Program description	3
Core qualification	6
Module M0508: Fluid Mechanics and Ocean Energy	6
Module M0523: Business & Management	9
Module M0524: Nontechnical Elective Complementary Courses for Master	10
Module M0751: Vibration Theory	13
Module M0808: Finite Elements Methods	15
Module M0846: Control Systems Theory and Design	17
Module M1201: Practical Course Energy Systems	21
Module M1204: Modelling and Optimization in Dynamics	23
Module M0604: High-Order FEM	26
Module M0657: Computational Fluid Dynamics II	28
Module M0714: Numerical Treatment of Ordinary Differential Equations	30
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	33
Module M0807: Boundary Element Methods	35
Module M1145: Automation and Simulation	37
Module M0840: Optimal and Robust Control	40
Module M1343: Fibre-polymer-composites	43
Module M0658: Innovative CFD Approaches	45
Module M1208: Project Work Energy Systems	47
Module M1159: Seminar Energy Systems	48
Specialization Energy Systems	50
Module M0763: Aircraft Systems I	50
Module M0742: Thermal Engineering	53
Module M1149: Marine Power Engineering	55
Module M1235: Electrical Power Systems I	58
Module M0641: Steam Generators	61
Module M0721: Air Conditioning	64
Module M1021: Marine Diesel Engine Plants	67
Module M1000: Combined Heat and Power and Combustion Technology	69
Module M1162: Selected Topics of Energy Systems - Option A	73
Module M1346: Selected Topics of Energy Systems - Option B	87
Module M0512: Use of Solar Energy	101
Module M1161: Turbomachinery	105
Module M1155: Aircraft Cabin Systems	107
Module M1294: Bioenergy	110
Module M0515: Energy Information Systems and Electromobility	116
Specialization Marine Engineering	119
Module M0528: Maritime Technology and Offshore Wind Parks	119
Module M1210: Selected Topics of Marine Engineering - Option A	122
Module M1149: Marine Power Engineering	130
Module M1347: Selected Topics of Marine Engineering - Option B	133
Module M1021: Marine Diesel Engine Plants	141
Module M0641: Steam Generators	143
Module M0721: Air Conditioning	146
Module M1161: Turbomachinery	149
Module M1000: Combined Heat and Power and Combustion Technology	151
Module M1146: Ship Vibration	155
Module M0742: Thermal Engineering	157
Thesis	159
Module M-002: Master Thesis	159

## Program description

---

---

### Content

The research-oriented master's study program in Energy Systems follows on from the bachelor's in mechanical engineering, specializing in energy systems. The program deals in greater depth with the math, scientific and engineering contents of the bachelor's degree course and teaches further methods to solve complex energy systems problems systematically and scientifically.

As a part of this master's program students must opt to specialize in either energy systems or marine engineering. A ship's engine room is a complex floating energy plant. The TUHH is the only German university to offer a study program in energy systems that includes marine engineering.

The content of the study program consists of basic and method-oriented knowledge about the physical description of classical energy systems, regenerative energy systems, and marine engineering.

## Career prospects

The study program covers a wide range of math and physics basics and prepares students for senior roles in industry and science in selected energy systems and/or marine engineering modules.

The program's wide-ranging scope facilitates challenging scientific work in very different areas of energy systems and marine engineering and also in general mechanical engineering, automotive and aviation engineering.

## Learning target

The aim of the master's program in Energy Systems is to familiarize students with the different energy conversion, distribution, and application technologies. It must be borne in mind that Energy Systems is a cross-sectional subject that touches upon practically all areas of technology. Leading to a M.Sc., the program is therefore designed to teach the skills required to recognize relationships in complex systems.

Graduates of the master's program in Energy Systems are able to apply the specialized knowledge that they have acquired to complex energy systems problems. They can work their way independently into new issues. They can analyze, abstract, and model processes using scientific methods and can also document them. They can assess data and results and develop from them strategies for devising innovative solutions. They are capable of discussing problems as members of a team and, if need be, of optimizing them.

## Program structure

The structure of the master's program in Energy Systems consists of the core qualification, a specialization (Energy Systems or Marine Engineering), and the thesis.

As a part of the core qualification students must study, along with the compulsory modules Operation and Management and Non-technical Supplementary Modules, the two modules Energy Systems Lab and Energy Systems Project Work. In addition, they can choose three from a range of 14 modules that are on offer.

As a part of the Energy Systems specialization, three compulsory modules (Turbomachines, Thermal Engineering, Combined Heat & Power and Combustion Technology) and four mandatory elective modules (out of 11) must be studied. The mandatory electives include an open module, Selected Energy Systems Topics, from which courses counting for 6 credits out of 39 on offer can be chosen.

As a part of the Marine Engineering specialization, students must take two compulsory modules (Energy Systems on Board Ships, Marine Engines) and five mandatory electives (out of 5 on offer). The mandatory electives include an open module, Selected Marine Engineering Topics, from which courses counting for 12 credits out of 22 on offer can be chosen.

In their master's thesis students work independently on research-oriented problems, structuring the task into

different sub-aspects and apply systematically the specialized competences they have acquired in the course of the study program.

The contents of the compulsory modules that form a part of the core qualification and those of the modules that form a part of the specializations are, together with the tasks set for the master's thesis, closely connected to the research areas at the university departments with an energy systems orientation.

## Core qualification

In-depth physics, math, and engineering contents of energy systems and marine engineering are taught in the core qualification area. In addition, research- and application-oriented experiments are undertaken in the Energy Systems Lab compulsory module and research-oriented problems are dealt with in the Energy Systems Project Work module.

Students are able to model and to analyze energy systems in terms of physics and mathematics. Furthermore, in the Energy Systems Lab module they are taught competences relating to the critical analysis and evaluation of measurement data and experimental results. In the Project Work module they are encouraged to work independently on problems, on the structuring of solution approaches, and on their written documentation. The Energy Systems Lab works in small groups and the Project Work can be undertaken as group work, thereby strengthening teamwork skills.

Module M0508: Fluid Mechanics and Ocean Energy	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Energy from the Ocean (L0002)	Lecture
Fluid Mechanics II (L0001)	Lecture
	<b>Hrs/wk</b>
	2
	2
	<b>CP</b>
	2
	4
<b>Module Responsible</b>	Prof. Michael Schlüter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Technische Thermodynamik I-II Wärme- und Stoffübertragung
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to describe different applications of fluid mechanics for the field of Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems in the field of ocean energy. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity, empirical solutions, numerical methods).
<i>Skills</i>	Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.
<b>Personal Competence</b>	
<i>Social Competence</i>	The students are able to discuss a given problem in small groups and to develop an approach. They are able to solve a problem within a team, to prepare a poster with the results and to present the poster.
<i>Autonomy</i>	Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0524: Nontechnical Elective Complementary Courses for Master

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p>

*Knowledge*

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

**Specialized Competence (Knowledge)**

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

**Professional Competence (Skills)**

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

*Skills*

**Personal Competence**

**Personal Competences (Social Skills)**

Students will be able

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

*Social Competence*

**Personal Competences (Self-reliance)**

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of

<i>Autonomy</i>	application <ul style="list-style-type: none"> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>

## Module M1201: Practical Course Energy Systems

### Courses

Title	Typ	Hrs/wk	CP
Practical Course Energy Systems (L1629)	Practical Course	6	6
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Heat Transfer, Gas and Steam Power Plants, Reciprocating Machinery		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The participating students can</p> <ul style="list-style-type: none"> <li>• explain complex energy systems,</li> <li>• describe the function of modern measurement devices for energy systems,</li> <li>• give critical comments to the whole measurement chain (sensor, installation situation, converting, display).</li> </ul>		
<i>Knowledge</i>			
<b>Skills</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• set sensors in relevant positions,</li> <li>• plan experiments and identify the relevant parameters,</li> <li>• generate test charts,</li> <li>• write a test report including sources of errors and literature comparison.</li> </ul>		
<b>Personal Competence</b>	<p>Students can</p> <ul style="list-style-type: none"> <li>• design experimental setups and perform experiments in small teams,</li> <li>• develop solutions in teams and represent solutions to other students,</li> <li>• work together in teams and evaluate the own part,</li> <li>• can coordinate the tasks of other teams,</li> <li>• write test reports and guide the discussions to the experiments.</li> </ul>		
<i>Social Competence</i>			
<b>Autonomy</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>• familiarize with the measurement documents,</li> <li>• apply measurement methods,</li> <li>• plan the test procedure and operate the experiments autonomously,</li> <li>• give short presentations to selected topics,</li> <li>• estimate own assets and weaknesses.</li> </ul>		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	90 minutes		
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Compulsory		

<b>Course L1629: Practical Course Energy Systems</b>	
<b>Typ</b>	Practical Course
<b>Hrs/wk</b>	6
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Lecturer</b>	Prof. Gerhard Schmitz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In the Practical Course on Energy Systems the following experiments are offered:</p> <ul style="list-style-type: none"> <li>• Operational characteristics of a diesel engine</li> <li>• Combined heat, power and chill production in the district heating plant of the TUHH</li> <li>• Acceptance test of a steam turbine plant</li> <li>• Heat transfer on radial impinging jets</li> <li>• Measurement in an sorption based air conditioning plant</li> <li>• Energy balance of a condensation boiler</li> </ul>
<b>Literature</b>	<p>Versuchsmanuskripte werden zu den einzelnen Versuchen zur Verfügung gestellt.</p> <p>Pfeifer, T.; Profos, P.: Handbuch der industriellen Messtechnik, 6. Auflage, 1994, Oldenbourg Verlag München</p>

## Module M1204: Modelling and Optimization in Dynamics

### Courses

Title	Typ	Hrs/wk	CP
Flexible Multibody Systems (L1632)	Lecture	2	3
Optimization of dynamical systems (L1633)	Lecture	2	3
<b>Module Responsible</b>	Prof. Robert Seifried		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics I, II, III</li> <li>• Mechanics I, II, III, IV</li> <li>• Simulation of dynamical Systems</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students demonstrate basic knowledge and understanding of modeling, simulation and analysis of complex rigid and flexible multibody systems and methods for optimizing dynamic systems after successful completion of the module.</p> <p><i>Skills</i></p> <p>Students are able</p> <ul style="list-style-type: none"> <li>+ to think holistically</li> <li>+ to independently, securely and critically analyze and optimize basic problems of the dynamics of rigid and flexible multibody systems</li> <li>+ to describe dynamics problems mathematically</li> <li>+ to optimize dynamics problems</li> </ul>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ solve problems in heterogeneous groups and to document the corresponding results.</li> </ul> <p><i>Autonomy</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ assess their knowledge by means of exercises.</li> <li>+ acquaint themselves with the necessary knowledge to solve research oriented tasks.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 min		
	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory		

<b>Assignment for the Following Curricula</b>	Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory
---	---

<b>Course L1632: Flexible Multibody Systems</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Robert Seifried
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Basics of Multibody Systems</li> <li>2. Basics of Continuum Mechanics</li> <li>3. Linear finite element modelles and modell reduction</li> <li>4. Nonlinear finite element Modelles: absolute nodal coordinate formulation</li> <li>5. Kinematics of an elastic body</li> <li>6. Kinetics of an elastic body</li> <li>7. System assembly</li> </ol>
<b>Literature</b>	<p>Schwertassek, R. und Wallrapp, O.: Dynamik flexibler Mehrkörpersysteme. Braunschweig, Vieweg, 1999.</p> <p>Seifried, R.: Dynamics of Underactuated Multibody Systems, Springer, 2014.</p> <p>Shabana, A.A.: Dynamics of Multibody Systems. Cambridge Univ. Press, Cambridge, 2004, 3. Auflage.</p>

Course L1633: Optimization of dynamical systems	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Robert Seifried, Dr. Leo Dostal
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Formulation and classification of optimization problems</li> <li>2. Scalar Optimization</li> <li>3. Sensitivity Analysis</li> <li>4. Unconstrained Parameter Optimization</li> <li>5. Constrained Parameter Optimization</li> <li>6. Stochastic optimization</li> <li>7. Multicriteria Optimization</li> <li>8. Topology Optimization</li> </ol>
<b>Literature</b>	Bestle, D.: Analyse und Optimierung von Mehrkörpersystemen. Springer, Berlin, 1994. Nocedal, J. , Wright , S.J. : Numerical Optimization. New York: Springer, 2006.

## Module M0604: High-Order FEM

### Courses

Title	Typ	Hrs/wk	CP
High-Order FEM (L0280)	Lecture	3	4
High-Order FEM (L0281)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Alexander Düster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of partial differential equations is recommended.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ give an overview of the different (h, p, hp) finite element procedures.</li> <li>+ explain high-order finite element procedures.</li> <li>+ specify problems of finite element procedures, to identify them in a given situation and to explain their mathematical and mechanical background.</li> </ul> <p><i>Skills</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ apply high-order finite elements to problems of structural mechanics.</li> <li>+ select for a given problem of structural mechanics a suitable finite element procedure.</li> <li>+ critically judge results of high-order finite elements.</li> <li>+ transfer their knowledge of high-order finite elements to new problems.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ solve problems in heterogeneous groups and to document the corresponding results.</li> </ul> <p><i>Autonomy</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>+ assess their knowledge by means of exercises and E-Learning.</li> <li>+ acquaint themselves with the necessary knowledge to solve research oriented tasks.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
	No 10 %	Presentation	Forschendes Lernen
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Materials Science: Specialisation Modeling: Elective Compulsory Mechanical Engineering and Management: Specialisation Product Development and Production: Elective Compulsory Mechatronics: Technical Complementary Course: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory		

<b>Course L0280: High-Order FEM</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Alexander Düster
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	1. Introduction 2. Motivation 3. Hierarchic shape functions 4. Mapping functions 5. Computation of element matrices, assembly, constraint enforcement and solution 6. Convergence characteristics 7. Mechanical models and finite elements for thin-walled structures 8. Computation of thin-walled structures 9. Error estimation and hp-adaptivity 10. High-order fictitious domain methods
<b>Literature</b>	[1] Alexander Düster, High-Order FEM, Lecture Notes, Technische Universität Hamburg-Harburg, 164 pages, 2014 [2] Barna Szabo, Ivo Babuska, Introduction to Finite Element Analysis – Formulation, Verification and Validation, John Wiley & Sons, 2011

<b>Course L0281: High-Order FEM</b>	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14

## Module M0657: Computational Fluid Dynamics II

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computational Fluid Dynamics II (L0237)	Lecture	2	3
Computational Fluid Dynamics II (L0421)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of computational and general thermo/fluid dynamics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Establish a thorough understanding of Finite-Volume approaches. Familiarise with details of the theoretical background of complex CFD algorithms.</p> <p><i>Skills</i> Ability to manage of interface problems and build-up of coding skills. Ability to evaluate, assess and benchmark different solution options.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Practice of team working during team exercises.</p> <p><i>Autonomy</i> Independent analysis of specific solution approaches.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	0.5h-0.75h		
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory		

<b>Course L0237: Computational Fluid Dynamics II</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Thomas Rung
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	Computational Modelling of complex single- and multiphase flows using higher-order approximations for unstructured grids and meshless particle-based methods.
<b>Literature</b>	1) Vorlesungsmanuskript und Übungsunterlagen  2) J.H. Ferziger, M. Peric: Computational Methods for Fluid Dynamics, Springer

<b>Course L0421: Computational Fluid Dynamics II</b>	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Thomas Rung
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

## Module M0714: Numerical Treatment of Ordinary Differential Equations

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Numerical Treatment of Ordinary Differential Equations (L0576)	Lecture	2	3
Numerical Treatment of Ordinary Differential Equations (L0582)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Sabine Le Borne		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematik I, II, III für Ingenieurstudierende (deutsch oder englisch) oder Analysis &amp; Lineare Algebra I + II sowie Analysis III für Technomathematiker</li> <li>Basic MATLAB knowledge</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>list numerical methods for the solution of ordinary differential equations and explain their core ideas,</li> <li>repeat convergence statements for the treated numerical methods (including the prerequisites tied to the underlying problem),</li> <li>explain aspects regarding the practical execution of a method.</li> <li>select the appropriate numerical method for concrete problems, implement the numerical algorithms efficiently and interpret the numerical results</li> </ul>		
<i>Knowledge</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>implement (MATLAB), apply and compare numerical methods for the solution of ordinary differential equations,</li> <li>to justify the convergence behaviour of numerical methods with respect to the posed problem and selected algorithm,</li> <li>for a given problem, develop a suitable solution approach, if necessary by the composition of several algorithms, to execute this approach and to critically evaluate the results.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge), explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.</li> </ul>		
<i>Social Competence</i>			
<b>Autonomy</b>	<p>Students are capable</p> <ul style="list-style-type: none"> <li>to assess whether the supporting theoretical and practical excercises are better solved individually or in a team,</li> <li>to assess their individual progress and, if necessary, to ask questions and seek help.</li> </ul>		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	90 min
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Electrical Engineering: Specialisation Modeling and Simulation: Elective Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory Mathematical Modelling in Engineering: Theory, Numerics, Applications: Specialisation I. Numerics (TUHH): Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Technomathematics: Specialisation I. Mathematics: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory

Course L0576: Numerical Treatment of Ordinary Differential Equations	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Sabine Le Borne, Dr. Patricio Farrell
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	Numerical methods for Initial Value Problems <ul style="list-style-type: none"> <li>• single step methods</li> <li>• multistep methods</li> <li>• stiff problems</li> <li>• differential algebraic equations (DAE) of index 1</li> </ul> Numerical methods for Boundary Value Problems <ul style="list-style-type: none"> <li>• multiple shooting method</li> <li>• difference methods</li> <li>• variational methods</li> </ul>

## Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0516)	Lecture	2	3
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0518)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.</p> <p><i>Skills</i> The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i> The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory International Management and Engineering: Specialisation II. ## Module M0807: Boundary Element Methods

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Boundary Element Methods (L0523)	Lecture	2	3
Boundary Element Methods (L0524)	Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the boundary element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable boundary elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own boundary element routines. Problems can be identified and the results are critically scrutinized.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>

## Module M0840: Optimal and Robust Control

<b>Courses</b>			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Herbert Werner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Classical control (frequency response, root locus)</li> <li>State space methods</li> <li>Linear algebra, singular value decomposition</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can explain the significance of the matrix Riccati equation for the solution of LQ problems.</li> <li>They can explain the duality between optimal state feedback and optimal state estimation.</li> <li>They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints.</li> <li>They can explain how an LQG design problem can be formulated as special case of an H2 design problem.</li> <li>They can explain how model uncertainty can be represented in a way that lends itself to robust controller design</li> <li>They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant.</li> <li>They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities.</li> </ul>		
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students are capable of designing and tuning LQG controllers for multivariable plant models.</li> <li>They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it.</li> <li>They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design.</li> <li>They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller.</li> <li>They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them.</li> <li>They can carry out all of the above using standard software tools (Matlab robust control toolbox).</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.		

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0658: Innovative CFD Approaches

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Application of Innovative CFD Methods in Research and Development (L0239)	Lecture	2	3
Application of Innovative CFD Methods in Research and Development (L1685)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Attendance of a computational fluid dynamics course (CFD1/CFD2) Competent knowledge of numerical analysis in addition to general and computational thermo/fluid dynamics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Student can explain the theoretical background of different CFD strategies (e.g. Lattice-Boltzmann, Smoothed Particle-Hydrodynamics, Finite-Volume methods) and describe the fundamentals of simulation-based optimisation.		
<i>Skills</i>	Student is able to identify an appropriate CFD-based solution strategy on a justified basis.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Student should practice her/his team-working abilities, learn to lead team sessions and present solutions to experts.		
<i>Autonomy</i>	Student should be able to structure and perform a simulation-based project independently,		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Specialization Energy Systems

The Energy Systems specialization covers the mechanical engineering-oriented area of energy systems. Attention is paid to covering examples from the entire energy chain as far as possible, from small energy conversion units (Thermal Engineering) to large-scale facilities (Steam Generators). The modules offered cover both classical (Turbomachines) and regenerative energy systems (Wind Farms). A number of modules deal with energy systems in the mobile sector, such as for cars, airplanes and ships (Air Conditioning). The focus is on teaching the system concept because only by considering a system as a whole can useful energy be provided efficiently by means of conversion from conventional and renewable energy sources.

Students learn to understand complex energy systems, to describe them physically, and to model them mathematically. They are able to analyze and assess complex energy systems issues in the context of current energy policy. These skills can be put to practical use in all areas of engineering.

Module M0763: Aircraft Systems I	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Aircraft Systems I (L0735)	Lecture                              3                              4
Aircraft Systems I (L0739)	Recitation Section (large) 2                              2
<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• Describe essential components and design points of hydraulic, electrical and high-lift systems</li> <li>• Give an overview of the functionality of air conditioning systems</li> <li>• Explain the need for high-lift systems such as ist functionality and effects</li> <li>• Assess the challenge during the design of supply systems of an aircraft</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• Design hydraulic and electric supply systems of aircrafts</li> <li>• Design high-lift systems of aircrafts</li> <li>• Analyze the thermodynamic behaviour of air conditioning systems</li> </ul>

<p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• Perform system design in groups and present and discuss results</li> </ul> <p>Students are able to:</p> <ul style="list-style-type: none"> <li>• Reflect the contents of lectures autonomously</li> </ul>
<p><b>Workload in Hours</b></p>	<p>Independent Study Time 110, Study Time in Lecture 70</p>
<p><b>Credit points</b></p>	<p>6</p>
<p><b>Studienleistung</b></p>	<p>None</p>
<p><b>Examination</b></p>	<p>Written exam</p>

## Module M0742: Thermal Engineering

### Courses

Title	Typ	Hrs/wk	CP
Thermal Engineering (L0023)	Lecture	3	5
Thermal Engineering (L0024)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.</p> <p><i>Skills</i></p> <p>Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

## Module M1149: Marine Power Engineering

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electrical Installation on Ships (L1531)	Lecture	2	2
Electrical Installation on Ships (L1532)	Recitation Section (large)	1	1
Marine Engineering (L1569)	Lecture	2	2
Marine Engineering (L1570)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Christopher Friedrich Wirz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to describe the state-of-the-art regarding the wide range of propulsion components on ships and apply their knowledge. They further know how to analyze and optimize the interaction of the components of the propulsion system and how to describe complex correlations with the specific technical terms in German and English. The students are able to name the operating behaviour of consumers, describe special requirements on the design of supply networks and to the electrical equipment in isolated networks, as e.g. onboard ships, offshore units, factories and emergency power supply systems, explain power generation and distribution in isolated grids, wave generator systems on ships, and name requirements for network protection, selectivity and operational monitoring.		
<i>Skills</i>	The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation on board ships. They are further able to assess, analyse and solve technical and operational problems with propulsion and auxiliary plants and to design propulsion systems. The students have the skills to describe complex correlations and bring them into context with related disciplines. Students are able to calculate short-circuit currents, switchgear, and design electrical propulsion systems for ships.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.		
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.

## Module M1235: Electrical Power Systems I

### Courses

Title	Typ	Hrs/wk	CP
Electrical Power Systems I (L1670)	Lecture	3	4
Electrical Power Systems I (L1671)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Christian Becker		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of Electrical Engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to give an overview of conventional and modern electric power systems. They can explain in detail and critically evaluate technologies of electric power generation, transmission, storage, and distribution as well as integration of equipment into electric power systems.</p> <p><i>Skills</i> With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of electric power systems and to assess the results.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.</p> <p><i>Autonomy</i> Students can independently tap knowledge of the emphasis of the lectures.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0641: Steam Generators			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Steam Generators (L0213)	Lecture	3	5
Steam Generators (L0214)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• "Technical Thermodynamics I and II"</li> <li>• "Heat Transfer"</li> <li>• "Fluid Mechanics"</li> <li>• "Steam Power Plants"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students know the thermodynamic base principles for steam generators and their types. They are able to describe the basic principles of steam generators and sketch the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as they are able to define the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these in the context of related disciplines.</p> <p>The students will be able, using detailed knowledge on the calculation, design, and construction of steam generators, linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formalisation, modelling of processes, and training in the solution methodology for partial problems a good overview of this key component of the power plant will be obtained.</p> <p>Within the framework of the exercise the students obtain the ability to draw the balances, and design the steam generator and its components. For this purpose small but close to lifelike tasks are solved, to highlight aspects of the design of steam generators.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.		
<i>Autonomy</i>	The students will be able to perform basic calculations covering aspects of the steam generator, with only the help of smaller clues, on their own. This way the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions are highlighted.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
	<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
			Den Studierenden wird eine kleine

<b>Studienleistung</b>	No	5 %	Exercises	Aufgabe (in ca. 5 min lösbar) zur Vorlesung der Vorwoche gestellt. Die Antworten müssen üblicherweise als Freitext gegeben werden, aber auch Zeichnungen, Stichpunkte oder, in seltenen Fällen, Multiple Choice sind möglich.

## Module M0721: Air Conditioning

### Courses

Title	Typ	Hrs/wk	CP
Air Conditioning (L0594)	Lecture	3	5
Air Conditioning (L0595)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a <math>h_1+x,x</math>-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.</p> <p><i>Skills</i></p> <p>Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Gas-Steam Power Plants"</li> <li>"Technical Thermodynamics I and II"</li> <li>"Heat Transfer"</li> <li>"Fluid Mechanics"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO<sub>x</sub> and the primary NO<sub>x</sub> reduction measures, and evaluate the impact of regulations and allowable limit levels.</p> <p><i>Knowledge</i> The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, or even district heating plants with an internal combustion engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the ecological significance of district CHP generation, as well as its economics.</p> <p><i>Skills</i> Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to holistically consider energy utilisation. Examples taken from the praxis, such as the CHP energy supply facility of the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p> <p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover, the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON Professional™. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>		
<b>Personal Competence</b>			

<p><i>Social Competence</i></p>	<p>Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.</p>		
<p><i>Autonomy</i></p>	<p>The students assisted by the tutors will be able to perform estimating calculations. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential impact of different process arrangements and boundary conditions highlighted.</p>		
<p><b>Workload in Hours</b></p>	<p>Independent Study Time 124, Study Time in Lecture 56</p>		
<p><b>Credit points</b></p>	<p>6</p>		
<p><b>Studienleistung</b></p>	<p><b>Compulsory Bonus</b></p> <p>No</p>	<p><b>Form</b></p> <p>10 %</p>	<p><b>Description</b></p> <p>Am Ende jeder Vorlesung wird schriftlich eine zu auswertende Kurzfrage (5-10 min) zu der Vorlesung der Vorwoche gestellt. In den Kurzfragen werden kleine Rechenaufgaben, Skizzen oder auch kleine Freitexte zur Beantwortung gestellt.</p>

## Module M1162: Selected Topics of Energy Systems - Option A

### Courses

Title	Typ	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Steam turbines in energy, environmental and Power Train Engineering (L1286)	Lecture	3	5
Steam turbines in energy, environmental and Power Train Engineering (L1287)	Recitation Section (small)	1	1
Gas Distribution Systems (L1639)	Lecture	2	3
Auxiliary Systems on Board of Ships (L1249)	Lecture	2	2
Auxiliary Systems on Board of Ships (L1250)	Recitation Section (large)	1	1
Computational Fluid Dynamics - Exercises in OpenFoam (L1375)	Recitation Section (small)	1	1
Computational Fluid Dynamics in Process Engineering (L1052)	Lecture	2	2
Offshore Wind Parks (L0072)	Lecture	2	3
Selected Topics of Experimental and Theoretical Fluidynamics (L0240)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation Section (large)	1	2
Turbines and Turbo Compressors (L1564)	Lecture	2	3
Turbines and Turbo Compressors (L1565)	Recitation Section (large)	1	1
Internal Combustion Engines II (L1079)	Lecture	2	2
Internal Combustion Engines II (L1080)	Recitation Section (large)	1	2
Hydrogen Technology (L0060)	Lecture	2	2
Wind Turbine Plants (L0011)	Lecture	2	3
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation Section (small)	1	2

<b>Module Responsible</b>	Prof. Gerhard Schmitz
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic moduls of mechanical engineering, energy systems and marine technologies
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students are able to <ul style="list-style-type: none"> <li>describe selected energy systems and rank the interrelation with other energy systems.</li> </ul>
<i>Skills</i>	The students can <ul style="list-style-type: none"> <li>analyse and evaluate tasks in the field of energy systems.</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can <ul style="list-style-type: none"> <li>discuss with other students and lecturers different aspects of energy systems.</li> </ul>
<i>Autonomy</i>	The students can <ul style="list-style-type: none"> <li>define tasks and become acquainted with necessary knowledge.</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses

<b>Credit points</b>	12
<b>Assignment for the Following Curricula</b>	Energy Systems: Specialisation Energy Systems: Elective Compulsory

<b>Course L0021: Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	
<b>Lecturer</b>	Prof. Michael Fröba

## Module M1346: Selected Topics of Energy Systems - Option B

### Courses

Title	Typ	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Steam turbines in energy, environmental and Power Train Engineering (L1286)	Lecture	3	5
Steam turbines in energy, environmental and Power Train Engineering (L1287)	Recitation Section (small)	1	1
Gas Distribution Systems (L1639)	Lecture	2	3
Auxiliary Systems on Board of Ships (L1249)	Lecture	2	2
Auxiliary Systems on Board of Ships (L1250)	Recitation Section (large)	1	1
Computational Fluid Dynamics - Exercises in OpenFoam (L1375)	Recitation Section (small)	1	1
Computational Fluid Dynamics in Process Engineering (L1052)	Lecture	2	2
Offshore Wind Parks (L0072)	Lecture	2	3
Selected Topics of Experimental and Theoretical Fluidynamics (L0240)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation Section (large)	1	2
Turbines and Turbo Compressors (L1564)	Lecture	2	3
Turbines and Turbo Compressors (L1565)	Recitation Section (large)	1	1
Internal Combustion Engines II (L1079)	Lecture	2	2
Internal Combustion Engines II (L1080)	Recitation Section (large)	1	2
Hydrogen Technology (L0060)	Lecture	2	2
Wind Turbine Plants (L0011)	Lecture	2	3
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic moduls of mechanical engineering, energy systems and marine technologies		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to describe selected energy systems and rank the interrrelation with other energy systems.		
<i>Skills</i>	The students can analyse and evaluate tasks in the field of energy systems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can discuss with other students and lecturers different aspects of energy systems.		
<i>Autonomy</i>	The students can define tasks and become acquainted with necessary knowledge.		
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	6		
<b>Assignment for the Following Curricula</b>	Energy Systems: Specialisation Energy Systems: Elective Compulsory		

Course L0021: Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	
<b>Lecturer</b>	Prof. Michael Fröba
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Introduction to electrochemical energy conversion</li> <li>2. Function and structure of electrolyte</li> <li>3. Low-temperature fuel cell               <ul style="list-style-type: none"> <li>◦ Types</li> <li>◦ Thermodynamics of the PEM fuel cell</li> <li>◦ Cooling and humidification strategy</li> </ul> </li> <li>4. High-temperature fuel cell               <ul style="list-style-type: none"> <li>◦ The MCFC</li> <li>◦ The SOFC</li> <li>◦ Integration Strategies and partial reforming</li> </ul> </li> <li>5. Fuels               <ul style="list-style-type: none"> <li>◦ Supply of fuel</li> <li>◦ Reforming of natural gas and biogas</li> <li>◦ Reforming of liquid hydrocarbons</li> </ul> </li> <li>6. Energetic Integration and control of fuel cell systems</li> </ol>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Hamann, C.; Vielstich, W.: Elektrochemie 3. Aufl.; Weinheim: Wiley - VCH, 2003</li> </ul>

Course L1286: Steam turbines in energy, environmental and Power Train Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	90 min
<b>Lecturer</b>	Dr. Christian Scharfetter
<b>Language</b>	DE
<b>Cycle</b>	WiSe
	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Construction Aspects of a Steam Turbine</li> <li>• Energy Conversion in a Steam Turbine</li> <li>• Construction Types of Steam Turbines</li> <li>• Behaviour of Steam Turbines</li> </ul>

<b>Content</b>	<ul style="list-style-type: none"> <li>• Sealing Systems for Steam Turbines</li> <li>• Axial Thrust</li> <li>• Regulation of Steam Turbines</li> <li>• Stiffness Calculation of the Blades</li> <li>• Blade and Rotor Oscillations</li> <li>• Fundamentals of a Safe Steam Turbine Operation</li> <li>• Application in Conventional and Renewable Power Stations</li> <li>• Connection to thermal and electrical energy networks, interfaces</li> <li>• Conventional and regenerative power plant concepts, drive technology</li> <li>• Analysis of the global energy supply market</li> <li>• Applications in conventional and regenerative power plants</li> <li>• Different power plant concepts and their influence on the steam turbine (engine and gas turbine power plants with waste heat utilization, geothermal energy, solar thermal energy, biomass, biogas, waste incineration).</li> <li>• Classic combined heat and power generation as a combined product of the manufacturing industry</li> <li>• Impact of change in the energy market, operating profiles</li> <li>• Applications in drive technology</li> <li>• Operating and maintenance concepts</li> </ul> <p>The lecture will be deepened by means of examples, tasks and two excursions</p>

Course L0240: Selected Topics of Experimental and Theoretical Fluidynamics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Prof. Thomas Rung
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Will be announced at the beginning of the lecture. Exemplary topics are</p> <ol style="list-style-type: none"> <li>1. methods and procedures from experimental fluid mechanics</li> <li>2. rational Approaches towards flow physics modelling</li> <li>3. selected topics of theoretical computation fluid dynamics</li> <li>4. turbulent flows</li> </ol>
<b>Literature</b>	Wird in der Veranstaltung bekannt gegeben. To be announced during the lecture.

Course L1820: System Simulation	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Dr. Stefan Wischhusen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>All participants must bring a notebook, to install and use the software OpenModelica.</p> <ul style="list-style-type: none"> <li>• Instruction and modelling of physical processes</li> <li>• Modelling and limits of model</li> <li>• Time constant, stiffness, stability, step size</li> <li>• Terms of object orientated programming</li> <li>• Differential equations of simple systems</li> <li>• Introduction into Modelica</li> <li>• Introduction into simulation tool</li> <li>• Example: Heat transfer</li> <li>• Example: System with different subsystems</li> </ul>

## Module M0512: Use of Solar Energy

### Courses

Title	Typ	Hrs/wk	CP
Energy Meteorology (L0016)	Lecture	1	1
Energy Meteorology (L0017)	Recitation Section (small)	1	1
Collector Technology (L0018)	Lecture	2	2
Solar Power Generation (L0015)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	With the completion of this module, students will be able to deal with technical foundations and current issues and problems in the field of solar energy and explain and evaluate these critically in consideration of the prior curriculum and current subject specific issues. In particular they can professionally describe the processes within a solar cell and explain the specific features of application of solar modules. Furthermore, they can provide an overview of the collector technology in solar thermal systems.		
<i>Skills</i>	Students can apply the acquired theoretical foundations of exemplary energy systems using solar radiation. In this context, for example they can assess and evaluate potential and constraints of solar energy systems with respect to different geographical assumptions. They are able to dimension solar energy systems in consideration of technical aspects and given assumptions. Using module-comprehensive knowledge students can evaluate the economic and ecologic conditions of these systems. They can select calculation methods within the radiation theory for these topics.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.		
<i>Autonomy</i>	Students can independently exploit sources and acquire the particular knowledge about the subject area with respect to emphasis for the lectures. Furthermore, with the assistance of lecturers, they can discrete use calculation methods for analysing and dimensioning solar energy systems. Based on this procedure they can concrete assess their specific learning level and can consequently define the further workflow.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	3 hours written exam		
	Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective		

<b>Assignment for the Following Curricula</b>	Compulsory International Management and Engineering: Specialisation II. ## Module M1294: Bioenergy

### Courses

Title	Typ	Hrs/wk	CP
Biofuels Process Technology (L0061)	Lecture	1	1
Biofuels Process Technology (L0062)	Recitation Section (small)	1	1
Thermal Utilization of Biomass (L1767)	Lecture	2	2
Thermal Utilization of Biomass (L1768)	Recitation Section (small)	1	1
World Market for Commodities from Agriculture and Forestry (L1769)	Lecture	1	1
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to reproduce an in-depth outline of energy production from biomass, aerobic and anaerobic waste treatment processes, the gained products and the treatment of produced emissions.		
<i>Skills</i>	Students can apply the learned theoretical knowledge of biomass-based energy systems to explain relationships for different tasks, like dimensioning and design of biomass power plants. In this context, students are also able to solve computational tasks for combustion, gasification and biogas, biodiesel and bioethanol use.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can participate in discussions to design and evaluate energy systems using biomass as an energy source.		
<i>Autonomy</i>	Students can independently exploit sources with respect to the emphasis of the lectures. They can choose and acquire the for the particular task useful knowledge. Furthermore, they can solve computational tasks of biomass-based energy systems independently with the assistance of the lecture. Regarding to this they can assess their specific learning level and can consequently define the further workflow.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	3 hours written exam		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Elective Compulsory International Management and Engineering: Specialisation II. Course L1767: Thermal Utilization of Biomass	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Martin Kaltschmitt
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Goal of this course is it to discuss the physical, chemical, and biological as well as the technical, economic, and environmental basics of all options to provide energy from biomass from a German and international point of view. Additionally different system approaches to use biomass for energy, aspects to integrate bioenergy within the energy system, technical and economic development potentials, and the current and expected future use within the energy system are presented.</p> <p>The course is structured as follows:</p> <ul style="list-style-type: none"> <li>• Biomass as an energy carrier within the energy system; use of biomass in Germany and world-wide, overview on the content of the course</li> <li>• Photosynthesis, composition of organic matter, plant production, energy crops, residues, organic waste</li> <li>• Biomass provision chains for woody and herbaceous biomass, harvesting and provision, transport, storage, drying</li> <li>• Thermo-chemical conversion of solid biofuels           <ul style="list-style-type: none"> <li>◦ Basics of thermo-chemical conversion</li> <li>◦ Direct thermo-chemical conversion through combustion: combustion technologies for small and large scale units, electricity generation technologies, flue gas treatment technologies, ashes and their use</li> <li>◦ Gasification: Gasification technologies, producer gas cleaning technologies, options to use the cleaned producer gas for the provision of heat, electricity and/or fuels</li> <li>◦ Fast and slow pyrolysis: Technologies for the provision of bio-oil and/or for the provision of charcoal, oil cleaning technologies, options to use the pyrolysis oil and charcoal as an energy carrier as well as a raw material</li> </ul> </li> <li>• Physical-chemical conversion of biomass containing oils and/or fats: Basics, oil seeds and oil fruits, vegetable oil production, production of a biofuel with standardized characteristics (trans-esterification, hydrogenation, co-processing in existing refineries), options to use this fuel, options to use the residues (i.e. meal, glycerine)</li> <li>• Bio-chemical conversion of biomass           <ul style="list-style-type: none"> <li>◦ Basics of bio-chemical conversion</li> <li>◦ Biogas: Process technologies for plants using agricultural feedstock, sewage sludge (sewage gas), organic waste fraction (landfill gas), technologies for the provision of bio methane, use of the digested slurry</li> <li>◦ Ethanol production: Process technologies for feedstock containing sugar, starch or celluloses, use of ethanol as a fuel, use of the stillage</li> </ul> </li> </ul>

<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L1769: World Market for Commodities from Agriculture and Forestry	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Michael Köhl, Bernhard Chilla
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>1) Markets for Agricultural Commodities            What are the major markets and how are markets functioning            Recent trends in world production and consumption.            World trade is growing fast. Logistics. Bottlenecks.            The major countries with surplus production            Growing net import requirements, primarily of China, India and many other countries.            Tariff and non-tariff market barriers. Government interferences.</p> <p>2) Closer Analysis of Individual Markets            Thomas Mielke will analyze in more detail the global vegetable oil markets, primarily palm oil, soya oil, rapeseed oil, sunflower oil. Also the raw material (the oilseed) as well as the by-product (oilmeal) will be included. The major producers and consumers.            Vegetable oils and oilmeals are extracted from the oilseed. The importance of vegetable oils and animal fats will be highlighted, primarily in the food industry in Europe and worldwide. But in the past 15 years there have also been rapidly rising global requirements of oils &amp; fats for non-food purposes, primarily as a feedstock for biodiesel but also in the chemical industry.            Importance of oilmeals as an animal feed for the production of livestock and aquaculture            Oilseed area, yields per hectare as well as production of oilseeds. Analysis of the major oilseeds worldwide. The focus will be on soybeans, rapeseed, sunflowerseed, groundnuts and cottonseed.            Regional differences in productivity. The winners and losers in global agricultural production.</p> <p>3) Forecasts: Future Global Demand &amp; Production of Vegetable Oils            Big challenges in the years ahead: Lack of arable land for the production of oilseeds, grains and other crops. Competition with livestock. Lack of water. What are possible solutions? Need for better education &amp; management, more mechanization, better seed varieties and better inputs to raise yields.</p>

	<p>The importance of prices and changes in relative prices to solve market imbalances (shortage situations as well as surplus situations). How does it work? Time lags.</p> <p>Rapidly rising population, primarily the number of people considered “middle class” in the years ahead.</p> <p>Higher disposable income will trigger changing diets in favour of vegetable oils and livestock products.</p> <p>Urbanization. Today, food consumption per caput is partly still very low in many developing countries, primarily in Africa, some regions of Asia and in Central America. What changes are to be expected?</p> <p>The myth and the realities of palm oil in the world of today and tomorrow.</p> <p>Labour issues curb production growth: Some examples: 1) Shortage of labour in oil palm plantations in Malaysia. 2) Structural reforms overdue for the agriculture in India, China and other countries to become more productive and successful, thus improving the standard of living of smallholders.</p>

## Module M0515: Energy Information Systems and Electromobility

### Courses

Title	Typ	Hrs/wk	CP
Electrical Power Systems II (L1696)	Lecture	2	4
Electro mobility (L1833)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of Electrical Engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to give an overview of the electric power engineering in the field of renewable energies. They can explain in detail the possibilities for the integration of renewable energy systems into the existing grid, the electrical storage possibilities and the electric power transmission and distribution, and can take critically a stand on it.</p> <p><i>Skills</i> With completion of this module the students are able to apply the acquired skills in applications of the design, integration, development of renewable energy systems and to assess the results.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students can participate in specialized and interdisciplinary discussions, advance ideas and represent their own work results in front of others.</p> <p><i>Autonomy</i> Students can independently tap knowledge of the emphasis of the lectures.</p>

## Specialization Marine Engineering

The Marine Engineering specialization covers a wide range of marine engineering aspects, such as Ships' Engines, Ship Vibrations, Maritime Technology and Offshore Wind Farms, Ships' Propellers, Ship Acoustics, and Auxiliary Plant on Board Ships, and also conventional energy systems aspects, such as Turbomachines, Thermal Engineering, or Air Conditioning. Here too the focus is on complex marine engineering systems and the efficient provision of electricity, heating, and refrigeration.

Students learn to understand complex ships' systems, to describe them physically, and to model them mathematically. They are able to analyze and assess complex aspects of marine engineering in the context of current maritime issues.

### Module M0528: Maritime Technology and Offshore Wind Parks

<b>Courses</b>	
<b>Title</b>	<b>Typ</b>
Introduction to Maritime Technology (L0070)	Lecture
Introduction to Maritime Technology (L1614)	Recitation Section (small)
Offshore Wind Parks (L0072)	Lecture
	<b>Hrs/wk</b>
	<b>CP</b>
	2
	1
	2
<b>Module Responsible</b>	Prof. Moustafa Abdel-Maksoud
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>Qualified Bachelor of a natural or engineering science; Solid knowledge and competences in mathematics, mechanics, fluid dynamics.</p> <p>Basic knowledge of ocean engineering topics (e.g. from an introductory class like 'Introduction to Maritime Technology')</p>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p>After successful completion of this class, students should have an overview about phenomena and methods in ocean engineering and the ability to apply and extend the methods presented. In detail, the students should be able to</p> <ul style="list-style-type: none"> <li>• describe the different aspects and topics in Maritime Technology,</li> <li>• apply existing methods to problems in Maritime Technology,</li> <li>• discuss limitations in present day approaches and perspectives in the future.</li> </ul>
<b>Knowledge</b>	<p>Based on research topics of present relevance the participants are to be prepared for independent research work in the field. For that purpose specific research problems of workable scope will be addressed in the class.</p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> <li>• Show present research questions in the field</li> <li>• Explain the present state of the art for the topics considered</li> <li>• Apply given methodology to approach given problems</li> <li>• Evaluate the limits of the present methods</li> </ul>

Skills Personal Competence Social Competence Autonomy	<ul style="list-style-type: none"> <li>Identify possibilities to extend present methods</li> <li>Evaluate the feasibility of further developments</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Studienleistung</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	180 min

## Module M1210: Selected Topics of Marine Engineering - Option A

### Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Naval Architecture for Marine Engineers (L1704)	Lecture	2	2
Fundamentals of Naval Architecture for Marine Engineers (L1705)	Recitation Section (large)	1	2
Auxiliary Systems on Board of Ships (L1249)	Lecture	2	2
Auxiliary Systems on Board of Ships (L1250)	Recitation Section (large)	1	1
Cavitation (L1596)	Lecture	2	3
Manoeuvrability of Ships (L1597)	Lecture	2	3
Ship Acoustics (L1605)	Lecture	2	3
Marine Propellers (L1269)	Lecture	2	2
Marine Propellers (L1270)	Project-/problem-based Learning	2	1
Special Topics of Ship Propulsion (L1589)	Lecture	3	3
Internal Combustion Engines II (L1079)	Lecture	2	2
Internal Combustion Engines II (L1080)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Christopher Friedrich Wirz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>			
<i>Skills</i>	The students are able to apply their understanding of specific topics in mechanical engineering as well as naval architecture to describe and design complex systems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.		
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.		
<b>Workload in Hours</b>	Depends on choice of courses

<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The lectures starts with the description of the propeller blade outline parameters. The design fundamentals for the blade parameters are introduced. The momentum theory for screw propellers is treated. The design optimization of the propeller by means of systematic propeller series is considered. The lecture then treats the profile theory of the airfoil with infinite span (singularity methods) for the most common technical profiles. Lifting line theory is introduced as calculation tool for radial circulation distribution. The lecture continues with the interaction propeller and main propulsion plant. Strategies to control a CPP are discussed. The lecture closes with the most important cavitation phenomena which are relevant for the determination of pressure fluctuations.
<b>Literature</b>	W.H. Isay, Propellertheorie. Springer Verlag.

## Module M1149: Marine Power Engineering

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electrical Installation on Ships (L1531)	Lecture	2	2
Electrical Installation on Ships (L1532)	Recitation Section (large)	1	1
Marine Engineering (L1569)	Lecture	2	2
Marine Engineering (L1570)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Christopher Friedrich Wirz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to describe the state-of-the-art regarding the wide range of propulsion components on ships and apply their knowledge. They further know how to analyze and optimize the interaction of the components of the propulsion system and how to describe complex correlations with the specific technical terms in German and English. The students are able to name the operating behaviour of consumers, describe special requirements on the design of supply networks and to the electrical equipment in isolated networks, as e.g. onboard ships, offshore units, factories and emergency power supply systems, explain power generation and distribution in isolated grids, wave generator systems on ships, and name requirements for network protection, selectivity and operational monitoring.		
<i>Skills</i>	The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation on board ships. They are further able to assess, analyse and solve technical and operational problems with propulsion and auxiliary plants and to design propulsion systems. The students have the skills to describe complex correlations and bring them into context with related disciplines. Students are able to calculate short-circuit currents, switchgear, and design electrical propulsion systems for ships.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.		
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

Ship Acoustics (L1605)	Lecture	2	3
Marine Propellers (L1269)	Lecture	2	2
Marine Propellers (L1270)	Project-/problem-based Learning	2	1
Special Topics of Ship Propulsion (L1589)	Lecture	3	3
Internal Combustion Engines II (L1079)	Lecture	2	2
Internal Combustion Engines II (L1080)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Christopher Friedrich Wirz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>			
<i>Skills</i>	The students are able to apply their understanding of specific topics in mechanical engineering as well as naval architecture to describe and design complex systems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.		
<i>Autonomy</i>	The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.		
<b>Workload in Hours</b>	Depends on choice of courses		
<b>Credit points</b>	6		
<b>Assignment for the Following Curricula</b>	Energy Systems: Specialisation Marine Engineering: Elective Compulsory		

Course L1704: Fundamentals of Naval Architecture for Marine Engineers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28

Course L1269: Marine Propellers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	
<b>Lecturer</b>	Prof. Stefan Krüger
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The lectures starts with the description of the propeller blade outline parameters. The design fundamentals for the blade parameters are introduced. The momentum theory for screw propellers is treated. The design optimization of the propeller by means of systematic propeller series is considered. The lecture then treats the profile theory of the airfoil with infinite span (singularity methods) for the most common technical profiles. Lifting line theory is introduced as calculation tool for radial circulation distribution. The lecture continues with the interaction propeller and main propulsion plant. Strategies to control a CPP are discussed. The lecture closes with the most important cavitation phenomena which are relevant for the determination of pressure fluctuations.
<b>Literature</b>	W.H. Isay, Propellertheorie. Springer Verlag.

# Module M0641 : Steam Generators

## Courses

Title	Typ	Hrs/wk	CP
Steam Generators (L0213)	Lecture	3	5
Steam Generators (L0214)	Recitation Section (large)	1	1

<b>Module Responsible</b>	Prof. Alfons Kather
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Technical Thermodynamics I and II"</li> <li>"Heat Transfer"</li> <li>"Fluid Mechanics"</li> <li>"Steam Power Plants"</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>The students know the thermodynamic base principles for steam generators and their types. They are able to describe the basic principles of steam generators and sketch the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as they are able to define the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these in the context of related disciplines.</p> <p>The students will be able, using detailed knowledge on the calculation, design, and construction of steam generators, linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formalisation, modelling of processes, and training in the solution methodology for partial problems a good overview of this key component of the power plant will be obtained.</p> <p>Within the framework of the exercise the students obtain the ability to draw the balances, and design the steam generator and its components. For this purpose small but close to lifelike tasks are solved, to highlight aspects of the design of steam generators.</p>
<i>Knowledge</i>	
<i>Skills</i>	
<i>Personal Competence</i>	
<i>Social Competence</i>	Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.
<i>Autonomy</i>	The students will be able to perform basic calculations covering aspects of the steam generator, with only the help of smaller clues, on their own. This way the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions are highlighted.

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
--------------------------	--

<b>Credit points</b>	6
----------------------	---

<b>Compulsory Bonus</b>	<b>Form</b>	<b>Description</b>
		Den Studierenden wird eine kleine

<b>Studienleistung</b>	No	5 %	Exercises	Aufgabe (in ca. 5 min lösbar) zur Vorlesung der Vorwoche gestellt. Die Antworten müssen üblicherweise als Freitext gegeben werden, aber auch Zeichnungen, Stichpunkte oder, in seltenen Fällen, Multiple Choice sind möglich.

## Module M0721: Air Conditioning

### Courses

Title	Typ	Hrs/wk	CP
Air Conditioning (L0594)	Lecture	3	5
Air Conditioning (L0595)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a <math>h_1+x,x</math>-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.</p> <p><i>Skills</i></p> <p>Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

## Module M1000: Combined Heat and Power and Combustion Technology

### Courses

Title	Typ	Hrs/wk	CP
Combined Heat and Power and Combustion Technology (L0216)	Lecture	3	5
Combined Heat and Power and Combustion Technology (L0220)	Recitation Section (large)	1	1

<b>Module Responsible</b>	Prof. Alfons Kather
---------------------------	---------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>"Gas-Steam Power Plants"</li> <li>"Technical Thermodynamics I and II"</li> <li>"Heat Transfer"</li> <li>"Fluid Mechanics"</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO<sub>x</sub> and the primary NO<sub>x</sub> reduction measures, and evaluate the impact of regulations and allowable limit levels.</p>
<i>Knowledge</i>	<p>The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, or even district heating plants with an internal combustion engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the ecological significance of district CHP generation, as well as its economics.</p>
<i>Skills</i>	<p>Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to holistically consider energy utilisation. Examples taken from the praxis, such as the CHP energy supply facility of the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p>
<b>Personal Competence</b>	<p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover, the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON Professional™. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>

<p><i>Social Competence</i></p>	<p>Especially during the exercises the focus is placed on communication with the tutor. This animates the students to reflect on their existing knowledge and ask specific questions for improving further this knowledge level.</p>		
<p><i>Autonomy</i></p>	<p>The students assisted by the tutors will be able to perform estimating calculations. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential impact of different process arrangements and boundary conditions highlighted.</p>		
<p><b>Workload in Hours</b></p>	<p>Independent Study Time 124, Study Time in Lecture 56</p>		
<p><b>Credit points</b></p>	<p>6</p>		
<p><b>Studienleistung</b></p>	<p><b>Compulsory Bonus</b></p> <p>No</p>	<p><b>Form</b></p> <p>10 %</p>	<p><b>Description</b></p> <p>Am Ende jeder Vorlesung wird schriftlich eine zu auswertende Kurzfrage (5-10 min) zu der Vorlesung der Vorwoche gestellt. In den Kurzfragen werden kleine Rechenaufgaben, Skizzen oder auch kleine Freitexte zur Beantwortung gestellt.</p>

Module M1146: Ship Vibration			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Ship Vibration (L1528)	Lecture	2	3
Ship Vibration (L1529)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Dr. Rüdiger Ulrich Franz von Bock und Polach		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanis I - III Structural Analysis of Ships I Fundamentals of Ship Structural Design		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can reproduce the acceptance criteria for vibrations on ships; they can explain the methods for the calculation of natural frequencies and forced vibrations of structural components and the entire hull girder; they understand the effect of exciting forces of the propeller and main engine and methods for their determination		
<i>Skills</i>	Students are capable to apply methods for the calculation of natural frequencies and exciting forces and resulting vibrations of ship structures including their assessment; they can model structures for the vibration analysis		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to communicate and cooperate in a professional environment in the shipbuilding and component supply industry.		
<i>Autonomy</i>	Students are able to detect vibration-prone components on ships, to model the structure, to select suitable calculation methods and to assess the results		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Studienleistung</b>	None		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	3 hours

## Module M0742: Thermal Engineering

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Thermal Engineering (L0023)	Lecture	3	5
Thermal Engineering (L0024)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.		
<i>Skills</i>	Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.		
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Thesis

In their master's thesis students work independently on research-oriented problems, structuring the task into different sub-aspects and apply systematically the specialized competences they have acquired in the course of the study program.

Special importance is attached to a scientific approach to the problem including, in addition to an overview of literature on the subject, its classification in relation to current issues, a description of the theoretical foundations, and a critical analysis and assessment of the results.

Module M-002: Master Thesis				
Courses				
Title	Typ	Hrs/wk	CP	
<b>Module Responsible</b>	Professoren der TUHH			
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>			
<b>Recommended Previous Knowledge</b>				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul> <p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>	<p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> </ul>			

<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>
