgesetzen) of the states in Germany.

Possible employers include manufacturing companies in mechanical and electrical engineering as well as engineering firms.

The degree allows access to a Master program, for example the consecutive International Master in Mechantronics.

Learning target

Graduates are able

- to identify, abstract, formulate and solve technical problems on basic research;
- to select, combine and interdisciplinary apply suitable methods for analysis, modeling, simulation and optimization;
- to understand, analyze and evaluate products and methods in Mechatronics and its sub-disciplines in a systematic manner;
- to apply design methods in Mechatronics;
- to plan and carry out experiments and to interpret their results;
- and to estimate the boundaries of methods and techniques

Graduates can

- interdisciplinarily and responsibly apply and independently expand their knowledge within the sub-disciplines of Mechatronics accounting for economic requirements;
- evaluate Mechatronic problems in a wider societal context and assess the non-technical effects of their engineering work;
- cooperate with experts of other disciplines and laypersons and to communicate in German and English;
- conduct literary research and use databases and other information sources for their work and can express the results of their work understandably both in written and oral presentation;
- expand and deepen their acquired knowledge throughout their lives.

Program structure

The program is split into the core qualifications and Bachelor thesis.

The interdisciplinary final thesis is scheduled for the sixth semester.

At the Hamburg University of Technology the graduates can continue their studies with, among others, the Master program "International Master Mechatronics".

Core Qualification

Module M0575: Proce	edural Programming			
Courses				
Title		Typ	Hrc/wk	CP
Procedural Programming (L0197)		Lecture	1 1	2
Procedural Programming (L0201)		Recitation Section (large)	1	1
Procedural Programming (L0202)		Practical Course	2	3
Module Responsible	Prof. Siegfried Rump			
Admission Requirements	None			
Recommended Previous	Elementary PC handling skills			
Knowledge	Elementary mathematical skills			
Educational Objectives	After taking part successfully, students have reached the followi	ng learning results		
Professional Competence				
Knowledge	The students acquire the following knowledge:			
	 They know basic elements of the programment and know how to use them. 	ming language C. They	know the ba	sic data types
	 They have an understanding of elemer programming environment and know how t 	ntary compiler tasks, o hose interact.	of the prep	rocessor and
	 They know how to bind programs and how packages. 	to include external libr	aries to enha	ance software
	 They know how to use header files and he programming projects. 	ow to declare function i	nterfaces to	create larger
	 The acquire some knowledge how the pra allows them to develop programs interacting 	ogram interacts with thing with the programming	ne operating g environme	system. This nt as well.
	 They learnt several possibilities how to mo algorithms. 	odel and implement freq	uently occu	ring standard
Skills	 The students know how to judge the co algorithms efficiently. 	mplexity of an algorith	ims and how	v to program
	 The students are able to model and in functionalities. Moreover, they are able to a 	nplement algorithms fo adapt a given API.	or a numbei	of standard
Personal Competence Social Competence	The students acquire the following skills:			
	 They are able to work in small teams to sprogramming errors and to present their re 	solve given weekly task sults.	s, to identify	/ and analyze
	They are able to explain simple phenomena	a to each other directly a	at the PC.	
	They are able to plan and to work out a pro	ject in small teams.		
	 They communicate final results and present 	t programs to their tuto	r	
	• They communicate final results and present			
Autonomy	 The students take individual examinations programming skills and ability to solve new 	s as well as a final writ tasks.	ten examn t	o prove their
	 The students have many possibilities to programming exercises. 	check their abilities wh	nen solving	several given
	 In order to solve the given tasks efficientl within their group, where every student sol 	y, the students have to ves his or her part indivi	o split those idually.	appropriately

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture , in its teaching and learning arrangements , in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal- oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal- oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	 locate selected specialized areas with the relevant non-technical mother discipline, outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, different specialist disciplines relate to their own discipline and differentiate it as well as make connections, sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, Can communicate in a foreign language in a manner appropriate to the subject.
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	 apply basic methods of the said scientific disciplines, auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, to handle simple questions in aforementioned scientific disciplines in a sucsessful manner, justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence	
Social Competence	Personal Competences (Social Skills)
	Students will be able
	to learn to collaborate in different manner,

Autonomy	 to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. Personal Competences (Self-reliance) Students are able in selected areas to reflect on their own profession and professionalism in the context of real-life fields of application to organize themselves and their own learning processes
	 to reflect and decide questions in front of a broad education background
	 to communicate a nontechnical item in a competent way in writen form or verbaly
	 to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Title			Тур	Hrs/wk	СР
Electrical Engineering II: Alternating	g Current Networks and Basic Devices	(L0178)	Lecture	3	5
Electrical Engineering II: Alternating	g Current Networks and Basic Devices	(L0179)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Becker				
Admission Requirements	None				
Recommended Previous	Electrical Engineering I				
Knowledge	Mathematics I				
	Direct current networks, complex r	numbers			
Educational Objectives	After taking part successfully, stud	lents have reached the follow	ing learning results		
Professional Competence	After taking part successionly, stud		ing learning results		
Knowledge	Students are able to reproduce a	nd explain fundamental the	ories principles and methods	related to the t	theory of alternating
intervege	currents. They can describe netwo	orks of linear elements using	a complex notation for voltac	les and currents.	They can reproduce
	an overview of applications for th	e theory of alternating curre	ents in the area of electrical	engineering. Stu	dents are capable of
	explaining the behavior of fundam	ental passive and active devi	ces as well as their impact on	simple circuits.	
Skills	Students are capable of calculating	g parameters within simple	electrical networks at alterna	ting currents by	means of a complex
	notation for voltages and current	ts. They can appraise the f	undamental effects that may	occur within el	ectrical networks at
	alternating currents. Students an	e able to analyze simple c	ircuits such as oscillating cir	cuits, filter, and	matching networks
	quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of an				
	dimension their main features	ler, transmission line, compe	insation of reactive power, inc	intipliase system)	and are quaimed to
Personal Competence					
Social Competence	Students are able to work together	r on subject related tasks in s	mall groups. They are able to	present their res	ults effectively.
Autonomy	Students are capable to gather ne	ecessary information from the	e references provided and rela	ate that informat	ion to the context of
	the lecture. They are able to contin	nually reflect their knowledge	by means of activities that a	company the lea	ture, such as online-
	tests and exercises that are relate	ed to the exam. Based on re	spective feedback, students a	re expected to a	djust their individual
	learning process. They are able to	a L Linear Algebra, and Analy	their knowledge obtained in	this lecture and	the content of other
	lectures (e.g. Electrical Engineering	y I, Lilleal Algebia, and Analy	515).

Knowledge				
Educational Objectives	After taking part successfully, students have reache	d the following learning results		
Professional Competence	· · · · · · · · · · · · · · · · · · ·			
Knowladza				
Knowledge	Students can name further concepts in an	alysis and linear algebra. They are able	to explain the	m using appropriate
	examples.			
	 Students can discuss logical connections bet 	ween these concepts. They are capable o	f illustrating th	ese connections with
	the help of examples.			
	 They know proof strategies and can reproduce 	e them.		
Skills				
SKIIIS	Students can model problems in analysis and	l linear algebra with the help of the concep	ts studied in th	nis course. Moreover,
	they are capable of solving them by applying	established methods.		
	 Students are able to discover and verify furth 	er logical connections between the concept	s studied in the	e course.
	 For a given problem, the students can deve 	elop and execute a suitable approach, and	d are able to c	ritically evaluate the
	results.			,
Demonal Commetence				
Personal Competence				
Social Competence	Students are able to work together in teams. They are capable to use mathematics as a common language.			
	 In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can 			
	design examples to check and deepen the ur	derstanding of their peers.	51	
		5		
Autonomy				
Autonomy	• Students are capable of checking their unde	rstanding of complex concepts on their ow	n. They can sp	ecify open questions
	precisely and know where to get help in solvi	ng them.		
	 Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard 			
	problems.

Courses	
Title	Typ Hrs/wk CP
Circuit Theory (L0566)	Lecture 3 4
Circuit Theory (L0567)	Recitation Section (small) 2 2
Module Responsible	
Admission Requirements	None
Kecommended Previous	Electrical Engineering I and II, Mathematics I and II
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	· · · · · · · · · · · · · · · · · · ·
Knowledge	Students are able to explain the basic methods for calculating electrical circuits. They know the Fourier series analysis of line
	networks driven by periodic signals. They know the methods for transient analysis of linear networks in time and in frequer
	domain, and they are able to explain the frequency behaviour and the synthesis of passive two-terminal-circuits.
Skills	The students are able to calculate currents and voltages in linear networks by means of basic methods, also when driven
	periodic signals. They are able to calculate transients in electrical circuits in time and frequency domain and are able to explain
	respective transient behaviour. They are able to analyse and to synthesize the frequency behaviour of passive two-termin
	circuits.
Personal Competence	
Social Competence	Students work on exercise tasks in small guided groups. They are encouraged to present and discuss their results within t
	group.
Autonomy	The students are able to find out the required methods for solving the given practice problems. Possibilities are given to test the
	knowledge during the lectures continuously by means of short-time tests. This allows them to control independently th
	educational objectives. They can link their gained knowledge to other courses like Electrical Engineering I and Mathematics I.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module Responsible	Prof. Wolfgang Hintze			
Admission Requirements	None			
Recommended Previous	no course assessments required			
Knowledge	internship recommended			
Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence		5 5		
Knowledae	Students are able to			
	 name basic criteria for the selection of manufacturing pro 	ocesses.		
	 name the main groups of Manufacturing Technology. 			
	name the application areas of different manufacturing pr	ocesses.		
	 name boundaries, advantages and disadvantages of the describe elements, deometric properties and kinematic y 	ariables and requirements for	tools workniece :	and process
	 explain the essential models of manufacturing technology 		tools, workpiece t	ind process.
Skills	Students are able to			
	select manufacturing processes in accordance with the re-	equirements.		needuced
	 design manufacturing processes for simple tasks to meet assess components in terms of their production-oriented 	construction	e component to be	e produced.
	• assess components in terms of their production-oriented	construction.		
Personal Competence				
Social Competence	Students are able to			
boolar competence				
	 develop solutions in a production environment with quality 	ied personnel at technical leve	el and represent d	lecisions.
Autonomy	Students are able to			
	 interpret independently the manufacturing process. 			
	 assess own strengths and weaknesses in general. 			
	 assess their learning progress and define gaps to be imp 	roved.		
	 assess possible consequences of their actions.

Courses	
Title	Typ Hrs/wk CP
Computer Engineering (L0321)	Lecture 3 4
Computer Engineering (L0324)	Recitation Section (small) 1 2
Module Responsible	Prof. Heiko Falk
Admission Requirements	None
Recommended Previous	Basic knowledge in electrical engineering
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	Arter taking part succession, students have reached the following rearing results
Knowlodgo	This module deals with the foundations of the functionality of computing systems. It covers the layers from the assembly level
Knowledge	This module deals with the following includes the following tables. It covers the layers from the assembly-level
	programming down to gates. The module includes the following topics.
	Introduction
	Combinational logic: Gates, Boolean algebra, Boolean functions, hardware synthesis, combinational networks
	Sequential logic: Flip-flops, automata, systematic hardware design
	Technological foundations
	Computer arithmetic: Integer addition, subtraction, multiplication and division
	Basics of computer architecture: Programming models, MIPS single-cycle architecture, pipelining
	Memories: Memory hierarchies, SRAM, DRAM, caches
	Input/output: I/O from the perspective of the CPU, principles of passing data, point-to-point connections, busses
Skills	The students perceive computer systems from the architect's perspective, i.e., they identify the internal structure and the physical
	composition of computer systems. The students can analyze, how highly specific and individual computers can be built based on a
	collection of few and simple components. They are able to distinguish between and to explain the different abstraction layers of
	today's computing systems - from gates and circuits up to complete processors.
	After successful completion of the module, the students are able to judge the interdependencies between a physical computer
	system and the software executed on it. In particular, they shall understand the consequences that the execution of software has
	on the hardware-centric abstraction lavers from the assembly language down to gates. This way, they will be enabled to evaluate
	the impact that these low abstraction levels have on an entire system's performance and to propose feasible options.
Personal Competence	
Social Competence	Students are able to solve similar problems alone or in a group and to present the results accordingly.
Autonomy	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes
Autonomy	stadents are usic to acquire new knowledge non-specine inclutate and to associate ans knowledge with other classes.

Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Professional competence				
Knowledge	 Students can name the basic concepts in the a 	rea of analysis and differential equations.	They are able	to explain them using
	appropriate examples			
	Students can discuss logical connections betw	and there concepts. They are capable of	f illustrating th	and connections with
	Students can discuss logical connections betw	een these concepts. They are capable to	n musuating th	ese connections with
	the help of examples.			
	 They know proof strategies and can reproduce 	them.		
Skills				
	 Students can model problems in the area of ar 	nalysis and differential equations with the	help of the co	ncepts studied in this
	course. Moreover, they are capable of solving t	hem by applying established methods.		
	Students are able to discover and verify further	r logical connections between the concep	ts studied in the	e course.
	 For a given problem, the students can developed 	op and execute a suitable approach, an	d are able to c	ritically evaluate the
	results.			
Personal Competence				
Social Competence				
	 Students are able to work together in teams. I 	ney are capable to use mathematics as a	common langu	age.
	 In doing so, they can communicate new conce 	pts according to the needs of their coope	erating partners	. Moreover, they can
	design examples to check and deepen the und	erstanding of their peers.		
Autonomy				
, (accricinity)	 Students are capable of checking their unders 	tanding of complex concepts on their ow	vn. They can sp	ecify open questions
	precisely and know where to get help in solving	g them.		
	 Students have developed sufficient persistence 	e to be able to work for longer periods	in a goal-orien	ted manner on hard
	problems	5		
	problems.

Knowledge	The students can			
	 describe the axiomatic precedure used in mech 	anical contoxts		
	overlain important stops in model design:	anical contexts,		
	 explain important steps in model design, present technical knowledge 			
	present teenned knowledge.			
Skills	The students can			
	 explain the important elements of mathematics 	I / mechanical analysis and model for	mation and ann	ly it to the context of
	their own problems.			ly it to the context of
	 apply basic methods to engineering problems: 			
	 estimate the reach and boundaries of the method 	ods and extend them to be applicable t	o wider problem	sets.
Personal Competence				
Social Competence	The students can work in groups and support each oth	er to overcome difficulties.		
	The statents can work in groups and support each other to overcome dimetities.			
Autonomy	Students are capable of determining their own strengt	ns and weaknesses and to organize the	ir time and learn	ning based on those.

Recommended Previous	Elementary knowledge in Mathematics and M	echanics		
Knowledge				
Educational Objectives	After taking part successfully, students have	reached the following learning results		
Professional Competence				
Knowledge	Students are familiar with the laws of Thern	nodynamics. They know the relation of the kir	nds of energy acc	ording to 1 st law of
	Thermodynamics and are aware about the lin	aits of operaty conversions according to 2 nd low	of Thormodynam	aice. They are able to
	dictinguish between state variables and pre	coss variables and know the meaning of diffe	vor mernouynan	lics. They are able to
	onthalpy, ontropy and also the meaning of	exercy and apergy They are able to draw the	o Carnot cyclo ir	a Thormodynamics
	related diagram. They know the physical diff	evergy and anergy. They are able to draw the	re able to use the	
	state. They know the meaning of a fundamen	tal state of equation and know the basics of tw	o phaso Thormody	
	state. They know the meaning of a fundament	tal state of equation and know the basics of tw		ynannes.
Skills	Students are able to calculate the internal er	lergy, the enthalpy, the kinetic and the potent	al energy as well	as work and heat for
	simple change of states and to use this calcu	ations for the Carnot cycle. They are able to ca	liculate state varia	ables for an ideal and
	for a real gas from measured thermal state va	ariables.		
Personal Competence				
Social Competence	The students are able to discuss in small grou	ips and develop an approach.		
Autonomy	Students are able to define independently tas	sks, to get new knowledge from existing knowl	edge as well as to	find ways to use the
	knowledge in practice.

Course L0432: Signals and S	ystems
Тур	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Gerhard Bauch
Language	DE/EN
Cycle	SoSe
Content	Introduction to signal and system theory
	Signals
	Classification of signals
	 Continuous-time and discrete-time signals
	 Analog and digital signals

- Deterministic and random signals
- Description of LTI systems by differential equations or difference equations, respectively
- Basic properties of signals and operations on signals
- Elementary signals
- Distributions (Generalized Functions)
- Power and energy of signals
- Correlation functions of deterministic signals
 - Autocorrelation function
 - Crosscorrelation function
 - Orthogonal signals
 - Applications of correlation
- Linear time-invariant (LTI) systems
 - LinearityTime-invariance
 - Description of LTI systems by impulse response and frequency response
 - Convolution
 - Convolution and correlation
 - Properties of LTI-systems
 - Causal systems
 - Stable systems
 - Memoryless systems
- Fourier Series and Fourier Transform
 - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
 - Properties of the Fourier transform
 - Fourier transform of some basic signals
 - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
 - Frequency response, magnitude response and phase response
 - Transmission factor, attenuation, gain
 - Frequency-flat and frequency-selective LTI-systems
 - Bandwidth definitions
 - · Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
 - Phase delay and group delay
 - Linear-phase systems
 - Distortion-free systems
 - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
 - Relation of Fourier transform and Laplace transform
 - Properties of the Laplace transform
 - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
 - Transfer function of LTI-systems
 - Relation of Laplace transform, magnitude response and phase response
 - Analysis of LTI-systems using pole-zero plots
 - Allpass filters
 - Minimum-phase, maximum-phase and mixed phase filters
 - Stable systems
- Sampling
 - Sampling theorem
 - Reconstruction of continuous-time signals in frequency domain and time domain
 - Oversampling
 - Aliasing
 - Sampling with pulses of finite duration, sample and hold
- Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
 - Relation of Fourier transform and DTFT
 - Properties of the DTFT
- Discrete Fourier Transform (DFT)
 - Relation of DTFT and DFT
 - Cyclic properties of the DFT
 - DFT matrix
 - Zero padding
 - Cyclic convolution
 - Fast Fourier Transform (FFT)
 - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
 - Relation of Laplace transform, DTFT, and z-transform
 - Properties of the z-transform
 - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
 - FIR and IIR filters
 - Z-transform of digital filters
 - Analysis of discrete-time systems using pole-zero plots in the z-domain
 - Stability
 - Allpass filters

Knowledge				
Educational Objectives	After taking part successfully, students have reache	d the following learning results		
Professional Competence	After taking part successiony, students have reache	a the following learning results		
Knowlodge				
Knowledge	Students can name the basic concepts in Mat	hematics IV. They are able to explain ther	m using appropria	ate examples.
	Students can discuss logical connections bet	ween these concepts. They are capable	of illustrating the	ese connections v
	the help of examples.			
	They know proof strategies and can reproduce	e them.		
Skills				
	Students can model problems in Mathematic	cs IV with the help of the concepts studie	ed in this course.	Moreover, they
	capable of solving them by applying establish	ned methods.		
	 Students are able to discover and verify furth 	er logical connections between the conce	pts studied in the	course.
	 For a given problem, the students can deve 	elop and execute a suitable approach, a	nd are able to cr	itically evaluate
	results.			
Personal Competence				
Social Competence				
	• Students are able to work together in teams.	They are capable to use mathematics as	a common langua	age.
	 In doing so, they can communicate new cond 	cepts according to the needs of their coop	perating partners.	Moreover, they
	design examples to check and deepen the un	derstanding of their peers.		
Autonomy				
	Students are capable of checking their unde	rstanding of complex concepts on their o	wn. They can spe	ecity open questi
	precisely and know where to get help in solvi	ng them.		
	 Students have developed sufficient persister 	nce to be able to work for longer period	s in a goal-orient

Module M0956: Meas	urement Techn	ology for Mechai	nical Engine	ers		
Courses						
Title				Тур	Hrs/wk	СР
Practical Course: Measurement and Control Systems (L1119)				Practical Course	2	2
Measurement Technology for Mech	anical Engineering (L112	16)		Lecture	2	3
Measurement Technology for Mech	anical Engineering (L112	18)		Recitation Section (large)	1	1
Module Responsible	Prof. Thorsten Kern					
Admission Requirements	None					
Recommended Previous	Basic knowledge of p	hysics, chemistry and ele	ectrical engineering	9		
Knowledge						
Educational Objectives	After taking part succ	cessfully, students have r	eached the followi	ng learning results		
Professional Competence						
Knowledge	Students are able to	name the most importa	nt fundmentals of	the Measurement Technol	logy (Quantities and	d Units, Uncertainty
	Calibration, Static an	id Dynamic Properties of	Sensors and Syste	ms).		
	They can outline the	most important measur	ing methods for c	lifferent kinds of quantities	s to be maesured (Electrical Quantitie
	Temperature, mecha	nical quantities, Flow, Tir	me, Frequency).			
	They can describe im	portant mathada of cham	aical Analysis (Cas	Sancara Enactrocomy Ca	c Chromotography	
	They can describe in	iportant methods of chen	lical Analysis (Gas	Sensors, Spectroscopy, Ga	as chroniatography,	1
Skills	Students can select s	uitable measuring metho	ds to given proble	ms and can use refering m	easurement device	s in practice
Skiis	Statents can select s	altable measuring means	do to given proble	ins and can use rereining in		s in practice.
	The students are able	e to orally explain issues	in the subject are	a of measurement techno	logy and solution a	pproaches as well a
	place the issues into	the right context and app	lication area.			
Personal Competence						
Social Competence	Students can arrive a	at work results in groups a	and document the	m in a common report.		
···· ,·· ,··						
Autonomy	Students are able to	familiarize themselves wi	th new measurem	ent technologies.		
Workload in Hours	Independent Study Ti	ime 110, Study Time in L	ecture 70			
Credit points	6					
Course achievement	Compulsory Bonus	Form	Description			
	ites none	practical work	anu

Course L1119: Practical Cour	rse: Measurement and Control Systems
Тур	Practical Course
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Thorsten Kern
Language	DE
Cycle	WiSe/SoSe
Content	Experiment 1: Emission and immission measurement of gaseous pollutants: different technologies to determine different gaseous pollutants in automotive exhaust are used.
	Experiment 2: Simulation and measurement of asynchrone engine and rotary pump: the dynamic behaviour of e pump engine will be investigated. The starting will be simulated on a PC and compared with measurement.
	Experiment 3: Michelson interferometer and fiber optic: fundamental optical phenonema will be understood and applications with Michelson interferometer and optical fibers demonstrated.
	Experiment 4:Identification of the parameters of a control system and optimal control parameters

Module M1320: Simul	lation and Design of Mechatronic Sy	stems		
Courses				
Title		Тур	Hrs/wk	СР
Simulation and Design of Mechatro	nic Systems (L1822)	Lecture	2	2
Simulation and Design of Mechatro	nic Systems (L1823)	Recitation Section (large)	1	2
Simulation and Design of Mechatro	nic Systems (L1824)	Practical Course	1	2
Module Responsible	NN			
Admission Requirements				
Recommended Previous	Fundatmentals of mechanics, control theory and ele-	ctrical engineering		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	d the following learning results		
Professional Competence				
Knowledge	Students are able to describe methods and calculation	ons for design, modeling, simulation and	optimization of n	nechatronic systems.
Skills	Students are able to apply modern algorithms for me	odeling of mechatronic systems. They ca	n identify, simula	ite and design simple
	systems and implement those in laboratory condition	ns.		
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mix	ed groups and present results to target g	iroups.	
Autonomy	Students are able to recognize and improve knowled	ge deficits independently.		
	With instructor assistance, students are able to evalu	uate their own knowledge level and defin	e a further cours	e of study.
Workload in Hours	Independent Study Time 124, Study Time in Lecture	56

Module M0688: Tech	iicai Thermodynamics II			
Courses				
Title		Түр	Hrs/wk	СР
Technical Thermodynamics II (L044	19)	Lecture	2	4
Technical Thermodynamics II (L045	50)	Recitation Section (large)	1	1
Technical Thermodynamics II (L045	51)	Recitation Section (small)	1	1
Module Responsible	Prof. Dr. Arne Speerforck			
Admission Requirements	None			
Recommended Previous	Elementary knowledge in Mathematics, Mechanics	and Technical Thermodynamics I		
Knowledge				
Educational Objectives	After taking part successfully, students have reach	ned the following learning results		
Professional Competence				
Knowledge	Students are familiar with different cycle processe	s like Joule, Otto, Diesel, Stirling, Seiliger ar	nd Clausius-Rank	ine. They are able t
	derive energetic and exergetic efficiencies and	know the influence different factors. The	/ know the diffe	erence between an
	clockwise and clockwise cycles (heat-power cycle	cooling cycle). They have increased knowl	edge of steam c	ycles and are able t
	draw the different cycles in Thermodynamics re	lated diagrams. They know the laws of g	as mixtures, es	pecially of humid a
	processes and are able to perform simple combu	stion calculations. They are provided with b	asic knowledge	in gas dynamics an
	know the definition of the speed of sound and kno	w about a Laval nozzle.		
Skills	Students are able to use thermodynamic laws for	the design of technical processes. Especial	ly they are able	to formulate energy
	exergy- and entropy balances and by this to opti	mise technical processes. They are able to	perform simple	safety calculations
	regard to an outflowing gas from a tank. They	are able to transform a verbal formulate	ed message into	an abstract form
	procedure.			
Personal Competence				
Social Competence	The students are able to discuss in small groups a	nd develop an approach.		
Autonomy	Students are able to define independently tacks t	a gat now knowledge from existing knowledge	lao as well as to	find wave to use th
Autonomy	Students are able to define independently tasks, t	o get new knowledge from existing knowled	ige as well as to	ind ways to use th
	knowledge in practice.

Module M0829: Found	dations of Management			
Courses				
Title		Тур	Hrs/wk	СР
Management Tutorial (L0882)		Recitation Section (small)	2	3
Introduction to Management (L088	0)	Lecture	3	3
Module Responsible	Prof. Christoph Ihl			
Admission Requirements	None			
Recommended Previous	Basic Knowledge of Mathematics and Business			
Knowledge	After whether we want an end of the second state to second state to the fail	and a state of the state of the		
Brefessional Competence	After taking part successiony, students have reached the foil	owing learning results		
Knowledge	After taking this module, students know the important basics	of many different areas in Busir	and Manage	ment from Planning
Khomeage	and Organisation to Marketing and Innovation, and also to In	vestment and Controlling. In parti	icular they are al	ble to
	 explain the differences between Economics and M 	anagement and the sub-discipl	ines in Manage	ment and to name
	important definitions from the field of Management			
	 explain the most important aspects of and goals in N 	lanagement and name the most	important aspe	cts of entreprneurial
	projects	waduction procurations and as		chain management
	 describe and explain basic business functions as portability or approximation and human ressource management information of the second s	mation management innovation	management ar	chain management,
	explain the relevance of planning and decision ma	king in Rusiness esn in situat	tions under mul	Itinle objectives and
	uncertainty, and explain some basic methods from ma	thematical Finance	long under mu	tiple objectives and
	 state basics from accounting and costing and selected 	controlling methods.		
CL ///				
Skills	Students are able to analyse business units with respect to o out an Entrepreneurship project in a team. In particular, they	are able to	jectives, strateg	ies etc.) and to carry
	 analyse Management goals and structure them approp 	riately		
	analyse organisational and staff structures of compani	es		
	apply methods for decision making under multiple obj	ectives, under uncertainty and un	ider risk	
	 analyse production and procurement systems and Bus 	iness information systems		
	analyse and apply basic methods of marketing			
	 select and apply basic methods from mathematical fin 	ance to predefined problems		
	 apply basic methods from accounting, costing and cor 	trolling to predefined problems		
Personal Competence				
Social Competence	Students are able to			
	 work successfully in a team of students 			
	 to apply their knowledge from the lecture to an entrep 	reneurship project and write a co	herent report on	the project
	 to communicate appropriately and 			
	• to cooperate respectfully with their fellow students.			
Autonomy	Students are able to			
Autonomy				
	 work in a team and to organize the team themselves 			
	 to write a report on their project.

Course L08	382: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busi knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Title		Тур	Hrs/wk	СР
Introduction to Control Systems (L)654)	Lecture	2	4
Introduction to Control Systems (L)655)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner			
Admission Requirements	None			
Recommended Previous	Representation of signals and systems in time and fre	quency domain, Laplace transform		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	 Students can represent dynamic system helps 	ior in time and frequency domain and	can in particular	ovalain proportion
	Students can represent dynamic system benav first and second order systems	for in time and nequency domain, and		explain properties
	They can explain the dynamics of simple contri	ol loops and interpret dynamic propertie	es in terms of fre	quency response a
	root locus	si loops and interpret dynamic propertie		queries response u
	They can explain the Nyquist stability criterion	and the stability margins derived from i	t.	
	• They can explain the role of the phase margin	n analysis and synthesis of control loop	s	
	They can explain the way a PID controller affect	ts a control loop in terms of its frequence	y response	
	They can explain issues arising when controller	s designed in continuous time domain a	are implemented	digitally
Skills	Students can transform models of linear dynam	nic systems from time to frequency dom	ain and vice ver	sa
	They can simulate and assess the behavior of s	systems and control loops		
	They can design PID controllers with the help of	f heuristic (Ziegler-Nichols) tuning rules		
	They can analyze and synthesize simple control	I loops with the help of root locus and fr	equency respon	se techniques
	They can calculate discrete-time approxima	tions of controllers designed in con	tinuous-time ar	nd use it for digi
	implementation			
	• They can use standard software tools (Matlab 0	Control Toolbox, Simulink) for carrying o	ut these tasks	
Borconal Compotonco				
	Students can work in small groups to jointly calve tos	anical problems, and experimentally val	idata thair contr	allor docigne
Social Competence	Students can work in small groups to jointly solve tec			oller designs
Autonomy	when solving given problems	ces (lecture notes, software document	ation, experime	nic guides) and use
	when solving given problems.			
	They can assess their knowledge in weekly on-line tes	sts and thereby control their learning pro	ogress.

Тур	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	First and second order systems, poles and zeros, impulse and step response
	Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants
	Internal model principle
	Root locus techniques
	Root locus plots
	Root locus design of PID controllers
	Frequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	 Root locus and frequency response of time delay systems
	Smith predictor
	Digital control
	Sampled data systems, difference equations
	Sampled-data systems, dinitelence equations Tustin approximation, dinital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course

Course L0293: Electrical Mac	hines and Actuators
Тур	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Thorsten Kern, Dennis Kähler
Language	DE
Cycle	SoSe
Content	Electric field: Coulomb's law, flux (field) line, work, potential, capacitor, energy, force, capacitive actuators
	Magnetic field: force, flux line, Ampere's law, field at bounderies, flux, magnetic circuit, hysteresis, induction, self-induction, mutual inductance, transformer, electromagnetic actuators Synchronous machines, construction and layout, equivalent single line diagrams, no-load and short-cuircuit characteristics, vector diagrams, motor and generator operation, stepper motors DC-Machines: Construction and layout, torque generation mechanismen, torque vs speed characteristics, commutation, Asynchronous Machines. Magnetic field, construction and layout, equivalent single line diagram, complex stator current diagram (Heylands'diagram), torque vs. speed characteristics, rotor layout (squirrel-cage vs. sliprings),
	Drives with variable speed, inverter red operation, special drives

emiconductor Circuit Design (L07	53) 54)	Lecture	3	4
emiconductor Circuit Design (LU8	54)	Recitation Section (small)	1	2
Module Responsible	Prof. Matthias Kuhl			
Admission Requirements	None			
Recommended Previous	Fundamentals of electrical engineering			
Knowledge	Basics of physics, especially semiconduct	or physics		
Educational Objectives	After taking part successfully, students ha	ave reached the following learning results		
Professional Competence				
Knowledge	 Students are able to explain the full 	nctionality of different MOS devices in electronic c	rcuite	
	 Students are able to explain the full Students are able to explain how all 	nctionality of different MOS devices in electronic cl	4	
	 Students are able to explain now all Students are able to explain the full 	nalog circuits functions and where they are applied	1. nd their specificat	ions
	 Students are able to explain the full Students know the fundamental did 	netionality of rundamental operational ampliners a	s and disadvantag	es
	 Students have knowledge about me 	emory circuits and can explain their functionality a	and specifications.	
	 Students know the appropriate field 	ds for the use of bipolar transistors.		
		·		
<i>ci :</i> //				
SKIIIS	Students can calculate the specific	ations of different MOS devices and can define the	parameters of ele	ectronic circuits.
	Students are able to develop difference	ent logic circuits and can design different types of	logic circuits.	
	Students can use MOS devices, ope	erational amplifiers and bipolar transistors for spec	ific applications.	
Personal Competence				
Social Competence				
	 Students are able work emiciently in Students weaking together in email 	n neterogeneous teams.	al avaations	
	 Students working together in small 	groups can solve problems and answer profession	iai questions.	
Autonomy				
Autonomy	Students are able to assess their le	evel of knowledge.		
Workload in Hours Credit points	Independent Study Time 124, Study Time	in Lecture 56		
Course achievement	None

Module M0803: Embe	dded Systems			
Lourses				
Fitle		Typ	Hrs/wk	СР
Embedded Systems (L0805)		Recitation Section (small)	1	2
Module Responsible	Prof Heiko Falk	,		
Admission Bequirements	None			
Recommended Previous	Computer Engineering			
Knowledge	Computer Engineering			
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Brofossional Competence	After taking part successiony, students have reached the	Tonowing learning results		
Knowledge	Embedded systems can be defined as information process	sing systems embedded into enclos	ing products. Thi	s course teaches th
Knowledge	foundations of such systems. In particular, it deals with a	an introduction into these systems (notions common	characteristics) ar
	their specification languages (models of computation h	ierarchical automata specification	of distributed sy	stems task graph
	specification of real-time applications, translations betwee	en different models).		sterns, task graph.
	Another part covers the hardware of embedded system	ns: Sonsors, A/D and D/A converter	s, real-time cap	able communicatio
	hardware, embedded processors, memories, energy diss	sipation, reconfigurable logic and ac	tuators. The cou	rse also features a
	introduction into real-time operating systems, middlewa	are and real-time scheduling. Finally	y, the implement	tation of embedde
	officient realizations, compilers for embedded processors	bicware partitioning, nigh-level trans	normations of sp	ecifications, energ
	encienc realizations, compliers for embedded processors,	is covered.		
Skills	After having attended the course, students shall be able	e to realize simple embedded syste	ms. The student	s shall realize whi
	relevant parts of technological competences to use in or	der to obtain a functional embedded	l systems. In par	ticular, they shall I
	able to compare different models of computations and fe	easible techniques for system-level of	lesign. They sha	I be able to judge
	which areas of embedded system design specific risks exi	ist.		
Personal Competence				
Social Competence	Students are able to solve similar problems alone or in a g	group and to present the results acco	ordingly.	
Autonomy	Students are able to acquire new knowledge from specific	literature and to associate this know	wledge with othe	r classes.

Module M-001: Bache	lor Thesis		
Courses			
Title	Typ Hrs/wk CP		
Module Responsible	Professoren der TUHH		
Admission Requirements	According to General Regulations §21 (1):		
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.		
Recommended Previous			
Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Skills	 The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue o opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve the students. 		
	 With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 		
Personal Competence Social Competence	 Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 		
Autonomy	 The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own.
