

Module Manual

Master of Science

Biomedical Engineering

Cohort: Winter Term 2017

Updated: 15th January 2019

Table of Contents

Table of Contents	2
Program description	5
Core qualification	7
Module M0523: Business & Management	7
Module M0524: Nontechnical Elective Complementary Courses for Master	8
Module M1173: Applied Statistics	11
Module M0811: Medical Imaging Systems	14
Module M1179: Medical Basics and Pathology	16
Module M1164: Practical Course Product Development, Materials and Production	19
Module M1180: Case Studie and Clinical Internship	21
Module M1214: Study work	23
Specialization Implants and Endoprostheses	24
Module M0623: Intelligent Systems in Medicine	24
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	27
Module M1230: Selected Topics of Biomedical Engineering - Option A (6 LP)	31
Module M1241: Selected Topics of Biomedical Engineering - Option B (12 LP)	40
Module M1334: BIO II: Biomaterials	49
Module M0746: Microsystem Engineering	51
Module M0751: Vibration Theory	54
Module M0768: Microsystems Technology in Theory and Practice	56
Module M0808: Finite Elements Methods	59
Module M0814: Technology Management	61
Module M0846: Control Systems Theory and Design	63
Module M0867: Production Planning & Control and Digital Enterprise	66
Module M1150: Continuum Mechanics	69
Module M0921: Electronic Circuits for Medical Applications	71
Module M1151: Material Modeling	75
Module M1199: Advanced Functional Materials	77
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	79
Module M1333: BIO I: Implants and Fracture Healing	81
Module M1342: Polymers	84
Module M0548: Bioelectromagnetics: Principles and Applications	87
Module M1335: BIO II: Artificial Joint Replacement	91
Module M0630: Robotics and Navigation in Medicine	93
Module M0634: Introduction into Medical Technology and Systems	96
Module M0752: Nonlinear Dynamics	99
Module M0761: Semiconductor Technology	101
Module M0835: Humanoid Robotics	104
Module M0838: Linear and Nonlinear System Identifikation	106
Module M0840: Optimal and Robust Control	108
Module M0845: Feedback Control in Medical Technology	111
Module M1143: Mechanical Design Methodology	113
Module M0855: Marketing (Sales and Services / Innovation Marketing)	116
Module M0938: Bioprocess Engineering - Fundamentals	119
Module M1280: MED II: Introduction to Physiology	123
Module M1277: MED I: Introduction to Anatomy	125
Module M1332: BIO I: Experimental Methods in Biomechanics	127
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	129
Module M0632: Regenerative Medicine	132
Module M0832: Advanced Topics in Control	134
Specialization Artificial Organs and Regenerative Medicine	137
Module M1241: Selected Topics of Biomedical Engineering - Option B (12 LP)	137
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	146
Module M1334: BIO II: Biomaterials	150
Module M1230: Selected Topics of Biomedical Engineering - Option A (6 LP)	152
Module M0751: Vibration Theory	161
Module M0814: Technology Management	163
Module M0768: Microsystems Technology in Theory and Practice	165
Module M0846: Control Systems Theory and Design	168
Module M0867: Production Planning & Control and Digital Enterprise	171
Module M1150: Continuum Mechanics	174
Module M1199: Advanced Functional Materials	176
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	178
Module M0808: Finite Elements Methods	180
Module M1342: Polymers	182
Module M1333: BIO I: Implants and Fracture Healing	185
Module M0746: Microsystem Engineering	188
Module M0623: Intelligent Systems in Medicine	191
Module M1151: Material Modeling	193
Module M0921: Electronic Circuits for Medical Applications	195
Module M0548: Bioelectromagnetics: Principles and Applications	199

Module M0630: Robotics and Navigation in Medicine	203
Module M1335: BIO II: Artificial Joint Replacement	206
Module M0634: Introduction into Medical Technology and Systems	208
Module M0752: Nonlinear Dynamics	211
Module M0761: Semiconductor Technology	213
Module M0835: Humanoid Robotics	216
Module M0838: Linear and Nonlinear System Identifikation	218
Module M0840: Optimal and Robust Control	220
Module M0855: Marketing (Sales and Services / Innovation Marketing)	223
Module M1143: Mechanical Design Methodology	226
Module M1277: MED I: Introduction to Anatomy	229
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	231
Module M1280: MED II: Introduction to Physiology	234
Module M0632: Regenerative Medicine	236
Module M1332: BIO I: Experimental Methods in Biomechanics	238
Module M0845: Feedback Control in Medical Technology	240
Module M0938: Bioprocess Engineering - Fundamentals	242
Module M1439: Lecture Tissue Engineering - Regenerative Medicine	246
Module M0832: Advanced Topics in Control	247
Specialization Management and Business Administration	250
Module M0623: Intelligent Systems in Medicine	250
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	253
Module M1230: Selected Topics of Biomedical Engineering - Option A (6 LP)	257
Module M1241: Selected Topics of Biomedical Engineering - Option B (12 LP)	266
Module M1334: BIO II: Biomaterials	275
Module M0746: Microsystem Engineering	277
Module M0751: Vibration Theory	280
Module M0768: Microsystems Technology in Theory and Practice	282
Module M0808: Finite Elements Methods	285
Module M0814: Technology Management	287
Module M0846: Control Systems Theory and Design	289
Module M0867: Production Planning & Control and Digital Enterprise	292
Module M1150: Continuum Mechanics	295
Module M0921: Electronic Circuits for Medical Applications	297
Module M1151: Material Modeling	301
Module M1199: Advanced Functional Materials	303
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	305
Module M1333: BIO I: Implants and Fracture Healing	307
Module M1342: Polymers	310
Module M0548: Bioelectromagnetics: Principles and Applications	313
Module M1335: BIO II: Artificial Joint Replacement	317
Module M0630: Robotics and Navigation in Medicine	319
Module M0634: Introduction into Medical Technology and Systems	322
Module M0752: Nonlinear Dynamics	325
Module M0761: Semiconductor Technology	327
Module M0835: Humanoid Robotics	330
Module M0838: Linear and Nonlinear System Identifikation	332
Module M0840: Optimal and Robust Control	334
Module M0845: Feedback Control in Medical Technology	337
Module M1143: Mechanical Design Methodology	339
Module M0855: Marketing (Sales and Services / Innovation Marketing)	342
Module M0938: Bioprocess Engineering - Fundamentals	345
Module M1277: MED I: Introduction to Anatomy	349
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	351
Module M1280: MED II: Introduction to Physiology	354
Module M1332: BIO I: Experimental Methods in Biomechanics	356
Module M0632: Regenerative Medicine	358
Module M0832: Advanced Topics in Control	360
Specialization Medical Technology and Control Theory	363
Module M0623: Intelligent Systems in Medicine	363
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	366
Module M1230: Selected Topics of Biomedical Engineering - Option A (6 LP)	370
Module M1241: Selected Topics of Biomedical Engineering - Option B (12 LP)	379
Module M1334: BIO II: Biomaterials	388
Module M0746: Microsystem Engineering	390
Module M0751: Vibration Theory	393
Module M0768: Microsystems Technology in Theory and Practice	395
Module M0814: Technology Management	398
Module M0846: Control Systems Theory and Design	400
Module M0867: Production Planning & Control and Digital Enterprise	403
Module M0921: Electronic Circuits for Medical Applications	406
Module M1150: Continuum Mechanics	410
Module M1151: Material Modeling	412
Module M1199: Advanced Functional Materials	414
Module M1279: MED II: Introduction to Biochemistry and Molecular Biology	416

Module M1333: BIO I: Implants and Fracture Healing	418
Module M0808: Finite Elements Methods	421
Module M1342: Polymers	423
Module M0548: Bioelectromagnetics: Principles and Applications	426
Module M1335: BIO II: Artificial Joint Replacement	430
Module M0630: Robotics and Navigation in Medicine	432
Module M0634: Introduction into Medical Technology and Systems	435
Module M0752: Nonlinear Dynamics	438
Module M0761: Semiconductor Technology	440
Module M0835: Humanoid Robotics	443
Module M0838: Linear and Nonlinear System Identifikation	445
Module M0840: Optimal and Robust Control	447
Module M0845: Feedback Control in Medical Technology	450
Module M0855: Marketing (Sales and Services / Innovation Marketing)	452
Module M1143: Mechanical Design Methodology	455
Module M0938: Bioprocess Engineering - Fundamentals	458
Module M1277: MED I: Introduction to Anatomy	462
Module M1278: MED I: Introduction to Radiology and Radiation Therapy	464
Module M1280: MED II: Introduction to Physiology	467
Module M1332: BIO I: Experimental Methods in Biomechanics	469
Module M0632: Regenerative Medicine	471
Module M0832: Advanced Topics in Control	473
Thesis	476
Module M-002: Master Thesis	476

Module Manual

Master

Biomedical Engineering

Cohort: Winter Term 2017

Updated: 15th January 2019

Program description

Content

Graduates have acquired in-depth and extensive skills in engineering, mathematics and sciences that enable them to work scientifically in the field of medical technology, medical device technology and neighboring fields. They have a critical awareness of recent knowledge of their discipline, based on which they can act responsibly in their profession and society.

Career prospects

The demands on the health care continue to rise due to aging and the increased life expectations of the population. Here, the mechanization is of great importance. This applies to both individual implants and instruments as well as to large appliances used for diagnosis and therapy. Medical and engineering science personnel of the future will have to work more closely together to meet the new requirements. However, this also means that these fundamentally different disciplines must be able to understand the basics of problems of the "other" discipline. For engineers, this means that they understand and influence specific engineering basics and additionally medical and business aspects of patient care, project management, and development and research may need.

Learning target

The above mentioned qualifications are acquired by graduates during the course of their studies. The contents of the three areas are mapped to specializations: "implants and prostheses ", " Artificial Organs and Regenerative Medicine " can be management and administration "or" Medical and Control ".

Graduates are able to:

- analyze and solve scientific problems, even if they are defined in an uncommon way or incompletely and have competing specifications;
- Apply innovative methods in basic research problem solving and develop new scientific methods;
- identify information needs, find information and fundraising;
- theoretical and experimental investigation plan and perform;
- Evaluate data critically and draw conclusions;
- analyze and evaluate the use of new and emerging technologies.
- Concepts and solutions to basic research, partly unusual issues - possibly involving other disciplines - to develop;
- to create new products, processes and methods;
- apply their scientific engineering judgment to work with complex, possibly incomplete information to identify contradictions and deal with them;
- classify knowledge from different fields methodically and combine systematically and handle complexity;
- familiarize themselves systematically and in a short time with new tasks;
- To systematically reflect non-technical implications of engineering activity and responsibly integrate into their actions.

Core qualification

Module M0523: Business & Management

Module Responsible	Prof. Matthias Meyer
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students are able to find their way around selected special areas of management within the scope of business management. • Students are able to explain basic theories, categories, and models in selected special areas of business management. • Students are able to interrelate technical and management knowledge.
<i>Skills</i>	<ul style="list-style-type: none"> • Students are able to apply basic methods in selected areas of business management. • Students are able to explain and give reasons for decision proposals on practical issues in areas of business management.
Personal Competence	
<i>Social Competence</i>	<ul style="list-style-type: none"> • Students are able to communicate in small interdisciplinary groups and to jointly develop solutions for complex problems
<i>Autonomy</i>	<ul style="list-style-type: none"> • Students are capable of acquiring necessary knowledge independently by means of research and preparation of material.
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0524: Nontechnical Elective Complementary Courses for Master

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	<p>The Nontechnical Academic Programms (NTA)</p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p>The Competence Level</p>

Knowledge

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Professional Competence (Skills)

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Skills

Personal Competence

Personal Competences (Social Skills)

Students will be able

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

Social Competence

Personal Competences (Self-reliance)

Students are able in selected areas

- to reflect on their own profession and professionalism in the context of real-life fields of

<i>Autonomy</i>	application <ul style="list-style-type: none"> • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in written form or verbally • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

<p>Information regarding lectures and courses can be found in the corresponding module handbook published separately.</p>

Module M1173: Applied Statistics

Courses

Title	Typ	Hrs/wk	CP
Applied Statistics (L1584)	Lecture	2	3
Applied Statistics (L1586)	Project-/problem-based Learning	2	2
Applied Statistics (L1585)	Recitation Section (small)	1	1
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge of statistical methods		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the statistical methods and the conditions of their use.		
<i>Skills</i>	Students are able to use the statistics program to solve statistics problems and to interpret and depict the results		
Personal Competence			
<i>Social Competence</i>	Team Work, joined presentation of results		
<i>Autonomy</i>	To understand and interpret the question and solve		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes, 28 questions		
Assignment for the Following Curricula	Mechanical Engineering and Management: Specialisation Management: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Core qualification: Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L1584: Applied Statistics	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	DE/EN
Cycle	WiSe
Content	<p>The goal is to introduce students to the basic statistical methods and their application to simple problems. The topics include:</p> <ul style="list-style-type: none"> • Chi square test • Simple regression and correlation • Multiple regression and correlation • One way analysis of variance • Two way analysis of variance • Discriminant analysis • Analysis of categorial data • Chossing the appropriate statistical method • Determining critical sample sizes
Literature	Applied Regression Analysis and Multivariable Methods, 3rd Edition, David G. Kleinbaum Emory University, Lawrence L. Kupper University of North Carolina at Chapel Hill, Keith E. Muller University of North Carolina at Chapel Hill, Azhar Nizam Emory University, Published by Duxbury Press, CB © 1998, ISBN/ISSN: 0-534-20910-6

Course L1586: Applied Statistics	
Typ	Project-/problem-based Learning
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	DE/EN
Cycle	WiSe
Content	The students receive a problem task, which they have to solve in small groups (n=5). They do have to collect their own data and work with them. The results have to be presented in an executive summary at the end of the course.
Literature	Selbst zu finden

Course L1585: Applied Statistics	
Typ	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Michael Morlock
Language	DE/EN
Cycle	WiSe
Content	The different statistical tests are applied for the solution of realistic problems using actual data sets and the most common used commercial statistical software package (SPSS).
Literature	Student Solutions Manual for Kleinbaum/Kupper/Muller/Nizam's Applied Regression Analysis and Multivariable Methods, 3rd Edition, David G. Kleinbaum Emory University Lawrence L. Kupper University of North Carolina at Chapel Hill, Keith E. Module M0811: Medical Imaging Systems			
Courses			
Title	Typ	Hrs/wk	CP
Medical Imaging Systems (L0819)	Lecture	4	6
Module Responsible	Dr. Michael Grass		
Admission Requirements	None		
Recommended Previous Knowledge	none		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can:</p> <ul style="list-style-type: none"> • Describe the system configuration and components of the main clinical imaging systems; • Explain how the system components and the overall system of the imaging systems function; • Explain and apply the physical processes that make imaging possible and use with the fundamental physical equations; • Name and describe the physical effects required to generate image contrasts; • Explain how spatial and temporal resolution can be influenced and how to characterize the images generated; • Explain which image reconstruction methods are used to generate images; <p>Describe and explain the main clinical uses of the different systems.</p> <p>Students are able to:</p> <ul style="list-style-type: none"> • Explain the physical processes of images and assign to the systems the basic mathematical or physical equations required; <ul style="list-style-type: none"> ◦ Calculate the parameters of imaging systems using the mathematical or physical equations; ◦ Determine the influence of different system components on the spatial and temporal resolution of imaging systems; ◦ Explain the importance of different imaging systems for a number of clinical applications; <p>Select a suitable imaging system for an application.</p>		
Personal Competence	<p><i>Social Competence</i> none</p> <p><i>Autonomy</i> Students can:</p> <ul style="list-style-type: none"> • Understand which physical effects are used in medical imaging; • Decide independently for which clinical issue a measuring system can be used. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale			

Assignment for the Following Curricula	Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Biomedical Engineering: Core qualification: Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory

Module M1179: Medical Basics and Pathology

Courses

Title	Typ	Hrs/wk	CP
Medical Basics and Pathology I (L1599)	Lecture	2	2
Medical Basics and Pathology II (L1600)	Lecture	2	2
Medical Basics and Pathology III (L1602)	Lecture	2	2
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i>			
Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Examination	Written exam		
Examination duration and scale	120 minutes		
Assignment for the Following Curricula	Biomedical Engineering: Core qualification: Compulsory		

Course L1599: Medical Basics and Pathology I	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Julian Schulze zur Wiesch
Language	DE
Cycle	SoSe
Content	<p>Upon successful completion of the course, participants should be able to describe the foundations of the organization of the German health system and to describe different ways of treatment in the hospital. They should be able to describe the anatomy, physiology and basic diagnostic possibilities for the following organ system: heart / circulatory system, lungs, digestive tract, kidney, including the technical possibilities of monitoring heart-lung function, in the emergency department, in the monitoring stations and in intensive care and the basics of cardiopulmonary resuscitation. Furthermore, the anatomy and physiology of the nervous system will be explored. The importance and possibilities of preventive medicine of serious public health problems are described. Students prepare their own sub-themes in the form of small lectures and discuss various clinical cases on these topics interactively as problem-based learning. This course/Lecture by excursions into our emergency room, our endoscopy unit, mini-laparoscopy and our ICU as well as out patient clinics.</p>
Literature	Wird in der Veranstaltung bekannt gegeben

Course L1600: Medical Basics and Pathology II	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Johannes Kluwe
Language	DE
Cycle	WiSe
Content	<p>Major diseases of</p> <ul style="list-style-type: none"> • the gastrointestinal system and the liver, • the hormone system, • the kidneys. <p>The lecture will focus on pathophysiology, symptoms, diagnostic and therapeutic principles of these diseases.</p> <p>I Gastrointestinal tract and liver:</p> <ul style="list-style-type: none"> • Gastrointestinal bleeding: causes, symptoms, endoscopic treatment options • Colorectal cancer: basics, principle of prophylactic screening, therapy • Liver diseases / liver cirrhosis: causes, symptoms, complications, therapeutic options <p>II Hormones:</p> <ul style="list-style-type: none"> • Diabetes mellitus type 1 and 2: pathophysiology, complications, basics of glucose metabolism, therapeutic principles • Thyreoid gland - hyper- and hypothyreoidism: causes, symptoms diagnostics, therapy <p>III Kidneys</p> <ul style="list-style-type: none"> • Functions and failure, diagnostics, principles of renal replacement therapy
Literature	Wird in der Veranstaltung bekannt gegeben

Course L1602: Medical Basics and Pathology III	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Dominic Wichmann
Language	DE
Cycle	WiSe
Content	<p>a) Basic understanding of the pathology/pathophysiology of cardiac diseases and their stage-adapted treatments: coronary heart disease, myocardial infarction, mitral valve insufficiencies, aortic valve stenosis</p> <p>b) Basic understanding of the pathology/pathophysiology of pulmonary diseases and their stage-adapted treatments: asthma, chronic obstructive pulmonary disease, pneumonia, bronchial cancer</p> <p>c) Basic understanding of infectious diseases, immune-system and autoimmune diseases</p>
Literature	Skript zur Vorlesung.

Module M1164: Practical Course Product Development, Materials and Production

Courses			
Title	Typ	Hrs/wk	CP
Practical Course Product Development, Materials and Production (L1566)	Laboratory	6	6
Module Responsible	Prof. Wolfgang Hintze		
Admission Requirements	None		
Recommended Previous Knowledge	<p>Product Development:</p> <ul style="list-style-type: none"> Lectures: Mechanics I-III Lectures: Integrated Product Development I incl. CAD practical training <p>Materials:</p> <ul style="list-style-type: none"> Lectures: Structural Metallic Materials, Metallic Materials for Aircraft Applications, Introduction to Materials Testing Lectures: Structure and Properties of Polymers, Structure and Properties of Composites, Manufacturing of Polymers and Composites <p>Production:</p> <ul style="list-style-type: none"> Lecture: Production Engineering Lectures: Forming and Cutting Technology, Methods of production process design Lectures: Machine Tools and Robotic 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can ...</p> <ul style="list-style-type: none"> represent more complex context of different fields of study. describe functionality of modern measurement instrumentations and machine technologies. <p>Students are capable of ...</p> <ul style="list-style-type: none"> applying theoretical knowledge for practical applications. applying provided experimental methods for examining contexts of different fields of study. analyzing and evaluating experimental results by using provided methods. applying modern measurement instrumentations.

Module M1214: Study work				
Courses				
Title	Typ	Hrs/wk	CP	
Module Responsible	Prof. Michael Morlock			
Admission Requirements	None			
Recommended Previous Knowledge	Subjects of the Master program and the specialisations.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain the project as well as their autonomously gained knowledge and relate it to current issues of their field of study. • They can explain the basic scientific methods they have worked with. 			
<i>Skills</i>	The students are able to autonomously solve a limited scientific task under the guidance of an experienced researcher. They can justify and explain their approach for problem solving; they can draw conclusions from their results, and then can find new ways and methods for their work. Students are capable of comparing and assessing alternative approaches with their own with regard to given criteria.			
Personal Competence				
<i>Social Competence</i>	The students are able to condense the relevance and the structure of the project work, the work procedure and the sub-problems for the presentation and discussion in front of a bigger group. They can lead the discussion and give a feedback on the project to their peers and supervisors.			
<i>Autonomy</i>	The students are capable of independently planning and documenting the work steps and procedures while considering the given deadlines. This includes the ability to accurately procure the newest scientific information. Furthermore, they can obtain feedback from experts with regard to the progress of the work, and to accomplish results on the state of the art in science and technology.

Courses

Title	Typ	Hrs/wk	CP
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture	2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)	2	2
Module Responsible	Rainer Marrone		
Admission Requirements	None		
Recommended Previous Knowledge	Vectors, matrices, Calculus		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.</p> <p><i>Skills</i></p> <p>Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>Students are able to discuss their solutions to problems with others. They communicate in English</p> <p><i>Autonomy</i></p> <p>Students are able of checking their understanding of complex concepts by solving varaints of concrete problems</p>

Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques

Assignment for the Following Curricula	Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory		

Course L1663: Nature's Hierarchical Materials	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	
Lecturer	Prof. Gerold Schneider
Language	EN
Cycle	WiSe
Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Course L1669: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Prof. Christian Schuster
Language	DE/EN
Cycle	WiSe
Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques
Literature	<ul style="list-style-type: none"> - Zinke, Brunswig, "Hochfrequenztechnik 1", Springer (1999) - J. Detlefsen, U. Siart, "Grundlagen der Hochfrequenztechnik", Oldenbourg (2012) - D. M. Pozar, "Microwave Engineering", Wiley (2011) - Y. Huang, K. Boyle, "Antenna: From Theory to Practice", Wiley (2008) - H. Ott, "Electromagnetic Compatibility Engineering", Wiley (2009) - A. Schwab, W. Kürner, "Elektromagnetische Verträglichkeit", Springer (2007)

Course L1877: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	
Typ	Recitation Section (small)
Hrs/wk	2

Courses

Title	Typ	Hrs/wk	CP
Microsystem Engineering (L0680)	Lecture	2	4
Microsystem Engineering (L0682)	Project-/problem-based Learning	1	1
Microsystem Engineering (L0681)	Recitation Section (small)	1	1
Module Responsible	Prof. Manfred Kasper		
Admission Requirements	None		
Recommended Previous Knowledge	Basic courses in physics, mathematics and electric engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know about the most important technologies and materials of MEMS as well as their applications in sensors and actuators.		
<i>Skills</i>	Students are able to analyze and describe the functional behaviour of MEMS components and to evaluate the potential of microsystems.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2h

Module M0808: Finite Elements Methods			
Courses			
Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation Section (large)	2	3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	None		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.

Title	Typ	Hrs/wk	CP
Technology Management (L0849)	Project-/problem-based Learning	3	3
Technology Management Seminar (L0850)	Project-/problem-based Learning	2	3
Module Responsible	Prof. Cornelius Herstatt		
Admission Requirements	None		
Recommended Previous Knowledge	Bachelor knowledge in business management		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students will gain deep insights into:</p> <ul style="list-style-type: none"> • Technology Timing Strategies <ul style="list-style-type: none"> ◦ Technology Strategies and Lifecycle Management (I/II) ◦ Technology Intelligence and Planning • Technology Portfolio Management <ul style="list-style-type: none"> ◦ Technology Portfolio Methodology ◦ Technology Acquisition and Exploitation ◦ IP Management • Organizing Technology Development <ul style="list-style-type: none"> ◦ Technology Organization & Management ◦ Technology Funding & Controlling 		
<i>Knowledge</i>			
Skills	<p>The course aims to:</p> <ul style="list-style-type: none"> • Develop an understanding of the importance of Technology Management - on a national as well as international level • Equip students with an understanding of important elements of Technology Management (strategic, operational, organizational and process-related aspects) • Foster a strategic orientation to problem-solving within the innovation process as well as Technology Management and its importance for corporate strategy • Clarify activities of Technology Management (e.g. technology sourcing, maintenance and exploitation) • Strengthen essential communication skills and a basic understanding of managerial, organizational and financial issues concerning Technology-, Innovation- and R&D-management. Further topics to be discussed include: <ul style="list-style-type: none"> • Basic concepts, models and tools, relevant to the management of technology, R&D and innovation • Innovation as a process (steps, activities and results) 		
<i>Skills</i>			
Personal Competence	<ul style="list-style-type: none"> • Interact within a team • Raise awareness for global issues 		
<i>Social Competence</i>			
Autonomy	<ul style="list-style-type: none"> • Gain access to knowledge sources • Interpret complicated cases 		
<i>Autonomy</i>			

	<ul style="list-style-type: none"> • Develop presentation skills
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	90 minutes
Assignment for the Following Curricula	Global Innovation Management: Core qualification: Compulsory International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Mechanical Engineering and Management: Specialisation Management: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprosthesis: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Compulsory

Course L0849: Technology Management

Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	<p>The role of technology for the competitive advantage of the firm and industries; Basic concepts, models and tools for the management of technology; managerial decision making regarding the identification, selection and protection of technology (make or buy, keep or sell, current and future technologies). Theories, practical examples (cases), lectures, interactive sessions and group study.</p> <p>This lecture is part of the Module Technology Management and can not separately chosen.</p>
Literature	Leiblein, M./Ziedonis, A.: Technology Strategy and Innovation Management, Elgar Research Collection, Northampton (MA) 2011

Course L0850: Technology Management Seminar

Typ	Project-/problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	Aspects of and Cases in combination with the content of the lecture.
Literature	see lecture Technology Management.

Module M0846: Control Systems Theory and Design

Courses

Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2

Module Responsible	Prof. Herbert Werner
---------------------------	----------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	Introduction to Control Systems
---------------------------------------	---------------------------------

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively They can explain the significance of a minimal realisation They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection They can extend all of the above to multi-input multi-output systems They can explain the z-transform and its relationship with the Laplace Transform They can explain state space models and transfer function models of discrete-time systems They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation They can explain how a state space model can be constructed from a discrete-time impulse response
<i>Skills</i>	<ul style="list-style-type: none"> Students can transform transfer function models into state space models and vice versa They can assess controllability and observability and construct minimal realisations They can design LQG controllers for multivariable plants They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate They can identify transfer function models and state space models of dynamic systems from experimental data They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink)
Personal Competence	
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.
<i>Autonomy</i>	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems. They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Module M0921: Electronic Circuits for Medical Applications

Courses			
Title	Typ	Hrs/wk	CP
Electronic Circuits for Medical Applications (L0696)	Lecture	2	3
Electronic Circuits for Medical Applications (L1056)	Recitation Section (small)	1	2
Electronic Circuits for Medical Applications (L1408)	Practical Course	1	1
Module Responsible	NN		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of electrical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the basic functionality of the information transfer by the central nervous system Students are able to explain the build-up of an action potential and its propagation along an axon Students can exemplify the communication between neurons and electronic devices Students can describe the special features of low-noise amplifiers for medical applications Students can explain the functions of prostheses, e. g. an artificial hand Students are able to discuss the potential and limitations of cochlea implants and artificial eyes <ul style="list-style-type: none"> Students can calculate the time dependent voltage behavior of an action potential Students can give scenarios for further improvement of low-noise and low-power signal acquisition. Students can develop the block diagrams of prosthetic systems Students can define the building blocks of electronic systems for an artificial eye. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are trained to solve problems in the field of medical electronics in teams together with experts with different professional background. Students are able to recognize their specific limitations, so that they can ask for assistance to the right time. Students can document their work in a clear manner and communicate their results in a way that others can be involved whenever it is necessary <ul style="list-style-type: none"> Students are able to realistically judge the status of their knowledge and to define actions for improvements when necessary. Students can break down their work in appropriate work packages and schedule their work in a realistic way. Students can handle the complex data structures of bioelectrical experiments without needing support. 		

	<ul style="list-style-type: none"> • Students are able to act in a responsible manner in all cases and situations of experimental work.

Module M1199: Advanced Functional Materials			
Courses			
Title	Typ	Hrs/wk	CP
Advanced Functional Materials (L1625)	Lecture	2	6
Module Responsible	Prof. Patrick Huber		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Materials Science (I and II)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students will be able to explain the properties of advanced materials along with their applications in technology, in particular metallic, ceramic, polymeric, semiconductor, modern composite materials (biomaterials) and nanomaterials.		
<i>Skills</i>	The students will be able to select material configurations according to the technical needs and, if necessary, to design new materials considering architectural principles from the micro- to the macroscale. The students will also gain an overview on modern materials science, which enables them to select optimum materials combinations depending on the technical applications.		
Personal Competence			
<i>Social Competence</i>	The students are able to present solutions to specialists and to develop ideas further.		
<i>Autonomy</i>	The students are able to ... <ul style="list-style-type: none"> • assess their own strengths and weaknesses. • define tasks independently. 		
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28		
Credit points	6

Module M1333: BIO I: Implants and Fracture Healing

Courses

Title	Typ	Hrs/wk	CP
Implants and Fracture Healing (L0376)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students can describe the different ways how bones heal, and the requirements for their existence. The students can name different treatments for the spine and hollow bones under given fracture morphologies.</p> <p><i>Skills</i> The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.</p>		
Personal Competence	<p><i>Social Competence</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p> <p><i>Autonomy</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Biomechanics: Compulsory</p> <p>Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective</p>

Module M1342: Polymers

Courses

Title	Typ	Hrs/wk	CP
Structure and Properties of Polymers (L0389)	Lecture	2	3
Processing and design with polymers (L1892)	Lecture	2	3
Module Responsible	Dr. Hans Wittich		
Admission Requirements	None		
Recommended Previous Knowledge	Basics: chemistry / physics / material science		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can use the knowledge of plastics and define the necessary testing and analysis.</p> <p><i>Knowledge</i> They can explain the complex relationships structure-property relationship and the interactions of chemical structure of the polymers, including to explain neighboring contexts (e.g. sustainability, environmental protection).</p> <p><i>Skills</i> Students are capable of</p> <ul style="list-style-type: none"> - using standardized calculation methods in a given context to mechanical properties (modulus, strength) to calculate and evaluate the different materials. - For mechanical recycling problems selecting appropriate solutions and sizing example Stiffness, corrosion resistance. 		
Personal Competence	<p><i>Social Competence</i> Students can,</p> <ul style="list-style-type: none"> - arrive at work results in groups and document them. - provide appropriate feedback and handle feedback on their own performance constructively. <p><i>Autonomy</i> Students are able to,</p> <ul style="list-style-type: none"> - assess their own strengths and weaknesses - assess their own state of learning in specific terms and to define further work steps on this basis guided by teachers. - assess possible consequences of their professional activity. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	180 min		
	Materials Science: Specialisation Engineering Materials: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory

Module M0548: Bioelectromagnetics: Principles and Applications

Courses

Title	Typ	Hrs/wk	CP
Bioelectromagnetics: Principles and Applications (L0371)	Lecture	3	5
Bioelectromagnetics: Principles and Applications (L0373)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	None		
Recommended Previous Knowledge	Basic principles of physics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students can explain the basic principles, relationships, and methods of bioelectromagnetics, i.e. the quantification and application of electromagnetic fields in biological tissue. They can define and exemplify the most important physical phenomena and order them corresponding to wavelength and frequency of the fields. They can give an overview over measurement and numerical techniques for characterization of electromagnetic fields in practical applications. They can give examples for therapeutic and diagnostic utilization of electromagnetic fields in medical technology.</p> <p><i>Skills</i></p> <p>Students know how to apply various methods to characterize the behavior of electromagnetic fields in biological tissue. In order to do this they can relate to and make use of the elementary solutions of Maxwell's Equations. They are able to assess the most important effects that these models predict for biological tissue, they can order the effects corresponding to wavelength and frequency, respectively, and they can analyze them in a quantitative way. They are able to develop validation strategies for their predictions. They are able to evaluate the effects of electromagnetic fields for therapeutic and diagnostic applications and make an appropriate choice.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).</p> <p><i>Autonomy</i></p> <p>Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can communicate problems and effects in the field of bioelectromagnetics in English.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module M0630: Robotics and Navigation in Medicine

Courses

Title	Typ	Hrs/wk	CP
Robotics and Navigation in Medicine (L0335)	Lecture	2	3
Robotics and Navigation in Medicine (L0338)	Project Seminar	2	2
Robotics and Navigation in Medicine (L0336)	Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • principles of math (algebra, analysis/calculus) • principles of programming, e.g., in Java or C++ • solid R or Matlab skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain kinematics and tracking systems in clinical contexts and illustrate systems and their components in details. Systems can be evaluated with respect to collision detection and safety and regulations. Students can assess typical systems regarding design and limitations.		
<i>Skills</i>	The students are able to design and evaluate navigation systems and robotic systems for medical applications.		
Personal Competence			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.

Module M0634: Introduction into Medical Technology and Systems

Courses

Title	Typ	Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture	2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar	2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
Personal Competence			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.

Course L0663: Humanoid Robotics	
---------------------------------	--

Typ	Seminar
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Grundlagen der Regelungstechnik • Control systems theory and design
Literature	- B. Siciliano, O. Khatib. "Handbook of Robotics. Part A: Robotics Foundations", Springer (2008).

Module M0838: Linear and Nonlinear System Identifikation

Courses

Title	Typ	Hrs/wk	CP
Linear and Nonlinear System Identification (L0660)	Lecture	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Classical control (frequency response, root locus) • State space methods • Discrete-time systems • Linear algebra, singular value decomposition • Basic knowledge about stochastic processes 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> • Students can explain the general framework of the prediction error method and its application to a variety of linear and nonlinear model structures • They can explain how multilayer perceptron networks are used to model nonlinear dynamics • They can explain how an approximate predictive control scheme can be based on neural network models • They can explain the idea of subspace identification and its relation to Kalman realisation theory <ul style="list-style-type: none"> • Students are capable of applying the prediction error method to the experimental identification of linear and nonlinear models for dynamic systems • They are capable of implementing a nonlinear predictive control scheme based on a neural network model • They are capable of applying subspace algorithms to the experimental identification of linear models for dynamic systems • They can do the above using standard software tools (including the Matlab System Identification Toolbox)

Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Prediction error method • Linear and nonlinear model structures • Nonlinear model structure based on multilayer perceptron network • Approximate predictive control based on multilayer perceptron network model • Subspace identification
Literature	<ul style="list-style-type: none"> • Lennart Ljung, System Identification - Theory for the User, Prentice Hall 1999 • M. Norgaard, O. Ravn, N.K. Poulsen and L.K. Hansen, Neural Networks for Modeling and Control of Dynamic Systems, Springer Verlag, London 2003 • T. Kailath, A.H. Sayed and B. Hassibi, Linear Estimation, Prentice Hall 2000

Module M0840: Optimal and Robust Control

Courses			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Classical control (frequency response, root locus) State space methods Linear algebra, singular value decomposition 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the significance of the matrix Riccati equation for the solution of LQ problems. They can explain the duality between optimal state feedback and optimal state estimation. They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints. They can explain how an LQG design problem can be formulated as special case of an H2 design problem. They can explain how model uncertainty can be represented in a way that lends itself to robust controller design They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant. They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities. 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students are capable of designing and tuning LQG controllers for multivariable plant models. They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it. They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design. They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller. They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them. They can carry out all of the above using standard software tools (Matlab robust control toolbox). 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0845: Feedback Control in Medical Technology			
Courses			
Title	Typ	Hrs/wk	CP
Feedback Control in Medical Technology (L0664)	Lecture	2	3
Module Responsible	Prof. Olaf Simanski		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in Control, Basics in Physiology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The lecture will introduce into the fascinating area of medical technology with the engineering point of view. Fundamentals in human physiology will be similarly introduced like knowledge in control theory.</p> <p><i>Knowledge</i> Internal control loops of the human body will be discussed in the same way like the design of external closed loop system for example in for anesthesia control.</p> <p>The handling of PID controllers and modern controller like predictive controller or fuzzy controller or neural networks will be illustrated. The operation of simple equivalent circuits will be discussed.</p> <p><i>Skills</i> Application of modeling, identification, control technology in the field of medical technology.</p>		
Personal Competence	<p><i>Social Competence</i> Students can develop solutions to specific problems in small groups and present their results (e.g. during project week)</p> <p><i>Autonomy</i> Students are able to find necessary literature and to set it into the context of the lecture. They are able to continuously evaluate their knowledge and to take control of their learning process. They can combine knowledge from different courses to form a consistent whole.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Oral exam		
Examination duration and scale			
Assignment for the Following Curricula	Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory

Module M0855: Marketing (Sales and Services / Innovation Marketing)

Courses

Title	Typ	Hrs/wk	CP
Marketing (Innovation Marketing / Sales and Services) (L0862)	Project-/problem-based Learning	5	6
Module Responsible	Prof. Christian Lüthje		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Module International Business • Basic understanding of business administration principles (strategic planning, decision theory, project management, international business) • Bachelor-level Marketing Knowledge (Marketing Instruments, Market and Competitor Strategies, Basics of Buying Behavior) • Understanding of differences in the market introduction of Products and Services • Understanding the differences between B2B and B2C marketing • Understanding of the importance of managing innovation in global industrial markets • Good English proficiency; presentation skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students will have gained a deep understanding of</p> <ul style="list-style-type: none"> • Specific characteristics in the marketing of innovative industrial goods and services • The importance of product-related and independent services • Approaches for analyzing the current market situation and the future market development • The gathering of information about future customer needs and requirements • Concepts and approaches to integrate lead users and their needs into product and service development processes • Approaches and tools for ensuring customer-orientation in the development of new products and innovative services • Marketing mix elements that take into consideration the specific requirements and challenges of innovative products and services • Pricing methods for new products and services • The organization of complex sales forces and personal selling • Communication concepts and instruments for new products and services 		
<i>Knowledge</i>			
<i>Skills</i>	<p>Based on the acquired knowledge students will be able to:</p> <ul style="list-style-type: none"> • Design and to evaluate decisions regarding marketing and innovation strategies • Analyze markets by applying market and technology portfolios • Conduct forecasts and develop compelling scenarios as a basis for strategic planning • Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for customer-oriented product and service development • Use adequate methods to foster efficient diffusion of innovative products and services • Choose suitable pricing strategies and communication activities for innovations • Make strategic sales decisions for products and services (i.e. selection of sales channels) • Apply methods of sales force management (i.e. customer value analysis) 		
Personal Competence			

<i>Social Competence</i>	<p>The students will be able to</p> <ul style="list-style-type: none"> • have fruitful discussions and exchange arguments • develop original results in a group • present results in a clear and concise way • carry out respectful team work
<i>Autonomy</i>	<p>The students will be able to</p> <ul style="list-style-type: none"> • Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem fields. • Consider proposed business actions in the field of marketing and reflect on them.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module M0938: Bioprocess Engineering - Fundamentals

Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	None		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem propose solutions to complicated biotechnological problems and to deduce the corresponding models to explore new knowledge resources and to apply the newly gained contents identify scientific problems with concrete industrial use and to formulate solutions. to document and discuss their procedures as well as results in a scientific manner 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.		
<i>Autonomy</i>	After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.

Module M1280: MED II: Introduction to Physiology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
Module Responsible	Dr. Roger Zimmermann		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> describe the basics of the energy metabolism; describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology. 		
<i>Knowledge</i>			
<i>Skills</i>	The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.		
Personal Competence			
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.		
<i>Autonomy</i>	The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	60 minutes		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>Electrical Engineering: Specialisation Medical Technology: Elective Compulsory</p> <p>General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Biomechanics: Compulsory</p>

Course L0385: Introduction to Physiology	
--	--

Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Roger Zimmermann
Language	DE
Cycle	SoSe
Content	
Literature	Taschenatlas der Physiologie, Silbernagl Despopoulos, ISBN 978-3-135-67707-1, Thieme Repetitorium Physiologie, Speckmann, ISBN 978-3-437-42321-5, Elsevier

Module M1277: MED I: Introduction to Anatomy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
Module Responsible	Prof. Udo Schumacher		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.		
<i>Skills</i>	The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.		
Personal Competence			
<i>Social Competence</i>	The students can participate in current discussions in biomedical research and medicine on a professional level.		
<i>Autonomy</i>	The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory

Module M1278: MED I: Introduction to Radiology and Radiation Therapy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
Module Responsible	Prof. Ulrich Carl		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Therapy</p> <p>The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p>The students can describe the patients' passage from their initial admittance through to follow-up care.</p> <p>Diagnostics</p> <p>The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p> <p>Therapy</p> <p>The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p>Diagnostics</p> <p>The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p>		
<i>Knowledge</i>			
<i>Skills</i>			

Personal Competence	The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.

Content	<p>The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments</p>

Module M0832: Advanced Topics in Control

Courses

Title	Typ	Hrs/wk	CP
Advanced Topics in Control (L0661)	Lecture	2	3
Advanced Topics in Control (L0662)	Recitation Section (small)	2	3

Module Responsible	Prof. Herbert Werner
---------------------------	----------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	H-infinity optimal control, mixed-sensitivity design, linear matrix inequalities
---------------------------------------	--

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<ul style="list-style-type: none"> • Students can explain the advantages and shortcomings of the classical gain scheduling approach • They can explain the representation of nonlinear systems in the form of quasi-LPV systems • They can explain how stability and performance conditions for LPV systems can be formulated as LMI conditions • They can explain how gridding techniques can be used to solve analysis and synthesis problems for LPV systems • They are familiar with polytopic and LFT representations of LPV systems and some of the basic synthesis techniques associated with each of these model structures
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain how graph theoretic concepts are used to represent the communication topology of multiagent systems • They can explain the convergence properties of first order consensus protocols • They can explain analysis and synthesis conditions for formation control loops involving either LTI or LPV agent models
<i>Skills</i>	<ul style="list-style-type: none"> • Students can explain the state space representation of spatially invariant distributed systems that are discretized according to an actuator/sensor array • They can explain (in outline) the extension of the bounded real lemma to such distributed systems and the associated synthesis conditions for distributed controllers • Students are capable of constructing LPV models of nonlinear plants and carry out a mixed-sensitivity design of gain-scheduled controllers; they can do this using polytopic, LFT or general LPV models • They are able to use standard software tools (Matlab robust control toolbox) for these tasks • Students are able to design distributed formation controllers for groups of agents with either LTI or LPV dynamics, using Matlab tools provided • Students are able to design distributed controllers for spatially interconnected systems, using the Matlab MD-toolbox

<p>Personal Competence</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<p>Students can work in small groups and arrive at joint results.</p> <p>Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.</p>
<p>Workload in Hours</p>	<p>Independent Study Time 124, Study Time in Lecture 56</p>
<p>Credit points</p>	<p>6</p>
<p>Examination</p>	<p>Oral exam</p>
<p>Examination duration and scale</p>	<p>30 min</p>

Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques

Module M0629: Intelligent Autonomous Agents and Cognitive Robotics

Courses

Title	Typ	Hrs/wk	CP
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture	2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)	2	2
Module Responsible	Rainer Marrone		
Admission Requirements	None		
Recommended Previous Knowledge	Vectors, matrices, Calculus		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.</p> <p>Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students are able to discuss their solutions to problems with others. They communicate in English		
<i>Autonomy</i>	Students are able of checking their understanding of complex concepts by solving varaints of concrete problems		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Examination Form	Klausur
Examination duration and scale	
Lecturer	Prof. Gerold Schneider
Language	EN
Cycle	WiSe
Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques

Professional Competence	<p>Students will gain deep insights into:</p> <ul style="list-style-type: none"> • Technology Timing Strategies <ul style="list-style-type: none"> ◦ Technology Strategies and Lifecycle Management (I/II) ◦ Technology Intelligence and Planning • Technology Portfolio Management <ul style="list-style-type: none"> ◦ Technology Portfolio Methodology ◦ Technology Acquisition and Exploitation ◦ IP Management • Organizing Technology Development <ul style="list-style-type: none"> ◦ Technology Organization & Management ◦ Technology Funding & Controlling 		
<i>Knowledge</i>			
Skills	<p>The course aims to:</p> <ul style="list-style-type: none"> • Develop an understanding of the importance of Technology Management - on a national as well as international level • Equip students with an understanding of important elements of Technology Management (strategic, operational, organizational and process-related aspects) • Foster a strategic orientation to problem-solving within the innovation process as well as Technology Management and its importance for corporate strategy • Clarify activities of Technology Management (e.g. technology sourcing, maintenance and exploitation) • Strengthen essential communication skills and a basic understanding of managerial, organizational and financial issues concerning Technology-, Innovation- and R&D-management. Further topics to be discussed include: <ul style="list-style-type: none"> • Basic concepts, models and tools, relevant to the management of technology, R&D and innovation • Innovation as a process (steps, activities and results) 		
<i>Skills</i>			
Personal Competence	<ul style="list-style-type: none"> • Interact within a team • Raise awareness for global issues 		
<i>Social Competence</i>			
Autonomy	<ul style="list-style-type: none"> • Gain access to knowledge sources • Interpret complicated cases 		
<i>Autonomy</i>			

	<ul style="list-style-type: none"> • Develop presentation skills
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	90 minutes
Assignment for the Following Curricula	Global Innovation Management: Core qualification: Compulsory International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Mechanical Engineering and Management: Specialisation Management: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprosthesis: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Compulsory

Course L0849: Technology Management

Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	<p>The role of technology for the competitive advantage of the firm and industries; Basic concepts, models and tools for the management of technology; managerial decision making regarding the identification, selection and protection of technology (make or buy, keep or sell, current and future technologies). Theories, practical examples (cases), lectures, interactive sessions and group study.</p> <p>This lecture is part of the Module Technology Management and can not separately chosen.</p>
Literature	Leiblein, M./Ziedonis, A.: Technology Strategy and Innovation Management, Elgar Research Collection, Northampton (MA) 2011

Course L0850: Technology Management Seminar

Typ	Project-/problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	Aspects of and Cases in combination with the content of the lecture.
Literature	see lecture Technology Management.

Module M0768: Microsystems Technology in Theory and Practice

Courses

Title	Typ	Hrs/wk	CP
Microsystems Technology (L0724)	Lecture	2	4
Microsystems Technology (L0725)	Project-/problem-based Learning	2	2
Module Responsible	Prof. Hoc Khiem Trieu		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in physics, chemistry, mechanics and semiconductor technology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students are able</p> <ul style="list-style-type: none"> to present and to explain current fabrication techniques for microstructures and especially methods for the fabrication of microsensors and microactuators, as well as the integration thereof in more complex systems <p><i>Knowledge</i></p> <ul style="list-style-type: none"> to explain in details operation principles of microsensors and microactuators and to discuss the potential and limitation of microsystems in application. <p>Students are capable</p> <ul style="list-style-type: none"> to analyze the feasibility of microsystems, to develop process flows for the fabrication of microstructures and to apply them. <p><i>Skills</i></p>		
Personal Competence			
<i>Social Competence</i>	Students are able to prepare and perform their lab experiments in team work as well as to present and discuss the results in front of audience.		
<i>Autonomy</i>	None		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	30 min		

Assignment for the Following Curricula	Electrical Engineering: Specialisation Nanoelectronics and Microsystems Technology: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory

Module M0846: Control Systems Theory and Design

Courses			
Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	Introduction to Control Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<div style="display: flex; justify-content: space-between;"> <div style="width: 15%;"><i>Knowledge</i></div> <div style="width: 85%;"> <ul style="list-style-type: none"> Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively They can explain the significance of a minimal realisation They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection They can extend all of the above to multi-input multi-output systems They can explain the z-transform and its relationship with the Laplace Transform They can explain state space models and transfer function models of discrete-time systems They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation They can explain how a state space model can be constructed from a discrete-time impulse response </div> </div>		
<i>Skills</i>	<ul style="list-style-type: none"> Students can transform transfer function models into state space models and vice versa They can assess controllability and observability and construct minimal realisations They can design LQG controllers for multivariable plants They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate They can identify transfer function models and state space models of dynamic systems from experimental data They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink) 		
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.		
	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Module M1199: Advanced Functional Materials			
Courses			
Title	Typ	Hrs/wk	CP
Advanced Functional Materials (L1625)	Lecture	2	6
Module Responsible	Prof. Patrick Huber		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Materials Science (I and II)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students will be able to explain the properties of advanced materials along with their applications in technology, in particular metallic, ceramic, polymeric, semiconductor, modern composite materials (biomaterials) and nanomaterials.		
<i>Skills</i>	The students will be able to select material configurations according to the technical needs and, if necessary, to design new materials considering architectural principles from the micro- to the macroscale. The students will also gain an overview on modern materials science, which enables them to select optimum materials combinations depending on the technical applications.		
Personal Competence			
<i>Social Competence</i>	The students are able to present solutions to specialists and to develop ideas further.		
<i>Autonomy</i>	The students are able to ... <ul style="list-style-type: none"> • assess their own strengths and weaknesses. • define tasks independently. 		
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28		
Credit points	6		
Examination	Presentation		
Examination duration and scale	90 min

Module M1279: MED II: Introduction to Biochemistry and Molecular Biology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Biochemistry and Molecular Biology (L0386)	Lecture	2	3
Module Responsible	Prof. Hans-Jürgen Kreienkamp		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> • describe basic biomolecules; • explain how genetic information is coded in the DNA; • explain the connection between DNA and proteins; 		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students can</p> <ul style="list-style-type: none"> • recognize the importance of molecular parameters for the course of a disease; • describe selected molecular-diagnostic procedures; • explain the relevance of these procedures for some diseases 		
Personal Competence			
<i>Social Competence</i>	The students can participate in discussions in research and medicine on a technical level.		
<i>Autonomy</i>	The students can develop understanding of topics from the course, using technical literature, by themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28

Module M0808: Finite Elements Methods

Courses			
Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation Section (large)	2	3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	None		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.

Module M1342: Polymers			
Courses			
Title		Typ	Hrs/wk CP
Structure and Properties of Polymers (L0389)		Lecture	2 3
Processing and design with polymers (L1892)		Lecture	2 3
Module Responsible	Dr. Hans Wittich		
Admission Requirements	None		
Recommended Previous Knowledge	Basics: chemistry / physics / material science		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can use the knowledge of plastics and define the necessary testing and analysis.</p> <p><i>Knowledge</i> They can explain the complex relationships structure-property relationship and the interactions of chemical structure of the polymers, including to explain neighboring contexts (e.g. sustainability, environmental protection).</p> <p>Students are capable of</p> <p><i>Skills</i></p> <ul style="list-style-type: none"> - using standardized calculation methods in a given context to mechanical properties (modulus, strength) to calculate and evaluate the different materials. - For mechanical recycling problems selecting appropriate solutions and sizing example Stiffness, corrosion resistance. 		
Personal Competence	<p>Students can,</p> <p><i>Social Competence</i></p> <ul style="list-style-type: none"> - arrive at work results in groups and document them. - provide appropriate feedback and handle feedback on their own performance constructively. <p>Students are able to,</p> <p><i>Autonomy</i></p> <ul style="list-style-type: none"> - assess their own strengths and weaknesses - assess their own state of learning in specific terms and to define further work steps on this basis guided by teachers. - assess possible consequences of their professional activity. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	180 min		
	Materials Science: Specialisation Engineering Materials: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory		

Assignment for the Following Curricula	Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory
	Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory
	Product Development, Materials and Production: Specialisation Production: Elective Compulsory
	Product Development, Materials and Production: Specialisation Materials: Elective Compulsory
	Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory
	Theoretical Mechanical Engineering: Specialisation Materials Science: Elective Compulsory

Course L0389: Structure and Properties of Polymers	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Dr. Hans Wittich
Language	DE
Cycle	WiSe
Content	<ul style="list-style-type: none"> - Structure and properties of polymers - Structure of macromolecules Constitution, Configuration, Conformation, Bonds, Synthesis, Molecular weight distribution - Morphology amorph, crystalline, blends - Properties Elasticity, plasticity, viscoelasticity - Thermal properties - Electrical properties - Theoretical modelling - Applications
Literature	Ehrenstein: Polymer-Werkstoffe, Carl Hanser Verlag

Course L1892: Processing and design with polymers	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Bodo Fiedler, Dr. Hans Wittich
Language	DE/EN
Cycle	WiSe
Content	<p>Manufacturing of Polymers: General Properties; Calendering; Extrusion; Injection Moulding; Thermoforming, Foaming; Joining</p> <p>Designing with Polymers: Materials Selection; Structural Design; Dimensioning</p>
Literature	<p>Osswald, Menges: Materials Science of Polymers for Engineers, Hanser Verlag</p> <p>Crawford: Plastics engineering, Pergamon Press</p> <p>Michaeli: Einführung in die Kunststoffverarbeitung, Hanser Verlag</p> <p>Konstruieren mit Kunststoffen, Gunter Erhard , Hanser Verlag</p>

Module M1333: BIO I: Implants and Fracture Healing

Courses

Title	Typ	Hrs/wk	CP
Implants and Fracture Healing (L0376)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students can describe the different ways how bones heal, and the requirements for their existence.</p> <p>The students can name different treatments for the spine and hollow bones under given fracture morphologies.</p> <p><i>Skills</i> The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.</p>		
Personal Competence	<p><i>Social Competence</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p> <p><i>Autonomy</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Biomechanics: Compulsory</p> <p>Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective</p>		

Compulsory
Biomedical Engineering: Specialisation Management and Business Administration: Elective
Compulsory
Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective
Compulsory
Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Course L0376: Implants and Fracture Healing	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	DE
Cycle	WiSe
Content	<p>Topics to be covered include:</p> <ol style="list-style-type: none"> 1. Introduction (history, definitions, background importance) 2. Bone (anatomy, properties, biology, adaptations in femur, tibia, humerus, radius) 3. Spine (anatomy, biomechanics, function, vertebral bodies, intervertebral disc, ligaments) <ol style="list-style-type: none"> 3.1 The spine in its entirety 3.2 Cervical spine 3.3 Thoracic spine 3.4 Lumbar spine 3.5 Injuries and diseases 4. Pelvis (anatomy, biomechanics, fracture treatment) 5. Fracture Healing <ol style="list-style-type: none"> 5.1 Basics and biology of fracture repair 5.2 Clinical principals and terminology of fracture treatment 5.3 Biomechanics of fracture treatment <ol style="list-style-type: none"> 5.3.1 Screws 5.3.2 Plates 5.3.3 Nails 5.3.4 External fixation devices 5.3.5 Spine implants 6.0 New Implants

Module M0746: Microsystem Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Microsystem Engineering (L0680)	Lecture	2	4
Microsystem Engineering (L0682)	Project-/problem-based Learning	1	1
Microsystem Engineering (L0681)	Recitation Section (small)	1	1
Module Responsible	Prof. Manfred Kasper		
Admission Requirements	None		
Recommended Previous Knowledge	Basic courses in physics, mathematics and electric engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know about the most important technologies and materials of MEMS as well as their applications in sensors and actuators.		
<i>Skills</i>	Students are able to analyze and describe the functional behaviour of MEMS components and to evaluate the potential of microsystems.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2h		
Assignment for the Following Curricula	Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory		

Course L0680: Microsystem Engineering	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Manfred Kasper
Language	EN
Cycle	WiSe
Content	<p>Object and goal of MEMS</p> <p>Scaling Rules</p> <p>Lithography</p> <p>Film deposition</p> <p>Structuring and etching</p> <p>Energy conversion and force generation</p> <p>Electromagnetic Actuators</p> <p>Reluctance motors</p> <p>Piezoelectric actuators, bi-metal-actuator</p> <p>Transducer principles</p> <p>Signal detection and signal processing</p> <p>Mechanical and physical sensors</p> <p>Acceleration sensor, pressure sensor</p> <p>Sensor arrays</p> <p>System integration</p> <p>Yield, test and reliability</p>
Literature	<p>M. Kasper: Mikrosystementwurf, Springer (2000)</p> <p>M. Madou: Fundamentals of Microfabrication, CRC Press (1997)</p>

Course L0682: Microsystem Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Manfred Kasper
Language	EN
Cycle	WiSe
Content	Examples of MEMS components Layout consideration Electric, thermal and mechanical behaviour Design aspects
Literature	Wird in der Veranstaltung bekannt gegeben

Module M0623: Intelligent Systems in Medicine

Courses

Title	Typ	Hrs/wk	CP
Intelligent Systems in Medicine (L0331)	Lecture	2	3
Intelligent Systems in Medicine (L0334)	Project Seminar	2	2
Intelligent Systems in Medicine (L0333)	Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • principles of math (algebra, analysis/calculus) • principles of stochastics • principles of programming, Java/C++ and R/Matlab • advanced programming skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students are able to analyze and solve clinical treatment planning and decision support problems using methods for search, optimization, and planning. They are able to explain methods for classification and their respective advantages and disadvantages in clinical contexts. The students can compare different methods for representing medical knowledge. They can evaluate methods in the context of clinical data and explain challenges due to the clinical nature of the data and its acquisition and due to privacy and safety requirements.		
<i>Skills</i>	The students can give reasons for selecting and adapting methods for classification, regression, and prediction. They can assess the methods based on actual patient data and evaluate the implemented methods.		
Personal Competence			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective

Module M0921: Electronic Circuits for Medical Applications

Courses			
Title	Typ	Hrs/wk	CP
Electronic Circuits for Medical Applications (L0696)	Lecture	2	3
Electronic Circuits for Medical Applications (L1056)	Recitation Section (small)	1	2
Electronic Circuits for Medical Applications (L1408)	Practical Course	1	1
Module Responsible	NN		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of electrical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the basic functionality of the information transfer by the central nervous system Students are able to explain the build-up of an action potential and its propagation along an axon Students can exemplify the communication between neurons and electronic devices Students can describe the special features of low-noise amplifiers for medical applications Students can explain the functions of prostheses, e. g. an artificial hand Students are able to discuss the potential and limitations of cochlea implants and artificial eyes <ul style="list-style-type: none"> Students can calculate the time dependent voltage behavior of an action potential Students can give scenarios for further improvement of low-noise and low-power signal acquisition. Students can develop the block diagrams of prosthetic systems Students can define the building blocks of electronic systems for an artificial eye. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> Students are trained to solve problems in the field of medical electronics in teams together with experts with different professional background. Students are able to recognize their specific limitations, so that they can ask for assistance to the right time. Students can document their work in a clear manner and communicate their results in a way that others can be involved whenever it is necessary 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are able to realistically judge the status of their knowledge and to define actions for improvements when necessary. Students can break down their work in appropriate work packages and schedule their work in a realistic way. Students can handle the complex data structures of bioelectrical experiments without needing support. 		

	<ul style="list-style-type: none"> • Students are able to act in a responsible manner in all cases and situations of experimental work.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0548: Bioelectromagnetics: Principles and Applications

Courses			
Title	Typ	Hrs/wk	CP
Bioelectromagnetics: Principles and Applications (L0371)	Lecture	3	5
Bioelectromagnetics: Principles and Applications (L0373)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	None		
Recommended Previous Knowledge	Basic principles of physics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the basic principles, relationships, and methods of bioelectromagnetics, i.e. the quantification and application of electromagnetic fields in biological tissue. They can define and exemplify the most important physical phenomena and order them corresponding to wavelength and frequency of the fields. They can give an overview over measurement and numerical techniques for characterization of electromagnetic fields in practical applications. They can give examples for therapeutic and diagnostic utilization of electromagnetic fields in medical technology.		
<i>Skills</i>	Students know how to apply various methods to characterize the behavior of electromagnetic fields in biological tissue. In order to do this they can relate to and make use of the elementary solutions of Maxwell's Equations. They are able to assess the most important effects that these models predict for biological tissue, they can order the effects corresponding to wavelength and frequency, respectively, and they can analyze them in a quantitative way. They are able to develop validation strategies for their predictions. They are able to evaluate the effects of electromagnetic fields for therapeutic and diagnostic applications and make an appropriate choice.		
Personal Competence			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).		
<i>Autonomy</i>	Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can communicate problems and effects in the field of bioelectromagnetics in English.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Oral exam		
Examination duration			

and scale	30-60 minutes
Assignment for the Following Curricula	<p>Electrical Engineering: Specialisation Microwave Engineering, Optics, and Electromagnetic Compatibility: Elective Compulsory</p> <p>Electrical Engineering: Specialisation Medical Technology: Elective Compulsory</p> <p>International Management and Engineering: Specialisation II. Module M0634: Introduction into Medical Technology and Systems

Courses

Title	Typ	Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture	2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar	2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
Personal Competence			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory

Module M0752: Nonlinear Dynamics			
Courses			
Title	Typ	Hrs/wk	CP
Nonlinear Dynamics (L0702)	Lecture	4	6
Module Responsible	Prof. Norbert Hoffmann		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Calculus • Linear Algebra • Engineering Mechanics 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to reflect existing terms and concepts in Nonlinear Dynamics and to develop and research new terms and concepts.		
<i>Skills</i>	Students are able to apply existing methods and procedures of Nonlinear Dynamics and to develop novel methods and procedures.		
Personal Competence			
<i>Social Competence</i>	Students can reach working results also in groups.		
<i>Autonomy</i>	Students are able to approach given research tasks individually and to identify and follow up novel research tasks by themselves.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2 Hours		
Assignment for the Following Curricula	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory		

Course L0702: Nonlinear Dynamics	
Typ	Lecture
Hrs/wk	4
CP	6

Module M0838: Linear and Nonlinear System Identifikation

Courses

Title	Typ	Hrs/wk	CP
Linear and Nonlinear System Identification (L0660)	Lecture	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Classical control (frequency response, root locus) • State space methods • Discrete-time systems • Linear algebra, singular value decomposition • Basic knowledge about stochastic processes 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain the general framework of the prediction error method and its application to a variety of linear and nonlinear model structures • They can explain how multilayer perceptron networks are used to model nonlinear dynamics • They can explain how an approximate predictive control scheme can be based on neural network models • They can explain the idea of subspace identification and its relation to Kalman realisation theory 		
<i>Skills</i>	<ul style="list-style-type: none"> • Students are capable of applying the prediction error method to the experimental identification of linear and nonlinear models for dynamic systems • They are capable of implementing a nonlinear predictive control scheme based on a neural network model • They are capable of applying subspace algorithms to the experimental identification of linear models for dynamic systems • They can do the above using standard software tools (including the Matlab System Identification Toolbox) 		
Personal Competence			
<i>Social Competence</i>	Students can work in mixed groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Prediction error method • Linear and nonlinear model structures • Nonlinear model structure based on multilayer perceptron network • Approximate predictive control based on multilayer perceptron network model • Subspace identification
Literature	<ul style="list-style-type: none"> • Lennart Ljung, System Identification - Theory for the User, Prentice Hall 1999 • M. Norgaard, O. Ravn, N.K. Poulsen and L.K. Hansen, Neural Networks for Modeling and Control of Dynamic Systems, Springer Verlag, London 2003 • T. Kailath, A.H. Sayed and B. Hassibi, Linear Estimation, Prentice Hall 2000

Module M0840: Optimal and Robust Control

Courses			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Classical control (frequency response, root locus) State space methods Linear algebra, singular value decomposition 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the significance of the matrix Riccati equation for the solution of LQ problems. They can explain the duality between optimal state feedback and optimal state estimation. They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints. They can explain how an LQG design problem can be formulated as special case of an H2 design problem. They can explain how model uncertainty can be represented in a way that lends itself to robust controller design They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant. They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities. 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students are capable of designing and tuning LQG controllers for multivariable plant models. They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it. They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design. They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller. They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them. They can carry out all of the above using standard software tools (Matlab robust control toolbox). 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0855: Marketing (Sales and Services / Innovation Marketing)

Courses

Title	Typ	Hrs/wk	CP
Marketing (Innovation Marketing / Sales and Services) (L0862)	Project-/problem-based Learning	5	6
Module Responsible	Prof. Christian Lüthje		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Module International Business • Basic understanding of business administration principles (strategic planning, decision theory, project management, international business) • Bachelor-level Marketing Knowledge (Marketing Instruments, Market and Competitor Strategies, Basics of Buying Behavior) • Understanding of differences in the market introduction of Products and Services • Understanding the differences between B2B and B2C marketing • Understanding of the importance of managing innovation in global industrial markets • Good English proficiency; presentation skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students will have gained a deep understanding of</p> <ul style="list-style-type: none"> • Specific characteristics in the marketing of innovative industrial goods and services • The importance of product-related and independent services • Approaches for analyzing the current market situation and the future market development • The gathering of information about future customer needs and requirements • Concepts and approaches to integrate lead users and their needs into product and service development processes • Approaches and tools for ensuring customer-orientation in the development of new products and innovative services • Marketing mix elements that take into consideration the specific requirements and challenges of innovative products and services • Pricing methods for new products and services • The organization of complex sales forces and personal selling • Communication concepts and instruments for new products and services 		
<i>Knowledge</i>			
<i>Skills</i>	<p>Based on the acquired knowledge students will be able to:</p> <ul style="list-style-type: none"> • Design and to evaluate decisions regarding marketing and innovation strategies • Analyze markets by applying market and technology portfolios • Conduct forecasts and develop compelling scenarios as a basis for strategic planning • Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for customer-oriented product and service development • Use adequate methods to foster efficient diffusion of innovative products and services • Choose suitable pricing strategies and communication activities for innovations • Make strategic sales decisions for products and services (i.e. selection of sales channels) • Apply methods of sales force management (i.e. customer value analysis) 		
Personal Competence			

<p><i>Social Competence</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • have fruitful discussions and exchange arguments • develop original results in a group • present results in a clear and concise way • carry out respectful team work
<p><i>Autonomy</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem fields. • Consider proposed business actions in the field of marketing and reflect on them.

Module M1143: Mechanical Design Methodology

Courses

Title	Typ	Hrs/wk	CP
Mechanical Design Methodology (L1523)	Lecture	3	4
Mechanical Design Methodology (L1524)	Recitation Section (small)	1	2
Module Responsible	Prof. Josef Schlattmann		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	Science-based working on product design considering targeted application of specific product design techniques Creative handling of processes used for scientific preparation and formulation of complex product design problems / Application of various product design techniques following theoretical aspects.		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	30 min		
Assignment for the Following Curricula	International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Product Development and Production: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L1523: Mechanical Design Methodology	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Josef Schlattmann
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Systematic reflection and analysis of the mechanical design process • Process structuring in sections (task, functions, acting principles, design-elements and total construction) as well as levels (working-, controlling-, and deciding-levels) • Creativity (basics, methods, practical application in mechatronics) • Diverse methods applied as tools (function structure, GALFMOS, AEIOU method, GAMPFT, simulation tools, TRIZ) • Evaluation and selection (technical-economical evaluation, preference matrix) • Value analysis, cost-benefit analysis • Low-noise design of technical products • Project monitoring and leading (leading projects / employees, organisation in product development, creating ideas / responsibility and communication) • Aesthetic product design (industrial design, colouring, specific examples / exercises)
Literature	<ul style="list-style-type: none"> • Pahl, G.; Beitz, W.; Feldhusen, J.; Grote, K.-H.: Konstruktionslehre: Grundlage erfolgreicher Produktentwicklung, Methoden und Anwendung, 7. Auflage, Springer Verlag, Berlin 2007 • VDI-Richtlinien: 2206; 2221ff

Course L1524: Mechanical Design Methodology	
Typ	Recitation Section (small)
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Lecturer	Prof. Josef Schlattmann

Module M1277: MED I: Introduction to Anatomy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
Module Responsible	Prof. Udo Schumacher		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.		
<i>Skills</i>	The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.		
Personal Competence			
<i>Social Competence</i>	The students can participate in current discussions in biomedical research and medicine on a professional level.		
<i>Autonomy</i>	The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory

Module M1278: MED I: Introduction to Radiology and Radiation Therapy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
Module Responsible	Prof. Ulrich Carl		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Therapy</p> <p>The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p>The students can describe the patients' passage from their initial admittance through to follow-up care.</p> <p>Diagnostics</p> <p>The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p> <p>Therapy</p> <p>The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p>Diagnostics</p> <p>The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p>		
<i>Knowledge</i>			
<i>Skills</i>			

Personal Competence	The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.

Content	<p>The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments</p>

Module M1280: MED II: Introduction to Physiology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
Module Responsible	Dr. Roger Zimmermann		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> describe the basics of the energy metabolism; describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology. 		
<i>Knowledge</i>			
<i>Skills</i>	The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.		
Personal Competence			
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.		
<i>Autonomy</i>	The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.

Module M0845: Feedback Control in Medical Technology			
Courses			
Title	Typ	Hrs/wk	CP
Feedback Control in Medical Technology (L0664)	Lecture	2	3
Module Responsible	Prof. Olaf Simanski		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in Control, Basics in Physiology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The lecture will introduce into the fascinating area of medical technology with the engineering point of view. Fundamentals in human physiology will be similarly introduced like knowledge in control theory.</p> <p><i>Knowledge</i> Internal control loops of the human body will be discussed in the same way like the design of external closed loop system for example in for anesthesia control.</p> <p>The handling of PID controllers and modern controller like predictive controller or fuzzy controller or neural networks will be illustrated. The operation of simple equivalent circuits will be discussed.</p> <p><i>Skills</i> Application of modeling, identification, control technology in the field of medical technology.</p>		
Personal Competence	<p><i>Social Competence</i> Students can develop solutions to specific problems in small groups and present their results (e.g. during project week)</p> <p><i>Autonomy</i> Students are able to find necessary literature and to set it into the context of the lecture. They are able to continuously evaluate their knowledge and to take control of their learning process. They can combine knowledge from different courses to form a consistent whole.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Oral exam		
Examination duration and scale			
Assignment for the Following Curricula	Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory		

Course L0664: Feedback Control in Medical Technology	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Ulf Pilz, Prof. Olaf Simanski
Language	DE
Cycle	SoSe
Content	<p>Taking an engineering point of view, the lecture is structured as follows.</p> <ul style="list-style-type: none"> • Introduction to the topic with selected examples • Physiology - introduction and overview • Regeneration of functions of the cardiovascular system • Regeneration of the respiratory functions • Closed loop control in anesthesia • regeneration of kidney and liver functions • regeneration of motorize function/ rehabilitation engineering • navigation systems and robotic in medicine <p>The lecture will use knowledge from modeling, simulation and controller design and MATLAB and SIMULINK will be used.</p>
Literature	<p>Silbernagel/Depopoulos: Taschenatlas der Physiologie, Thieme Verlag Stuttgart</p> <p>Werner: Kooperative und autonome Systeme der Medizintechnik, Oldenburg Verlag</p> <p>M.C.K.Khoo: "Physiological Control System", IEEE Press, 2000</p>

Module M0938: Bioprocess Engineering - Fundamentals

Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	None		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p><i>Skills</i></p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> • describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters • predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process • analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations • distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem • propose solutions to complicated biotechnological problems and to deduce the corresponding models • to explore new knowledge resources and to apply the newly gained contents • identify scientific problems with concrete industrial use and to formulate solutions. • to document and discuss their procedures as well as results in a scientific manner <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p>After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.</p> <p><i>Autonomy</i></p> <p>After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.</p>

Courses			
Title	Typ	Hrs/wk	CP
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture	2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)	2	2
Module Responsible	Rainer Marrone		
Admission Requirements	None		
Recommended Previous Knowledge	Vectors, matrices, Calculus		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.</p>		
Personal Competence			
<i>Social Competence</i>	Students are able to discuss their solutions to problems with others. They communicate in English		
<i>Autonomy</i>	Students are able of checking their understanding of complex concepts by solving varaints of concrete problems		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes

Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.

Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques

Course L0379: Ceramics Technology	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	90 Minuten
Lecturer	Dr. Rolf Janßen
Language	DE/EN
Cycle	WiSe
Content	<p>Introduction to ceramic processing with emphasis on advanced structural ceramics. The course focus predominatly on powder-based processing, e.g. "powder-metallurgical techniques and sintering (solid state and liquid phase). Also, some aspects of glass and cement science as well as new developments in powderless forming techniques of ceramics and ceramic composites will be addressed. Examples will be discussed in order to give engineering students an understanding of technology development and specific applications of ceramic components.</p> <p>Content:</p> <p>Inhalt:</p> <ol style="list-style-type: none"> 1. Introduction 2. Raw materials 3. Powder fabrication 4. Powder processing 5. Shape-forming processes 6. Densification, sintering 7. Glass and Cement technology 8. Ceramic-metal joining techniques

Module M1241: Selected Topics of Biomedical Engineering - Option B (12 LP)

Courses

Title	Typ	Hrs/wk	CP
Nature's Hierarchical Materials (L1663)	Seminar	2	3
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1669)	Lecture	3	4
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1877)	Recitation Section (small)	2	2
Development and Regulatory Approval of Implants (L1588)	Lecture	2	3
Experimental Methods for the Characterization of Materials (L1580)	Lecture	2	3
Numerical Methods in Biomechanics (L1583)	Seminar	2	3
Seminar Biomedical Engineering (L1890)	Seminar	2	3
Six Sigma (L1130)	Lecture	2	3
Fluid Mechanics II (L0001)	Lecture	2	4
Ceramics Technology (L0379)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i>			
Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Depends on choice of courses		
Credit points	12		
Assignment for the Following Curricula	Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory		

Course L1663: Nature's Hierarchical Materials	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	
Lecturer	Prof. Gerold Schneider
Language	EN
Cycle	WiSe
Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.
Literature	Peter Fratzl, Richard Weinkamer, Nature's hierarchical materials Progress, in Materials Science 52 (2007) 1263-1334 Journal publications

Course L1669: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Prof. Christian Schuster
Language	DE/EN
Cycle	WiSe
Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques
Literature	<ul style="list-style-type: none"> - Zinke, Brunswig, "Hochfrequenztechnik 1", Springer (1999) - J. Detlefsen, U. Siart, "Grundlagen der Hochfrequenztechnik", Oldenbourg (2012) - D. M. Module Responsible	Prof. Manfred Kasper		
Admission Requirements	None		
Recommended Previous Knowledge	Basic courses in physics, mathematics and electric engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know about the most important technologies and materials of MEMS as well as their applications in sensors and actuators.		
<i>Skills</i>	Students are able to analyze and describe the functional behaviour of MEMS components and to evaluate the potential of microsystems.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0808: Finite Elements Methods			
Courses			
Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation Section (large)	2	3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	None		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	120 min		
	Civil Engineering: Core qualification: Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective		

Assignment for the Following Curricula	Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechatronics: Core qualification: Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Product Development, Materials and Production: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Compulsory
---	---

Course L0291: Finite Element Methods	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Otto von Estorff
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> - General overview on modern engineering - Displacement method - Hybrid formulation - Isoparametric elements - Numerical integration - Solving systems of equations (statics, dynamics) - Eigenvalue problems - Non-linear systems - Applications - Programming of elements (Matlab, hands-on sessions) - Applications
Literature	Bathe, K.-J. (2000): Finite-Elemente-Methoden. Springer Verlag, Berlin

Module M0814: Technology Management

Courses			
Title	Typ	Hrs/wk	CP
Technology Management (L0849)	Project-/problem-based Learning	3	3
Technology Management Seminar (L0850)	Project-/problem-based Learning	2	3
Module Responsible	Prof. Cornelius Herstatt		
Admission Requirements	None		
Recommended Previous Knowledge	Bachelor knowledge in business management		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students will gain deep insights into:</p> <ul style="list-style-type: none"> • Technology Timing Strategies <ul style="list-style-type: none"> ◦ Technology Strategies and Lifecycle Management (I/II) ◦ Technology Intelligence and Planning • Technology Portfolio Management <ul style="list-style-type: none"> ◦ Technology Portfolio Methodology ◦ Technology Acquisition and Exploitation ◦ IP Management • Organizing Technology Development <ul style="list-style-type: none"> ◦ Technology Organization & Management ◦ Technology Funding & Controlling 		
<i>Knowledge</i>			
<i>Skills</i>	<p>The course aims to:</p> <ul style="list-style-type: none"> • Develop an understanding of the importance of Technology Management - on a national as well as international level • Equip students with an understanding of important elements of Technology Management (strategic, operational, organizational and process-related aspects) • Foster a strategic orientation to problem-solving within the innovation process as well as Technology Management and its importance for corporate strategy • Clarify activities of Technology Management (e.g. technology sourcing, maintenance and exploitation) • Strengthen essential communication skills and a basic understanding of managerial, organizational and financial issues concerning Technology-, Innovation- and R&D-management. Further topics to be discussed include: <ul style="list-style-type: none"> • Basic concepts, models and tools, relevant to the management of technology, R&D and innovation • Innovation as a process (steps, activities and results) 		
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> • Interact within a team • Raise awareness for global issues 		
<i>Autonomy</i>	<ul style="list-style-type: none"> • Gain access to knowledge sources • Interpret complicated cases 		

	<ul style="list-style-type: none"> • Develop presentation skills
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	90 minutes
Assignment for the Following Curricula	Global Innovation Management: Core qualification: Compulsory International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Mechanical Engineering and Management: Specialisation Management: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprosthesis: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Compulsory

Course L0849: Technology Management

Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	<p>The role of technology for the competitive advantage of the firm and industries; Basic concepts, models and tools for the management of technology; managerial decision making regarding the identification, selection and protection of technology (make or buy, keep or sell, current and future technologies). Theories, practical examples (cases), lectures, interactive sessions and group study.</p> <p>This lecture is part of the Module Technology Management and can not separately chosen.</p>
Literature	Leiblein, M./Ziedonis, A.: Technology Strategy and Innovation Management, Elgar Research Collection, Northampton (MA) 2011

Typ	Project-/problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	Aspects of and Cases in combination with the content of the lecture.
Literature	see lecture Technology Management.

Module M0846: Control Systems Theory and Design

Courses			
Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	Introduction to Control Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively They can explain the significance of a minimal realisation They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection They can extend all of the above to multi-input multi-output systems They can explain the z-transform and its relationship with the Laplace Transform They can explain state space models and transfer function models of discrete-time systems They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation They can explain how a state space model can be constructed from a discrete-time impulse response 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students can transform transfer function models into state space models and vice versa They can assess controllability and observability and construct minimal realisations They can design LQG controllers for multivariable plants They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate They can identify transfer function models and state space models of dynamic systems from experimental data They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink) 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.		
<i>Autonomy</i>	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Module M0921: Electronic Circuits for Medical Applications

Courses			
Title	Typ	Hrs/wk	CP
Electronic Circuits for Medical Applications (L0696)	Lecture	2	3
Electronic Circuits for Medical Applications (L1056)	Recitation Section (small)	1	2
Electronic Circuits for Medical Applications (L1408)	Practical Course	1	1
Module Responsible	NN		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of electrical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the basic functionality of the information transfer by the central nervous system Students are able to explain the build-up of an action potential and its propagation along an axon Students can exemplify the communication between neurons and electronic devices Students can describe the special features of low-noise amplifiers for medical applications Students can explain the functions of prostheses, e. g. an artificial hand Students are able to discuss the potential and limitations of cochlea implants and artificial eyes <ul style="list-style-type: none"> Students can calculate the time dependent voltage behavior of an action potential Students can give scenarios for further improvement of low-noise and low-power signal acquisition. Students can develop the block diagrams of prosthetic systems Students can define the building blocks of electronic systems for an artificial eye. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> Students are trained to solve problems in the field of medical electronics in teams together with experts with different professional background. Students are able to recognize their specific limitations, so that they can ask for assistance to the right time. Students can document their work in a clear manner and communicate their results in a way that others can be involved whenever it is necessary 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are able to realistically judge the status of their knowledge and to define actions for improvements when necessary. Students can break down their work in appropriate work packages and schedule their work in a realistic way. Students can handle the complex data structures of bioelectrical experiments without needing support. 		

	<ul style="list-style-type: none"> • Students are able to act in a responsible manner in all cases and situations of experimental work.

Module M1199: Advanced Functional Materials	
Courses	
Title	Typ
Advanced Functional Materials (L1625)	Lecture
Hrs/wk	CP
2	6
Module Responsible	Prof. Patrick Huber
Admission Requirements	None
Recommended Previous Knowledge	Fundamentals of Materials Science (I and II)
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	The students will be able to explain the properties of advanced materials along with their applications in technology, in particular metallic, ceramic, polymeric, semiconductor, modern composite materials (biomaterials) and nanomaterials.
<i>Skills</i>	The students will be able to select material configurations according to the technical needs and, if necessary, to design new materials considering architectural principles from the micro- to the macroscale. The students will also gain an overview on modern materials science, which enables them to select optimum materials combinations depending on the technical applications.
Personal Competence	
<i>Social Competence</i>	The students are able to present solutions to specialists and to develop ideas further.
<i>Autonomy</i>	The students are able to ... <ul style="list-style-type: none"> • assess their own strengths and weaknesses. • define tasks independently.
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28
Credit points	6
Examination	Presentation
Examination duration and scale	90 min
Assignment for the Following Curricula	Materials Science: Core qualification: Compulsory Mechanical Engineering and Management: Specialisation Materials: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Materials Science: Elective Compulsory

Course L1625: Advanced Functional Materials	
Typ	Lecture
Hrs/wk	2
CP	6
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28
Lecturer	Prof. Patrick Huber, Prof. Stefan Müller, Prof. Bodo Fiedler, Prof. Gerold Schneider, Prof. Jörg Weißmüller
Language	DE/EN
Cycle	WiSe
Content	1. Porous Solids - Preparation, Characterization and Functionalities 2. Fluidics with nanoporous membranes 3. Thermoplastic elastomers 4. Optimization of polymer properties by nanoparticles 5. Fiber composites in automotive 6. Modeling of materials based on quantum mechanics 7. Biomaterials
Literature	Wird in der Veranstaltung bekannt gegeben

Module M1279: MED II: Introduction to Biochemistry and Molecular Biology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Biochemistry and Molecular Biology (L0386)	Lecture	2	3
Module Responsible	Prof. Hans-Jürgen Kreienkamp		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> • describe basic biomolecules; • explain how genetic information is coded in the DNA; • explain the connection between DNA and proteins; 		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students can</p> <ul style="list-style-type: none"> • recognize the importance of molecular parameters for the course of a disease; • describe selected molecular-diagnostic procedures; • explain the relevance of these procedures for some diseases 		
Personal Competence			
<i>Social Competence</i>	The students can participate in discussions in research and medicine on a technical level.		
<i>Autonomy</i>	The students can develop understanding of topics from the course, using technical literature, by themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	60 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory

Module M1333: BIO I: Implants and Fracture Healing

Courses			
Title	Typ	Hrs/wk	CP
Implants and Fracture Healing (L0376)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	The students can describe the different ways how bones heal, and the requirements for their existence.		
<i>Knowledge</i>	The students can name different treatments for the spine and hollow bones under given fracture morphologies.		
<i>Skills</i>	The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.		
Personal Competence	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.		
<i>Social Competence</i>	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.		
<i>Autonomy</i>	The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.

Module M1342: Polymers

Courses

Title	Typ	Hrs/wk	CP
Structure and Properties of Polymers (L0389)	Lecture	2	3
Processing and design with polymers (L1892)	Lecture	2	3
Module Responsible	Dr. Hans Wittich		
Admission Requirements	None		
Recommended Previous Knowledge	Basics: chemistry / physics / material science		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can use the knowledge of plastics and define the necessary testing and analysis.</p> <p><i>Knowledge</i> They can explain the complex relationships structure-property relationship and the interactions of chemical structure of the polymers, including to explain neighboring contexts (e.g. sustainability, environmental protection).</p> <p><i>Skills</i> Students are capable of</p> <ul style="list-style-type: none"> - using standardized calculation methods in a given context to mechanical properties (modulus, strength) to calculate and evaluate the different materials. - For mechanical recycling problems selecting appropriate solutions and sizing example Stiffness, corrosion resistance. 		
Personal Competence	<p><i>Social Competence</i> Students can,</p> <ul style="list-style-type: none"> - arrive at work results in groups and document them. - provide appropriate feedback and handle feedback on their own performance constructively. <p><i>Autonomy</i> Students are able to,</p> <ul style="list-style-type: none"> - assess their own strengths and weaknesses - assess their own state of learning in specific terms and to define further work steps on this basis guided by teachers. - assess possible consequences of their professional activity.

Module M0548: Bioelectromagnetics: Principles and Applications

Courses			
Title	Typ	Hrs/wk	CP
Bioelectromagnetics: Principles and Applications (L0371)	Lecture	3	5
Bioelectromagnetics: Principles and Applications (L0373)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	None		
Recommended Previous Knowledge	Basic principles of physics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the basic principles, relationships, and methods of bioelectromagnetics, i.e. the quantification and application of electromagnetic fields in biological tissue. They can define and exemplify the most important physical phenomena and order them corresponding to wavelength and frequency of the fields. They can give an overview over measurement and numerical techniques for characterization of electromagnetic fields in practical applications. They can give examples for therapeutic and diagnostic utilization of electromagnetic fields in medical technology.		
<i>Skills</i>	Students know how to apply various methods to characterize the behavior of electromagnetic fields in biological tissue. In order to do this they can relate to and make use of the elementary solutions of Maxwell's Equations. They are able to assess the most important effects that these models predict for biological tissue, they can order the effects corresponding to wavelength and frequency, respectively, and they can analyze them in a quantitative way. They are able to develop validation strategies for their predictions. They are able to evaluate the effects of electromagnetic fields for therapeutic and diagnostic applications and make an appropriate choice.		
Personal Competence			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).		
<i>Autonomy</i>	Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can communicate problems and effects in the field of bioelectromagnetics in English.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Oral exam		
Examination duration			

and scale	30-60 minutes

Module M0630: Robotics and Navigation in Medicine

Courses

Title	Typ	Hrs/wk	CP
Robotics and Navigation in Medicine (L0335)	Lecture	2	3
Robotics and Navigation in Medicine (L0338)	Project Seminar	2	2
Robotics and Navigation in Medicine (L0336)	Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • principles of math (algebra, analysis/calculus) • principles of programming, e.g., in Java or C++ • solid R or Matlab skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain kinematics and tracking systems in clinical contexts and illustrate systems and their components in details. Systems can be evaluated with respect to collision detection and safety and regulations. Students can assess typical systems regarding design and limitations.		
<i>Skills</i>	The students are able to design and evaluate navigation systems and robotic systems for medical applications.		
Personal Competence			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.

Module M0634: Introduction into Medical Technology and Systems

Courses			
Title	Typ	Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture	2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar	2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
Personal Competence			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.

Module M0835: Humanoid Robotics			
Courses			
Title	Typ	Hrs/wk	CP
Humanoid Robotics (L0663)	Seminar	2	2
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Introduction to control systems • Control theory and design 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> • Students can explain humanoid robots. • Students learn to apply basic control concepts for different tasks in humanoid robotics. • Students acquire knowledge about selected aspects of humanoid robotics, based on specified literature • Students generalize developed results and present them to the participants • Students practice to prepare and give a presentation • Students are capable of developing solutions in interdisciplinary teams and present them • They are able to provide appropriate feedback and handle constructive criticism of their own results • Students evaluate advantages and drawbacks of different forms of presentation for specific tasks and select the best solution • Students familiarize themselves with a scientific field, are able of introduce it and follow presentations of other students, such that a scientific discussion develops

Literature	- B. Siciliano, O. Khatib. "Handbook of Robotics. Part A: Robotics Foundations", Springer (2008).

Module M0838: Linear and Nonlinear System Identifikation

Courses

Title	Typ	Hrs/wk	CP
Linear and Nonlinear System Identification (L0660)	Lecture	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Classical control (frequency response, root locus) • State space methods • Discrete-time systems • Linear algebra, singular value decomposition • Basic knowledge about stochastic processes 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain the general framework of the prediction error method and its application to a variety of linear and nonlinear model structures • They can explain how multilayer perceptron networks are used to model nonlinear dynamics • They can explain how an approximate predictive control scheme can be based on neural network models • They can explain the idea of subspace identification and its relation to Kalman realisation theory 		
<i>Skills</i>	<ul style="list-style-type: none"> • Students are capable of applying the prediction error method to the experimental identification of linear and nonlinear models for dynamic systems • They are capable of implementing a nonlinear predictive control scheme based on a neural network model • They are capable of applying subspace algorithms to the experimental identification of linear models for dynamic systems • They can do the above using standard software tools (including the Matlab System Identification Toolbox) 		
Personal Competence			
<i>Social Competence</i>	Students can work in mixed groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Prediction error method • Linear and nonlinear model structures • Nonlinear model structure based on multilayer perceptron network • Approximate predictive control based on multilayer perceptron network model • Subspace identification
Literature	<ul style="list-style-type: none"> • Lennart Ljung, System Identification - Theory for the User, Prentice Hall 1999 • M. Norgaard, O. Ravn, N.K. Poulsen and L.K. Hansen, Neural Networks for Modeling and Control of Dynamic Systems, Springer Verlag, London 2003 • T. Kailath, A.H. Sayed and B. Hassibi, Linear Estimation, Prentice Hall 2000

Module M0840: Optimal and Robust Control

Courses			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Classical control (frequency response, root locus) State space methods Linear algebra, singular value decomposition 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the significance of the matrix Riccati equation for the solution of LQ problems. They can explain the duality between optimal state feedback and optimal state estimation. They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints. They can explain how an LQG design problem can be formulated as special case of an H2 design problem. They can explain how model uncertainty can be represented in a way that lends itself to robust controller design They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant. They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities. 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students are capable of designing and tuning LQG controllers for multivariable plant models. They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it. They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design. They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller. They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them. They can carry out all of the above using standard software tools (Matlab robust control toolbox). 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0845: Feedback Control in Medical Technology

Courses			
Title	Typ	Hrs/wk	CP
Feedback Control in Medical Technology (L0664)	Lecture	2	3
Module Responsible	Prof. Olaf Simanski		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in Control, Basics in Physiology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The lecture will introduce into the fascinating area of medical technology with the engineering point of view. Fundamentals in human physiology will be similarly introduced like knowledge in control theory.</p> <p><i>Knowledge</i> Internal control loops of the human body will be discussed in the same way like the design of external closed loop system for example in for anesthesia control.</p> <p>The handling of PID controllers and modern controller like predictive controller or fuzzy controller or neural networks will be illustrated. The operation of simple equivalent circuits will be discussed.</p> <p><i>Skills</i> Application of modeling, identification, control technology in the field of medical technology.</p>		
Personal Competence	<p><i>Social Competence</i> Students can develop solutions to specific problems in small groups and present their results (e.g. during project week)</p> <p><i>Autonomy</i> Students are able to find necessary literature and to set it into the context of the lecture. They are able to continuously evaluate their knowledge and to take control of their learning process. They can combine knowledge from different courses to form a consistent whole.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28

Module M0855: Marketing (Sales and Services / Innovation Marketing)

Courses

Title	Typ	Hrs/wk	CP
Marketing (Innovation Marketing / Sales and Services) (L0862)	Project-/problem-based Learning	5	6

Module Responsible	Prof. Christian Lüthje
---------------------------	------------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	<ul style="list-style-type: none"> Module International Business Basic understanding of business administration principles (strategic planning, decision theory, project management, international business) Bachelor-level Marketing Knowledge (Marketing Instruments, Market and Competitor Strategies, Basics of Buying Behavior) Understanding of differences in the market introduction of Products and Services Understanding the differences between B2B and B2C marketing Understanding of the importance of managing innovation in global industrial markets Good English proficiency; presentation skills
---------------------------------------	--

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<p>Students will have gained a deep understanding of</p> <ul style="list-style-type: none"> Specific characteristics in the marketing of innovative industrial goods and services The importance of product-related and independent services Approaches for analyzing the current market situation and the future market development The gathering of information about future customer needs and requirements Concepts and approaches to integrate lead users and their needs into product and service development processes Approaches and tools for ensuring customer-orientation in the development of new products and innovative services Marketing mix elements that take into consideration the specific requirements and challenges of innovative products and services Pricing methods for new products and services The organization of complex sales forces and personal selling Communication concepts and instruments for new products and services
<i>Knowledge</i>	
<i>Skills</i>	<p>Based on the acquired knowledge students will be able to:</p> <ul style="list-style-type: none"> Design and to evaluate decisions regarding marketing and innovation strategies Analyze markets by applying market and technology portfolios Conduct forecasts and develop compelling scenarios as a basis for strategic planning Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for customer-oriented product and service development Use adequate methods to foster efficient diffusion of innovative products and services Choose suitable pricing strategies and communication activities for innovations Make strategic sales decisions for products and services (i.e. selection of sales channels) Apply methods of sales force management (i.e. customer value analysis)
Personal Competence	

<p><i>Social Competence</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • have fruitful discussions and exchange arguments • develop original results in a group • present results in a clear and concise way • carry out respectful team work
<p><i>Autonomy</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem fields. • Consider proposed business actions in the field of marketing and reflect on them.
<p>Workload in Hours</p>	<p>Independent Study Time 110, Study Time in Lecture 70</p>

Module M0938: Bioprocess Engineering - Fundamentals

Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	None		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p><i>Skills</i></p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> • describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters • predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process • analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations • distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem • propose solutions to complicated biotechnological problems and to deduce the corresponding models • to explore new knowledge resources and to apply the newly gained contents • identify scientific problems with concrete industrial use and to formulate solutions. • to document and discuss their procedures as well as results in a scientific manner <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p>After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.</p> <p><i>Autonomy</i></p> <p>After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.</p>

Course L0842: Bioprocess Engineering- Fundamentals	
Typ	Recitation Section (large)
Hrs/wk	2
CP	1
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28
Lecturer	Prof. Andreas Liese, Prof. An-Ping Zeng
Language	DE
Cycle	SoSe
Content	1. Introduction (Prof. Liese, Prof. Zeng) 2. Enzymatic kinetics (Prof. Liese) 3. Stoichiometry I + II (Prof. Liese) 4. Microbial Kinetics I+II (Prof. Zeng) 5. Rheology (Prof. Liese) 6. Mass transfer in bioprocess (Prof. Zeng) 7. Continuous culture (Chemostat) (Prof. Zeng) 8. Sterilisation (Prof. Zeng) 9. Downstream processing (Prof. Liese) 10. Repetition (Reserve) (Prof. Liese, Prof. Zeng)
Literature	siehe Vorlesung

Course L0843: Bioprocess Engineering - Fundamental Practical Course	
Typ	Practical Course
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Andreas Liese, Prof. An-Ping Zeng
Language	DE
Cycle	SoSe
Content	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out. The students document their experiments and results in a protocol.
Literature	Skript

Module M1277: MED I: Introduction to Anatomy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
Module Responsible	Prof. Udo Schumacher		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.		
<i>Skills</i>	The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.		
Personal Competence			
<i>Social Competence</i>	The students can participate in current discussions in biomedical research and medicine on a professional level.		
<i>Autonomy</i>	The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Mechanical Engineering: Specialisation Biomechanics: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory

Module M1278: MED I: Introduction to Radiology and Radiation Therapy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3

Module Responsible	Prof. Ulrich Carl
---------------------------	-------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	None
---------------------------------------	------

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<p>Therapy The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p>The students can describe the patients' passage from their initial admittance through to follow-up care.</p>
<i>Knowledge</i>	<p>Diagnostics The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p>
<i>Skills</i>	<p>Therapy The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p>Diagnostics The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p>

Personal Competence	The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.

Content	<p>The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments</p>

Module M1280: MED II: Introduction to Physiology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
Module Responsible	Dr. Roger Zimmermann		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> describe the basics of the energy metabolism; describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology. 		
<i>Knowledge</i>			
<i>Skills</i>	The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.		
Personal Competence			
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.		
<i>Autonomy</i>	The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.

Courses

Title	Typ	Hrs/wk	CP
Intelligent Systems in Medicine (L0331)	Lecture	2	3
Intelligent Systems in Medicine (L0334)	Project Seminar	2	2
Intelligent Systems in Medicine (L0333)	Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • principles of math (algebra, analysis/calculus) • principles of stochastics • principles of programming, Java/C++ and R/Matlab • advanced programming skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students are able to analyze and solve clinical treatment planning and decision support problems using methods for search, optimization, and planning. They are able to explain methods for classification and their respective advantages and disadvantages in clinical contexts. The students can compare different methods for representing medical knowledge. They can evaluate methods in the context of clinical data and explain challenges due to the clinical nature of the data and its acquisition and due to privacy and safety requirements.		
<i>Skills</i>	The students can give reasons for selecting and adapting methods for classification, regression, and prediction. They can assess the methods based on actual patient data and evaluate the implemented methods.		
Personal Competence			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.

Module M0629: Intelligent Autonomous Agents and Cognitive Robotics

Courses			
Title	Typ	Hrs/wk	CP
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture	2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)	2	2
Module Responsible	Rainer Marrone		
Admission Requirements	None		
Recommended Previous Knowledge	Vectors, matrices, Calculus		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.</p>		
<i>Knowledge</i>			
<i>Skills</i>	<p>Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.</p>		
Personal Competence			
<i>Social Competence</i>	Students are able to discuss their solutions to problems with others. They communicate in English		
<i>Autonomy</i>	Students are able of checking their understanding of complex concepts by solving varaints of concrete problems		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		

**Assignment for the
Following Curricula**

Computer Science: Specialisation Intelligence Engineering: Elective Compulsory
Computational Science and Engineering: Specialisation Systems Engineering and Robotics:
Elective Compulsory
International Production Management: Specialisation Production Technology: Elective
Compulsory
International Management and Engineering: Specialisation II. Information Technology:
Elective Compulsory
Mechatronics: Technical Complementary Course: Elective Compulsory
Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective
Compulsory
Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory
Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective
Compulsory
Biomedical Engineering: Specialisation Management and Business Administration: Elective
Compulsory

Course L0341: Intelligent Autonomous Agents and Cognitive Robotics	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Rainer Marrone
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Definition of agents, rational behavior, goals, utilities, environment types • Adversarial agent cooperation: Agents with complete access to the state(s) of the environment, games, Minimax algorithm, alpha-beta pruning, elements of chance • Uncertainty: Motivation: agents with no direct access to the state(s) of the environment, probabilities, conditional probabilities, product rule, Bayes rule, full joint probability distribution, marginalization, summing out, answering queries, complexity, independence assumptions, naive Bayes, conditional independence assumptions • Bayesian networks: Syntax and semantics of Bayesian networks, answering queries revised (inference by enumeration), typical-case complexity, pragmatics: reasoning from effect (that can be perceived by an agent) to cause (that cannot be directly perceived). • Probabilistic reasoning over time: Environmental state may change even without the agent performing actions, dynamic Bayesian networks, Markov assumption, transition model, sensor model, inference problems: filtering, prediction, smoothing, most-likely explanation, special cases: hidden Markov models, Kalman filters, Exact inferences and approximations • Decision making under uncertainty: Simple decisions: utility theory, multivariate utility functions, dominance, decision networks, value of informatio Complex decisions: sequential decision problems, value iteration, policy iteration, MDPs Decision-theoretic agents: POMDPs, reduction to multidimensional continuous MDPs, dynamic decision networks • Simultaneous Localization and Mapping • Planning • Game theory (Golden Balls: Split or Share) Decisions with multiple agents, Nash equilibrium, Bayes-Nash equilibrium • Social Choice Voting protocols, preferences, paradoxes, Arrow's Theorem, • Mechanism Design Fundamentals, dominant strategy implementation, Revelation Principle, Gibbard-Satterthwaite Impossibility Theorem, Direct mechanisms, incentive compatibility, strategy-proofness, Vickrey-Groves-Clarke mechanisms, expected externality mechanisms, participation constraints, individual rationality, budget balancedness, bilateral trade, Myerson-Satterthwaite Theorem
Literature	<ol style="list-style-type: none"> 1. Artificial Intelligence: A Modern Approach (Third Edition), Stuart Russell, Peter Norvig, Prentice Hall, 2010, Chapters 2-5, 10-11, 13-17 2. Probabilistic Robotics, Thrun, S., Burgard, W., Fox, D. MIT Press 2005 3. Multiagent Systems: Algorithmic, Game-Theoretic, and Logical Foundations, Yoav Shoham, Kevin Leyton-Brown, Cambridge University Press, 2009

Module M1230: Selected Topics of Biomedical Engineering - Option A (6 LP)

Courses

Title	Typ	Hrs/wk	CP
Nature's Hierarchical Materials (L1663)	Seminar	2	3
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1669)	Lecture	3	4
Introduction to Waveguides, Antennas, and Electromagnetic Compatibility (L1877)	Recitation Section (small)	2	2
Development and Regulatory Approval of Implants (L1588)	Lecture	2	3
Experimental Methods for the Characterization of Materials (L1580)	Lecture	2	3
Numerical Methods in Biomechanics (L1583)	Seminar	2	3
Seminar Biomedical Engineering (L1890)	Seminar	2	3
Six Sigma (L1130)	Lecture	2	3
Fluid Mechanics II (L0001)	Lecture	2	4
Ceramics Technology (L0379)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i>			
Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Depends on choice of courses		
Credit points	6		
Assignment for the Following Curricula	Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory		

Course L1663: Nature's Hierarchical Materials	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Examination Form	Klausur
Examination duration and scale	
Lecturer	Prof. Gerold Schneider
Language	EN
Cycle	WiSe
Content	Biological materials are omnipresent in the world around us. They are the main constituents in plant and animal bodies and have a diversity of functions. A fundamental function is obviously mechanical providing protection and support for the body. But biological materials may also serve as ion reservoirs (bone is a typical example), as chemical barriers (like cell membranes), have catalytic function (such as enzymes), transfer chemical into kinetic energy (such as the muscle), etc. This lecture will focus on materials with a primarily (passive) mechanical function: cellulose tissues (such as wood), collagen tissues (such as tendon or cornea), mineralized tissues (such as bone, dentin and glass sponges). The main goal is to give an introduction to the current knowledge of the structure in these materials and how these structures relate to their (mostly mechanical) functions.
Literature	Peter Fratzl, Richard Weinkamer, Nature's hierarchical materials Progress, in Materials Science 52 (2007) 1263-1334 Journal publications

Course L1669: Introduction to Waveguides, Antennas, and Electromagnetic Compatibility	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Examination Form	Mündliche Prüfung
Examination duration and scale	30 min
Lecturer	Prof. Christian Schuster
Language	DE/EN
Cycle	WiSe
Content	<p>This course is intended as an introduction to the topics of wave propagation, guiding, sending, and receiving as well as Electromagnetic Compatibility (EMC) for graduate engineering students that do not have a formal background in electrical engineering. It will be useful for engineers that face the technical challenge of transmitting high frequency / high bandwidth data in e.g. medical, automotive, or avionic applications. Both circuit and field concepts of wave propagation and Electromagnetic Compatibility will be introduced and discussed.</p> <p>Topics:</p> <ul style="list-style-type: none"> - Fundamental properties and phenomena of electrical circuits - Steady-state sinusoidal analysis of electrical circuits - Fundamental properties and phenomena of electromagnetic fields and waves - Steady-state sinusoidal description of electromagnetic fields and waves - Useful microwave network parameters - Transmission lines and basic results from transmission line theory - Plane wave propagation, superposition, reflection and refraction - General theory of waveguides - Most important types of waveguides and their properties - Radiation and basic antenna parameters - Most important types of antennas and their properties - Numerical techniques and CAD tools for waveguide and antenna design - Fundamentals of Electromagnetic Compatibility - Coupling mechanisms and countermeasures - Shielding, grounding, filtering - Standards and regulations - EMC measurement techniques
Literature	<ul style="list-style-type: none"> - Zinke, Brunswig, "Hochfrequenztechnik 1", Springer (1999) - J. Detlefsen, U. Siart, "Grundlagen der Hochfrequenztechnik", Oldenbourg (2012) - D. M. Pozar, "Microwave Engineering", Wiley (2011) - Y. Huang, K. Boyle, "Antenna: From Theory to Practice", Wiley (2008) - H. Ott, "Electromagnetic Compatibility Engineering", Wiley (2009) - A. Schwab, W. Kürner, "Elektromagnetische Verträglichkeit", Springer (2007)

Module M1334: BIO II: Biomaterials			
Courses			
Title		Typ	Hrs/wk CP
Biomaterials (L0593)		Lecture	2 3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Materials Science: Specialisation Nano and Hybrid Materials: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory		

Course L0593: Biomaterials	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	EN
Cycle	WiSe
	Topics to be covered include: 1. Introduction (Importance, nomenclature, relations)

Content	<p>2. Biological materials</p> <p>2.1 Basics (components, testing methods)</p> <p>2.2 Bone (composition, development, properties, influencing factors)</p> <p>2.3 Cartilage (composition, development, structure, properties, influencing factors)</p> <p>2.4 Fluids (blood, synovial fluid)</p> <p>3 Biological structures</p> <p>3.1 Menisci of the knee joint</p> <p>3.2 Intervertebral discs</p> <p>3.3 Teeth</p> <p>3.4 Ligaments</p> <p>3.5 Tendons</p> <p>3.6 Skin</p> <p>3.7 Nervs</p> <p>3.8 Muscles</p> <p>4. Replacement materials</p> <p>4.1 Basics (history, requirements, norms)</p> <p>4.2 Steel (alloys, properties, reaction of the body)</p> <p>4.3 Titan (alloys, properties, reaction of the body)</p> <p>4.4 Ceramics and glas (properties, reaction of the body)</p> <p>4.5 Plastics (properties of PMMA, HDPE, PET, reaction of the body)</p> <p>4.6 Natural replacement materials</p> <p>Knowledge of composition, structure, properties, function and changes/adaptations of biological and technical materials (which are used for replacements in-vivo). Acquisition of basics for theses work in the area of biomechanics.</p>

Module M0746: Microsystem Engineering

Courses

Title	Typ	Hrs/wk	CP
Microsystem Engineering (L0680)	Lecture	2	4
Microsystem Engineering (L0682)	Project-/problem-based Learning	1	1
Microsystem Engineering (L0681)	Recitation Section (small)	1	1
Module Responsible	Prof. Manfred Kasper		
Admission Requirements	None		
Recommended Previous Knowledge	Basic courses in physics, mathematics and electric engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students know about the most important technologies and materials of MEMS as well as their applications in sensors and actuators.		
<i>Skills</i>	Students are able to analyze and describe the functional behaviour of MEMS components and to evaluate the potential of microsystems.		
Personal Competence			
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.		
<i>Autonomy</i>	Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2h		
Assignment for the Following Curricula	Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory		

Course L0680: Microsystem Engineering	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Manfred Kasper
Language	EN
Cycle	WiSe
Content	<p>Object and goal of MEMS</p> <p>Scaling Rules</p> <p>Lithography</p> <p>Film deposition</p> <p>Structuring and etching</p> <p>Energy conversion and force generation</p> <p>Electromagnetic Actuators</p> <p>Reluctance motors</p> <p>Piezoelectric actuators, bi-metal-actuator</p> <p>Transducer principles</p> <p>Signal detection and signal processing</p> <p>Mechanical and physical sensors</p> <p>Acceleration sensor, pressure sensor</p> <p>Sensor arrays</p> <p>System integration</p> <p>Yield, test and reliability</p>
Literature	<p>M. Kasper: Mikrosystementwurf, Springer (2000)</p> <p>M. Madou: Fundamentals of Microfabrication, CRC Press (1997)</p>

Course L0682: Microsystem Engineering	
Typ	Project-/problem-based Learning
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Manfred Kasper
Language	EN
Cycle	WiSe
Content	Examples of MEMS components Layout consideration Electric, thermal and mechanical behaviour Design aspects
Literature	Wird in der Veranstaltung bekannt gegeben

Course L0681: Microsystem Engineering	
Typ	Recitation Section (small)
Hrs/wk	1
CP	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Manfred Kasper
Language	EN
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M0751: Vibration Theory			
Courses			
Title		Typ	Hrs/wk CP
Vibration Theory (L0701)		Lecture	4 6
Module Responsible	Prof. Norbert Hoffmann		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Calculus • Linear Algebra • Engineering Mechanics 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to denote terms and concepts of Vibration Theory and develop them further.		
<i>Skills</i>	Students are able to denote methods of Vibration Theory and develop them further.		
Personal Competence			
<i>Social Competence</i>	Students can reach working results also in groups.		
<i>Autonomy</i>	Students are able to approach individually research tasks in Vibration Theory.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2 Hours		
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Core qualification: Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L0701: Vibration Theory	
Typ	Lecture
Hrs/wk	4
CP	6
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Lecturer	Prof. Norbert Hoffmann, Merten Tiedemann, Sebastian Kruse
Language	DE/EN
Cycle	WiSe
Content	Linear and Nonlinear Single and Multiple Degree of Freedom Oscillations and Waves.
Literature	K. Magnus, K. Popp, W. Sextro: Schwingungen. Physikalische Grundlagen und mathematische Behandlung von Schwingungen. Springer Verlag, 2013.

Module M0768: Microsystems Technology in Theory and Practice

Courses

Title	Typ	Hrs/wk	CP
Microsystems Technology (L0724)	Lecture	2	4
Microsystems Technology (L0725)	Project-/problem-based Learning	2	2
Module Responsible	Prof. Hoc Khiem Trieu		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in physics, chemistry, mechanics and semiconductor technology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students are able</p> <ul style="list-style-type: none"> to present and to explain current fabrication techniques for microstructures and especially methods for the fabrication of microsensors and microactuators, as well as the integration thereof in more complex systems 		
<i>Knowledge</i>	<ul style="list-style-type: none"> to explain in details operation principles of microsensors and microactuators and to discuss the potential and limitation of microsystems in application. 		
Skills	<p>Students are capable</p> <ul style="list-style-type: none"> to analyze the feasibility of microsystems, to develop process flows for the fabrication of microstructures and to apply them. 		
Personal Competence			
<i>Social Competence</i>	Students are able to prepare and perform their lab experiments in team work as well as to present and discuss the results in front of audience.		
<i>Autonomy</i>	None		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	30 min		

Assignment for the Following Curricula	Electrical Engineering: Specialisation Nanoelectronics and Microsystems Technology: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory
---	---

Course L0724: Microsystems Technology	
Typ	Lecture
Hrs/wk	2
CP	4
Workload in Hours	Independent Study Time 92, Study Time in Lecture 28
Lecturer	Prof. Hoc Khiem Trieu
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Introduction (historical view, scientific and economic relevance, scaling laws) • Semiconductor Technology Basics, Lithography (wafer fabrication, photolithography, improving resolution, next-generation lithography, nano-imprinting, molecular imprinting) • Deposition Techniques (thermal oxidation, epitaxy, electroplating, PVD techniques: evaporation and sputtering; CVD techniques: APCVD, LPCVD, PECVD and LECVD; screen printing) • Etching and Bulk Micromachining (definitions, wet chemical etching, isotropic etch with HNA, electrochemical etching, anisotropic etching with KOH/TMAH: theory, corner undercutting, measures for compensation and etch-stop techniques; plasma processes, dry etching: back sputtering, plasma etching, RIE, Bosch process, cryo process, XeF2 etching) • Surface Micromachining and alternative Techniques (sacrificial etching, film stress, stiction: theory and counter measures; Origami microstructures, Epi-Poly, porous silicon, SOI, SCREAM process, LIGA, SU8, rapid prototyping) • Thermal and Radiation Sensors (temperature measurement, self-generating sensors: Seebeck effect and thermopile; modulating sensors: thermo resistor, Pt-100, spreading resistance sensor, pn junction, NTC and PTC; thermal anemometer, mass flow sensor, photometry, radiometry, IR sensor: thermopile and bolometer) • Mechanical Sensors (strain based and stress based principle, capacitive readout, piezoresistivity, pressure sensor: piezoresistive, capacitive and fabrication process; accelerometer: piezoresistive, piezoelectric and capacitive; angular rate sensor: operating principle and fabrication process) • Magnetic Sensors (galvanomagnetic sensors: spinning current Hall sensor and magneto-transistor; magnetoresistive sensors: magneto resistance, AMR and GMR, fluxgate magnetometer) • Chemical and Bio Sensors (thermal gas sensors: pellistor and thermal conductivity sensor; metal oxide semiconductor gas sensor, organic semiconductor gas sensor, Lambda probe, MOSFET gas sensor, pH-FET, SAW sensor, principle of biosensor, Clark electrode, enzyme electrode, DNA chip) • Micro Actuators, Microfluidics and TAS (drives: thermal, electrostatic, piezo electric and electromagnetic; light modulators, DMD, adaptive optics, microscanner, microvalves: passive and active, micropumps, valveless micropump, electrokinetic micropumps,

	<p>micromixer, filter, inkjet printhead, microdispenser, microfluidic switching elements, microreactor, lab-on-a-chip, microanalytics)</p> <ul style="list-style-type: none"> • MEMS in medical Engineering (wireless energy and data transmission, smart pill, implantable drug delivery system, stimulators: microelectrodes, cochlear and retinal implant; implantable pressure sensors, intelligent osteosynthesis, implant for spinal cord regeneration) • Design, Simulation, Test (development and design flows, bottom-up approach, top-down approach, testability, modelling: multiphysics, FEM and equivalent circuit simulation; reliability test, physics-of-failure, Arrhenius equation, bath-tub relationship) • System Integration (monolithic and hybrid integration, assembly and packaging, dicing, electrical contact: wire bonding, TAB and flip chip bonding; packages, chip-on-board, wafer-level-package, 3D integration, wafer bonding: anodic bonding and silicon fusion bonding; micro electroplating, 3D-MID)
<p>Literature</p>	<p>M. Madou: Fundamentals of Microfabrication, CRC Press, 2002</p> <p>N. Schwesinger: Lehrbuch Mikrosystemtechnik, Oldenbourg Verlag, 2009</p> <p>T. M. Adams, R. A. Layton: Introductory MEMS, Springer, 2010</p> <p>G. Gerlach; W. Dötzel: Introduction to microsystem technology, Wiley, 2008</p>

Module M0814: Technology Management

Courses

Title	Typ	Hrs/wk	CP
Technology Management (L0849)	Project-/problem-based Learning	3	3
Technology Management Seminar (L0850)	Project-/problem-based Learning	2	3

Module Responsible	Prof. Cornelius Herstatt
---------------------------	--------------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	Bachelor knowledge in business management
---------------------------------------	---

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<p>Students will gain deep insights into:</p> <ul style="list-style-type: none"> • Technology Timing Strategies <ul style="list-style-type: none"> ◦ Technology Strategies and Lifecycle Management (I/II) ◦ Technology Intelligence and Planning • Technology Portfolio Management <ul style="list-style-type: none"> ◦ Technology Portfolio Methodology ◦ Technology Acquisition and Exploitation ◦ IP Management • Organizing Technology Development <ul style="list-style-type: none"> ◦ Technology Organization & Management ◦ Technology Funding & Controlling
<i>Knowledge</i>	
<i>Skills</i>	<p>The course aims to:</p> <ul style="list-style-type: none"> • Develop an understanding of the importance of Technology Management - on a national as well as international level • Equip students with an understanding of important elements of Technology Management (strategic, operational, organizational and process-related aspects) • Foster a strategic orientation to problem-solving within the innovation process as well as Technology Management and its importance for corporate strategy • Clarify activities of Technology Management (e.g. technology sourcing, maintenance and exploitation) • Strengthen essential communication skills and a basic understanding of managerial, organizational and financial issues concerning Technology-, Innovation- and R&D-management. Further topics to be discussed include: <ul style="list-style-type: none"> • Basic concepts, models and tools, relevant to the management of technology, R&D and innovation • Innovation as a process (steps, activities and results)
Personal Competence	
<i>Social Competence</i>	<ul style="list-style-type: none"> • Interact within a team • Raise awareness for global issues
<i>Autonomy</i>	<ul style="list-style-type: none"> • Gain access to knowledge sources • Interpret complicated cases

	<ul style="list-style-type: none"> • Develop presentation skills
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70
Credit points	6
Examination	Written exam
Examination duration and scale	90 minutes
Assignment for the Following Curricula	Global Innovation Management: Core qualification: Compulsory International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Mechanical Engineering and Management: Specialisation Management: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprosthesis: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Compulsory

Course L0849: Technology Management

Typ	Project-/problem-based Learning
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	<p>The role of technology for the competitive advantage of the firm and industries; Basic concepts, models and tools for the management of technology; managerial decision making regarding the identification, selection and protection of technology (make or buy, keep or sell, current and future technologies). Theories, practical examples (cases), lectures, interactive sessions and group study.</p> <p>This lecture is part of the Module Technology Management and can not separately chosen.</p>
Literature	Leiblein, M./Ziedonis, A.: Technology Strategy and Innovation Management, Elgar Research Collection, Northampton (MA) 2011

Course L0850: Technology Management Seminar

Typ	Project-/problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Cornelius Herstatt
Language	EN
Cycle	WiSe
Content	Aspects of and Cases in combination with the content of the lecture.
Literature	see lecture Technology Management.

Module M0846: Control Systems Theory and Design

Courses			
Title	Typ	Hrs/wk	CP
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	Introduction to Control Systems		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively They can explain the significance of a minimal realisation They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection They can extend all of the above to multi-input multi-output systems They can explain the z-transform and its relationship with the Laplace Transform They can explain state space models and transfer function models of discrete-time systems They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation They can explain how a state space model can be constructed from a discrete-time impulse response 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students can transform transfer function models into state space models and vice versa They can assess controllability and observability and construct minimal realisations They can design LQG controllers for multivariable plants They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate They can identify transfer function models and state space models of dynamic systems from experimental data They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink) 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.		
<i>Autonomy</i>	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.		

Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Written exam
Examination duration and scale	120 min

Module M0867: Production Planning & Control and Digital Enterprise

Courses

Title	Typ	Hrs/wk	CP
The Digital Enterprise (L0932)	Lecture	2	2
Production Planning and Control (L0929)	Lecture	2	2
Production Planning and Control (L0930)	Recitation Section (small)	1	1
Exercise: The Digital Enterprise (L0933)	Recitation Section (small)	1	1
Module Responsible	Prof. Hermann Lödging		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Production and Quality Management		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students can explain the contents of the module in detail and take a critical position to them.		
<i>Skills</i>	Students are capable of choosing and applying models and methods from the module to industrial problems.		
Personal Competence			
<i>Social Competence</i>	Students can develop joint solutions in mixed teams and present them to others.		
<i>Autonomy</i>	-		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

Module M0921: Electronic Circuits for Medical Applications

Courses			
Title	Typ	Hrs/wk	CP
Electronic Circuits for Medical Applications (L0696)	Lecture	2	3
Electronic Circuits for Medical Applications (L1056)	Recitation Section (small)	1	2
Electronic Circuits for Medical Applications (L1408)	Practical Course	1	1
Module Responsible	NN		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of electrical engineering		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the basic functionality of the information transfer by the central nervous system Students are able to explain the build-up of an action potential and its propagation along an axon Students can exemplify the communication between neurons and electronic devices Students can describe the special features of low-noise amplifiers for medical applications Students can explain the functions of prostheses, e. g. an artificial hand Students are able to discuss the potential and limitations of cochlea implants and artificial eyes <ul style="list-style-type: none"> Students can calculate the time dependent voltage behavior of an action potential Students can give scenarios for further improvement of low-noise and low-power signal acquisition. Students can develop the block diagrams of prosthetic systems Students can define the building blocks of electronic systems for an artificial eye. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> Students are trained to solve problems in the field of medical electronics in teams together with experts with different professional background. Students are able to recognize their specific limitations, so that they can ask for assistance to the right time. Students can document their work in a clear manner and communicate their results in a way that others can be involved whenever it is necessary 		
<i>Autonomy</i>	<ul style="list-style-type: none"> Students are able to realistically judge the status of their knowledge and to define actions for improvements when necessary. Students can break down their work in appropriate work packages and schedule their work in a realistic way. Students can handle the complex data structures of bioelectrical experiments without needing support. 		

	<ul style="list-style-type: none"> • Students are able to act in a responsible manner in all cases and situations of experimental work.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56
Credit points	6
Examination	Oral exam
Examination duration and scale	40 min
Assignment for the Following Curricula	Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Microelectronics and Microsystems: Specialisation Microelectronics Complements: Elective Compulsory

Course L0696: Electronic Circuits for Medical Applications	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	NN
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Market for medical instruments • Membrane potential, action potential, sodium-potassium pump • Information transfer by the central nervous system • Interface tissue - electrode • Amplifiers for medical applications, analog-digital converters • Examples for electronic implants • Artificial eye, cochlea implant
Literature	<p>Kim E. Barret, Susan M. Barman, Scott Boitano and Heddwen L. Module M1150: Continuum Mechanics

Courses			
Title	Typ	Hrs/wk	CP
Continuum Mechanics (L1533)	Lecture	2	3
Continuum Mechanics Exercise (L1534)	Recitation Section (small)	2	3
Module Responsible	Prof. Swantje Bargmann		
Admission Requirements	None		
Recommended Previous Knowledge	Mechanics I Mechanics II		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students can explain the fundamental concepts to calculate the mechanical behavior of materials.</p> <p><i>Skills</i> The students can set up balance laws and apply basics of deformation theory to specific aspects, both in applied contexts as in research contexts.</p> <p>Personal Competence</p> <p><i>Social Competence</i> The students are able to present solutions to specialists and to develop ideas further.</p> <p><i>Autonomy</i> The students are able to assess their own strengths and weaknesses and to define tasks themselves. They can solve exercises in the area of continuum mechanics on their own.</p>

Module M1199: Advanced Functional Materials			
Courses			
Title		Typ	Hrs/wk CP
Advanced Functional Materials (L1625)		Lecture	2 6
Module Responsible	Prof. Patrick Huber		
Admission Requirements	None		
Recommended Previous Knowledge	Fundamentals of Materials Science (I and II)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students will be able to explain the properties of advanced materials along with their applications in technology, in particular metallic, ceramic, polymeric, semiconductor, modern composite materials (biomaterials) and nanomaterials.		
<i>Skills</i>	The students will be able to select material configurations according to the technical needs and, if necessary, to design new materials considering architectural principles from the micro- to the macroscale. The students will also gain an overview on modern materials science, which enables them to select optimum materials combinations depending on the technical applications.		
Personal Competence			
<i>Social Competence</i>	The students are able to present solutions to specialists and to develop ideas further.		
<i>Autonomy</i>	The students are able to ... <ul style="list-style-type: none"> • assess their own strengths and weaknesses. • define tasks independently. 		
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28		
Credit points	6		
Examination	Presentation		
Examination duration and scale	90 min		
Assignment for the Following Curricula	Materials Science: Core qualification: Compulsory Mechanical Engineering and Management: Specialisation Materials: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Materials Science: Elective Compulsory		

Course L1625: Advanced Functional Materials	
Typ	Lecture
Hrs/wk	2
CP	6
Workload in Hours	Independent Study Time 152, Study Time in Lecture 28
Lecturer	Prof. Patrick Huber, Prof. Stefan Müller, Prof. Bodo Fiedler, Prof. Gerold Schneider, Prof. Jörg Weißmüller
Language	DE/EN
Cycle	WiSe
Content	1. Porous Solids - Preparation, Characterization and Functionalities 2. Fluidics with nanoporous membranes 3. Thermoplastic elastomers 4. Optimization of polymer properties by nanoparticles 5. Fiber composites in automotive 6. Modeling of materials based on quantum mechanics 7. Biomaterials
Literature	Wird in der Veranstaltung bekannt gegeben

Module M1279: MED II: Introduction to Biochemistry and Molecular Biology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Biochemistry and Molecular Biology (L0386)	Lecture	2	3
Module Responsible	Prof. Hans-Jürgen Kreienkamp		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> describe basic biomolecules; explain how genetic information is coded in the DNA; explain the connection between DNA and proteins; 		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students can</p> <ul style="list-style-type: none"> recognize the importance of molecular parameters for the course of a disease; describe selected molecular-diagnostic procedures; explain the relevance of these procedures for some diseases 		
Personal Competence			
<i>Social Competence</i>	The students can participate in discussions in research and medicine on a technical level.		
<i>Autonomy</i>	The students can develop understanding of topics from the course, using technical literature, by themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	60 minutes		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>Electrical Engineering: Specialisation Medical Technology: Elective Compulsory</p> <p>General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p>

Module M1333: BIO I: Implants and Fracture Healing

Courses

Title	Typ	Hrs/wk	CP
Implants and Fracture Healing (L0376)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge	It is recommended to participate in "Introduction into Anatomie" before attending "Implants and Fracture Healing".		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> The students can describe the different ways how bones heal, and the requirements for their existence.</p> <p>The students can name different treatments for the spine and hollow bones under given fracture morphologies.</p> <p><i>Skills</i> The students can determine the forces acting within the human body under quasi-static situations under specific assumptions.</p>		
Personal Competence	<p><i>Social Competence</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p> <p><i>Autonomy</i> The students can, in groups, solve basic numerical modeling tasks for the calculation of internal forces.</p>

Module M0808: Finite Elements Methods

Courses			
Title	Typ	Hrs/wk	CP
Finite Element Methods (L0291)	Lecture	2	3
Finite Element Methods (L0804)	Recitation Section (large)	2	3
Module Responsible	Prof. Otto von Estorff		
Admission Requirements	None		
Recommended Previous Knowledge	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.		
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.		
Personal Competence			
<i>Social Competence</i>	-		
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam

Module M1342: Polymers

Courses

Title	Typ	Hrs/wk	CP
Structure and Properties of Polymers (L0389)	Lecture	2	3
Processing and design with polymers (L1892)	Lecture	2	3
Module Responsible	Dr. Hans Wittich		
Admission Requirements	None		
Recommended Previous Knowledge	Basics: chemistry / physics / material science		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students can use the knowledge of plastics and define the necessary testing and analysis.</p> <p><i>Knowledge</i> They can explain the complex relationships structure-property relationship and the interactions of chemical structure of the polymers, including to explain neighboring contexts (e.g. sustainability, environmental protection).</p> <p><i>Skills</i> Students are capable of</p> <ul style="list-style-type: none"> - using standardized calculation methods in a given context to mechanical properties (modulus, strength) to calculate and evaluate the different materials. - For mechanical recycling problems selecting appropriate solutions and sizing example Stiffness, corrosion resistance. 		
Personal Competence	<p><i>Social Competence</i> Students can,</p> <ul style="list-style-type: none"> - arrive at work results in groups and document them. - provide appropriate feedback and handle feedback on their own performance constructively. <p><i>Autonomy</i> Students are able to,</p> <ul style="list-style-type: none"> - assess their own strengths and weaknesses - assess their own state of learning in specific terms and to define further work steps on this basis guided by teachers. - assess possible consequences of their professional activity. 		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0548: Bioelectromagnetics: Principles and Applications

Courses

Title	Typ	Hrs/wk	CP
Bioelectromagnetics: Principles and Applications (L0371)	Lecture	3	5
Bioelectromagnetics: Principles and Applications (L0373)	Recitation Section (small)	2	1
Module Responsible	Prof. Christian Schuster		
Admission Requirements	None		
Recommended Previous Knowledge	Basic principles of physics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students can explain the basic principles, relationships, and methods of bioelectromagnetics, i.e. the quantification and application of electromagnetic fields in biological tissue. They can define and exemplify the most important physical phenomena and order them corresponding to wavelength and frequency of the fields. They can give an overview over measurement and numerical techniques for characterization of electromagnetic fields in practical applications. They can give examples for therapeutic and diagnostic utilization of electromagnetic fields in medical technology.</p> <p><i>Skills</i></p> <p>Students know how to apply various methods to characterize the behavior of electromagnetic fields in biological tissue. In order to do this they can relate to and make use of the elementary solutions of Maxwell's Equations. They are able to assess the most important effects that these models predict for biological tissue, they can order the effects corresponding to wavelength and frequency, respectively, and they can analyze them in a quantitative way. They are able to develop validation strategies for their predictions. They are able to evaluate the effects of electromagnetic fields for therapeutic and diagnostic applications and make an appropriate choice.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).</p> <p><i>Autonomy</i></p> <p>Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can communicate problems and effects in the field of bioelectromagnetics in English.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module M1335: BIO II: Artificial Joint Replacement

Courses

Title	Typ	Hrs/wk	CP
Artificial Joint Replacement (L1306)	Lecture	2	3
Module Responsible	Prof. Michael Morlock		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence <i>Knowledge</i> <i>Skills</i>			
Personal Competence <i>Social Competence</i> <i>Autonomy</i>			
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Materials Science: Specialisation Nano and Hybrid Materials: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L1306: Artificial Joint Replacement	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	DE
Cycle	SoSe
Content	<p>Inhalt (deutsch)</p> <ol style="list-style-type: none"> 1. EINLEITUNG (Bedeutung, Ziel, Grundlagen, allg. Geschichte des künstlichen Gelenkersatzes) 2. FUNKTIONSANALYSE (Der menschliche Gang, die menschliche Arbeit, die sportliche Aktivität) 3. DAS HÜFTGELENK (Anatomie, Biomechanik, Gelenkersatz Schaffseite und Pfannenseite, Evolution der Implantate) 4. DAS KNIEGELENK (Anatomie, Biomechanik, Bandersatz, Gelenkersatz femorale, tibiale und patelläre Komponenten) 5. DER FUß (Anatomie, Biomechanik, Gelenkersatz, orthopädische Verfahren) 6. DIE SCHULTER (Anatomie, Biomechanik, Gelenkersatz) 7. DER ELLBOGEN (Anatomie, Biomechanik, Gelenkersatz) 8. DIE HAND (Anatomie, Biomechanik, Gelenkersatz) 9. Module M0630: Robotics and Navigation in Medicine

Courses

Title	Typ	Hrs/wk	CP
Robotics and Navigation in Medicine (L0335)	Lecture	2	3
Robotics and Navigation in Medicine (L0338)	Project Seminar	2	2
Robotics and Navigation in Medicine (L0336)	Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • principles of math (algebra, analysis/calculus) • principles of programming, e.g., in Java or C++ • solid R or Matlab skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain kinematics and tracking systems in clinical contexts and illustrate systems and their components in details. Systems can be evaluated with respect to collision detection and safety and regulations. Students can assess typical systems regarding design and limitations.		
<i>Skills</i>	The students are able to design and evaluate navigation systems and robotic systems for medical applications.		
Personal Competence			
<i>Social Competence</i>	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective		

	Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory
--	---

Course L0335: Robotics and Navigation in Medicine	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Alexander Schlaefer
Language	EN
Cycle	SoSe
Content	<ul style="list-style-type: none"> - kinematics - calibration - tracking systems - navigation and image guidance - motion compensation The seminar extends and complements the contents of the lecture with respect to recent research results.
Literature	Spong et al.: Robot Modeling and Control, 2005 Troccaz: Medical Robotics, 2012 Further literature will be given in the lecture.

Course L0338: Robotics and Navigation in Medicine	
Typ	Project Seminar

Module M0634: Introduction into Medical Technology and Systems

Courses

Title	Typ	Hrs/wk	CP
Introduction into Medical Technology and Systems (L0342)	Lecture	2	3
Introduction into Medical Technology and Systems (L0343)	Project Seminar	2	2
Introduction into Medical Technology and Systems (L1876)	Recitation Section (large)	1	1
Module Responsible	Prof. Alexander Schlaefer		
Admission Requirements	None		
Recommended Previous Knowledge	principles of math (algebra, analysis/calculus) principles of stochastics principles of programming, R/Matlab		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can explain principles of medical technology, including imaging systems, computer aided surgery, and medical information systems. They are able to give an overview of regulatory affairs and standards in medical technology.		
<i>Skills</i>	The students are able to evaluate systems and medical devices in the context of clinical applications.		
Personal Competence			
<i>Social Competence</i>	The students describe a problem in medical technology as a project, and define tasks that are solved in a joint effort.		
<i>Autonomy</i>	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computer Science: Specialisation Computer and Software Engineering: Elective Compulsory Electrical Engineering: Core qualification: Elective Compulsory General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory Computational Science and Engineering: Specialisation Engineering Sciences: Elective Compulsory Computational Science and Engineering: Specialisation Computer Science: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory

Module M0752: Nonlinear Dynamics			
Courses			
Title	Typ	Hrs/wk	CP
Nonlinear Dynamics (L0702)	Lecture	4	6
Module Responsible	Prof. Norbert Hoffmann		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Calculus • Linear Algebra • Engineering Mechanics 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Students are able to reflect existing terms and concepts in Nonlinear Dynamics and to develop and research new terms and concepts.		
<i>Skills</i>	Students are able to apply existing methods and procedures of Nonlinear Dynamics and to develop novel methods and procedures.		
Personal Competence			
<i>Social Competence</i>	Students can reach working results also in groups.		
<i>Autonomy</i>	Students are able to approach given research tasks individually and to identify and follow up novel research tasks by themselves.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	2 Hours		
Assignment for the Following Curricula	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Literature	- B. Siciliano, O. Khatib. "Handbook of Robotics. Part A: Robotics Foundations", Springer (2008).

Module M0838: Linear and Nonlinear System Identifikation

Courses

Title	Typ	Hrs/wk	CP
Linear and Nonlinear System Identification (L0660)	Lecture	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> • Classical control (frequency response, root locus) • State space methods • Discrete-time systems • Linear algebra, singular value decomposition • Basic knowledge about stochastic processes 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain the general framework of the prediction error method and its application to a variety of linear and nonlinear model structures • They can explain how multilayer perceptron networks are used to model nonlinear dynamics • They can explain how an approximate predictive control scheme can be based on neural network models • They can explain the idea of subspace identification and its relation to Kalman realisation theory 		
<i>Skills</i>	<ul style="list-style-type: none"> • Students are capable of applying the prediction error method to the experimental identification of linear and nonlinear models for dynamic systems • They are capable of implementing a nonlinear predictive control scheme based on a neural network model • They are capable of applying subspace algorithms to the experimental identification of linear models for dynamic systems • They can do the above using standard software tools (including the Matlab System Identification Toolbox) 		
Personal Competence			
<i>Social Competence</i>	Students can work in mixed groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0840: Optimal and Robust Control

Courses			
Title	Typ	Hrs/wk	CP
Optimal and Robust Control (L0658)	Lecture	2	3
Optimal and Robust Control (L0659)	Recitation Section (small)	2	3
Module Responsible	Prof. Herbert Werner		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Classical control (frequency response, root locus) State space methods Linear algebra, singular value decomposition 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> Students can explain the significance of the matrix Riccati equation for the solution of LQ problems. They can explain the duality between optimal state feedback and optimal state estimation. They can explain how the H2 and H-infinity norms are used to represent stability and performance constraints. They can explain how an LQG design problem can be formulated as special case of an H2 design problem. They can explain how model uncertainty can be represented in a way that lends itself to robust controller design They can explain how - based on the small gain theorem - a robust controller can guarantee stability and performance for an uncertain plant. They understand how analysis and synthesis conditions on feedback loops can be represented as linear matrix inequalities. 		
<i>Knowledge</i>	<ul style="list-style-type: none"> Students are capable of designing and tuning LQG controllers for multivariable plant models. They are capable of representing a H2 or H-infinity design problem in the form of a generalized plant, and of using standard software tools for solving it. They are capable of translating time and frequency domain specifications for control loops into constraints on closed-loop sensitivity functions, and of carrying out a mixed-sensitivity design. They are capable of constructing an LFT uncertainty model for an uncertain system, and of designing a mixed-objective robust controller. They are capable of formulating analysis and synthesis conditions as linear matrix inequalities (LMI), and of using standard LMI-solvers for solving them. They can carry out all of the above using standard software tools (Matlab robust control toolbox). 		
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.

Module M0845: Feedback Control in Medical Technology			
Courses			
Title	Typ	Hrs/wk	CP
Feedback Control in Medical Technology (L0664)	Lecture	2	3
Module Responsible	Prof. Olaf Simanski		
Admission Requirements	None		
Recommended Previous Knowledge	Basics in Control, Basics in Physiology		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The lecture will introduce into the fascinating area of medical technology with the engineering point of view. Fundamentals in human physiology will be similarly introduced like knowledge in control theory.</p> <p><i>Knowledge</i> Internal control loops of the human body will be discussed in the same way like the design of external closed loop system for example in for anesthesia control.</p> <p>The handling of PID controllers and modern controller like predictive controller or fuzzy controller or neural networks will be illustrated. The operation of simple equivalent circuits will be discussed.</p> <p><i>Skills</i> Application of modeling, identification, control technology in the field of medical technology.</p>		
Personal Competence	<p><i>Social Competence</i> Students can develop solutions to specific problems in small groups and present their results (e.g. during project week)</p> <p><i>Autonomy</i> Students are able to find necessary literature and to set it into the context of the lecture. They are able to continuously evaluate their knowledge and to take control of their learning process. They can combine knowledge from different courses to form a consistent whole.</p>		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Oral exam		
Examination duration and scale

Cycle	SoSe
Content	<p>Taking an engineering point of view, the lecture is structured as follows.</p> <ul style="list-style-type: none"> • Introduction to the topic with selected examples • Physiology - introduction and overview • Regeneration of functions of the cardiovascular system • Regeneration of the respiratory functions • Closed loop control in anesthesia • regeneration of kidney and liver functions • regeneration of motorize function/ rehabilitation engineering • navigation systems and robotic in medicine <p>The lecture will use knowledge from modeling, simulation and controller design and MATLAB and SIMULINK will be used.</p>
Literature	<p>Silbernagel/Depopoulos: Taschenatlas der Physiologie, Thieme Verlag Stuttgart</p> <p>Werner: Kooperative und autonome Systeme der Medizintechnik, Oldenburg Verlag</p> <p>M.C.K.Khoo: "Physiological Control System", IEEE Press, 2000</p>

Module M0855: Marketing (Sales and Services / Innovation Marketing)

Courses			
Title	Typ	Hrs/wk	CP
Marketing (Innovation Marketing / Sales and Services) (L0862)	Project-/problem-based Learning	5	6
Module Responsible	Prof. Christian Lüthje		
Admission Requirements	None		
Recommended Previous Knowledge	<ul style="list-style-type: none"> Module International Business Basic understanding of business administration principles (strategic planning, decision theory, project management, international business) Bachelor-level Marketing Knowledge (Marketing Instruments, Market and Competitor Strategies, Basics of Buying Behavior) Understanding of differences in the market introduction of Products and Services Understanding the differences between B2B and B2C marketing Understanding of the importance of managing innovation in global industrial markets Good English proficiency; presentation skills 		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students will have gained a deep understanding of</p> <ul style="list-style-type: none"> Specific characteristics in the marketing of innovative industrial goods and services The importance of product-related and independent services Approaches for analyzing the current market situation and the future market development The gathering of information about future customer needs and requirements Concepts and approaches to integrate lead users and their needs into product and service development processes Approaches and tools for ensuring customer-orientation in the development of new products and innovative services Marketing mix elements that take into consideration the specific requirements and challenges of innovative products and services Pricing methods for new products and services The organization of complex sales forces and personal selling Communication concepts and instruments for new products and services 		
<i>Knowledge</i>	<p>Based on the acquired knowledge students will be able to:</p> <ul style="list-style-type: none"> Design and to evaluate decisions regarding marketing and innovation strategies Analyze markets by applying market and technology portfolios Conduct forecasts and develop compelling scenarios as a basis for strategic planning Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for customer-oriented product and service development Use adequate methods to foster efficient diffusion of innovative products and services Choose suitable pricing strategies and communication activities for innovations Make strategic sales decisions for products and services (i.e. selection of sales channels) Apply methods of sales force management (i.e. customer value analysis) 		
<i>Skills</i>	<p>Based on the acquired knowledge students will be able to:</p> <ul style="list-style-type: none"> Design and to evaluate decisions regarding marketing and innovation strategies Analyze markets by applying market and technology portfolios Conduct forecasts and develop compelling scenarios as a basis for strategic planning Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for customer-oriented product and service development Use adequate methods to foster efficient diffusion of innovative products and services Choose suitable pricing strategies and communication activities for innovations Make strategic sales decisions for products and services (i.e. selection of sales channels) Apply methods of sales force management (i.e. customer value analysis) 		
Personal Competence			

<p><i>Social Competence</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • have fruitful discussions and exchange arguments • develop original results in a group • present results in a clear and concise way • carry out respectful team work
<p><i>Autonomy</i></p>	<p>The students will be able to</p> <ul style="list-style-type: none"> • Acquire knowledge independently in the specific context and to map this knowledge on other new complex problem fields. • Consider proposed business actions in the field of marketing and reflect on them.
<p>Workload in Hours</p>	<p>Independent Study Time 110, Study Time in Lecture 70</p>
<p>Credit points</p>	<p>6</p>
<p>Examination</p>	<p>Subject theoretical and practical work</p>
<p>Examination duration and scale</p>	<p>90 min</p>

Module M1143: Mechanical Design Methodology

Courses			
Title	Typ	Hrs/wk	CP
Mechanical Design Methodology (L1523)	Lecture	3	4
Mechanical Design Methodology (L1524)	Recitation Section (small)	1	2
Module Responsible	Prof. Josef Schlattmann		
Admission Requirements	None		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	Science-based working on product design considering targeted application of specific product design techniques		
<i>Skills</i>	Creative handling of processes used for scientific preparation and formulation of complex product design problems / Application of various product design techniques following theoretical aspects.		
Personal Competence			
<i>Social Competence</i>			
<i>Autonomy</i>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Oral exam		
Examination duration and scale	30 min		
Assignment for the Following Curricula	International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Product Development and Production: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L1523: Mechanical Design Methodology	
Typ	Lecture
Hrs/wk	3
CP	4
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42
Lecturer	Prof. Josef Schlattmann
Language	DE
Cycle	SoSe
Content	<ul style="list-style-type: none"> • Systematic reflection and analysis of the mechanical design process • Process structuring in sections (task, functions, acting principles, design-elements and total construction) as well as levels (working-, controlling-, and deciding-levels) • Creativity (basics, methods, practical application in mechatronics) • Diverse methods applied as tools (function structure, GALFMOS, AEIOU method, GAMPFT, simulation tools, TRIZ) • Evaluation and selection (technical-economical evaluation, preference matrix) • Value analysis, cost-benefit analysis • Low-noise design of technical products • Project monitoring and leading (leading projects / employees, organisation in product development, creating ideas / responsibility and communication) • Aesthetic product design (industrial design, colouring, specific examples / exercises)
Literature	<ul style="list-style-type: none"> • Pahl, G.; Beitz, W.; Feldhusen, J.; Grote, K.-H.: Konstruktionslehre: Grundlage erfolgreicher Produktentwicklung, Methoden und Anwendung, 7. Auflage, Springer Verlag, Berlin 2007 • VDI-Richtlinien: 2206; 2221ff

Module M0938: Bioprocess Engineering - Fundamentals

Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation Section (large)	2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	None		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem propose solutions to complicated biotechnological problems and to deduce the corresponding models to explore new knowledge resources and to apply the newly gained contents identify scientific problems with concrete industrial use and to formulate solutions. to document and discuss their procedures as well as results in a scientific manner 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence			
<i>Social Competence</i>	After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.		
<i>Autonomy</i>	After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Examination	Written exam		
Examination duration			

and scale	90 min

Module M1277: MED I: Introduction to Anatomy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Anatomy (L0384)	Lecture	2	3
Module Responsible	Prof. Udo Schumacher		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	The students can describe basal structures and functions of internal organs and the musculoskeletal system. The students can describe the basic macroscopy and microscopy of those systems.		
<i>Skills</i>	The students can recognize the relationship between given anatomical facts and the development of some common diseases; they can explain the relevance of structures and their functions in the context of widespread diseases.		
Personal Competence			
<i>Social Competence</i>	The students can participate in current discussions in biomedical research and medicine on a professional level.		
<i>Autonomy</i>	The students are able to access anatomical knowledge by themselves, can participate in conversations on the topic and acquire the relevant knowledge themselves.		
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28		
Credit points	3		
Examination	Written exam		
Examination duration and scale	90 minutes

Module M1278: MED I: Introduction to Radiology and Radiation Therapy

Courses

Title	Typ	Hrs/wk	CP
Introduction to Radiology and Radiation Therapy (L0383)	Lecture	2	3
Module Responsible	Prof. Ulrich Carl		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Therapy</p> <p>The students can distinguish different types of currently used equipment with respect to its use in radiation therapy.</p> <p>The students can explain treatment plans used in radiation therapy in interdisciplinary contexts (e.g. surgery, internal medicine).</p> <p>The students can describe the patients' passage from their initial admittance through to follow-up care.</p> <p>Diagnostics</p> <p>The students can illustrate the technical base concepts of projection radiography, including angiography and mammography, as well as sectional imaging techniques (CT, MRT, US).</p> <p>The students can explain the diagnostic as well as therapeutic use of imaging techniques, as well as the technical basis for those techniques.</p> <p>The students can choose the right treatment method depending on the patient's clinical history and needs.</p> <p>The student can explain the influence of technical errors on the imaging techniques.</p> <p>The student can draw the right conclusions based on the images' diagnostic findings or the error protocol.</p> <p>Therapy</p> <p>The students can distinguish curative and palliative situations and motivate why they came to that conclusion.</p> <p>The students can develop adequate therapy concepts and relate it to the radiation biological aspects.</p> <p>The students can use the therapeutic principle (effects vs adverse effects)</p> <p>The students can distinguish different kinds of radiation, can choose the best one depending on the situation (location of the tumor) and choose the energy needed in that situation (irradiation planning).</p> <p>The student can assess what an individual psychosocial service should look like (e.g. follow-up treatment, sports, social help groups, self-help groups, social services, psycho-oncology).</p> <p>Diagnostics</p> <p>The students can suggest solutions for repairs of imaging instrumentation after having done error analyses.</p>		
<i>Knowledge</i>			
<i>Skills</i>			

Personal Competence	The students can classify results of imaging techniques according to different groups of diseases based on their knowledge of anatomy, pathology and pathophysiology.
<i>Social Competence</i>	The students can assess the special social situation of tumor patients and interact with them in a professional way. The students are aware of the special, often fear-dominated behavior of sick people caused by diagnostic and therapeutic measures and can meet them appropriately.
<i>Autonomy</i>	The students can apply their new knowledge and skills to a concrete therapy case. The students can introduce younger students to the clinical daily routine. The students are able to access anatomical knowledge by themselves, can participate competently in conversations on the topic and acquire the relevant knowledge themselves.

Content	<p>The students will be given an understanding of the technological possibilities in the field of medical imaging, interventional radiology and radiation therapy/radiation oncology. It is assumed, that students in the beginning of the course have heard the word "X-ray" at best. It will be distinguished between the two arms of diagnostic (Prof. Dr. med. Thomas Vestring) and therapeutic (Prof. Dr. med. Ulrich Carl) use of X-rays. Both arms depend on special big units, which determine a predefined sequence in their respective departments</p>

Module M1280: MED II: Introduction to Physiology

Courses

Title	Typ	Hrs/wk	CP
Introduction to Physiology (L0385)	Lecture	2	3
Module Responsible	Dr. Roger Zimmermann		
Admission Requirements	None		
Recommended Previous Knowledge	None		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students can</p> <ul style="list-style-type: none"> describe the basics of the energy metabolism; describe physiological relations in selected fields of muscle, heart/circulation, neuro- and sensory physiology. 		
<i>Knowledge</i>			
<i>Skills</i>	The students can describe the effects of basic bodily functions (sensory, transmission and processing of information, development of forces and vital functions) and relate them to similar technical systems.		
Personal Competence			
<i>Social Competence</i>	The students can conduct discussions in research and medicine on a technical level. The students can find solutions to problems in the field of physiology, both analytical and metrological.		
<i>Autonomy</i>	The students can derive answers to questions arising in the course and other physiological areas, using technical literature, by themselves.

Examination	Written exam		
Examination duration and scale	90 min		
Assignment for the Following Curricula	<p>General Engineering Science (German program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (German program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Biomedical Engineering: Compulsory</p> <p>General Engineering Science (English program): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Mechanical Engineering, Focus Biomechanics: Compulsory</p> <p>General Engineering Science (English program, 7 semester): Specialisation Biomedical Engineering: Compulsory</p> <p>Mechanical Engineering: Specialisation Biomechanics: Compulsory</p> <p>Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory</p>		

Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory
Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory
Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory
Technomathematics: Specialisation III. Engineering Science: Elective Compulsory

Course L0377: Experimental Methods in Biomechanics	
--	--

Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Michael Morlock
Language	DE
Cycle	SoSe
Content	
Literature	Wird in der Veranstaltung bekannt gegeben

Module M0632: Regenerative Medicine

Courses

Title	Typ	Hrs/wk	CP
Practical Course Introduction to Cell Culture (L0350)	Practical Course	3	3
Regenerative Medicine (L0347)	Seminar	2	3
Module Responsible	Prof. Ralf Pörtner		
Admission Requirements	None		
Recommended Previous Knowledge	For the "Practical course Introduction to cell culture" participation in lecture "Regenerative medicine"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>After successful completion of the module students will be able to describe the basic methods of regenerative medicine and to explain the use of the tissue cells for different methods of tissue engineering. They are able to give a basic overview of methods for the cultivation of animal and human cells.</p> <p><i>Skills</i></p> <p>After successful completion of the module students are</p> <ul style="list-style-type: none"> • able to use medical databases for acquisition and presentation of relevant up-to-date data independently • able to present their work results in the form of presentations • able to carry out basic cell culture methods and the corresponding analysis independently <p><i>Personal Competence</i></p> <p>Students are able to work together as a team with 2-4 students to solve given tasks and discuss their results in the plenary and to defend them.</p> <p><i>Social Competence</i></p> <p>Students are able to reflect their work orally and discuss it with other students and teachers.</p> <p><i>Autonomy</i></p> <p>After completion of this module, participants will be able to solve a technical problem in teams of approx. 2-4 persons independently including a presentation of the results.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Examination	Presentation		
Examination duration and scale	Oral presentation + discussion (30 min) + protocol internship		
Assignment for the Following Curricula	<p>Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Compulsory</p> <p>Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory</p> <p>Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory</p>		

Course L0350: Practical Course Introduction to Cell Culture	
Typ	Practical Course
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Ralf Pörtner
Language	DE
Cycle	SoSe
Content	Introduction to basic skills for cultivation of mammalian cells compact practical course
Literature	Lindl, T. und Gstraunthaler, G.: Zell- und Gewebekultur. Von den Grundlagen zur Laborbank. Spektrum Akademischer Verlag; 6. Auflage 2008.

Course L0347: Regenerative Medicine	
Typ	Seminar
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Ralf Pörtner, Dr. Frank Feyerabend
Language	DE/EN
Cycle	SoSe
Content	<p>The course deals with the application of biotechnological engineering principles for regeneration of human tissues. The main topics are "tissue engineering" for the generation of "artificial organs" such as cartilage, liver, blood vessel etc., and their applications:</p> <ul style="list-style-type: none"> • Introduction (historical development, examples for medical and technical applications, commercial aspects) • Cell specific fundamentals (cell physiology, biochemistry, metabolism, special requirements for cell cultivation "in vitro") • Process specific fundamentals (requirements for culture systems, examples for reactor design, mathematical modelling, process and control strategies) • Examples for applications for clinical applications, drug testing and material testing <p>The fundamentals will be presented by the lecturers.</p> <p>The "state of the art" of specific applications will be exploited by the students based on selected papers and presented during the course.</p>
Literature	<p>Regenerative Biology and Medicine (Taschenbuch) von David L. Stocum; Academic Pr Inc; ISBN-10: 0123693713 , ISBN-13: 978-0123693716</p> <p>Fundamentals of Tissue Engineering and Regenerative Medicine von Ulrich Meyer (Herausgeber), Thomas Meyer (Herausgeber), Jörg Handschel (Herausgeber), Hans Peter Wiesmann (Herausgeber): Springer, Berlin; ISBN-10: 3540777547; ISBN-13: 978-3540777540</p>

Module M0832: Advanced Topics in Control

Courses

Title	Typ	Hrs/wk	CP
Advanced Topics in Control (L0661)	Lecture	2	3
Advanced Topics in Control (L0662)	Recitation Section (small)	2	3

Module Responsible	Prof. Herbert Werner
---------------------------	----------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	H-infinity optimal control, mixed-sensitivity design, linear matrix inequalities
---------------------------------------	--

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<ul style="list-style-type: none"> • Students can explain the advantages and shortcomings of the classical gain scheduling approach • They can explain the representation of nonlinear systems in the form of quasi-LPV systems • They can explain how stability and performance conditions for LPV systems can be formulated as LMI conditions • They can explain how gridding techniques can be used to solve analysis and synthesis problems for LPV systems • They are familiar with polytopic and LFT representations of LPV systems and some of the basic synthesis techniques associated with each of these model structures
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can explain how graph theoretic concepts are used to represent the communication topology of multiagent systems • They can explain the convergence properties of first order consensus protocols • They can explain analysis and synthesis conditions for formation control loops involving either LTI or LPV agent models
<i>Skills</i>	<ul style="list-style-type: none"> • Students can explain the state space representation of spatially invariant distributed systems that are discretized according to an actuator/sensor array • They can explain (in outline) the extension of the bounded real lemma to such distributed systems and the associated synthesis conditions for distributed controllers <ul style="list-style-type: none"> • Students are capable of constructing LPV models of nonlinear plants and carry out a mixed-sensitivity design of gain-scheduled controllers; they can do this using polytopic, LFT or general LPV models • They are able to use standard software tools (Matlab robust control toolbox) for these tasks <ul style="list-style-type: none"> • Students are able to design distributed formation controllers for groups of agents with either LTI or LPV dynamics, using Matlab tools provided • Students are able to design distributed controllers for spatially interconnected systems, using the Matlab MD-toolbox

<p>Personal Competence</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<p>Students can work in small groups and arrive at joint results.</p> <p>Students are able to find required information in sources provided (lecture notes, literature, software documentation) and use it to solve given problems.</p>
<p>Workload in Hours</p>	<p>Independent Study Time 124, Study Time in Lecture 56</p>
<p>Credit points</p>	<p>6</p>
<p>Examination</p>	<p>Oral exam</p>
<p>Examination duration and scale</p>	<p>30 min</p>
<p>Assignment for the Following Curricula</p>	<p>Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Avionic and Embedded Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory</p>

Course L0661: Advanced Topics in Control	
Typ	Lecture
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Herbert Werner
Language	EN
Cycle	WiSe
Content	<ul style="list-style-type: none"> • Linear Parameter-Varying (LPV) Gain Scheduling <ul style="list-style-type: none"> - Linearizing gain scheduling, hidden coupling - Jacobian linearization vs. quasi-LPV models - Stability and induced L2 norm of LPV systems - Synthesis of LPV controllers based on the two-sided projection lemma - Simplifications: controller synthesis for polytopic and LFT models - Experimental identification of LPV models - Controller synthesis based on input/output models - Applications: LPV torque vectoring for electric vehicles, LPV control of a robotic manipulator • Control of Multi-Agent Systems <ul style="list-style-type: none"> - Communication graphs - Spectral properties of the graph Laplacian - First and second order consensus protocols - Formation control, stability and performance - LPV models for agents subject to nonholonomic constraints - Application: formation control for a team of quadrotor helicopters • Control of Spatially Interconnected Systems <ul style="list-style-type: none"> - Multidimensional signals, l2 and L2 signal norm - Multidimensional systems in Roesser state space form - Extension of real-bounded lemma to spatially interconnected systems - LMI-based synthesis of distributed controllers - Spatial LPV control of spatially varying systems - Applications: control of temperature profiles, vibration damping for an actuated beam
Literature	<ul style="list-style-type: none"> • Werner, H., Lecture Notes "Advanced Topics in Control" • Selection of relevant research papers made available as pdf documents via StudIP

Thesis

Module M-002: Master Thesis

Courses

Title	Typ	Hrs/wk	CP
Module Responsible	Professoren der TUHH		
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §21 (1): <p>At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<ul style="list-style-type: none"> The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues. The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them. The students can place a research task in their subject area in its context and describe and critically assess the state of research. 		
<i>Knowledge</i>			
<i>Skills</i>	<p>The students are able:</p> <ul style="list-style-type: none"> To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question. To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way. To develop new scientific findings in their subject area and subject them to a critical assessment. 		
Personal Competence	Students can		
<i>Social Competence</i>	<ul style="list-style-type: none"> Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way. Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly. 		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> To structure a project of their own in work packages and to work them off accordingly. To work their way in depth into a largely unknown subject and to access the information required for them to do so. 		

	<ul style="list-style-type: none"> To apply the techniques of scientific work comprehensively in research of their own.
