Module M0508: Fluid Mechanics and Ocean Energy	4
Module M0523: Business & Management	7
Module M0524: Nontechnical Elective Complementary Courses for Master	8
Module M0751: Vibration Theory	10
Module M0808: Finite Elements Methods	11
Module M0846: Control Systems Theory and Design	13
Module M1201: Practical Course Energy Systems	15
Module M1204: Modelling and Optimization in Dynamics	16
Module M0604: High-Order FEM	18
Module M0657: Computational Fluid Dynamics II	20
Module M0714: Numerical Treatment of Ordinary Differential Equations	21
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics)	23
Module M0807: Boundary Element Methods	24
Module M1145: Automation and Simulation	26
Module M0521: Materials for Energy Conversion Plants	28
Module M0658: Innovative CFD Approaches	29
Module M1208: Project Work Energy Systems	30
Module M1159: Seminar Energy Systems	31
Specialization Energy Systems	33
Module M0763: Aircraft Systems I	33
Module M0742: Thermal Engineering	35
Module M1149: Marine Power Engineering	37
Module M1200: Electrical Power Supply	39
Module M0641: Steam Generators	42
Module M0721: Air Conditioning	44
Module M1021: Marine Diesel Engine Plants	46
Module M1161: Turbomachinery	48
Module M1000: Combined Heat and Power and Combustion Technology	50
Module M1162: Selected Topics of Energy Systems	52
Module M1162: Selected Topics of Energy Systems	63
Module M1155: Aircraft Cabin Systems	74
Module M1294: Bioenergy	76
Module M1235: Electrical Power Systems I	80
Specialization Marine Engineering	83
Module M0528: Maritime Technology and Offshore Wind Parks	83
Module M1210: Selected Topics of Marine Engineering	86
Module M1149: Marine Power Engineering	92
Module M1021: Marine Diesel Engine Plants	94
Module M0641: Steam Generators	96
Module M1161: Turbomachinery	98
Module M0721: Air Conditioning	100
Module M1000: Combined Heat and Power and Combustion Technology	102
Module M1146: Ship Vibration	104
Module M0742: Thermal Engineering	106
Thesis	108
Module M-002: Master Thesis	108

Program description

Content

The research-oriented master's study program in Energy Systems follows on from the bachelor's in mechanical engineering, specializing in energy systems. The program deals in greater depth with the math, scientific and engineering contents of the bachelor's degree course and teaches further methods to solve complex energy systems problems systematically and scientifically.

As a part of this master's program students must opt to specialize in either energy systems or marine engineering. A ship's engine room is a complex floating energy plant. The TUHH is the only German university to offer a study program in energy systems that includes marine engineering.

The content of the study program consists of basic and method-oriented knowledge about the physical description of classical energy systems, regenerative energy systems, and marine engineering.

Career prospects

The study program covers a wide range of math and physics basics and prepares students for senior roles in industry and science in selected energy systems and/or marine engineering modules.

The program's wide-ranging scope facilitates challenging scientific work in very different areas of energy systems and marine engineering and also in general mechanical engineering, automotive and aviation engineering.

Learning target

The aim of the master's program in Energy Systems is to familiarize students with the different energy conversion, distribution, and application technologies. It must be borne in mind that Energy Systems is a cross-sectional subject that touches upon practically all areas of technology. Leading to a M.Sc., the program is therefore designed to teach the skills required to recognize relationships in complex systems.

Graduates of the master's program in Energy Systems are able to apply the specialized knowledge that they have acquired to complex energy systems problems. They can work their way independently into new issues. They can analyze, abstract, and model processes using scientific methods and can also document them. They can assess data and results and develop from them strategies for devising innovative solutions. They are capable of discussing problems as members of a team and, if need be, of optimizing them.

Program structure

The structure of the master's program in Energy Systems consists of the core qualification, a specialization (Energy Systems or Marine Engineering), and the thesis.

As a part of the core qualification students must study, along with the compulsory modules Operation and Management and Non-technical Supplementary Modules, the two modules Energy Systems Lab and Energy Systems Project Work. In addition, they can choose three from a range of 14 modules that are on offer.

As a part of the Energy Systems specialization, three compulsory modules (Turbomachines, Thermal Engineering, Combined Heat & Power and Combustion Technology) and four mandatory elective modules (out of 11) must be studied. The mandatory electives include an open module, Selected Energy Systems Topics, from which courses counting for 6 credits out of 39 on offer can be chosen.

As a part of the Marine Engineering specialization, students must take two compulsory modules (Energy Systems on Board Ships, Marine Engines) and five mandatory electives (out of 5 on offer). The mandatory electives include an open module, Selected Marine Engineering Topics, from which courses counting for 12 credits out of 22 on offer can be chosen.

In their master's thesis students work independently on research-oriented problems, structuring the task into different sub-aspects and apply systematically the specialized competences they have acquired in the course of the study program.

The contents of the compulsory modules that form a part of the core qualification and those of the modules that form a part of the specializations are, together with the tasks set for the master's thesis, closely connected to the research areas at the university departments with an energy systems orientation.

Core qualification

In-depth physics, math, and engineering contents of energy systems and marine engineering are taught in the core qualification area. In addition, research- and application-oriented experiments are undertaken in the Energy Systems Lab compulsory module and research-oriented problems are dealt with in the Energy Systems Project Work module.

Students are able to model and to analyze energy systems in terms of physics and mathematics. Furthermore, in the Energy Systems Lab module they are taught competences relating to the critical analysis and evaluation of measurement data and experimental results. In the Project Work module they are encouraged to work independently on problems, on the structuring of solution approaches, and on their written documentation. The Energy Systems Lab works in small groups and the Project Work can be undertaken as group work, thereby strengthening teamwork skills.

Module M0508: Fluid Mechanics and Ocean Energy	
Courses	
Title	Typ Hrs/wk CP
Energy from the Ocean (L0002)	Lecture 2 2
Fluid Mechanics II (L0001)	Lecture 2 4
Module Responsible	Prof. Michael Schlüter
Admission Requirements	none
Recommended Previous Knowledge	Technische Thermodynamik I-II Wärme- und Stoffübertragung
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to describe different applications of fluid mechanics for the field of Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems in the field of ocean energy. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity, empirical solutions, numerical methods).
<i>Skills</i>	Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.
Personal Competence	
<i>Social Competence</i>	The students are able to discuss a given problem in small groups and to develop an approach.
<i>Autonomy</i>	Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam
Examination duration and scale	3h
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective Compulsory Renewable Energies: Core qualification: Compulsory Theoretical Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory

Course L0002: Energy from the Ocean	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Moustafa Abdel-Maksoud
Language	DE
Cycle	WiSe
Content	<ol style="list-style-type: none"> 1. Introduction to ocean energy conversion 2. Wave properties <ul style="list-style-type: none"> ◦ Linear wave theory ◦ Nonlinear wave theory ◦ Irregular waves ◦ Wave energy ◦ Refraction, reflection and diffraction of waves 3. Wave energy converters <ul style="list-style-type: none"> ◦ Overview of the different technologies ◦ Methods for design and calculation 4. Ocean current turbine

Module M0523: Business & Management	
Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"> • Students are able to find their way around selected special areas of management within the scope of business management. • Students are able to explain basic theories, categories, and models in selected special areas of business management. • Students are able to interrelate technical and management knowledge.
<i>Skills</i>	<ul style="list-style-type: none"> • Students are able to apply basic methods in selected areas of business management. • Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.
Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<ul style="list-style-type: none"> • Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.
Workload in Hours	Depends on choice of courses
Credit points	6

Courses
Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0524: Nontechnical Elective Complementary Courses for Master	
Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<p>The Non-technical Elective Study Area</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the "non-technical department" follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p>Specialized Competence (Knowledge)</p> <p>Students can</p> <ul style="list-style-type: none"> • explain specialized areas in context of the relevant non-technical disciplines, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
Professional Competence <i>Skills</i>	<p>Professional Competence (Skills)</p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> • apply basic and specific methods of the said scientific disciplines, • question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence	

<i>Social Competence</i>	<p>Personal Competences (Social Skills)</p> <p>Students will be able</p> <ul style="list-style-type: none"> • to learn to collaborate in different manner, • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge.
<i>Autonomy</i>	<p>Personal Competences (Self-reliance)</p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)

Module M0751: Vibration Theory			
Courses			
Title	Typ	Hrs/wk	CP
Vibration Theory (L0701)	Lecture	3	6
Module Responsible	Prof. Norbert Hoffmann		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to denote terms and concepts of Vibration Theory and develop them further.		
<i>Skills</i>	Students are able to denote methods of Vibration Theory and develop them further.		
Personal Competence			
<i>Social Competence</i>	Students can reach working results also in groups.		
<i>Autonomy</i>	Students are able to approach individually research tasks in Vibration Theory.		
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2 Hours		
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Core qualification: Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory		

Course L0701: Vibration Theory	
Typ	Lecture

Module M0808: Finite Elements Methods			
Courses			
Title		Typ	Hrs/wk CP
Finite Element Methods (L0291)		Lecture	2 3
Finite Element Methods (L0804)		Recitation Section (large)	2 3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	none		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1204: Modelling and Optimization in Dynamics			
Courses			
Title	Typ	Hrs/wk	CP
Flexible Multibody Systems (L1632)	Lecture	2	3
Optimization of dynamical systems (L1633)	Lecture	2	3
Module Responsible	Prof. Robert Seifried		
Admission Requirements	None		
Recommended Previous Knowledge	Simulation of dynamical Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students demonstrate basic knowledge and understanding of modeling, simulation and analysis of complex rigid and flexible multibody systems and methods for optimizing dynamic systems after successful completion of the module.</p> <p><i>Skills</i> Students are able</p> <ul style="list-style-type: none"> + to think holistically + to independently, securely and critically analyze and optimize basic problems of the dynamics of rigid and flexible multibody systems + to describe dynamics problems mathematically + to optimize dynamics problems 		
Personal Competence	<p><i>Social Competence</i> Students are able to</p> <ul style="list-style-type: none"> + solve problems in heterogeneous groups and to document the corresponding results. <p><i>Autonomy</i> Students are able to</p> <ul style="list-style-type: none"> + assess their knowledge by means of exercises. + acquaint themselves with the necessary knowledge to solve research oriented tasks. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	30 min		
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory		

Course L1632: Flexible Multibody Systems	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Robert Seifried
Language	DE
Cycle	WiSe
Content	<ol style="list-style-type: none"> 1. Basics of Multibody Systems 2. Basics of Continuum Mechanics 3. Linear finite element modelles and modell reduction 4. Nonlinear finite element Modelles: absolute nodal coordinate formulation 5. Kinematics of an elastic body 6. Kinetics of an elastic body 7. System assembly
Literature	Schwertassek, R. und Wallrapp, O.: Dynamik flexibler Mehrkörpersysteme. Braunschweig, Vieweg, 1999. Seifried, R.: Dynamics of Underactuated Multibody Systems, Springer, 2014. Shabana, A.A.: Dynamics of Multibody Systems. Cambridge Univ. Press, Cambridge, 2004, 3. Auflage.

Course L1633: Optimization of dynamical systems	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Robert Seifried
Language	DE
Cycle	WiSe
Content	<ol style="list-style-type: none"> 1. Formulation and classification of optimization problems 2. Scalar Optimization 3. Sensitivity Analysis 4. Unconstrained Parameter Optimization 5. Constrained Parameter Optimization 6. Stochastic optimization 7. Multicriteria Optimization 8. Topology Optimization
Literature	<p>Bestle, D.: Analyse und Optimierung von Mehrkörpersystemen. Springer, Berlin, 1994.</p> <p>Nocedal, J. , Wright , S.J. : Numerical Optimization. New York: Springer, 2006.</p>

Module M0604: High-Order FEM				
Courses				
Title		Typ	Hrs/wk	CP
High-Order FEM (L0280)		Lecture	3	4
High-Order FEM (L0281)		Recitation Section (large)	1	2
Module Responsible	Prof. Alexander Düster			
Admission Requirements	None			
Recommended Previous Knowledge	Differential Equations 2 (Partial Differential Equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to + give an overview of the different (h, p, hp) finite element procedures. + explain high-order finite element procedures. + specify problems of finite element procedures, to identify them in a given situation and to explain their mathematical and mechanical background.			
<i>Skills</i>	Students are able to + apply high-order finite elements to problems of structural mechanics. + select for a given problem of structural mechanics a suitable finite element procedure. + critically judge results of high-order finite elements. + transfer their knowledge of high-order finite elements to new problems.			
Personal Competence				
<i>Social Competence</i>	Students are able to + solve problems in heterogeneous groups and to document the corresponding results.			
<i>Autonomy</i>	Students are able to + assess their knowledge by means of exercises and E-Learning. + acquaint themselves with the necessary knowledge to solve research oriented tasks.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Production Management: Specialisation Production Technology: Elective Compulsory Materials Science: Specialisation Modelling: Elective Compulsory Mechatronics: Technical Complementary Course: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory			

Course L0280: High-Order FEM	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Alexander Düster
Language	EN
Cycle	SoSe
Content	1. Introduction 2. Motivation 3. Hierarchic shape functions 4. Mapping functions 5. Computation of element matrices, assembly, constraint enforcement and solution 6. Convergence characteristics 7. Mechanical models and finite elements for thin-walled structures 8. Computation of thin-walled structures 9. Error estimation and hp-adaptivity 10. High-order fictitious domain methods
Literature	[1] Alexander Düster, High-Order FEM, Lecture Notes, Technische Universität Hamburg-Harburg, 164 pages, 2014 [2] Barna Szabo, Ivo Babuska, Introduction to Finite Element Analysis – Formulation, Verification and Validation, John Wiley & Sons, 2011

Course L0281: High-Order FEM	
Typ	Recitation Section (large)

Module M0657: Computational Fluid Dynamics II			
Courses			
Title	Typ	Hrs/wk	CP
Computational Fluid Dynamics II (L0237)	Lecture	2	3
Computational Fluid Dynamics II (L0421)	Recitation Section (large)	2	3
Module Responsible	Prof. Thomas Rung		
Admission Requirements	none		
Recommended Previous Knowledge	Basics of computational and general thermo/fluid dynamics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Establish a thorough understanding of Finite-Volume approaches. Familiarise with details of the theoretical background of complex CFD algorithms.		
<i>Skills</i>	Ability to manage of interface problems and build-up of coding skills. Ability to evaluate, assess and benchmark different solution options.		
Personal Competence			
<i>Social Competence</i>	Practice of team working during team exercises.		
<i>Autonomy</i>	Independent analysis of specific solution approaches.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	0.5h-0.75h		
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory		

Course L0237: Computational Fluid Dynamics II	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Thomas Rung
Language	DE/EN
Cycle	SoSe
Content	Computational Modelling of complex single- and multiphase flows using higher-order approximations for unstructured grids and meshless particle-based methods.
Literature

Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics)				
Courses				
Title		Typ	Hrs/wk	CP
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) (L0516)		Lecture	2	3
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) (L0518)		Recitation Section (large)	2	3
Module Responsible	Prof. Otto von Estorff			
Admission Requirements	none			
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.			
<i>Skills</i>	The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.			
Personal Competence				
<i>Social Competence</i>				
<i>Autonomy</i>	The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.

Automation and Simulation (L1525)		Lecture	3	3
Automation and Simulation (L1527)		Recitation Section (large)	2	3
Module Responsible	Prof. Günter Ackermann			
Admission Requirements	none			
Recommended Previous Knowledge	BSc Mechanical Engineering or similar			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can describe the structure and the function of process computers, the corresponding components, the data transfer via bus systems and programmable logic computers .			
	They can describe the basic principle of a numeric simulation and the corresponding parameters.			
	They can explain the usual method to simulate the dynamic behaviour of three-phase machines.			
<i>Skills</i>	Students can describe and design simple controllers using established methods.			
	They are able to assess the basic characteristics of a given automation system and to evaluate, if it is adequate for a given plant.			
	They can model and simulate technical systems with respect to their dynamical behaviour and can use Matlab/Simulink for the simulation.			
	They are able to apply established methods for the calculation of the dynamical behaviour of three-phase machines.			
Personal Competence				
<i>Social Competence</i>	Teamwork in small teams.			
<i>Autonomy</i>	Students are able to identify the need of methodical analyses in the field of automation systems, to do these analyses in an adequate manner and to evaluate the results critically.

Specialization Energy Systems

The Energy Systems specialization covers the mechanical engineering-oriented area of energy systems. Attention is paid to covering examples from the entire energy chain as far as possible, from small energy conversion units (Thermal Engineering) to large-scale facilities (Steam Generators). The modules offered cover both classical (Turbomachines) and regenerative energy systems (Wind Farms). A number of modules deal with energy systems in the mobile sector, such as for cars, airplanes and ships (Air Conditioning). The focus is on teaching the system concept because only by considering a system as a whole can useful energy be provided efficiently by means of conversion from conventional and renewable energy sources.

Students learn to understand complex energy systems, to describe them physically, and to model them mathematically. They are able to analyze and assess complex energy systems issues in the context of current energy policy. These skills can be put to practical use in all areas of engineering.

Module M0763: Aircraft Systems I	
Courses	
Title	Typ Hrs/wk CP
Aircraft Systems I (L0735)	Lecture 3 4
Aircraft Systems I (L0739)	Recitation Section (large) 1 2
Module Responsible	Prof. Frank Thielecke
Admission Requirements	None
Recommended Previous Knowledge	Basic knowledge in: <ul style="list-style-type: none"> • Mathematics • Mechanics • Thermodynamics • Electrical Engineering • Hydraulics • Control Systems
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> • Describe essential components and design points of hydraulic and electrical systems such as high-lift and anti-ice systems • Give an overview of the functionality of air conditioning systems and explain atmospheric conditions for icing such as the functionality of anti-ice systems • Explain the need for high-lift systems such as ist functionality and effects • Assess the challenge during the design of supply systems of an aircraft
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> • Design hydraulic supply systems of aircrafts • Design high-lift systems of aircrafts • Analyze the thermodynamic behaviour of air conditioning systems and design anti-ice systems
Personal Competence	
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> • Perform system design in groups and present and discuss results
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> • Reflect the contents of lectures autonomously
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam
Examination duration and scale	165 Minutes
Assignment for the Following Curricula	Energy Systems: Specialisation Energy Systems: Elective Compulsory Aircraft Systems Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory

Course L0735: Aircraft Systems I	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Frank Thielecke
Language	DE
Cycle	WiSe
Content	<ul style="list-style-type: none"> Hydraulic Energy Systems (Fluids; pressure loss in valves and pipes; components of hydraulic systems like pumps, valves, etc.; pressure/flow characteristics; actuators; tanks; power and heat balances; emergency power) Electric Energy Systems (Generators; constant-speed-drives; DC and AC converters; electrical power distribution; bus systems; monitoring; load analysis) High Lift Systems (Principles; investigation of loads and system actuation power; principles and sizing of actuation and positioning systems; safety requirements and devices) Environmental Control Systems (Thermodynamic analysis; expansion and compression cooling systems; control strategies; cabin pressure control systems) De- and Anti-Ice Systems: (Atmospheric icing conditions; principles of de- and anti-ice systems)
Literature	<ul style="list-style-type: none"> Moir, Seabridge: Aircraft Systems Green: Aircraft Hydraulic Systems Torenbek: Synthesis of Subsonic Airplane Design SAE1991: ARP; Air Conditioning Systems for Subsonic Airplanes

Module M0742: Thermal Engineering				
Courses				
Title		Typ	Hrs/wk	CP
Thermal Engineering (L0023)		Lecture	3	5
Thermal Engineering (L0024)		Recitation Section (large)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous Knowledge	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.			
<i>Skills</i>	Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	60 min			
Assignment for the Following Curricula	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Compulsory Energy Systems: Specialisation Marine Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Module M1149: Marine Power Engineering	
Courses	
Title	Typ Hrs/wk CP
Electrical Installation on Ships (L1531)	Lecture 2 2
Electrical Installation on Ships (L1532)	Recitation Section (large) 1 1
Marine Engineering (L1569)	Lecture 2 2
Marine Engineering (L1570)	Recitation Section (large) 1 1
Module Responsible	Prof. Christopher Friedrich Wirz
Admission Requirements	
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to describe the state-of-the-art regarding the wide range of propulsion components on ships and apply their knowledge. They further know how to analyze and optimize the interaction of the components of the propulsion system and how to describe complex correlations with the specific technical terms in German and English. The students are able to name the operating behaviour of consumers, describe special requirements on the design of supply networks and to the electrical equipment in isolated networks, as e.g. onboard ships, offshore units, factories and emergency power supply systems, explain power generation and distribution in isolated grids, wave generator systems on ships, and name requirements for network protection, selectivity and operational monitoring.
<i>Skills</i>	The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation on board ships. They are further able to assess, analyse and solve technical and operational problems with propulsion and auxiliary plants and to design propulsion systems. The students have the skills to describe complex correlations and bring them into context with related disciplines. Students are able to calculate short-circuit currents, switchgear, and design electrical propulsion systems for ships.
Personal Competence	
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84
Credit points	6
Examination	Written exam

Module M0641 : Steam Generators				
Courses				
Title		Typ	Hrs/wk	CP
Steam Generators (L0213)		Lecture	3	5
Steam Generators (L0214)		Recitation Section (large)	1	1
Module Responsible	Prof. Alfons Kather			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge in Thermodynamics, Heat Transfer, Fluid Mechanics and Steam Power Plants			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students outline the steam thermodynamics and the technical types of steam generators. They are in a position to describe the basic principles of steam generators and highlight the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as determine the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these also in the context of adjoining subjects.			
<i>Skills</i>	The students will be able, using detailed knowledge on the calculation, design and construction of steam generators linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formulation, modelling of processes and training in the solution methodology for partial problems they obtain a good overview of this key component of the power plant. Within the framework of the exercise the students obtain the ability to draw the balances and dimension the steam generator and its components. For this purpose small but close to reality tasks are solved, to highlight aspects of the design of steam generators.			
Personal Competence				
<i>Social Competence</i>	An excursion within the framework of the lecture is planned for those students that are interested. In this come the students in direct contact with the whole subject field of gas and steam generators. Through discussions with the plant personnel they obtain an overview of the daily operation problems and their solution approach.			
<i>Autonomy</i>	The students assisted by the tutors will be able to develop alone basic calculations covering partial aspects of the steam generator. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions highlighted.

Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous Knowledge	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a h_1+x,x -diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.			
<i>Skills</i>	Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Module M1000: Combined Heat and Power and Combustion Technology				
Courses				
Title		Typ	Hrs/wk	CP
Combined Heat and Power and Combustion Technology (L0216)		Lecture	3	5
Combined Heat and Power and Combustion Technology (L0220)		Recitation Section (large)	1	1
Module Responsible	Prof. Alfons Kather			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge in Thermodynamics incl. Combustion Calculations, Heat Transfer and Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO_x and the primary NO_x reduction measures and evaluate the impact of regulations and allowable limit levels.</p> <p>The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, and district heating plants with motor engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the economical and ecological significance of district CHP plants, as well as their economics.</p> <p><i>Skills</i> Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to do holistic considerations of energy utilisation. Examples taken from the praxis, such as the energy supply within the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p> <p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON ProfessionalTM. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>			
Personal Competence	<p><i>Social Competence</i> Especially during the exercises the focus is on communication with the teaching person. By this the students are animated to reflect on their existing knowledge and to ask specific questions for improving their knowledge level.</p> <p><i>Autonomy</i> The students assisted by the tutors will be able to develop simulation models independently and run scenario analyses as well as estimating calculations. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process arrangements and boundary conditions are highlighted.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Energy and Environmental Engineering: Specialisation Energy Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Compulsory Energy Systems: Specialisation Marine Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory			

Course L0216: Combined Heat and Power and Combustion Technology	
Typ	Lecture
Hrs/wk	3
CP	5
Workload in Hours	Independent Study Time 108, Study Time in Lecture 42
Lecturer	Prof. Alfons Kather
Language	DE
Cycle	SoSe
Content	<p>In the subject area of "Combined Heat and Power" covers the following themes:</p> <ul style="list-style-type: none"> • Layout, design and operation of Combined Heat and Power plants • District heating plants with back-pressure steam turbine and condensing turbine with pressure-controlled extraction tapping • District heating plants with gas turbine • District heating plants with combined steam and gas turbine • District heating plants with motor engine • Geothermal power and heat generation • Combined cooling heat and power (CCHP) • Layout of the key components • Regulatory framework and allowable limits • Economic significance and calculation of the profitability of district CHP plant <p>whereas the subject of Combustion Technology includes:</p> <ol style="list-style-type: none"> 1. Thermodynamic and chemical fundamentals 2. Fuels 3. Reaction kinetics 4. Premixed flames 5. Non-premixed flames 6. Combustion of gaseous fuels 7. Combustion of liquid fuels 8. Combustion of solid fuels 9. Combustion Chamber design 10. NO_x reduction

Course L1287: Steam Turbines in Renewable and Conventional Applications	
Typ	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Klausur
Examination duration and scale	90 min
Lecturer	Dr. Christian Scharfetter
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Course L1639: Gas Distribution Systems	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Dr. Bernhard Klocke
Language	DE/EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Introduction - A general survey of gas supply • Grid layout • Gas pressure control system • Pipeline technology • Gas metering and energy calculation • Construction of network • Operation of network • In-House installation • Injection of Biomethane • Technical directives and standards
Literature	<ul style="list-style-type: none"> • Homann, K.; Reimert, R.; Klocke, B.: The Gas Engineer's Dictionary Oldenbourg Industrieverlag, 2013 ISBN 978-3-8356-3214-1 • Cerbe, G.: Grundlagen der Gastechnik: Gasbeschaffung - Gasverteilung - Gasverwendung 7. Auflage 2008 ISBN 978-3-446-41352-8

Course L1249: Auxiliary Systems on Board of Ships	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Examination Form	Mündliche Prüfung
Examination duration and scale	20 min
Lecturer	Prof. Christopher Friedrich Wirz
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Vorschriften zur Schiffsausrüstung • Ausrüstungsanlagen auf Standard-Schiffen • Ausrüstungsanlagen auf Spezial-Schiffen • Grundlagen und Systemtechnik der Hydraulik • Auslegung und Betrieb von Ausrüstungsanlagen
Literature	<ul style="list-style-type: none"> • H. Meyer-Peter, F. Bernhardt: Handbuch der Schiffsbetriebstechnik • H. Watter: Hydraulik und Pneumatik

Course L1250: Auxiliary Systems on Board of Ships	
Typ	Recitation Section (large)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Examination Form	Mündliche Prüfung
Examination duration and scale	20 min
Lecturer	Prof. Christopher Friedrich Wirz
Language	DE
Cycle	SoSe
Content	
Literature	Siehe korrespondierende Vorlesung

Course L0072: Offshore Wind Parks	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Mündliche Prüfung
Examination duration and scale	45 min
Lecturer	Dr. Alexander Mitzlaff
Language	DE
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Nonlinear Waves: Stability, pattern formation, solitary states • Bottom Boundary layers: wave boundary layers, scour, stability of marine slopes • Ice-structure interaction • Wave and tidal current energy conversion
Literature	<ul style="list-style-type: none"> • Chakrabarti, S., Handbook of Offshore Engineering, vol. Module M1294: Bioenergy	
Courses	
Title	Typ Hrs/wk CP
Biofuels Process Technology (L0061)	Lecture 1 1
Biofuels Process Technology (L0062)	Recitation Section (small) 1 1
Thermal Utilization of Biomass (L1767)	Lecture 2 2
World Market for Agricultural Commodities (L1769)	Lecture 1 1
Sustainable Mobility (L0010)	Lecture 2 1
Module Responsible	Prof. Martin Kaltschmitt
Admission Requirements	None
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	Students are able to reproduce an in-depth outline of energy production from biomass, aerobic and anaerobic waste treatment processes, the gained products and the treatment of produced emissions.
<i>Skills</i>	Students can apply the learned theoretical knowledge of biomass-based energy systems to explain relationships for different tasks, like dimensioning and design of biomass power plants. In this context, students are also able to solve computational tasks for combustion, gasification and biogas, biodiesel and bioethanol use.
Personal Competence	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can independently exploit sources with respect to the emphasis of the lectures. They can choose and acquire the for the particular task useful knowledge. Furthermore, they can solve computational tasks of biomass-based energy systems independently with the assistance of the lecture. Regarding to this they can assess their specific learning level and can consequently define the further workflow.

Courses				
Title		Typ	Hrs/wk	CP
Electrical Power Systems I (L1670)		Lecture	3	4
Electrical Power Systems I (L1671)		Recitation Section (large)	2	2
Module Responsible	Prof. Christian Becker			
Admission Requirements	none			
Recommended Previous Knowledge	Fundamentals of Electrical Engineering			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.			
<i>Skills</i>	With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of electric power systems and to assess the results.			
Personal Competence				
<i>Social Competence</i>	The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.			
<i>Autonomy</i>	Students can independently tap knowledge of the emphasis of the lectures.

Specialization Marine Engineering

The Marine Engineering specialization covers a wide range of marine engineering aspects, such as Ships' Engines, Ship Vibrations, Maritime Technology and Offshore Wind Farms, Ships' Propellers, Ship Acoustics, and Auxiliary Plant on Board Ships, and also conventional energy systems aspects, such as Turbomachines, Thermal Engineering, or Air Conditioning. Here too the focus is on complex marine engineering systems and the efficient provision of electricity, heating, and refrigeration.

Students learn to understand complex ships' systems, to describe them physically, and to model them mathematically. They are able to analyze and assess complex aspects of marine engineering in the context of current maritime issues.

Module M0528: Maritime Technology and Offshore Wind Parks	
Courses	
Title	Typ
Introduction to Maritime Technology (L0070)	Lecture
Introduction to Maritime Technology (L1614)	Recitation Section (small)
Offshore Wind Parks (L0072)	Lecture
Hrs/wk	CP
2	2
1	1
2	3
Module Responsible	Prof. Moustafa Abdel-Maksoud
Admission Requirements	
Recommended Previous Knowledge	<p>Qualified Bachelor of a natural or engineering science; Solid knowledge and competences in mathematics, mechanics, fluid dynamics.</p> <p>Basic knowledge of ocean engineering topics (e.g. from an introductory class like 'Introduction to Maritime Technology')</p>
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	<p><i>Knowledge</i></p> <p>After successful completion of this class, students should have an overview about phenomena and methods in ocean engineering and the ability to apply and extend the methods presented. In detail, the students should be able to</p> <ul style="list-style-type: none"> • describe the different aspects and topics in Maritime Technology, • apply existing methods to problems in Maritime Technology, • discuss limitations in present day approaches and perspectives in the future. <p>Based on research topics of present relevance the participants are to be prepared for independent research work in the field. For that purpose specific research problems of workable scope will be addressed in the class.</p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> • Show present research questions in the field • Explain the present state of the art for the topics considered • Apply given methodology to approach given problems • Evaluate the limits of the present methods • Identify possibilities to extend present methods • Evaluate the feasibility of further developments
<i>Skills</i>	
Personal Competence	
<i>Social Competence</i>	
<i>Autonomy</i>	
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	180 min
Assignment for the Following Curricula	Energy Systems: Specialisation Marine Engineering: Elective Compulsory Renewable Energies: Specialisation Wind energy: Elective Compulsory

Course L0070: Introduction to Maritime Technology	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Sven Hoog

Content	The lectures starts with the description of the propeller blade outline parameters. The design fundamentals for the blade parameters are introduced. The momentum theory for screw propellers is treated. The design optimization of the propeller by means of systematic propeller series is considered. The lecture then treats the profile theory of the airfoil with infinite span (singularity methods) for the most common technical profiles. Lifting line theory is introduced as calculation tool for radial circulation distribution. The lecture continues with the interaction propeller and main propulsion plant. Strategies to control a CPP are discussed. The lecture closes with the most important cavitation phenomena which are relevant for the determination of pressure fluctuations.
Literature	W.H. Isay, Propellertheorie. Springer Verlag.

Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students are able to describe the state-of-the-art regarding the wide range of propulsion components on ships and apply their knowledge. They further know how to analyze and optimize the interaction of the components of the propulsion system and how to describe complex correlations with the specific technical terms in German and English. The students are able to name the operating behaviour of consumers, describe special requirements on the design of supply networks and to the electrical equipment in isolated networks, as e.g. onboard ships, offshore units, factories and emergency power supply systems, explain power generation and distribution in isolated grids, wave generator systems on ships, and name requirements for network protection, selectivity and operational monitoring.
<i>Skills</i>	The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation on board ships. They are further able to assess, analyse and solve technical and operational problems with propulsion and auxiliary plants and to design propulsion systems. The students have the skills to describe complex correlations and bring them into context with related disciplines. Students are able to calculate short-circuit currents, switchgear, and design electrical propulsion systems for ships.
Personal Competence	
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.

Module M0641 : Steam Generators				
Courses				
Title		Typ	Hrs/wk	CP
Steam Generators (L0213)		Lecture	3	5
Steam Generators (L0214)		Recitation Section (large)	1	1
Module Responsible	Prof. Alfons Kather			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge in Thermodynamics, Heat Transfer, Fluid Mechanics and Steam Power Plants			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students outline the steam thermodynamics and the technical types of steam generators. They are in a position to describe the basic principles of steam generators and highlight the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as determine the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these also in the context of adjoining subjects.			
<i>Skills</i>	The students will be able, using detailed knowledge on the calculation, design and construction of steam generators linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formulation, modelling of processes and training in the solution methodology for partial problems they obtain a good overview of this key component of the power plant. Within the framework of the exercise the students obtain the ability to draw the balances and dimension the steam generator and its components. For this purpose small but close to reality tasks are solved, to highlight aspects of the design of steam generators.			
Personal Competence				
<i>Social Competence</i>	An excursion within the framework of the lecture is planned for those students that are interested. In this come the students in direct contact with the whole subject field of gas and steam generators. Through discussions with the plant personnel they obtain an overview of the daily operation problems and their solution approach.			
<i>Autonomy</i>	The students assisted by the tutors will be able to develop alone basic calculations covering partial aspects of the steam generator. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions highlighted.

Module M0721 : Air Conditioning				
Courses				
Title		Typ	Hrs/wk	CP
Air Conditioning (L0594)		Lecture	3	5
Air Conditioning (L0595)		Recitation Section (large)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous Knowledge	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a h_1+x,x -diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.			
<i>Skills</i>	Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1000: Combined Heat and Power and Combustion Technology				
Courses				
Title		Typ	Hrs/wk	CP
Combined Heat and Power and Combustion Technology (L0216)		Lecture	3	5
Combined Heat and Power and Combustion Technology (L0220)		Recitation Section (large)	1	1
Module Responsible	Prof. Alfons Kather			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge in Thermodynamics incl. Combustion Calculations, Heat Transfer and Fluid Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	<p>The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO_x and the primary NO_x reduction measures and evaluate the impact of regulations and allowable limit levels.</p> <p>The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, and district heating plants with motor engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the economical and ecological significance of district CHP plants, as well as their economics.</p>			
<i>Skills</i>	<p>Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to do holistic considerations of energy utilisation. Examples taken from the praxis, such as the energy supply within the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p> <p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON ProfessionalTM. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>			
Personal Competence				
<i>Social Competence</i>	Especially during the exercises the focus is on communication with the teaching person. By this the students are animated to reflect on their existing knowledge and to ask specific questions for improving their knowledge level.			
<i>Autonomy</i>	The students assisted by the tutors will be able to develop simulation models independently and run scenario analyses as well as estimating calculations. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process arrangements and boundary conditions are highlighted.

Module M1146: Ship Vibration				
Courses				
Title		Typ	Hrs/wk	CP
Ship Vibration (L1528)		Lecture	2	3
Ship Vibration (L1529)		Recitation Section (small)	2	3
Module Responsible	Prof. Sören Ehlers			
Admission Requirements	None			
Recommended Previous Knowledge	Mechanis I - III Structural Analysis of Ships I Fundamentals of Ship Structural Design			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students can reproduce the acceptance criteria for vibrations on ships; they can explain the methods for the calculation of natural frequencies and forced vibrations of structural components and the entire hull girder; they understand the effect of exciting forces of the propeller and main engine and methods for their determination			
<i>Skills</i>	Students are capable to apply methods for the calculation of natural frequencies and exciting forces and resulting vibrations of ship structures including their assessment; they can model structures for the vibration analysis			
Personal Competence				
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.			
<i>Autonomy</i>	Students are able to detect vibration-prone components on ships, to model the structure, to select suitable calculation methods and to assess the results

Admission Requirements	none			
Recommended Previous Knowledge	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.			
<i>Skills</i>	Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Thesis

In their master's thesis students work independently on research-oriented problems, structuring the task into different sub-aspects and apply systematically the specialized competences they have acquired in the course of the study program.

Special importance is attached to a scientific approach to the problem including, in addition to an overview of literature on the subject, its classification in relation to current issues, a description of the theoretical foundations, and a critical analysis and assessment of the results.

Module M-002: Master Thesis	
Courses	
Title	Typ
Hrs/wk	CP
Module Responsible	Professoren der TUHH
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §24 (1): <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>
Recommended Previous Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues. The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them. The students can place a research task in their subject area in its context and describe and critically assess the state of research.
<i>Skills</i>	<p>The students are able:</p> <ul style="list-style-type: none"> To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question. To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way. To develop new scientific findings in their subject area and subject them to a critical assessment.
Personal Competence	
<i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way. Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> To structure a project of their own in work packages and to work them off accordingly. To work their way in depth into a largely unknown subject and to access the information required for them to do so. To apply the techniques of scientific work comprehensively in research of their own.
Workload in Hours	Independent Study Time 900, Study Time in Lecture 0
Credit points	30
Examination	according to Subject Specific Regulations
