## Program description

Content

Ξ

## Core qualification

Courses				
Title		Тур	Hrs/wk	CP
Engineering Mechanics I (L0187)		Lecture	3	3
Engineering Mechanics I (L0190)		Recitation Section (small)	2	3
Module Responsible	Prof. Uwe Weltin			
Admission Requirements	none			
Recommended Previous	Elementary knowledge in mathematics and physics			
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	Students are able to describe fundamental connection	ns, theories and methods to calculate forces in s	tatically determined r	nounted systems of r
	bodies and fundamentals in elastostatics.			
Skills	Students are able to apply theories and methods to c	alculate forces in statically determined mounted	systems of rigid bod	ies and fundamental
	elastostatics.			
Personal Competence				
Social Competence	Students are able to work goal-oriented in small mixe	d groups, learning and broadening teamwork al	pilities.	
Autonomy	Students are able to solve individually exercises relat	ad to this lacture		
Autonomy	Students are able to solve individually exercises relat			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 7	70		
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 min.			
Assignment for the Following	Bioprocess Engineering: Core qualification: Compuls	ory		
Curricula	Electrical Engineering: Core qualification: Elective Co	mpulsory		
	Energy and Environmental Engineering: Core qualified	ation: Compulsory		
	Computational Science and Engineering: Core qualif	ication: Compulsory		
	Logistics and Mobility: Core qualification: Compulsory	/		
	Process Engineering: Core qualification: Compulsory			

Course L0187: Engineering Mecha	nics I
Тур	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Course work	2 voluntary tests, 30 minutes each with a maximum of four extra points for a final exam with 30 points. The bonus expires after each semester.
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	Methods to calculate forces in statically determined systems of rigid bodies
	Newton-Euler-Method     Energy-Methods Fundamentals of elasticity     Forces and deformations in elastic systems
Literature	<ul> <li>Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 1: Statik, Springer Vieweg, 2013</li> <li>Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 2: Elastostatik, Springer Verlag, 2011</li> <li>Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 1: Statik, Springer Vieweg, 2013</li> <li>Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Vieweg, 2013</li> <li>Gross, D; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Verlag, 2011</li> <li>Hibbeler, Russel C.: Technische Mechanik 1 Statik, Pearson Studium, 2012</li> <li>Hibbeler, Russel C.: Technische Mechanik 2 Festigkeitslehre, Pearson Studium, 2013</li> <li>Hauger, W.; Mannl, V.; Wall, W.A.; Werner, E.: Aufgaben zu Technische Mechanik 1-3: Statik, Elastostatik, Kinetik, Springer Verlag, 2011</li> </ul>

Module Manual B. Sc. "Process Engineering"

Course L0190: Engineering Mechanics I	
Тур	Recitation Section (small)
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	See interlocking course
Literature	See interlocking course

,	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
	After taking part successfully, students have reached the following learning results
Professional Competence	· · · · · · · · · · · · · · · · · · ·
Knowledge	The Non-technical Academic Programms (NTA)
	imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-relian management, collaboration and professional and personnel management competences. The department implements these training object its <b>teaching architecture</b> , in its <b>teaching and learning arrangements</b> , in <b>teaching areas</b> and by means of teaching offerings in which s can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are per two different catalogues for nontechnical complementary courses.
	The Learning Architecture
	consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical ac programms follow the specific profiling of TUHH degree courses.
	The learning architecture demands and trains independent educational planning as regards the individual development of competences provides orientation knowledge in the form of "profiles"
	The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two seme view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters the course of studies.
	Teaching and Learning Arrangements
	provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of deali interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in courses.
	Fields of Teaching
	are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 studen Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.
	The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal- communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.
	The Competence Level
	of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differer reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scien theoretical level of abstraction in the B.Sc.
	This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership fund Bachelor's and Master's graduates in their future working life.
	Specialized Competence (Knowledge)
	Students can
	<ul> <li>locate selected specialized areas with the relevant non-technical mother discipline,</li> <li>outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning</li> <li>different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul>
Skills	Professional Competence (Skills)
	In selected sub-areas students can
	<ul> <li>apply basic methods of the said scientific disciplines,</li> <li>auestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>to handle simple questions in aforementioned scientific disciplines in a successful manner,</li> <li>justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relation the subject.</li> </ul>
Personal Competence	

Students will be able

Autonomy	<ul> <li>to learn to collaborate in different manner,</li> <li>to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> <li>to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> Personal Competences (Self-reliance) Students are able in selected areas <ul> <li>to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>to organize themselves and their own learning processes</li> <li>to reflect and decide questions in front of a broad education background</li> <li>to communicate a nontechnical item in a competent way in writen form or verbaly</li> <li>to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>

Content	In the physics lab a number of key experiments on physical phenomena in mechanics, oscillatory and wave motion, thermodynamics, electricity, and optics will be conducted by the students under assistance of a lecturing tutor. The experiments are part of the physics education program presented in the course "Physics for TUHH-VT Engineers". Beyond teaching of fundamental physical background the objectives are basic skills in preparation and performing physical measurements, usage of physical equipment, analysis of the results and preparation of a report on the experimental data. The students receive instructions in terms of scientific writing as well as feedback on their own reports and level of scientific writing. Before every experiment an colloquium takes place in which the students explain and discuss the theoretical background and its translation into practice with the corresponding experiment.
Literature	Zu den Versuchen gibt es individuelle Versuchsanleitungen, die vor der Versuchsdurchführung ausgegeben werden. Zum Teil müssen die zur Versuchsdurchführung notwendigen physikalischen Hintergründe selbstständig erarbeitet werden, wozu die zur Vorlesung "Physik für TUHH-VT Ingenieure" angegebene Literatur gut geeignet ist.

Module M0888: Organic C	hemistry			
Courses				
Title		Тур	Hrs/wk	CP
Organic Chemistry (L0831)		Lecture	4	4
Organic Chemistry (L0832)		Laboratory Course	3	2
Module Responsible	Prof. Patrick Theato			
Admission Requirements	none			
Recommended Previous	High School Chemistry and/or lecture "general and inorga	nic chemistry"		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the for	bllowing learning results		
Professional Competence				
Knowledge	Students are familiar with basic concepts of organic chem	istry. They are able to classify organic mol	ecules and to identify	functional groups and to
	describe the respective synthesis routes. Fundament	al reaction mechanisms like nucleophi	lic substitution, elimi	nations, additions and
	aromatic substitution can be described. Students are capa	ble to describe in general modern reactior	n mechanisms.	
Skills	Students are able to use basics of organic chemistry for the design of technical processes. Especially they are able to formulate basic routes to synthesize small organic molecules and by this to optimise technical processes in Process Engineering. They are able to transform a verbally formulated message into an abstract formal procedure. The students are able to document and interpret their working process and results scientifically.			
Personal Competence				
Social Competence	The students are able to discuss in small groups and deve	lop an approach for given tasks.		
Autonomy	Students are able to get new knowledge from existing kno	wledge as well as to find ways to use the k	nowledge in practice.	
Workload in Hours	Independent Study Time 82, Study Time in Lecture 98

Course L0832: Organic Chemistry	
Тур	Laboratory Course
Hrs/wk	3
CP	2
Workload in Hours	Independent Study Time 18, Study Time in Lecture 42
Lecturer	Prof. Patrick Theato
Language	DE
Cycle	SoSe
Content	The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkanes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described. Prior to each experiment, an oral colloquium takes place in small groups. In the colloquium are security aspects of the experiments are discussed, as well as the topics of the experiments. Solutions to previously provided questions are answered. In the colloquia the students acquire the skill to express scientific matters orally in a scientifically correct language and to describe theoretical basics. The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Course L0882: Project Entreprene	urship
Тур	Problem-based Learning
Hrs/wk	2
CP	3
Workload in Hours	Independent Study Time 62, Study Time in Lecture 28
Lecturer	Prof. Christoph Ihl
Language	DE
Cycle	WiSe/SoSe
Content	In this project module, students work on an Entrepreneurship project. They are required to go through all relevant steps, from the first idea to the concept, using their knowledge from the corresponding lecture. Project work is carried out in teams with the support of a mentor.
Literature	Relevante Literatur aus der korrespondierenden Vorlesung.

Courses				
Title		Тур	Hrs/wk	CP
Physical Chemistry (L0833)		Lecture	2	2
Physical Chemistry (L0835)		Laboratory Course	2	1
Module Responsible	Prof. Hans-Ulrich Moritz			
Admission Requirements	None			
Recommended Previous	Contents of the previous modules inorganic chemistry, physics for	engineers and mathematics I-III.		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the following	learning results		
Professional Competence				
Knowledge	The students are able,			
	-to repeat the basic concepts of physical chemistry			
	-to describe and summarize the underlying concepts of mass-, he	eat- and momentum transfer.		
	- to interpret phase diagrams and affiliate kinetic rate laws.			
Skills	The students are able to			
	- conduct (fundamental) thermodynamical, electrochemical and ki	netic calculations.		
	- assess new applications with respect to environmental sustaina	bility.		
	- abstract their knowldege to related issues to conduct thermodyn	amical, electrochemical and kineti	ic calculations.	
Personal Competence				
Social Competence	The students are able to plan, prepare, conduct and document experiments according to scientific guidelines in small groups.			
	The students are able to reflect their subject-specific knowledge o	rally in a team and to discuss it wi	th fellow students and fa	culty.
Autonomy	Students are able to assess their knowldege continuously	on their own by exemplified	practice Students are	e able to apply the
, laterierity	knowldege discretely to plan, prepare and conduct experiments.			
Workload in Hours	Independent Study Time 34, Study Time in Lecture 56

Course L0835: Physical Chemistry	v	
	2	
CP	1	
Workload in Hours	Independent Study Time 2, Study Time in Lecture 28	
Lecturer	Prof. Hans-Ulrich Moritz, Dr. Werner Pauer	
Language	DE	
Cycle	WiSe	
Content	Six laboratory experiments are conducted in groups of two students. The subjects of experimental investigations are:	
	Reaction kinetics	
	Freezing-point depression (cryoscopy)	
	Electrical mobility of ions	
	Viscosimetry	
	Heat of neutralization	
	Surface tension	
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basics and their translation into practice.	
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Phase Equilibria Thermodynamics (L01)	4)	Lecture	2	2
Phase Equilibria Thermodynamics (L01		Recitation Section (small)	1	2
Phase Equilibria Thermodynamics (L014	2)	Recitation Section (large)	1	2
Module Responsible	Prof. Irina Smirnova			
Admission Requirements	None			
Recommended Previous	Mathematics, Physical Chemistry, Thermodynamics	s I and II		
Knowledge				
Educational Objectives	After taking part successfully, students have reache	ed the following learning results		
Professional Competence		* *		
Knowledge				
	<ul> <li>Starting from the very basics of thermodynamics</li> </ul>	mics, the students learn the mathematical tools to d	escribe thermodynar	nic equilibria.
	<ul> <li>They learn how state variables are influence</li> </ul>	ed by the mixing of compounds and learn concepts	to quantitatively des	cribe these properties
	<ul> <li>Moreover, the students learn how phase ed</li> </ul>	quilibria can be described mathematically and whi	ch phenomena may	occur if different phas
	(vapor, liquid, solid) coexist in equilibrium. F	Furthermore the fundamentals of reaction equilibria	are taught.	
	• For different phase equilibria, several exa	mples relevant for different kinds of processes an	re shown and the ne	ecessary knowledge
	plotting and interpreting the equilibria are ta	aught.		
Skills				
Skiis	Applying their knowledge, the students are	able to identify the correct equation for the determi	nation of the equilibri	um state and know h
	to simplify these equations meaningfully.			
	The students know models which can be us	sed to determine the properties of the system in the	e equilibrium state an	d they are able to so
	the resulting mathematical relations.			
	<ul> <li>For specific applications, they are able to</li> </ul>	self-reliantly find necessary physico-chemical p	properties of compou	unds as well as mo
	parameters in literature sources.			
	<ul> <li>Beside pure compound properties the stude</li> </ul>	ents are capable of describing the properties of mix	tures.	
		equilibria graphically and they know how to interpre		omena.
		able to understand fundamental concepts that are		
	processes in chemical engineering.			
	processes in onemical engineering.			
Personal Competence				
	The students are able to work in small groups to as	but the corresponding problems and to present the		and other students
	The students are able to work in small groups, to so	live the corresponding problems and to present the	em oraly to the tutors a	and other students
Autonomy	• The students are able to find necessary info	rmation self-reliantly in literature sources and to jud	dge their quality.	
	<ul> <li>During the semester the students are able</li> </ul>	e to check their learning progress continuously	in exercises. Based	on this knowledge
	students can adept their learning process.			-

Recommended Previous	Fundamentals of inorganic/organic chemistry and biolog	ЭХ		
Knowledge				
Educational Objectives	After taking part successfully, students have reached the	e following learning results		
Professional Competence				
Knowledge	With the completion of this module the students acquire	e in-depth knowledge of important cause-effect	chains of potential	environmental proble
	which might occur from production processes, projects	or construction measures. They have knowled	dge about the meth	odological diversity a
	are competent in dealing with different methods and ins	struments to assess environmental impacts. Be	esides the students	are able to estimate
	complexity of these environmental processes as well as	uncertainties and difficulties with their measure	ement.	
Skills	The students are able to select a suitable method for	the respective case from the variety of asses	sment methods. Th	ereby they can deve
	suitable solutions for managing and mitigating enviro	nmental problems in a business context. The	ey are able to carr	y out Life Cycle Imp
	Assessments independently and can apply the software	e programs OpenLCA and the database EcoIn	vent. After finishing	the course the stude
	have the competence to critically judge research results	or other publications on environmental impact	S.	
Personal Competence				
Social Competence		and scientific tasks, both subject-specific and	multidisciplinary T	hey are able to deve
oocial oompetence	e The students are able to discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They are able to develo jointly different solutions and to discuss their theoretical or practical implementation. Due to the selected lecture topics, the students receiv			
	insights into the multi-layered issues of the environment protection and the concept of sustainability. Their sensitivity and consciousness towar			
	these subjects are raised and which helps to raise their awareness of their future social responsibilities in their role as engineers.			
Autonomy	The students learn to research, process and present a s	scientific topic independently. They are able to	carry out independ	ent scientific work T
natonomy	can solve an environmental problem in a business conte			
			20013.

Admission Requirements	
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	
	• The students are capable of explaining qualitative and determining quantitative heat transfer in procedural apparatus (e.g. he
	exchanger, chemical reactors).
	They are capable of distinguish and characterize different kinds of heat transfer mechanisms namely heat conduction, heat transfer and the sevel and define.
	thermal radiation.
	• The students have the ability to explain the physical basis for mass transfer in detail and to describe mass transfer qualitative and
	quantitative by using suitable mass transfer theories.
	They are able to depict the analogy between heat- and mass transfer and to describe complex linked processes in detail.
Skills	
Skills	• The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balan
	the corresponding energy and mass flow, respectively.
	They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calcula
	the corresponding heat flows.
	<ul> <li>Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus.</li> </ul>
	They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for t     description and design of apparents (a gravitation column)
	description and design of apparatus (e.g. extraction column, rectification column).
	<ul> <li>In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application</li> </ul>
	considering their advantages and disadvantages, respectively.
	<ul> <li>In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus.</li> </ul>
	The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the course)
	thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems.
Personal Competence	
Social Competence	
	The students are capable to work on subject-specific challenges in teams and to present the results orally in a reasonable manner to tutc
	and other students.
Autonomy	
	The students are able to find and evaluate necessary information from suitable sources
	• They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker-system, exam-li
	assignments) and on this basis they can control their learning processes.

Courses		
Title	Typ Hrs/wk CP	
ntroduction to Control Systems (L0654		
ntroduction to Control Systems (L0655		
	Prof. Herbert Werner	
Admission Requirements		
Recommended Previous		
Knowledge		
Educational Objectives	After taking part successfully, students have reached the following learning results	
Professional Competence		
Knowledge		
	Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first	and seco
	order systems	
	They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and roo	ot locus
	They can explain the Nyquist stability criterion and the stability margins derived from it.	
	They can explain the role of the phase margin in analysis and synthesis of control loops	
	They can explain the way a PID controller affects a control loop in terms of its frequency response	
	They can explain issues arising when controllers designed in continuous time domain are implemented digitally	
Skills		
Chino Chino	Students can transform models of linear dynamic systems from time to frequency domain and vice versa	
	They can simulate and assess the behavior of systems and control loops	
	They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules	
	They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques	
	They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation	ı
	They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks	
Deve anal Commetance		
Personal Competence		
	Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs	- la dar an artic
Autonomy		oiving giv
	problems.	
	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.	
Workload in House	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.	
	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.	
Credit points	They can assess their knowledge in weekly on-line tests and thereby control their learning progress. Independent Study Time 124, Study Time in Lecture 56 6

Тур	octure						
Hrs/wk	2						
CP							
Workload in Hours	dependent Study Time 92, Study Time in Lecture 28						
Lecturer	of. Herbert Werner						
Language							
Cycle	Se						
Content	als and systems						
	Linear systems, differential equations and transfer functions						
	First and second order systems, poles and zeros, impulse and step response						
	• Stability						
	Feedback systems						
	Principle of feedback, open-loop versus closed-loop control						
	Reference tracking and disturbance rejection						
	Types of feedback, PID control						
	System type and steady-state error, error constants						
	Internal model principle						
	Root locus techniques						
	Root locus plots						
	Root locus design of PID controllers						
	iency response techniques						
	Bode diagram						
	Minimum and non-minimum phase systems						
	Nyquist plot, Nyquist stability criterion, phase and gain margin						
	Loop shaping, lead lag compensation						
	Frequency response interpretation of PID control						
	Time delay systems						
	Root locus and frequency response of time delay systems						
	Smith predictor						
	Digital control						
	Sampled-data systems, difference equations						
	Tustin approximation, digital implementation of PID controllers						
	Software tools						
	Introduction to Matlab, Simulink, Control toolbox						
	Computer-based exercises throughout the course						
Literature	Margar H. Lastus Natas, Introduction to Control Sustame <sup>4</sup>

Module M0892: Chemical	Reaction Engineering				
Courses					
Title		Тур	Hrs/wk	CP	
Chemical Reaction Engineering (Fundar	nentals) (L0204)	Lecture	2	2	
Chemical Reaction Engineering (Fundar	nentals) (L0244)	Recitation Section (large)	2	2	
Experimental Course Chemical Engineer	ring (Fundamentals) (L0221)	Laboratory Course	2	2	
Module Responsible	Prof. Raimund Horn				
Admission Requirements	None				
Recommended Previous	Contents of the previous modules mathematics	I-III, physical chemistry, technical thermodynamics	I+II as well as con	nputational methods f	
Knowledge	engineers.				
Educational Objectives	After taking part successfully, students have reach	ed the following learning results			
Professional Competence					
Knowledge	The students are able to explain basic conc	epts of chemical reaction engineering. They ar	e able to point ou	ut differences betwee	
	thermodynamical and kinetical processes. The str	udents have a strong ability to outline parts of isothe	ermal and non-isothe	ermal ideal reactors an	
	to describe their properties.				
Skills	After successful completion of the module, student	ts are able to:			
	- apply different computational methods to dimens	ion isothermal and non-isothermal ideal reactors,			
	- determine and compute stable operation points for these reactors ,				
	- conduct experiments on a lab-scale pilot plants a	and document these according to scientific guideline	S.		
Personal Competence					
Social Competence	After successful completition of the lab-course the	students have a strong ability to organize themselfe	s in small groups to s	solve issues in chemic	
	reaction engineering. The students can discuss th	eir subject related knowledge among each other and	d with their teachers.		
Autonomy	The students are able to obtain further information	on and assess their relevance autonomously. Stude	ents can apply their	knowldege discretely	
	plan, prepare and conduct experiments.				
Workload in Hours	Independent Study Time 96, Study Time in Lecture	ə 84

CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Raimund Horn
Language	DE
Cycle	WiSe
	Fundamentals of chemical reaction engineering, definitions, calculation of species concentrations (reactor, reaction mixture, reactants, products, inerts and solvents, reaction volume, Reaktor volume, chemical reaction, mass, moles, mole fraction, volume, density, molar concentration, mass- concentration, molality, partial pressure, hydrodynamic residence time, space time, extent of reaction, reactor throughput, reactor load, conversion, selectivity, yield, concentration calculations in stationary and flowing multicomponent-mixtures) Stoichiometry and stoichiometric calculations (simple reactions, complex reactions, key reactions, key species, matrix of stoichiometric coefficients, linear dependent and independent reactions, element-species-matrix, row reduced form of a matrix, rank of a matrix, Gauss Jordan elimination, relation between stoichiometry and kinetics, calculating the extent of reaction from mole number changes in complex reactions) Thermodynamics (What is thermodynamics?, importance of thermodynamics in chemical reaction engineering, zeroth law of thermodynamics, temperature scales, temperature measurements in praxis, first law of thermodynamics, internal energy, enthalpy, calorimeter, heat of reaction, standard heat of formation, Hess law, heat capacity, Kirchhoff law, standard heat of reaction, pressure dependence of the heat of reaction, second law of thermodynamics, reversible and irreversible processes, entropy, Clausius inequality, free energy, Gibbs Energy, chemical potential, chemical equilibrium, activity, van't Hoff law, calculation of chemical equilibrium, principle of Le Chatelier and Braun, equilibrium calculations in multiple reaction systems, Lagrange Multipliers)

	integral method of kinetic analysis, laboratory reactors for kinetic measurements, half life, kinetics of complex reactions, parallel reactions, reversible reactions, sequence of reactions, irreversible reaction with pre-equilibrium, reduction of reaction mechanisms, quasi-stationarity principle of Bodenstein, rate limiting step, Michaelis-Menten kinetics, analytical integration of first order differential equations - integrating factor, numerical integration of complex kinetics)
	Types of chemical Reaktors (chemical reactors in industry and laboratory, ideal vs. real reaktors, discontinuous, half continuous and continuous reactors, single phase - biphasic- and multiphase reactors, batch-reactor, semi-batch reactor, CSTR, Plug Flow reactor, fixed bed reactor, adiabatic staged reactors, rotating furnaces, fluidized bed reactors, gas-liquid-reactors, multi-phase reactors)
	Isothermal ideal reactors (mole-balance of a chemical reactor, mole balance of a batch reactor, integration of the batch reactor mole balance for various kinetics, partial fraction decomposition, mole balance of the semi-batch reactor, mole balance of the plug flow reactor, analogy batch reactor - plug flow reactor, design of plug flow reactors for reactions with volume change and complex reactions, mole balance of a fixed bed reactor, design of a membrane reactor, mole balance of a continuously stirred tank reactor, comparison of CSTR and PFR with respect to conversion and selectivity, mole-balance of a cascade of tank reactors, numerical-interative calculation of a cascade of tank reactors, Newton-Raphson method, graphical analysis of a cascade of tank reactors)
	non-isothermal ideal reactors (energy balance of a reactor, adiabatic reactor, adiabatic temperature rise, staged reactor for adiabatic exothermic reactions limited by chemical equilibrium, design of an adiabatic plug flow reactor, Levenspiel-plots, heat transfer through a reactor wall, heat transfer by convection, heat conduction, heat transfer through a cylindrical wall, design of a plug flow reactor in parallel and counter flow, heat balance of the cooling fluid, CSTR with heat exchange, multiple stationary states, ignition-extinction behavior, stability of a CSTR, complex reactions in non-isothermal reactors, optimum temperature profile of a reactor)

Content	Performing and evaluation of experiments concerning chemical reaction engineering with emphasis on ideal reactors:				
	* Batch reactor - Estimation of kinetic parameters for the saponification of ethylacetate				
	*CSTR - Residence time distribution, reaction				
	*CSTR in Series - Residence time distribution, reaction				
	* Plug Flow Reactor - Residence time distribution, reaction				
	Before the practical conduct of the experiments a colloquium takes place in which the students explain, reflect and discuss the theoretical basic and their translation into practice.				
	The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.

Practical Course: Measurement and Co Measurement Technology for Mechanic		Laboratory Course Lecture	2	2	
Measurement Technology for Mechanic		Recitation Section (large)	- 1	1	
Module Responsible					
Admission Requirements	none				
Recommended Previous	none Basic knowledge of physics, chemistry and electrical engineering				
Knowledge	Basio knowledge of physics, shemiony and electronic	ngineering			
Educational Objectives	After taking part successfully, students have reached t	a following learning results			
	Alter taking part successionly, students have reacted to	le lonowing learning results			
Professional Competence	Students are able to name the most important fundme	ntale of the Massurement Technology (Quantitie	a and Unita Uncort	ainty Calibration St	
Knowledge	Students are able to name the most important fundme and Dynamic Properties of Sensors and Systems).	mais of the measurement recimology (Quantitie	es and Onits, Oncent	anny, Canbration, Sta	
	and Dynamic Properties of Sensors and Systems).				
	They can outline the most important measuring met	hods for different kinds of quantities to be ma	esured (Electrical C	Quantities, Temperatu	
	mechanical quantities, Flow, Time, Frequency).				
	They can describe important methods of chemical Ana	liveis (Gas Sansors, Spectroscopy, Gas Chroma	(ography)		
	They can describe important methods of chemical And	iyaa (daa denadra, opeciidacopy, daa onionia	(ography)		
Skille	Students can select suitable measuring methods to giv	on problems and can use refering measuremen	t dovicos in practico		
OKIIIS	Students can select suitable measuring methods to given problems and can use refering measurement devices in practice.				
	The students are able to orally explain issues in the subject area of measurement technology and solution approaches as well as place the issu				
	into the right context and application area.				
Dava anal Compositoria					
Personal Competence	Chudente con emire at werk requite in groups and does	ment them in a common venert			
Social Competence	Students can arrive at work results in groups and docu	iment them in a common report.			
A					
Αυτοποπγ	Students are able to familiarize themselves with new r	neasurement technologies.

Cycle	WiSe/SoSe
Content	Experiment 1: Emission and immission measurement of gaseous pollutants: different technologies to determine different gaseous pollutants in automotive exhaust are used.
	Experiment 2: Simulation and measurement of asynchrone engine and rotary pump: the dynamic behaviour of e pump engine will be investigated. The starting will be simulated on a PC and compared with measurement.
	Experiment 3: Michelson interferometer and fiber optic: fundamental optical phenonema will be understood and applications with Michelson interferometer and optical fibers demonstrated.
	Experiment 4:Identification of the parameters of a control system and optimal control parameters

Practical Exercise Environmental Techn	ology (L1387)	Laboratory Course	1	1
Environmental Technologie (L0326)		Lecture	2	2
Module Responsible	Dr. Joachim Gerth			
Admission Requirements	None			
Recommended Previous	Fundamentals of inorganic/organic chemistry and bio	logy		
Knowledge				
Educational Objectives	After taking part successfully, students have reached	the following learning results		
Professional Competence				
Knowledge	With the completion of this modul the students obtain	profound knowledge of environmental techn	ology. They are able to	describe the behavio
	of chemicals in the environment. Students can give	an overview of scientific disciplines involved	I. They can explain terr	ns and allocate them
	related methods.			
Chille	Chudente ave able to propose appropriate manage	ment and mitigation measures for an irony	nentel systeless. They	ava abla ta datarrai
Skills	Students are able to propose appropriate manage	•		
	geochemical parameters and to assess the potentia			
	opinions on how Environmental Technology contribu	nes to sustainable development, and they ca	in present and delend t	nese opinions in irom
	and against the group.			
Personal Competence				
Social Competence	The students are able to discuss the various technic	al and scientific tasks, both subject-specific	and multidisciplinary. Th	ney are able to devel
	different approaches to the task as a group as well as	to discuss their theoretical or practical impler	nentation.	
	Q			
Autonomy	Students can independently exploit sources about of	the subject, acquire the particular knowledge	and tranter it to new pro	biems.
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42	2		
Credit points	3			
Examination	Written exam			
Examination duration and scale	1 hour written exam

	The experiment demonstrates the effect of ionic strength on the binding of dissolved zinc and phosphate by soil surfaces. From the results it can be inferred that the potential of soil surfaces is modified by the application of salt. This has consequences for the retention of nutrients and pollutants. The experiment is carried out with iron oxide rich soil material. Within the lab course students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.

Thesis

Medule M 001, Recheler 7	Floorie
Module M-001: Bachelor 1	nesis
Courses	
Title	Typ Hrs/wk CP
Module Responsible	Professoren der TUHH
Admission Requirements	<ul> <li>According to Consul Descriptions 204 (4);</li> </ul>
	According to General Regulations §24 (1):
	At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.
Recommended Previous	
Knowledge	
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
Knowledge	• The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts
	theories, and methods).
	On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and
	establishing links with extended specialized expertise.
	The students are able to outline the state of research on a selected issue in their subject area.
Skills	The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related
	problems.
	• With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues
	and develop solutions.
	The students can take up a critical position on the findings of their own research work from a specialized perspective.
Personal Competence	
Social Competence	
	<ul> <li>Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured</li> </ul>
	<ul> <li>way.</li> <li>The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so</li> </ul>
	they can uphold their own assessments and viewpoints convincingly.
Autonomy	• The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time
	frame.
	• The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem.
	The students can apply the essential techniques of scientific work to research of their own.
Workload in Hours	Independent Study Time 360, Study Time in Lecture 0
