

Module Manual

Master of Science (M.Sc.)

Mechanical Engineering and Management Dual study program

Cohort: Winter Term 2022

Updated: 2nd August 2022

Table of Contents

Program description 3 Core Qualification 5 Module M0808: Computer Aided Design and Computation 5 Module M0808: Computer Aided Design and Computation 5 Module M0808: Robotics 7 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative 8: 12 CP) 10 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative 8: 6 CP) 17 Module M1292: Marketing and Communication 24 Module M1293: Internship MEM 30 Module M1283: Internship MEM 30 Module M1283: Internship MEM 30 Module M1283: Research Project IMPMEM 30 Module M1283: Research Inodule 2 (dual study program, Master's degree) 33 Module M1283: Research Module 3 (dual study program, Master's degree) 36 Module M078: Mobility of Goods and Logistics Systems 40 Module M125: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M078: Mobility of Goods and Logistics Systems 40 Module M039: Conomics 49 Module M126: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0303: Entrepreneurial Finance	Table of Contents	2
Core Qualification 5 Module M0569: Computer Aided Design and Computation 5 Module M0553: Robatics 7 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative B: 6 CP) 11 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative B: 6 CP) 12 Module M1292: Marketing and Communication 24 Module M1283: Structure and properties of fibre-polymer-composites 30 Module M1283: Structure and properties of fibre-polymer-composites 31 Module M1283: Research Project IMPMEM 35 Module M1281: Research Project MIPMEM 36 Specialization Management 38 Module M0134: Technology Enrepreneuship 42 Module M0135: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0135: Interpreneuship 42 Module M0135: Interpreneuship 42 Module M0135: Interpreneuship 42 Module M0135: Maintery Research Methods 47 Module M0135: Interpreneuship 42 Module M0135:	Program description	3
Module M0809: Computer Aided Design and Computation \$ Module M053: Robitors 7 Module M053: Business & Management 9 Module M128: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M128: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M129: Marketing and Communication 24 Module M129: Internship MEM 30 Module M128: Research Project IMPMEM 33 Module M1738: Practical module 2 (dual study program, Master's degree) 36 Specialization Management 38 Module M0978: Mobility of Gods and Logistics Systems 40 Module M078: Technology Entrepreneuship 42 Module M078: Mobility of Gods and Logistics Systems 40 Module M078: Mobility of Gods and Logistics Systems 40 Module M078: Sinterting (Sales and Services / Innovation Marketing) 52 Module M078: Sinterting Sales and Services / Innovation Marketing) 52 Module M0751: Vibration Theory		
Module M0563: Robotics 7 Module M0563: Robotics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M1282: Marketing and Communication 24 Module M1292: Marketing and Communication 24 Module M1759: Linking theory and practice (dual study program, Master's degree) 28 Module M1233: Structure and properties of fibre-polymer-composites 31 Module M1737: Practical module 1 (dual study program, Master's degree) 35 Module M1738: Research Project IMPMEM 35 Module M0814: Technology Management 38 Module M0814: Technology Management 38 Module M0814: Technology Entrepreneuship 42 Module M0814: Technology Entrepreneuship 42 Module M055: Marketing (Sales and Services / Innovation Marketing) 52 Module M054: Technology Entrepreneuship 43 Module M055: Marketing (Sales and Services / Innovation Marketing) 52 Module M055: Marketing (Sales and Services / Innovation Marketing) 52 Module M055: Marketing (Sales and Services / Innovation Marketing) 53 Module M05		
Module M0233: Business & Management 9 Module M1438: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M1438: Selected Topics of Mechanical Engineering and Management (Alternative B: 6 CP) 17 Module M1739: Inking theory and practice (dual study program, Master's degree) 27 Module M138: Structure and properties of fibre-polymer-composites 30 Module M138: Research Project IMPMEM 30 Module M1283: Research Project IMPMEM 35 Module M1283: Research Project IMPMEM 36 Module M034: Technology Management 38 Module M034: Technology fanagement 38 Module M035: Guantitative Research Methods 47 Module M035: Conomics 49 Module M035: Fortereneurial Finance 40 Module M035: Fortereneurial Finance 59 Module M035: Fortere Planing 51 Module M035: Fortere Planing 51		
Module M1282: Selected Topics of Mechanical Engineering and Management (Alternative A: 12 CP) 10 Module M1282: Marketing and Communication 24 Module M1759: Linking theory and practice (dual study program, Master's degree) 28 Module M1759: Traking theory and practice (dual study program, Master's degree) 28 Module M1759: Traking theory and practice (dual study program, Master's degree) 28 Module M173: Practical module 1 (dual study program, Master's degree) 33 Module M173: Practical module 2 (dual study program, Master's degree) 36 Specialization Management 38 Module M0814: Technology Management 38 Module M0814: Technology Management and Enterprise Resource Planning: CERMEDES AG 47 Module M0814: Technology Entrepreneuship 42 Module M078: Mobility of Gods and Logistics Systems 40 Module M078: Cenomics 49 Module M035: Entrepreneuship 52 Module M035: Sintrepreneuship Finance 49 Module M035: Marketing (Sales and Services / Innovation Marketing) 52 Module M035: Entrepreneural Finance 63 Module M035: Sintrepreneural Finance 63 Module M035: Sintrepreneural Finance 63 Module M		
Module M1438: Selected Topics of Mechanical Engineering and Management (Alternative B: 6 CP) 17 Module M1759: Linking theory and practice (dual study program, Master's degree) 28 Module M1759: Practical module 1 (dual study program, Master's degree) 28 Module M1343: Structure and properties of fibre-polymer-composites 30 Module M1343: Structure and properties of fibre-polymer-composites 31 Module M1348: Research Project IMPMEM 35 Module M1758: Practical module 2 (dual study program, Master's degree) 36 Specialization Management 38 Module M0314: Technology Management 38 Module M0314: Technology Interpreneuship 42 Module M0325: Interprintional Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0355: Marketing (Sales and Services / Innovation Marketing) 52 Module M0355: Marketing Gales and Services / Innovation Marketing) 52 Module M0355: Marketing Flamagement, Organization, and Human Resource Management 57 Module M0355: Marketing Sales and Services / Innovation Marketing) 52 Module M0355: Marketing Flamagement, Organization, and Human Resource Management 57 Module M0351: Vibration Theory 63 Module M0352: Nonlinear Dynamics		
Module M1292: Marketing and Communication24Module M1756: Linking theory and practice (dual study program, Master's degree)27Module M1756: Practical module 1 (dual study program, Master's degree)28Module M1343: Structure and properties of fibre-polymer-composites31Module M1375: Practical module 2 (dual study program, Master's degree)33Module M1757: Practical module 2 (dual study program, Master's degree)36Specialization Management38Module M034: Technology Management38Module M034: Technology Entrepreneuship42Module M035: International Production Management and Enterprise Resource Planning: CERMEDES AGModule M1255: International Production Management, and Enterprise Resource Planning: CERMEDES AGModule M036: Economics49Module M035: Marketing (Sales and Services / Innovation Marketing)22Module M035: Enterneurial Finance54Module M035: Product Planning59Module M035: Product Planning61Specialization Mechatronics63Module M035: Product Planning61Specialization Mechatronics63Module M035: Product Planning61Specialization Mechatronics63Module M0375: Vibration Theory63Module M0375: Nonlinear Dynamics65Module M0375: Nonlinear Dynamics76Module M0375: Nonlinear Dynamics76Module M0375: Nonlinear Dynamics77Module M0375: Digital Gricuit Design76Module M0375: Digital Gricuit Design76Module M		
Module M1759: Linking theory and practice (dual study program, Master's degree) 27 Module M1285: Internship MEM 30 Module M1285: Recarch and module 2 (dual study program, Master's degree) 33 Module M1285: Research Project IMPMEM 35 Module M1758: Practical module 2 (dual study program, Master's degree) 36 Specialization Management 38 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Socons and Services / Innovation Marketing) 52 Module M053: Entrepreneurial Finance 54 Module M054: Advanced Topics in Management, Organization, and Human Resource Management 57 Module M055: Nonlinear Dynamics 63 Module M054: Froduct Planning 63		
Module M1756: Practical module 1 (dual study program, Master's degree) 28 Module M1243: Internship MEM 30 Module M1343: Structure and properties of fibre-polymer-composites 31 Module M1757: Practical module 2 (dual study program, Master's degree) 33 Module M1283: Research Project IIMPMEM 35 Module M01758: Practical module 3 (dual study program, Master's degree) 36 Specialization Management 38 Module M0814: Technology Management 38 Module M0184: Technology Chargeneeusship 40 Module M1263: Unattrative Research Methods 47 Module M0150: Economics 47 Module M0150: Economics 47 Module M0153: Enterneeurial Finance 54 Module M0153: Economics 49 Module M0153: Economics 59 Module M0153: Interneeurial Finance 54 Module M0153: Internetical Statistics 59 Module M0151: Vipration Theory 63 Module M0151: Vipration Theory 63 Module M0152: Nonlinear Dynamics 65 Module M0153: International Production 78 Module M0152: Vipration Theory 63 Modul		
Module M1285: Internship MEM 30 Module M1243: Structure and properties of fibre-polymer-composites 31 Module M1757: Practical module 2 (dual study program, Master's degree) 33 Module M1283: Research Project IMPMEM 35 Module M1758: Practical module 3 (dual study program, Master's degree) 36 Specialization Management 38 Module M0814: Technology Management 38 Module M0978: Mobility of Goods and Logistics Systems 40 Module M1255: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0253: Quantitative Research Methods 47 Module M0253: Marketing (Sales and Services / Innovation Marketing) 52 Module M0355: Entrepreneurial Finance 54 Module M0355: Interveneurial Finance 63 Module M0355: Product Planning 61 Specialization Mechatronics 63 Module M0351: Product Planning 61 Specialization Mechatronics 63 Module M0452: Nonlinear Dynamics 65 Module M0453: Inducrinal Processing and Digital Filters 72 Module M0454: Advanced Torvic train and Production 74 Module M0452: Nonlinear Dynamics		
Module M1343: Structure and properties of fibre-polymer-composites 31 Module M1253: Practical module 2 (dual study program, Master's degree) 33 Module M1258: Practical module 3 (dual study program, Master's degree) 36 Specialization Management 38 Module M0814: Technology Management 38 Module M0978: Mobility of Goods and Logistics Systems 40 Module M1263: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0750: Economics 49 Module M0751: Advanced Topics in Management, Organization, and Human Resource Management 57 Module M08151: Product Planning 61 Specialization Mechatronics 63 Module M0751: Vibration Theory 63 Module M0752: Nonlinear Dynamics 65 Module M0752: Nonlinear Dynamics 65 Module M0752: Nonlinear Dynamics 67 Module M0752: Nonlinear Dynamics 67 Module M0753: Industrial Process Automation <td></td> <td></td>		
Module M1757: Practical module 2 (dual study program, Master's degree) 33 Module M1758: Practical module 3 (dual study program, Master's degree) 36 Specialization Management 38 Module M0978: Mobility of Goods and Logistics Systems 40 Module M0978: Mobility of Goods and Logistics Systems 40 Module M1255: Interpreneuship 42 Module M1255: Interpreneuship 42 Module M1255: Interpreneuship 42 Module M0750: Economics 44 Module M0750: Economics 44 Module M053: Entrepreneurial Finance 54 Module M0543: Advanced Topics in Management, Organization, and Human Resource Management 57 Module M0512: Enduced Propics in Management, Organization, and Human Resource Management 57 Module M0512: Produced Planing 61 Specialization Mechatronics 63 Module M0751: Vibration Theory 63 Module M0752: Notinear Dynamics 65 Module M0752: Notinear Dynamics 65 Module M0752: Notinear Dynamics 67 Module M0752: Digital Signal Processing and Digital Filters 72 Module M0673: Industrial Process Automation 74 Modu		
Module M1283: Research Project IMPMEM35Module M1283: Practical module 3 (dual study program, Master's degree)36Specialization Management38Module M0814: Technology Management38Module M1034: Technology Gntrepreneuship42Module M1285: International Production Management and Enterprise Resource Planning: CERMEDES AG45Module M1263: Quantitative Research Methods47Module M0750: Economics49Module M0855: Marketing (Sales and Services / Innovation Marketing)52Module M0133: Entrepreneurial Finance54Module M0134: Technology Entrepreneurial Finance54Module M0135: Entrepreneurial Finance54Module M0135: Entrepreteruial Finance54Module M0135: Product Planning61Specialization Mechatronics59Module M0751: Vibration Theory63Module M0751: Vibration Theory63Module M0752: Nonlinear Dynamics65Module M0751: Usignal Energing69Module M033: Industrial Processing and Digital Filters72Module M033: Industrial Process Automation74Module M0677: Digital Signal Processing and Digital Filters78Module M0677: Digital Design Methodology in Mechatronics82Module M0677: Digital Design Methodology in Mechatronics82Module M1048: Integrated Circuit Design76Specialization Product Development and Production78Module M0677: Digital Design Methodology in Mechatronics82Module M1048: Integrated Signel Production78		
Module M1758: Practical module 3 (dual study program, Master's degree) 36 Specialization Management 38 Module M0914: Technology Management 38 Module M1034: Technology Management and Enterprise Resource Planning: CERMEDES AG 45 Module M1255: International Production Management and Enterprise Resource Planning: CERMEDES AG 45 Module M0550: Economics 49 Module M0555: Marketing (Sales and Services / Innovation Marketing) 52 Module M0555: Intrepreneurial Finance 54 Module M0515: Entrepreneurial Finance 54 Module M0513: Advanced Topics in Management, Organization, and Human Resource Management 57 Module M0513: Product Planning 61 Specialization Mechatronics 63 Module M0751: Vibration Theory 63 Module M0751: Vibration Theory 63 Module M0751: Vibration Theory and Design 67 Module M0846: Control Systems Theory and Design 67 Module M0877: Digital Signal Processing and Digital Filters 72 Module M0677: Digital Signal Processing and Digital Filters 72 Module M06787: Digital Signal Processing and Digital Filters 72 Module M06797: Digital Signal Processing and Digital Filters		
Specialization Management38Module M0814: Technology Management38Module M0878: Mobility of Goods and Logistics Systems40Module M1034: Technology Entrepreneuship42Module M1255: International Production Management and Enterprise Resource Planning: CERMEDES AG45Module M0750: Economics49Module M0855: Marketing (Sales and Services / Innovation Marketing)52Module M0855: Interpreneurial Finance54Module M0855: Marketing (Sales and Services / Innovation Marketing)52Module M0453: Advanced Topics in Management, Organization, and Human Resource Management57Module M0135: Product Planning61Specialization Mechatronics63Module M0751: Vibration Theory63Module M0752: Nonlinear Dynamics65Module M0775: Ubration Theory and Design67Module M0775: Digital Circuit Design71Module M0776: Digital Signal Processing and Digital Filters72Module M0776: Budgita Signal Processing and Digital Filters72Module M0677: Digital Signal Process Automation74Module M0677: Digital Signal Process Automation78Module M0807: Boundary Element Methodology in Mechatronics82Module M143: Applied Design78Module M143: Applied Design Methodology in Mechatronics82Module M144: High-Order FEM78Module M143: Applied Design Methodology in Mechatronics82Module M143: Applied Design Methodology in Mechatronics82Module M144: High-Order FEM78Module

Program description

Content

Nowadays engineers work not only as designers or as problem solvers in technical issues, but also fill management positions and have to make strategic and operative decisions. In addition to profound and specialized knowledge in diverse engineering fields, engineers also need a basic understanding in economics and business studies. Graduates, who already bring along both, specialized knowledge in engineering as well as a basic understanding of economic sciences, have excellent prospects in the labor market.

The international master study course "Mechanical Engineering and Management" gives students with a bachelor's degree in mechanical engineering or similar the opportunity to build up an individual profile within two specializations.

In the first specialization students gain basic knowledge in management, business administration, accounting as well as in specialized management topics, such as corporate management, human resources or logistics.

For the second specialization students can choose between three main topics: Materials, Mechatronics, or Product Development and Production. Because of the material behavior and its great impact on product design and manufacturing, the Materials specialization represents a bridge between natural science and engineering science. The Mechatronics specialization represents an interdisciplinary field between mechanics, electronics and computer science. The last specialization, Product Development and Production, includes the computation as well as the manufacturing of products. Therefore not only the structure of the master study course is interdisciplinary, but also its specializations.

In addition to the foundational curriculum taught at TUHH, seminars on developing personal skills are integrated into the dual study programme, in the context of transfer between theory and practice. These seminars correspond to the modern professional requirements expected of an engineer, as well as promoting the link between the two places of learning.

The intensive dual courses at TUHH integrating practical experience consist of an academic-oriented and a practice-oriented element, which are completed at two places of learning. The academic-oriented element comprises study at TUHH. The practice-oriented element is coordinated with the study programme in terms of content and time, and consists of practical modules and phases spent in an affiliate company during periods when there are no lectures.

Career prospects

The international master study course "Mechanical Engineering and Management" prepares graduates for a wide range of job profiles in international operating companies and in service providers, such as consulting. They are able to work as a facilitator between technical and business sectors and to take leading positions as technical and executive managers with budget and personnel responsibilities. The program is designed to be diverse and allows graduates to work in a variety of different industrial sectors (especially in mechanical engineering) and with different products and services. Graduates may decide for direct entry into companies or to take up academic careers, e.g. Ph.D. studies, in universities or other research institutions.

In addition, students acquire basic professional and personal skills as part of the dual study programme that enable them to enter professional practice at an early stage and to go on to further study. Students also gain practical work experience through the integrated practical modules. Graduates of the dual course have broad foundational knowledge, fundamental skills for academic work and relevant personal competences.

Learning target

Graduates of the program are able to transfer the individually acquired specialized knowledge to new unknown topics, to grasp, to analyze and to scientifically solve complex problems of their discipline. They can find missing information and plan as well as execute theoretical studies.

They are able to work independently in fields of mechanical engineering and management as well as in their interface. They can use their interdisciplinary understanding to evaluate and to critically question results and findings in management and mechanical engineering. Based upon these they can also make decisions and draw further conclusions. They are able to act methodically, to organize smaller projects, to select scientific methods and to advance these further, if necessary. They're also qualified to work on challenging projects by considering and verifying existing information in two of these specializations:

- Management
- Management
 Materials
- Mechatronics
- Product Development and Production

In the following the learning target is divided in knowledge, skills, social skills and independence.

Knowledge

- Graduates have gained specialized interdisciplinary knowledge with broad theoretical and methodical foundations. This includes especially the compulsory courses in the first semester, in which they learn about Robotics, Computer Aided Design and Computation and Multiphase Materials.
- They have a fundamental understanding of business administration as well as special knowledge about diverse topics, such as marketing, intercultural communication or project management. They can describe different methods and current research in these fields.
- They are able to explain principles, methods and applications in detail of two engineering specializations. The engineering specializations are Materials, Mechatronics and Product Development and Production.
- They have gained basic knowledge in non-technical topics. Non-native German speaking graduates also learned the fundamentals of German language.
- They know the state of the art in their chosen specializations and can give an overview of applications in industry and research.

Skills

For all specializations

- Graduates are able to use their interdisciplinary understanding to solve complex problems through integrative linking. They can identify implications between economy and technology, mediate between these sectors and perform operative and strategic tasks.
- They are able to transfer their theoretical knowledge into practice, analyse management problems in complex corporate situations as well as to choose between advanced methods and procedures of material sience, mechatronics or computation and production and to use them for complex problems.
- They can estimate and evaluate future technologies, materials, methods and scientific findings and are able to research independently (qualified for Ph.D. studies).

Management specialization

- Graduates of the Management specialization are able to evaluate necessary business and financial key figures and to make decisions based on these.
- They are able to use diverse methods and techniques of management and business administration successfully for different tasks.

Materials specialization

- Graduates of the Materials can identify new application fields of materials and make choices between different materials in consideration of functions, cost and quality.
- They can calculate several material parameters and make constructive decisions upon these calculations.

Mechatronics specialization

- Graduates of the Mechatronics specialization can solve mechatronic tasks as well as design tasks systematically and methodically.
- They are able to use their knowledge about current methods, automation and simulation to analyze systems, evaluate the findings and to choose between different strategies to solve the task.

Product Development and Production specialization

- Graduates of the Product Development and Production specialization can choose between diverse manufacturing and production processes in consideration of geometry, failure control and cost.
- They are able to design, calculate and simulate according to the current state of the art.

Social Skills

- Graduates are able describe techniques, methods and findings of their work verbally and in written form in English.
- They can communicate with experts of their chosen disciplines and in their interdisciplinary interface as well as with lay persons about advanced contents and issues in English. They can also react appropriately to questions and comments.
- They are able to work in team. For this they can define, distribute and integrate subtasks and arrange team meetings. They can interact socially and are capable of taking leading positions.

Autonomy

- Graduates are capable of finding necessary information, extending their knowledge in technical, economic and social topics and putting these into context with their knowledge.
- They can systematically reflect the non-technical consequences of their work and can put their actions into socio-economic context.
- They can estimate their own strengths and weaknesses as well as possible consequences of their actions. They can compensate deficits and extend their knowledge independently as far as necessary.
- They can work self-organized and self-motivated in different research fields and find, analyze and define concrete problems within (lifelong learning).

By continually switching places of learnings throughout the dual study programme, it is possible for theory and practice to be interlinked. Students reflect theoretically on their individual professional practical experience, and apply the results of their reflection to new forms of practice. They also test theoretical elements of the course in a practical setting, and use their findings as a stimulus for theoretical debate.

Program structure

The course is designed modular and is based on the university-wide standardized course structure with uniform module sizes (multiples of six credit points (CP)). The course combines the engineering and management disciplines and allows the deepening in two of four specializations. The students can broadly personalize their studies due to high number and variety of elective courses.

In the common core skills, students take the following modules:

- Computer Aided Design and Computation (6 CP)
- Fibre-polymer-composites (6 CP)
- Robotics (6 CP)
- Management and complementary technical elective courses or an internship can be choosen (12 CP)
- Complementary courses business and management (catalog) (6 CP)
- Complementary nontechnical elective courses (catalog) (6 CP), of that 4 CP are intended for German classes

Students specialize by selecting two of the following areas, each covering 18 credit points. Students have to choose the Management specialization. Solely students of the Northern Institute of Technology have to choose two engineering specializations:

- Management (18 CP)
- Materials (18 CP)
- Mechatronics (18 CP)
- Product Development and Production (18 CP)

Within each area of specialization students can choose within a catalogue of modules (each 6 CP).

Students write also a master thesis and one additional scientific project work.

- Research Project (12 CP)
- Master thesis (30 CP)

The structural model of the dual study programme follows a module-differentiating approach. Given the practice-oriented element, the curriculum of the dual study programme is different compared to a standard Bachelor's course. Five practical modules are completed at the dual students' partner company as part of corresponding practical terms during lecture-free periods.

Core Qualification

The core qualification provides the basic fundamentals for the four spcializations and also includes a catalogue of nontechnical elective complementary courses. For all three engineering specializations (Materials, Mechatronics, Product Development and Production) a compulsory module ist included. As preparation for the Management spezialization students choose three lecuters from the Business and Management catalogue and can also choose up to two more management related modules. Alternatively technical complementary courses or an internship can be chosen here. In total two modules has to be chosen.

Module M0809: Comp	outer Aided Design and Computat	ion		
Courses				
Title		Тур	Hrs/wk	СР
Computer Aided Design and Comp Computer Aided Design and Comp		Lecture Recitation Section (small)	2	3
Module Responsible		Rectation Section (Small)	2	5
Admission Requirements				
Recommended Previous		facturing techniques		
Knowledge				
-	- Basic knowledge in mathematics, physics, and	statics		
	- Mechanics I (statics, mechanics of materials) a	nd mechanics II (hydrostatics, kinematics, dyr	namics)	
	- Mathematics I, II, III (in particular differential ec	nuations)		
Educational Objectives	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
Knowledge	- Understanding of the capabilities and limitations of 3D-CAD-Systems, PDM systems, and computer aided simulation Tools			
	- General knowledge of the finite element metho	d in combination with a basic theoretical and	methodology ba	sis
	- Basic understanding of the structural optimizat	ions potential and fields of application		
Skills	s - Hands-on practice with an exemplary 3D-CAD-system to demonstrate basic modeling techniques as well as interfaces for			
	concurrent finite element analysis			
Personal Competence				
Social Competence				
Autonomy

Content	Part 1: Computer aided design (Prof. DrIng. D. Krause)
	Introduction to integrated product development
	3D-CAD-systems and CAD-interfaces
	Introduction to PDM-systems
	Additional computer aided engineering/simulation tools (FEA, DMU, VR)
	Part 2: Introduction to the Finite Element Method (DrIng. S. Lippert)
	 General overview on the finite element method Displacement method
	Isoparametric elements
	Numerical integration
	Applications
	Programming of elements (Matlab, hands-on sessions)
	Part 3: Structural Optimization Methods (Prof. DrIng. C. Emmelmann)
	Introduction to structural optimization theory
	Fields of application for structural optimization and commercial software tools
	This module relies heavily on the interconnection of theory and the application of commercial software systems via live
	demonstrations as well as hands-on sessions in a PC-pool.

Admission Requirements	None
Recommended Previous	None
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence Knowledge	• Students are able to find their way around selected special areas of management within the scope of business management
	 Students are able to explain basic theories, categories, and models in selected special areas of business management. Students are able to interrelate technical and management knowledge.
Skills	 Students are able to apply basic methods in selected areas of business management. Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.
Personal Competence Social Competence	• Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems
Autonomy	• Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.
Workload in Hours	Depends on choice of courses
Credit points	6

Content	In this course students will be taught to understand the research process and to interpret scientific papers as a preparation to
	starting their own scientific initiatives (e.g. Master-Thesis work). Students will work in groups and individually. Each group is
	expected to work out a presentation summarizing aspects of the research process (including practical examples) and to present
	and discuss it in class. Further, students will work out a written seminar paper.

Content	Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multi- cultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged. This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning. Some of the main topics covered in this course include: • Understanding "culture" and its impact on human interaction • Verbal and non-verbal communication • High and low context communication • Kole of formality and non-formality in communication • Varying interpretations of symbols, rituals & gestures • Managing diversity in domestic settings

	Course objective: To provide a theoretical and a practical insight into the area of financial and management accounting. Approach: Illustration of theoretical concepts combined with case studies and business examples. The exercise is based on the development of a financial business plan for your own business idea. This financial business plan is developed in a team of 3-5 students and presented as well as discussed in the class. I. Introduction to Cost Terms and Concepts II. Standard Costing and Variance Analysis III. Financial Accounting and Reporting (Financial Statement, Income Statement, Cash Flow) IV. Information for Decision Making V. Performance Management: Planning, Budgeting & Forecasting

	Course objective: To provide a theoretical and a practical insight into the area of financial and management accounting. Approach: Illustration of theoretical concepts combined with case studies and business examples. The exercise is based on the development of a financial business plan for your own business idea. This financial business plan is developed in a team of 3-5 students and presented as well as discussed in the class. I. Introduction to Cost Terms and Concepts II. Standard Costing and Variance Analysis III. Financial Accounting and Reporting (Financial Statement, Income Statement, Cash Flow) IV. Information for Decision Making V. Performance Management: Planning, Budgeting & Forecasting

Course L1760: Case Studies	of Marketing and Communication
Тур	Recitation Section (small)
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Christian Lüthje, Dr. Elke Christiane Fismer
Language	EN
Cycle	WiSe
	This course aims at deepening and applying the subjects taught in the lectures "Business-to-Business Marketing" and "Intercultural Communication". Students work on case studies in teams comprising 2-3 people. The case will enable the student teams to analyze problems, to discuss theoretical framworks and scientific results, to evaluate decisions made in companies and/or to develop own ideas for solutions. Each of these cases is related to a specific topic that has been tackled in the other two lectures of this module. The cases can comprise scientific studies or specific company examples (e.g. how company X built up a new salesforce; how company Y designed a successful communication campaign for other countries, how research study Z contributes to the understanding of intercultural differences). The student teams receive material (e.g. scientific articles, press articles) and work with this material to complete presentation documents. The results will be illustrated and discussed in a short presentation.
Literature	Die Materialien werden jedes Semester neu zusammengestellt, um die ausgewählten Fälle aktuell zu halten. Will be newly compiled each semester to keep the cases up-to-date and fresh.

Content	Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multi- cultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged. This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning. Some of the main topics covered in this course include: • Understanding "culture" and its impact on human interaction • Verbal and non-verbal communication • High and low context communication • Varying interpretations of symbols, rituals & gestures • Managing diversity in domestic settings

Module Responsible	Dr. Henning Haschke
Admission Requirements	None
Recommended Previous Knowledge	Successful completion of practical modules as part of the dual Bachelor's course
	 Module "interlinking theory and practice as part of the dual Master's course"
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	Dual students
	can describe and classify selected classic and current theories, concepts and methods
	related to project management and
	change and transformation management
	and apply them to specific situations, processes and plans in a personal, professional context.
Skills	Dual students
	 anticipate typical difficulties, positive and negative effects, as well as success and failure factors in the engineer sector, evaluate them and consider promising strategies and courses of action. develop specialised technical and conceptual skills to solve complex tasks and problems in their professional fiel activity/work.
Personal Competence Social Competence	
Social Competence	
	 can responsibly lead interdisciplinary teams within the framework of complex tasks and problems. engage in sector-specific and cross-sectoral discussions with experts, stakeholders and staff, representing t approaches, points of view and work results.
Autonomy	Dual students
	 define, reflect and evaluate goals and measures for complex application-oriented projects and change processes. shape their professional area of responsibility independently and sustainably. take responsibility for their actions and for the results of their work.

Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	 Students can explain the project as well as their autonomously gained knowledge and relate it to current issues of their fiel of study.
	 They can explain the basic scientific methods they have worked with.
Skills	The students are able to autonomously solve a limited scientific task under the guidance of an experienced researcher. They ca justify and explain their approach for problem solving; they can draw conclusions from their results, and then can find new way and methods for their work. Students are capable of comparing and assessing alternative approaches with their own with regar to given criteria.
Personal Competence	
Social Competence	The students are able to condense the relevance and the structure of the project work, the work procedure and the sub-problem for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project their peers and supervisors.
Autonomy	The students are capable of independently planning and documenting the work steps and procedures while considering the give deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedbac from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.

Specialization Management

Graduates of the Management specialization learn to use their knowledge in management and business topics for the planning of production processes and projects. Furthermore they have extended knowledge in special topics, such as human resources, entrepreneurship or logistics. Graduates are able to evaluate the necessary business and financial key figures and to make decisions based on these. They are able to put their theoretical knowledge into practice and to analyze complex questions in business administration. They learn diverse methods and techniques of management and business administration and are able to use them successful for different tasks.

Students have to choose the Management specialization. Solely students of the Northern Institute of Technology have to choose two engineering specializations.

Content	The intention of this lecture is to provide a general system analysis-based overview of how transportation chains emerge and how they are developed. The respective advantages and disadvantages of different international transportation chains of goods are to be pointed out from a micro- and a macroeconomic point of view. The effects on the traffic system as well as the ecological and social consequences of a spatial devision of economical activities are to be discussed. The overview of current international transportation chains is carried out on the basis of concrete material- and appendant information flows. Established transportation chains and some of their individual elements are to become transparent to the students by a number of practical examples. 1. A conceptual systems model 2. Elements of integrated and multi-modal transportation chains 3. interaction of transport and traffic, demand and supply on different layers of the transport system 4. Global Issues in Supply Chain Management 5. Global Players and networks 6. Logistics and corporate social responsibility (CSR) 7. Methods and data for assessment of international transport chains 8. Influence of cultural aspects on international transport chains 9. New solutions using different focuses of the transport and logstics system

Content	The problem-oriented-learning lecture consists of case studies and complex problems concerning the systemic characteristics of
	different modes of transport as well as the organization and realization of transport chains. Students get to know specific issues
	from practice of logistics and mobility of goods and work out recommondations for solutions.

Content	Important note: This course is part of an 6 ECTS module consisting of two courses "Entrepreneurship" & "Creation of Business		
	Opportunities", which have to be taken together in one semester.		
	Startups are temporary, team-based organizations, which can form both within and outside of established companies, to pursue		
	one central objective: taking a new venture idea to market by designing a business model that can be scaled to a full-grown		
	company. In this course, students will form startup teams around self-selected ideas and run through the process just like real		
	startups would do in the first three months of intensive work. Startup Engineering takes an incremental and iterative approach,		
	in that it favors variety and alternatives over one detailed, linear five-year business plan to reach steady state operations. From a		
	problem solving and systems thinking perspective, student teams create different possible versions of a new venture and		
	alternative hypotheses about value creation for customers and value capture vis-à-vis competitors. We will draw on recent		
	scientific findings about international success factors of new venture design. To test critical hypotheses early on, student teams		
	engage in scientific, evidence-based, experimental trial-and-error learning process that measures real progress.		
	Upon completion of this course, students will be able to:		
	pply a modern innovation toolkit relevant in both the corporate & startup world		
	· Analyze given business opportunities in terms of its constituent elements		
	· Design new business models by gathering and combining relevant ideas, facts and information		
	· Evaluate business opportunities and derive judgment about next steps & decisions		
	Course language is English, but participants can decide to give their graded presentations in German. Students are invited to		
	apply to this course module already with a startup idea and/ or team, but this is not a requirement! We will form teams and ideas		
	in the beginning of the course. Class meetings have alternate intervals of lecture inputs, teamwork, mentoring, and		
	peer feedback. Attendance is mandatory for at least 80% of class time due to large proportion of teamwork sessions.		
	Student teams give three presentations and submit them with backup analyses. Grading scheme:		
	· Startup discovery presentation after 5 weeks: 30%		
	· Startup validation presentation after 10 weeks: 30%		
	· Final startup pitches after 13 weeks: 40%

Cycle	SoSe
Content	The course involves two main parts: During the first part of the course, participants are provided with insights into the market for ERP-Software and are provided with
	knowledge on how ERP-implementation projects proceed and how these projects should ideally be managed from a theoretical and practical perspective. In addition, participants are provided with an understanding of business functions and processes by means of visiting the TUHH model factory. In the model factory, participants and are solving special business cases on the basis o group-specific tasks. Finally, participants are introduced into the basic functioning of ERP-Software referring to the most commor system (SAP). Participants gain a basic understanding of implementing organizational data, master data and processes into the system.
	During the second phase of this course, the students work independently in groups on deepening challenges, which conceptually build up on the executed case studies from phase one. Using the knowledge from phase one, the students are able to transfer the theoretical knowledge on the practical execution of the challes in SAP. The results of the group work will be presented in phase two.
Literature	Participants will be provided with a course handout in the form of pptslides which can be downloaded in advance. Further literature references regarding the theoretical concepts are not provided (as this is part of the challenge in writing the thesis) literature references with regard to the ERP-System used are as follows:
	 Agrawal, A. (2009): Customizing Materials Management Processes in SAP ERP Operations, Galileo Press: Boston. Arif, N./Tauseef, S. (2010): Integrating SAP ERP Financials, Galileo Press: Boston. Chudy, M./Castedo, L. (2015): Sales and Distribution in SAP ERP - Practical Guide, Galileo Press: Boston. Dickersback, J. T./Keller, G. (2010): Production Planning and Control with SAP ERP, 2e, Galileo Press: Boston. Franz, M. (2014): Project Management with SAP Project System, 4e, Galileo Press: Boston. Hoppe, M./Gulyassy, F. (2009): Materials Planning with SAP, Galileo Press: Boston. Veeriah, N. (2011): Customizing Financial Accounting in SAP, Galileo Press: Boston. Veeriah, N. Workload in Hours	Independent Study Time 138, Study Time in Lecture 42
Lecturer	Prof. Christian Ringle
Language	EN
Cycle	WiSe/SoSe
Content	 Participants will understand the use, requirements, advantages and disadvantages of quantitative methods. Examples illustrate the application of quantitative methods and their use to address business related problems. The course involves three parts: The first part of the course focuses on an introduction of quantitative research methods, The second part of the course involves working on a seminar thesis. Participants are in teams invited to describe selected quantitative research methods and to address simple research questions with the described method. Students are expected to write a short (empirical) paper that applies methods learned in this course to a research question of their choice, The third part is the final presentations of the results from the group work. Participants will present their own small research projects and discuss the results in the plenum. Participants are invited to join the discussions as a part of the final grade.
Literature	 Participants will be provided with a course handout in the form of pptslides which can be downloaded in advance. In the course, the participants will obtain a specific list of relevant literature. Some generally recommended are: Dalgaard, P. (2008). Introductory statistics with R. Springer Science & Business Media. Hair, J. F., Black, W. C., Babin, B. J., Anderson, R. E., & Tatham, R. L. (2006). Multivariate data analysis (Vol. 6). Upper Saddle River, NJ: Pearson Prentice Hall. Hair Jr, J. F., Hult, G. T. M., Ringle, C., & Sarstedt, M. (2013). A primer on partial least squares structural equation modeling (PLS-SEM). Sage Publications.

Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Christian Lüthje
Language	EN
Cycle	SoSe
Content	This PBL course is seggregated into two afternoon sessions. This cours aims at enhancing the students' practical skills in (1) forecasting the future development of markets and (2) making appropriate market-related decisions (particularly segmentation, managing the marketing mix). The students will be prompted to use the knowledge gathered in the lecture of this module and will be invited to (1) Conduct a scenario analysis for an innovative product category and (2) Engage in decision making wtihin a market simulation game.

Content	Entrepreneurial finance is at the center of a clash of two very distant worlds: that of entrepreneurship and that of finance. Finance is disciplined, based on numbers and logical thinking and looking for proven track records. Entrepreneurship is messy, based on intuition and experimentation and treading off the beaten track. Entrepreneurial finance is the provision of funding to young, innovative, growth-oriented companies. Entrepreneurial companies are young, typically less than the years old. And introduce innovative products or business models. The younger are called "startups," and are typically less than they are sold. There is a variety of investors who can finance entrepreneurial companies: family and friends, business angels, accelerators and incubators, crowdfunding platforms, venture capital firms, corporate investors, etc. The course provides a thorough understanding of what motivates them, of the way they invest, and of what support they can provide to a company at what stage in the fundraising cycle. The course addresses the following key questions: How much money can and should be raised? When should it be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured? Thus, the course provides an understanding of the whole fundraising cycle, from the moment the entrepreneur conceived her idea to the moment investors exit the company and move on. We examine the entrepreneur's signalling to investors of the qualities of the venture, the investor? evaluation of the exit process though liquidity events such as initial public offering, sale or merger. The following topics will be covered with specific case studies: 1. Introduction: Evaluating Venture Opportunities 2. Financial Planning 3. Ownership and Returns 4. Valuation Methods 5. Term Sheets 6. Structuring Deals 7. Corporate Governance 8. Staged Financing 9. Debt Financing 10. Exits
	11. Early Stage & Venture Capital Investors
	12. Ecosystems

Cycle	
Content	Entrepreneurial finance is at the center of a clash of two very distant worlds: that of entrepreneurship and that of finance. Finance is disciplined, based on numbers and logical thinking and looking for proven track records. Entrepreneurship is messy, based on intuition and experimentation and treading off the beaten track. Entrepreneurial finance is the provision of funding to young, innovative, growth-oriented companies. Entrepreneurial companies are young, typically less than ten years old, and introduce innovative products or business models. The younger are called "startups," and are typically less than five years old.
	There is a variety of investors who can finance entrepreneurial companies: family and friends, business angels, accelerators and incubators, crowdfunding platforms, venture capital firms, corporate investors, etc. The course provides a thorough understanding of what motivates them, of the way they invest, and of what support they can provide to a company at what stage in the fundraising cycle. The course addresses the following key questions: How much money can and should be raised? When should it be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured?
	Thus, the course provides an understanding of the whole fundraising cycle, from the moment the entrepreneur conceived her idea to the moment investors exit the company and move on. We examine the entrepreneur's signalling to investors of the qualities of the venture, the investors' evaluation of the venture, the various dimensions of contracting (cash flow rights, control rights, compensation, and other clauses), the negotiation of a deal and the provision of corporate governance, the process of staged financing, the financing through debt, and the exit process though liquidity events such as initial public offering, sale or merger.
	The following topics will be covered in lectures:
	1. Introduction: Evaluating Venture Opportunities
	2. Financial Planning
	3. Ownership and Returns
	4. Valuation Methods
	5. Term Sheets
	6. Structuring Deals
	7. Corporate Governance
	8. Staged Financing
	9. Debt Financing
	10. Exits
	11. Early Stage & Venture Capital Investors
	12. Ecosystems

Content	 This lecture focuses on multinational firms and advanced issues of management, organizations, and human resource management. This course is structured as a lecture and a seminar. In the lecture, the advanced theoretical concepts are explained and discussed, whereas they are applied in the seminar through the preparation of a seminar thesis. The students learn about the process and structure of a scientific article, and further deepen their knowledge, while working in groups. Example topics: Management: change management and corporate social responsibility; Organization: exploration & exploitation, networks, and organizational identity; Human Resource Management: human resource metrics & analytics and recruitment & selection.
Literature	The students will be provided with selected journal articles. Bernardin, H.J. (2006): Human Resource Management: An Experiential Approach, 4e, New York: McGraw-Hill. Cascio, W. (2015): Managing Human Resources: Productivity, Quality of Work Life, Profits, revised edition, New York: McGraw-Hill. French, W./Bell, C.H./Zawacki, R.A. (2004): Organization Development and Transformation: Managing Effective Change, 6e, Chicago: McGraw-Hill. Hitt, M.A./Ireland, R.D./Hoskisson, R.E. (2014): Strategic Management: Competitiveness and Globalization, 11e, Ohio: Cengage Learning. Lynch, R. (2015): Strategic Management, 7e, Harlow: Prentice Hall.

Content	Product Planning Process
	This integrated lecture is designed to understand major issues, activities and tools in the context of systematic product planning, a key activity for managing the front-end of innovation opportunities • Systematic scanning of markets for innovation opportunities • Understanding strengths/weakness and specific core competences of a firm as platforms for innovation • Exploring relevant sources for innovation (customers, suppliers, Lead Users, etc.) • Developing ideas for radical innovation, relying on the creativeness of employees, using techniques to stimulate creativity and creating a stimulating environment • Transferring ideas for innovation into feasible concepts which have a high market attractively Voluntary presentations in the third hour (articles / case studies) - Guest lectures by researchers - Lecture on Sustainability with frequent reference to current research - Permanent reference to current research Examination: In addition to the written exam at the end of the module, students have to attend the PBL-exercises and prepare presentations in groups in order to pass the module. Additionally, students have the opportunity to present research papers on a voluntary base. With these presentations it is possible to gain a bonus of max. 20% for the exam. However, the bonus is only valid if the exam is passed without the bonus.

Specialization Mechatronics

Graduates of the Mechatronics specialization are able to solve mechatronic tasks as well as design tasks systematically and methodically. They have knowledge about current methods, automation and simulation, are able to choose between different strategies and to use them independently for the development of new systems.

The Mechatronics specialization is recommended to students who already bring along basic knowledge in measurement technology, control engineering and computer science.

Specialization Product Development and Production

Graduates of the Product Development and Production specialization have profound knowledge of different manufacturing and production processes and can choose between them in consideration of geometry, failure control and cost. They are able to design, calculate and simulate according to the current state of the art.

The Product Development and Production specialization is recommended to students who already have basic knowledge in design methods, calculation of components and different manufacturing processes.

Admission Requirements				
Recommended Previous	Rapid Production			
Knowledge	Computer Aided Design and Computation			
Educational Objectives	After taking part successfully, students have reached the fe	ollowing learning results		
Professional Competence				
Knowledge	Students will be able to give an overview over			
	 3D printing based on fused deposition modeling, 			
	 printer setup and hardware components, 			
	 software and CAD data preparation, 			
	 and process parameters and quality aspects. 			
Skills	The students will be able to			
	 prepare CAD models for 3D printing, 			
	 calibrate and operate a 3D printer, 			
	 conduct designed experiments, 			
	and find optimal printing parameters.			
Personal Competence				
Social Competence	The students will be able to			
	coordinate work in a team,			
	 set up, monitor and adapt a project plan, 			
	 share information with team members, 			
	 deal with different personal knowledge backgrounds 	5,		
	 and handle team conflicts. 			
Autonomy	Without external support the students will be able to			
	• do literature research,			
	 organize work according to a schedule, 			
	 conduct experiments, 			
	and operate and troubleshoot a production machine

Knowledge						
Educational Objectives	After taking part successfully, students ha	ve reached the following learning results				
Professional Competence Knowledge	Students can give an overview over laser	systems for material processing, specifically:				
	• beam sources,					
	 transport and manipulation of Lase 	r beams,				
	 and laser Safety. 					
	They can also describe applications of lase	er systems in material processing, namely:				
	• primary forming,					
	• marking,					
	• cutting,					
	• joining,					
	and surface treatment.					
	They can also explain the material science of technically relevant metals as for example					
	• carbon steels,					
	micro alloyed steels					
	 low- and high-alloyed steels, 					
	 stainless steels, 					
	aluminium alloys,					
	 and magnesium alloys. 					
Skills	After successful completion of this course,	students should be able to				
	• give an overview on current laser to	echnology,				
	 classify its applications in today's m 	nanufacturing processes,				
	 evaluate economical and quality as 	pects,				
	 find suitable laser systems for giver 	n tasks.				
Personal Competence						
Social Competence						
Social competence	• Students are able to discuss their se	olutions to problems with others. They commu	unicate in English.			
Autonomy	• Students are able of checking their	understanding of complex concepts by solving	g variants of concrete problems

Content	The course enfolds the relationships between metallic materials, their properties, processing technologies as well as fields or application. Because of the ever-increasing loads and demands for resource efficiency, the optimization of material properties through the tailored processing as well as the targeted sequence of processing steps for the manufacturing of the final part are becoming more important than ever. In terms of selecting of an appropriate material for a targeted application, the necessary and appropriate manufacturing technologies have to be taking into consideration. In order to reflect the effects of manufacturing to the student of the second long back to the targeted is protected by the protection of the defects of manufacturing.
	methods, students are imparted knowledge about metallic materials combined with processing technologies. Particular attention is also paid to loading cases as well as damage mechanisms of the materials used in industrial applications. Furthermore, the possible methods for life extension are analysed and discussed. The aim of the course is to make students aware to perform a correct selection of appropriate materials with technological processes for potential applications taking into consideration the different kinds of stress (fatigue, creep, corrosion etc.).
	Lecture 1: Introduction. Requirements to structural metallic materials depending on their application. Typical examples for material usage in automotive, airplane and wind energy structures, power plants structures as well as in automotive component including transmissions, bearings, engines etc. Classification of the used materials into groups depending on their application requirements.
	Lecture 2: Fundamental aspects of Fe-C-alloys. Mechanical properties, material classes (austenitic and ferritic steels, cast iror etc.), Fe-C phase diagram. Fundamental aspects of heat treatment for Fe-base materials. Discussion of specific alloys and their typical applications.
	Lecture 3: Fundamentals of Fe-base materials processing for fabrication of components. From raw material to the component Typical fabrication routes: casting, forging, machining. Fundamentals of common manufacturing technologies. Cold forming and forging of steels. Fundamentals of formability and materials strengthening mechanisms, typical alloys and applications (e.g. TRII steels).
	Lecture 4: Fundamental aspects of Al-alloys and their base processing technologies for fabrication of components. Fundamenta aspects of Mg-alloys and their base processing technologies for fabrication of components.
	Lecture 5: Fundamental aspects of Ti-alloys and their base processing technologies for fabrication of components. Intermetalli alloys and metallic glasses: properties, applications and fundamental aspects of production and processing.
	Lecture 6: Cu-base alloys: classes of alloys, their typical applications and fundamental aspects of processing; examples for components. Ni- und Co-base alloys: classes of alloys, their properties and typical applications. Fundamental aspects of processing and manufacturing of components.
	Lecture 7: Fatigue and fracture of metallic materials. Fundamental aspects of fatigue loading (stress amplitudes, mean stress high- and low cycle fatigue). Notch effects, crack initiation and propagation. Damage tolerance assessment.
	Lecture 8: Degradation and failure of materials and components in service. Stress corrosion cracking and corrosion fatigue of metallic materials.
	Lecture 9: Surface engineering: coatings. Functional coatings for wear and corrosion protection, as well as decorative purposes Electrochemical and physical coating deposition, deposit welding and thermal spraying.
	Lecture 10: Surface engineering: modifications. Metallurgical surface modifications (nitriding, surface hardening ect.) and (thermo)mechanical methods (shot peening, laser shock peening, rolling, friction stir processing ect.).

Specialization Materials

Graduates of the Materials specialization are able to work in development, manufacturing and application of materials. They can identify new application fields of materials and make choices between different materials in consideration of functions, cost and quality.

The Materials specialization is recommended to students who already have basic knowledge about different materials and know how to calculate with material properties.

Knowledge	moments, stress, linear strain, free-body principle, lir e.g., in the modules Mathematics I and Mathematics		រូy); basics of ma	thematics as taugl
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
-	In this module, students learn the fundamental co	ncepts of nonlinear continuum mechan	ics. This theory	enables students
	In this module, students learn the fundamental concepts of nonlinear continuum mechanics. This theory enables students describe arbitrary deformations of continuous bodies (solid, liquid or gaseous) under arbitrary loads. The module is a continuati of the basic module Engineering Mechanics II (elastostatics), the limiting assumptions (isotropic, linear-elastic material behavis small deformations, simple geometries) of which are successively eliminated.			
	First, the students learn the necessary fundamentals of tensor calculus. Based on this, the description of the deformations / stra of arbitrarily deformable bodies is dealt with. The students learn the mathematical formalism for characterizing the stress state a body and for formulating the balance equations for mass, momentum, energy and entropy in various forms. Furthermore, students know which constitutive assumptions have to be made for modeling the material behavior of a mechanical body.			
Skills	The students can set up balance laws and apply ba research contexts.	sics of deformation theory to specific as	pects, both in a	pplied contexts as
Personal Competence

Professional Competence				
Knowledge	Students are able to give a summary of the technical details of the manufacturing processes composites and illustrate respectiv relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.			
Skills	Students can use the knowledge of fiber-reinforced composites (FRP) and its constituents (fiber / matrix) and define the necessary testing and analysis.			
	They can explain the complex structure-property relationship and			
	the interactions of chemical structure of the polymers, their processing with the different fiber types, including to explain neighboring contexts (e.g. sustainability, environmental protection).			
Personal Competence				
Social Competence	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of civil engineering. They are able to effectively present and explain their results alone or in groups in front of a qualifier audience. Students have the ability to develop alternative approaches to an engineering problem independently or in groups are discuss advantages as well as drawbacks.

Content	Students get the task in the form of a customer request for the development and production of a MTB handlebar made of fiber composites. In the task technical and normative requirements (standards) are given, all other required information come from the lectures and tutorials, and the respective documents (electronically and in conversation). The procedure is to specify in a milestone schedule and allows students to plan tasks and to work continuously. At project end, each group has a made handlebar with approved quality. In each project meeting the design (discussion of the requirements and risks) are discussed. The calculations are analyzed, evaluated and established manufacturing methods are selected. Materials are selected bar will be produced. The quality and the mechanical properties are checked. At the end of the final report created (compilation of the results for the "customers"). After the test during the "customer / supplier conversation" there is a mutual feedback-talk ("lessons learned") in order to ensure the continuous improvement.

Content	This class will cover the principles of dislocation theory from a physical metallurgy perspective, providing a fundamental understanding of the relations between the strength and of crystalline solids and distributions of defects. We will review the concept of dislocations, defining terminology used, and providing an overview of important concepts (e.g. linear elasticity, stress-strain relations, and stress transformations) for theory development. We will develop the theory of dislocation plasticity through derived stress-strain fields, associated self-energies, and the induced forces on dislocations due to internal and externally applied stresses. Dislocation structure will be discussed, including core models, stacking faults, and dislocation arrays (including grain boundary descriptions). Mechanisms of dislocation multiplication and strengthening will be covered along with general principles of creep and strain rate sensitivity. Final topics will include non-FCC dislocations, emphasizing the differences in structure and corresponding implications on dislocation mobility and macroscopic mechanical behavior; and dislocations in finite volumes.

Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc.This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Cycle	WiSe
Content	One of the most important questions when modeling mechanical systems in practice is how to model the behavior of the materials of their different components. In addition to simple isotropic elasticity in particular the following phenomena play key roles - anisotropy (material behavior depending on direction, e.g., in fiber-reinforced materials) - plasticity (permanent deformation due to one-time overload, e.g., in metal forming) - viscoelasticity (absorption of energy, e.g., in dampers) - creep (slow deformation under permanent load, e.g., in pipes)
	This lecture briefly introduces the theoretical foundations and mathematical modeling of the above phenomena. It is complemented by exercises where simple examples problems are solved by calculations and where the implementation of the content of the lecture in computer simulations is explained. It will also briefly discussed how important material parameters can be determined from experimental data.
