

# **Module Manual**

Bachelor of Science (B.Sc.)

# **Naval Architecture**

Cohort: Winter Term 2021

Updated: 20th April 2023

## **Table of Contents**

Table of Contents	2
Program description	3
Core Qualification	4
Module M0608: Basics of Electrical Engineering	4
Module M0850: Mathematics I	6
Module M0889: Mechanics I (Statics)	9
Module M0933: Fundamentals of Materials Science	11
Module M1692: Computer Science for Engineers - Introduction and Overview	13
Module M0577: Non-technical Courses for Bachelors	14
Module M0671: Technical Thermodynamics I	16
Module M0696: Mechanics II: Mechanics of Materials	18
Module M0851: Mathematics II	20
Module M0594: Fundamentals of Mechanical Engineering Design	23
Module M0597: Advanced Mechanical Engineering Design	25
Module M1118: Hydrostatics and Body Plan	28
Module M1804: Engineering Mechanics III (Dynamics)	31
Module M0598: Mechanical Engineering: Design	33
Module M0829: Foundations of Management	36
Module M0853: Mathematics III	38
Module M1805: Computational Mechanics	41
Module M0854: Mathematics IV	43
Module M0680: Fluid Dynamics	46
Module M0640: Stochastics and Ship Dynamics	48
Module M0664: Structural Design and Construction of Ships	51
Module M0655: Computational Fluid Dynamics I	53
Module M0659: Fundamentals of Ship Structural Design and Analysis	55
Module M1023: Marine Propulsion	58
Module M1109: Resistance and Propulsion	61
Module M1110: Ship Design	62
Thesis	64
Module M-001: Bachelor Thesis	64

## Program description

## Content

## **Core Qualification**

Module M0608: Basics	s of Electrical Engineering			
Courses				
Title		Тур	Hrs/wk	СР
Basics of Electrical Engineering (LO	290)	Lecture	3	4
Basics of Electrical Engineering (L02	292)	Recitation Section (small)	2	2
Module Responsible	Prof. Thorsten Kern			
Admission Requirements	None			
Recommended Previous	Basics of mathematics			
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reache	d the following learning results		
<b>Professional Competence</b>				
Knowledge	Students can to draw and explain circuit diagrams	for electric and electronic circuits with	a small number	of components. They
	can describe the basic function of electric and elec	tronic componentes and can present th	e corresponding	equations. They can
	demonstrate the use of the standard methods for ca	Iculations.		
Skills	Students are able to analyse electric and electron	nic circuits with few components and to	calculate select	ted quantities in the
	circuits. They apply the ususal methods of the electronic	ical engineering for this.		
Personal Competence				
Social Competence	none			
· ·	Students are able independently to analyse electric	and electronic circuits and to calculate se	lected quantities	in the circuits.
Worldood in House	Independent Chief. Time 110. Chief. Time in Leature	70		
Credit points	Independent Study Time 110, Study Time in Lecture	70		
Course achievement				
Examination				
Examination duration and				
scale	133 minutes			
	Bioprocess Engineering: Core Qualification: Compuls	on/		
Following Curricula	Digital Mechanical Engineering: Core Qualification: Computer			
1 ollowing curricula	Energy and Environmental Engineering: Core Qualific	• •		
	Green Technologies: Energy, Water, Climate: Core Q	, ,		
	Logistics and Mobility: Core Qualification: Compulsor	· ·		
	Logistics and Mobility: Specialisation Production Mar	•	Isory	
	Logistics and Mobility: Specialisation Traffic Planning	and Systems: Elective Compulsory		
	Mechanical Engineering: Core Qualification: Compuls	sory		
	Orientation Studies: Core Qualification: Elective Com	pulsory		
	Naval Architecture: Core Qualification: Compulsory			
	Process Engineering: Core Qualification: Compulsory			
	Engineering and Management - Major in Logistics	and Mobility: Specialisation Production !	Management and	Processes: Elective
	Compulsory			
	Engineering and Management - Major in Logistics an	d Mobility: Specialisation Traffic Planning	and Systems: El	ective Compulsory

Course L0290: Basics of Electrical Engineering		
Тур	Lecture	
Hrs/wk	3	
СР	4	
Workload in Hours	Independent Study Time 78, Study Time in Lecture 42	
Lecturer	Prof. Thorsten Kern	
Language	DE	
Cycle	WiSe	
Content	DC networks: Current, voltage, power, Kirchhoff's laws, equivalent sources, network analysis	
	AC: Characteristics, RMS, complexe representation, phasor diagrams, power	
	Three phase AC: Characterisitics, star-delta- connection, power, transformer	
	Elektronics: Principle, operating behaviour and application of electronic devises as diode, Zener-diode, thyristor, transistor operational amplifier	
Literature	Alexander von Weiss, Manfred Krause: "Allgemeine Elektrotechnik"; Viweg-Verlag, Signatur der Bibliothek der TUHH: ETB 309	
	Ralf Kories, Heinz Schmitt - Walter: "Taschenbuch der Elektrotechnik"; Verlag Harri Deutsch; Signatur der Bibliothek der TUHH:	
	ETB 122	
	"Grundlagen der Elektrotechnik" - andere Autoren	

Course L0292: Basics of Electrical Engineering		
Тур	Recitation Section (small)	
Hrs/wk	2	
СР	2	
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28	
Lecturer	Prof. Thorsten Kern, Weitere Mitarbeiter	
Language	DE	
Cycle	WiSe	
Content	Excercises to the analysis of circuits and the calculation of electrical quantities th the topics:  DC networks: Current, voltage, power, Kirchhoff's laws, equivalent sources, network analysis  AC: Characteristics, RMS, complexe representation, phasor diagrams, power Three phase AC: Characterisitics, star-delta- connection, power, transformer  Elektronics: Principle, operating behaviour and application of electronic devises as diode, Zener-diode, thyristor, transistor operational amplifier	
Literature	Alexander von Weiss, Manfred Krause: "Allgemeine Elektrotechnik"; Viweg-Verlag, Signatur der Bibliothek der TUHH: ETB 309 Ralf Kories, Heinz Schmitt - Walter: "Taschenbuch der Elektrotechnik"; Verlag Harri Deutsch; Signatur der Bibliothek der TUHH: ETB 122 "Grundlagen der Elektrotechnik" - andere Autoren	

Module M0850: Mathe	ematics I			
Courses				
Title		Тур	Hrs/wk	CP
Analysis I (L1010)		Lecture	2	2
Analysis I (L1012)		Recitation Section (small)	1	1
Analysis I (L1013)		Recitation Section (large)	1	1
Linear Algebra I (L0912)		Lecture	2	2
Linear Algebra I (L0913)		Recitation Section (small)	1	1
Linear Algebra I (L0914)		Recitation Section (large)	1	1
Module Responsible	Prof. Anusch Taraz			
Admission Requirements	None			
Recommended Previous	School mathematics			
Knowledge	After the life or a substitute of the last	. Fallaccio e la ameio e manche		
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	<ul> <li>Students can name the basic concepts in analy.</li> </ul>	sis and linear algebra. They are abl	e to explain the	em using appropriate
	examples.	,	·	3 11 1
	Students can discuss logical connections between	these concepts. They are capable	of illustrating th	ese connections with
	the help of examples.			
	<ul> <li>They know proof strategies and can reproduce the</li> </ul>	em.		
Skills				
	<ul> <li>Students can model problems in analysis and line</li> </ul>	ar algebra with the help of the conce	epts studied in th	nis course. Moreover,
	they are capable of solving them by applying esta	blished methods.		
	<ul> <li>Students are able to discover and verify further lo</li> </ul>	gical connections between the concep	ots studied in the	e course.
	For a given problem, the students can develop	and execute a suitable approach, ar	nd are able to c	ritically evaluate the
	results.			
<b>Personal Competence</b>				
Social Competence	Charles have a high to word the mathematic has see The			
	Students are able to work together in teams. They  lead to a common to the common teams.			-
	In doing so, they can communicate new concepts		erating partners	. Moreover, they can
	design examples to check and deepen the unders	tanding of their peers.		
Autonomy	<ul> <li>Students are capable of checking their understan</li> </ul>	ding of complex concepts on their or	wn. They can sp	ecify open questions
	precisely and know where to get help in solving th		.,	, , , , , , , , , , , ,
	Students have developed sufficient persistence to		s in a goal-orien	ted manner on hard
	problems.	3	3	
	F			
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112			
Credit points	8			
Course achievement	None			
Examination	Written exam			
Examination duration and	60 min (Analysis I) + 60 min (Linear Algebra I)			
scale				
Assignment for the	General Engineering Science (German program, 7 semes	ter): Core Qualification: Compulsory

Courses				
Title		Тур	Hrs/wk	СР
Mechanics I (Statics) (L1001)		Lecture	2	3
Mechanics I (Statics) (L1002)				
Mechanics I (Statics) (L1003)		Recitation Section (large)	1	1
Module Responsible	Prof. Robert Seifried			
Admission Requirements	None			
Recommended Previous	Solid school knowledge in mathematics and physics.			
Knowledge				
<b>Educational Objectives</b>	After taking part successfully, students have reached th	ne following learning results		
Professional Competence				
Knowledge	The students can			
	describe the axiomatic procedure used in mechanic procedure.	nical contexts;		
	explain important steps in model design;			
	<ul> <li>present technical knowledge in stereostatics.</li> </ul>			
Skills	The students can			
	explain the important elements of mathematical	/ mechanical analysis and model form	nation, and apply	/ it to the context (
	their own problems;			
	apply basic statical methods to engineering prob			
	<ul> <li>estimate the reach and boundaries of statical me</li> </ul>	thods and extend them to be applicab	le to wider proble	em sets.
Personal Competence				
Social Competence	The students can work in groups and support each othe	r to overcome difficulties.		
,				
Autonomy	Students are capable of determining their own strength	s and weaknesses and to organize the	ir time and learn	ng based on those.
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and	90 min			
scale

Module M0577: Non-technical Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results	
<b>Professional Competence</b>		

#### Knowledge The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

#### The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

### Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

#### Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

## The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

## Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- · outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity.
- Can communicate in a foreign language in a manner appropriate to the subject.

## Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

## Personal Competence

Social Competence

## Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

Autonomy	<ul> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>to organize themselves and their own learning processes</li> <li>to reflect and decide questions in front of a broad education background</li> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> <li>to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>

Hydrostatics (L1260)		Lecture	2	3
Hydrostatics (L1261)		Recitation Section (large)	2	1
Body Plan (L1452)		Project Seminar	2	2
Module Responsible	Prof. Stefan Krüger			
Admission Requirements	None			
Recommended Previous	Good knowledge in Mathemathics I-III and Mechanics	I-III.		
Knowledge	It is recommended that the students are familiar wit	n typical design relevant drawings, e.g. B	ody Plan, GA- Pla	n, Tank Plan etc.
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The lecture enables the student to carry out all necessary theoretical calculations for ship design on a scientific level. The lecture			
	is basic requirement for all following lectures in the s	ubjects shipo design and safety of ships.		
Skills	The student is able to carry out hydrostatic calcula	tions to ensure that the ship has sufficie	nt stability. He is	s able to design hull
	forms that are safe against capsizing or sinking.			
Personal Competence				
•	The student gets access to hydrostatical problems.			
Boeiai Competence	The stadent gets decess to thy drostatical problems.			
Autonomy

Language	
Cycle	1. Numerical Integration, Diffrentation, Interpolation
	- Trapezoidal Rule, Simpson, Tschebyscheff, graphical Integration Methods
	- Determination of Areas, 1st and 2nd order Moments
	- Numerical Diffrentation, Spline Interpolation
	2. Buyoancy
	- Principle of Archimedes
	- Equlibrium Floating Condition
	- Equlibrium Computations
	- Hydrostatic Tables and Sounding Tables
	- Trim Tables
	3. Stability at large heeling angles
	- Stability Equation
	- Cross Curves of Stability and Righting Levers
	- Numerical and Graphical Determination of Cross Curves
	- Heeling Moments of Free Surfaces, Water on Deck, Water Ingress
	- Heeling Moments of Different Type
	- Balance of Heeling and Righting Moments acc. to BV 1030
	- Intact Stability Code (General Critaria)
	4. Linearization of Stability Problems
	- Linearization of Restoring Forces and Moments
	- Correlation between Metacentric Height and Righting Lever at small heeling angles
	[20]

- Computation of Path of Metacentric Height for Modern Hull Forms
- Correlation between Righting Lever and Path of Metacentric Height
- Hydrostatic Stiffness Matrix
- Definition of MCT
- Computation of Equilibrum Floating Conditions from Hydrostatic Tables
- Effect of Free Surfaces on Initial GM
- Roll Motions at Small Roll Angles
- 6. Stability in Waves
- Roll Motions at Large Amplitudes
- Pure Loss of Stability on the Wave Crest
- Principle of Parametric Excitation
- Principle of Direct Wave Moments
- Grim's Equivalent Wave Concept
- 6 Longitudinal Strength
- Longitudinal Mass Distribution, Shear Forces, Bending Moments
- Longitudinal Strength in Stability Booklet
- 7. Deadweight Survey and Inclining Experiment
- Deplacement Computations from Draft mark Readings
- Weights to go on /come from board
- Inclining Experiment with Heeling Moments from Weights and Heeling Tanks
- Residual Sounding Volumes
- Determination of COG from Metacentric height and from Cross Curves
- Roll Decay Test
- 8. Launching and Docking
  - Launching Plan, Arrangement of Launching Blocks
  - Rigid Body Launching: Tilting, Dumping, Equation of Techel
  - Computation of Launching Event
- Bottom Pressure and Longitudinal Strength
- Linear- Elastic Effects
- Transversal Stability on Slipway and in Dock
- 9. Grounding
- Loss of Buoynacy when Grounded
- Pointwise Grounding
- Ship Grounds on Keel
- 10. Introduction into Damage Stability Problems
- Added Mass Method
- Loss of Buoyant Volume Method
- Simple Equilibrium Computations
- Intermediate Stages of Flooding (Addes Mass Method), Cross- and Downflooding
- Water Ingress Through Openings
- 11. Special Problems (optional and agreed upon)
- e.g. Heavy Lift Operations
- e.g. Jacking of Jackup Vessels
- e.g. Sinking After Water Ingress

Content	As preparation for the lecture "Hydrostatics", the students must develop a body plan of a modern twin screw vessel (cruise liner, RoPAx- feryy, RoRo) and perform elementary volumetric computations. The body plan is to be developed from a given GA or can be designed freely. All computations shall be based on graphical integration methods. The body plan consists of:  - Grid  - approx. 20 sections, 5 Waterlines, 5 Buttocks  - Computation Volume and centre of buoyancy for several drafts  - Computation of Righting Lever curve for a given displacement based on and graphical integration for several heeling angles.

	Mathematics I, II, Engineering Mechanics I (Statics)	). Parallel to Engineering Mechanik III the	e module Mathe	ematics III should be
Knowledge	attended.			
Educational Objectives	After taking part successfully, students have reached	d the following learning results		
Professional Competence				
Knowledge	The students can			
	describe the axiomatic procedure used in mea	chanical contoxts		
	explain important steps in model design;	chanical contexts,		
	<ul> <li>present technical knowledge in kinematics, ki</li> </ul>	netics and vibrations		
	present teeningal knowledge in kinematics, ki	nedes and visitations.		
Skills	The students can			
	<ul> <li>explain the important elements of mathemat</li> </ul>	ical / mechanical analysis and model form	nation, and app	ly it to the context of
	their own problems;	,,,,,,	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	,
	<ul> <li>apply basic kinematic, kinetic and vibraton m</li> </ul>	ethods to engineering problems;		
	• estimate the reach and boundaries of kinematic, kinetic and vibraton methods and extend them to be applicable to wider			
	problem sets.			
Personal Competence				
Social Competence	The students can work in groups and support each o	other to overcome difficulties.		
,				
Autonomy	Students are capable of determining their own stren	igths and weaknesses and to organize the	ir time and lear	ning based on those.

Course L08	82: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on so selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Lecturer	Prof. Christian Cyron
Language	DE
Cycle	SoSe
Content	The lecture Computational Structural Mechanics extends the content of the lecture Engineering Mechanic II. It bridges the gap between the manual calculation of mechanical stress and deformation in systems with a particularly simple geometry and the efficent computer-based computation of general mechanical systems:  Basics of linear continuum mechanics Planar structures: plate, membrane, slab Linientragwerke: beam, cable, truss Weak form and Galerkin's method Finite element method: theory and application Principles of mechanics: principle of virtual work, virtual displacements, virtual forces
Literature	Gross, Hauger, Wriggers, "Technische Mechanik 4", Springer

Admission Requirements	None			
Recommended Previous	Mathematics I - III			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence	Arter taking part successiony, stadents have reached	the following learning results		
•				
Knowledge	Students can name the basic concepts in Math	ematics IV. They are able to explain then	n using appropri	ate examples.
	Students can discuss logical connections between	een these concepts. They are capable	of illustrating th	ese connections with
	the help of examples.			
	They know proof strategies and can reproduce	them.		
Skills				
55	Students can model problems in Mathematics	IV with the help of the concepts studie	d in this course	. Moreover, they are
	capable of solving them by applying establishe	ed methods.		
	<ul> <li>Students are able to discover and verify further</li> </ul>	r logical connections between the concep	ots studied in the	e course.
	<ul> <li>For a given problem, the students can devel</li> </ul>	op and execute a suitable approach, ar	nd are able to c	ritically evaluate the
	results.			
Personal Competence				
Social Competence				
, , , , , , , , , , , , , , , , , , , ,	Students are able to work together in teams. They are capable to use mathematics as a common language.			
	• In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can			
	design examples to check and deepen the und	lerstanding of their peers.		
Autonomy				
	Students are capable of checking their unders		wn. They can sp	ecify open questions
	precisely and know where to get help in solvin			
	Students have developed sufficient persistent	ce to be able to work for longer periods	in a goal-orien	ted manner on hard
	problems.

Module M0655: Comp	outational Fluid Dynamics I			
Courses				
Title	Т	ур	Hrs/wk	СР
Computational Fluid Dynamics I (LC		ecture	2	3
Computational Fluid Dynamics I (LG	0419) R	ecitation Section (large)	2	3
Module Responsible	Prof. Thomas Rung			
Admission Requirements	None			
Recommended Previous	Students should have sound knowledge of engineering mathematic	cs (series expansions, inter	nal & vector calc	ulus), and be familia
Knowledge		ey should also be familiar	with engineering	fluid mechanics and
	thermodynamics.			
Educational Objectives	After taking part successfully, students have reached the following	learning results		
Professional Competence				
Knowledge	Students will have the required combined knowledge of therm	o-/fluid dynamics and nu	merical analysis	to translate genera
	principles of thermo-/fluid engineering into discrete algorithms	on the basis of local (fi	nite differences/v	olumes) and globa
	(potential theory) ansatz functions. They are familiar with the si			
	approximation concepts for investigating coupled systems of n			
	explain the motivation for applying them. Students have the requi	-	•	
	numerical algorithms dedicated to the solution of thermofluid dynatic predict thermofluid dynamic fields, in particular their realms and		ar with most num	nericai methods use
	to predict thermondia dynamic fields, in particular their realms and	i illilitations.		
Skills	The students are able choose and apply appropriate numerical pro			
	in space and time. They can apply/optimise numerical analysi			
	computational algorithms in a structured way, apply these code	es for parameter investig	ations and suppl	lement interfaces t
	extract simulation data for an engineering analysis.			
Personal Competence				
Social Competence	The students are able to discuss problems, present the results of t		ntly develop, impl	ement and report o
	solution strategies that address given technical reference problems	5.		
Autonomy	The students can independently analyse numerical methods to	colving fluid onginooring	problems They	are able to criticall
Autonomy	The students can independently analyse numerical methods to analyse own results as well as external data with regards to the pla		problems. They	are able to Critical
	analyse own results as well as external data with regards to the pic	rusibility und renublity.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Knowledge	Fundamentals of Materials Science I - III Welding Technology I Fundamentals of Mechanical Design I - III			
Educational Objectives	After taking part successfully, students have reach	hed the following learning results		
<b>Professional Competence</b>	·			
	Students can reproduce the basic contents of the structural behaviour of ship structures; they can explain the theory and methods for the calculation of deformations and stresses in beam-like structures.  Furthermore, they can reproduce the basis contents of codes (rules), materials, semi-finished products, joining and principles of structural design of components in the ship structure.			
	Students are capable of applying the methods and tools for the calculation of linear deformations and stresses in the above mentioned structures; they can choose calculation models of typical ship structures.  Furthermore, they are capable to apply the methods of drawing and sizing the ship structure; they can select suitable materials semi-finished products and joints.			
Personal Competence				
Social Competence	The students are able to communicate and coor industry.	perate in a professional environment in the	e shipbuilding an	d component supp
*	The students are capable to independently idealize real ship structures and to select suitable methods for analysis of beam structures; they are capable to assess the results of structural analyses.			analysis of beam-lik

Module M1110: Ship	Design				
Courses					
Title		Тур	Hrs/wk	СР	
Ship Design (L1262)		Lecture	2	3	
Ship Design (L1264)		Recitation Section (large)	2	3	
Module Responsible	Prof. Stefan Krüger				
Admission Requirements	None				
Recommended Previous	Fluid Dynamics for Naval Architects, Resistance and Prop	ulcion			
Knowledge	Resistance and Propulsion, Hydrostatics	uisioii			
	- Nesistance and Propalsion, Plyarostatics				
<b>Educational Objectives</b>	After taking part successfully, students have reached the follow	ing learning results			
<b>Professional Competence</b>					
Knowledge	The lecture starts with an overview about the importance and	requirements of the aerly de	sign phase. Com	petitive Elements of	
	Ship Designs are thoroughly discussed. Typical bulding contract	s and the related technical ris	k are introduced.	The most important	
	main parameters of a ship are introduced and their influence on the competitiveness of a design. The lecture focusses on the				
	influence of alternated main parameters on the total performance of a ship design and the consecutive process elements. In this				
		lecture, the design changes are dealt with by simple models or formulae. The student shall further learn to model complex			
	systems properly so that the relavent technical conclusions can	be drawn.			
	The lecture continues with an introduction into the different pl	hases of design project, from	the initial design	phase to a building	
	contract. Further, methods are introduced to generate bulding	specfication relevant informa	tion at different l	levens of granularity	
	during the different design stages. In detail, the following topics	are adressed:			
	- Structure of a building specification				
	- Determination of Light Ship Weight and Deadweight				
	Components				
	- Design of main section and hull form				
	- Design of aftbody lines and manoevering devices				
	- Design of main propulsion plant				
	- Design of subdivision				
	- Determination of limiting GMrequ- Curves				
	Scantlings of most improtant structural members     Longitudinal strength				
	- Outfitting Components				
	- Relevant rules and regulations				
	recevant rates and regulations				
Skills	The student is made familiar with the basic design principles	of seagoing mearchant ships	. The goal of the	e lecture is that the	
	student shall be able to carry out a concept design based on a	vessel of comparison fulfilling	typical contract	requirements within	
	the Marine Environment. The lecture deals with the basic design	n methods to determine the	fundamantal tech	nnical characteristics	
	of a ship design with respect to fulfillment procedures of the co			of Ship Design" the	
	relevant methods to determine and judge uopn the performanc	e of a ship design are treated.			
Personal Competence					
-	The students learns to prepare technical matters in such a	a way the he can persuade	his potantial co	ustomer against his	
	competitors.	•		-	
Autonomy	The students learns to prepare technical matters in such	a way the he can persuade	his potantial co	ustomer against his

## **Thesis**

Module M-001: Bache	lor Thesis
Courses	
Гitle	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to Canadal Developing \$21 (1).
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve
	subject-related problems.
	With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence Social Competence	
30ciai competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	
,	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	<ul> <li>specified time frame.</li> <li>The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific</li> </ul>
	problem.
	The students can apply the essential techniques of scientific work to research of their own.
