Program description	3
Core qualification	5
Module M0523: Business & Management	5
Module M0524: Non-technical Courses for Master	6
Module M0763: Aircraft Systems I	9
Module M0771: Flight Physics	12
Module M0812: Aircraft Design	15
Module M1155: Aircraft Cabin Systems	19
Module M0764: Aircraft Systems II	22
Module M1156: Systems Engineering	25
Module M1399: System Development Projekt	28
Module M1404: Research Project Aircraft-System-Engineering	30
Specialization Avionic Systems	32
Module M1213: Avionics for safety-critical Systems	32
Module M0836: Communication Networks	36
Module M0565: Mechatronic Systems	39
Module M0837: Simulation of Communication Networks	41
Module M1043: Aircraft Systems Engineering	43
Module M0803: Embedded Systems	57
Module M0832: Advanced Topics in Control	59
Module M1091: Flight Guidance and Control	62
Module M0791: Computer Architecture	65
Specialization Aircraft Systems	68
Module M0846: Control Systems Theory and Design	68
Module M0721: Air Conditioning	72
Module M0752: Nonlinear Dynamics	75
Module M0840: Optimal and Robust Control	77
Module M1043: Aircraft Systems Engineering	80
Module M0565: Mechatronic Systems	94
Module M0714: Numerical Treatment of Ordinary Differential Equations	96
Module M0808: Finite Elements Methods	99
Module M1091: Flight Guidance and Control	101
Module M1193: Cabin Systems Engineering	104
Module M1204: Modelling and Optimization in Dynamics	109
Module M1213: Avionics for safety-critical Systems	112
Module M0832: Advanced Topics in Control	115
Module M0563: Robotics	118
Specialization Cabin Systems	120
Module M1032: Airport Planning and Operations	120
Module M1193: Cabin Systems Engineering	123
Module M1091: Flight Guidance and Airline Operations	128
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	131
Module M1043: Aircraft Systems Engineering	133
Module M1343: Fibre-polymer-composites	147
Module M0721: Air Conditioning	150
Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	153
Module M0806: Technical Acoustics II (Room Acoustics, Computational Methods)	157
Module M1024: Methods of Integrated Product Development	159
Module M0633: Industrial Process Automation	162
Module M1213: Avionics for safety-critical Systems	164
Specialization Air Transportation Systems	167
Module M1091: Flight Guidance and Airline Operations	167
Module M1193: Cabin Systems Engineering	171
Module M1043: Aircraft Systems Engineering	176
Module M1339: Design optimization and probabilistic approaches in structural analysis	190
Module M1343: Fibre-polymer-composites	192
Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	195
Module M1032: Airport Planning and Operations	199
Module M1024: Methods of Integrated Product Development	201
Module M0808: Finite Elements Methods	204
Thesis	206
Module M-002: Master Thesis	206

## Program description

---

---

### Content

The consecutive Master program „Aircraft System Engineering“ prepares participating students for diverse kind of professions in the field of aviation and related industries. During studies the technical, mathematical and natural science orientated Bachelor of Engineering is deepened. Competences for the systematical, scientific and independent solution of responsible tasks in industry and research are taught.

Students learn how to use typical methods of systems engineering as well as the application of modern, computer-based techniques for system design, analysis and evaluation. This count among others methods such as model based systems engineering or model based / virtual testing. Furthermore required knowledge from different fields of aviation including aircraft systems, cabin systems, air transportation system, preliminary aircraft design, flight physics and material science is discussed.

Additionally students get insight into current research activities, e.g. in the area of fuel cells and electrical energy supply, actuators, virtual integration and aircraft level evaluation, avionics systems and software, hydraulic energy supply and integrated aircraft design.

Students are specializing in one of three fields of specialization and gaining the competence to work at the interfaces between these fields. According to their individual focuses students can adjust their studies very flexible due to the various numbers of offered elective courses.

### Career prospects

The consecutive Master program „Aircraft System Engineering“ prepares participating students for diverse kind of professions in the field of aviation and related industries. Graduates can, due to their specialization in one of the fields of Aircraft Systems Engineering, Cabin Systems, Air Transportation System or Preliminary Aircraft Design, work directly in one of these. Furthermore they have various methodically and interdisciplinary knowledge, so that they are prepared for multidisciplinary kind of jobs.

Graduates can work at Universities or other research institutes or apply directly for jobs in the industry. There they can start a carrier as a technical expert or qualify, with growing experiences, for technical management jobs such as project, group, team or development manager.

Besides starting their career in the aviation industry the master program allows, due to its system technical character, graduates to apply for jobs in other industries like the automotive or wind energy industry.

### Learning target

Graduates can:

- Analyze and solve problems in a scientific way, even if they are defined unusual or incomplete and having competitive specifications;
- Abstract and formulate complex problems from a new or developing part of their discipline;
- Apply innovative methods to fundamental problems and develop new scientific methods;
- Recognize information demand, find and supply information;
- Plan and conduct theoretical and experimental analysis;
- Interpret data in a critical way and draw conclusions from them;
- Investigate and evaluate the application of emerging technologies;

Graduates are able to:

- Develop concepts and solutions for fundamental, partly unusual problems if necessary by involving other disciplines;
- Create and develop new products, processes and methods;
- Use engineering judgment in order to work with complex, potentially incomplete information, recognize contradictions and deal with them;
- Classify methodically and combine systematically knowledge from different disciplines and deal with complexity;
- Work themselves systematically into new tasks within a short period of time;
- Reflect non-technical effects of engineers work systematically and take them responsible into account;
- Work out solutions that have a demand for depend methodical competences;
- Work scientifically with the goal to achieve a PhD degree.

## **Program structure**

The master program „Aircraft Systems Engineering“ is designed modular and oriented at the university wide program structure with an unified module size (multiples of six ECTS). It consists of a 60 ECTS curriculum of key qualifications that has to be taken by all students. It includes, among other, a so called system development project. Furthermore students have to choose one of the three offered curricula of specialization (30 ECTS), containing one obligatory module and a catalog of elective modules. The master program is completed by a master thesis.

All obligatory modules of the curriculum of key qualification and curricula of specializations are offered in the first two semesters of studies. The third semester only contains elective modules, which ease students to plan a semester abroad.

## Core qualification

The students extend their knowledge and skills in advanced engineering, aviation related subjects. Besides technical knowledge students strengthen their methodical skills in the fields of Aircraft Systems Engineering, Cabin Systems, Aircraft Design, Flight Physics and Systems Engineering. By performing the Systems Engineering Development Project, students apply their acquired skills in teams on a practical engineering problem.

### Module M0523: Business & Management

<b>Module Responsible</b>	Prof. Matthias Meyer
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way around selected special areas of management within the scope of business management.</li> <li>• Students are able to explain basic theories, categories, and models in selected special areas of business management.</li> <li>• Students are able to interrelate technical and management knowledge.</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>• Students are able to apply basic methods in selected areas of business management.</li> <li>• Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems</li> </ul>
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

#### Courses

**Information regarding lectures and courses can be found in the corresponding module handbook published separately.**

## Module M0524: Non-technical Courses for Master

<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH’s training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor’s or Master’s level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of “profiles”.</p> <p>The subjects that can be studied in parallel throughout the student’s entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor’s courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective</p>

*Knowledge*

in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

**Specialized Competence (Knowledge)**

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

**Professional Competence (Skills)**

In selected sub-areas students can

*Skills*

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

**Personal Competence**

**Personal Competences (Social Skills)**

Students will be able

*Social Competence*

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

**Personal Competences (Self-reliance)**

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of application

<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

**Courses**

**Information regarding lectures and courses can be found in the corresponding module handbook published separately.**

## Module M0763: Aircraft Systems I

### Courses

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Aircraft Systems I (L0735)	Lecture	3	4
Aircraft Systems I (L0739)	Recitation (large)	Section 2	2
<b>Module Responsible</b>	Prof. Frank Thielecke		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Students are able to: <ul style="list-style-type: none"> <li>• Describe essential components and design points of hydraulic, electrical and high-lift systems</li> <li>• Give an overview of the functionality of air conditioning systems</li> <li>• Explain the need for high-lift systems such as ist functionality and effects</li> <li>• Assess the challenge during the design of supply systems of an aircraft</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• Design hydraulic and electric supply systems of aircrafts</li> <li>• Design high-lift systems of aircrafts</li> <li>• Analyze the thermodynamic behaviour of air conditioning systems</li> </ul>		
<b>Personal Competence</b>	Students are able to: <ul style="list-style-type: none"> <li>• Perform system design in groups and present and discuss results</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• Reflect the contents of lectures autonomously</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam		
<b>Examination</b>			

<b>duration and scale</b>	165 Minutes
<b>Assignment for the Following Curricula</b>	Energy Systems: Specialisation Energy Systems: Elective Compulsory Aircraft Systems Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory

<b>Course L0735: Aircraft Systems I</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Frank Thielecke
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>Hydraulic Energy Systems (Fluids; pressure loss in valves and pipes; components of hydraulic systems like pumps, valves, etc.; pressure/flow characteristics; actuators; tanks; power and heat balances; emergency power)</li> <li>Electric Energy Systems (Generators; constant-speed-drives; DC and AC converters; electrical power distribution; bus systems; monitoring; load analysis)</li> <li>High Lift Systems (Principles; investigation of loads and system actuation power; principles and sizing of actuation and positioning systems; safety requirements and devices)</li> <li>Environmental Control Systems (Thermodynamic analysis; expansion and compression cooling systems; control strategies; cabin pressure control systems)</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>Moir, Seabridge: Aircraft Systems</li> <li>Green: Aircraft Hydraulic Systems</li> <li>Torenbek: Synthesis of Subsonic Airplane Design</li> <li>SAE1991: ARP; Air Conditioning Systems for Subsonic Airplanes</li> </ul>

<b>Course L1545: Aircraft Cabin Systems</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Ralf God
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The objective of the lecture with the corresponding exercise is the acquisition of knowledge about aircraft cabin systems and cabin operations. A basic understanding of technological and systems engineering effort to maintain an artificial but comfortable and safe travel and working environment at cruising altitude is to be achieved.</p> <p>The course provides a comprehensive overview of current technology and cabin systems in modern passenger aircraft. The Fulfillment of requirements for the cabin as the central system of work are covered on the basis of the topics comfort, ergonomics, human factors, operational processes, maintenance and energy supply:</p> <ul style="list-style-type: none"> <li>• Materials used in the cabin</li> <li>• Ergonomics and human factors</li> <li>• Cabin interior and non-electrical systems</li> <li>• Cabin electrical systems and lights</li> <li>• Cabin electronics, communication-, information- and IFE-systems</li> <li>• Cabin and passenger process chains</li> <li>• RFID Aircraft Parts Marking</li> <li>• Energy sources and energy conversion</li> </ul>

## Module M1404: Research Project Aircraft-System-Engineering

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Dozenten des SD M		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Bachelor Mechanical Engineering</li> <li>• Aircraft Systems I+II</li> <li>• Cabin Systems</li> <li>• Aircraft Design</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>The students are able to demonstrate their detailed knowledge in the field of Aircraft Systems Engineering. They can exemplify the state of technology and application and discuss critically in the context of actual problems and general conditions of science and society.</p> <p><i>Knowledge</i> The students can develop solving strategies and approaches for fundamental and practical problems in Aircraft Systems Engineering. They may apply theory based procedures and integrate safety-related, ecological, ethical, and economic view points of science and society.</p> <p><i>Skills</i> Scientific work techniques that are used can be described and critically reviewed. The students are able to independently select methods for the project work and to justify this choice. They can explain how these methods relate to the field of work and how the context of application has to be adjusted. General findings and further developments may essentially be outlined.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students are able to condense the relevance and the structure of the project work, the work steps and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their colleagues.</p> <p><i>Autonomy</i> Die Studierenden sind fähig, die zur Bearbeitung der Projektarbeit notwendigen Arbeitsschritte und Abläufe selbständig unter Berücksichtigung vorgegebener Fristen zu planen und zu dokumentieren. Hierzu gehört, dass sie sich aktuelle wissenschaftliche Informationen zielorientiert beschaffen können. Ferner sind sie in der Lage, bei Fachexperten Rückmeldungen zum Arbeitsfortschritt einzuholen, um hochwertige, auf den Stand von Wissenschaft und Technik bezogene Arbeitsergebnisse zu erreichen.</p>		
<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0		
<b>Credit points</b>	12		
<b>Course achievement</b>	None		
<b>Examination</b>	Study work		
<b>Examination duration and scale</b>	approx. 60 - 150 pages		
<b>Assignment for</b>

Curricula**

Aircraft Systems Engineering: Core qualification: Elective Compulsory

## Specialization Avionic Systems

### Module M1213: Avionics for safety-critical Systems

**Courses**

Title	Typ	Hrs/wk	CP
Avionics of Safty Critical Systems (L1640)	Lecture	2	3
Avionics of Safty Critical Systems (L1641)	Recitation (small)	Section 1	1
Avionics of Safty Critical Systems (L1652)	Practical Course	1	2

<b>Module Responsible</b>	Dr. Martin Halle
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Electrical Engineering</li> <li>• Informatics</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	Students can: <ul style="list-style-type: none"> <li>• describe the most important principles and components of safety-critical avionics</li> <li>• denote processes and standards of safety-critical software development</li> <li>• depict the principles of Integrated Modular Avionics (IMA)</li> <li>• can compare hardware and bus systems used in avionics</li> <li>• assess the difficulties of developing a safety-critical avionics system correctly</li> </ul>
<i>Knowledge</i>	
<b>Skills</b>	Students can ... <ul style="list-style-type: none"> <li>• operate real-time hardware and simulations</li> <li>• program A653 applications</li> <li>• plan avionics architectures up to a certain extend</li> <li>• create test scripts and assess test results</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can: <ul style="list-style-type: none"> <li>• jointly develop solutions in inhomogeneous teams</li> <li>• exchange information formally with other teams</li> <li>• present development results in a convenient way</li> </ul>
<b>Autonomy</b>	Students can: <ul style="list-style-type: none"> <li>• understand the requirements for an avionics system</li> <li>• autonomously derive concepts for systems based on safety-critical avionics</li> </ul>

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Martin Halle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Avionics are all kinds off flight electronics. Today there is no aircraft system function without avionics, and avionics are one main source of innovation in aerospace industry. Since many system functions are highly safety critical, the development of avionics hardware and software underlies mandatory constraints, technics, and processes. It is inevitable for system developers and computer engineers in aerospace industry to understand and master these. This lecture teaches the risks and techniques of developing safety critical hardware and software; major avionics components; integration; and test with a practical orientation. A focus is on Integrated Modular Avionics (IMA). The lecture is accompanied by a mandatory and laboratory exercises.</p> <p>Content:</p> <ol style="list-style-type: none"> <li>1. Introduction and Fundamentals</li> <li>2. History and Flight Control</li> <li>3. Concepts and Redundancy</li> <li>4. Digital Computers</li> <li>5. Interfaces and Signals</li> <li>6. Module M0836: Communication Networks				
Courses				
Title	Typ	Hrs/wk	CP	
Analysis and Structure of Communication Networks (L0897)	Lecture	2	2	
Selected Topics of Communication Networks (L0899)	Project-/problem-based Learning	2	2	
Communication Networks Exercise (L0898)	Project-/problem-based Learning	1	2	
<b>Module Responsible</b>	Prof. Andreas Timm-Giel			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Fundamental stochastics</li> <li>• Basic understanding of computer networks and/or communication technologies is beneficial</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to describe the principles and structures of communication networks in detail. They can explain the formal description methods of communication networks and their protocols. They are able to explain how current and complex communication networks work and describe the current research in these examples.			
<i>Skills</i>	Students are able to evaluate the performance of communication networks using the learned methods. They are able to work out problems themselves and apply the learned methods. They can apply what they have learned autonomously on further and new communication networks.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to define tasks themselves in small teams and solve these problems together using the learned methods. They can present the obtained results. They are able to discuss and critically analyse the solutions.			
<i>Autonomy</i>	Students are able to obtain the necessary expert knowledge for understanding the functionality and performance capabilities of new communication networks independently.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Presentation			
<b>Examination duration and scale</b>	1.5 hours colloquium with three students, therefore about 30 min per student. Topics of the colloquium are the posters from the previous poster session and the topics of the module.			
	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems:

Module M0565: Mechatronic Systems				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electro- and Contromechanics (L0174)		Lecture	2	2
Electro- and Contromechanics (L1300)		Recitation (small)	Section 1	2
Mechatronics Laboratory (L0196)		Project-/problem-based Learning	2	2
<b>Module Responsible</b>	Prof. Uwe Weltin			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of mechanics, electromechanics and control theory			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to describe methods and calculations to design, model, simulate and optimize mechatronic systems and can repeat methods to verify and validate models.			
<i>Skills</i>	Students are able to plan and execute mechatronic experiments. Students are able to model mechatronic systems and derive simulations and optimizations.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities and define task within the team.			
<i>Autonomy</i>	Students are able to solve individually exercises related to this lecture with instructional direction. Students are able to plan, execute and summarize a mechatronic experiment.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	None	Subject theoretical and practical work	
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 min			
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Mechatronics: Core qualification: Compulsory			

<b>Course L0174: Electro- and Contromechanics</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2

Module M0837: Simulation of Communication Networks			
Courses			
Title	Typ	Hrs/wk	CP
Simulation of Communication Networks (L0887)	Project-/problem-based Learning	5	6
<b>Module Responsible</b>	Prof. Andreas Timm-Giel		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Knowledge of computer and communication networks</li> <li>• Basic programming skills</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to explain the necessary stochastics, the discrete event simulation technology and modelling of networks for performance evaluation.		
<i>Skills</i>	Students are able to apply the method of simulation for performance evaluation to different, also not practiced, problems of communication networks. The students can analyse the obtained results and explain the effects observed in the network. They are able to question their own results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to acquire expert knowledge in groups, present the results, and discuss solution approaches and results. They are able to work out solutions for new problems in small teams.		
<i>Autonomy</i>	Students are able to transfer independently and in discussion with others the acquired method and expert knowledge to new problems. They can identify missing knowledge and acquire this knowledge independently.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Networks: Elective Compulsory		

<b>Course L0887: Simulation of Communication Networks</b>	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	5
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Lecturer</b>	Prof. Andreas Timm-Giel
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture. Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the course increasingly complex networks and protocols are considered and their performance is determined by simulation.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Skript des Instituts für Kommunikationsnetze</li> </ul> Further literature is announced at the beginning of the lecture.

## Module M1043: Aircraft Systems Engineering

### Courses

Title	Typ	Hrs/wk	CP
Fatigue & Damage Tolerance (L0310)	Lecture	2	3
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1514)	Lecture	2	3
Lightweight Design Practical Course (L1258)	Project-/problem-based Learning	3	3
Aviation Security (L1549)	Lecture	2	2
Aviation Security (L1550)	Recitation (small)	Section 1	1
Mechanisms, Systems and Processes of Materials Testing (L0950)	Lecture	2	2
Turbo Jet Engines (L0908)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation (large)	Section 1	2
Materials Testing (L0949)	Lecture	2	2
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation (small)	Section 1	2
Reliability of avionics assemblies (L1554)	Lecture	2	2
Reliability of avionics assemblies (L1555)	Recitation (small)	Section 1	1
Reliability of Aircraft Systems (L0749)	Lecture	2	3

<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way through selected special areas within systems engineering, air transportation system and material science</li> <li>• Students are able to explain basic models and procedures in selected special areas.</li> <li>• Students are able to interrelate scientific and technical knowledge.</li> </ul>
<i>Skills</i>	Students are able to apply basic methods in selected areas of engineering.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can chose independently, in which fields they want to deepen their knowledge and skills through the election of courses.
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory
---	--

<b>Course L0310: Fatigue &amp; Damage Tolerance</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	45 min
<b>Lecturer</b>	Dr. Martin Flamm
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Design principles, fatigue strength, crack initiation and crack growth, damage calculation, counting methods, methods to improve fatigue strength, environmental influences
<b>Literature</b>	Jaap Schijve, Fatigue of Structures and Materials. Kluwer Academic Publisher, Dordrecht, 2001 E. Haibach. Betriebsfestigkeit Verfahren und Daten zur Bauteilberechnung. VDI-Verlag, Düsseldorf, 1989

<b>Course L1514: Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Fundamentals of Anisotropic Elasticity</b></p> <p>Displacements, strains and stresses; Equilibrium equations; Kinematics; Hooke's generalized law</p> <p><b>Behaviour of a single laminate layer</b></p> <p>Material law of a single laminate layer; Full anisotropy and coupling effects; Material symmetries; Engineering constants; Plane state of stress; Transformation rules</p> <p><b>Fundamentals of Micromechanics of a laminate layer</b></p>

<p><b>Content</b></p>	<p>Representative unit cell; Determination of effective material constants; Effective stiffness properties of a single layer</p> <p><b>Classical Laminate Plate Theory</b></p> <p>Notations and laminate code; Kinematics and displacement field; Strains and stresses, stress resultants; Constitutive equations and coupling effects; Special laminates and their behavior; Effective laminate properties</p> <p><b>Strength of Laminated Plates</b></p> <p>Fundamental concept; Phenomenological failure criteria: maximum stresses, maximum strains, Tsai-Hill, Tsai-Wu, Puck, Hashin</p> <p><b>Bending of Composite Laminated Plates</b></p> <p>Differential Equations; Boundary Conditions; Navier-type solutions; Lévy-type solutions</p> <p><b>Stress Concentration Problems</b></p> <p>Free-edge effects; Stress concentrations at holes, cracks, delaminations; Aspects of failure analysis</p> <p><b>Stability of Thin-Walled Composite Structures</b></p> <p>Buckling of anisotropic plates and shells; Influence of loading conditions; Influence of boundary conditions; Exact transcendental solutions and their evaluation; Buckling of stiffened composite plates; Minimum stiffness requirements; Local buckling of stiffener profiles</p> <p><b>Written exercise (report required)</b></p> <p>Assessment of a thin-walled composite laminated beam taking several different dimensioning criteria into account</p>

<b>Content</b>	<ul style="list-style-type: none"> <li>• Functions of reliability and safety (regulations, certification requirements)</li> <li>• Basics methods of reliability analysis (FMEA, fault tree, functional hazard assessment)</li> <li>• Reliability analysis of electrical and mechanical systems</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• CS 25.1309</li> <li>• SAE ARP 4754</li> <li>• SAE ARP 4761</li> </ul>

Module M0803: Embedded Systems				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Embedded Systems (L0805)		Lecture	3	4
Embedded Systems (L0806)		Recitation (small)	Section 1	2
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Computer Engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p>Embedded systems can be defined as information processing systems embedded into enclosing products. This course teaches the foundations of such systems. In particular, it deals with an introduction into these systems (notions, common characteristics) and their specification languages (models of computation, hierarchical automata, specification of distributed systems, task graphs, specification of real-time applications, translations between different models).</p> <p><i>Knowledge</i> Another part covers the hardware of embedded systems: Sensors, A/D and D/A converters, real-time capable communication hardware, embedded processors, memories, energy dissipation, reconfigurable logic and actuators. The course also features an introduction into real-time operating systems, middleware and real-time scheduling. Finally, the implementation of embedded systems using hardware/software co-design (hardware/software partitioning, high-level transformations of specifications, energy-efficient realizations, compilers for embedded processors) is covered.</p> <p><i>Skills</i> After having attended the course, students shall be able to realize simple embedded systems. The students shall realize which relevant parts of technological competences to use in order to obtain a functional embedded systems. In particular, they shall be able to compare different models of computations and feasible techniques for system-level design. They shall be able to judge in which areas of embedded system design specific risks exist.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to solve similar problems alone or in a group and to present the results accordingly.</p> <p><i>Autonomy</i> Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.</p>

## Module M0832: Advanced Topics in Control

### Courses

Title	Typ	Hrs/wk	CP
Advanced Topics in Control (L0661)	Lecture	2	3
Advanced Topics in Control (L0662)	Recitation (small)	Section 2	3

<b>Module Responsible</b>	Prof. Herbert Werner
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	H-infinity optimal control, mixed-sensitivity design, linear matrix inequalities
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can explain the advantages and shortcomings of the classical gain scheduling approach</li> <li>They can explain the representation of nonlinear systems in the form of quasi-LPV systems</li> <li>They can explain how stability and performance conditions for LPV systems can be formulated as LMI conditions</li> <li>They can explain how gridding techniques can be used to solve analysis and synthesis problems for LPV systems</li> <li>They are familiar with polytopic and LFT representations of LPV systems and some of the basic synthesis techniques associated with each of these model structures</li> </ul>
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students can explain how graph theoretic concepts are used to represent the communication topology of multiagent systems</li> <li>They can explain the convergence properties of first order consensus protocols</li> <li>They can explain analysis and synthesis conditions for formation control loops involving either LTI or LPV agent models</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can explain the state space representation of spatially invariant distributed systems that are discretized according to an actuator/sensor array</li> <li>They can explain (in outline) the extension of the bounded real lemma to such distributed systems and the associated synthesis conditions for distributed controllers</li> <li>Students are capable of constructing LPV models of nonlinear plants and carry out a mixed-sensitivity design of gain-scheduled controllers; they can do this using polytopic, LFT or general LPV models</li> <li>They are able to use standard software tools (Matlab robust control toolbox) for these tasks</li> <li>Students are able to design distributed formation controllers for groups of agents with either LTI or LPV dynamics, using Matlab tools provided</li> </ul>

<p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<ul style="list-style-type: none"> <li>• Students are able to design distributed controllers for spatially interconnected systems, using the Matlab MD-toolbox</li> </ul> <p>Students can work in small groups and arrive at joint results.</p> <p>Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.</p>

Module M0791: Computer Architecture				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computer Architecture (L0793)		Lecture	2	3
Computer Architecture (L0794)		Project-/problem-based Learning	2	2
Computer Architecture (L1864)		Recitation (small)	Section 1	1
<b>Module Responsible</b>	Prof. Heiko Falk			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Module "Computer Engineering"			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	This module presents advanced concepts from the discipline of computer architecture. In the beginning, a broad overview over various programming models is given, both for general-purpose computers and for special-purpose machines (e.g., signal processors). Next, foundational aspects of the micro-architecture of processors are covered. Here, the focus particularly lies on the so-called pipelining and the methods used for the acceleration of instruction execution used in this context. The students get to know concepts for dynamic scheduling, branch prediction, superscalar execution of machine instructions and for memory hierarchies.			
<i>Skills</i>	The students are able to describe the organization of processors. They know the different architectural principles and programming models. The students examine various structures of pipelined processor architectures and are able to explain their concepts and to analyze them w.r.t. criteria like, e.g., performance or energy efficiency. They evaluate different structures of memory hierarchies, know parallel computer architectures and are able to distinguish between instruction- and data-level parallelism.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to solve similar problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire new knowledge from specific literature and to associate this knowledge with other classes.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

## Specialization Aircraft Systems

By specializing in Aircraft Systems Engineering students learn how to work on complex system design problems in an analytical and methodical way. They are deepening existing and getting new competences in the field of control design, simulation, system modelling and other parts of system design. Choosing an open module allows students furthermore to participate in various lectures in the field of aviation.

### Module M0846: Control Systems Theory and Design

#### Courses

Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation (small)	Section 2	2

<b>Module Responsible</b>	Prof. Herbert Werner
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Introduction to Control Systems
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space</li> <li>• They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively</li> <li>• They can explain the significance of a minimal realisation</li> <li>• They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection</li> <li>• They can extend all of the above to multi-input multi-output systems</li> <li>• They can explain the z-transform and its relationship with the Laplace Transform</li> <li>• They can explain state space models and transfer function models of discrete-time systems</li> <li>• They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation</li> <li>• They can explain how a state space model can be constructed from a discrete-time impulse response</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<ul style="list-style-type: none"> <li>• Students can transform transfer function models into state space models and vice versa</li> <li>• They can assess controllability and observability and construct minimal realisations</li> <li>• They can design LQG controllers for multivariable plants</li> <li>• They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate</li> <li>• They can identify transfer function models and state space models of dynamic systems from experimental data</li> <li>• They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink)</li> </ul>

<p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<p>Students can work in small groups on specific problems to arrive at joint solutions.</p> <p>Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p> <p>They can assess their knowledge in weekly on-line tests and thereby control their learning progress.</p>
<p><b>Workload in Hours</b></p>	<p>Independent Study Time 124, Study Time in Lecture 56</p>

Module M0721: Air Conditioning			
Courses			
Title	Typ	Hrs/wk	CP
Air Conditioning (L0594)	Lecture	3	5
Air Conditioning (L0595)	Recitation (large)	Section 1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a <math>h_1+x,x</math>-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.</p> <p><i>Skills</i></p> <p>Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Literature</b>	S. Strogatz: Nonlinear Dynamics and Chaos. Perseus, 2013.

## Module M0840: Optimal and Robust Control

### Courses

Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation (small)	Section 2	3

<b>Module Responsible</b>	Prof. Herbert Werner
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Classical control (frequency response, root locus)</li> <li>• State space methods</li> <li>• Linear algebra, singular value decomposition</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can explain the significance of the matrix Riccati equation for the solution of LQ problems.</li> <li>• They can explain the duality between optimal state feedback and optimal state estimation.</li> <li>• They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints.</li> <li>• They can explain how an LQG design problem can be formulated as special case of an H2 design problem.</li> <li>• They can explain how model uncertainty can be represented in a way that lends itself to robust controller design</li> <li>• They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant.</li> <li>• They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	<ul style="list-style-type: none"> <li>• Students are capable of designing and tuning LQG controllers for multivariable plant models.</li> <li>• They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it.</li> <li>• They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design.</li> <li>• They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller.</li> <li>• They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them.</li> <li>• They can carry out all of the above using standard software tools (Matlab robust control toolbox).</li> </ul>
<i>Social Competence</i>	
<i>Autonomy</i>	<p>Students can work in small groups on specific problems to arrive at joint solutions.</p> <p>Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.</p>

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	30 min
<b>Assignment for the Following Curricula</b>	<p>Computer Science: Specialisation Intelligence Engineering: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory</p> <p>Energy Systems: Core qualification: Elective Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory</p> <p>Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory</p> <p>Mechatronics: Specialisation System Design: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory</p> <p>Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory</p> <p>Product Development, Materials and Production: Specialisation Production: Elective Compulsory</p> <p>Product Development, Materials and Production: Specialisation Materials: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory</p> <p>Theoretical Mechanical Engineering: Core qualification: Elective Compulsory</p>

Course L0658: Optimal and Robust Control	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Herbert Werner

## Module M1043: Aircraft Systems Engineering

### Courses

Title	Typ	Hrs/wk	CP
Fatigue & Damage Tolerance (L0310)	Lecture	2	3
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1514)	Lecture	2	3
Lightweight Design Practical Course (L1258)	Project-/problem-based Learning	3	3
Aviation Security (L1549)	Lecture	2	2
Aviation Security (L1550)	Recitation (small)	Section 1	1
Mechanisms, Systems and Processes of Materials Testing (L0950)	Lecture	2	2
Turbo Jet Engines (L0908)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation (large)	Section 1	2
Materials Testing (L0949)	Lecture	2	2
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation (small)	Section 1	2
Reliability of avionics assemblies (L1554)	Lecture	2	2
Reliability of avionics assemblies (L1555)	Recitation (small)	Section 1	1
Reliability of Aircraft Systems (L0749)	Lecture	2	3

<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way through selected special areas within systems engineering, air transportation system and material science</li> <li>• Students are able to explain basic models and procedures in selected special areas.</li> <li>• Students are able to interrelate scientific and technical knowledge.</li> </ul>
<i>Skills</i>	Students are able to apply basic methods in selected areas of engineering.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can chose independently, in which fields they want to deepen their knowledge and skills through the election of courses.
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory
---	--

<b>Course L0310: Fatigue &amp; Damage Tolerance</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	45 min
<b>Lecturer</b>	Dr. Martin Flamm
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Design principles, fatigue strength, crack initiation and crack growth, damage calculation, counting methods, methods to improve fatigue strength, environmental influences
<b>Literature</b>	Jaap Schijve, Fatigue of Structures and Materials. Kluwer Academic Publisher, Dordrecht, 2001 E. Haibach. Betriebsfestigkeit Verfahren und Daten zur Bauteilberechnung. VDI-Verlag, Düsseldorf, 1989

<b>Course L1514: Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Fundamentals of Anisotropic Elasticity</b></p> <p>Displacements, strains and stresses; Equilibrium equations; Kinematics; Hooke's generalized law</p> <p><b>Behaviour of a single laminate layer</b></p> <p>Material law of a single laminate layer; Full anisotropy and coupling effects; Material symmetries; Engineering constants; Plane state of stress; Transformation rules</p> <p><b>Fundamentals of Micromechanics of a laminate layer</b></p>

<b>Content</b>	<p>Representative unit cell; Determination of effective material constants; Effective stiffness properties of a single layer</p> <p><b>Classical Laminate Plate Theory</b></p> <p>Notations and laminate code; Kinematics and displacement field; Strains and stresses, stress resultants; Constitutive equations and coupling effects; Special laminates and their behavior; Effective laminate properties</p> <p><b>Strength of Laminated Plates</b></p> <p>Fundamental concept; Phenomenological failure criteria: maximum stresses, maximum strains, Tsai-Hill, Tsai-Wu, Puck, Hashin</p> <p><b>Bending of Composite Laminated Plates</b></p> <p>Differential Equations; Boundary Conditions; Navier-type solutions; Lévy-type solutions</p> <p><b>Stress Concentration Problems</b></p> <p>Free-edge effects; Stress concentrations at holes, cracks, delaminations; Aspects of failure analysis</p> <p><b>Stability of Thin-Walled Composite Structures</b></p> <p>Buckling of anisotropic plates and shells; Influence of loading conditions; Influence of boundary conditions; Exact transcendental solutions and their evaluation; Buckling of stiffened composite plates; Minimum stiffness requirements; Local buckling of stiffener profiles</p> <p><b>Written exercise (report required)</b></p> <p>Assessment of a thin-walled composite laminated beam taking several different dimensioning criteria into account</p>

Module M0565: Mechatronic Systems				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Electro- and Contromechanics (L0174)		Lecture	2	2
Electro- and Contromechanics (L1300)		Recitation (small)	Section 1	2
Mechatronics Laboratory (L0196)		Project-/problem-based Learning	2	2
<b>Module Responsible</b>	Prof. Uwe Weltin			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of mechanics, electromechanics and control theory			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to describe methods and calculations to design, model, simulate and optimize mechatronic systems and can repeat methods to verify and validate models.			
<i>Skills</i>	Students are able to plan and execute mechatronic experiments. Students are able to model mechatronic systems and derive simulations and optimizations.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities and define task within the team.			
<i>Autonomy</i>	Students are able to solve individually exercises related to this lecture with instructional direction. Students are able to plan, execute and summarize a mechatronic experiment.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	<b>Compulsory</b>	<b>Bonus</b>	<b>Form</b>	<b>Description</b>
	Yes	None	Subject theoretical and practical work	
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 min			
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Control and Power Systems Engineering: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Mechatronics: Core qualification: Compulsory

## Module M0714: Numerical Treatment of Ordinary Differential Equations

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Numerical Treatment of Ordinary Differential Equations (L0576)	Lecture	2	3
Numerical Treatment of Ordinary Differential Equations (L0582)	Recitation (small)	Section 2	3
<b>Module Responsible</b>	Prof. Sabine Le Borne		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematik I, II, III für Ingenieurstudierende (deutsch oder englisch) oder Analysis &amp; Lineare Algebra I + II sowie Analysis III für Technomathematiker</li> <li>Basic MATLAB knowledge</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>list numerical methods for the solution of ordinary differential equations and explain their core ideas,</li> <li>repeat convergence statements for the treated numerical methods (including the prerequisites tied to the underlying problem),</li> <li>explain aspects regarding the practical execution of a method.</li> <li>select the appropriate numerical method for concrete problems, implement the numerical algorithms efficiently and interpret the numerical results</li> </ul>		
<i>Knowledge</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>implement (MATLAB), apply and compare numerical methods for the solution of ordinary differential equations,</li> <li>to justify the convergence behaviour of numerical methods with respect to the posed problem and selected algorithm,</li> <li>for a given problem, develop a suitable solution approach, if necessary by the composition of several algorithms, to execute this approach and to critically evaluate the results.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>work together in heterogeneously composed teams (i.e., teams from different study programs and background knowledge), explain theoretical foundations and support each other with practical aspects regarding the implementation of algorithms.</li> </ul>		
<i>Social Competence</i>			
<b>Autonomy</b>	<p>Students are capable</p> <ul style="list-style-type: none"> <li>to assess whether the supporting theoretical and practical exercises are better solved individually or in a team,</li> <li>to assess their individual progress and, if necessary, to ask questions and seek help.</li> </ul>		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M0808: Finite Elements Methods

### Courses

Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation (large)	Section 2	3

<b>Module Responsible</b>	Prof. Otto von Estorff
---------------------------	------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Course L2374: Flight Control</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Volker Gollnick
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The course will provide knowledge how to describe flight vehicle as a control system. Further it gives inside into the design, layout and optimization of controller for stabilisation and control of flight states and guidance modes.</p> <p>The course is intended to enable participants in the layout of flight control systems presenting the major methods and tools</p>

Module M1193: Cabin Systems Engineering				
Courses				
Title	Typ	Hrs/wk	CP	
Computer and communication technology in cabin electronics and avionics (L1557)	Lecture	2	2	
Computer and communication technology in cabin electronics and avionics (L1558)	Recitation (small)	Section 1	1	
Model-Based Systems Engineering (MBSE) with SysML/UML (L1551)	Project-/problem-based Learning	3	3	
<b>Module Responsible</b>	Prof. Ralf God			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Control Systems</li> </ul> Previous knowledge in: <ul style="list-style-type: none"> <li>• Systems Engineering</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	Students are able to: <ul style="list-style-type: none"> <li>• describe the structure and operation of computer architectures</li> <li>• explain the structure and operation of digital communication Networks</li> <li>• explain architectures of cabin electronics, integrated modular avionics (IMA) and Aircraft Data Communication Network (ADCN)</li> <li>• understand the approach of Model-Based Systems Engineering (MBSE) in the design of hardware and software-based cabin systems</li> </ul>			
<i>Knowledge</i>				
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• understand, operate and maintain a Minicomputer</li> <li>• build up a network communication and communicate with other network participants</li> <li>• connect a minicomputer with a cabin management system (A380 CIDS) and communicate over a AFDX®-Network</li> <li>• model system functions by means of formal languages SysML/UML and generate software code from the models</li> <li>• execute software code on a minicomputer</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>• elaborate partial results and merge with others to form a complete solution</li> </ul>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• organize and schedule their practical tasks</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			

<p><b>Examination duration and scale</b></p>	<p>120 minutes</p>
<p><b>Assignment for the Following Curricula</b></p>	<p>Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory                  Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory                  Aircraft Systems Engineering: Specialisation Cabin Systems: Compulsory                  International Management and Engineering: Specialisation II. ## Module M1213: Avionics for safety-critical Systems

### Courses

Title	Typ	Hrs/wk	CP
Avionics of Safty Critical Systems (L1640)	Lecture	2	3
Avionics of Safty Critical Systems (L1641)	Recitation (small)	Section 1	1
Avionics of Safty Critical Systems (L1652)	Practical Course	1	2

<b>Module Responsible</b>	Dr. Martin Halle
---------------------------	------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	<p>Basic knowledge in:</p> <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Electrical Engineering</li> <li>• Informatics</li> </ul>
---------------------------------------	---

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>Students can:</p> <ul style="list-style-type: none"> <li>• describe the most important principles and components of safety-critical avionics</li> <li>• denote processes and standards of safety-critical software development</li> <li>• depict the principles of Integrated Modular Avionics (IMA)</li> <li>• can compare hardware and bus systems used in avionics</li> <li>• assess the difficulties of developing a safety-critical avionics system correctly</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<p>Students can ...</p> <ul style="list-style-type: none"> <li>• operate real-time hardware and simulations</li> <li>• program A653 applications</li> <li>• plan avionics architectures up to a certain extend</li> <li>• create test scripts and assess test results</li> </ul>
<b>Personal Competence</b>	<p>Students can:</p> <ul style="list-style-type: none"> <li>• jointly develop solutions in inhomogeneous teams</li> <li>• exchange information formally with other teams</li> <li>• present development results in a convenient way</li> </ul>
<i>Social Competence</i>	
<i>Autonomy</i>	<p>Students can:</p> <ul style="list-style-type: none"> <li>• understand the requirements for an avionics system</li> <li>• autonomously derive concepts for systems based on safety-critical avionics</li> </ul>

<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
--------------------------	--

<b>Credit points</b>	6		
<b>Course achievement</b>	<b>Compulsory</b> Yes	<b>Bonus</b> None	<b>Form</b> Subject theoretical and practical work

<b>Course L1640: Avionics of Safty Critical Systems</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Martin Halle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Avionics are all kinds off flight electronics. Today there is no aircraft system function without avionics, and avionics are one main source of innovation in aerospace industry. Since many system functions are highly safety critical, the development of avionics hardware and software underlies mandatory constraints, technics, and processes. It is inevitable for system developers and computer engineers in aerospace industry to understand and master these. This lecture teaches the risks and techniques of developing safety critical hardware and software; major avionics components; integration; and test with a practical orientation. A focus is on Integrated Modular Avionics (IMA). The lecture is accompanied by a mandatory and laboratory exercises.</p> <p>Content:</p> <ol style="list-style-type: none"> <li>1. Introduction and Fundamentals</li> <li>2. History and Flight Control</li> <li>3. Concepts and Redundancy</li> <li>4. Digital Computers</li> <li>5. Interfaces and Signals</li> <li>6. ## Module M0832: Advanced Topics in Control

### Courses

Title	Typ	Hrs/wk	CP
Advanced Topics in Control (L0661)	Lecture	2	3
Advanced Topics in Control (L0662)	Recitation (small)	Section 2	3

<b>Module Responsible</b>	Prof. Herbert Werner
---------------------------	----------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	H-infinity optimal control, mixed-sensitivity design, linear matrix inequalities
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can explain the advantages and shortcomings of the classical gain scheduling approach</li> <li>They can explain the representation of nonlinear systems in the form of quasi-LPV systems</li> <li>They can explain how stability and performance conditions for LPV systems can be formulated as LMI conditions</li> <li>They can explain how gridding techniques can be used to solve analysis and synthesis problems for LPV systems</li> <li>They are familiar with polytopic and LFT representations of LPV systems and some of the basic synthesis techniques associated with each of these model structures</li> </ul>
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students can explain how graph theoretic concepts are used to represent the communication topology of multiagent systems</li> <li>They can explain the convergence properties of first order consensus protocols</li> <li>They can explain analysis and synthesis conditions for formation control loops involving either LTI or LPV agent models</li> </ul>
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can explain the state space representation of spatially invariant distributed systems that are discretized according to an actuator/sensor array</li> <li>They can explain (in outline) the extension of the bounded real lemma to such distributed systems and the associated synthesis conditions for distributed controllers</li> <li>Students are capable of constructing LPV models of nonlinear plants and carry out a mixed-sensitivity design of gain-scheduled controllers; they can do this using polytopic, LFT or general LPV models</li> <li>They are able to use standard software tools (Matlab robust control toolbox) for these tasks</li> <li>Students are able to design distributed formation controllers for groups of agents with either LTI or LPV dynamics, using Matlab tools provided</li> </ul>

<p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<ul style="list-style-type: none"> <li>• Students are able to design distributed controllers for spatially interconnected systems, using the Matlab MD-toolbox</li> </ul> <p>Students can work in small groups and arrive at joint results.</p> <p>Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.</p>

## Specialization Cabin Systems

In the specialization in cabin systems, students learn to systematically deal with issues related to the development of aircraft cabin systems, the use of these systems and their application in an operational environment. The aircraft cabin with the cabin management system represents the central working system of an airline during passenger transport. The focus of the specialization is the design of electronic cabin and communication systems using the methodology of Model-Based Systems Engineering (MBSE). Environmental control systems, acoustics, design methods related to composite materials and for integrated product development are further important aspects in the specialization for aircraft cabin development. Airport operations and operations of an airline with respective procedures and systems round off the context of the aircraft cabin. Students have broad knowledge on development methods for complex systems. They can draft requirements, functions and architectures for hardware- and software-based systems, and model and simulate solutions. They know about appropriate tools and methods and master the overall system development process from system design via system implementation and system integration, right up to validation and verification.

### Module M1032: Airport Planning and Operations

#### Courses

Title	Typ	Hrs/wk	CP
Airport Operations (L1276)	Lecture	3	3
Airport Planning (L1275)	Lecture	2	2
Airport Planning (L1469)	Recitation (small)	Section 1	1

<b>Module Responsible</b>	Prof. Volker Gollnick
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Bachelor Mech. Eng.</li> <li>• Vordiplom Mech. Eng.</li> <li>• Lecture Air Transportation Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ol style="list-style-type: none"> <li>1. Regulatory principles of airport planning and operations</li> <li>2. Design of an airport incl. Regulatory baselines</li> <li>3. Airport operation in the terminal and at the airfield</li> </ol>
<i>Skills</i>	<ul style="list-style-type: none"> <li>• Understanding of different interdisciplinary interdependencies</li> <li>• Planning and design of an airport</li> <li>• Modelling and assessment of airport operation</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Working in interdisciplinary teams</li> <li>• Communication</li> </ul>
<i>Autonomy</i>	Organization of workflows and -strategies

<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 min
<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory International Management and Engineering: Specialisation II. ## Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0516)	Lecture	2	3
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0518)	Recitation (large)	Section 2	3
<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.		
<i>Knowledge</i>	The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.		
<i>Skills</i>			
<b>Personal Competence</b>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Social Competence</i>	The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Course achievement</b>	None		
<b>Examination</b>	Written exam

## Module M1043: Aircraft Systems Engineering

### Courses

Title	Typ	Hrs/wk	CP
Fatigue & Damage Tolerance (L0310)	Lecture	2	3
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1514)	Lecture	2	3
Lightweight Design Practical Course (L1258)	Project-/problem-based Learning	3	3
Aviation Security (L1549)	Lecture	2	2
Aviation Security (L1550)	Recitation (small)	Section 1	1
Mechanisms, Systems and Processes of Materials Testing (L0950)	Lecture	2	2
Turbo Jet Engines (L0908)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation (large)	Section 1	2
Materials Testing (L0949)	Lecture	2	2
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation (small)	Section 1	2
Reliability of avionics assemblies (L1554)	Lecture	2	2
Reliability of avionics assemblies (L1555)	Recitation (small)	Section 1	1
Reliability of Aircraft Systems (L0749)	Lecture	2	3

<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way through selected special areas within systems engineering, air transportation system and material science</li> <li>• Students are able to explain basic models and procedures in selected special areas.</li> <li>• Students are able to interrelate scientific and technical knowledge.</li> </ul>
<i>Skills</i>	Students are able to apply basic methods in selected areas of engineering.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can chose independently, in which fields they want to deepen their knowledge and skills through the election of courses.
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Fundamentals of Anisotropic Elasticity</b></p> <p>Displacements, strains and stresses; Equilibrium equations; Kinematics; Hooke's generalized law</p> <p><b>Behaviour of a single laminate layer</b></p> <p>Material law of a single laminate layer; Full anisotropy and coupling effects; Material symmetries; Engineering constants; Plane state of stress; Transformation rules</p> <p><b>Fundamentals of Micromechanics of a laminate layer</b></p>

<b>Content</b>	<p>Representative unit cell; Determination of effective material constants; Effective stiffness properties of a single layer</p> <p><b>Classical Laminate Plate Theory</b></p> <p>Notations and laminate code; Kinematics and displacement field; Strains and stresses, stress resultants; Constitutive equations and coupling effects; Special laminates and their behavior; Effective laminate properties</p> <p><b>Strength of Laminated Plates</b></p> <p>Fundamental concept; Phenomenological failure criteria: maximum stresses, maximum strains, Tsai-Hill, Tsai-Wu, Puck, Hashin</p> <p><b>Bending of Composite Laminated Plates</b></p> <p>Differential Equations; Boundary Conditions; Navier-type solutions; Lévy-type solutions</p> <p><b>Stress Concentration Problems</b></p> <p>Free-edge effects; Stress concentrations at holes, cracks, delaminations; Aspects of failure analysis</p> <p><b>Stability of Thin-Walled Composite Structures</b></p> <p>Buckling of anisotropic plates and shells; Influence of loading conditions; Influence of boundary conditions; Exact transcendental solutions and their evaluation; Buckling of stiffened composite plates; Minimum stiffness requirements; Local buckling of stiffener profiles</p> <p><b>Written exercise (report required)</b></p> <p>Assessment of a thin-walled composite laminated beam taking several different dimensioning criteria into account</p>

## Module M1343: Fibre-polymer-composites

### Courses

Title	Typ	Hrs/wk	CP
Structure and properties of fibre-polymer-composites (L1894)	Lecture	2	3
Design with fibre-polymer-composites (L1893)	Lecture	2	3

<b>Module Responsible</b>	Prof. Bodo Fiedler
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basics: chemistry / physics / materials science
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	<p>Students can use the knowledge of fiber-reinforced composites (FRP) and its constituents to play (fiber / matrix) and define the necessary testing and analysis.</p> <p>They can explain the complex relationships structure-property relationship and the interactions of chemical structure of the polymers, their processing with the different fiber types, including to explain neighboring contexts (e.g. sustainability, environmental protection).</p> <p>Students are capable of</p> <ul style="list-style-type: none"> <li>• using standardized calculation methods in a given context to mechanical properties (modulus, strength) to calculate and evaluate the different materials.</li> <li>• approximate sizing using the network theory of the structural elements implement and evaluate.</li> <li>• selecting appropriate solutions for mechanical recycling problems and sizing example stiffness, corrosion resistance.</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	
<b>Personal Competence</b>	<p>Students can</p> <ul style="list-style-type: none"> <li>• arrive at funded work results in heterogenius groups and document them.</li> <li>• provide appropriate feedback and handle feedback on their own performance constructively.</li> </ul>
<i>Social Competence</i>	
<i>Autonomy</i>	<p>Students are able to</p> <ul style="list-style-type: none"> <li>- assess their own strengths and weaknesses.</li> <li>- assess their own state of learning in specific terms and to define further work steps on this basis.</li> <li>- assess possible consequences of their professional activity.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Credit points</b>	6
<b>Course achievement</b>	None

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	180 min
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Materials Science: Specialisation Engineering Materials: Elective Compulsory Mechanical Engineering and Management: Core qualification: Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Compulsory Renewable Energies: Specialisation Bioenergy Systems: Elective Compulsory Renewable Energies: Specialisation Wind Energy Systems: Elective Compulsory Renewable Energies: Specialisation Solar Energy Systems: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Materials Science: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory

<b>Course L1894: Structure and properties of fibre-polymer-composites</b>	
<b>Typ</b>	Lecture

<b>Cycle</b>	SoSe
<b>Content</b>	Designing with Composites: Laminate Theory; Failure Criteria; Design of Pipes and Shafts; Sandwich Structures; Notches; Joining Techniques; Compression Loading; Examples
<b>Literature</b>	Konstruieren mit Kunststoffen, Gunter Erhard , Hanser Verlag

Module M0721: Air Conditioning			
Courses			
Title	Typ	Hrs/wk	CP
Air Conditioning (L0594)	Lecture	3	5
Air Conditioning (L0595)	Recitation (large)	Section 1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a <math>h_1+x,x</math>-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.</p> <p><i>Skills</i></p> <p>Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

## Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility

<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1669)	Lecture	3	4
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1877)	Recitation (small)	Section 2	2
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic principles of physics and electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students can explain the basic principles, relationships, and methods for the design of waveguides and antennas as well as of Electromagnetic Compatibility. Specific topics are:</p> <ul style="list-style-type: none"> <li>- Fundamental properties and phenomena of electrical circuits</li> <li>- Steady-state sinusoidal analysis of electrical circuits</li> <li>- Fundamental properties and phenomena of electromagnetic fields and waves</li> <li>- Steady-state sinusoidal description of electromagnetic fields and waves</li> <li>- Useful microwave network parameters</li> <li>- Transmission lines and basic results from transmission line theory</li> <li>- Plane wave propagation, superposition, reflection and refraction</li> <li>- General theory of waveguides</li> <li>- Most important types of waveguides and their properties</li> <li>- Radiation and basic antenna parameters</li> <li>- Most important types of antennas and their properties</li> <li>- Numerical techniques and CAD tools for waveguide and antenna design</li> <li>- Fundamentals of Electromagnetic Compatibility</li> <li>- Coupling mechanisms and countermeasures</li> <li>- Shielding, grounding, filtering</li> <li>- Standards and regulations</li> <li>- EMC measurement techniques</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<p>Students know how to apply various methods and models for characterization and choice of waveguides and antennas. They are able to assess and qualify their basic electromagnetic properties. They can apply results and strategies from the field of Electromagnetic Compatibility to the development of electrical components and systems.</p>		
<b>Personal Competence</b>			
<i>Social Competence</i>	<p>Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).</p>		
<i>Autonomy</i>	<p>Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can discuss technical problems and physical effects in English.</p>		

<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

<b>Content</b>	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC). It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> <li>- Fundamental properties and phenomena of electrical circuits</li> <li>- Steady-state sinusoidal analysis of electrical circuits</li> <li>- Fundamental properties and phenomena of electromagnetic fields and waves</li> <li>- Steady-state sinusoidal description of electromagnetic fields and waves</li> <li>- Useful microwave network parameters</li> <li>- Transmission lines and basic results from transmission line theory</li> <li>- Plane wave propagation, superposition, reflection and refraction</li> <li>- General theory of waveguides</li> <li>- Most important types of waveguides and their properties</li> <li>- Radiation and basic antenna parameters</li> <li>- Most important types of antennas and their properties</li> <li>- Numerical techniques and CAD tools for waveguide and antenna design</li> <li>- Fundamentals of Electromagnetic Compatibility</li> <li>- Coupling mechanisms and countermeasures</li> <li>- Shielding, grounding, filtering</li> <li>- Standards and regulations</li> <li>- EMC measurement techniques</li> </ul>

Module M0806: Technical Acoustics II (Room Acoustics, Computational Methods)				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Acoustics II (Room Acoustics, Computational Methods) (L0519)		Lecture	2	3
Technical Acoustics II (Room Acoustics, Computational Methods) (L0521)		Recitation (large)	Section 2	3
<b>Module Responsible</b>	Prof. Otto von Estorff			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students possess an in-depth knowledge in acoustics regarding room acoustics and computational methods and are able to give an overview of the corresponding theoretical and methodical basis.			
<i>Skills</i>	The students are capable to handle engineering problems in acoustics by theory-based application of the demanding computational methods and procedures treated within the module.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.			
<i>Autonomy</i>	The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

## Module M1024: Methods of Integrated Product Development

### Courses

Title	Typ	Hrs/wk	CP
Integrated Product Development II (L1254)	Lecture	3	3
Integrated Product Development II (L1255)	Project-/problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Dieter Krause		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of Integrated product development and applying CAE systems		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>• explain technical terms of design methodology,</li> <li>• describe essential elements of construction management,</li> <li>• describe current problems and the current state of research of integrated product development.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>• select and apply proper construction methods for non-standardized solutions of problems as well as adapt new boundary conditions,</li> <li>• solve product development problems with the assistance of a workshop based approach,</li> <li>• choose and execute appropriate moderation techniques.</li> </ul>		
<b>Personal Competence</b>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>• prepare and lead team meetings and moderation processes,</li> <li>• work in teams on complex tasks,</li> <li>• represent problems and solutions and advance ideas.</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>• give a structured feedback and accept a critical feedback,</li> <li>• implement the accepted feedback autonomously.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

<b>Content</b>	<p><b>Lecture</b></p> <p>The lecture extends and enhances the learned content of the module “Integrated Product Development and lightweight design” and is based on the knowledge and skills acquired there.</p> <p>Topics of the course include in particular:</p> <ul style="list-style-type: none"> <li>• Methods of product development,</li> <li>• Presentation techniques,</li> <li>• Industrial Design,</li> <li>• Design for variety</li> <li>• Modularization methods,</li> <li>• Design catalogs,</li> <li>• Adapted QFD matrix,</li> <li>• Systematic material selection,</li> <li>• Assembly oriented design,</li> </ul> <p>Construction management</p> <ul style="list-style-type: none"> <li>• CE mark, declaration of conformity including risk assessment,</li> <li>• Patents, patent rights, patent monitoring</li> <li>• Project management (cost, time, quality) and escalation principles,</li> <li>• Development management for mechatronics,</li> <li>• Technical Supply Chain Management.</li> </ul> <p><b>Exercise (PBL)</b></p> <p>In the exercise the content presented in the lecture “Integrated Product Development II” and methods of product development and design management will be enhanced.</p> <p>Students learn an independently moderated and workshop based approach through industry related practice examples to solve complex and currently existing issues in product development. They will learn the ability to apply important methods of product development and design management autonomous and acquire further expertise in the field of integrated product development. Besides personal skills, such as teamwork, guiding discussions and representing work results will be acquired through the workshop based structure of the event under its own planning and management.</p>

<b>Content</b>	<p>Avionics are all kinds off flight electronics. Today there is no aircraft system function without avionics, and avionics are one main source of innovation in aerospace industry. Since many system functions are highly safety critical, the development of avionics hardware and software underlies mandatory constraints, technics, and processes. It is inevitable for system developers and computer engineers in aerospace industry to understand and master these. This lecture teaches the risks and techniques of developing safety critical hardware and software; major avionics components; integration; and test with a practical orientation. A focus is on Integrated Modular Avionics (IMA). The lecture is accompanied by a mandatory and laboratory exercises.</p> <p>Content:</p> <ol style="list-style-type: none"> <li>1. ## Specialization Air Transportation Systems

The degree programme „Air Transportation Systems and Preliminary Aircraft Design“ provides a comprehensive understanding of operational aspects of air transport. Further students are educated in aircraft design methods based on operational requirements. The programme competences will extend and intensify the basic competencies of the bachelor studies by specific methods in design and modelling of air transport systems and and aircraft a part of it.

As a result graduates will be system analysts being able to design, integrate, model and assess complex systems like air transport including the related technologies.

### Module M1091: Flight Guidance and Airline Operations

#### Courses

Title	Typ	Hrs/wk	CP
Airline Operations (L1310)	Lecture	3	3
Introduction to Flight Guidance (L0848)	Lecture	3	2
Introduction to Flight Guidance (L0854)	Recitation (large)	Section 1	1
Flight Control (L2374)	Lecture	2	2
Flight Control (L2375)	Recitation (small)	Section 1	1

<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	180 min
<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory

<b>Course L1310: Airline Operations</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Volker Gollnick, Dr. Karl Echtermeyer
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Introduction and overview</li> <li>2. Airline business models</li> <li>3. Interdependencies in flight planning (network management, slot management, network structures, aircraft circulation)</li> <li>4. Operative flight preparation (weight &amp; balance, payload/range, etc.)</li> <li>5. fleet policy</li> <li>6. Aircraft assessment and fleet planning</li> <li>7. Airline organisation</li> <li>8. Aircraft maintenance, repair and overhaul</li> </ol>
<b>Literature</b>	<p>Volker Gollnick, Dieter Schmitt: The Air Transport System, Springer Berlin Heidelberg New York, 2014</p> <p>Paul Clark: Buying the big jets, Ashgate 2008</p> <p>Mike Hirst: The Air Transport System, AIAA, 2008</p>

<b>Course L0848: Introduction to Flight Guidance</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 18, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Volker Gollnick
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Introduction and motivation Flight guidance principles (airspace structures, organization of air navigation services, etc.) Navigation Radio navigation Satellite navigation Principles of flight measurement techniques Measurement of position (geometric methods, distance measurement, direction measurement) Determination of the aircraft attitude (magnetic field- and inertial sensors) Measurement of speed Airspace surveillance (radar systems) Communication systems Avionics architectures (computer systems, bus systems) Cockpit systems and displays (cockpit design, cockpit equipment)
<b>Literature</b>	Rudolf Brockhaus, Robert Luckner, Wolfgang Alles: "Flugregelung", Springer Berlin Heidelberg New York, 2012 Holger Flühr: "Avionik und Flugsicherungssysteme", Springer Berlin Heidelberg New York, 2013 Volker Gollnick, Dieter Schmitt "Air Transport Systems", Springer Berlin Heidelberg New York, 2014

<b>Course L0854: Introduction to Flight Guidance</b>	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Volker Gollnick
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

<b>Course L2374: Flight Control</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Volker Gollnick
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The course will provide knowledge how to describe flight vehicle as a control system. Further it gives inside into the design, layout and optimization of controller for stabilisation and control of flight states and guidance modes. The course is intended to enable participants in the layout of flight control systems presenting the major methods and tools
<b>Literature</b>	Brockhaus, Alles, Luckner: Flugregelung, Springer Verlag, 2011 R.P.G Collinson: Introduction to Avionics Systems, Springer Verlag, 2011

<b>Course L2375: Flight Control</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Volker Gollnick
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M1193: Cabin Systems Engineering				
Courses				
Title	Typ	Hrs/wk	CP	
Computer and communication technology in cabin electronics and avionics (L1557)	Lecture	2	2	
Computer and communication technology in cabin electronics and avionics (L1558)	Recitation (small)	Section 1	1	
Model-Based Systems Engineering (MBSE) with SysML/UML (L1551)	Project-/problem-based Learning	3	3	
<b>Module Responsible</b>	Prof. Ralf God			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Control Systems</li> </ul> Previous knowledge in: <ul style="list-style-type: none"> <li>• Systems Engineering</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	Students are able to: <ul style="list-style-type: none"> <li>• describe the structure and operation of computer architectures</li> <li>• explain the structure and operation of digital communication Networks</li> <li>• explain architectures of cabin electronics, integrated modular avionics (IMA) and Aircraft Data Communication Network (ADCN)</li> <li>• understand the approach of Model-Based Systems Engineering (MBSE) in the design of hardware and software-based cabin systems</li> </ul>			
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>• understand, operate and maintain a Minicomputer</li> <li>• build up a network communication and communicate with other network participants</li> <li>• connect a minicomputer with a cabin management system (A380 CIDS) and communicate over a AFDX®-Network</li> <li>• model system functions by means of formal languages SysML/UML and generate software code from the models</li> <li>• execute software code on a minicomputer</li> </ul>			
<i>Skills</i>				
<b>Personal Competence</b>	Students are able to: <ul style="list-style-type: none"> <li>• elaborate partial results and merge with others to form a complete solution</li> </ul>			
<i>Social Competence</i>				
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• organize and schedule their practical tasks</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Written exam			

<p><b>Examination duration and scale</b></p>	<p>120 minutes</p>
<p><b>Assignment for the Following Curricula</b></p>	<p>Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory  Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory  Aircraft Systems Engineering: Specialisation Cabin Systems: Compulsory  International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory  Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory  Product Development, Materials and Production: Specialisation Production: Elective Compulsory  Product Development, Materials and Production: Specialisation Materials: Elective Compulsory  Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory  Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory</p>

<b>Course L1557: Computer and communication technology in cabin electronics and avionics</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Ralf God
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The objective of the lecture with the corresponding exercise is the acquisition of knowledge of computer and communication technology in electronic systems in the cabin and in aircraft. For the system engineer the strong interaction of software, mechanical and electronic system components nowadays requires a basic understanding of cabin electronics and avionics.</p> <p>The course teaches the basics of design and functionality of computers and data networks. Subsequently it focuses on current principles and applications in integrated modular avionics (IMA), aircraft data communication networks (ADCN), cabin electronics and cabin networks:</p> <ul style="list-style-type: none"> <li>• History of computer and network technology</li> <li>• Layer model in computer technology</li> <li>• Computer architectures (PC, IPC, Embedded Systems)</li> <li>• BIOS, UEFI and operating system (OS)</li> <li>• Programming languages (machine code and high-level languages)</li> <li>• Applications and Application Programming Interfaces</li> <li>• External interfaces (serial, USB, Ethernet)</li> <li>• Layer model in network technology</li> <li>• Network topologies</li> <li>• Network components</li> <li>• Bus access procedures</li> <li>• Integrated Modular Avionics (IMA) and Aircraft Data Communication Networks (ADCN)</li> <li>• Cabin electronics and cabin networks</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>- Skript zur Vorlesung</li> <li>- Schnabel, P.: Computertechnik-Fibel: Grundlagen Computertechnik, Mikroprozessortechnik, Halbleiterspeicher, Schnittstellen und Peripherie. Books on Demand; 1. Auflage, 2003</li> <li>- Schnabel, P.: Netzwerktechnik-Fibel: Grundlagen, Übertragungstechnik und Protokolle, Anwendungen und Dienste, Sicherheit. Books on Demand; 1. ## Module M1043: Aircraft Systems Engineering

### Courses

Title	Typ	Hrs/wk	CP
Fatigue & Damage Tolerance (L0310)	Lecture	2	3
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1514)	Lecture	2	3
Lightweight Design Practical Course (L1258)	Project-/problem-based Learning	3	3
Aviation Security (L1549)	Lecture	2	2
Aviation Security (L1550)	Recitation (small)	Section 1	1
Mechanisms, Systems and Processes of Materials Testing (L0950)	Lecture	2	2
Turbo Jet Engines (L0908)	Lecture	2	3
System Simulation (L1820)	Lecture	2	2
System Simulation (L1821)	Recitation (large)	Section 1	2
Materials Testing (L0949)	Lecture	2	2
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation (small)	Section 1	2
Reliability of avionics assemblies (L1554)	Lecture	2	2
Reliability of avionics assemblies (L1555)	Recitation (small)	Section 1	1
Reliability of Aircraft Systems (L0749)	Lecture	2	3

<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students are able to find their way through selected special areas within systems engineering, air transportation system and material science</li> <li>• Students are able to explain basic models and procedures in selected special areas.</li> <li>• Students are able to interrelate scientific and technical knowledge.</li> </ul>
<i>Skills</i>	Students are able to apply basic methods in selected areas of engineering.
<b>Personal Competence</b>	
<i>Social Competence</i>	
<i>Autonomy</i>	Students can chose independently, in which fields they want to deepen their knowledge and skills through the election of courses.
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory

<b>Course L0310: Fatigue &amp; Damage Tolerance</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	45 min
<b>Lecturer</b>	Dr. Martin Flamm
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Design principles, fatigue strength, crack initiation and crack growth, damage calculation, counting methods, methods to improve fatigue strength, environmental influences
<b>Literature</b>	Jaap Schijve, Fatigue of Structures and Materials. Kluwer Academic Publisher, Dordrecht, 2001 E. Haibach. Betriebsfestigkeit Verfahren und Daten zur Bauteilberechnung. VDI-Verlag, Düsseldorf, 1989

<b>Course L1514: Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics</b>	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Fundamentals of Anisotropic Elasticity</b></p> <p>Displacements, strains and stresses; Equilibrium equations; Kinematics; Hooke's generalized law</p> <p><b>Behaviour of a single laminate layer</b></p> <p>Material law of a single laminate layer; Full anisotropy and coupling effects; Material symmetries; Engineering constants; Plane state of stress; Transformation rules</p> <p><b>Fundamentals of Micromechanics of a laminate layer</b></p>

<p><b>Content</b></p>	<p>Representative unit cell; Determination of effective material constants; Effective stiffness properties of a single layer</p> <p><b>Classical Laminate Plate Theory</b></p> <p>Notations and laminate code; Kinematics and displacement field; Strains and stresses, stress resultants; Constitutive equations and coupling effects; Special laminates and their behavior; Effective laminate properties</p> <p><b>Strength of Laminated Plates</b></p> <p>Fundamental concept; Phenomenological failure criteria: maximum stresses, maximum strains, Tsai-Hill, Tsai-Wu, Puck, Hashin</p> <p><b>Bending of Composite Laminated Plates</b></p> <p>Differential Equations; Boundary Conditions; Navier-type solutions; Lévy-type solutions</p> <p><b>Stress Concentration Problems</b></p> <p>Free-edge effects; Stress concentrations at holes, cracks, delaminations; Aspects of failure analysis</p> <p><b>Stability of Thin-Walled Composite Structures</b></p> <p>Buckling of anisotropic plates and shells; Influence of loading conditions; Influence of boundary conditions; Exact transcendental solutions and their evaluation; Buckling of stiffened composite plates; Minimum stiffness requirements; Local buckling of stiffener profiles</p> <p><b>Written exercise (report required)</b></p> <p>Assessment of a thin-walled composite laminated beam taking several different dimensioning criteria into account</p>
<p><b>Literature</b></p>	<ul style="list-style-type: none"> <li>• Schürmann, H., „Konstruieren mit Faser-Kunststoff-Verbunden“, Springer, Berlin, aktuelle Auflage.</li> <li>• Wiedemann, J., „Leichtbau Band 1: Elemente“, Springer, Berlin, Heidelberg, , aktuelle Auflage.</li> <li>• Reddy, J.N., „Mechanics of Composite Laminated Plates and Shells“, CRC Publishing, Boca Raton et al., current edition.</li> <li>• Jones, R.M., „Mechanics of Composite Materials“, Scripta Book Co., Washington, current edition.</li> <li>• Timoshenko, S.P., Gere, J.M., „Theory of elastic stability“, McGraw-Hill Book Company, Inc., New York, current edition.</li> <li>• Turvey, G.J., Marshall, I.H., „Buckling and postbuckling of composite plates“, Chapman and Hall, London, current edition.</li> <li>• Herakovich, C.T., „Mechanics of fibrous composites“, John Wiley and Sons, Inc., New York, current edition.</li> <li>• Mittelstedt, C., Becker, W., „Strukturmechanik ebener Laminate“, aktuelle Auflage.</li> </ul>

## Module M1340: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility

### Courses

Title	Typ	Hrs/wk	CP
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1669)	Lecture	3	4
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1877)	Recitation (small)	Section 2	2

<b>Module Responsible</b>	Prof. Christian Schuster
---------------------------	--------------------------

<b>Admission Requirements</b>	None
-------------------------------	------

<b>Recommended Previous Knowledge</b>	Basic principles of physics and electrical engineering
---------------------------------------	--

<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
-------------------------------	--

<b>Professional Competence</b>	<p>Students can explain the basic principles, relationships, and methods for the design of waveguides and antennas as well as of Electromagnetic Compatibility. Specific topics are:</p> <ul style="list-style-type: none"> <li>- Fundamental properties and phenomena of electrical circuits</li> <li>- Steady-state sinusoidal analysis of electrical circuits</li> <li>- Fundamental properties and phenomena of electromagnetic fields and waves</li> <li>- Steady-state sinusoidal description of electromagnetic fields and waves</li> <li>- Useful microwave network parameters</li> <li>- Transmission lines and basic results from transmission line theory</li> <li>- Plane wave propagation, superposition, reflection and refraction</li> <li>- General theory of waveguides</li> <li>- Most important types of waveguides and their properties</li> <li>- Radiation and basic antenna parameters</li> <li>- Most important types of antennas and their properties</li> <li>- Numerical techniques and CAD tools for waveguide and antenna design</li> <li>- Fundamentals of Electromagnetic Compatibility</li> <li>- Coupling mechanisms and countermeasures</li> <li>- Shielding, grounding, filtering</li> <li>- Standards and regulations</li> <li>- EMC measurement techniques</li> </ul>
<i>Knowledge</i>	
<i>Skills</i>	<p>Students know how to apply various methods and models for characterization and choice of waveguides and antennas. They are able to assess and qualify their basic electromagnetic properties. They can apply results and strategies from the field of Electromagnetic Compatibility to the development of electrical components and systems.</p>
<b>Personal Competence</b>	
<i>Social Competence</i>	<p>Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).</p>
<i>Autonomy</i>	<p>Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can discuss technical problems and physical effects in English.</p>

<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Course achievement</b>	None
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	45 min
<b>Assignment for the Following Curricula</b>	<p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory</p> <p>Electrical Engineering: Core qualification: Elective Compulsory</p> <p>Electrical Engineering: Core qualification: Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory</p> <p>Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory</p> <p>Mechatronics: Specialisation System Design: Elective Compulsory</p> <p>Mechatronics: Specialisation System Design: Elective Compulsory</p>

Integrated Product Development II (L1254)		Lecture	3	3
Integrated Product Development II (L1255)		Project-/problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Dieter Krause			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge of Integrated product development and applying CAE systems			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>explain technical terms of design methodology,</li> <li>describe essential elements of construction management,</li> <li>describe current problems and the current state of research of integrated product development.</li> </ul>			
<i>Knowledge</i>				
<i>Skills</i>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>select and apply proper construction methods for non-standardized solutions of problems as well as adapt new boundary conditions,</li> <li>solve product development problems with the assistance of a workshop based approach,</li> <li>choose and execute appropriate moderation techniques.</li> </ul>			
<b>Personal Competence</b>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>prepare and lead team meetings and moderation processes,</li> <li>work in teams on complex tasks,</li> <li>represent problems and solutions and advance ideas.</li> </ul>			
<i>Social Competence</i>				
<i>Autonomy</i>	<p>After passing the module students are able to:</p> <ul style="list-style-type: none"> <li>give a structured feedback and accept a critical feedback,</li> <li>implement the accepted feedback autonomously.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Course achievement</b>	None			
<b>Examination</b>	Oral exam			
<b>Examination duration and scale</b>	30 Minuten

<b>Content</b>	<p><b>Lecture</b></p> <p>The lecture extends and enhances the learned content of the module “Integrated Product Development and lightweight design” and is based on the knowledge and skills acquired there.</p> <p>Topics of the course include in particular:</p> <ul style="list-style-type: none"> <li>• Methods of product development,</li> <li>• Presentation techniques,</li> <li>• Industrial Design,</li> <li>• Design for variety</li> <li>• Modularization methods,</li> <li>• Design catalogs,</li> <li>• Adapted QFD matrix,</li> <li>• Systematic material selection,</li> <li>• Assembly oriented design,</li> </ul> <p>Construction management</p> <ul style="list-style-type: none"> <li>• CE mark, declaration of conformity including risk assessment,</li> <li>• Patents, patent rights, patent monitoring</li> <li>• Project management (cost, time, quality) and escalation principles,</li> <li>• Development management for mechatronics,</li> <li>• Technical Supply Chain Management.</li> </ul> <p><b>Exercise (PBL)</b></p> <p>In the exercise the content presented in the lecture “Integrated Product Development II” and methods of product development and design management will be enhanced.</p> <p>Students learn an independently moderated and workshop based approach through industry related practice examples to solve complex and currently existing issues in product development. They will learn the ability to apply important methods of product development and design management autonomous and acquire further expertise in the field of integrated product development. Besides personal skills, such as teamwork, guiding discussions and representing work results will be acquired through the workshop based structure of the event under its own planning and management.</p>

## Module M0808: Finite Elements Methods

### Courses

Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation (large)	Section 2	3

<b>Module Responsible</b>	Prof. Otto von Estorff		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.</p> <p><i>Skills</i></p> <p>The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i></p> <p>Students can work in small groups on specific problems to arrive at joint solutions.</p> <p><i>Autonomy</i></p> <p>The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6

# Thesis

In their master’s thesis students work independently on research-oriented problems, structuring the task into different sub-aspects and apply systematically the specialized competences they have acquired in the course of the study program.

Special importance is attached to a scientific approach to the problem including, in addition to an overview of literature on the subject, its classification in relation to current issues, a description of the theoretical foundations, and a critical analysis and assessment of the results.

## Module M-002: Master Thesis

### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul> <p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>	Students can		
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		

<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>• To structure a project of their own in work packages and to work them off accordingly.</li> <li>• To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> <li>• To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0
<b>Credit points</b>	30
<b>Course achievement</b>	None
