Table of Contents	2
Program description	3
Core Qualification	4
Module M0569: Engineering Mechanics I	4
Module M0577: Non-technical Courses for Bachelors	6
Module M1497: Measurement Technology for VT/ BVT	8
Module M0850: Mathematics I	9
Module M0886: Fundamentals of Process Engineering and Material Engineering	12
Module M0883: General and Inorganic Chemistry	14
Module M0570: Engineering Mechanics II	16
Module M0671: Technical Thermodynamics I	17
Module M0757: Biochemistry and Microbiology	19
Module M0851: Mathematics II	23
Module M0888: Organic Chemistry	26
Module M0608: Basics of Electrical Engineering	28
Module M0688: Technical Thermodynamics II	30
Module M0853: Mathematics III	32
Module M0892: Chemical Reaction Engineering	35
Module M0877: Fundamentals in Molecular Biology	39
Module M0536: Fundamentals of Fluid Mechanics	41
Module M0544: Phase Equilibria Thermodynamics	43
Module M0891: Informatics for Process Engineers	46
Module M0829: Foundations of Management	49
Module M0938: Bioprocess Engineering - Fundamentals	52
Module M0538: Heat and Mass Transfer	55
Module M0546: Thermal Separation Processes	57
Module M1275: Environmental Technology	62
Module M0833: Introduction to Control Systems	64
Module M0945: Bioprocess Engineering - Advanced	67
Module M1498: Practice of Process Engineering	69
Module M1274: Environmental Technology	71
Module M0539: Process and Plant Engineering I	73
Module M0670: Particle Technology and Solids Process Engineering	76
Module M1276: Fundamentals of Technical Drawing	78
Thesis	80
Module M-001: Bachelor Thesis	80

Core Qualification

Module M0569: Engin	eering Mechanics I				
Courses					
Title		Тур	Hrs/wk	СР	
Engineering Mechanics I (L0187)		Lecture	3	3	
Engineering Mechanics I (L0190)		Recitation Section (small)	2	3	
Module Responsible	Prof. Uwe Weltin				
Admission Requirements	None				
Recommended Previous	Elementary knowledge in mathematics and phys	ics			
Knowledge					
Educational Objectives	After taking part successfully, students have read	ched the following learning results			
Professional Competence					
Knowledge	Students are able to describe fundamental conne	ections, theories and methods to calculate f	orces in statically o	determined mounted	
	systems of rigid bodies and fundamentals in elas	tostatics.			
Skills	Students are able to apply theories and method:	s to calculate forces in statically determine	d mounted system	s of rigid bodies and	
	fundamentals of elastostatics.				
Personal Competence					
Social Competence	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.				
Autonomy	Students are able to solve individually exercises	Students are able to solve individually exercises related to this lecture.			
Workload in Hours	Independent Study Time 110, Study Time in Lect	ture 70			
Credit points	6				
Course achievement	None				
Examination	Written exam				
Examination duration and	90 minutes				
scale					
Assignment for the	Bioprocess Engineering: Core Qualification: Comp	oulsory			
Following Curricula	Electrical Engineering: Core Qualification: Electiv	e Compulsory			
	Energy and Environmental Engineering: Core Qu	alification: Compulsory			
	Computational Science and Engineering: Core Qu	alification: Compulsory			
	Computational Science and Engineering: Special	sation II. Mathematics & Engineering Scien	e: Elective Compu	Isory	
	Logistics and Mobility: Core Qualification: Compu	Isory			
	Orientierungsstudium: Core Qualification: Electiv	e Compulsory			
	Process Engineering: Core Qualification: Compuls	sory

Module M0577: Non-technical Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		

Knowledge The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence

Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Recommended Previous	School mathematics					
Knowledge						
Educational Objectives	After taking part successfully, students have reached the	following learning results				
Professional Competence						
Knowledge						
	Students can name the basic concepts in analyst	sis and linear algebra. They are able	to explain the	m using appropriate		
	examples.					
	Students can discuss logical connections between	these concepts. They are capable of	of illustrating th	ese connections with		
	the help of examples.					
	They know proof strategies and can reproduce the	m.				
CI:II-						
Skills	Students can model problems in analysis and line	ar algebra with the help of the conce	pts studied in th	nis course. Moreover,		
	they are capable of solving them by applying esta	blished methods.				
	 Students are able to discover and verify further lo 	gical connections between the concep	ts studied in the	e course.		
	For a given problem, the students can develop	and execute a suitable approach, an	d are able to c	ritically evaluate the		
	results.					
Personal Competence						
Social Competence	Students are able to work together in teams. They	are canable to use mathematics as a	common langu	ane		
	In doing so, they can communicate new concepts			-		
	design examples to check and deepen the unders		eracing pareners	. riorcover, ency can		
		,				
Autonomy						
	Students are capable of checking their understan		vn. They can sp	ecify open questions		
	precisely and know where to get help in solving the			h. d h		
	Students have developed sufficient persistence t	o be able to work for longer periods	in a goai-orien	ted manner on nard		
	problems.

Florate Florost Gener	and morganic enemistry			
Courses				
Title		Тур	Hrs/wk	СР
General and Inorganic Chemistry (L		Lecture	3	3
Fundamentals in Inorganic Chemist		Practical Course	3 1	2
Fundamentals in Inorganic Chemist		Recitation Section (small)	1	1
Module Responsible				
Admission Requirements	None			
Recommended Previous Knowledge	High school Chemistry			
Educational Objectives	After taking part successfully, students have reache	d the following learning results		
Professional Competence				
Knowledge	Sstudents are able to handle molecular orbital the electron density distribution and structures of mole gas, liquid and solid phases. They are able to descr and entropy as well as the chemical equilibrium. I kinetic energy. They have increased knowledge of a understand titration as a quantitative analysis. The handle Nernst theory in describing the concentration understand corrosion as a redox reaction (local elements).	ecules (VSEPR); they have developed an libe chemical reactions in the sense of refiney can explain the concept of activation acid-base concepts, acid-base reactions in the concepts of activation acid-base concepts, acid-base reactions in the concepts of	idea of molecula tention of mass a on energy in con n water, can perf ate redox potent	or interactions in the sund energy, enthalpy jucture with particle orm pH calculations, ials to Gibbs energy,
Skills	Students are able to use general and inorganic chemistry for the design of technical processes. Especially they are able to formulate mass and energy balances and by this to optimise technical processes. They are able to perform simple calculations of pH values in regard to an application of acids and bases, and evaluate the course of redox processes (calculation of redoxpotentials). They are able to transform a verbal formulated message into an abstract formal procedure. Students are able to present and discuss their scientific results in plenum. The students are able to document the results of their experiments scientifically. They are able to use scientific citation methods in their reports.			
Personal Competence				
Social Competence	The students are able to discuss given tasks in smal	groups and to develop an approach.		
	Students are able to carry out experiments in small	groups in lab scale and to distribute tasks	in the group ind	ependently.
Autonomy	Students are able to define independently tasks, to knowledge in practice.			•
	Students are able to apply their knowledge to plan, their own knowledge and to acquire missing knowledge.		ents are able to	independently judge

Workload in Hours	Independent Study Time 18, Study Time in Lecture 42
Lecturer	Prof. Gerrit A. Luinstra
Language	DE
Cycle	WiSe
Content	This laboratory course comprises the following four topics, i) atomic structure and application of spectroscopic methods, introduction of analytic methods ii) chemical reactions (qualitative analysis), bonding types, reaction types, reaction equations iii) acid-base concepts, acid-base reactions in water, buffer solution, quantitative analysis (titration) iv), redox processes in water, redox potential, Nernst theory describing the concentration dependence of redox potentials, galvanic elements and electrolysis. Prior to every experiement, a seminar takes place in small groups (12-15 students). The students participate orally. Team work and cooperation are forwarded because the experiments in the lab and the writing of the reports is conducted in groups of three or four students. Additionally, acedemic writing conveyed (documentation of experiment results in lab journals, literature citations in reports).

Recommended Previous	Elementary knowledge in Mathematics and Mechanics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	Students are familiar with the laws of Thermodynamic	s. They know the relation of the kind	s of energy acco	ording to 1 st law of
	Thermodynamics and are aware about the limits of ene			-
	distinguish between state variables and process varial			
	enthalpy, entropy and also the meaning of exergy an	3		
	related diagram. They know the physical difference bet		-	-
	state. They know the meaning of a fundamental state of	equation and know the basics of two	phase Thermody	namics.
Skills	Students are able to calculate the internal energy, the	enthalpy, the kinetic and the potentia	l energy as well	as work and heat for
	simple change of states and to use this calculations for			
	for a real gas from measured thermal state variables.			
	-			
Personal Competence				
-	The students are able to discuss in small groups and de	velop an approach.		
	Students are able to define independently tasks, to get		dge as well as to	find wavs to use the
	knowledge in practice.			,

Recommended Previous Knowledge	Mathematics I					
Educational Objectives	After taking part successfully, students have reached the	following learning results				
Professional Competence	Arter taking part successivily, students have reached the	Tollowing learning results				
Knowledge						
Knowledge	 Students can name further concepts in analysis 	s and linear algebra. They are able	to explain the	m using appropriate		
	examples.					
	 Students can discuss logical connections between 	these concepts. They are capable of	of illustrating th	ese connections with		
	the help of examples.					
	 They know proof strategies and can reproduce the 	em.				
Skills	Students can model problems in analysis and line	ar algebra with the help of the conce	nts studied in th	nis course Moreover		
	they are capable of solving them by applying esta	-	pes seddied iii ei	ns course. Moreover,		
	Students are able to discover and verify further lo		ts studied in the	course.		
	For a given problem, the students can develop					
	results.			, , , , , , , , , ,		
Personal Competence						
Social Competence						
•	Students are able to work together in teams. They are capable to use mathematics as a common language.					
	In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design appears to the place and design of the impact of the					
	design examples to check and deepen the understanding of their peers.					
Autonomy	Students are capable of checking their understanding of complex concepts on their own. They can specify open questions			ecify open questions		
	precisely and know where to get help in solving th	em.				
	 Students have developed sufficient persistence t 	o be able to work for longer periods	in a goal-orien	ted manner on hard		
	problems.

Knowledge						
Educational Objectives	After taking part success	sfully, students have re	eached the following	ng learning results		
Professional Competence						
Knowledge	Students are familiar with basic concepts of organic chemistry. They are able to classify organic molecules and to identify functional groups and to describe the respective synthesis routes. Fundamental reaction mechanisms like nucleophilic substitution, eliminations, additions and aromatic substitution can be described. Students are capable to describe in genera modern reaction mechanisms.					
Skills	Students are able to use basics of organic chemistry for the design of technical processes. Especially they are able to formulate basic routes to synthesize small organic molecules and by this to optimise technical processes in Process Engineering. They are able to transform a verbally formulated message into an abstract formal procedure. The students are able to document and interpret their working process and results scientifically.					
Personal Competence						
Social Competence	The students are able to	discuss in small group	s and develop an	approach for given tasks		
Autonomy	Students are able to get	new knowledge from	existing knowledg	e as well as to find ways	to use the knowledge	in practice.

Content	The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkenes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described. Prior to each experiment, an oral colloquium takes place in small groups. In the colloquium are security aspects of the experiments are discussed, as well as the topics of the experiments. Solutions to previously provided questions are answered. In the colloquia the students acquire the skill to express scientific matters orally in a scientifically correct language and to describe theoretical basics. The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Module Responsible				
Admission Requirements	None			
Recommended Previous	Mathematics I + II			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
	The tuning part successionly, stadents have reached	and ronouning realiting results		
Professional Competence				
Knowledge	 Students can name the basic concepts in the ar 	ea of analysis and differential equations	They are able t	o evolain them using
		ea or analysis and differential equations	. They are able t	o explain them using
	appropriate examples.			
	Students can discuss logical connections between	een these concepts. They are capable	of illustrating th	ese connections with
	the help of examples.			
	 They know proof strategies and can reproduce 	them.		
Chille				
Skills	Students can model problems in the area of an	alysis and differential equations with the	e help of the cor	ncepts studied in this
	course. Moreover, they are capable of solving t	·		
			te studied in the	COURCO
	Students are able to discover and verify further			
	For a given problem, the students can develop	p and execute a suitable approach, ar	nd are able to c	ritically evaluate the
	results.			
Personal Competence				
-				
Social Competence	Students are able to work together in teams. The students are able to work together.	nev are capable to use mathematics as a	common langu	age.
	 In doing so, they can communicate new concept 			-
			crating partners	. Horeover, they can
	design examples to check and deepen the unde	erstanding of their peers.		
Autonomy				
	 Students are capable of checking their understand 	anding of complex concepts on their or	wn. They can sp	ecify open questions
	precisely and know where to get help in solving	them.		
	 Students have developed sufficient persistence 	e to be able to work for longer periods	in a goal-orien	ted manner on hard
	problems.			
	processes.

Module Responsible	Prof. Raimund Horn			
Admission Requirements	None			
Recommended Previous Knowledge				well as computational
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	3.	<u> </u>		
•	The students are able to explain basic concepts of chemical reaction engineering. They are able to point out differences betwe			differences between
, and the second	thermodynamical and kinetical processes. T			
	ideal reactors and to describe their properties	5.		
Skills	After successful completion of the module, st	udents are able to:		
	- apply different computational methods to di	mension isothermal and non-isothermal idea	l reactors,	
	- determine and compute stable operation po	ints for these reactors ,		
	- conduct experiments on a lab-scale pilot pla	ants and document these according to scienti	fic guidelines.	
Personal Competence				
Social Competence	After successful completition of the lab-course the students have a strong ability to organize themselfes in small groups to solv			
	issues in chemical reaction engineering. The	e students can discuss their subject related	knowledge among	each other and with
	their teachers.			
Autonomy	The students are able to obtain further	information and assess their relevance au	itonomously. Stude	ents can apply their
	knowldege discretely to plan, prepare and co	nduct experiments.

Course L0221: Experimental	Course Chemical Engineering (Fundamentals)
Тур	Practical Course
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Raimund Horn, Dr. Achim Bartsch
Language	DE/EN
Cycle	SoSe
Content	Performing and evaluation of experiments concerning chemical reaction engineering with emphasis on ideal reactors:
	* Batch reactor - Estimation of kinetic parameters for the saponification of ethylacetate
	*CSTR - Residence time distribution, reaction
	*CSTR in Series - Residence time distribution, reaction
	* Plug Flow Reactor - Residence time distribution, reaction
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Content	Widespread techniques of microbiological, biochemical and genetic approaches will be taught during this course.
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.
	Topics and Methods of the course include:
	- Morphology and growth of different bacteria strains
	- Measuring of microbial growth by turbidity
	- Preparation of several culture media
	- Strain identification by gram staining and analytical profile index (API test)
	- Genetic background identification by 165 rRNA analysis
	- Microscopy
	- BLAST analyses
	- Colony PCR procedure
	- Enzyme activity measurements and kinetics (Michaelis-Menten equation, Lineweaver-Burk plot)
	- Enzymes as biocatalysts (exemplarily use of enzymes in detergents)
	- Measurement of protein concentrations (Bradford protein assay)
	- Qualitative and quantitative enzyme activity assay

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Course L08	382: Management Tutorial
Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busin knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Knowledge	-			
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
	Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail. 5 After successful completion of this module, students should be able to		f stoichiometry and	
	 describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic to compare them as well as to apply them to current biotechnical problem propose solutions to complicated biotechnological problems and to deduce the corresponding models to explore new knowledge resources and to apply the newly gained contents identify scientific problems with concrete industrial use and to formulate solutions. to document and discuss their procedures as well as results in a scientific manner 		vth inhibition on the	
Personal Competence Social Competence Autonomy	take position to their own opinions and increase their	capacity for teamwork in engineering a	nd scientific envir	onments.

Content	In this course fermentation and downstream technologies on the example of the production of an enzyme by means of a recombinant microorganism is learned. Detailed characterization and simulation of enzyme kinetics as well as application of the enzyme in a bioreactor is carried out. The students document their experiments and results in a protocol.

Heat and Mass Transfer (L0101)		Lecture	2	2
Heat and Mass Transfer (L0102) Heat and Mass Transfer (L1868)		Recitation Section (small) Recitation Section (large)	1 1	2
Module Responsible	Prof. Irina Smirnova	Recitation Section (large)	1	2
Admission Requirements	None			
	Basic knowledge: Technical Thermodynamics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached th	e following learning results		
Professional Competence				
Knowledge	 The students are capable of explaining qualitativ heat exchanger, chemical reactors). They are capable of distinguish and characterize transfer and thermal radiation. The students have the ability to explain the p qualitative and quantitative by using suitable ma They are able to depict the analogy between hea 	different kinds of heat transfer mechalysical basis for mass transfer in ass transfer theories.	nanisms namely h	eat conduction, heat
Skills	 The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balance the corresponding energy and mass flow, respectively. They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calculate the corresponding heat flows. Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus. They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for the description and design of apparatus (e.g. extraction column, rectification column). In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application considering their advantages and disadvantages, respectively. In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus. The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the courses thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems. 			
Personal Competence Social Competence				
Autonomy	 The students are able to find and evaluate necessary information from suitable sources They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker system, exam-like assignments) and on this basis they can control their learning processes. 			continuously (clicker-

Educational Objectives	After taking part successfully, students have re	eached the following learning results		
Professional Competence	Ance: calling part succession, state in a very	educined and renorming reducing		
Knowledge				
	 The students can distinguish and describe different types of separation processes such as distillation, extraction, an adsorption The students develop an understanding for the course of concentration during a separation process, the estimation of the energy demand of a process, the possibilities of energy saving, and the selection of separation systems They have good knowledge of designing methods for separation processes and devices 			
Personal Competence Social Competence Autonomy	 Using the gained knowledge the students can select a reasonable system boundary for a given separation process and car close the associated energy and material balances The students can use different graphical methods for the designing of a separation process and define the amount of theoretical stages required They can select and design a basic type of thermal separation process for a given case based on the advantages and disadvantages of the process The students are capable to obtain independently the needed material properties from appropriate sources (diagrams and tables) They can calculate continuous and discontinuous processes The students are able to prove their theoretical knowledge in the experimental lab work. The students are able to discuss the theoretical background and the content of the experimental work with the teachers in colloquium. The students are capable of linking their gained knowledge with the content of other lectures and use it together for the solution of technical problems. Other lectures such as thermodynamics, fluid mechanics and chemical engineering. The students can work technical assignments in small groups and present the combined results in the tutorial The students are able to carry out practical lab work in small groups and organize a functional division of labor between them. They are able to discuss their results and to document them scientifically in a report.

Content	The students work on eight different experiments in this practical course. For every one of the eight experiments, a colloquium takes place in which the students explain and discuss the theoretical background and its translation into practice with staff and fellow students. The students work small groups with a high degree of division of labor. For every experiment, the students write a report. They receive instructions in terms of scientific writing as well as feedback on their own reports and level of scientific writing so they can increase their capabilities in this area. Topics of the practical course: Introduction in the thermal process engineering and to the main features of separation processes Simple equilibrium processes, several steps processes Distillation of binary mixtures, enthalpy-concentration diagrams Extractive and azeotrope distillation, water vapor distillation, stepwise distillation Extraction: separation ternary systems, ternary diagram Multiphase separation including complex mixtures Designing of separation devices without discrete stages Drying Chromatographic separation processes Membrane separation

Content	The practical course Environmental Engineering currently consists of 6 experiments, which deal with the different focal points of environmental engineering in the areas of air, water, soil, environment, biomass and noise. The following experiments are carried out for this purpose: Determination of the calorific value of biomass, soil purification, waste water treatment, noise emissions, plastic waste, biowaste. Translated with www.DeepL.com/Translator (free version) Within the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.

Thesis

Module M-001: Bachelor Thesis	
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	A condition to Conseq Develotions (23 /3)
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	
	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve
	subject-related problems.
	 With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions.
	 The students can take up a critical position on the findings of their own research work from a specialized perspective.
	g
Personal Competence	
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	specified time frame.
	• The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific
	problem.
	The students can apply the essential techniques of scientific work to research of their own.
