Bachelor of Science (B.Sc.) Mechatronics

Cohort: Winter Term 2022 Updated: 7th June 2024

## **Table of Contents**

Table of Contents	2
Program description	3
Core Qualification	4
Module M0577: Non-technical Courses for Bachelors	4
Module M0377: Norrectimical Engineering I: Direct Current Networks and Electromagnetic Fields	6
Module M1692: Computer Science for Engineers - Introduction and Overview	7
Module M0850: Mathematics I	8
Module M1802: Engineering Mechanics I (Stereostatics)	10
Module M0933: Fundamentals of Materials Science	12
Module M0547: Electrical Engineering II: Alternating Current Networks and Basic Devices	14
Module M0594: Fundamentals of Mechanical Engineering Design	17
Module M1693: Computer Science for Engineers - Programming Concepts, Data Handling & Communication	19
Module M0851: Mathematics II	21
Module M1803: Engineering Mechanics II (Elastostatics)	23
Module M1804: Engineering Mechanics III (Dynamics)	25
Module M0598: Mechanical Engineering: Design	27
Module M0853: Mathematics III	30
Module M0708: Electrical Engineering III: Circuit Theory and Transients	33
Module M1805: Computational Mechanics	35
Module M0672: Signals and Systems	37
Module M0854: Mathematics IV	40
Module M0671: Technical Thermodynamics I	43
Module M0725: Production Engineering	45
Module M0956: Measurement Technology for Mechanical Engineers	48
Module M1320: Simulation and Design of Mechatronic Systems	51
Module M0833: Introduction to Control Systems	53
Module M0829: Foundations of Management	55
Module M0688: Technical Thermodynamics II	58
Module M0610: Electrical Machines and Actuators	60
Module M0777: Semiconductor Circuit Design	62
Thesis	64
Module M-001: Bachelor Thesis	64

#### **Program description**

#### Content

The graduate students of the Bachelor program Mechatronics are able to demonstrate an overview of fundamental knowledge in the fields of material science, production, thermodynamics, mechanical design and computer science. They are able to express in detail basic approaches in the fields of mathematics, mechanics and electrical engineering, to explain the basics of metrology and control theory and to describe the interdisciplinary aspects of Mechatronics. This knowledge and the methods learned enable them to examine problems in Mechatronics, the sub-disciplines of Mechatronics and the adjacent disciplines.

#### **Career prospects**

The graduates of the Bachelor program Mechatronics are directly able to enter a career in the field of Mechatronics and work responsibly as Engineer. They are entitled to use the professional title Ingenieurin or Ingenieur (Engineer) pursuant to the Engineers Acts (Ingenieurgesetzen) of the states in Germany.

Possible employers include manufacturing companies in mechanical and electrical engineering as well as engineering firms.

The degree allows access to a Master program, for example the consecutive International Master in Mechantronics.

#### Learning target

Graduates are able

- to identify, abstract, formulate and solve technical problems on basic research;
- to select, combine and interdisciplinary apply suitable methods for analysis, modeling, simulation and optimization;
- to understand, analyze and evaluate products and methods in Mechatronics and its sub-disciplines in a systematic manner;
- to apply design methods in Mechatronics;
- to plan and carry out experiments and to interpret their results;
- and to estimate the boundaries of methods and techniques

Graduates can

- interdisciplinarily and responsibly apply and independently expand their knowledge within the sub-disciplines of Mechatronics accounting for economic requirements;
- evaluate Mechatronic problems in a wider societal context and assess the non-technical effects of their engineering work;
- cooperate with experts of other disciplines and laypersons and to communicate in German and English;
- conduct literary research and use databases and other information sources for their work and can express the results of their work understandably both in written and oral presentation;
- expand and deepen their acquired knowledge throughout their lives.

#### **Program structure**

The program is split into the core qualifications and Bachelor thesis.

The interdisciplinary final thesis is scheduled for the sixth semester.

At the Hamburg University of Technology the graduates can continue their studies with, among others, the Master program "International Master Mechatronics".

#### **Core Qualification**

The study of mechatronics enables you to understand interdisciplinary technical issues and to coordinate their solution in project teams and to take on subtasks of each individual technical discipline. This function is often referred to as systems engineering. The core qualifications of the bachelor's degree in mechanical engineering correspond exactly to this requirement and convey the basics from all relevant disciplines (computer science, electrical engineering, mechanics, systems technology) as well as the necessary basics of mathematics.

Module Responsible	Dagmar Richter
Admission Requirements	
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fu Self-reliance, self-management, collaboration and professional and personnel management competences. The departm implements these training objectives in its <b>teaching architecture</b> , in its <b>teaching and learning arrangements</b> , in <b>teach</b> <b>areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>compete</b> <b>level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechn complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechn academic programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development competences. It also provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation study these subjects in one or two specific semesters during the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dea with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are delibera encouraged in specific courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migra studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter seme 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a g oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging g oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. Th differences are reflected in the practical examples used, in content topics that refer to different professional application conte and in the higher scientific and theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leader functions of Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	<ul> <li>locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in learning area,</li> <li>different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representa in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	<ul> <li>apply basic methods of the said scientific disciplines,</li> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned speci discipline,</li> </ul>

• to handle simple questions in aforementioned scientific disciplines in a sucsessful manner,

	• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence	
Social Competence	Personal Competences (Social Skills)
	Students will be able
	<ul> <li>to learn to collaborate in different manner,</li> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> </ul>
	<ul> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> </ul>
	to explain nontechnical items to auditorium with technical background knowledge.
Autonomy	Personal Competences (Self-reliance)
	Students are able in selected areas
	to reflect on their own profession and professionalism in the context of real-life fields of application
	to organize themselves and their own learning processes
	<ul> <li>to reflect and decide questions in front of a broad education background</li> </ul>
	to communicate a nontechnical item in a competent way in writen form or verbaly
	<ul> <li>to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

	g Current Networks and Basic Devices (L0178)	Lecture	3	5
Electrical Engineering II: Alternating	g Current Networks and Basic Devices (L0179)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Becker			
Admission Requirements	None			
<b>Recommended Previous</b>	Electrical Engineering I			
Knowledge	Mathematics I			
	Hutternuces i			
	Direct current networks, complex numbers			
Educational Objectives	After taking part successfully, students have reached t	he following learning results		
Professional Competence				
Knowledge	Students are able to reproduce and explain fundame			
	currents. They can describe networks of linear element an overview of applications for the theory of alternational			
	explaining the behavior of fundamental passive and ad	-		
	explaining the behavior of randamental publice and at	are devices as well as then impact of	simple encurs.	
Skills	Students are capable of calculating parameters within	simple electrical networks at alterna	ting currents by	means of a comp
	notation for voltages and currents. They can appra			-
	alternating currents. Students are able to analyze simple circuits such as oscillating circuits, filter, and matching network			
	quantitatively and dimension elements by means of a design. They can motivate and justify the fundamental elements of			
	electrical power supply (transformer, transmission line, compensation of reactive power, multiphase system) and are qualified			
	dimension their main features.			
Personal Competence				
Social Competence	Students are able to work together on subject related	asks in small groups. They are able to	present their res	ults effectively.
Autonomy	Students are capable to gather necessary information			
	the lecture. They are able to continually reflect their knowledge by means of activities that accompany the lecture, such as online tests and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual tests and exercises that are related to the exam.			
	tests and exercises that are related to the exam. Based on respective feedback, students are expected to adjust their individual learning process. They are able to draw connections between their knowledge obtained in this lecture and the content of other			
	lectures (e.g. Electrical Engineering I, Linear Algebra, a	-	this lecture and	the content of ou

Cycle	SoSe
Content	- General time-dependency of electrical networks
	- Representation and properties of harmonic signals
	- RLC-elements at alternating currents/voltages
	- Complex notation for the representation of RLC-elements
	- Power in electrical networks at alternating currents, compensation of reactive power
	- Frequency response locus (Nyquist plot) and Bode-diagrams
	- Measurement instrumentation for assessing alternating currents
	- Oscillating circuits, filters, electrical transmission lines
	- Transformers, three-phase current, energy converters
	- Simple non-linear and active electrical devices
Literature	- M. Albach, "Elektrotechnik", Pearson Studium (2011)
	- T. Harriehausen, D. Schwarzenau, "Moeller Grundlagen der Elektrotechnik", Springer (2013)
	- R. Kories, H. Schmidt-Walter, "Taschenbuch der Elektrotechnik", Harri Deutsch (2010)
	- C. Kautz, "Tutorien zur Elektrotechnik", Pearson (2009)
	- A. Hambley, "Electrical Engineering: Principles and Applications", Pearson (2013)
	- R. Dorf, "The Electrical Engineering Handbook", CRC (2006)

Recommended Previous				
Knowledge				
-	After taking part successfully, students have reached th	e following learning results		
Professional Competence		5 5		
Knowledge				
	Students can name the basic concepts in the are	a of analysis and differential equation	s. They are able	to explain them usin
	appropriate examples.	a three concepts. They are conclude	of illustration th	ana sannastiana wit
	<ul> <li>Students can discuss logical connections between the help of examples.</li> </ul>	en these concepts. They are capable	of illustrating th	ese connections wit
	<ul> <li>They know proof strategies and can reproduce the</li> </ul>	iem		
Skills				
	Students can model problems in the area of anal		ne help of the con	ncepts studied in thi
	course. Moreover, they are capable of solving the			
	Students are able to discover and verify further lo			
	<ul> <li>For a given problem, the students can develop reculte</li> </ul>	and execute a suitable approach, a	nd are able to c	ritically evaluate th
	results.			
Personal Competence				
Social Competence				
Social competence	Students are able to work together in teams. The	y are capable to use mathematics as	a common langu	age.
	<ul> <li>In doing so, they can communicate new concept</li> </ul>		perating partners	. Moreover, they ca
	design examples to check and deepen the under	standing of their peers.		
Autonomy	Students are capable of checking their understa	nding of complex concepts on their o	wn. They can sp	ecify open question
	precisely and know where to get help in solving them.			
	Students have developed sufficient persistence	to be able to work for longer period	ls in a goal-orien	ted manner on har
	problems.

Circuit Theory (L0566)		Lecture	3	4
Circuit Theory (L0567)		Recitation Section (small)	2	2
Module Responsible	Prof. Alexander Kölpin			
Admission Requirements	None			
<b>Recommended Previous</b>	Electrical Engineering I and II, Mathematics I and II			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence	······ ·······························			
-	Students are able to explain the basic methods for cal	culating electrical circuits. They know	v the Fourier se	ries analysis of line
	networks driven by periodic signals. They know the m			
	domain, and they are able to explain the frequency beh			
Skills	The students are able to calculate currents and volta	ges in linear networks by means of	basic methods.	also when driven
	periodic signals. They are able to calculate transients in			
	respective transient behaviour. They are able to anal			
	circuits.			
Personal Competence				
Social Competence	Students work on exercise tasks in small guided grou	ps. They are encouraged to present	and discuss th	eir results within t
	group.			
Autonomy	The students are able to find out the required methods	for solving the given practice problem	ns. Possibilities a	are given to test th
	knowledge during the lectures continuously by mean	ns of short-time tests. This allows t	them to control	independently th
	educational objectives. They can link their gained know	edge to other courses like Electrical E	ngineering I and	Mathematics I.
Credit points	Independent Study Time 110, Study Time in Lecture 70

## Course L0432: Signals and Systems Тур Lecture Hrs/wk 3 СР 4 Workload in Hours Independent Study Time 78, Study Time in Lecture 42 Lecturer Prof. Gerhard Bauch DE/EN Language Cycle SoSe Content • Introduction to signal and system theory Signals Classification of signals Continuous-time and discrete-time signals Analog and digital signals Deterministic and random signals • Description of LTI systems by differential equations or difference equations, respectively • Basic properties of signals and operations on signals • Elementary signals • Distributions (Generalized Functions) • Power and energy of signals • Correlation functions of deterministic signals Autocorrelation function Crosscorrelation function Orthogonal signals Applications of correlation • Linear time-invariant (LTI) systems

- Linearity
- Time-invariance
- Description of LTI systems by impulse response and frequency response
- Convolution
- Convolution and correlation
- Properties of LTI-systems
- Causal systems
- Stable systems
- Memoryless systems
- Fourier Series and Fourier Transform
  - Fourier transform of continuous-time signals, discrete-time signals, periodic signals, non-periodic signals
  - Properties of the Fourier transform
  - Fourier transform of some basic signals
  - Parseval's theorem
- Analysis of LTI-systems and signals in the frequency domain
  - Frequency response, magnitude response and phase response
  - Transmission factor, attenuation, gain
  - Frequency-flat and frequency-selective LTI-systems
  - Bandwidth definitions
  - Basic types of systems (filters), lowpass, highpass, bandpass, bandstop systems
  - Phase delay and group delay
  - Linear-phase systems
  - Distortion-free systems
  - Spectrum analysis with limited observation window: Leakage effect
- Laplace Transform
  - Relation of Fourier transform and Laplace transform
  - Properties of the Laplace transform
  - Laplace transform of some basic signals
- Analysis of LTI-systems in the s-domain
  - Transfer function of LTI-systems
  - Relation of Laplace transform, magnitude response and phase response
  - Analysis of LTI-systems using pole-zero plots
  - Allpass filters
  - Minimum-phase, maximum-phase and mixed phase filters
  - Stable systems
- Sampling
  - Sampling theorem
  - Reconstruction of continuous-time signals in frequency domain and time domain
  - Oversampling
  - Aliasing
  - Sampling with pulses of finite duration, sample and hold
  - Decimation and interpolation
- Discrete-Time Fourier Transform (DTFT)
  - Relation of Fourier transform and DTFT
  - Properties of the DTFT
- Discrete Fourier Transform (DFT)
  - Relation of DTFT and DFT
  - Cyclic properties of the DFT
  - DFT matrix
  - Zero padding
  - Cyclic convolution
  - Fast Fourier Transform (FFT)
  - Application of the DFT: Orthogonal Frequency Division Multiplex (OFDM)
- Z-Transform
  - Relation of Laplace transform, DTFT, and z-transform
  - Properties of the z-transform
  - Z-transform of some basic discrete-time signals
- Discrete-time systems, digital filters
  - FIR and IIR filters
  - Z-transform of digital filters
  - Analysis of discrete-time systems using pole-zero plots in the z-domain
  - Stability
  - Stability
     Allpass filters
  - Minimum-phase, maximum-phase and mixed-phase filters
  - Linear phase filters
  - Enedi phase inc

-	The content of experiment 1:
	Accuracy testing of a delta robot: In the course of the experiment, the accuracy of a delta robot is tested through 3 tasks. The fit task focuses on the online/offline programming of the robot. The second task deals with sensor calibration. In the third task, f radius of a sphere is determined using three different measurement methods (manual measurement, manual measurement with sensor, automatic data acquisition and data processing).
	The content of experiment 3:
	The aim of the task is to enable the parallel kinematics to find objects, grasp them and place them on a static target position this purpose, the end effector of the kinematics is equipped with an optical sensor (camera), whose characteristics are to defined. The measuring range of the sensor is to be identified and, based on this, a movement strategy for finding the objects is be developed and implemented. Once the objects have been found, they are to be picked up with a magnetic gripper a transported to their destination.
	The content of experiment 4:
	The aim of the task is to enable the parallel kinematics to find objects, grab them and deposit them on a moving platform. For the purpose, the end effector of the kinematics is equipped with an optical sensor (camera), the properties of which were worked in experiment 3. Based on this, the parallel kinematics should now be able to follow the moving platform. For this purpose position control must be developed and implemented. Once the controller has been appropriately configured, the objects can placed on the moving platform.

	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Timm Faulwasser
Language	DE
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	<ul> <li>First and second order systems, poles and zeros, impulse and step response</li> </ul>
	Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants
	Internal model principle
	Root locus techniques
	Root locus plots
	Root locus design of PID controllers
	Frequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	<ul> <li>Root locus and frequency response of time delay systems</li> </ul>
	Smith predictor
	Digital control
	Sampled-data systems, difference equations
	Tustin approximation, digital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course
Literature

СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christian Lüthje, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Recommended Previous Knowledge	Elementary knowledge in Mathematics, Mechanics and	Technical Thermodynamics I		
	After taking part successfully, students have reached t	he following learning results		
Professional Competence	After taking part successfully, students have reached t	ne following learning results		
Knowledge	Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are at derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are at draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of hum processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics know the definition of the speed of sound and know about a Laval nozzle. Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate en exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculation regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract for procedure.			erence between a ycles and are able pecially of humid
Skills				safety calculation
	The students are able to discuss in small groups and develop an approach. You can answer comprehension question content that are provided in the lecture with the ClickerOnline tool "TurningPoint" after discussions with other students Students can physically understand and explain the complex problems (cycle processes, air conditioning processes, processes) set in tasks. They are able to select the methods taught in the lecture and exercise to solve complex pr apply them independently to different types of tasks.		students. ocesses, combust

Course L0864: Semiconducto	or Circuit Design
Тур	Recitation Section (small)
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	NN, Weitere Mitarbeiter
Language	DE
Cycle	SoSe
Content	<ul> <li>Basic circuits and characteristic curves of bipolar transistors</li> <li>Basic circuits and characteristic curves of MOS transistors for amplifiers</li> <li>Realization and dimensioning of operational amplifiers</li> <li>Realization of logic functions</li> <li>Basic circuits with MOS transistors for combinational and sequential logic</li> <li>Memory circuits</li> <li>Circuits for analog-to-digital and digital-to-analog converters</li> <li>Design of exemplary circuits</li> </ul>
Literature	<ul> <li>U. Tietze und Ch. Schenk, E. Gamm, Halbleiterschaltungstechnik, Springer Verlag, 14. Auflage, 2012, ISBN 3540428496</li> <li>R. J. 	Thesis
Module M-001: Bache	lor Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge Skills	<ul> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions or solve subject.</li> </ul>
Personal Competence Social Competence	<ul> <li>technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably an in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to th addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> </ul>
Autonomy	<ul> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientifi problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
Credit points	12
Course achievement	None
Examination	Thesis
	According to General Regulations
scale	
-	General Engineering Science (German program): Thesis: Compulsory
i showing curricula	General Engineering Science (German program, 7 semester): Thesis: Compulsory Civil- and Environmental Engineering: Thesis: Compulsory
	Bioprocess Engineering: Thesis: Compulsory
	Chemical and Bioprocess Engineering: Thesis: Compulsory
	Computer Science: Thesis: Compulsory
	Data Science: Thesis: Compulsory
	Digital Mechanical Engineering: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory
	Engineering Science: Thesis: Compulsory
