Bachelor of Science (B.Sc.)

# **Bioprocess Engineering**

Cohort: Winter Term 2021

Updated: 31st May 2023

## **Table of Contents**

Table of Contents	2
Program description	3
Core Qualification	4
Module M0850: Mathematics I	4
Module M0886: Fundamentals of Process Engineering and Material Engineering	7
Module M0883: General and Inorganic Chemistry	9
Module M1497: Measurement Technology for VT/ BVT	11
Module M0889: Mechanics I (Statics)	13
Module M0577: Non-technical Courses for Bachelors	15
Module M0671: Technical Thermodynamics I	17
Module M0757: Biochemistry and Microbiology	19
Module M0851: Mathematics II	23
Module M0888: Organic Chemistry	26
Module M0696: Mechanics II: Mechanics of Materials	28
Module M0608: Basics of Electrical Engineering	30
Module M0688: Technical Thermodynamics II	32
Module M0892: Chemical Reaction Engineering	34
Module M0853: Mathematics III	38
Module M0877: Fundamentals in Molecular Biology	41
Module M0536: Fundamentals of Fluid Mechanics	43
Module M0544: Phase Equilibria Thermodynamics	46
Module M0829: Foundations of Management	49
Module M1693: Computer Science for Engineers - Programming Concepts, Data Handling & Communication	51
Module M0938: Bioprocess Engineering - Fundamentals	53
Module M0538: Heat and Mass Transfer	56
Module M0546: Thermal Separation Processes	58
Module M1275: Environmental Technology	63
Module M0833: Introduction to Control Systems	65
Module M0945: Bioprocess Engineering - Advanced	67
Module M1498: Practice of Process Engineering	69
Module M0539: Process and Plant Engineering I	71
Module M0670: Particle Technology and Solids Process Engineering	74
Module M1276: Fundamentals of Technical Drawing	76
Thesis	78
Module M-001: Bachelor Thesis	78

Medule Responsible   Prof. Anusch Toraz   Admission Requirements   Knowledge   Education Objectives   After taking part successfully, students have reached the following learning results   Foressional Competence   Knowledge    * Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples.  * Students can discuss logical connections between these concepts. They are capable of lillustrating these connections with the help of examples.  * They know proof strategies and can reproduce them.  * Students can model problems in analysis and linear algebra. They are capable of lillustrating these connections with the help of examples.  * Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.  * Students are able to discover and verify further logical connections between the concepts studied in the course.  * For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.  * Students are able to work together in teams. They are capable to use mathematics as a common language.  * In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.  * Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  * Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  * Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  * Students have developed sufficient persistence to computery  * Students have developed sufficient computery  * General Engineering Core Qualification Computery  * General Engineering Core Qualification Computer

## Actional Objectives    Professional Competence					
Professional Competence  Knowledge  - Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples.  - Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.  - They know proof strategies and can reproduce them.  - Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.  - Students are able to discover and verify further logical connections between the concepts studied in this course. Moreover, they are capable of solving them by applying established methods.  - Students are able to discover and verify further logical connections between the concepts studied in the course.  - For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.  - Students are able to work together in teams. They are capable to use mathematics as a common language.  - In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.  - Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  - Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  - Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  - Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  - Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard problems.  - Students have developed sufficient persistence to be able to work for longer periods in		After taking part successfully, students have reached the fo	lowing learning results		
Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples.  Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples.  They know proof strategies and can reproduce them.  Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. They are capable of solving them by applying established methods.  Students are able to discover and verify further logical connections between the concepts studied in the course.  For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.  Personal Competence  Sacial Competence  Sacial Competence  Sacial Competence  Sudents are able to work together in teams. They are capable to use mathematics as a common language.  In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers. Module M0886: Fund	amentals of Process Engineeri	ng and Material Engineering		
Courses				
Title		Тур	Hrs/wk	СР
ntroduction into Process Engineeri	ng/Bioprocess Engineering (L0829)	Lecture	2	1
Fundamentals of material engineer	ring (L0830)	Lecture	2	2
Module Responsible	Prof. Michael Schlüter			
Admission Requirements	None			
Recommended Previous	none			
Knowledge				
Educational Objectives	After taking part successfully, students have	e reached the following learning results		
Professional Competence				
Knowledge	After passing this module the students have	e the ability to:		
	give an overview of the most importa	ant fields on process and bioprocess enginee	ring,	
	explain some working methods for directions	fferent fields in process engineering.		
Skills	After passing this module the students shou	ıld have the ability to:		
	list and outline the most important fie	elds of process engineering.		
	·	proaches or methods of the different fields	of process engineering,	
	read and prepare an engineering draw			
	explain the most important technolog	gies for wastewater and exhaust air treatme	nt	
	scheme typical chemical and biotech	nological processes independently with the	aid of pointers.	
Personal Competence				
•	The students are able to			
	work out results in groups and docum			
	provide appropriate feedback and hall	ndle feedback on their own performance cor	nstructively.	
Autonomy	The students are able to estimate their pro	ogress of learning by themselves and to de	eliberate their lack of k	nowledge in Proces
	Engineering and Bioprocess Engineering.

Title		Тур	Hrs/wk	СР
General and Inorganic Chemistry (I	L0824)	Lecture	3	3
Fundamentals in Inorganic Chemis	try (L0996)	Practical Course	3	2
undamentals in Inorganic Chemis	try (L1941)	Recitation Section (small)	1	1
Module Responsible	Prof. Gerrit A. Luinstra			
Admission Requirements	None			
Recommended Previous				
Knowledge				
	After taking part successfully, students have rea	ched the following learning results		
Professional Competence				
Knowledge	Sstudents are able to handle molecular orbital electron density distribution and structures of r	molecules (VSEPR); they have developed a	n idea of molecula	ar interactions in the
	gas, liquid and solid phases. They are able to de and entropy as well as the chemical equilibriur kinetic energy. They have increased knowledge understand titration as a quantitative analysis. handle Nernst theory in describing the concent understand corrosion as a redox reaction (local e	n. They can explain the concept of active of acid-base concepts, acid-base reactions They can recognize redox processes, con tration dependence of redox potentials, k	ation energy in con in water, can perf relate redox potent	ijucture with particle orm pH calculations ials to Gibbs energy
Skills	Students are able to use general and inorganic chemistry for the design of technical processes. Especially they are able to formulate mass and energy balances and by this to optimise technical processes. They are able to perform simple calculations of pH values in regard to an application of acids and bases, and evaluate the course of redox processes (calculation of redoxpotentials). They are able to transform a verbal formulated message into an abstract formal procedure. Students are able to present and discuss their scientific results in plenum. The students are able to document the results of their experiments scientifically. They are able to use scientific citation methods in their reports.			
Personal Competence				
Social Competence	The students are able to discuss given tasks in small groups and to develop an approach.			
	Students are able to carry out experiments in sm	nall groups in lab scale and to distribute tas	ks in the group ind	ependently.
Autonomy	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
	Students are able to apply their knowledge to p their own knowledge and to acquire missing kno			independently judg

Тур	Lecture
Hrs/wk	3
СР	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Gerrit A. Luinstra
Language	DE
Cycle	WiSe
Content	This elementary course in chemistry comprises the following four topics, i) molecular orbital theory applied to compounds with bonds between s-, p- and d-block elements (octahedral field only), Description of molecular interactions in the gas, liquid and solid phase, (semi) conductivity on account of the formation of band structures, ii) describing chemical reactions in the sense of retention of mass and energy, enthalpy and entropy, chemical equilibrium, concepts of activation energy in conjucture with particle kinetic energy iii) acid-base concepts, acid-base reactions in water, pH calculation, quantitative analysis (titration) iv), redox processes in water, redox potential, Nernst theory describing the concentration dependence of redox potentials, overpotential, corrosion (local elments).
Literature	Chemie für Ingenieure, Guido Kickelbick, ISBN 978-3-8273-7267-3  Chemie, Charles Mortimer (Deutsch und Englisch verfügbar)  http://www.chemgapedia.de

Course L0996: Fundamentals	s in Inorganic Chemistry
Тур	Practical Course
Hrs/wk	3
СР	2
Workload in Hours	Independent Study Time 18, Study Time in Lecture 42
Lecturer	Prof. Gerrit A. Luinstra
Language	DE
Cycle	WiSe
Content	This laboratory course comprises the following four topics, i) atomic structure and application of spectroscopic methods,
	introduction of analytic methods ii) chemical reactions (qualitative analysis), bonding types, reaction types, reaction equations iii)
	acid-base concepts, acid-base reactions in water, buffer solution, quantitative analysis (titration) iv), redox processes in water,
	redox potential, Nernst theory describing the concentration dependence of redox potentials, galvanic elements and electrolysis.
	Prior to every experiement, a seminar takes place in small groups (12-15 students). The students participate orally. Team work
	and cooperation are forwarded because the experiments in the lab and the writing of the reports is conducted in groups of three or
	four students. Additionally, acedemic writing conveyed (documentation of experiment results in lab journals, literature citations in
	reports).

Course L2270: Practical Cour	rse Measurement Technology
Тур	Practical Course
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Alexander Penn
Language	DE
Cycle	WiSe
Content	In the Practical Course in Measurement Technology the theory from the lectures "Physical Fundamentals of Measurement Technology" and "Measurement Technology" will be applied in practice. In small groups students learn how to handle different measurement techniques from industry and research. During the practical course, a wide range of different measurement methods will be taught, including the use of HLPC columns for qualitative mass analysis, the determination of mass transfer coefficients using optical oxygen sensors or the evaluation of image data to obtain process parameters. The practical course also teaches how measurement data are statistically evaluated and experiments are correctly documented.

Тур	Lecture
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Alexander Penn
Language	DE
Cycle	WiSe
Content	Basic introduction to measurement technology for process engineers. Includes error calculation, measurement units, calibration, measurement data analysis, measurement techniques and sensors. Particular attention is paid to the measurement of temperature, pressure, flow and level. The lecture provides insights into the latest developments in sensor technology in measurement technology and process engineering.

Module M0577: Non-technical Courses for Bachelors		
Module Responsible	Dagmar Richter	
Admission Requirements	None	
Recommended Previous	None	
Knowledge		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results	
Professional Competence		

#### Knowledge The Non-technical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

#### The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles'

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

#### Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

#### Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goaloriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

#### The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

#### Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

#### Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic methods of the said scientific disciplines,
- auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist
- to handle simple questions in aforementioned scientific disciplines in a sucsessful manner.
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

#### Personal Competence

Social Competence

#### Personal Competences (Social Skills)

Students will be able

· to learn to collaborate in different manner.

to organize themselves and the to reflect and decide question to communicate a nontechnic	ance) sion and professionalism in the context of real-life fields of application
Workload in Hours Depends on choice of courses  Credit points 6	

### Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0671: Techr	nical Thermodynamics I					
Courses

Technical Thermodynamics I (L043)	7)	Lecture	2	4		
Technical Thermodynamics I (L0439) Recitation Section (large)			1	1		
Technical Thermodynamics I (L044)	1) Recitation Section (small) 1 1					
Module Responsible	Prof. Arne Speerforck					
Admission Requirements	None					
Recommended Previous	Elementary knowledge in Mathematics and Mechanics					
Knowledge						
<b>Educational Objectives</b>	After taking part successfully, students have reached t	he following learning results				
<b>Professional Competence</b>						
Knowledge	Students are familiar with the laws of Thermodynami	cs. They know the relation of the kind	s of energy acc	ording to 1 <sup>st</sup> law of		
	Thermodynamics and are aware about the limits of en	ergy conversions according to 2 <sup>nd</sup> law o	of Thermodynam	nics. They are able to		
	distinguish between state variables and process vari	ables and know the meaning of differe	ent state variabl	es like temperature,		
	enthalpy, entropy and also the meaning of exergy a	nd anergy. They are able to draw the	Carnot cycle in	a Thermodynamics		
	related diagram. They know the physical difference be	etween an ideal and a real gas and are	able to use the	related equations of		
	state. They know the meaning of a fundamental state	of equation and know the basics of two	phase Thermody	namics.		
Skills	Students are able to calculate the internal energy, the	enthalpy, the kinetic and the potential	energy as well	as work and heat for		
	simple change of states and to use this calculations fo	the Carnot cycle. They are able to calc	ulate state varia	ables for an ideal and		
	for a real gas from measured thermal state variables.

Knowledge					
<b>Educational Objectives</b>	After taking part successfully, students have reached the	e following learning results			
<b>Professional Competence</b>					
Knowledge					
	Students can name further concepts in analysi	s and linear algebra. They are able	to explain the	m using appropriate	
	examples.				
	Students can discuss logical connections between	these concepts. They are capable	of illustrating th	ese connections with	
	the help of examples.				
	<ul> <li>They know proof strategies and can reproduce the</li> </ul>	em.			
Skills	Students can model problems in analysis and line	ear algebra with the help of the conce	inte studied in th	nis course Moreover	
	they are capable of solving them by applying esta		pts studied in ti	ns course. Moreover,	
	Students are able to discover and verify further lo		ate studied in the	COURSE	
	For a given problem, the students can develop				
	results.	and execute a suitable approach, an	id die able to c	ntically evaluate the	
	resuits.				
Personal Competence					
Social Competence	<ul> <li>Students are able to work together in teams. They are capable to use mathematics as a common language.</li> </ul>				
	<ul> <li>In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can</li> </ul>				
	design examples to check and deepen the understanding of their peers.				
		- '			
Autonomy					
Autonomy	• Students are capable of checking their understanding of complex concepts on their own. They can specify open questions				
	precisely and know where to get help in solving them.				
	• Students have developed sufficient persistence to be able to work for longer periods in a goal-oriented manner on hard				
	problems.

Content	The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkanes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described.  Prior to each experiment, an oral colloquium takes place in small groups. In the colloquium are security aspects of the experiments are discussed, as well as the topics of the experiments. Solutions to previously provided questions are answered. In the colloquia the students acquire the skill to express scientific matters orally in a scientifically correct language and to describe theoretical basics.  The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Course L0221: Experimental	Course Chemical Engineering (Fundamentals)
Тур	Practical Course
Hrs/wk	2
СР	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Raimund Horn
Language	DE/EN
Cycle	SoSe SoSe
Content	Performing and evaluation of experiments concerning chemical reaction engineering with emphasis on ideal reactors:
	* Batch reactor - Estimation of kinetic parameters for the saponification of ethylacetate
	*CSTR - Residence time distribution, reaction
	*CSTR in Series - Residence time distribution, reaction
	* Plug Flow Reactor - Residence time distribution, reaction
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Content	Widespread techniques of microbiological, biochemical and genetic approaches will be taught during this course.  Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation method: labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.
	Topics and Methods of the course include:
	- Morphology and growth of different bacteria strains
	- Measuring of microbial growth by turbidity
	- Preparation of several culture media
	- Strain identification by gram staining and analytical profile index (API test)
	- Genetic background identification by 16S rRNA analysis
	- Microscopy
	- BLAST analyses
	- Colony PCR procedure
	- Enzyme activity measurements and kinetics (Michaelis-Menten equation, Lineweaver-Burk plot)
	- Enzymes as biocatalysts (exemplarily use of enzymes in detergents)
	- Measurement of protein concentrations (Bradford protein assay)
	- Qualitative and quantitative enzyme activity assay

Cycle	SoSe
Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Тур	Recitation Section (small)
Hrs/wk	2
СР	3
Workload	Independent Study Time 62, Study Time in Lecture 28
in Hours	
Lecturer	Prof. Christoph Ihl, Katharina Roedelius
Language	DE
Cycle	WiSe/SoSe
Content	In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.
	If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on se selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the busine knowledge from the lecture should come to practical use. The group projects are guided by a mentor.

Heat and Mass Transfer (L0101)		Lecture	2	2
Heat and Mass Transfer (L0102)		Recitation Section (small)	1	2
Heat and Mass Transfer (L1868)		Recitation Section (large)	1	2
Module Responsible	Prof. Irina Smirnova			
Admission Requirements	None			
Recommended Previous	Basic knowledge: Technical Thermodynamics			
Knowledge				
-	After taking part successfully, students have reached	d the following learning results		
Professional Competence				
Knowledge	The students are capable of explaining qualit	ative and determining quantitative heat t	ransfer in proced	lural apparatus (e. g.
	heat exchanger, chemical reactors).			( 9
	They are capable of distinguish and characte	rize different kinds of heat transfer mech	anisms namely h	eat conduction, heat
	transfer and thermal radiation.	nze amerene kinas er nede eranster meen	amorno namely i	icae corradoriori, rica
	The students have the ability to explain the students have the ability to explain the students.	e physical basis for mass transfer in d	etail and to de	scribe mass transfe
	qualitative and quantitative by using suitable		ctan and to de	seribe mass cransie.
	They are able to depict the analogy between		omplex linked p	ocesses in detail
	They are able to depice the analogy between	near and mass transfer and to describe e	ompiex illiked pi	occises in actuii.
Skills				
	The students are able to set reasonable syst	em boundaries for a given transport pro	blem by using th	ne gained knowledge
	and to balance the corresponding energy and	mass flow, respectively.		
	They are capable to solve specific heat trans	fer problems (e.g. heated chemical react	tors, temperatur	e alteration in fluids
	and to calculate the corresponding heat flows			
	Using dimensionless quantities, the students	can execute scaling up of technical proces	sses or apparatu	S.
	They are able to distinguish between diffusion	n, convective mass transition and mass to	ransfer. They car	n use this knowledge
	for the description and design of apparatus (e	.g. extraction column, rectification column	n).	
	In this context, the students are capable to ch	noose and design fundamental types of he	eat and mass exc	changer for a specific
	application considering their advantages and	disadvantages, respectively.		
	In addition, they can calculate both, steady-st	ate and non-steady-state processes in pro	ocedural apparat	us.
	The students are capable to connect their	r knowledge obtained in this course v	vith knowlegde	of other courses (Ir
	particular the courses thermodynamics, fluid	d mechanics and chemical process engi	neering) to solv	e concrete technica
	problems.			
Dorsonal Compotonso				
Personal Competence				
Social Competence	The students are capable to work on subject	specific challenges in teams and to pres	ent the results o	rally in a reasonable
	manner to tutors and other students.			
Autonomy	The students are able to find and evaluate ne	cessary information from suitable sources		
	The students are able to find and evaluate re     They are able to prove their level of knowledge.	•		continuously (slickor
				John John Chicken
	system, exam-like assignments) and on this b	lasis they can control their learning proces	sses.

Course L1159: Separation Pr	ocesses
Тур	Practical Course
Hrs/wk	1
СР	1
Workload in Hours	Independent Study Time 16, Study Time in Lecture 14
Lecturer	Prof. Irina Smirnova
Language	DE/EN
Cycle	WiSe
Content	The students work on eight different experiments in this practical course. For every one of the eight experiments, a colloquium
	takes place in which the students explain and discuss the theoretical background and its translation into practice with staff and
	fellow students.
	The students work small groups with a high degree of division of labor. For every experiment, the students write a report. They
	receive instructions in terms of scientific writing as well as feedback on their own reports and level of scientific writing so they can
	increase their capabilities in this area.
	Topics of the practical course:
	Introduction in the thermal process engineering and to the main features of separation processes
	Simple equilibrium processes, several steps processes
	Distillation of binary mixtures, enthalpy-concentration diagrams
	Extractive and azeotrope distillation, water vapor distillation, stepwise distillation
	Extraction: separation ternary systems, ternary diagram
	Multiphase separation including complex mixtures
	Designing of separation devices without discrete stages
	Drying
	Chromatographic separation processes
	Membrane separation
	Energy demand of separation processes
	Advance overview of separation processes
	Selection of separation processes

Content	The practical course Environmental Engineering currently consists of 5 experiments, which deal with the different focal points of environmental engineering in the areas of air, water, soil, energy and noise. The following experiments are carried out for this purpose:  biological degradation of artificial materials, fine dust measurement in the air, water analysis, noise emission measurement, photovoltaic energy  Within the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They
	discuss different approaches to the task as well as it's theoretical or practical implementation.

## Thesis

Module M-001: Bache	lor Thesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	According to Congrel Populations \$21 (1)
	According to General Regulations §21 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
Knowledge	The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course
	of study (facts, theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of
	opening up and establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	
	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve     the students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve
	subject-related problems.  • With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on
	technical issues, and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and
	in a structured way.
	• The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the
	addressees. In doing so they can uphold their own assessments and viewpoints convincingly.
4	
Autonomy	The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a
	specified time frame.
	The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific
	<ul> <li>problem.</li> <li>The students can apply the essential techniques of scientific work to research of their own.</li> </ul>
	The students can apply the essential techniques of scientific work to research of their own.
