Content

Core qualification

Module M0569: Engineeri	ng Mechanics I			
Courses				
Title		Тур	Hrs/wk	СР
Engineering Mechanics I (L0187)		Lecture	3	3
Engineering Mechanics I (L0190)		Recitation Section (small)	2	3
Module Responsible	Prof. Uwe Weltin			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in mathematics and physics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Students are able to describe fundamental connections,	heories and methods to calculate forces in st	atically determined r	mounted systems of rigid
	bodies and fundamentals in elastostatics.			
Skills	Students are able to apply theories and methods to calcu	ulate forces in statically determined mounted	systems of rigid bod	lies and fundamentals of
	elastostatics.			
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mixed g	oups, learning and broadening teamwork ab	ilities.	
Autonomy	Students are able to solve individually exercises related	o this lecture.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 min.			
Assignment for the Following	Bioprocess Engineering: Core qualification: Compulsory			
Curricula	Electrical Engineering: Core qualification: Elective Comp	ulsory		
	Energy and Environmental Engineering: Core qualification	n: Compulsory		
	Computational Science and Engineering: Core qualificat	on: Compulsory		
	Logistics and Mobility: Core qualification: Compulsory			
	Process Engineering: Core qualification: Compulsory			

Course L0187: Engineering Mecha	anics I
Тур	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Course work	2 voluntary tests, 30 minutes each with a maximum of four extra points for a final exam with 30 points. The bonus expires after each semester.
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	Methods to calculate forces in statically determined systems of rigid bodies
	Newton-Euler-Method Energy-Methods Fundamentals of elasticity Forces and deformations in elastic systems
Literature	 Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 1: Statik, Springer Vieweg, 2013 Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 2: Elastostatik, Springer Verlag, 2011 Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 1: Statik, Springer Vieweg, 2013 Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Verlag, 2011 Hibbeler, Russel C.: Technische Mechanik 1 Statik, Pearson Studium, 2012 Hibbeler, Russel C.: Technische Mechanik 2 Festigkeitslehre, Pearson Studium, 2013 Hauger, W.; Mannl, V.; Wall, W.A.; Werner, E.: Aufgaben zu Technische Mechanik 1-3: Statik, Elastostatik, Kinetik, Springer Verlag, 2011

Course L0190: Engineering Mechanics I	
Тур	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

Module M0577: Nontechnical Complementary Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge	The Non-technical Academic Programms (NTA)	

The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, selfmanagement, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles"

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented $communication \ skills, e.g. \ the \ skills \ required \ by \ outgoing \ engineers \ in \ international \ and \ intercultural \ situations.$

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline.
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- · different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

Autonomy Personal Students to to	explain nontechnical items to auditorium with technical background knowledge. Competences (Self-reliance) are able in selected areas reflect on their own profession and professionalism in the context of real-life fields of application organize themselves and their own learning processes reflect and decide questions in front of a broad education background communicate a nontechnical item in a competent way in writen form or verbaly organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours Depends	on choice of courses

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems. Workload in Hours Independent Study Time 128, Study Time in Lecture 112 Credit points 8					
Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. Students are able to discover and verify further logical connections between the concepts studied in the course. For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results. Personal Competence Social Competence Social Competence Students are able to work together in teams. They are capable to use mathematics as a common language. In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. Autonomy Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely an know where to get help in solving them. Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems. Workload in Hours Independent Study Time 128, Study Time in Lecture 112 Credit points 8	Skills

Module M0920: Physics				
Courses				
Title		Тур	Hrs/wk	СР
Physics (L0945)		Lecture	2	2
Physics (L0946)		Recitation Section (small)	1	1
Physics-Lab for VT/ BVT/ EUT (L0947)		Laboratory Course	2	3
Module Responsible	Prof. Wolfgang Hansen			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in Mathematics and Physics	from secondary school		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The students are able to describe and explain basic	terms and procedures about three-dimensional	kinematics, dynamic	s, and thermodynamics.
	They can identify and apply the equations of motion for linear, circular, and oscillatory motion. They are able to reflect and interpret			
	basic physical principles and physical concepts such	as conservation laws and their implications.		
Skills	The students get knowledge of basic terminology of	physics and ability to employ physical laws in o	rder to solve simple	technical problems. The
<i></i>	students can organize their experiments, record and		radi to dorvo dimpro	toomingar probleme. The
Personal Competence				
Social Competence	The students are able to discuss and present their p	reparation, the practical measurement and the a	nalysis of their physi	cal experiments in small
,	groups.			
Autonomy	The students are able to read and comprehend liter	ature to basic physical subjects. From the tutors	they get feedback or	their verbal and written
	work. Due to the given feedback they learn to access	their level of knowledge.

Content	In the physics lab a number of key experiments on physical phenomena in mechanics, oscillatory and wave motion, thermodynamics, electricity,			
	and optics will be conducted by the students under assistance of a lecturing tutor. The experiments are part of the physics education program			
	presented in the course "Physics for TUHH-VT Engineers".			
	Beyond teaching of fundamental physical background the objectives are basic skills in preparation and performing physical measurements, usag			
	of physical equipment, analysis of the results and preparation of a report on the experimental data. The students receive instructions in terms of			
	scientific writing as well as feedback on their own reports and level of scientific writing.			
	Before every experiment an colloquium takes place in which the students explain and discuss the theoretical background and its translation into			
	practice with the corresponding experiment.			
Literature	Zu den Versuchen gibt es individuelle Versuchsanleitungen, die vor der Versuchsdurchführung ausgegeben werden.			
	Zum Teil müssen die zur Versuchsdurchführung notwendigen physikalischen Hintergründe selbstständig erarbeitet werden, wozu die zur Vorlesung "Physik für TUHH-VT Ingenieure" angegebene Literatur gut geeignet ist.

Module M0883: General ar	nd Inorganic Chemistry			
Courses				
Title		Тур	Hrs/wk	CP
Fundamentals in Inorganic Chemistry (L	0824)	Lecture	4	4
Fundamentals in Inorganic Chemistry (L		Laboratory Course	3	2
Module Responsible	Prof. Gerrit A. Luinstra			
Admission Requirements	none			
Recommended Previous	High school Chemistry			
Knowledge				
Educational Objectives	After taking part successfully, students have reach	ned the following learning results		
Professional Competence				
Knowledge	After finalization of the module students are able to describe molecular orbital theory as well as molecular interactions in the gas, liquid and solid phases. They are able to describe chemical reactions in the sense of retention of mass and energy, enthalpy and entropy as well as the chemical equilibrium. They can explain the concept of activation energy in conjucture with particle kinetic energy. They have increased knowledge of acid base concepts, acid-base reactions in water, pH calculation, quantitative analysis (titration), redox processes in water, redox potential, Nerns theory describing the concentration dependence of redox potentials, overpotential, corrosion (local elments).			
Skills	Students are able to use general and inorganic chemistry for the design of technical processes. Especially they are able to formulate mass an energy balances and by this to optimise technical processes. They are able to perform simple calculations of pH values in regard to an applicatio of acids and bases, and evaluate the course of redox processes (calculation of redoxpotentials). They are able to transform a verbal formulate message into an abstract formal procedure. Students are able to present and discuss their scientific results in plenum. The students are able to document the results of their experiments scientifically. They are able to use scientific citation methods in their reports.			
Personal Competence				
Social Competence	The students are able to discuss given tasks in sn	nall groups and to develop an approach.		
	Students are able to carry out experiments in sma	all groups in lab scale and to distribute tasks in the	group independently.	
Autonomy	onomy Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the know practice.			to use the knowledge
	Students are able to apply their knowledge to knowledge and to acquire missing knowledge that		nts are able to indepen	ndently judge their ow

Module M0757: Biochemis	stry and Microbiology			
Courses				
Title		Тур	Hrs/wk	СР
Biochemistry (L0351)		Lecture	2	2
Biochemistry (L0728)		Problem-based Learning	1	1
Microbiology (L0881)		Lecture	2	2
Microbiology (L0888)		Problem-based Learning	1	1
Module Responsible	Dr. Paul Bubenheim			
Admission Requirements	none			
Recommended Previous	none			
Knowledge				
Educational Objectives	After taking part successfully, students have reac	hed the following learning results		
Professional Competence				
Knowledge	At the end of this module the students can:			
	- explain the methods of biological and biochemi	cal research to determine the properties of biomolecu	les	
	- name the basic components of a living organism			
	- explain the principles of metabolism			
	- describe the structure of living cells			
	-			
Skills				
Personal Competence				
Social Competence	The students are able,			
	- to gather knowledge in groups of about 10 students	ents		
	- to introduce their own knowledge and to argue	their view in discussions in teams		
	- to divide a complex task into subtasks, solve the	ese and to present the combined results		
Autonomy	The students are able to present the results of the	eir subtasks in a written report		
Workload in Hours	Independent Study Time 96, Study Time in Lectu	re 84

Module M0888: Organic C	hemistry			
Courses				
Title		Тур	Hrs/wk	СР
Organic Chemistry (L0831)		Lecture	4	4
Organic Chemistry (L0832)		Laboratory Course	3	2
Module Responsible	Prof. Patrick Theato			
Admission Requirements	none			
Recommended Previous	High School Chemistry and/or lecture "general and inorg	ganic chemistry"		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	Students are familiar with basic concepts of organic chemistry. They are able to classify organic molecules and to identify functional groups and to describe the respective synthesis routes. Fundamental reaction mechanisms like nucleophilic substitution, eliminations, additions and aromatic substitution can be described. Students are capable to describe in general modern reaction mechanisms.			
Skills	Students are able to use basics of organic chemistry for the design of technical processes. Especially they are able to formulate basic routes to synthesize small organic molecules and by this to optimise technical processes in Process Engineering. They are able to transform a verbally formulated message into an abstract formal procedure.			
Personal Competence	The students are able to document and interpret their wo	rking process and results scientifically.		
Social Competence	The students are able to discuss in small groups and de-	velop an approach for given tasks.		
Autonomy	Students are able to get new knowledge from existing kr	nowledge as well as to find ways to use the	knowledge in practice.

Cycle	SoSe
Content	The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkenes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described. Prior to each experiment, an oral colloquium takes place in small groups. In the colloquium are security aspects of the experiments are discussed, as well as the topics of the experiments. Solutions to previously provided questions are answered. In the colloquia the students acquire the skill to express scientific matters orally in a scientifically correct language and to describe theoretical basics. The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Module M0688: Technical	Thermodynamics II			
Courses				
Title		Тур	Hrs/wk	СР
Technical Thermodynamics II (L0449)		Lecture	2	4
Technical Thermodynamics II (L0450)		Recitation Section (large)	1	1
Technical Thermodynamics II (L0451)		Recitation Section (small)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in Mathematics, Mechanics and Techn	ical Thermodynamics I		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ring learning results		
Professional Competence				
Knowledge	Students are familiar with different cycle processes like Jou	le, Otto, Diesel, Stirling, Seiliger and	Clausius-Rankine. T	hey are able to deri
	energetic and exergetic efficiencies and know the influence	different factors. They know the different	ence between anti cl	ockwise and clockwi
	cycles (heat-power cycle, cooling cycle). They have incre			
	Thermodynamics related diagrams. They know the laws of	gas mixtures, especially of humid air	processes and are	able to perform simp
	combustion calculations. They are provided with basic knowle	dge in gas dynamics and know the defi	nition of the speed of	sound and know abo
	a Laval nozzle.			
Skills	Students are able to use thermodynamic laws for the design	of technical processes. Especially the	y are able to formula	te energy, exergy- a
	entropy balances and by this to optimise technical processes			
	from a tank. They are able to transform a verbal formulated me			3 3
Personal Competence Social Competence Autonomy	The students are able to discuss in small groups and develop Students are able to define independently tasks, to get new k practice.		well as to find ways to	o use the knowledge

Knowledge				
Educational Objectives	After taking part successfully, students have reached	d the following learning results		
Professional Competence				
Knowledge				
Knowieage	Students can name the basic concepts in th	e area of analysis and differential equations. T	hey are able to explain	them using appropriat
	examples.			
	Students can discuss logical connections by	etween these concepts. They are capable o	fillustrating these conn	nections with the help
	examples.	, , , ,	0	
	They know proof strategies and can reprodu	ce them		
	The state of the s			
Skills	Students can model problems in the area	of analysis and differential equations with th	e help of the concepts	studied in this course
	Moreover, they are capable of solving them	, ,		
			udied in the course	
	Students are able to discover and verify furth			41
	For a given problem, the students can devel	op and execute a suitable approach, and are at	ne to critically evaluate	ine resuits.
Personal Competence				
Social Competence	Ohiodanda ana alala da consulada mada an inda ana	The control of the co		
	Students are able to work together in teams.			
	In doing so, they can communicate new or	· ·	perating partners. Mor	eover, they can desig
	examples to check and deepen the understa	anding of their peers.		
Autonomy				
	Students are capable of checking their under	erstanding of complex concepts on their own.	They can specify open	questions precisely an
	know where to get help in solving them.			
	 Students have developed sufficient persister 	nce to be able to work for longer periods in a go	al-oriented manner on l	hard problems.

Content	Widespread techniques of microbiological, biochemical and genetic approaches will be taught during this course.
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.
	Topics and Methods of the course include:
	- Morphology and growth of different bacteria strains
	- Measuring of microbial growth by turbidity
	- Preparation of several culture media
	- Strain identification by gram staining and analytical profile index (API test)
	- Genetic background identification by 16S rRNA analysis
	- Microscopy
	- BLAST analyses
	- Colony PCR procedure
	- Enzyme activity measurements and kinetics (Michaelis-Menten equation, Lineweaver-Burk plot)
	- Enzymes as biocatalysts (exemplarily use of enzymes in detergents)
	- Measurement of protein concentrations (Bradford protein assay)
	- Qualitative and quantitative enzyme activity assay

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Course L0114: Phase Equilibria Th	nermodynamics
Тур	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Irina Smirnova
Language	DE
Cycle	SoSe
Content	
Literature	1. Introduction: Applications of thermodynamics of mixtures 2. Thermodynamic equations in multi-component systems: Fundamental equations, chemical potential, fugacity 3. Phase equilibria of pure substances: thermodynamic equilibrium, vapor pressure, Gibbs' phase rule 4. Equations of state: virial equations, van-der-Waals equation, generalized equations of state 5. Mixing properties: ideal and real mixtures, excess properties, partial molar properties 6. Vapor-liquid-equilibria: binary systems, azeotropes, equilibrium condition 7. Gas-liquid-equilibria: equilibrium condition, Henry-coefficient 8. GE-Models: Hildebrand-model, Flory-Huggins-model, Wilson-model, UNIQUAC, UNIFAC 9. Liquid-liquid-equilibria: equilibrium condition, phase equilibria in binary and ternary systems 10. Solid-liquid-equilibria: equilibrium condition, binary systems 11. Chemical reactions: reaction coordinate, mass action law, influence of pressure and temperature 12. Osmotic pressure

Module Responsible	Prof. Andreas Liese				
Admission Requirements	none				
Recommended Previous	none, module "organic chemistry", module "fundamentals for process engineering"				
Knowledge					
Educational Objectives	After taking part successfully, students have reach	ned the following learning results			
Professional Competence					
Knowledge	Students are able to describe the basic concepts	s of bioprocess engineering. They are able to	classify different types of k	inetics for enzymes a	
	microorganisms, as well as to differentiate differentiate	ent types of inhibition. The parameters of stoic	chiometry and rheology c	an be named and ma	
	transport processes in bioreactors can be expla	ained. The students are capable to explain fu	ındamental bioprocess m	anagement, sterilizati	
	technology and downstream processing in detail.				
Skills	After successful completion of this module, studer	nts should be able to			
	describe different kinetic approaches for a	rowth and substrate-uptake and to calculate the	e corresponding paramete	are	
	-	ergy generation, regeneration of redox equivers			
	process	rigy generation, regeneration of redex equiv	aionto ana growar minor		
	· ·	metry and to set up / solve metabolic flux equal	ions		
		different bioreactors and bioprocesses (anaero		icroaerobic) to compa	
	them as well as to apply them to current bi	iotechnical problem			
	 propose solutions to complicated biotechr 	nological problems and to deduce the correspo	nding models		
		As a supplicable a supplication of a supplicable			
	to explore new knowledge resources and identify expentific problems with concrete in				
	 identify scientific problems with concrete in to document and discuss their procedures 				
	to document and discuss their procedures	as well as results in a scientific mainter			
Personal Competence					
Social Competence	After completion of this module participants shou	ld be able to debate technical questions in sm	all teams to enhance the	ability to take position	
	their own opinions and increase their capacity for			,	
	,	3			
Autonomy	After completion of this module participants will b	e able to solve a technical problem in a team i	ndependently by organizi	ng their workflow and	
	present their results in a plenum.

Course L0843: Bioprocess Engineering - Fundamental Practical Course		
Тур	Laboratory Course	
Hrs/wk	2	
CP	2	
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28	
Lecturer	Prof. Andreas Liese, Prof. An-Ping Zeng	
Language	DE	
Cycle	SoSe	
Content	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out. The students document their experiments and results in a protocol.

Module M1274: Environme	ental Technology			
Courses				
Title		Тур	Hrs/wk	СР
Environmental Assessment (L0860)		Lecture	2	2
Environmental Assessment (L1054)		Recitation Section (small)	1	1
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	None			
Recommended Previous	Fundamentals of inorganic/organic chemistry and biology			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the follow	ing learning results		
Professional Competence				
Knowledge	which might occur from production processes, projects or cor	struction measures. They have knowled	edge about the metho	odological diversity and
	are competent in dealing with different methods and instrume complexity of these environmental processes as well as uncert	ainties and difficulties with their measu	rement.	
Skills	The students are able to select a suitable method for the respective case from the variety of assessment methods. Thereby they can develop suitable solutions for managing and mitigating environmental problems in a business context. They are able to carry out Life Cycle Impact Assessments independently and can apply the software programs OpenLCA and the database Ecolovent. After finishing the course the students have the competence to critically judge research results or other publications on environmental impacts.			
Personal Competence				
Social Competence	The students are able to discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They are able to develop jointly different solutions and to discuss their theoretical or practical implementation. Due to the selected lecture topics, the students receive insights into the multi-layered issues of the environment protection and the concept of sustainability. Their sensitivity and consciousness towards these subjects are raised and which helps to raise their awareness of their future social responsibilities in their role as engineers.			
Autonomy	The students learn to research, process and present a scientific topic independently. They are able to carry out independent scientific work. They can solve an environmental problem in a business context and are able to judge results of other publications.			
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42

Recommended Previous	Recommended requirements: Thermodynamics III			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	The students can distinguish and describe di	forest types of congretion processes such as distill	ation autraction an	d adaptation
		fferent types of separation processes such as distill		
		he course of concentration during a separation pro	icess, the estimation	n or the energy dema
	of a process, the possibilities of energy savin	•		
	They have good knowledge of designing me	indus for separation processes and devices		
Skills				
	Using the gained knowledge the students of	an select a reasonable system boundary for a gi	ven separation pro-	cess and can close t
	associated energy and material balances			
	The students can use different graphical me	thods for the designing of a separation process a	nd define the amou	unt of theoretical stag
	required			
	They can select and design a basic type of the	ermal separation process for a given case based o	n the advantages a	nd disadvantages of t
	process			
	 The students are capable to obtain independ 	ently the needed material properties from appropri	ate sources (diagrai	ms and tables)
	 They can calculate continuous and discontin 	uous processes		
	 The students are able to prove their theoretic 	al knowledge in the experimental lab work.		
	The students are able to discuss the theoretic	al background and the content of the experimental	work with the teach	ers in colloquium.
	The students are concluded linking their gained to	actual and actuating the content of ather leatures and	una it tamathau fau t	ha adution of toologi
	The students are capable of linking their gained k problems. Other lectures such as thermodynamics, fl		ise it together for t	ne solution of technic
	problems. Other rectures such as thermodynamics, in	uid mechanics and chemical engineering.		
Personal Competence				
·				
Social Competence	The students can work technical assignments	s in small groups and present the combined results	in the tutorial	
	The students are able to carry out practical	ab work in small groups and organize a functiona	I division of labor b	etween them. They a
	able to discuss their results and to document	them scientifically in a report.		•
		, ,		
	İ			
Autonomy	The students are concluded to obtain the needs	ad information from quitable sources by the mack on	and access their au	.olity

Course work	Compulsory attendence of the colloquia of all experiments and compulsory report.
Lecturer	Prof. Irina Smirnova
Language	DE/EN
Cycle	SoSe
Content	The students work on eight different experiments in this practical course. For every one of the eight experiments, a colloquium takes place in which the students explain and discuss the theoretical background and its translation into practice with staff and fellow students. The students work small groups with a high degree of division of labor. For every experiment, the students write a report. They receive instructions
	in terms of scientific writing as well as feedback on their own reports and level of scientific writing so they can increase their capabilities in thi area. Topics of the practical course:
	 Introduction in the thermal process engineering and to the main features of separation processes Simple equilibrium processes, several steps processes Distillation of binary mixtures, enthalpy-concentration diagrams Extractive and azeotrope distillation, water vapor distillation, stepwise distillation Extraction: separation ternary systems, ternary diagram Multiphase separation including complex mixtures Designing of separation devices without discrete stages Drying Chromatographic separation processes Membrane separation Energy demand of separation processes Advance overview of separation processes Selection of separation processes
Literature	 G. Brunner: Skriptum Thermische Verfahrenstechnik J. King: Separation Processes, McGraw-Hill, 2. Aufl. 1980 Sattler: Thermische Trennverfahren, VCH, Weinheim 1995 J.D. Seader, E.J. Courses			
itle	Тур	Hrs/wk	CP
ntroduction to Control Systems (L0654)	Lecture	2	4
ntroduction to Control Systems (L0655)	Recitation Section (small)	2	2
Module Responsible Prof. Herbert Werner			
Admission Requirements none			
Recommended Previous Representation of signals and systems in time and freque	ency domain, Laplace transform		
Knowledge			
Educational Objectives After taking part successfully, students have reached the f	following learning results		
Professional Competence			
Knowledge Students can represent dynamic system behavior	in time and fraguency demain, and can in no	ticular avalain areas	artics of first and so
order systems	in time and requency domain, and can in par	liculai explain prope	files of lifst and set
They can explain the dynamics of simple control to	oons and interpret dynamic properties in term	s of frequency respo	nse and root locus
They can explain the Nyquist stability criterion and		o or moquemey recept	
They can explain the role of the phase margin in a			
They can explain the way a PID controller affects a	a control loop in terms of its frequency respons	se	
They can explain issues arising when controllers of	designed in continuous time domain are imple	emented digitally	
Olilla			
Skills • Students can transform models of linear dynamics	systems from time to frequency domain and vi	ce versa	
They can simulate and assess the behavior of sys	stems and control loops		
They can design PID controllers with the help of	euristic (Ziegler-Nichols) tuning rules		
They can analyze and synthesize simple control to	pops with the help of root locus and frequency	response technique	es
They can calculate discrete-time approximations of	of controllers designed in continuous-time and	d use it for digital imp	lementation
They can use standard software tools (Matlab Cor.)	ntrol Toolbox, Simulink) for carrying out these	tasks	
Personal Competence			
Social Competence Students can work in small groups to jointly solve technical	al problems, and experimentally validate their	controller designs	
Autonomy Students can obtain information from provided sources (I		_	se it when solving a
problems.	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	3 ,	33
They can assess their knowledge in weekly on-line tests a	and thereby control their learning progress.		
Workload in Hours Independent Study Time 124, Study Time in Lecture 56

Typ	Lecture
Hrs/wk	
СР	
	Independent Study Time 92, Study Time in Lecture 28
Lecturer	
Language	DE
Cycle	WiSe
Content	Signals and systems
	Linear systems, differential equations and transfer functions
	First and second order systems, poles and zeros, impulse and step response
	Stability
	Feedback systems
	Principle of feedback, open-loop versus closed-loop control
	Reference tracking and disturbance rejection
	Types of feedback, PID control
	System type and steady-state error, error constants
	Internal model principle
	Root locus techniques
	a. Doubleaus plate
	Root locus plots Root locus design of PID controllers
	Frequency response techniques
	Trequency response techniques
	Bode diagram
	Minimum and non-minimum phase systems
	Nyquist plot, Nyquist stability criterion, phase and gain margin
	Loop shaping, lead lag compensation
	Frequency response interpretation of PID control
	Time delay systems
	Root locus and frequency response of time delay systems
	Smith predictor
	Digital control
	a Campled data systems difference asystical
	Sampled-data systems, difference equations Tradia paragraphical distribution of DID controllers
	Tustin approximation, digital implementation of PID controllers
	Software tools
	Introduction to Matlab, Simulink, Control toolbox
	Computer-based exercises throughout the course

Professional Competence				
Knowledge	The students are able to explain basic concepts	of chemical reaction engineering. They are	e able to point ou	ut differences between
	thermodynamical and kinetical processes. The studen	ts have a strong ability to outline parts of isothe	rmal and non-isothe	ermal ideal reactors and
	to describe their properties.			
Skills	After successful completion of the module, students are	e able to:		
	- apply different computational methods to dimension isothermal and non-isothermal ideal reactors,			
	- determine and compute stable operation points for these reactors ,			
	- conduct experiments on a lab-scale pilot plants and c	locument these according to scientific guidelines	5.	
Personal Competence				
Social Competence	After successful completition of the lab-course the stud	ents have a strong ability to organize themselfes	s in small groups to s	solve issues in chemica
	reaction engineering. The students can discuss their st	ubject related knowledge among each other and	with their teachers.	
Autonomy	The students are able to obtain further information ar	nd assess their relevance autonomously. Stude	nts can apply their	knowldege discretely to
	plan, prepare and conduct experiments.

Course L0204: Chemical Reaction	n Engineering (Fundamentals)
Тур	Lecture
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Raimund Horn
Language	DE
Cycle	WiSe
Content	Fundamentals of chemical reaction engineering, definitions, calculation of species concentrations (reactor, reaction mixture, reactants, products, inerts and solvents, reaction volume, Reaktor volume, chemical reaction, mass, moles, mole fraction, volume, density, molar concentration, mass-concentration, molality, partial pressure, hydrodynamic residence time, space time, extent of reaction, reactor throughput, reactor load, conversion, selectivity, yield, concentration calculations in stationary and flowing multicomponent-mixtures)
	Stoichiometry and stoichiometric calculations (simple reactions, complex reactions, key reactions, key species, matrix of stoichiometric coefficients, linear dependent and independent reactions, element-species-matrix, row reduced form of a matrix, rank of a matrix, Gauss Jordan elimination, relation between stoichiometry and kinetics, calculating the extent of reaction from mole number changes in complex reactions)
	Thermodynamics (What is thermodynamics?, importance of thermodynamics in chemical reaction engineering, zeroth law of thermodynamics, temperature scales, temperature measurements in praxis, first law of thermodynamics, internal energy, enthalpy, calorimeter, heat of reaction, standard heat of formation, Hess law, heat capacity, Kirchhoff law, standard heat of reaction, pressure dependence of the heat of reaction, second law of thermodynamics, reversible and irreversible processes, entropy, Clausius inequality, free energy, Gibbs Energy, chemical potential, chemical equilibrium, activity, van't Hoff law, calculation of chemical equilibrium, principle of Le Chatelier and Braun, equilibrium calculations in multiple reaction systems, Lagrange Multipliers)
	Chemical kinetics (reversible and irreversible reactions, homogeneous and heterogeneous reactions, elementary step, reaction mechanism, microkinetics, macrokinetics, formal kinetics, reaction rate, rate of change of species mole number, Arrhenius-equation, activation energy and pre-exponential factor for komplex reactions, reactions of 0., 1. and 2. order, analytical integration of rate laws, Damköhler-number, differential and

integral method of kinetic analysis, laboratory reactors for kinetic measurements, half life, kinetics of complex reactions, parallel reactions, reversible reactions, sequence of reactions, irreversible reaction with pre-equilibrium, reduction of reaction mechanisms, quasi-stationarity principle of Bodenstein, rate limiting step, Michaelis-Menten kinetics, analytical integration of first order differential equations - integrating factor, numerical integration of complex kinetics)

Types of chemical Reaktors (chemical reactors in industry and laboratory, ideal vs. real reaktors, discontinuous, half continuous and continuous reactors, single phase - biphasic- and multiphase reactors, batch-reactor, semi-batch reactor, CSTR, Plug Flow reactor, fixed bed reactor, adiabatic staged reactors, rotating furnaces, fluidized bed reactors, gas-liquid-reactors, multi-phase reactors)

Isothermal ideal reactors (mole-balance of a chemical reactor, mole balance of a batch reactor, integration of the batch reactor mole balance for various kinetics, partial fraction decomposition, mole balance of the semi-batch reactor, mole balance of the plug flow reactor, analogy batch reactor - plug flow reactor, design of plug flow reactors for reactions with volume change and complex reactions, mole balance of a fixed bed reactor, design of a membrane reactor, mole balance of a continuously stirred tank reactor, comparison of CSTR and PFR with respect to conversion and selectivity, mole-balance of a cascade of tank reactors, numerical-interative calculation of a cascade of tank reactors, Newton-Raphson method, graphical analysis of a cascade of tank reactors)

non-isothermal ideal reactors (energy balance of a reactor, adiabatic reactor, adiabatic temperature rise, staged reactor for adiabatic exothermic reactions limited by chemical equilibrium, design of an adiabatic plug flow reactor, Levenspiel-plots, heat transfer through a reactor wall, heat transfer by convection, heat conduction, heat transfer through a cylindrical wall, design of a plug flow reactor in parallel and counter flow, heat balance of the cooling fluid, CSTR with heat exchange, multiple stationary states, ignition-extinction behavior, stability of a CSTR, complex reactions in non-isothermal reactors, optimum temperature profile of a reactor)

Course L0221: Experimental Cour	se Chemical Engineering (Fundamentals)
Тур	Laboratory Course
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Raimund Horn, Dr. Achim Bartsch
Language	DE/EN
Cycle	SoSe
Content	Performing and evaluation of experiments concerning chemical reaction engineering with emphasis on ideal reactors:
	* Batch reactor - Estimation of kinetic parameters for the saponification of ethylacetate
	*CSTR - Residence time distribution, reaction
	*CSTR in Series - Residence time distribution, reaction
	* Plug Flow Reactor - Residence time distribution, reaction
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

	The experiment demonstrates the effect of ionic strength on the binding of dissolved zinc and phosphate by soil surfaces. From the results it can be inferred that the potential of soil surfaces is modified by the application of salt. This has consequences for the retention of nutrients and pollutants. The experiment is carried out with iron oxide rich soil material. Within the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.

Course L0096: Process and Plant Engineering I	
Тур	Recitation Section (large)
Hrs/wk	1
CP	2
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14
Course work	none
Lecturer	Prof. Georg Fieg
Language	DE
Cycle	SoSe
Content	See interlocking course
Literature	See interlocking course

Course L1214: Process and Plant	ourse L1214: Process and Plant Engineering I		
Тур	Recitation Section (small)		
Hrs/wk	1		
CP	2		
Workload in Hours	Independent Study Time 46, Study Time in Lecture 14		
Course work	none		
Lecturer	Prof. Georg Fieg		
Language	DE		
Cycle	SoSe		
Content	See interlocking course		
Literature	See interlocking course		

Module M0670: Particle Te	echnology and Solids Process Engineerin	g		
Courses				
Title		Tun	Hrs/wk	CP
Particle Technology I (L0434)		Typ Lecture	2 nrs/wk	3
Particle Technology I (L0435)		Recitation Section (small)	1	1
Particle Technology I (L0440)		Laboratory Course	2	2
Module Responsible	Prof. Stefan Heinrich			
Admission Requirements	None			
Recommended Previous	keine			
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	following learning results		
Professional Competence				
Knowledge	After successful completion of the module students are at	ple to		
	 name and explain processes and unit-operations 	of solids process engineering		
	characterize particles, particle distributions and to			
Skills	Students are able to			
	a share and design appropriate and processes for		alida muanautiaa af th	a a muadu at
	choose and design apparatuses and processes for		iolias properties of tr	ne product
	 asses solids with respect to their behavior in solid document their work scientifically. 	s processing steps		
	document their work scientifically.			
Personal Competence				
Social Competence	The students are able to discuss scientific topics orally with other students or scientific personal and to develop solutions for technical-scientific			
	issues in a group.			
Autonomy	Students are able to analyze and solve questions regardi	ing solid particles independently.		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 minutes			
Assignment for the Following	General Engineering Science (German program): Specia	lisation Process Engineering: Compulsory		
Curricula	General Engineering Science (German program): Specia	lisation Bioprocess Engineering: Compulsory		
	General Engineering Science (German program): Specia	lisation Energy and Enviromental Engineering	g: Compulsory	
	General Engineering Science (German program, 7 seme	ster): Specialisation Process Engineering: Con	mpulsory	
	General Engineering Science (German program, 7 seme	ster): Specialisation Bioprocess Engineering:	Compulsory	
	General Engineering Science (German program, 7 seme	ster): Specialisation Energy and Enviromental	Engineering: Comp	oulsory
	Bioprocess Engineering: Core qualification: Compulsory			
	Energy and Environmental Engineering: Core qualification	n: Compulsory		
	General Engineering Science (English program): Special	isation Bioprocess Engineering: Compulsory		
	General Engineering Science (English program): Special	isation Energy and Enviromental Engineering	: Compulsory	
	General Engineering Science (English program): Special	lisation Process Engineering: Compulsory		
	General Engineering Science (English program, 7 semes	ster): Specialisation Process Engineering: Con	npulsory	
	General Engineering Science (English program, 7 semes	ster): Specialisation Bioprocess Engineering: 0	Compulsory	
	General Engineering Science (English program, 7 semes	ster): Specialisation Energy and Enviromental	Engineering: Comp	ulsory
	Process Engineering: Core qualification: Compulsory			

Course L0434: Particle Technology I		
Тур	Lecture	
Hrs/wk	2	
CP	3	
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28	
Lecturer	Prof. Stefan Heinrich	
Language	DE	
Cycle	SoSe	
Content	 Description of a separation process Description of a particle mixture Particle size reduction Agglomeration, particle size enlargement Storage and flow of bulk solids Basics of fluid/particle flows classifying processes Separation of particles from fluids Basic fluid mechanics of fluidized beds Pneumatic and hydraulic transport 	
Literature	Schubert, H.; Heidenreich, E.; Liepe, F.; Neeße, T.: Mechanische Verfahrenstechnik. Deutscher Verlag für die Grundstoffindustrie, Leipzig, 1990. Stieß, M.: Mechanische Verfahrenstechnik I und II. Springer Verlag, Berlin, 1992.	

Course L0435: Particle Technology I		
Тур	Recitation Section (small)	
Hrs/wk	1	
CP	1	
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14	
Lecturer	Prof. Stefan Heinrich	
Language	DE	
Cycle	SoSe	
Content	See interlocking course	
Literature	See interlocking course	

Course L0440: Particle Technolog	y I
Тур	Laboratory Course
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Stefan Heinrich
Language	DE
Cycle	SoSe
Content	 Sieving Bulk properties Size reduction Mixing Gas cyclone Blaine-test, filtration Sedimentation
Literature	Schubert, H.; Heidenreich, E.; Liepe, F.; Neeße, T.: Mechanische Verfahrenstechnik. Deutscher Verlag für die Grundstoffindustrie, Leipzig, 1990. Stieß, M.: Mechanische Verfahrenstechnik I und II. Springer Verlag, Berlin, 1992.

Thesis

Module M-001: Bachelor 1	Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to General Regulations §24 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	
	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (fac
	theories, and methods).
	 On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up ar establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-relate
	problems.
	With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issue
	and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	
	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structure
	way.
	 The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing they can uphold their own assessments and viewpoints convincingly.
	they can upriord their own assessments and viewpoints convincingly.
Autonomy	
riateriorny	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified tine.
	frame.
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.
	The students can apply the essential techniques of scientific work to research of their own.
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
Credit points	12
Examination	according to Subject Specific Regulations
Examination duration and scale	laut FSPO
