Module M2063: Introduction to Optimal and Model Predictive Control	127
Thesis	129
Module M-001: Bachelor Thesis	129

Program description

Content

Today one can find mechanical engineering in practically all industrially made goods of everyday life like cars, electronic devices or tools. Mechanical engineering incorporates technologies and develops market ready products from basic developments. Accordingly the field of activity of mechanical engineers is wide: Planning and calculation of plants, devices and machines, selection and development of materials, design of mechanical devices taking into account economic manufacturing and planning of production plants are examples. Developments in micro system technology, mechatronics and microelectronics extended the field of work during the last years. In addition, subjects outside the field of technology become more and more important for engineers.

The aim of the mechanical engineering programs at TUHH (bachelor and master) is to successfully prepare young people for their career start in this wide and always varying field. Mechanical engineers work in industry, medium-sized companies, public facilities, colleges and engineer's offices. Their activities can include various areas like research, development, production, project management, distribution, marketing and quality assurance.

The variety of applications within this occupation demands a high degree of specialization. Consequently, the professional training of mechanical engineers must balance the wide range of knowledge to be acquired (to offer diverse applications in the future) and the profoundness of training (for up-to-date technical competences). In the course of the consecutive bachelor's and master's program in mechanical engineering at the TUHH, the wide range of knowledge is taught mostly during the bachelor's program while specific skills are developed during the master's program. In any case, a profound understanding of the basics as well as a proficiency in common methods are part of the education. The course of study leading to the "Bachelor of Science" degree in mechanical engineering is designed with this aspiration. The fundamentals necessary to solve tasks in mechanical engineering are taught. Additionally, skills in an area of focus are taught during the bachelor's degree course. The degree qualifies students to work professionally in typical fields of mechanical engineering:

- Product development and production (production technologies, materials, lightweight design),
- Aircraft systems engineering (aircraft systems, simulation product development),
- Energy systems (thermal power plants, piston engines),
- Mechatronics (simulation, semiconductor technology),
- Biomechanics (medicine, implants),
- Materials in engineering sciences (materials sciences, structural materials)

In reality, the transitions between the individual fields of mechanical engineering are blurred. The listed fields of application can be further pursued on in one of the master's programs in mechanical engineering.

In addition to the technical basics, an education in non-technical areas such as business administration, patent law, humanities as well as law and philosophy is pursued that fulfills the demands made on modern day engineers.

Career prospects

The courses' graduates are able to work responsibly and proficiently as mechanical engineers. According to the laws of the states of the Federal Republic of Germany, they may use the professional title engineer. Possible employers are for example manufacturing companies in the mechanical engineering sector as well as engineering and planning offices. The degree allows for further studies in a masters' program, e.g. the consecutive programs corresponding to the areas of focus.

Learning target

The education objective of this bachelor's program is to develop the skills to select and combine basic methods and techniques to carry out technical tasks in the field of mechanical engineering and more specifically in the chosen area of focus.

Knowledge

- The students are able to name and describe the mathematical and scientific fundamentals and methods of the engineering sciences.
- The students are able to explain the fundamentals and methods of mechanical engineering and to give a summary of their field of studies.
- The students are able to explain in detail the fundamentals, methods, and areas of application of the individual areas of mechanical engineering.
- The students are able to reflect the fundamentals and methods of mechanical engineering and to give a summary of the relevant social, ethical, ecological, and economical boundary conditions of their field of studies.
- Knowledge in the areas of focus:
 - Biomechanics: The students are able to describe different types of implants and large-scale equipment for diagnosis and therapy and to explain their workings.
 - Energy Systems: The students are able to explain technologies for the conversion, distribution, and use of energy.
 - Aircraft Systems Engineering: The Students are able to explain methods of systems engineering in relation to aircraft design and production.
 - Materials in Engineering Sciences: The students are able to explain characteristics of engineering materials, particularly of metals, ceramics, and structural materials.
 - Mechatronics: The students are able to explain mechatronic systems and their function from the perspectives of mechanical and electrical engineering.
 - Product Development and Production: The Students are able to explain all steps of the product development process.
 - Theoretical Mechanical Engineering: The students are able to describe the problems of mechanical engineering based on theoretical fundamentals.

Skills

- The students are able to apply their knowledge about mathematical and scientific fundamentals and methods of engineering to simple theoretical and practical problems and to develop solutions.
- The Students are able to map typical detailed theoretical as well as practical mechanical engineering problems (e.g. dimensioning of machine parts such as shafts and bearings, calculation of energy flows) to their knowledge of fundamentals. They are able to analyze these problems methodically and based on fundamentals and to find and implement appropriate solution methods. They are able to document the chosen solution method adequately in writing.
- The students are able to map practical, rather general mechanical engineering problems (e.g. design of devices) to sub-problems from their or other relevant fields, to analyze them methodically and based on fundamentals and to find and implement appropriate solution methods. They are able to present their solution to an audience in a clearly structured manner.
- The students are able to handle practical engineering problems from research independently by applying appropriate methods, to document their chosen approach and to present it in front of an expert audience.

- skills in the area of focus:
 - Biomechanics: The students are able to analyze medical equipment and implants by applying scientific methods
 - Energy Systems: The Students are able to analyze processes such as combustion systems or recuperators by applying scientific methods.
 - Aircraft System Engineering: The students are able to apply the standard methods of aircraft design and production.
 - Materials of Engineering Sciences: The students are able to apply methods of mechanical engineering to the design and analysis of engineering materials.
 - Mechatronics: The students are able to analyze mechatronic systems and their functions under consideration of aspects of electrical and mechanical engineering.
 - Product Development and Production: The students are able to apply standard methods to the design of production processes.
 - Theoretical Mechanical Engineering: The students are able to simulate mechanical and energy systems.

Social competency

- The students are able to present the approach and outcome of their work comprehensibly in writing as well as orally.
- The students are able to communicate with experts and laypersons about subject matters and problems of mechanical engineering. They are able to react appropriately to enquiries, complements, and comments.
- The students are able to work in groups. They are able to define, distribute, and integrate subtasks. They are able to reach agreements in terms of time and to interact socially.

Independence

- The students are able to obtain necessary specialist information and to put it into the context of their knowledge.
- The students are able to assess their competences realistically and to compensate for shortcomings independently.
- The students are able to acquire knowledge and skills of topic areas and problems in a self-organized and self-motivated manner (lifelong learning in engineering).

Program structure

The course of studies consists of the core qualification in the extent of 150 credit points, a specialization in the extent of 18 credit points and the final work intended in the sixth semester in the extent of 12 credit points.

Specializations are: Energy technology, airplane-system technology, materials in the engineer's sciences, mechatronics, product development and production, as well as theoretical mechanical engineering.

Core Qualification

Within this block "Kernqualifikation" of the Bachelor of Science program the students get the basics knowledge, basic professional skills and methods as a base for the further development of their competence up the ability to work qualified and responsible and to apply their skills on the job. Scientific principle-base education in mathematics and the basics of engineering science are the essential topics of this block. First field applications, basics in business administration and nontechnical complementary courses are an important complement to these fields.

Module M0577: Non-technical Courses for Bachelors

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i>	<p>The Non-technical Academic Programms (NTA)</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p>Specialized Competence (Knowledge)</p> <p>Students can</p> <ul style="list-style-type: none"> • locate selected specialized areas with the relevant non-technical mother discipline, • outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area, • different specialist disciplines relate to their own discipline and differentiate it as well as make connections, • sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity, • Can communicate in a foreign language in a manner appropriate to the subject.
<i>Skills</i>	<p>Professional Competence (Skills)</p> <p>In selected sub-areas students can</p>

	<ul style="list-style-type: none"> • apply basic methods of the said scientific disciplines, • question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline, • to handle simple questions in aforementioned scientific disciplines in a successful manner, • justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.
Personal Competence <i>Social Competence</i>	Personal Competences (Social Skills) Students will be able <ul style="list-style-type: none"> • to learn to collaborate in different manner, • to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, • to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), • to explain nontechnical items to auditorium with technical background knowledge.
<i>Autonomy</i>	Personal Competences (Self-reliance) Students are able in selected areas <ul style="list-style-type: none"> • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0850: Mathematics I				
Courses				
Title	Typ		Hrs/wk	CP
Mathematics I (L2970)	Lecture		4	4
Mathematics I (L2971)	Recitation Section (large)		2	2
Mathematics I (L2972)	Recitation Section (small)		2	2
Module Responsible	Prof. Anusch Taraz			
Admission Requirements	None			
Recommended Previous Knowledge	School mathematics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can reproduce them. <i>Skills</i> <ul style="list-style-type: none"> Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are able to work together in teams. They are capable to use mathematics as a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. <i>Autonomy</i> <ul style="list-style-type: none"> Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.

Course L2686: Computer Science for Engineers - Introduction and Overview	
Typ	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Görschwin Fey
Language	DE/EN
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M1802: Engineering Mechanics I (Stereostatics)			
Courses			
Title	Typ	Hrs/wk	CP
Engineering Mechanics I (Statics) (L1001)	Lecture	2	3
Engineering Mechanics I (Statics) (L1003)	Recitation Section (large)	1	1
Engineering Mechanics I (Statics) (L1002)	Recitation Section (small)	2	2
Module Responsible	Prof. Benedikt Kriegesmann		
Admission Requirements	None		
Recommended Previous Knowledge	Solid school knowledge in mathematics and physics.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<div>The students can</div> <ul style="list-style-type: none">describe the axiomatic procedure used in mechanical contexts;explain important steps in model design;present technical knowledge in stereostatics. <div>The students can</div> <ul style="list-style-type: none">explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;apply basic statical methods to engineering problems;estimate the reach and boundaries of statical methods and extend them to be applicable to wider problem sets.		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	The students can work in groups and support each other to overcome difficulties.		
<i>Autonomy</i>	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Data Science: Specialisation II. Application: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Computer Science in Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Integrated Building Technology: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Naval Architecture: Core Qualification: Compulsory Process Engineering: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory		

Course L1001: Engineering Mechanics I (Statics)	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Benedikt Kriegesmann
Language	DE
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Tasks in Mechanics • Modelling and model elements • Vector calculus for forces and torques • Forces and equilibrium in space • Constraints and reactions, characterization of constraint systems • Planar and spatial truss structures • Internal forces and moments for beams and frames • Center of mass, volume, area and line • Computation of center of mass by integrals, joint bodies • Friction (sliding and sticking) • Friction of ropes
Literature	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Course L1003: Engineering Mechanics I (Statics)	
Typ	Recitation Section (large)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Benedikt Kriegesmann
Language	DE
Cycle	WiSe
Content	Forces and equilibrium Constraints and reactions Frames Center of mass Friction Internal forces and moments for beams
Literature	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Course L1002: Engineering Mechanics I (Statics)	
Typ	Recitation Section (small)
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Benedikt Kriegesmann
Language	DE
Cycle	WiSe
Content	Forces and equilibrium Constraints and reactions Frames Center of mass Friction Internal forces and moments for beams
Literature	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 1. 11. Auflage, Springer (2011).

Module M1803: Engineering Mechanics II (Elastostatics)			
Courses			
Title	Type	Hrs/wk	CP
Engineering Mechanics II (Elastostatics) (L0493)	Lecture	2	2
Engineering Mechanics II (Elastostatics) (L1691)	Recitation Section (large)	2	2
Engineering Mechanics II (Elastostatics) (L0494)	Recitation Section (small)	2	2
Module Responsible	Prof. Christian Cyron		
Admission Requirements	None		
Recommended Previous Knowledge	Engineering Mechanics I, Mathematics I (basic knowledge of rigid body mechanics such as balance of linear and angular momentum, basic knowledge of linear algebra like vector-matrix calculus, basic knowledge of analysis such as differential and integral calculus)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Having accomplished this module, the students know and understand the basic concepts of continuum mechanics and elastostatics, in particular stress, strain, constitutive laws, stretching, bending, torsion, failure analysis, energy methods and stability of structures.		
<i>Skills</i>	Having accomplished this module, the students are able to - apply the fundamental concepts of mathematical and mechanical modeling and analysis to problems of their choice - apply the basic methods of elastostatics to problems of engineering, in particular in the design of mechanical structures - to educate themselves about more advanced aspects of elastostatics		
Personal Competence			
<i>Social Competence</i>	Ability to communicate complex problems in elastostatics, to work out solution to these problems together with others, and to communicate these solutions.		
<i>Autonomy</i>	Self-discipline and endurance in tackling independently complex challenges in elastostatics; ability to learn also very abstract knowledge.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Civil- and Environmental Engineering: Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Integrated Building Technology: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Orientation Studies: Core Qualification: Elective Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Process Engineering: Core Qualification: Compulsory Engineering and Management - Major in Logistics and Mobility: Core Qualification: Compulsory		

Course L0493: Engineering Mechanics II (Elastostatics)	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Christian Cyron
Language	DE
Cycle	SoSe
Content	<p>The lecture Engineering Mechanics II introduces the fundamental concepts of stress and strain and explains how these can be used to characterize and compute elastic deformations of mechanical bodies under loading. The focus of the lecture lies on:</p> <ul style="list-style-type: none"> • basis of continuum mechanics: stress, strain, constitutive laws • truss • torsion bar • beam theory: bending, moment of inertia of area, transverse shear • energy methods: Maxwell-Betti reciprocal work theorem, Castigliano's second theorem, theorem of Menabrea • strength of materials: maximum principle stress criterion, yield criteria according to Tresca and von Mises • stability of mechanical structures: Euler buckling strut
Literature	<ul style="list-style-type: none"> • Gross, D., Hauger, W., Schröder, J., Wall, W.A.: Technische Mechanik 1, Springer • Gross, D., Hauger, W., Schröder, J., Wall, W.A.: Technische Mechanik 2 Elastostatik, Springer

Module M0725: Production Engineering				
Courses				
Title	Typ	Hrs/wk	CP	
Production Engineering I (L0608)	Lecture	2	2	
Production Engineering I (L0612)	Recitation Section (large)	1	1	
Production Engineering II (L0610)	Lecture	2	2	
Production Engineering II (L0611)	Recitation Section (large)	1	1	
Module Responsible	Prof. Jan Hendrik Dege			
Admission Requirements	None			
Recommended Previous Knowledge	no course assessments required			
	internship recommended			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students are able to ... <ul style="list-style-type: none">name basic criteria for the selection of manufacturing processes.name the main groups of Manufacturing Technology.name the application areas of different manufacturing processes.name boundaries, advantages and disadvantages of the different manufacturing process.describe elements, geometric properties and kinematic variables and requirements for tools, workpiece and process.explain the essential models of manufacturing technology.			
Skills	Students are able to... <ul style="list-style-type: none">select manufacturing processes in accordance with the requirements.design manufacturing processes for simple tasks to meet the required tolerances of the component to be produced.assess components in terms of their production-oriented construction.			
Personal Competence				
Social Competence	Students are able to ... <ul style="list-style-type: none">develop solutions in a production environment with qualified personnel at technical level and represent decisions.			
Autonomy	Students are able to .. <ul style="list-style-type: none">interpret independently the manufacturing process.assess own strengths and weaknesses in general.assess their learning progress and define gaps to be improved.assess possible consequences of their actions.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Courses				
Title	Typ	Hrs/wk	CP	
Technical Thermodynamics I (L0437)	Lecture	2	4	
Technical Thermodynamics I (L0439)	Recitation Section (large)	1	1	
Technical Thermodynamics I (L0441)	Recitation Section (small)	1	1	
Module Responsible	Prof. Arne Speerforck			
Admission Requirements	None			
Recommended Previous Knowledge	Elementary knowledge in Mathematics and Mechanics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> Students are familiar with the laws of Thermodynamics. They know the relation of the kinds of energy according to 1st law of Thermodynamics and are aware about the limits of energy conversions according to 2nd law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamics related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.</p> <p><i>Skills</i> Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students can discuss in small groups and work out a solution. You can answer comprehension questions about the content that are provided in the lecture with the ClickerOnline tool "TurningPoint" after discussions with other students.</p> <p><i>Autonomy</i> Students can understand the problems posed in tasks physically. They are able to select the methods taught in the lecture and exercise to solve problems and apply them independently to different types of tasks.</p>

Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can name further concepts in analysis and linear algebra. They are able to explain them using appropriate examples. Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. They know proof strategies and can reproduce them. <i>Skills</i> <ul style="list-style-type: none"> Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> Students are able to work together in teams. They are capable to use mathematics as a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. <i>Autonomy</i> <ul style="list-style-type: none"> Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.

Advanced Mechanical Engineering Design I (L0262)	Lecture	2	2
Advanced Mechanical Engineering Design I (L0263)	Recitation Section (large)	2	1
Module Responsible	Prof. Dieter Krause		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Fundamentals of Mechanical Engineering Design Mechanics Fundamentals of Materials Science Production Engineering 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i>	After passing the module, students are able to: <ul style="list-style-type: none"> explain complex working principles and functions of machine elements and of basic elements of fluidics, explain requirements, selection criteria, application scenarios and practical examples of complex machine elements, indicate the background of dimensioning calculations. 		
<i>Skills</i>	After passing the module, students are able to: <ul style="list-style-type: none"> accomplish dimensioning calculations of covered machine elements, transfer knowledge learned in the module to new requirements and tasks (problem solving skills), recognize the content of technical drawings and schematic sketches, evaluate complex designs, technically. 		
Personal Competence <i>Social Competence</i>	<ul style="list-style-type: none"> Students are able to discuss technical information in the lecture supported by activating methods. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are able to independently deepen their acquired knowledge in exercises. Students are able to acquire additional knowledge and to recapitulate poorly understood content e.g. by using the video recordings of the lectures. 		
Workload in Hours	Independent Study Time 68, Study Time in Lecture 112

Module M0688: Technical Thermodynamics II				
Courses				
Title	Typ	Hrs/wk	CP	
Technical Thermodynamics II (L0449)	Lecture	2	4	
Technical Thermodynamics II (L0450)	Recitation Section (large)	1	1	
Technical Thermodynamics II (L0451)	Recitation Section (small)	1	1	
Module Responsible	Prof. Arne Speerforck			
Admission Requirements	None			
Recommended Previous Knowledge	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.			
Skills	Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.			
Personal Competence				
Social Competence	The students are able to discuss in small groups and develop an approach. You can answer comprehension questions about the content that are provided in the lecture with the ClickerOnline tool "TurningPoint" after discussions with other students.			
Autonomy	Students can physically understand and explain the complex problems (cycle processes, air conditioning processes, combustion processes) set in tasks. They are able to select the methods taught in the lecture and exercise to solve complex problems and apply them independently to different types of tasks.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	General Engineering Science (German program, 7 semester): Core Qualification: Compulsory Bioprocess Engineering: Core Qualification: Compulsory Chemical and Bioprocess Engineering: Core Qualification: Compulsory Energy Systems: Technical Complementary Course Core Studies: Elective Compulsory Engineering Science: Specialisation Mechanical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering: Elective Compulsory Green Technologies: Energy, Water, Climate: Core Qualification: Compulsory Mechanical Engineering: Core Qualification: Compulsory Mechatronics: Core Qualification: Compulsory Mechatronics: Specialisation Robot- and Machine-Systems: Elective Compulsory Technomathematics: Specialisation III. Differential Equations 1 (Ordinary Differential Equations) (L1033)	Recitation Section (large)	1	1	
Module Responsible	Prof. Marko Lindner			
Admission Requirements	None			
Recommended Previous Knowledge	Mathematics I + II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none">Students can name the basic concepts in the area of analysis and differential equations. They are able to explain them using appropriate examples.Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.They know proof strategies and can reproduce them.			
<i>Skills</i>	<ul style="list-style-type: none">Students can model problems in the area of analysis and differential equations with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.Students are able to discover and verify further logical connections between the concepts studied in the course.For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.			
Personal Competence <i>Social Competence</i>	<ul style="list-style-type: none">Students are able to work together in teams. They are capable to use mathematics as a common language.In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.			
<i>Autonomy</i>	<ul style="list-style-type: none">Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them.Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.			
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112

Module Responsible	Prof. Robert Seifried			
Admission Requirements	None			
Recommended Previous Knowledge	Mathematics I, II, Engineering Mechanics I (Statics). Parallel to Engineering Mechanik III the module Mathematics III should be attended.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	The students can <ul style="list-style-type: none">describe the axiomatic procedure used in mechanical contexts;explain important steps in model design;present technical knowledge in kinematics, kinetics and vibrations.			
Skills	The students can <ul style="list-style-type: none">explain the important elements of mathematical / mechanical analysis and model formation, and apply it to the context of their own problems;apply basic kinematic, kinetic and vibraton methods to engineering problems;estimate the reach and boundaries of kinematic, kinetic and vibraton methods and extend them to be applicable to wider problem sets.			
Personal Competence				
Social Competence	The students can work in groups and support each other to overcome difficulties.			
Autonomy	Students are capable of determining their own strengths and weaknesses and to organize their time and learning based on those.

Engineering Science: Elective Compulsory			

Course L1134: Engineering Mechanics III (Dynamics)	
Typ	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Robert Seifried
Language	DE
Cycle	WiSe
Content	Kinematics 1.1 Motion of a particle 1.2 Planar motion of a rigid body 1.3 Spatial motion of a rigid body 1.4 Spatial relative Kinematics 2 Kinetics 2.1 Linear momentum and change of linear momentum 2.2 Angular momentum and change of angular momentum 2.3 Kinetics of rigid bodies 2.4 Energy and balance of energy 3 Vibrations 3.1 Classification of Vibrations 3.2 Free undamped vibration 3.3 Free damped vibration 3.4 Forced vibration 4. Impact problems 5 Kinetics of gyroscopes 5.1 Free gyroscopic motion 5.2 Forced gyroscopic motion
Literature	K. Magnus, H.H. Müller-Slany: Grundlagen der Technischen Mechanik. 7. Auflage, Teubner (2009). D. Gross, W. Hauger, J. Schröder, W. Wall: Technische Mechanik 3 und 4. 11. Auflage, Springer (2011).

Course L1136: Engineering Mechanics III (Dynamics)	
Typ	Recitation Section (large)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Robert Seifried
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Course L1135: Engineering Mechanics III (Dynamics)	
Typ	Recitation Section (small)
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Robert Seifried
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M0610: Electrical Machines and Actuators			
Courses			
Title	Typ	Hrs/wk	CP
Electrical Machines and Actuators (L0293)	Lecture	3	4
Electrical Machines and Actuators (L0294)	Recitation Section (large)	2	2
Module Responsible	Prof. Thorsten Kern		
Admission Requirements	None		
Recommended Previous Knowledge	Basics of mathematics, in particular complexe numbers, integrals, differentials		
	Basics of electrical engineering and mechanical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can to draw and explain the basic principles of electric and magnetic fields.</p> <p>They can describe the function of the standard types of electric machines and present the corresponding equations and characteristic curves. For typically used drives they can explain the major parameters of the energy efficiency of the whole system from the power grid to the driven engine.</p> <p>Students are able to calculate two-dimensional electric and magnetic fields in particular ferromagnetic circuits with air gap. For this they apply the usual methods of the design auf electric machines.</p> <p>They can calulate the operational performance of electric machines from their given characteristic data and selected quantities and characteristic curves. They apply the usual equivalent circuits and graphical methods.</p>		
Knowledge			
Skills			
Personal Competence			
Social Competence	none		
Autonomy	Students are able independently to calculate electric and magnatic fields for applications. They are able to analyse independently the operational performance of electric machines from the charactersitic data and theycan calculate thereof selected quantities and characteristic curves.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Course achievement	None		
Examination	Subject theoretical and practical work		
Examination duration and scale	Design of four machines and actuators, review of design files		
Assignment for the Following Curricula	<p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Elective Compulsory</p> <p>Electrical Engineering: Core Qualification: Elective Compulsory</p> <p>Electrical Engineering and Information Technology: Core Qualification: Elective Compulsory</p> <p>Engineering Science: Specialisation Electrical Engineering: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Specialisation Energy Technology: Elective Compulsory</p> <p>Green Technologies: Energy, Water, Climate: Specialisation Maritime Technologies: Elective Compulsory</p> <p>Computer Science in Engineering: Specialisation II. Module M0680: Fluid Dynamics				
Courses				
Title	Typ		Hrs/wk	CP
Fluid Mechanics (L0454)	Lecture		3	4
Fluid Mechanics (L0455)	Recitation Section (large)		2	2
Module Responsible	Prof. Thomas Rung			
Admission Requirements	None			
Recommended Previous Knowledge	Students should have sound knowledge of engineering mathematics, engineering mechanics and thermodynamics.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students will have the required sound knowledge to explain the general principles of fluid engineering and physics of fluids. They are familiar with the similarities and differences between fluid mechanics and neighbouring subjects (thermodynamics, structural mechanics). Students can scientifically outline the rationale of flow physics using mathematical models. They are familiar with most performance analysis methods -in particular their realms and limitations- and the prediction of fluid engineering devices.			
<i>Skills</i>	Students are able to apply fluid-engineering principles and flow-physics models for the analysis of technical systems. They are able to explain physical relationships used to design fluid engineering devices. The lecture enables the student to carry out all necessary theoretical calculations for the fluid dynamic design of engineering devices on a scientific level.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss problems, present the results of their own analysis, and jointly develop solution strategies that address given technical goals.			
<i>Autonomy</i>	The students are able to develop solution strategies for complex problems self-consistent. They are able to critically analyse own results as well as external data with regards to the plausibility and reliability.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	180 min			
Assignment for the Following Curricula	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Naval Architecture: Compulsory Mechanical Engineering: Core Qualification: Compulsory Naval Architecture: Core Qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory			

Course L0454: Fluid Mechanics	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Thomas Rung
Language	DE/EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • continuum physics definition of fluids, difference to solids/structures and material properties of fluids • dimensional analysis and similitude • fluid forces and fluid statics • transport and conservation of mass, momentum & energy • fluid kinematics • technically relevant flow models for incompressible fluids <ul style="list-style-type: none"> ◦ control volume & stream tube analysis ◦ vortical flow models ◦ potential flows ◦ boundary layer flows ◦ different types of conservation equations and their realm (Navier-Stokes/Euler/Bernoulli equations) ◦ analytical solutions for Navier-Stokes systems • Analysis of internal flows (channels, pipes, open channels) and external flows, fundamentals of wing aerodynamics • turbulent flows • fundamentals of gas dynamics (1D compressible flows)
Literature	<ul style="list-style-type: none"> • the course primarily refers to / das Modul stützt sich bevorzugt auf : Munson, B.R.; Rothmayer, A.P.; Okiishi, T.H.; Huebsch, W.W.: Fundamentals of Fluid Mechanics, John Wiley & Sons. • Spurk, J.; Aksel, N.: Strömungslehre, Springer. • Schade, H.; Kunz, E.; Kameier, F.; Paschereit, C.O.: Strömungslehre, De Gruyter. • Herwig, H.: Strömungsmechanik, Springer. • Herwig, H.: Strömungsmechanik von A-Z, Vieweg.

Course L2475: Computational Structural Mechanics	
Typ	Integrated Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Christian Cyron, Dr. Kevin Linka
Language	DE
Cycle	SoSe
Content	<p>The lecture Computational Structural Mechanics extends the content of the lecture Engineering Mechanic II. It bridges the gap between the manual calculation of mechanical stress and deformation in systems with a particularly simple geometry and the efficient computer-based computation of general mechanical systems:</p> <ul style="list-style-type: none"> • Basics of linear continuum mechanics • Planar structures: plate, membrane, slab • Linientragwerke: beam, cable, truss • Weak form and Galerkin's method • Finite element method: theory and application • Principles of mechanics: principle of virtual work, virtual displacements, virtual forces
Literature	Gross, Hauger, Wriggers, "Technische Mechanik 4", Springer

Module M0833: Introduction to Control Systems				
Courses				
Title	Typ		Hrs/wk	CP
Introduction to Control Systems (L0654)	Lecture		2	4
Introduction to Control Systems (L0655)	Recitation Section (small)		2	2
Module Responsible	Prof. Timm Faulwasser			
Admission Requirements	None			
Recommended Previous Knowledge	Representation of signals and systems in time and frequency domain, Laplace transform			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus They can explain the Nyquist stability criterion and the stability margins derived from it. They can explain the role of the phase margin in analysis and synthesis of control loops They can explain the way a PID controller affects a control loop in terms of its frequency response They can explain issues arising when controllers designed in continuous time domain are implemented digitally They can apply stability analysis via the Rough-Hurwitz criterion They can map systems from the Laplace domain to the time domain and obtain a state-space description They can do pole-placement control designs for SISO systems and analyze controllability of LTI Systems <i>Skills</i> <ul style="list-style-type: none"> Students can transform models of linear dynamic systems from time to frequency domain and vice versa They can simulate and assess the behavior of systems and control loops They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks Personal Competence <i>Social Competence</i> Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs <i>Autonomy</i> Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems. They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Content	<p>The content of experiment 1:</p> <p>Accuracy testing of a delta robot: In the course of the experiment, the accuracy of a delta robot is tested through 3 tasks. The first task focuses on the online/offline programming of the robot. The second task deals with sensor calibration. In the third task, the</p>

	<p>radius of a sphere is determined using three different measurement methods (manual measurement, manual measurement with a sensor, automatic data acquisition and data processing).</p> <p>The content of experiment 3:</p> <p>The aim of the task is to enable the parallel kinematics to find objects, grasp them and place them on a static target position. For this purpose, the end effector of the kinematics is equipped with an optical sensor (camera), whose characteristics are to be defined. The measuring range of the sensor is to be identified and, based on this, a movement strategy for finding the objects is to be developed and implemented. Once the objects have been found, they are to be picked up with a magnetic gripper and transported to their destination.</p> <p>The content of experiment 4:</p> <p>The aim of the task is to enable the parallel kinematics to find objects, grab them and deposit them on a moving platform. For this purpose, the end effector of the kinematics is equipped with an optical sensor (camera), the properties of which were worked out in experiment 3. Based on this, the parallel kinematics should now be able to follow the moving platform. For this purpose, a position control must be developed and implemented. Once the controller has been appropriately configured, the objects can be placed on the moving platform.</p>

Module M0829: Foundations of Management				
Courses				
Title	Typ		Hrs/wk	CP
Introduction to Management (L0880)	Lecture		3	3
Exercise Introduction to Management (Exercise) (L0882)	Recitation Section (small)		2	3
Module Responsible	Prof. Christian Lüthje			
Admission Requirements	None			
Recommended Previous Knowledge	Basic Knowledge of Mathematics and Business			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	<p>After taking this module, students know the important basics of many different areas in Business and Management, from Planning and Organisation to Marketing and Innovation, and also to Investment and Controlling. In particular they are able to</p> <ul style="list-style-type: none"> • explain the differences between Economics and Management and the sub-disciplines in Management and to name important definitions from the field of Management • explain the most important aspects of and goals in Management and name the most important aspects of entrepreneurial projects • describe and explain basic business functions as production, procurement and sourcing, supply chain management, organization and human resource management, information management, innovation management and marketing • explain the relevance of planning and decision making in Business, esp. in situations under multiple objectives and uncertainty, and explain some basic methods from mathematical Finance • state basics from accounting and costing and selected controlling methods. 			
<i>Skills</i>	<p>Students are able to analyse business units with respect to different criteria (organization, objectives, strategies etc.) and to carry out an Entrepreneurship project in a team. In particular, they are able to</p> <ul style="list-style-type: none"> • analyse Management goals and structure them appropriately • analyse organisational and staff structures of companies • apply methods for decision making under multiple objectives, under uncertainty and under risk • analyse production and procurement systems and Business information systems • analyse and apply basic methods of marketing • select and apply basic methods from mathematical finance to predefined problems • apply basic methods from accounting, costing and controlling to predefined problems 			
Personal Competence				
<i>Social Competence</i>	<p>Students are able to</p> <ul style="list-style-type: none"> • work successfully in a team of students • to apply their knowledge from the lecture to an entrepreneurship project and write a coherent report on the project • to communicate appropriately and • to cooperate respectfully with their fellow students. 			
<i>Autonomy</i>	<p>Students are able to</p> <ul style="list-style-type: none"> • work in a team and to organize the team themselves • to write a report on their project. 			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6

Course L0882: Exercise Introduction to Management (Exercise)	
Typ	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Christian LÜthje
Language	DE
Cycle	WiSe/SoSe
Content	<p>In this exercise, students develop the knowledge and skills to understand what it means to turn an idea for a new product or service into a real business idea and to start a start-up. The students work together in weekly group exercises and develop a business idea in teams of up to five people. Finally, they present their developed business ideas in the form of a final presentation and a corresponding pitch deck.</p> <p>Why this course is essential:</p> <p>Many students develop ideas for new products or services during their studies. This exercise provides them with the tools and basic knowledge to turn these ideas into reality. In the process, students learn to work creatively, structured, and in teams.</p> <p>Content:</p> <p>In ten weekly group exercises, students work out a business idea based on the following key questions:</p> <ol style="list-style-type: none"> 1. How do you generate a relevant and viable business idea? 2. How do you develop a business model from a business idea? 3. How do you assess the market and potential customers for a specific product or service? 4. How do you develop a sales and distribution strategy? 5. How can you convince investors of a business idea and a business model to secure financing? <p>What you will learn and get:</p> <p>At the end of this exercise, you will have gained an overview of what it means to start a start-up and the necessary steps to do so. Furthermore, you will have learned to transform your theoretical knowledge into practical business ideas and business models. In the process, you will have gained skills regarding teamwork.</p>

Specialization Biomechanics

Due to the ever increasing demands on the health system of an aging population, mechanization is of great importance. Both individual implants and instruments as well as large appliances used for diagnostics and therapy, medical and engineering science staff must work increasingly close together to meet the new requirements. For engineers, this means that they can understand and influence project management, and development and research have what they learn in this specialization in addition to specific engineering fundamentals and medical and business aspects of patient care.

Module M1277: MED I: Introduction to Anatomy

Courses				
Title		Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)		Lecture	2	3
Module Responsible	Prof. Michael Morlock			
Admission Requirements	None			
Recommended Previous Knowledge	Students can listen to the lectures without any prior knowledge. Basic school knowledge of biology, chemistry / biochemistry, physics and Latin can be useful.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><div>The lectures are about microscopic anatomy, describing the microscopic structure of tissues and organs, and about macroscopic anatomy which is about organs and organ systems. The lectures also contain an introduction to cell biology, human development and to the central nervous system. The fundamentals of radiologic imaging are described as well, using projectional x-ray and cross-sectional images. The Latin terms are introduced.</div></div> <div><div>Skills</div><div>At the end of the lecture series the students are able to describe the microscopic as well as the macroscopic assembly and functions of the human body. The Latin terms are the prerequisite to understand medical literature. This knowledge is needed to understand und further develop medical devices.</div></div> <div><div></div><div>These insights in human anatomy are the fundamentals to explain the role of structure and function for the development of common diseases and their impact on the human body.</div></div> <div><div>Personal Competence</div><div><div>Social Competence</div><div>The students can participate in current discussions in biomedical research and medicine on a professional level. The Latin terms are prerequisite for communication with physicians on a professional level.</div></div><div><div>Autonomy</div><div>The lectures are an introduction to the basics of anatomy and should encourage students to improve their knowledge by themselves. Advice is given as to which further literature is suitable for this purpose. Likewise, the lecture series encourages students to recognize and think critically about biomedical problems.</div></div></div>

Module M1278: MED I: Introduction to Radiology and Radiation Therapy			
Courses			
Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Therapy The students can distinguish different types of currently used equipment with respect to its use in radiation therapy. The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine). The students can describe the patients' passage from their initial admittance through to follow-up care. Diagnostics The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US). The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques. The students can choose the right treatment method depending on the patient's clinical history and needs. The student can explain the influence of technical errors on the imaging techniques. The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.		
<i>Skills</i>	Therapy The students can distinguish curative and palliative situations and motivate why they came to that conclusion. The students can develop adequate therapy concepts and relate it to the radiation biological aspects. The students can use the therapeutic principle (effects vs adverse effects) The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning). The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology). Diagnostics The students can suggest solutions for repairs of imaging instrumentation after having done error analyses. The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.		
Personal Competence			
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.		
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.

Content	<p>The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments</p>

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Hans-Jürgen Kreienkamp
Language	DE
Cycle	WiSe
Content	
Literature	Müller-Esterl, Biochemie, Spektrum Verlag, 2010; 2. Auflage Löffler, Basiswissen Biochemie, 7. Auflage, Springer, 2008

Module M1333: BIO I: Implants and Fracture Healing				
Courses				
Title	Typ		Hrs/wk	CP
Implants and Fracture Healing (L0376)	Lecture		2	3
Module Responsible	Prof. Sara Checa Esteban			
Admission Requirements	None			
Recommended Previous Knowledge	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p>The students can describe the different ways how bones heal, and the requirements for their existence. The students can name different treatments for the spine and hollow bones under given fracture morphologies.</p> <p>The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.</p> <p>The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p> <p>The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p>

Module M1332: BIO I: Experimental Methods in Biomechanics			
Courses			
Title	Typ	Hrs/wk	CP
Experimental Methods in Biomechanics (L0377)	Lecture	2	3
Module Responsible	Dr. Gerd Huber		
Admission Requirements	None		
Recommended Previous Knowledge	It is recommended to participate in "Implantate und Frakturheilung" before attending "Experimentelle Methoden".		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The course deals with common experimental methods used in biomechanics. For each topic an overview and some basic practical knowledge is provided.</p> <ol style="list-style-type: none"> 1. Tribology 2. Optical Methods 3. Motion Analysis 4. Pressure Distribution 5. Strain Gauges 6. Pre-clinical testing 7. Specimen Preparation and Storage <p>The students can describe the different ways how bones heal, and the requirements for their existence.</p> <p>The students can name different treatments for the spine and hollow bones under given fracture morphologies.</p> <p>The students can describe different measurement techniques for forces and movements, and choose the adequate technique for a given task.</p> <p><i>Skills</i> The students can describe the basic handling of several experimental techniques used in biomechanics.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students are able to organize themselves as a group to solve simple experimental tasks together. On the one hand, the division of tasks must be organized during the experiment as well as during the short written elaboration, but on the other hand, the knowledge acquired must be available to all participants of the group afterwards. The challenge here is that the topics change quickly because fundamentally different measurement principles are taught. In addition, a strict time management is expected.</p> <p><i>Autonomy</i> Students perform simple experimental tasks in small groups or create simple sensors (e.g. strain gauges). The preceding lecture serves as a basis for these experiments. As preparation or follow-up, the theoretical knowledge has to be worked up and related to the experimental result. In particular, independent transfer performance is necessary to clarify why experimental observations can show deviations from the theoretical values and how these deviations can be compensated.</p>

Specialization Energy Systems

The aim of this specialization is to familiarize students with different technologies for energy conversion, energy distribution and energy application. Processes can be analyzed using scientific methods, as well as abstracted and modeled, and are also documented. Students can evaluate data and results and from those develop strategies for the development of innovative solutions.

Module M1022: Reciprocating Machinery

Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Reciprocating Engines and Turbomachinery - Part Reciprocating Engines (L0633)	Lecture	1	1
Fundamentals of Reciprocating Engines and Turbomachinery - Part Reciprocating Engines (L0634)	Recitation Section (large)	1	1
Internal Combustion Engines I (L0059)	Lecture	2	2
Internal Combustion Engines I (L0639)	Recitation Section (large)	1	2

Module Responsible	Prof. Christopher Friedrich Wirz
Admission Requirements	None
Recommended Previous Knowledge	Thermodynamics, Mechanics, Machine Elements
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i> <i>Skills</i>	<p>As a result of the part module „Fundamentals of Reciprocating Machinery“, the students are able to reflect fundamentals regarding power and working machinery and describe the qualitative and quantitative correlations of operating methods and efficiencies of multiple types of engines, compressors and pumps. They are able to utilize technical terms and parameters as well as aspects regarding the development of power density and efficiency, furthermore to give an overview of charging systems, fuels and emissions. The students are able to select specific types of machinery and assess design related and operational problems.</p> <p>As a result of the part module “Internal Combustion Engines I”, the students are able reflect and utilize the state-of-the-art regarding efficiency limits. In addition, they are able to utilize their knowledge of design, mechanical and thermodynamic characteristics and the approach of similarity. They are able to explain, assess and develop engines as well as charging systems. Detailed knowledge is present regarding computer-aided process design.</p> <p>The students are skilled to employ basic and detail knowledge regarding reciprocating machinery, their selection and operation. They are further able to assess, analyse and solve technical and operational problems and to perform mechanical and thermodynamic design.</p>
Personal Competence <i>Social Competence</i> <i>Autonomy</i>	<p>The students are able to communicate and cooperate in a professional environment in the field of machinery design and application.</p> <p>The widespread scope of gained knowledge enables the students to handle situations in their future profession independently and confidently.</p>

Module M0655: Computational Fluid Dynamics I				
Courses				
Title		Type	Hrs/wk	CP
Computational Fluid Dynamics I (L0235)		Lecture	2	3
Computational Fluid Dynamics I (L0419)		Recitation Section (large)	2	3
Module Responsible		Prof. Thomas Rung		
Admission Requirements		None		
Recommended Previous Knowledge		Students should have sound knowledge of engineering mathematics (series expansions, internal & vector calculus), and be familiar with the foundations of partial/ordinary differential equations. They should also be familiar with engineering fluid mechanics and thermodynamics.		
Educational Objectives		After taking part successfully, students have reached the following learning results		
Professional Competence				
<i>Knowledge</i>		Students will have the required combined knowledge of thermo-/fluid dynamics and numerical analysis to translate general principles of thermo-/fluid engineering into discrete algorithms on the basis of local (finite differences/volumes) and global (potential theory) ansatz functions. They are familiar with the similarities and differences between different discretisation and approximation concepts for investigating coupled systems of non-linear, convective partial differential equations (PDE), and explain the motivation for applying them. Students have the required background knowledge to develop, code, explain and apply numerical algorithms dedicated to the solution of thermofluid dynamic PDEs. They are familiar with most numerical methods used to predict thermofluid dynamic fields, in particular their realms and limitations.		
<i>Skills</i>		The students are able choose and apply appropriate numerical procedures that integrate the governing thermofluid dynamic PDEs in space and time. They can apply/optimize numerical analysis concepts to/for fluid dynamic applications. They can code computational algorithms in a structured way, apply these codes for parameter investigations and supplement interfaces to extract simulation data for an engineering analysis.		
Personal Competence				
<i>Social Competence</i>		The students are able to discuss problems, present the results of their own analysis, and jointly develop, implement and report on solution strategies that address given technical reference problems.		
<i>Autonomy</i>		The students can independently analyse numerical methods to solving fluid engineering problems. They are able to critically analyse own results as well as external data with regards to the plausibility and reliability.

Module M0538: Heat and Mass Transfer			
Courses			
Title	Type	Hrs/wk	CP
Heat and Mass Transfer (L0101)	Lecture	2	2
Heat and Mass Transfer (L0102)	Recitation Section (small)	2	2
Heat and Mass Transfer (L1868)	Recitation Section (large)	1	2
Module Responsible	Prof. Irina Smirnova		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge: Technical Thermodynamics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <ul style="list-style-type: none"> The students are capable of explaining qualitative and determining quantitative heat transfer in procedural apparatus (e. g. heat exchanger, chemical reactors). They are capable of distinguish and characterize different kinds of heat transfer mechanisms namely heat conduction, heat transfer and thermal radiation. The students have the ability to explain the physical basis for mass transfer in detail and to describe mass transfer qualitative and quantitative by using suitable mass transfer theories. They are able to depict the analogy between heat- and mass transfer and to describe complex linked processes in detail. <i>Skills</i> <ul style="list-style-type: none"> The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balance the corresponding energy and mass flow, respectively. They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calculate the corresponding heat flows. Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus. They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for the description and design of apparatus (e.g. extraction column, rectification column). In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application considering their advantages and disadvantages, respectively. In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus. The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the courses thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems. Personal Competence <i>Social Competence</i> <ul style="list-style-type: none"> The students are capable to work on subject-specific challenges in teams and to present the results orally in a reasonable manner to tutors and other students. <i>Autonomy</i> <ul style="list-style-type: none"> The students are able to find and evaluate necessary information from suitable sources They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker-system, exam-like assignments) and on this basis they can control their learning processes.

Module M2064: Introduction to Machine Learning for Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Introduction to Machine Learning for Engineering (L3333)	Lecture		2	4
Introduction to Machine Learning for Engineering (L3332)	Recitation Section (large)		1	2
Module Responsible	Prof. Timm Faulwasser			
Admission Requirements	None			
Recommended Previous Knowledge	Linear algebra, differentiation of vector-valued functions, basic programming			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students learn basic techniques of Machine Learning. They he basic of selected ML techniques such as KNN, support vector machines, Gaussian process and kernel regression. They are also familiar with neural network and their training			
<i>Skills</i>	The students are able to decide whether given learning tasks from engineering are classification or regression problems. They know essential differences between unsupervised, supervised and reinforcement learning. They can formalize nonlinear programming problems via KKT conditions. They can apply basic concepts from statistics and stochastics. They can apply the following to simple problems: KNN, support vector machines, Gaussian process and kernel regression and artificial neural networks.			
Personal Competence				
<i>Social Competence</i>	The students can collaborate across boundaries of disciplines and in international teams.			
<i>Autonomy</i>	The student can formulate questions and problems with respect to complex issues. They can program selected techniques on their own in Python.

Specialization Aircraft Systems Engineering

The specialization "Aircraft Systems" prepares students for a variety of careers in the aviation industry, and neighboring fields. Students will gain knowledge on how to deal with the methods of systems engineering, as well as the use of modern, computer-aided techniques for system design, analysis and evaluation. In addition, the necessary competencies of aeronautical engineering in aircraft systems, cabin systems, pneumatic conveying systems and aircraft design and flight physics and materials technology.

Module M0599: Digital Product Development and Lightweight Design

Courses

Title	Typ	Hrs/wk	CP
CAE-Team Project (L0271)	Project-/problem-based Learning	2	2
Digital Product Development (L0269)	Lecture	2	2
Development of Lightweight Design Products (L0270)	Lecture	2	2
Module Responsible	Prof. Dieter Krause		
Admission Requirements	None		
Recommended Previous Knowledge	Advanced Knowledge about engineering design: Fundamentals of Mechanical Engineering Design Mechanical Engineering: Design Advanced Mechanical Engineering Design		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i>	After completing the module, students are capable of: <ul style="list-style-type: none"> explaining the functional principle of 3D-CAD-Systems, PDM- and FEM-Systems describing the interaction of the different CAE-Systems in the product development process 		
Personal Competence <i>Social Competence</i> <i>Autonomy</i>	After completing the module, students are able to: <ul style="list-style-type: none"> evaluate different CAD- and PDM-Systems with regards to the desired requirements such as classification schemes and product structuring design an exemplary product using CAD-,PDM- and/or FEM-Systems with shared workload After completing the module, students are able to: <ul style="list-style-type: none"> To develop a project plan and allocate work appropriate work packages in the framework of group discussions Present project results as a team for instance in a presentation Students are capable of: <ul style="list-style-type: none"> independently adapt to a CAE-Tool and complete a given practical task with it

In this course, students learn the handling of modern CAD, PDM and FEM systems (Creo, Windchill and Hyperworks). After a short introduction in the applied software systems, students work in teams on a task during the semester. The aim is the development of one product out of several CAD parts models using a PDM system including FEM calculations of selected parts and 3D printing of parts. The developed product must be presented in a joint presentation.</p>

Module M0767: Aeronautical Systems			
Courses			
Title	Type	Hrs/wk	CP
Fundamentals of Aircraft Systems (L0741)	Lecture	2	2
Fundamentals of Aircraft Systems (L0742)	Recitation Section (small)	1	1
Air Transportation Systems (L0591)	Lecture	2	2
Air Transportation Systems (L0816)	Recitation Section (large)	1	1
Module Responsible	Prof. Frank Thielecke		
Admission Requirements	None		
Recommended Previous Knowledge	Basics of mathematics, mechanics and thermodynamics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students get a basic understanding of the structure and design of an aircraft, as well as an overview of the systems inside an aircraft. In addition, a basic knowledge of the relationships, the key parameters, roles and ways of working in different subsystems in the air transport is acquired.</p> <p><i>Skills</i> Due to the learned cross-system thinking students can gain a deeper understanding of different system concepts and their technical system implementation. In addition, they can apply the learned methods for the design and assessment of subsystems of the air transportation system in the context of the overall system.</p> <p>Personal Competence</p> <p><i>Social Competence</i> Students are made aware of interdisciplinary communication in groups.</p> <p><i>Autonomy</i> Students are able to independently analyze different system concepts and their technical implementation as well as to think system oriented.</p>

Literature	Michael Schäfer, Computational Engineering - Introduction to Numerical Methods, Springer.

Specialization Materials in Engineering Sciences

In the specialization "materials in engineering", students work mainly with construction materials, modeling materials and nanotechnology and hybrid materials.

Module M1901: Materials Science Laboratory

Courses			
Title	Typ	Hrs/wk	CP
Companion Lecture for Materials Science Laboratory (L1088)	Lecture	2	2
Material Science Laboratory (L1235)	Practical Course	4	4
Module Responsible	Prof. Franziska Lissel		
Admission Requirements	None		
Recommended Previous Knowledge	none		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students are able to give a summary of the technical details of experiments in the area of materials sciences and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.</p> <p><i>Skills</i> The students can transfer their fundamental knowledge on material sciences to the process of solving practical problems. They identify and overcome typical problems during the realization of experiments in the context of material sciences.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> Students are able to cooperate in small groups in order to conduct experiments in the context of materials sciences. They are able to effectively present and explain their results alone or in groups in front of a qualified audience.</p> <p><i>Autonomy</i> Students are capable of solving problems in the context of materials sciences using provided literature. They are able to fill gaps in as well as extent their knowledge using the literature and other sources provided by the supervisor.</p>

Module M1910: Materials Engineering: Materials Selection, Processing and Modelling				
Courses				
Title	Type		Hrs/wk	CP
Materials and Process Modeling (L2862)	Lecture		3	3
Materials Selection and Processing (L2861)	Lecture		3	3
Module Responsible	Prof. Norbert Huber			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of mathematics (differential equations, integration), materials science (classes of materials, structure, properties, tensile test) and engineering mechanics (stress, strain, elasticity, deformation).			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p>The module deals with the production and properties of engineering materials. Particular attention is paid to material selection, material processing, the associated microstructure and the achievable mechanical properties. In conjunction with the costs, these are decisive for the applicability and economic efficiency. Metallic materials are in the foreground. Ceramics and polymers are also covered in the sense of a broad range of available materials.</p> <p>In parallel to the material-technological consideration, the modeling of material behavior by means of phenomenological material laws for plasticity under monotonic and cyclic loading is worked out. In addition to the evaluation of component behavior, plasticity also plays a major role in manufacturing processes and thus provides the basis for process simulation. Process models and simulation methods for selected manufacturing processes, such as rolling or forming, are presented for this topic area.</p> <p>Students are able to</p> <ul style="list-style-type: none"> analyze the material behavior of metallic materials for general load histories with respect to elasticity and plasticity as well as the associated velocity-dependent material behavior and describe it with corresponding material laws to relate the deformation behavior to the underlying microstructural mechanisms to assess how processing procedures affect the chain microstructure - process - properties understand how the mechanical properties of metallic materials can be tailored by the processing due to microstructural design <p>Students are able to</p> <ul style="list-style-type: none"> actively enrich and shape the course by contributing to the discussion. develop solutions to given problems and explain them in English in the plenum and discuss them with their fellow students. <p>Students are able to,</p> <ul style="list-style-type: none"> assess their own strengths and weaknesses concretely assess their respective learning status and define further work steps on this basis abstract given tasks and then apply them to new problems by transferring the taught material.

Module M0672: Signals and Systems			
Courses			
Title	Typ	Hrs/wk	CP
Signals and Systems (L0432)	Lecture	3	4
Signals and Systems (L0433)	Recitation Section (small)	2	2
Module Responsible	Prof. Gerhard Bauch		
Admission Requirements	None		
Recommended Previous Knowledge	<p>Mathematics 1-3</p> <p>The modul is an introduction to the theory of signals and systems. Good knowledge in maths as covered by the moduls Mathematik 1-3 is expected. Further experience with spectral transformations (Fourier series, Fourier transform, Laplace transform) is useful but not required.</p>		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students are able to classify and describe signals and linear time-invariant (LTI) systems using methods of signal and system theory. They are able to apply the fundamental transformations of continuous-time and discrete-time signals and systems. They can describe and analyse deterministic signals and systems mathematically in both time and image domain. In particular, they understand the effects in time domain and image domain which are caused by the transition of a continuous-time signal to a discrete-time signal.</p> <p>The students are familiar with the contents of lecture and tutorials. They can explain and apply them to new problems.</p> <p><i>Skills</i> The students are able to describe and analyse deterministic signals and linear time-invariant systems using methods of signal and system theory. They can analyse and design basic systems regarding important properties such as magnitude and phase response, stability, linearity etc.. They can assess the impact of LTI systems on the signal properties in time and frequency domain.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Specialization Product Development and Production

The specialization "Product Development and Production" maps the product creation process from strategic product planning, through the systematic and methodical development of products, including concept development, design, material selection, simulation and test to production, the planning and control and the use of modern manufacturing processes, to high-performance materials.

Module M0726: Production Technology

Courses

Title	Typ	Hrs/wk	CP
Fundamentals of Machine Tools (L0689)	Lecture	2	2
Fundamentals of Machine Tools (L1992)	Recitation Section (large)	1	1
Forming and Cutting Technology (L0613)	Lecture	2	2
Forming and Cutting Technology (L0614)	Recitation Section (large)	1	1

Module Responsible	Prof. Jan Hendrik Dege
Admission Requirements	None
Recommended Previous Knowledge	without major course assessment internship recommended Previous knowledge in mathematics, mechanics and electrical engineering
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence <i>Knowledge</i> <i>Skills</i>	Students are able to ... <ul style="list-style-type: none"> • explain the basics of chip formation and mechanisms and models of machining. • explain methods and parameters for design and analysis of metal forming, machining processes and tools. • explain technical concepts of machine tool building and give an overview on trends in the machine tool industry. • explain types, constructions and functions of CNC-machines and give an overview on multi-machine systems. • explain equipment components. Students are able to... <ul style="list-style-type: none"> • select tool geometry, cutting materials, process parameters and appropriate measuring technique in accordance with the requirements. • estimate occurring forces and temperatures during chip formation. • select appropriate machine tools for machining and create NC programs for turning and milling. • assess the quality of a machine tools and to detect weak points.
Personal Competence <i>Social Competence</i> <i>Autonomy</i>	Students are able to ... <ul style="list-style-type: none"> • develop solutions in a production environment with qualified personnel at technical level and represent decisions. Students are able to ... <ul style="list-style-type: none"> • interpret independently cutting processes. • create independently NC programs. • select independently machine tools by reference to appropriate requirements. • assess own strengths and weaknesses in general. • assess their learning progress and define gaps to be improved. • assess possible consequences of their actions.

In this course, students learn the handling of modern CAD, PDM and FEM systems (Creo, Windchill and Hyperworks). After a short introduction in the applied software systems, students work in teams on a task during the semester. The aim is the development of one product out of several CAD parts models using a PDM system including FEM calculations of selected parts and 3D printing of parts. The developed product must be presented in a joint presentation.</p>

Specialization Theoretical Mechanical Engineering

The focus of the specialization "Theoretical Mechanical Engineering" lies on theory-method-oriented content and principles as well as intensive scientific thinking training. The students enter a wide-open field of work, especially in the area of mechanical and automotive engineering, biotechnology and medical technology, power engineering, aerospace engineering, shipbuilding, automation technology, materials science and related fields.

Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	<p>Main features of complex analysis</p> <ul style="list-style-type: none"> • Functions of one complex variable • Complex differentiation • Conformal mappings • Complex integration • Cauchy's integral theorem • Cauchy's integral formula • Taylor and Laurent series expansion • Singularities and residuals • Integral transformations: Fourier and Laplace transformation
Literature	<ul style="list-style-type: none"> • http://www.math.uni-hamburg.de/teaching/export/tuhh/index.html

Course L1041: Complex Functions	
Typ	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dr. Hanna Peywand Kiani
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1042: Complex Functions	
Typ	Recitation Section (large)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Dozenten des Fachbereiches Mathematik der UHH
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Module M2027: Modeling, Simulation and Optimization (EN)			
Courses			
Title	Typ	Hrs/wk	CP
Modeling, Simulation and Optimization (EN) (L2446)	Integrated Lecture	4	6
Module Responsible	Prof. Benedikt Kriegesmann		
Admission Requirements	None		
Recommended Previous Knowledge	Sound knowledge of engineering mathematics, engineering mechanics and fluid mechanics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students will have an overview of various technical problems and the differential equations, which describe them. Students will give an overview of different solution approaches and for which kind of problems they can be used for.</p> <p><i>Skills</i> Students are able to solve different technical problems with the introduced discretization methods.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students are able to discuss problems and jointly develop solution strategies.</p> <p><i>Autonomy</i> The students are able to develop solution strategies for complex problems self-consistent and critically analyse results.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	<p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Advanced Materials: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Aircraft Systems Engineering: Elective Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Elective Compulsory</p> <p>Engineering Science: Specialisation Advanced Materials: Compulsory</p> <p>Engineering Science: Specialisation Biomedical Engineering: Compulsory</p> <p>Engineering Science: Specialisation Mechanical Engineering and Management: Compulsory</p> <p>Engineering Science: Specialisation Mechatronics: Elective Compulsory</p> <p>Engineering Science: Specialisation Mechanical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Mechatronics: Elective Compulsory</p> <p>Mechanical Engineering: Specialisation Aircraft Systems Engineering: Compulsory</p> <p>Technomathematics: Specialisation III. Engineering Science: Elective Compulsory</p>		

Course L2446: Modeling, Simulation and Optimization (EN)	
Typ	Integrated Lecture
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Benedikt Kriegesmann, Prof. Alexander Düster, Prof. Robert Seifried, Prof. Thomas Rung
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Partial Differential Equations in technical problems • Overview of modelling approaches • Finite Approximation Methods - Finite Differences / Elements / Volumes • Introduction to the Discrete Element Method • Numerical methods for time dependent problems • Gradient-based optimization
Literature	Michael Schäfer, Computational Engineering - Introduction to Numerical Methods, Springer.

Module M2064: Introduction to Machine Learning for Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Introduction to Machine Learning for Engineering (L3333)	Lecture		2	4
Introduction to Machine Learning for Engineering (L3332)	Recitation Section (large)		1	2
Module Responsible	Prof. Timm Faulwasser			
Admission Requirements	None			
Recommended Previous Knowledge	Linear algebra, differentiation of vector-valued functions, basic programming			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	The students learn basic techniques of Machine Learning. They he basic of selected ML techniques such as KNN, support vector machines, Gaussian process and kernel regression. They are also familiar with neural network and their training			
<i>Skills</i>	The students are able to decide whether given learning tasks from engineering are classification or regression problems. They know essential differences between unsupervised, supervised and reinforcement learning. They can formalize nonlinear programming problems via KKT conditions. They can apply basic concepts from statistics and stochastics. They can apply the following to simple problems: KNN, support vector machines, Gaussian process and kernel regression and artificial neural networks.			
Personal Competence				
<i>Social Competence</i>	The students can collaborate across boundaries of disciplines and in international teams.			
<i>Autonomy</i>	The student can formulate questions and problems with respect to complex issues. They can program selected techniques on their own in Python.			
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	No	20 %	Midterm	
Examination	Written exam			
Examination duration and scale	90 min			
Assignment for the Following Curricula	General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Theoretical Mechanical Engineering: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Mechatronics: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Electrical Engineering: Elective Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Energy Systems: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Electrical Engineering: Core Qualification: Elective Compulsory Electrical Engineering and Information Technology: Core Qualification: Elective Compulsory Electrical Engineering and Information Technology: Core Qualification: Elective Compulsory Engineering Science: Specialisation Mechanical Engineering: Elective Compulsory Engineering Science: Specialisation Mechatronics: Elective Compulsory Engineering Science: Specialisation Mechanical Engineering and Management: Elective Compulsory Engineering Science: Specialisation Electrical Engineering: Elective Compulsory Green Technologies: Energy, Water, Climate: Specialisation Energy Technology: Elective Compulsory Mechanical Engineering: Specialisation Theoretical Mechanical Engineering: Elective Compulsory Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory			

Course L3333: Introduction to Machine Learning for Engineering	
Typ	Lecture

Module M2063: Introduction to Optimal and Model Predictive Control				
Courses				
Title		Typ	Hrs/wk	CP
Introduction to Optimal and Model Predictive Control (L3331)		Lecture	2	4
Introduction to Optimal and Model Predictive Control (L3330)		Recitation Section (small)	1	2
Module Responsible	Prof. Timm Faulwasser			
Admission Requirements	None			
Recommended Previous Knowledge	Linear algebra, differentiation of vector-valued functions, basic programming, if possible: basic of control engineering			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><div>In the lecture, students learn the basic techniques of optimal and predictive control for linear systems. In particular, the linear quadratic state controller and the basics of dynamic programming are discussed. The basic idea of model predictive control for linear systems with quadratic cost functionals is also discussed, and the question of stability is discussed. The students also learn how the problems that arise can be solved using numerical algorithms.</div><div>Skills</div><div>The students are able to design simple optimal state feedback for linear systems. You can formulate discrete-time optimal control problems and solve them using numerical methods. They can formulate and solve dynamic programming recursion for linear systems. The students can formulate simple MPC controllers and implement numerical ones. They can also make statements about the nominal stability of the designed control closed-loop.</div><div>Personal Competence</div><div><div>Social Competence</div><div>The students can collaborate across boundaries of disciplines and in international teams.</div><div>Autonomy</div><div>The student can formulate questions and problems with respect to complex issues. They can program selected techniques on their own in Matlab or Python.</div></div></div>

Literature	Will be announced at the beginning of the course.

Thesis

The work at the Bachelor thesis should show that the nominee or candidate is able to work on a problem from her or his field independently with scientific methods within an intended term.

Module M-001: Bachelor Thesis				
Courses				
Title	Typ		Hrs/wk	CP
Module Responsible	Professoren der TUHH			
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §21 (1): <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>			
Recommended Previous Knowledge				
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	<ul style="list-style-type: none"> The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. 			
Skills	<ul style="list-style-type: none"> The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 			
Personal Competence <i>Social Competence</i>	<ul style="list-style-type: none"> Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 			
<i>Autonomy</i>	<ul style="list-style-type: none"> The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own. 			
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
