Bachelor of Science (B.Sc.)

## **Mechanical Engineering**

Cohort: Winter Term 2017

Updated: 18th September 2021

# Table of Contents

Table of Contents	2
Program description	3
Core Qualification	5
Module M0782: Computer Science for Mechanical Engineers	5
Module M0725: Production Engineering	7
Module M0889: Mechanics I (Statics)	10
Module M0850: Mathematics I	12
Module M0933: Fundamentals of Materials Science	15
Module M0577: Nontechnical Complementary Courses for Bachelors	17
Module M1006: Team Project MB	19
Module M0671: Technical Thermodynamics I	20
Module M0696: Mechanics II: Mechanics of Materials	22
Module M0851: Mathematics II	24
Module M0594: Fundamentals of Mechanical Engineering Design	27
Module M0597: Advanced Mechanical Engineering Design	29
Module M0608: Basics of Electrical Engineering	32
Module M0598: Mechanical Engineering: Design	34
Module M0688: Technical Thermodynamics II	37
Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)	39
Module M0853: Mathematics III	41
Module M0865: Fundamentals of Production and Quality Management	44
Module M0610: Electrical Machines	46
Module M0680: Fluid Dynamics	48
Module M0934: Advanced Materials	50
Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	52
Module M0596: Advanced Mechanical Design Project	54
Module M0956: Measurement Technology for Mechanical and Process Engineers	56
Module M0833: Introduction to Control Systems	59
Module M0829: Foundations of Management	62
Specialization Biomechanics	65
Module M1277: MED I: Introduction to Anatomy	65
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	67
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	69
Module M1333: BIO I: Implants and Fracture Healing	70
Module M1280: MED II: Introduction to Physiology	72
Module M1332: BIO I: Experimental Methods in Biomechanics	73
Specialization Energy Systems	74
Module M0684: Heat Transfer	74
Module M1022: Reciprocating Machinery	76
Module M0655: Computational Fluid Dynamics I	79
Module M0639: Gas and Steam Power Plants	81
Specialization Aircraft Systems Engineering	84
Module M1320: Simulation and Design of Mechatronic Systems	84
Module M0599: Integrated Product Development and Lightweight Design	86
Module M0767: Aeronautical Systems	88
Specialization Materials in Engineering Sciences	90
Module M0988: Structural Materials	90
Module M1009: Material Science Laboratory	92
Module M1005: Enhanced Fundamentals of Materials Science	93
Specialization Mechatronics	96
Module M0854: Mathematics IV	96
Module M1320: Simulation and Design of Mechatronic Systems	99
Module M0777: Semiconductor Circuit Design	101
Specialization Product Development and Production	103
Module M0726: Production Technology	103
Module M1009: Material Science Laboratory	106
Module M0599: Integrated Product Development and Lightweight Design	107
Specialization Theoretical Mechanical Engineering	109
Module M1320: Simulation and Design of Mechatronic Systems	109
Module M0662: Numerical Mathematics I	111
Module M0684: Heat Transfer	113
Module M0854: Mathematics IV	115
Thesis	118
Module M-001: Bachelor Thesis	118

## Program description

---

---

### Content

Today the mechanical engineering is involved in practically all industrially made goods of the everyday life: e. g. , with cars, electronic devices or tools. Mechanical engineering integrates technologies and provides products ready for the market from basis developments. The field of activity of mechanical engineers is accordingly wide: Planning and calculation of arrangements, devices and machines, choice and development of materials, construction of mechanical devices taking into account economic manufacturing and planning of production plants are examples. The development in the mechatronic system technology, Mechatronik and microelectronics have extended the scope of work during the last years. In addition, subjects become for engineers more and more important which stretch beyond the borders of the technology

According to these circumstances it is the aim of the mechanical engineering courses of studies in the TUHH (bachelor and master) to prepare young people very successfully for an occupational entrance in this varied branch always understood in the change. Mechanical engineers work in industry, middle class, public facilities, colleges and engineer's offices. Besides, her activities can enclose so various areas like research, development, production, project management, distribution, marketing and quality assurance.

On grounds of the varied uses a high degree of specialisation is necessary in the occupation. As a consequence the professional training of the mechanical engineer stands in the tension field between width of the education (for very varied later ranges of application) and depth of the education (for topical, specialist competence). Within the scope of the consecutive bachelor's master courses of studies mechanical engineering in the TUHH the width of the field is given primarily during the bachelor's study and in the master study main focuses are deepened. In any case, belong to the education a strengthened understanding of the bases of the field and controlling of current operating procedures. With this claim the study of the mechanical engineering is conceived with end "Bachelor of Science" in the TUHH. It provides the duties machine-architectural for the solution for necessary engineer-scientific bases. In addition competence is already given in the bachelor's course of studies with the first technical deepening for the work in a certain subject field. With it the first, occupation-enabling education is guaranteed for the following typical use fields of the mechanical engineering:

- Product development and production (production technology, materials, lightweight construction),
- Airplane system technology (airplane systems, simulation, product development),
- Energy technology (warm power stations, combustion machines),
- Mechatronik (simulation, solid-state circuit technology),
- Biomechanics (medicine, implants),
- Materials (material sciences, structural materials)

The borders between the single occupational fields of the mechanical engineering are fluent in the reality. The performed use fields find all her continuation in one of the master courses of studies in the mechanical engineering.

In addition to the technical basis canon an education is aimed in non-technical areas like business administration, patent being, humanities as well as right and philosophy which does justice to the modern occupational standards for an engineer.

### Career prospects

The graduates and female graduates of the course of studies are able to work responsibly and competently as a mechanical engineer or mechanical engineering engineer. They may lead according to the engineer's laws of the countries of the Federal Republic of Germany the job title engineers or female engineers. possible employer are, for example, producing enterprises of the mechanical engineering, engineer's offices and planning offices. The end allows the crossing in a master course of studies, e. g. , the consecutive master for the suitable deepening.

### Learning target

The education aim of this bachelor's course of studies is to develop the ability, to select basic methods and procedures and to connect with each other to solve technical duties in the field of the mechanical engineering and especially in the elective deepening direction.

#### Knowledge:

- The students can name the mathematical-scientific bases and methods of the engineer's sciences and describe.
- The students can explain the bases and methods of the mechanical engineering and can give an overview about her field.
- The students can explain the bases, methods and areas of application of the branches of the mechanical engineering in detail.
- The students can return the bases and methods of the mechanical engineering and can give an overview about the relevant social, ethical, ecological and economic edge terms of her field.
- Knowledge in the deepening directions:
  - W-biomechanics: The students can describe different implants and great devices for diagnosis and therapy and explain her functionality.
  - W-energy technology: The students can explain technologies for energy conversion, energy distribution and energy uses.
  - W-airplane system technology: The students can explain engineering concerning airplane design and aircraft construction to methods of the system.
  - W materials of the engineer's sciences: Students can explain characteristic features of the engineer's materials, in particular from metals, ceramics and structural materials.
  - W-Mechatronik: Students can explain mechatronische systems and her function from the point of view of the mechanical engineering and the electrical engineering.
  - W product development and production: The students can explain the product process of development in all steps.
  - W-theoretical mechanical engineering: Students can describe problem formulations of the mechanical engineering on theoretical basis.

#### Skills

- The students can apply her knowledge about mathematical-scientific bases and methods of the engineer's sciences to easy theoretical and practical problems and compile solutions.
- The students are able to do typical detailed theoretical as well as practical problem formulations from the mechanical engineering (z. B. Dimensionierung of machine parts like waves and storages, calculation of energy streams) on her basis knowledge illustrate, analyse basis-oriented and find suitable solution methods and move. They can document the smashed solution way suitably in writing.
- The students can illustrate practical, rather general problem formulation from the mechanical engineering (e. g. , draught and construction of devices) on part problems of own field or other relevant fields, analyse basis-oriented and find suitable methods of the problem solution and move this. They can present her solution of an audience clearly structured.
- The students can work on engineer-practical questions from the research under use of suitable methods independently, document her smashed solution way and present before a skilled audience.
- Skills in the deepening directions:
  - Biomechanics: The students can analyse medical equipment as well as implants with scientific methods.
  - Energy technology: The students can analyse processes like incineration plants or heat exchangers with scientific methods.
  - Airplane system technology: The students can apply standard methods of the airplane design and aircraft construction.
  - Materials of the engineer's sciences: The students can apply machine-architectural methods to the design and the analysis of engineer's materials.
  - Mechatronik: The students can analyse mechatronische systems and her functions taking into account electrotechnical and machine-architectural points of view.

## Module Manual B.Sc. "Mechanical Engineering"

- Product development and production: The students can apply standard methods of the design of production processes.  
Theoretical mechanical engineering: The students can simulate mechanical as well as energy systems.

### Social competence

- The students are able to show approach and results of her work in writing and orally understandably.
- The students can communicate about contents and problems of the mechanical engineering with experts and laymen. They can react to inquiries, supplements and comments suitably.
- The students are to be worked in the situation in groups. They can define part duties, distribute and integrate. They can meet temporal arrangements and socially interoperate.

### Independency

- The students are able to procure necessary technical information and to place in the context of her knowledge.
- The students can estimate her available competence realistically and work off deficits independently.
- The students can learn self-organised and motivates subject complexes and problem formulations work on (lifelong learning in the engineer's practise).

### **Program structure**

The course of studies sits down together from the core qualification in the extent of 150 achievement points, a deepening to be chosen in the extent to 18 achievement points and the final work intended in the sixth semestre in the extent of 12 achievement points.

As deepening stand for the choice: Energy technology, airplane-system technology, materials in the engineer's sciences, Mechatronik, product development and production, as well as theoretical mechanical engineering.

## Core Qualification

Within this block "Kernqualifikation" of the Bachelor of Science program the students get the basics knowledge, basic professional skills and methods as a base for the further development of their competence up the ability to work qualified and responsible and to apply their skills on the job. Scientific principle-base education in mathematics and the basics of engineering science are the essential topics of this block. First field applications, basics in business administration and nontechnical complementary courses are an important complement to these fields.

Module M0782: Computer Science for Mechanical Engineers			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Computer Science for Mechanical Engineers (L0149)	Lecture	2	3
Computer Science for Mechanical Engineers (L0772)	Recitation Section (small)	2	2
Computer Science for Mechanical Engineers (L0773)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Görschwin Fey		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 Minuten		
<b>Assignment for the Following Curricula</b>	Mechanical Engineering: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory		

Course L0149: Computer Science for Mechanical Engineers	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Görschwin Fey
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	You are a student of mechanical engineering and want a solid introduction to computer science particularly tailored to suit your needs? Well, here it is. All you have to do is to start learning German right now because this is an introductory course being taught in German.
<b>Literature</b>	Helmut Erlenkötter: C++ : Objektorientiertes Programmieren von Anfang an. Reinbek bei Hamburg: Rowohlt Taschenbuch-Verlag (15. Aufl., 2012).  Bjarne Stroustrup: Die C++-Programmiersprache. München: Addison Wesley (4., aktualisierte und erw. Aufl., 2011).

Module M0725: Production Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Production Engineering I (L0608)	Lecture	2	2
Production Engineering I (L0612)	Recitation Section (large)	1	1
Production Engineering II (L0610)	Lecture	2	2
Production Engineering II (L0611)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Wolfgang Hintze		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	no course assessments required internship recommended		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to ... <ul style="list-style-type: none"> <li>name basic criteria for the selection of manufacturing processes.</li> <li>name the main groups of Manufacturing Technology.</li> <li>name the application areas of different manufacturing processes.</li> <li>name boundaries, advantages and disadvantages of the different manufacturing process.</li> <li>describe elements, geometric properties and kinematic variables and requirements for tools, workpiece and process.</li> <li>explain the essential models of manufacturing technology.</li> </ul>		
<i>Skills</i>	Students are able to... <ul style="list-style-type: none"> <li>select manufacturing processes in accordance with the requirements.</li> <li>design manufacturing processes for simple tasks to meet the required tolerances of the component to be produced.</li> <li>assess components in terms of their production-oriented construction.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to ... <ul style="list-style-type: none"> <li>develop solutions in a production environment with qualified personnel at technical level and represent decisions.</li> </ul>		
<i>Autonomy</i>	Students are able to .. <ul style="list-style-type: none"> <li>interpret independently the manufacturing process.</li> <li>assess own strengths and weaknesses in general.</li> <li>assess their learning progress and define gaps to be improved.</li> <li>assess possible consequences of their actions.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory Logistics and Mobility: Specialisation Engineering Science: Elective Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory

Module M0933: Fundamentals of Materials Science				
Courses				
Title	Typ	Hrs/wk	CP	
Fundamentals of Materials Science I (L1085)	Lecture	2	2	
Fundamentals of Materials Science II (Advanced Ceramic Materials, Polymers and Composites) (L0506)	Lecture	2	2	
Physical and Chemical Basics of Materials Science (L1095)	Lecture	2	2	
<b>Module Responsible</b>	Prof. Jörg Weißmüller			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Highschool-level physics, chemistry und mathematics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students have acquired a fundamental knowledge on metals, ceramics and polymers and can describe this knowledge comprehensively. Fundamental knowledge here means specifically the issues of atomic structure, microstructure, phase diagrams, phase transformations, corrosion and mechanical properties. The students know about the key aspects of characterization methods for materials and can identify relevant approaches for characterizing specific properties. They are able to trace materials phenomena back to the underlying physical and chemical laws of nature.			
<i>Skills</i>	The students are able to trace materials phenomena back to the underlying physical and chemical laws of nature. Materials phenomena here refers to mechanical properties such as strength, ductility, and stiffness, chemical properties such as corrosion resistance, and to phase transformations such as solidification, precipitation, or melting. The students can explain the relation between processing conditions and the materials microstructure, and they can account for the impact of microstructure on the material's behavior.			
<b>Personal Competence</b>				
<i>Social Competence</i>	-			
<i>Autonomy</i>	-

Module M0577: Nontechnical Complementary Courses for Bachelors	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>The Non-technical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
<b>Skills</b>	<p><b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic methods of the said scientific disciplines,</li> <li>• auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple questions in aforementioned scientific disciplines in a sucessful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	<p><b>Personal Competences (Social Skills)</b></p> <p>Students will be able</p> <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> </ul>

<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> <p><b>Personal Competences (Self-reliance)</b></p> <p>Students are able in selected areas</p> <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses

Module M1006: Team Project MB			
Courses			
Title	Typ	Hrs/wk	CP
Team Project MB (L1236)	Practical Course	6	6
<b>Module Responsible</b>	Prof. Bodo Fiedler		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to give a summary of the technical details of projects in the area of civil engineering and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.</p> <p><i>Skills</i> The students can transfer their fundamental knowledge on civil engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of civil engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of civil engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Students have the ability to develop alternative approaches to an civil engineering problem independently or in groups and discuss advantages as well as drawbacks.</p> <p><i>Autonomy</i> Students are capable of independently solving mechanical engineering problems using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

Module M0671: Technical Thermodynamics I			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Thermodynamics I (L0437)	Lecture	2	4
Technical Thermodynamics I (L0439)	Recitation Section (large)	1	1
Technical Thermodynamics I (L0441)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics and Mechanics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are familiar with the laws of Thermodynamics. They know the relation of the kinds of energy according to 1 <sup>st</sup> law of Thermodynamics and are aware about the limits of energy conversions according to 2 <sup>nd</sup> law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and energy. They are able to draw the Carnot cycle in a Thermodynamics related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.		
<i>Skills</i>	Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.		
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Module M0608: Basics of Electrical Engineering			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Basics of Electrical Engineering (L0290)	Lecture	3	4
Basics of Electrical Engineering (L0292)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Thorsten Kern		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of mathematics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Students can to draw and explain circuit diagrams for electric and electronic circuits with a small number of components. They can describe the basic function of electric and electronic components and can present the corresponding equations. They can demonstrate the use of the standard methods for calculations.		
<i>Knowledge</i>			
<i>Skills</i>	Students are able to analyse electric and electronic circuits with few components and to calculate selected quantities in the circuits. They apply the usual methods of the electrical engineering for this.		
<b>Personal Competence</b>	none		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are able independently to analyse electric and electronic circuits and to calculate selected quantities in the circuits.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	135 minutes		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Core Qualification: Compulsory Energy and Environmental Engineering: Core Qualification: Compulsory Logistics and Mobility: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Process Engineering: Core Qualification: Compulsory		

Course L0290: Basics of Electrical Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Thorsten Kern
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	DC networks: Current, voltage, power, Kirchhoff's laws, equivalent sources, network analysis  AC: Characteristics, RMS, complex representation, phasor diagrams, power Three phase AC: Characteristics, star-delta-connection, power, transformer  Elektronik: Principle, operating behaviour and application of electronic devices as diode, Zener-diode, thyristor, transistor operational amplifier
<b>Literature</b>	Alexander von Weiss, Manfred Krause: "Allgemeine Elektrotechnik"; Vieweg-Verlag, Signatur der Bibliothek der TUHH: ETB 309 Ralf Kories, Heinz Schmitt - Walter: "Taschenbuch der Elektrotechnik"; Verlag Harri Deutsch; Signatur der Bibliothek der TUHH: ETB 122 "Grundlagen der Elektrotechnik" - andere Autoren

<b>Course L0292: Basics of Electrical Engineering</b>	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28

Haan-Gruiten 2005.</li> </ol>

Course L0592: Mechanical Design Project II	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 18, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Wolfgang Hintze
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Generation of sketches for functions and sub-functions</li> <li>• Approximately calculation of shafts</li> <li>• Dimension of bearings, screw connections and weld</li> <li>• Generation of engineering drawings (assembly drawings, manufacturing drawing)</li> </ul>
<b>Literature</b>	<p><b>Dubbel, Taschenbuch für Maschinenbau</b>, Beitz, W., Küttner, K.-H., Springer-Verlag.</p> <p>Maschinenelemente, Band I - III, Niemann, G., Springer-Verlag.</p> <p><b>Maschinen- und Konstruktionselemente</b>, Steinhilper, W., Röper, R., Springer-Verlag.</p> <p>Einführung in die DIN-Normen, Klein, M., Teubner-Verlag.</p> <p>Konstruktionslehre, Pahl, G., Beitz, W., Springer-Verlag.</p>

Course L0267: Team Project Design Methodology	
<b>Typ</b>	Project-/problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Dieter Krause
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction to engineering designing methodology</li> <li>• Team Project Design Methodology                             <ul style="list-style-type: none"> <li>◦ Creating requirement lists</li> <li>◦ Problem formulation</li> <li>◦ Creating functional structures</li> <li>◦ Finding solutions</li> <li>◦ Evaluation of the found concepts</li> <li>◦ Documentation of the taken methodological steps and the concepts using presentation slides</li> </ul> </li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Dubbel, Taschenbuch für den Maschinenbau; Grote, K.-H., Feldhusen, J.(Hrsg.); Springer-Verlag, aktuelle Auflage.</li> <li>• Maschinenelemente, Band I-III; Niemann, G., Springer-Verlag, aktuelle Auflage.</li> <li>• Maschinen- und Konstruktionselemente; Steinhilper, W., Röper, R., Springer Verlag, aktuelle Auflage.</li> <li>• Einführung in die DIN-Normen; Klein, M., Teubner-Verlag.</li> <li>• Konstruktionslehre, Pahl, G.; Beitz, W., Springer-Verlag, aktuelle Auflage.</li> <li>• Maschinenelemente 1-2; Schlecht, B., Pearson Verlag, aktuelle Auflage.</li> <li>• Maschinenelemente - Gestaltung, Berechnung, Anwendung; Haberhauer, H., Bodenstein, F., Springer-Verlag, aktuelle Auflage.</li> <li>• Roloff/Matek Maschinenelemente; Wittel, H., Muhs, D., Jannasch, D., Voßiek, J., Springer Vieweg, aktuelle Auflage.</li> <li>• Sowie weitere Bücher zu speziellen Themen</li> </ul>

Module M0688: Technical Thermodynamics II			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Thermodynamics II (L0449)	Lecture	2	4
Technical Thermodynamics II (L0450)	Recitation Section (large)	1	1
Technical Thermodynamics II (L0451)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.</p> <p><i>Skills</i> Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i> Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Core Qualification: Compulsory General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Energy and Environmental Engineering: Core Qualification: Compulsory General Engineering Science (English program): Core Qualification: Compulsory General Engineering Science (English program, 7 semester): Core Qualification: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Process Engineering: Core Qualification: Compulsory		

Course L0449: Technical Thermodynamics II	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Gerhard Schmitz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	8. Cycle processes 7. Gas - vapor - mixtures 10. Open systems with constant flow rates 11. Combustion processes 12. Special fields of Thermodynamics
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Schmitz, G.: Technische Thermodynamik, TuTech Verlag, Hamburg, 2009</li> <li>• Baehr, H.D.; Kabelac, S.: Thermodynamik, 15. Module M0959: Mechanics III (Hydrostatics, Kinematics, Kinetics I)			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1134)		Lecture	3                  3
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1135)		Recitation Section (small)	2                  2
Mechanics III (Hydrostatics, Kinematics, Kinetics I) (L1136)		Recitation Section (large)	1                  1
<b>Module Responsible</b>	Prof. Robert Seifried		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics I, II, Mechanics I (Statics)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students can		
	<ul style="list-style-type: none"> <li>• describe the axiomatic procedure used in mechanical contexts;</li> <li>• explain important steps in model design;</li> <li>• present technical knowledge in stereostatics.</li> </ul>		
<i>Skills</i>	The students can		
	<ul style="list-style-type: none"> <li>• explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>• apply basic hydrostatical, kinematic and kinetic methods to engineering problems;</li> <li>• estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.		
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Core Qualification: Compulsory General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Module M0853: Mathematics III				
Courses				
Title	Typ	Hrs/wk	CP	
Analysis III (L1028)	Lecture	2	2	
Analysis III (L1029)	Recitation Section (small)	1	1	
Analysis III (L1030)	Recitation Section (large)	1	1	
Differential Equations 1 (Ordinary Differential Equations) (L1031)	Lecture	2	2	
Differential Equations 1 (Ordinary Differential Equations) (L1032)	Recitation Section (small)	1	1	
Differential Equations 1 (Ordinary Differential Equations) (L1033)	Recitation Section (large)	1	1	
<b>Module Responsible</b>	Prof. Anusch Taraz			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mathematics I + II			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>• Students can name the basic concepts in the area of analysis and differential equations. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul>			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>				
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>• Students can model problems in the area of analysis and differential equations with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.</li> <li>• Students are able to discover and verify further logical connections between the concepts studied in the course.</li> <li>• For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are able to work together in teams. They are capable to use mathematics as a common language.</li> <li>• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.</li> <li>• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 128, Study Time in Lecture 112			
<b>Credit points</b>	8			
<b>Examination</b>	Written exam

Module M0610: Electrical Machines			
Courses			
Title	Typ	Hrs/wk	CP
Electrical Machines (L0293)	Lecture	3	4
Electrical Machines (L0294)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Thorsten Kern		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of mathematics, in particular complex numbers, integrals, differentials Basics of electrical engineering and mechanical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>Students can draw and explain the basic principles of electric and magnetic fields.</p> <p>They can describe the function of the standard types of electric machines and present the corresponding equations and characteristic curves. For typically used drives they can explain the major parameters of the energy efficiency of the whole system from the power grid to the driven engine.</p> <p><i>Skills</i></p> <p>Students are able to calculate two-dimensional electric and magnetic fields in particular ferromagnetic circuits with air gap. For this they apply the usual methods of the design of electric machines.</p> <p>They can calculate the operational performance of electric machines from their given characteristic data and selected quantities and characteristic curves. They apply the usual equivalent circuits and graphical methods.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> none</p> <p><i>Autonomy</i> Students are able independently to calculate electric and magnetic fields for applications. They are able to analyse independently the operational performance of electric machines from the characteristic data and they can calculate thereof selected quantities and characteristic curves.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam

<b>Content</b>	<p>Exercises to the application of electric and magnetic fields.</p> <p>Exercises to the operational performance of electric machines.</p>
<b>Literature</b>	<p>Hermann Linse, Roland Fischer: "Elektrotechnik für Maschinenbauer", Vieweg-Verlag; Signatur der Bibliothek der TUHH: ETB 313</p> <p>Ralf Kories, Heinz Schmitt-Walter: "Taschenbuch der Elektrotechnik"; Verlag Harri Deutsch; Signatur der Bibliothek der TUHH: ETB 122</p> <p>"Grundlagen der Elektrotechnik" - anderer Autoren</p> <p>Fachbücher "Elektrische Maschinen"</p>

Module M0680: Fluid Dynamics			
Courses			
Title	Typ	Hrs/wk	CP
Fluid Mechanics (L0454)	Lecture	3	4
Fluid Mechanics (L0455)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Thomas Rung		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Sound knowledge of engineering mathematics, engineering mechanics and thermodynamics.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students will have the required sound knowledge to explain the general principles of fluid engineering and physics of fluids. Students can scientifically outline the rationale of flow physics using mathematical models and are familiar with methods for the performance analysis and the prediction of fluid engineering devices.</p> <p><i>Skills</i> Students are able to apply fluid-engineering principles and flow-physics models for the analysis of technical systems. The lecture enables the student to carry out all necessary theoretical calculations for the fluid dynamic design of engineering devices on a scientific level.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to discuss problems and jointly develop solution strategies.</p> <p><i>Autonomy</i> The students are able to develop solution strategies for complex problems self-consistent and critically analyse results.</p>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	180 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program): Specialisation Naval Architecture: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program): Specialisation Naval Architecture: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Mechanical Engineering: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory		

Course L0454: Fluid Mechanics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Thomas Rung
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Overview</li> <li>• Physical/mathematical modelling</li> <li>• Special phenomena</li> <li>• Basic equations of fluid dynamics</li> <li>• The turbulence problem</li> <li>• One dimensional theory for inkompressibel flows</li> <li>• One dimensional theory for kompressibel flows</li> <li>• Flow over contours without friction</li> <li>• Flow over contours with friction</li> <li>• Flow through channels</li> <li>• Simplified equations for three dimensional flow</li> <li>• Special aspects of the numerical solution for complex flows</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Herwig, H.: Strömungsmechanik, 2. Auflage, Springer- Verlag, Berlin, Heidelberg, 2006</li> <li>• Herwig, H.: Strömungsmechanik von A-Z, Vieweg Verlag, Wiesbaden, 2004</li> </ul>

Course L0455: Fluid Mechanics	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Thomas Rung
<b>Language</b>	DE
<b>Cycle</b>	SoSe

<b>Literature</b>	See interlocking course

Module M0934: Advanced Materials			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Advanced Materials Characterization (L1087)		Lecture	2
Advanced Materials Design (L1091)		Lecture	2
Advanced Materials Design (L1092)		Recitation Section (large)	2
<b>Module Responsible</b>	Prof. Patrick Huber		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of Materials Science (I and II)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will be able to explain the properties of advanced materials along with their applications in technology, in particular metallic, ceramic, polymeric, semiconductor, modern composite materials (biomaterials) and nanomaterials.		
<i>Skills</i>	The students will be able to select material configurations according to the technical needs and, if necessary, to design new materials considering architectural principles from the micro- to the macroscale. The students will also gain an overview on modern materials science, which enables them to select optimum materials combinations depending on the technical applications.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to present solutions to specialists and to develop ideas further.		
<i>Autonomy</i>	The students are able to ... <ul style="list-style-type: none"> <li>• assess their own strengths and weaknesses.</li> <li>• define tasks independently.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Mechanical Engineering: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Elective Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering: Elective Compulsory Mechanical Engineering: Core Qualification: Elective Compulsory		

Course L1087: Advanced Materials Characterization	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Patrick Huber
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	
<b>Literature</b>	William D. Callister und David G. Rethwisch, Materialwissenschaften und Werkstofftechnik, Wiley&Sons, Asia (2011).  William D. Callister, Materials Science and Technology, Wiley& Sons, Inc. (2007).

Course L1091: Advanced Materials Design	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Bodo Fiedler, Prof. Stefan Müller, Prof. Patrick Huber, Prof. Gerold Schneider, Prof. Jörg Weißmüller
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	
<b>Literature</b>	Vorlesungsunterlagen

<b>Course L1092: Advanced Materials Design</b>	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28

Module M0960: Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems)	
<b>Courses</b>	
<b>Title</b>	<b>Typ</b> <b>Hrs/wk</b> <b>CP</b>
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1137)	Lecture 3 3
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1138)	Recitation Section (small) 2 2
Mechanics IV (Kinetics II, Oscillations, Analytical Mechanics, Multibody Systems) (L1139)	Recitation Section (large) 1 1
<b>Module Responsible</b>	Prof. Robert Seifried
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Mathematics I-III and Mechanics I-III
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	The students can <ul style="list-style-type: none"> <li>describe the axiomatic procedure used in mechanical contexts;</li> <li>explain important steps in model design;</li> <li>present technical knowledge.</li> </ul>
<i>Skills</i>	The students can <ul style="list-style-type: none"> <li>explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;</li> <li>apply basic methods to engineering problems;</li> <li>estimate the reach and boundaries of the methods and extend them to be applicable to wider problem sets.</li> </ul>
<b>Personal Competence</b>	
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	120 min
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program): Specialisation Naval Architecture: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program): Specialisation Naval Architecture: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Specialisation III. <b>Module M0833: Introduction to Control Systems</b>			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Introduction to Control Systems (L0654)	Lecture	2	4
Introduction to Control Systems (L0655)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Herbert Werner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Representation of signals and systems in time and frequency domain, Laplace transform		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<ul style="list-style-type: none"> <li>Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems</li> <li>They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus</li> <li>They can explain the Nyquist stability criterion and the stability margins derived from it.</li> <li>They can explain the role of the phase margin in analysis and synthesis of control loops</li> <li>They can explain the way a PID controller affects a control loop in terms of its frequency response</li> <li>They can explain issues arising when controllers designed in continuous time domain are implemented digitally</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can transform models of linear dynamic systems from time to frequency domain and vice versa</li> <li>They can simulate and assess the behavior of systems and control loops</li> <li>They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules</li> <li>They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques</li> <li>They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation</li> <li>They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs		
<i>Autonomy</i>	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.		
They can assess their knowledge in weekly on-line tests and thereby control their learning progress.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

<b>Literature</b>	See interlocking course

Module M0829: Foundations of Management			
Courses			
Title	Typ	Hrs/wk	CP
Management Tutorial (L0882)	Recitation Section (large)	2	3
Introduction to Management (L0880)	Lecture	3	3
<b>Module Responsible</b>	Prof. Christoph Ihl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic Knowledge of Mathematics and Business		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to</p> <ul style="list-style-type: none"> <li>• explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management</li> <li>• explain the most important aspects of and goals in Management and name the most important aspects of entrepreneurial projects</li> <li>• describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human resource management, information management, innovation management and marketing</li> <li>• explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance</li> <li>• state basics from accounting and costing and selected controlling methods.</li> </ul> <p><i>Skills</i></p> <p>Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to</p> <ul style="list-style-type: none"> <li>• analyse Management goals and structure them appropriately</li> <li>• analyse organisational and staff structures of companies</li> <li>• apply methods for decision making under multiple objectives, under uncertainty and under risk</li> <li>• analyse production and procurement systems and Business information systems</li> <li>• analyse and apply basic methods of marketing</li> <li>• select and apply basic methods from mathematical finance to predefined problems</li> <li>• apply basic methods from accounting, costing and controlling to predefined problems</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>• work successfully in a team of students</li> <li>• to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project</li> <li>• to communicate appropriately and</li> <li>• to cooperate respectfully with their fellow students.</li> </ul> <p><i>Autonomy</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>• work in a team and to organize the team themselves</li> <li>• to write a report on their project.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Subject theoretical and practical work		
<b>Examination duration and scale</b>	several written exams during the semester		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Process Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory General Engineering Science (German program, 7 semester): Specialisation Computer Science: Compulsory General Engineering Science (German program, 7 semester): Specialisation Bioprocess Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Civil Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Energy and Environmental Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Product Development and Production: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems:

Course L0882: Management Tutorial	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christoph Ihl, Katharina Roedelius, Tobias Vlcek
<b>Language</b>	DE
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>
<b>Literature</b>	Relevante Literatur aus der korrespondierenden Vorlesung.

Course L0880: Introduction to Management	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christoph Ihl, Prof. Thorsten Blecker, Prof. Christian Lütjhe, Prof. Christian Ringle, Prof. Kathrin Fischer, Prof. Cornelius Herstatt, Prof. Wolfgang Kersten, Prof. Matthias Meyer, Prof. Thomas Wrona

## Specialization Biomechanics

Due to the ever increasing demands on the health system of an aging population, mechanization is of great importance. Both individual implants and instruments as well as large appliances used for diagnostics and therapy, medical and engineering science staff must work increasingly close together to meet the new requirements. For engineers, this means that they can understand and influence project management, and development and research have what they learn in this specialization in addition to specific engineering fundamentals and medical and business aspects of patient care.

Module M1277: MED I: Introduction to Anatomy			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
<b>Module Responsible</b>	Prof. Udo Schumacher		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.</p> <p><i>Skills</i> The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can participate in current discussions in biomedical research and medicine on a professional level.</p> <p><i>Autonomy</i> The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.</p>		
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28		
<b>Credit points</b>	3		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 minutes

Course L0383: Introduction to Radiology and Radiation Therapy	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Ulrich Carl, Prof. Thomas Vestring
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments

Module M1280: MED II: Introduction to Physiology			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
<b>Module Responsible</b>	Dr. Roger Zimmermann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	None		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students can</p> <ul style="list-style-type: none"> <li>describe the basics of the energy metabolism;</li> <li>describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology.</li> </ul> <p><i>Skills</i> The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.</p> <p><i>Autonomy</i> The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.</p>		
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28		
<b>Credit points</b>	3		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 minutes		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Technomathematics: Specialisation III. Module M1022: Reciprocating Machinery			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fundamentals of Reciprocating Engines and Turbomachinery - Part Reciprocating Engines (L0633)	Lecture	1	1
Fundamentals of Reciprocating Engines and Turbomachinery - Part Reciprocating Engines (L0634)	Recitation Section (large)	1	1
Internal Combustion Engines I (L0059)	Lecture	2	2
Internal Combustion Engines I (L0639)	Recitation Section (large)	1	2
<b>Module Responsible</b>	Prof. Christopher Friedrich Wirz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Thermodynamics, Mechanics, Machine Elements		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> As a result of the part module „Fundamentals of Reciprocating Machinery“, the students are able to reflect fundamentals regarding power and working machinery and describe the qualitative and quantitative correlations of operating methods and efficiencies of multiple types of engines, compressors and pumps. They are able to utilize technical terms and parameters as well as aspects regarding the development of power density and efficiency, furthermore to give an overview of charging systems, fuels and emissions. The students are able to select specific types of machinery and assess design related and operational problems.</p> <p>As a result of the part module “Internal Combustion Engines I”, the students are able reflect and utilize the state-of-the-art regarding efficiency limits. In addition, they are able to utilize their knowledge of design, mechanical and thermodynamic characteristics and the approach of similarity. They are able to explain, assess and develop engines as well as charging systems. Detailed knowledge is present regarding computer-aided process design.</p> <p><i>Skills</i> The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation. They are further able to assess, analyse and solve technical and operational problems and to perform mechanical and thermodynamic design.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> The students are able to communicate and cooperate in a professional environment in the field of machinery design and application.</p> <p><i>Autonomy</i> The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.</p>

Module M0639: Gas and Steam Power Plants			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Gas and Steam Power Plants (L0206)	Lecture	3	5
Gas and Steam Power Plants (L0210)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Alfons Kather		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• "Technical Thermodynamics I and II"</li> <li>• "Heat Transfer"</li> <li>• "Fluid Mechanics"</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students can evaluate the development of the electricity demand and the energy conversion routes in the thermal power plant, describe the various types of power plant and the layout of the steam generator block. They are also able to determine the operation characteristics of the power plant. Additionally they can describe the exhaust gas cleaning apparatus and the combination possibilities of conventional fossil-fuelled power plants with solar thermal and geothermal power plants or plants equipped with Carbon Capture and Storage.</p> <p>The students have basic knowledge about the principles, operation and design of turbomachinery</p> <p><i>Skills</i> The students will be able, using theories and methods of the energy technology from fossil fuels and based on well-founded knowledge on the function and construction of gas and steam power plants, to identify basic associations in the production of heat and electricity, so as to develop conceptual solutions. Through analysis of the problem and exposure to the inherent interplay between heat and power generation the students are endowed with the capability and methodology to develop realistic optimal concepts for the generation of electricity and the production of heat. From the technical basics the students become the ability to follow better the deliberations on the electricity mix composition within the energy-political triangle (economy, secure supply and environmental protection).</p> <p>Within the framework of the exercise the students learn the use of the specialised software suite EBSILON Professional™. With this tool small practical tasks are solved with the PC, to highlight aspects of the design and development of power plant cycles.</p> <p>The students are able to do simplified calculations on turbomachinery either as part of a plant, as single component or at stage level.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> An excursion within the framework of the lecture is planned for students that are interested. The students get in this manner direct contact with a modern power plant in this region. The students will obtain first-hand experience with a power plant in operation and gain insights into the conflicts between technical and political issues.</p> <p><i>Autonomy</i> The students assisted by the tutors will be able to develop alone simple simulation models and run with these scenario analyses. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process combinations and boundary conditions highlighted. The students are able independently to analyse the operational performance of steam power plants and calculate selected quantities and characteristic curves.</p>

Course L0210: Gas and Steam Power Plants	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Alfons Kather
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In the 1<sup>st</sup> part of the lecture a general introduction into fluid-flow machines and steam power plants is offered, including:</p> <ul style="list-style-type: none"> <li>• Energy balance of a fluid-flow machine</li> <li>• Theory of turbine and compressor stage</li> <li>• Equal and positive pressure blading</li> <li>• Flow losses</li> <li>• Characteristic numbers</li> <li>• Axial and radial design</li> <li>• Design features</li> <li>• Hydraulic fluid-flow machines</li> <li>• Pump and water turbine designs</li> <li>• Design examples of reciprocating engines and turbomachinery</li> <li>• Steam power plants</li> <li>• Gas turbine systems</li> <li>• Diesel engine systems</li> <li>• Waste heat utilisation</li> </ul> <p>followed by the more specialised issues:</p> <ul style="list-style-type: none"> <li>• Electricity Demand and Forecasting</li> <li>• Thermodynamic fundamentals</li> <li>• Energy Conversion in Thermal Power Plants</li> <li>• Types of Power Plant</li> <li>• Layout of the power plant block</li> <li>• Individual elements of the power plant</li> <li>• Cooling systems</li> <li>• Flue gas cleaning</li> <li>• Operation characteristics of the power plant</li> <li>• Construction materials</li> <li>• Location of power plants</li> </ul> <p>The environmental impact of acidification, fine particulate or CO<sub>2</sub> emissions and the resulting climatic effects are a special focus of the lecture and the lecture hall exercise. The challenges in plant operation from interconnecting conventional power plants and renewable energy sources are discussed and the technical options for providing security of supply and network stability are presented, also under consideration of cost effectiveness. In this critical review, focus is especially placed on the compatibility of the different solutions with the environment and climate. With this, the awareness for the responsibility of an engineer's own actions are emphasized and the potential extent of the different solutions presented clearly.</p> <p>Within the framework of the exercise the students learn the use of the specialised software suite EBSILON Professional™. With this tool small tasks are solved on the PC, to highlight aspects of the design and development of power plant cycles. The students present their results orally and can afterwards ask questions and get feedback. The course work has a positive effect on the students final grade.</p>

## Specialization Aircraft Systems Engineering

The specialization "Aircraft Systems" prepares students for a variety of careers in the aviation industry, and neighboring fields. Students will gain knowledge on how to deal with the methods of systems engineering, as well as the use of modern, computer-aided techniques for system design, analysis and evaluation. In addition, the necessary competencies of aeronautical engineering in aircraft systems, cabin systems, pneumatic conveying systems and aircraft design and flight physics and materials technology.

Module M1320: Simulation and Design of Mechatronic Systems			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Simulation and Design of Mechatronic Systems (L1822)	Lecture	2	2
Simulation and Design of Mechatronic Systems (L1823)	Recitation Section (large)	1	2
Simulation and Design of Mechatronic Systems (L1824)	Practical Course	1	2
<b>Module Responsible</b>	Prof. Uwe Weltin		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of mechanics, control theory and electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe methods and calculations for design, modeling, simulation and optimization of mechatronic systems.		
<i>Skills</i>	Students are able to apply modern algorithms for modeling of mechatronic systems. They can identify, simulate and design simple systems and implement those in laboratory conditions.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups and present results to target groups.		
<i>Autonomy</i>	Students are able to recognize and improve knowledge deficits independently.		
	With instructor assistance, students are able to evaluate their own knowledge level and define a further course of study.

<b>Module M0599: Integrated Product Development and Lightweight Design</b>			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
CAE-Team Project (L0271)	Project-/problem-based Learning	2	2
Development of Lightweight Design Products (L0270)	Lecture	2	2
Integrated Product Development I (L0269)	Lecture	2	2
<b>Module Responsible</b>	Prof. Dieter Krause		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Advanced Knowledge about engineering design: Fundamentals of Mechanical Engineering Design Mechanical Engineering: Design Advanced Mechanical Engineering Design		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After completing the module, students are capable of: <ul style="list-style-type: none"> <li>• explaining the functional principle of 3D-CAD-Systems, PDM- and FEM-Systems</li> <li>• describing the interaction of the different CAE-Systems in the product development process</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	After completing the module, students are able to: <ul style="list-style-type: none"> <li>• evaluate different CAD- and PDM-Systems with regards to the desired requirements such as classification schemes and product structuring</li> <li>• design an exemplary product using CAD-,PDM- and/or FEM-Systems with shared workload</li> </ul>		
<b>Personal Competence</b>	After completing the module, students are able to: <ul style="list-style-type: none"> <li>• To develop a project plan and allocate work appropriate work packages in the framework of group discussions</li> <li>• Present project results as a team for instance in a presentation</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are capable of: <ul style="list-style-type: none"> <li>• independently adapt to a CAE-Tool and complete a given practical task with it</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

<b>Content</b>	<ul style="list-style-type: none"> <li>• Practical Introduction in the used software systems (Creo, Windchill, Hyperworks)</li> <li>• Team formation, allocation of tasks and generation of a project plan</li> <li>• Collective creation of one product out of CAD models supported by FEM calculations and PDM system</li> <li>• Manufacturing of selected parts using 3D printer</li> <li>• Presentation of results</li> </ul> <p><b>Description</b></p> <p>Part of the module is a project based team orientated practical course using the PBL method. In this course, students learn the handling of modern CAD, PDM and FEM systems (Creo, Windchill and Hyperworks). After a short introduction in the applied software systems, students work in teams on a task during the semester. The aim is the development of one product out of several CAD parts models using a PDM system including FEM calculations of selected parts and 3D printing of parts. The developed product must be presented in a joint presentation.</p>

Module M0767: Aeronautical Systems				
<b>Courses</b>				
Title	Typ	Hrs/wk	CP	
Fundamentals of Aircraft Systems (L0741)	Lecture	2	2	
Fundamentals of Aircraft Systems (L0742)	Recitation Section (small)	1	1	
Air Transportation Systems (L0591)	Lecture	2	2	
Air Transportation Systems (L0816)	Recitation Section (large)	1	1	
<b>Module Responsible</b>	Prof. Frank Thielecke			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basics of mathematics, mechanics and thermodynamics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	Students get a basic understanding of the structure and design of an aircraft, as well as an overview of the systems inside an aircraft. In addition, a basic knowledge of the relationships, the key parameters, roles and ways of working in different subsystems in the air transport is acquired.  Due to the learned cross-system thinking students can gain a deeper understanding of different system concepts and their technical system implementation. In addition, they can apply the learned methods for the design and assessment of subsystems of the air transportation system in the context of the overall system.			
<i>Knowledge</i>				
<i>Skills</i>				
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are made aware of interdisciplinary communication in groups.			
<i>Autonomy</i>	Students are able to independently analyze different system concepts and their technical implementation as well as to think system oriented.

## Specialization Materials in Engineering Sciences

In the specialization "materials in engineering", students work mainly with construction materials, modeling materials and nanotechnology and hybrid materials.

Module M0988: Structural Materials			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fundamentals of Mechanical Properties of Materials (L1090)	Lecture	2	3
Welding Technology (L1123)	Lecture	3	3
<b>Module Responsible</b>	Prof. Claus Emmelmann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of Materials Science		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students get to know the principles that are responsible for the mechanical behaviour of metals. They acquire basic knowledge in modelling of the materials behaviour. Furthermore, the students learn about the behaviour of metals under static and dynamic loads. The students get to know the most important welding technologies and the corresponding systems. They learn about the influence of welding on the materials and design.</p> <p><i>Skills</i> The students know the mechanical properties of metals and the underlying principles. They are able to name the influencing factors on the welding behaviour of steel materials.</p> <p>The students are able to select between alloys according to the desired mechanical properties and weldability. They can distinguish between different welding techniques and select the suitable technique and system components for a defined application. They are able to dimension weld joints within design tasks.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> none</p> <p><i>Autonomy</i> none</p>

<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Companion Lecture for Materials Science Laboratory (L1088)		Lecture	2
Material Science Laboratory (L1235)		Practical Course	4
<b>Module Responsible</b>	Prof. Bodo Fiedler		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to give a summary of the technical details of experiments in the area of materials sciences and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.		
<i>Skills</i>	The students can transfer their fundamental knowledge on material sciences to the process of solving practical problems. They identify and overcome typical problems during the realization of experiments in the context of material sciences.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to cooperate in small groups in order to conduct experiments in the context of materials sciences. They are able to effectively present and explain their results alone or in groups in front of a qualified audience.		
<i>Autonomy</i>	Students are capable of solving problems in the context of materials sciences using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84

Course L1086: Enhanced Fundamentals: Metals	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Jörg Weißmüller, Prof. Patrick Huber
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Enhanced Fundamentals of Metals:</p> <ul style="list-style-type: none"> <li>• Introduction to phenomenological thermodynamics</li> <li>• Elasticity</li> <li>• Thermal materials behavior (heat capacity, thermal expansion)</li> <li>• Conductors, semiconductors, isolators: conduction mechanisms and band structure</li> <li>• Superconductors</li> <li>• Dry corrosion</li> <li>• Electrochemistry in the material sciences</li> <li>• Wet corrosion</li> <li>• Alloy corrosion</li> <li>• Corrosion protection</li> <li>• Stainless steel</li> <li>• Battery materials</li> <li>• Supercapacitors</li> <li>• Fuel cells</li> <li>• Materials for hydrogen storage</li> <li>• Magnetism: phenomenology, Magnetometers, atomistics, micromagnetism</li> <li>• Magnetic materials</li> <li>• Magnetic materials: applications</li> </ul>
<b>Literature</b>	Vorlesungsskript

## Specialization Mechatronics

In the specialization "Mechatronics" students learn to combine the mechanical engineering content with the knowledge and skills of electrical engineering, to study in mechatronics, those sub-disciplines and related disciplines problems that arise.

Module M0854: Mathematics IV			
Courses			
Title	Typ	Hrs/wk	CP
Differential Equations 2 (Partial Differential Equations) (L1043)	Lecture	2	1
Differential Equations 2 (Partial Differential Equations) (L1044)	Recitation Section (small)	1	1
Differential Equations 2 (Partial Differential Equations) (L1045)	Recitation Section (large)	1	1
Complex Functions (L1038)	Lecture	2	1
Complex Functions (L1041)	Recitation Section (small)	1	1
Complex Functions (L1042)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Anusch Taraz		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics 1 - III		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>• Students can name the basic concepts in Mathematics IV. They are able to explain them using appropriate examples.</li> <li>• Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.</li> <li>• They know proof strategies and can reproduce them.</li> </ul>		
<i>Skills</i>			
<b>Personal Competence</b> <i>Social Competence</i>			
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 68, Study Time in Lecture 112		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 min (Complex Functions) + 60 min (Differential Equations 2)		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (German program): Specialisation Naval Architecture: Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory Computer Science: Specialisation Computational Mathematics: Elective Compulsory Electrical Engineering: Core Qualification: Compulsory General Engineering Science (English program): Specialisation Electrical Engineering: Compulsory General Engineering Science (English program): Specialisation Naval Architecture: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Electrical Engineering: Compulsory		

	General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory
	General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory
	General Engineering Science (English program, 7 semester): Specialisation Naval Architecture: Compulsory
	Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory
	Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory
	Computational Science and Engineering: Specialisation Mathematics & Engineering Science: Elective Compulsory
	Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Compulsory
	Mechanical Engineering: Specialisation Mechatronics: Compulsory
	Mechatronics: Core Qualification: Compulsory
	Naval Architecture: Core Qualification: Compulsory
	Theoretical Mechanical Engineering: Technical Complementary Course Core Studies: Elective Compulsory

Course L1043: Differential Equations 2 (Partial Differential Equations)	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dozenten des Fachbereiches Mathematik der UHH
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>Main features of the theory and numerical treatment of partial differential equations</p> <ul style="list-style-type: none"> <li>• Examples of partial differential equations</li> <li>• First order quasilinear differential equations</li> <li>• Normal forms of second order differential equations</li> <li>• Harmonic functions and maximum principle</li> <li>• Maximum principle for the heat equation</li> <li>• Wave equation</li> <li>• Liouville's formula</li> <li>• Special functions</li> <li>• Difference methods</li> <li>• Finite elements</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• <a href="http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html">http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html</a></li> </ul>

Course L1044: Differential Equations 2 (Partial Differential Equations)	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14

Module M1320: Simulation and Design of Mechatronic Systems			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b> <b>CP</b>
Simulation and Design of Mechatronic Systems (L1822)		Lecture	2                  2
Simulation and Design of Mechatronic Systems (L1823)		Recitation Section (large)	1                  2
Simulation and Design of Mechatronic Systems (L1824)		Practical Course	1                  2
<b>Module Responsible</b>	Prof. Uwe Weltin		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of mechanics, control theory and electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to describe methods and calculations for design, modeling, simulation and optimization of mechatronic systems.		
<i>Skills</i>	Students are able to apply modern algorithms for modeling of mechatronic systems. They can identify, simulate and design simple systems and implement those in laboratory conditions.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups and present results to target groups.		
<i>Autonomy</i>	Students are able to recognize and improve knowledge deficits independently.		
	With instructor assistance, students are able to evaluate their own knowledge level and define a further course of study.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	90 min		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory Mechanical Engineering: Specialisation Aircraft Systems Engineering: Compulsory Mechanical Engineering: Specialisation Mechatronics: Compulsory Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Compulsory Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Elective Compulsory Mechatronics: Core Qualification: Compulsory		
Course L1822: Simulation and Design of Mechatronic Systems			
<b>Typ</b>	Lecture		
<b>Hrs/wk</b>	2

**Specialization Product Development and Production**

The specialization "Product Development and Production" maps the product creation process from strategic product planning, through the systematic and methodical development of products, including concept development, design, material selection, simulation and test to production, the planning and control and the use of modern manufacturing processes, to high-performance materials.

Module M0726: Production Technology			
Courses			
Title	Typ	Hrs/wk	CP
Fundamentals of Machine Tools (L0689)	Lecture	2	2
Fundamentals of Machine Tools (L1992)	Recitation Section (large)	1	1
Forming and Cutting Technology (L0613)	Lecture	2	2
Forming and Cutting Technology (L0614)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Wolfgang Hintze		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	without major course assessment internship recommended Previous knowledge in mathematics, mechanics and electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to ...</p> <ul style="list-style-type: none"> <li>explain the basics of chip formation and mechanisms and models of machining.</li> <li>explain methods and parameters for design and analysis of metal forming, machining processes and tools.</li> <li>explain technical concepts of machine tool building and give an overview on trends in the machine tool industry.</li> <li>explain types, constructions and functions of CNC-machines and give an overview on multi-machine systems.</li> <li>explain equipment components.</li> </ul> <p><i>Skills</i> Students are able to...</p> <ul style="list-style-type: none"> <li>select tool geometry, cutting materials, process parameters and appropriate measuring technique in accordance with the requirements.</li> <li>estimate occurring forces and temperatures during chip formation.</li> <li>select appropriate machine tools for machining and create NC programs for turning and milling.</li> <li>assess the quality of a machine tools and to detect weak points.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to ...</p> <ul style="list-style-type: none"> <li>develop solutions in a production environment with qualified personnel at technical level and represent decisions.</li> </ul> <p><i>Autonomy</i> Students are able to ...</p> <ul style="list-style-type: none"> <li>interpret independently cutting processes.</li> <li>create independently NC programs.</li> <li>select independently machine tools by reference to appropriate requirements.</li> <li>assess own strengths and weaknesses in general.</li> <li>assess their learning progress and define gaps to be improved.</li> <li>assess possible consequences of their actions.</li> </ul>

Module M1009: Material Science Laboratory			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Companion Lecture for Materials Science Laboratory (L1088)		Lecture	2
Material Science Laboratory (L1235)		Practical Course	4
<b>Module Responsible</b>	Prof. Bodo Fiedler		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to give a summary of the technical details of experiments in the area of materials sciences and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.		
<i>Skills</i>	The students can transfer their fundamental knowledge on material sciences to the process of solving practical problems. They identify and overcome typical problems during the realization of experiments in the context of material sciences.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to cooperate in small groups in order to conduct experiments in the context of materials sciences. They are able to effectively present and explain their results alone or in groups in front of a qualified audience.		
<i>Autonomy</i>	Students are capable of solving problems in the context of materials sciences using provided literature. They are able to fill gaps in as well as extend their knowledge using the literature and other sources provided by the supervisor.		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	1,5 h written Exam (50%) covering the lesson		
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Materials in Engineering Sciences: Compulsory Mechanical Engineering: Specialisation Product Development and Production: Compulsory Mechanical Engineering: Specialisation Materials in Engineering Sciences: Compulsory Product Development, Materials and Production: Technical Complementary Course Core Studies: Elective Compulsory		

Course L1088: Companion Lecture for Materials Science Laboratory	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Patrick Huber
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Physico-chemical backgrounds and fundamental experimental principles with regard to the following experiments, the topics to be addressed are indicated in brackets for each experiment: 1. Phase diagrams, heat treatment, hardness measurements (thermodynamics, elastic properties of solids) 2. notch impact test (elastic properties of solids) 3. Processes during the solidification of metals (thermodynamics and kinetics of solid-liquid phase transitions) 4. tensile test (elastic properties of solids) 5. Identification of polymers (polymer physics) 6. fiber-reinforced polymers (physical principles of composite materials) 7. Production and microstructure of ceramic materials (physico-chemical principles of ceramics) 8. Mechanical properties of ceramic materials (elastic properties of solids and composite materials)

<b>Module M0599: Integrated Product Development and Lightweight Design</b>			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
CAE-Team Project (L0271)	Project-/problem-based Learning	2	2
Development of Lightweight Design Products (L0270)	Lecture	2	2
Integrated Product Development I (L0269)	Lecture	2	2
<b>Module Responsible</b>	Prof. Dieter Krause		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Advanced Knowledge about engineering design: Fundamentals of Mechanical Engineering Design  Mechanical Engineering: Design  Advanced Mechanical Engineering Design		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	After completing the module, students are capable of: <ul style="list-style-type: none"> <li>• explaining the functional principle of 3D-CAD-Systems, PDM- and FEM-Systems</li> <li>• describing the interaction of the different CAE-Systems in the product development process</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>	After completing the module, students are able to: <ul style="list-style-type: none"> <li>• evaluate different CAD- and PDM-Systems with regards to the desired requirements such as classification schemes and product structuring</li> <li>• design an exemplary product using CAD-,PDM- and/or FEM-Systems with shared workload</li> </ul>		
<b>Personal Competence</b>	After completing the module, students are able to: <ul style="list-style-type: none"> <li>• To develop a project plan and allocate work appropriate work packages in the framework of group discussions</li> <li>• Present project results as a team for instance in a presentation</li> </ul>		
<i>Social Competence</i>			
<i>Autonomy</i>	Students are capable of: <ul style="list-style-type: none"> <li>• independently adapt to a CAE-Tool and complete a given practical task with it</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6

<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Practical Introduction in the used software systems (Creo, Windchill, Hyperworks)</li> <li>• Team formation, allocation of tasks and generation of a project plan</li> <li>• Collective creation of one product out of CAD models supported by FEM calculations and PDM system</li> <li>• Manufacturing of selected parts using 3D printer</li> <li>• Presentation of results</li> </ul> <p><b>Description</b></p> <p>Part of the module is a project based team orientated practical course using the PBL method. In this course, students learn the handling of modern CAD, PDM and FEM systems (Creo, Windchill and Hyperworks). After a short introduction in the applied software systems, students work in teams on a task during the semester. The aim is the development of one product out of several CAD parts models using a PDM system including FEM calculations of selected parts and 3D printing of parts. The developed product must be presented in a joint presentation.</p>

**Specialization Theoretical Mechanical Engineering**

The focus of the specialization "Theoretical Mechanical Engineering" lies on theory-method-oriented content and principles as well as intensive scientific thinking training. The students enter a wide-open field of work, especially in the area of mechanical and automotive engineering, biotechnology and medical technology, power engineering, aerospace engineering, shipbuilding, automation technology, materials science and related fields.

Module M1320: Simulation and Design of Mechatronic Systems			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Simulation and Design of Mechatronic Systems (L1822)	Lecture	2	2
Simulation and Design of Mechatronic Systems (L1823)	Recitation Section (large)	1	2
Simulation and Design of Mechatronic Systems (L1824)	Practical Course	1	2
<b>Module Responsible</b>	Prof. Uwe Weltin		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of mechanics, control theory and electrical engineering		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to describe methods and calculations for design, modeling, simulation and optimization of mechatronic systems.</p> <p><i>Skills</i> Students are able to apply modern algorithms for modeling of mechatronic systems. They can identify, simulate and design simple systems and implement those in laboratory conditions.</p>		
<b>Personal Competence</b>	<p><i>Social Competence</i> Students are able to work goal-oriented in small mixed groups and present results to target groups.</p> <p><i>Autonomy</i> Students are able to recognize and improve knowledge deficits independently.</p> <p>With instructor assistance, students are able to evaluate their own knowledge level and define a further course of study.</p>

## Thesis

The work at the Bechelo thesis should show that the nominee or candidate is able to work on a problem from her or his field independently with scientific methods within an intended term.

Module M-001: Bachelor Thesis				
Courses				
Title	Typ	Hrs/wk	CP	
<b>Module Responsible</b>	Professoren der TUHH			
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §21 (1):</li> </ul> <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>			
<b>Recommended Previous Knowledge</b>				
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods).</li> <li>On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise.</li> <li>The students are able to outline the state of research on a selected issue in their subject area.</li> </ul>			
<b>Skills</b>	<ul style="list-style-type: none"> <li>The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems.</li> <li>With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.</li> <li>The students can take up a critical position on the findings of their own research work from a specialized perspective.</li> </ul>			
<b>Personal Competence</b> <i>Social Competence</i>	<ul style="list-style-type: none"> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly.</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 360, Study Time in Lecture 0			
<b>Credit points</b>	12			
<b>Examination</b>	Thesis			
<b>Examination duration and scale</b>	According to General Regulations			
<b>Assignment for the Following Curricula</b>	General Engineering Science (German program, 7 semester): Thesis: Compulsory Civil- and Environmental Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Energy and Environmental Engineering: Thesis: Compulsory General Engineering Science (English program, 7 semester): Thesis: Compulsory Computational Science and Engineering: Thesis: Compulsory Logistics and Mobility: Thesis: Compulsory Mechanical Engineering: Thesis: Compulsory Mechatronics: Thesis: Compulsory Naval Architecture: Thesis: Compulsory Technomathematics: Thesis: Compulsory Teilstudiengang Lehramt Elektrotechnik-Informationstechnik: Thesis: Compulsory Teilstudiengang Lehramt Metalltechnik: Thesis: Compulsory Process Engineering: Thesis: Compulsory
