Bachelor of Science (B.Sc.)

Process Engineering

Cohort: Winter Term 2020

Updated: 30th April 2020

Table of Contents

Table of Contents	2
Program description	3
Core qualification	4
Module M0577: Non-technical Courses for Bachelors	4
Module M0569: Engineering Mechanics I	7
Module M0886: Fundamentals of Process Engineering and Material Engineering	9
Module M0850: Mathematics I	12
Module M0883: General and Inorganic Chemistry	16
Module M1497: Measurement Technology for VT/ BVT	19
Module M0570: Engineering Mechanics II	22
Module M0671: Technical Thermodynamics I	24
Module M0888: Organic Chemistry	27
Module M0851: Mathematics II	29
Module M1276: Fundamentals of technical drawing	33
Module M0608: Basics of Electrical Engineering	35
Module M0688: Technical Thermodynamics II	37
Module M0892: Chemical Reaction Engineering	40
Module M0853: Mathematics III	46
Module M0729: Construction and Apparatus Engineering	50
Module M0536: Fundamentals of Fluid Mechanics	54
Module M0544: Phase Equilibria Thermodynamics	58
Module M0891: Informatics for Process Engineers	63
Module M0938: Bioprocess Engineering - Fundamentals	66
Module M0618: Renewables and Energy Systems	70
Module M0538: Heat and Mass Transfer	74
Module M0546: Thermal Separation Processes	77
Module M0833: Introduction to Control Systems	83
Module M1275: Environmental Technology	87
Module M0829: Foundations of Management	89
Module M1498: Practice of Process Engineering	93
Module M0539: Process and Plant Engineering I	95
Module M0670: Particle Technology and Solids Process Engineering	99
Module M1274: Environmental Technology	102
Thesis	105
Module M-001: Bachelor Thesis	105

Program description

Content

Core qualification

Module M0577: Non-technical Courses for Bachelors

Module Responsible	Dagmar Richter
Admission Requirements	None
Recommended Previous Knowledge	None
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	<p>The Non-technical Academic Programms (NTA)</p> <p>imparts skills that, in view of the TUHH’s training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its teaching architecture, in its teaching and learning arrangements, in teaching areas and by means of teaching offerings in which students can qualify by opting for specific competences and a competence level at the Bachelor’s or Master’s level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p>The Learning Architecture</p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of “profiles”</p> <p>The subjects that can be studied in parallel throughout the student’s entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p>Teaching and Learning Arrangements</p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p>Fields of Teaching</p> <p><i>Knowledge</i> are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, migration studies, communication studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor’s courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the</p>

skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- locate selected specialized areas with the relevant non-technical mother discipline,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Professional Competence (Skills)

In selected sub-areas students can

Skills

- apply basic methods of the said scientific disciplines,
- question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,
- to handle simple questions in aforementioned scientific disciplines in a successful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Personal Competences (Social Skills)

Students will be able

Social Competence

- to learn to collaborate in different manner,
- to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,
- to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),
- to explain nontechnical items to auditorium with technical background knowledge.

Personal Competences (Self-reliance)

Students are able in selected areas

Autonomy

- to reflect on their own profession and professionalism in the context of real-life fields of application
- to organize themselves and their own learning processes
- to reflect and decide questions in front of a broad education background
- to communicate a nontechnical item in a competent way in written form or

	verbaly • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)
Workload in Hours	Depends on choice of courses
Credit points	6

Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0569: Engineering Mechanics I				
Courses				
Title		Typ	Hrs/wk	CP
Engineering Mechanics I (L0187)		Lecture	3	3
Engineering Mechanics I (L0190)		Recitation (small)	Section 2	3
Module Responsible	Prof. Uwe Weltin			
Admission Requirements	None			
Recommended Previous Knowledge	Elementary knowledge in mathematics and physics			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are able to describe fundamental connections, theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals in elastostatics.			
<i>Skills</i>	Students are able to apply theories and methods to calculate forces in statically determined mounted systems of rigid bodies and fundamentals of elastostatics.			
Personal Competence				
<i>Social Competence</i>	Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.			
<i>Autonomy</i>	Students are able to solve individually exercises related to this lecture.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Course achievement	None			
Examination	Written exam			
Examination duration and scale	90 minutes			
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Computational Science and Engineering: Specialisation II. Mathematics & Engineering Science: Elective Compulsory Orientierungsstudium: Core qualification: Elective Compulsory Process Engineering: Core qualification: Compulsory			

Course L0187: Engineering Mechanics I	
Typ	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Uwe Weltin
Language	DE
Cycle	WiSe
Content	<p>Methods to calculate forces in statically determined systems of rigid bodies</p> <ul style="list-style-type: none"> • Newton-Euler-Method • Energy-Methods <p>Fundamentals of elasticity</p> <ul style="list-style-type: none"> • Forces and deformations in elastic systems
Literature	<ul style="list-style-type: none"> • Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 1: Statik, Springer Vieweg, 2013 • Gross, D.; Hauger, W.; Schröder, J.; Wall, W.A.: Technische Mechanik 2: Elastostatik, Springer Verlag, 2011 • Gross, D.; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 1: Statik, Springer Vieweg, 2013 • Gross, D.; Ehlers, W.; Wriggers, P.; Schröder, J.; Müller, R.: Formeln und Aufgaben zur Technischen Mechanik 2: Elastostatik, Springer Verlag, 2011 • Hibbeler, Russel C.: Technische Mechanik 1 Statik, Pearson Studium, 2012 • Hibbeler, Russel C.: Technische Mechanik 2 Festigkeitslehre, Pearson Studium, 2013 • Hauger, W.; Mannl, V.; Wall, W.A.; Werner, E.: Aufgaben zu Technische Mechanik 1-3: Statik, Elastostatik, Kinetik, Springer Verlag, 2011

Module M0886: Fundamentals of Process Engineering and Material Engineering

Courses

Title	Typ	Hrs/wk	CP
Introduction into Process Engineering/Bioprocess Engineering (L0829)	Lecture	2	1
Fundamentals of material engineering (L0830)	Lecture	2	2

Module Responsible	Prof. Michael Schlüter
Admission Requirements	None
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	<p>After passing this module the students have the ability to:</p> <ul style="list-style-type: none"> • give an overview of the most important fields on process and bioprocess engineering, • explain some working methods for different fields in process engineering.
<i>Knowledge</i>	
Skills	<p>After passing this module the students should have the ability to:</p> <ul style="list-style-type: none"> • list and outline the most important fields of process engineering, • name the most important working approaches or methods of the different fields of process engineering, • read and prepare an engineering drawing, • explain the most important technologies for wastewater and exhaust air treatment • scheme typical chemical and biotechnological processes independently with the aid of pointers.
<i>Skills</i>	
Personal Competence	<p>The students are able to</p> <ul style="list-style-type: none"> • work out results in groups and document them, • provide appropriate feedback and handle feedback on their own performance constructively.
<i>Social Competence</i>	
Autonomy	<p>The students are able to estimate their progress of learning by themselves and to deliberate their lack of knowledge in Process Engineering and Bioprocess Engineering.</p>
<i>Autonomy</i>	
Workload in Hours	Independent Study Time 34, Study Time in Lecture 56
Credit points	3

Course achievement	Compulsory	Bonus	Form	Description
	No	5 %	Written elaboration

Linear Algebra I (L0914)	Recitation (large)	Section 1	1

Module Responsible	Prof. Anusch Taraz
Admission Requirements	None
Recommended Previous Knowledge	School mathematics
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can name the basic concepts in analysis and linear algebra. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
<i>Skills</i>	<ul style="list-style-type: none"> • Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
<i>Social Competence</i>	<ul style="list-style-type: none"> • Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
<i>Autonomy</i>	<ul style="list-style-type: none"> • Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer

	periods in a goal-oriented manner on hard problems.
Workload in Hours	Independent Study Time 128, Study Time in Lecture 112
Credit points	8

Module M0883: General and Inorganic Chemistry			
Courses			
Title	Typ	Hrs/wk	CP
General and Inorganic Chemistry (L0824)	Lecture	3	3
Fundamentals in Inorganic Chemistry (L0996)	Practical Course	3	2
Fundamentals in Inorganic Chemistry (L1941)	Recitation (small)	Section 1	1
Module Responsible	Prof. Gerrit A. Luinstra		
Admission Requirements	None		
Recommended Previous Knowledge	High school Chemistry		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students are able to handle molecular orbital theory including the octahedral ligand field, qualitatively describe the resulting electron density distribution and structures of molecules (VSEPR); they have developed an idea of molecular interactions in the gas, liquid and solid phases. They are able to describe chemical reactions in the sense of retention of mass and energy, enthalpy and entropy as well as the chemical equilibrium. They can explain the concept of activation energy in conjunction with particle kinetic energy. They have increased knowledge of acid-base concepts, acid-base reactions in water, can perform pH calculations, understand titration as a quantitative analysis. They can recognize redox processes, correlate redox potentials to Gibbs energy, handle Nernst theory in describing the concentration dependence of redox potentials, know the concept of overpotential and understand corrosion as a redox reaction (local element).</p> <p><i>Skills</i></p> <p>Students are able to use general and inorganic chemistry for the design of technical processes. Especially they are able to formulate mass and energy balances and by this to optimise technical processes. They are able to perform simple calculations of pH values in regard to an application of acids and bases, and evaluate the course of redox processes (calculation of redoxpotentials). They are able to transform a verbal formulated message into an abstract formal procedure. Students are able to present and discuss their scientific results in plenum. The students are able to document the results of their experiments scientifically. They are able to use scientific citation methods in their reports.</p> <p>Personal Competence</p> <p>The students are able to discuss given tasks in small groups and to develop an approach.</p> <p><i>Social Competence</i></p> <p>Students are able to carry out experiments in small groups in lab scale and to distribute tasks in the group independently.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p> <p>Students are able to apply their knowledge to plan, prepare and conduct experiments. Students are able to independently judge their own knowledge and to acquire missing knowledge that is required to fulfill their tasks.</p>		

Workload in Hours	Independent Study Time 82, Study Time in Lecture 98

Course L2270: Practical Course Measurement Technology	
Typ	Practical Course
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Prof. Michael Schlüter
Language	DE
Cycle	WiSe
Content	In the Practical Course in Measurement Technology the theory from the lectures "Physical Fundamentals of Measurement Technology" and "Measurement Technology" will be applied in practice. In small groups students learn how to handle different measurement techniques from industry and research. During the practical course, a wide range of different measurement methods will be taught, including the use of HPLC columns for qualitative mass analysis, the determination of mass transfer coefficients using optical oxygen sensors or the evaluation of image data to obtain process parameters. The practical course also teaches how measurement data are statistically evaluated and experiments are correctly documented.

Course L2268: Measurement Technology	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Alexandra von Kameke
Language	DE
Cycle	WiSe
Content	Basic introduction to measurement technology for process engineers. Includes error calculation, measurement units, calibration, measurement data analysis, measurement techniques and sensors. Particular attention is paid to the measurement of temperature, pressure, flow and level. The lecture provides insights into the latest developments in sensor technology in measurement technology and process engineering.

Module M0570: Engineering Mechanics II

Courses

Title	Typ	Hrs/wk	CP
Engineering Mechanics II (L0191)	Lecture	3	3
Engineering Mechanics II (L0192)	Recitation (small)	Section 2	3
Module Responsible	Prof. Uwe Weltin		
Admission Requirements	None		
Recommended Previous Knowledge	Technical Mechanics I		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i> Students are able to describe connections, theories and methods to calculate forces and motions of rigid bodies in 3D.</p> <p><i>Skills</i> Students are able to apply theories and method to calculate forces and motions of rigid bodies in 3D.</p>		
Personal Competence	<p><i>Social Competence</i> Students are able to work goal-oriented in small mixed groups, learning and broadening teamwork abilities.</p> <p><i>Autonomy</i> Students are able to solve individually exercises related to this lecture with instructional direction.</p>		
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6		
Course achievement	None		
Examination	Written exam		
Examination duration and scale	90 minutes		
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Electrical Engineering: Core qualification: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Orientierungsstudium: Core qualification: Elective Compulsory Process Engineering: Core qualification: Compulsory

Module M0671: Technical Thermodynamics I

Courses

Title	Typ	Hrs/wk	CP
Technical Thermodynamics I (L0437)	Lecture	2	4
Technical Thermodynamics I (L0439)	Recitation (large)	Section 1	1
Technical Thermodynamics I (L0441)	Recitation (small)	Section 1	1
Module Responsible	Prof. Gerhard Schmitz		
Admission Requirements	None		
Recommended Previous Knowledge	Elementary knowledge in Mathematics and Mechanics		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>Students are familiar with the laws of Thermodynamics. They know the relation of the kinds of energy according to 1st law of Thermodynamics and are aware about the limits of energy conversions according to 2nd law of Thermodynamics. They are able to distinguish between state variables and process variables and know the meaning of different state variables like temperature, enthalpy, entropy and also the meaning of exergy and anergy. They are able to draw the Carnot cycle in a Thermodynamics related diagram. They know the physical difference between an ideal and a real gas and are able to use the related equations of state. They know the meaning of a fundamental state of equation and know the basics of two phase Thermodynamics.</p> <p><i>Skills</i></p> <p>Students are able to calculate the internal energy, the enthalpy, the kinetic and the potential energy as well as work and heat for simple change of states and to use this calculations for the Carnot cycle. They are able to calculate state variables for an ideal and for a real gas from measured thermal state variables.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>The students are able to discuss in small groups and develop an approach.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.</p>

Module M0888: Organic Chemistry				
Courses				
Title		Typ	Hrs/wk	CP
Organic Chemistry (L0831)		Lecture	4	4
Organic Chemistry (L0832)		Practical Course	3	2
Module Responsible	Dr. Axel Thomas Neffe			
Admission Requirements	None			
Recommended Previous Knowledge	High School Chemistry and/or lecture "general and inorganic chemistry"			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are familiar with basic concepts of organic chemistry. They are able to classify organic molecules and to identify functional groups and to describe the respective synthesis routes. Fundamental reaction mechanisms like nucleophilic substitution, eliminations, additions and aromatic substitution can be described. Students are capable to describe in general modern reaction mechanisms.			
<i>Skills</i>	Students are able to use basics of organic chemistry for the design of technical processes. Especially they are able to formulate basic routes to synthesize small organic molecules and by this to optimise technical processes in Process Engineering. They are able to transform a verbally formulated message into an abstract formal procedure. The students are able to document and interpret their working process and results scientifically.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach for given tasks.			
<i>Autonomy</i>	Students are able to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
Workload in Hours	Independent Study Time 82, Study Time in Lecture 98			
Credit points	6			
Course achievement	Compulsory	Bonus	Form	Description
	Yes	None	Subject theoretical and practical work	
Examination	Written exam			
Examination duration and scale	90 minutes			
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory Process Engineering: Core qualification: Compulsory			

Course L0831: Organic Chemistry	
Typ	Lecture
Hrs/wk	4
CP	4
Workload in Hours	Independent Study Time 64, Study Time in Lecture 56
Lecturer	Dr. Axel Thomas Neffe
Language	DE
Cycle	SoSe
Content	The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkenes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described.
Literature	gängige einführende Werke zur Organischen Chemie. Z.B. „Organische Chemie“ von K.P.C.Vollhart & N.E.Schore, Wiley VCH

Course L0832: Organic Chemistry	
Typ	Practical Course
Hrs/wk	3
CP	2
Workload in Hours	Independent Study Time 18, Study Time in Lecture 42
Lecturer	Dr. Axel Thomas Neffe
Language	DE
Cycle	SoSe
Content	<p>The lecture covers basic concepts of organic chemistry. This includes simple carbon compounds, alkanes, alkenes, aromatic compounds, alcohols, phenols, ethers, aldehydes, ketones, carboxylic acids, esters, amines, amides and amino acids. Further, fundamentals of reaction mechanisms will be described. This includes nucleophilic substitution, eliminations, additions and aromatic substitution. Also modern reaction mechanisms will be described.</p> <p>Prior to each experiment, an oral colloquium takes place in small groups. In the colloquium are security aspects of the experiments are discussed, as well as the topics of the experiments. Solutions to previously provided questions are answered. In the colloquia the students acquire the skill to express scientific matters orally in a scientifically correct language and to describe theoretical basics.</p> <p>The students write up a report for every experiment. They receive feedback to their level of scientific writing (citation methods, labeling of graphs, etc.), so that they can improve their competence in this field over the course of the practical course.</p>

Module M0851: Mathematics II

Courses

Title	Typ	Hrs/wk	CP
Analysis II (L1025)	Lecture	2	2
Analysis II (L1026)	Recitation (large)	Section 1	1
Analysis II (L1027)	Recitation (small)	Section 1	1
Linear Algebra II (L0915)	Lecture	2	2
Linear Algebra II (L0916)	Recitation (small)	Section 1	1
Linear Algebra II (L0917)	Recitation (large)	Section 1	1

Module Responsible	Prof. Anusch Taraz
Admission Requirements	None
Recommended Previous Knowledge	Mathematics I
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can name further concepts in analysis and linear algebra. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
<i>Skills</i>	<ul style="list-style-type: none"> • Students can model problems in analysis and linear algebra with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
<i>Social Competence</i>	<ul style="list-style-type: none"> • Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
<i>Autonomy</i>	<ul style="list-style-type: none"> • Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer

	periods in a goal-oriented manner on hard problems.

Module M0688: Technical Thermodynamics II				
Courses				
Title	Typ	Hrs/wk	CP	
Technical Thermodynamics II (L0449)	Lecture	2	4	
Technical Thermodynamics II (L0450)	Recitation (large)	Section 1	1	
Technical Thermodynamics II (L0451)	Recitation (small)	Section 1	1	
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	None			
Recommended Previous Knowledge	Elementary knowledge in Mathematics, Mechanics and Technical Thermodynamics I			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	Students are familiar with different cycle processes like Joule, Otto, Diesel, Stirling, Seiliger and Clausius-Rankine. They are able to derive energetic and exergetic efficiencies and know the influence different factors. They know the difference between anti clockwise and clockwise cycles (heat-power cycle, cooling cycle). They have increased knowledge of steam cycles and are able to draw the different cycles in Thermodynamics related diagrams. They know the laws of gas mixtures, especially of humid air processes and are able to perform simple combustion calculations. They are provided with basic knowledge in gas dynamics and know the definition of the speed of sound and know about a Laval nozzle.			
<i>Skills</i>	Students are able to use thermodynamic laws for the design of technical processes. Especially they are able to formulate energy, exergy- and entropy balances and by this to optimise technical processes. They are able to perform simple safety calculations in regard to an outflowing gas from a tank. They are able to transform a verbal formulated message into an abstract formal procedure.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0892: Chemical Reaction Engineering

Courses

Title	Typ	Hrs/wk	CP
Chemical Reaction Engineering (Fundamentals) (L0204)	Lecture	2	2
Chemical Reaction Engineering (Fundamentals) (L0244)	Recitation (large)	Section 2	2
Experimental Course Chemical Engineering (Fundamentals) (L0221)	Practical Course	2	2
Module Responsible	Prof. Raimund Horn		
Admission Requirements	None		
Recommended Previous Knowledge	Contents of the previous modules mathematics I-III, physical chemistry, technical thermodynamics I+II as well as computational methods for engineers.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The students are able to explain basic concepts of chemical reaction engineering. They are able to point out differences between thermodynamical and kinetical processes. The students have a strong ability to outline parts of isothermal and non-isothermal ideal reactors and to describe their properties.</p> <p>After successful completion of the module, students are able to:</p> <ul style="list-style-type: none"> - apply different computational methods to dimension isothermal and non-isothermal ideal reactors, - determine and compute stable operation points for these reactors , - conduct experiments on a lab-scale pilot plants and document these according to scientific guidelines. 		
Personal Competence			
<i>Social Competence</i>	After successful completion of the lab-course the students have a strong ability to organize themselves in small groups to solve issues in chemical reaction engineering. The students can discuss their subject related knowledge among each other and with their teachers.		
<i>Autonomy</i>	The students are able to obtain further information and assess their relevance autonomously. Students can apply their knowledge discretely to plan, prepare and conduct experiments.		
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84		
Credit points	6		
Course achievement	Compulsory Yes	Bonus None	Form Subject theoretical and practical work
Examination	Written exam		
Examination duration and scale	120 min		
Assignment for the Following	General Engineering Science (German program, 7 semester): Specialisation Process Engineering: Compulsory General Engineering Science (German program, 7 semester): Specialisation Bioprocess Engineering: Compulsory Bioprocess Engineering: Core qualification: Compulsory Bioprocess Engineering: Core qualification: Compulsory

Analysis III (L1028)	Lecture	2	2
Analysis III (L1029)	Recitation (small)	Section 1	1
Analysis III (L1030)	Recitation (large)	Section 1	1
Differential Equations 1 (Ordinary Differential Equations) (L1031)	Lecture	2	2
Differential Equations 1 (Ordinary Differential Equations) (L1032)	Recitation (small)	Section 1	1
Differential Equations 1 (Ordinary Differential Equations) (L1033)	Recitation (large)	Section 1	1

Module Responsible	Prof. Anusch Taraz
Admission Requirements	None
Recommended Previous Knowledge	Mathematics I + II
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> • Students can name the basic concepts in the area of analysis and differential equations. They are able to explain them using appropriate examples. • Students can discuss logical connections between these concepts. They are capable of illustrating these connections with the help of examples. • They know proof strategies and can reproduce them.
<i>Skills</i>	<ul style="list-style-type: none"> • Students can model problems in the area of analysis and differential equations with the help of the concepts studied in this course. Moreover, they are capable of solving them by applying established methods. • Students are able to discover and verify further logical connections between the concepts studied in the course. • For a given problem, the students can develop and execute a suitable approach, and are able to critically evaluate the results.
Personal Competence	
<i>Social Competence</i>	<ul style="list-style-type: none"> • Students are able to work together in teams. They are capable to use mathematics as a common language. • In doing so, they can communicate new concepts according to the needs of their cooperating partners. Moreover, they can design examples to check and deepen the understanding of their peers.
<i>Autonomy</i>	<ul style="list-style-type: none"> • Students are capable of checking their understanding of complex concepts on their own. They can specify open questions precisely and know where to get help in solving them. • Students have developed sufficient persistence to be able to work for longer

	periods in a goal-oriented manner on hard problems.

Cycle	SoSe
Content	In the exercise-lecture the topics from the main lecture are discussed intensively and transferred into application. For that, the students receive example tasks for download. The students solve these problems based on the lecture material either independently or in small groups. The solution is discussed with the students under scientific supervision and parts of the solutions are presented on the chalk board. At the end of each exercise-lecture, the correct solution is presented on the chalk board. Parallel to the exercise-lecture tutorials are held where the student solve exam questions under a set time-frame in small groups and discuss the solutions afterwards.

Module M0544: Phase Equilibria Thermodynamics				
Courses				
Title	Typ	Hrs/wk	CP	
Phase Equilibria Thermodynamics (L0114)	Lecture	2	2	
Phase Equilibria Thermodynamics (L0140)	Recitation (small)	Section 1	2	
Phase Equilibria Thermodynamics (L0142)	Recitation (large)	Section 1	2	
Module Responsible	Prof. Irina Smirnova			
Admission Requirements	None			
Recommended Previous Knowledge	Mathematics, Physical Chemistry, Thermodynamics I and II			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<ul style="list-style-type: none"> Starting from the very basics of thermodynamics, the students learn the mathematical tools to describe thermodynamic equilibria. They learn how state variables are influenced by the mixing of compounds and learn concepts to quantitatively describe these properties. Moreover, the students learn how phase equilibria can be described mathematically and which phenomena may occur if different phases (vapor, liquid, solid) coexist in equilibrium. Furthermore the fundamentals of reaction equilibria are taught. For different phase equilibria, several examples relevant for different kinds of processes are shown and the necessary knowledge for plotting and interpreting the equilibria are taught. 			
<i>Knowledge</i>				
<i>Skills</i>				
Personal Competence	<ul style="list-style-type: none"> Applying their knowledge, the students are able to identify the correct equation for the determination of the equilibrium state and know how to simplify these equations meaningfully. The students know models which can be used to determine the properties of the system in the equilibrium state and they are able to solve the resulting mathematical relations. For specific applications, they are able to self-reliantly find necessary physico-chemical properties of compounds as well as model parameters in literature sources. Beside pure compound properties the students are capable of describing the properties of mixtures. The students know how to visualize phase equilibria graphically and they know how to interpret the occurring phenomena. Based on their knowledge, the students are able to understand fundamental concepts that are the basis for many separation and reaction processes in chemical engineering. 			

<i>Social Competence</i>	The students are able to work in small groups, to solve the corresponding problems and to present them orally to the tutors and other students
<i>Autonomy</i>	<ul style="list-style-type: none"> • The students are able to find necessary information self-reliantly in literature sources and to judge their quality. • During the semester the students are able to check their learning progress continuously in exercises. Based on this knowledge the students can adapt their learning process.
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0938: Bioprocess Engineering - Fundamentals

Courses

Title	Typ	Hrs/wk	CP
Bioprocess Engineering - Fundamentals (L0841)	Lecture	2	3
Bioprocess Engineering- Fundamentals (L0842)	Recitation (large)	Section 2	1
Bioprocess Engineering - Fundamental Practical Course (L0843)	Practical Course	2	2
Module Responsible	Prof. Andreas Liese		
Admission Requirements	None		
Recommended Previous Knowledge	none, module "organic chemistry", module "fundamentals for process engineering"		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>Students are able to describe the basic concepts of bioprocess engineering. They are able to classify different types of kinetics for enzymes and microorganisms, as well as to differentiate different types of inhibition. The parameters of stoichiometry and rheology can be named and mass transport processes in bioreactors can be explained. The students are capable to explain fundamental bioprocess management, sterilization technology and downstream processing in detail.</p> <p>After successful completion of this module, students should be able to</p> <ul style="list-style-type: none"> describe different kinetic approaches for growth and substrate-uptake and to calculate the corresponding parameters predict qualitatively the influence of energy generation, regeneration of redox equivalents and growth inhibition on the fermentation process analyze bioprocesses on basis of stoichiometry and to set up / solve metabolic flux equations distinguish between scale-up criteria for different bioreactors and bioprocesses (anaerobic, aerobic as well as microaerobic) to compare them as well as to apply them to current biotechnical problem propose solutions to complicated biotechnological problems and to deduce the corresponding models to explore new knowledge resources and to apply the newly gained contents identify scientific problems with concrete industrial use and to formulate solutions. to document and discuss their procedures as well as results in a scientific manner 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence	<p>After completion of this module participants should be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork in engineering and scientific environments.</p> <p>After completion of this module participants will be able to solve a technical problem in a team independently by organizing their workflow and to present their results in a plenum.</p>		
<i>Social Competence</i>			
<i>Autonomy</i>

Module M0618: Renewables and Energy Systems

Courses

Title	Typ	Hrs/wk	CP
Power Industry (L0316)	Lecture	1	1
Energy Systems and Energy Industry (L0315)	Lecture	2	2
Renewable Energy (L0313)	Lecture	2	2
Renewable Energy (L1434)	Recitation (small)	Section 1	1

Module Responsible	Prof. Martin Kaltschmitt
Admission Requirements	None
Recommended Previous Knowledge	none
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	<p><i>Knowledge</i></p> <p>With completion of this module, the students can provide an overview of characteristics of energy systems and their economic efficiency. They can explain the issues occurring in this context. Furthermore, they can explain details of power generation, power distribution and power trading with regard to subject-related contexts. The students can explain these aspects, which are applicable to many energy systems in general, especially for renewable energy systems and critically discuss them. Furthermore, the students can explain the environmental benefits from the use of such systems.</p> <p><i>Skills</i></p> <p>Students are able to apply methodologies for detailed determination of energy demand or energy production for various types of energy systems. Furthermore, they can evaluate energy systems technically, environmentally and economically and design them under certain given conditions. Therefore, they can choose the necessary subject-specific calculation rules, also for non-standardized solutions of a problem.</p> <p>The students are able to explain questions and possible approaches to its processing from the field of renewable energies orally and to put them into the right context.</p> <p>Personal Competence</p> <p><i>Social Competence</i></p> <p>The students are able to analyze suitable technical alternatives and to assess them with technical, economical and ecological criteria under sustainability aspects. This allows them to make an effective contribution to a more sustainable power supply.</p> <p><i>Autonomy</i></p> <p>Students can independently exploit sources, acquire the particular knowledge about the subject area and transform it to new questions.</p>

Module M0538: Heat and Mass Transfer

Courses

Title	Typ	Hrs/wk	CP
Heat and Mass Transfer (L0101)	Lecture	2	2
Heat and Mass Transfer (L0102)	Recitation (small)	Section 1	2
Heat and Mass Transfer (L1868)	Recitation (large)	Section 1	2

Module Responsible	Prof. Irina Smirnova
---------------------------	----------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	Basic knowledge: Technical Thermodynamics
---------------------------------------	---

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	<ul style="list-style-type: none"> The students are capable of explaining qualitative and determining quantitative heat transfer in procedural apparatus (e. g. heat exchanger, chemical reactors). They are capable of distinguish and characterize different kinds of heat transfer mechanisms namely heat conduction, heat transfer and thermal radiation. The students have the ability to explain the physical basis for mass transfer in detail and to describe mass transfer qualitative and quantitative by using suitable mass transfer theories. They are able to depict the analogy between heat- and mass transfer and to describe complex linked processes in detail.
<i>Knowledge</i>	
<i>Skills</i>	<ul style="list-style-type: none"> The students are able to set reasonable system boundaries for a given transport problem by using the gained knowledge and to balance the corresponding energy and mass flow, respectively. They are capable to solve specific heat transfer problems (e.g. heated chemical reactors, temperature alteration in fluids) and to calculate the corresponding heat flows. Using dimensionless quantities, the students can execute scaling up of technical processes or apparatus. They are able to distinguish between diffusion, convective mass transition and mass transfer. They can use this knowledge for the description and design of apparatus (e.g. extraction column, rectification column). In this context, the students are capable to choose and design fundamental types of heat and mass exchanger for a specific application considering their advantages and disadvantages, respectively. In addition, they can calculate both, steady-state and non-steady-state processes in procedural apparatus. The students are capable to connect their knowledge obtained in this course with knowlegde of other courses (In particular the courses thermodynamics, fluid mechanics and chemical process engineering) to solve concrete technical problems.

<p>Personal Competence</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i></p>	<ul style="list-style-type: none"> • The students are capable to work on subject-specific challenges in teams and to present the results orally in a reasonable manner to tutors and other students. • The students are able to find and evaluate necessary information from suitable sources • They are able to prove their level of knowledge during the course with accompanying procedure continuously (clicker-system, exam-like assignments) and on this basis they can control their learning processes.

Module M0833: Introduction to Control Systems

Courses

Title	Typ	Hrs/wk	CP
Introduction to Control Systems (L0654)	Lecture	2	4
Introduction to Control Systems (L0655)	Recitation (small)	Section 2	2

Module Responsible	Prof. Herbert Werner
Admission Requirements	None
Recommended Previous Knowledge	Representation of signals and systems in time and frequency domain, Laplace transform
Educational Objectives	After taking part successfully, students have reached the following learning results
Professional Competence	
<i>Knowledge</i>	<ul style="list-style-type: none"> Students can represent dynamic system behavior in time and frequency domain, and can in particular explain properties of first and second order systems They can explain the dynamics of simple control loops and interpret dynamic properties in terms of frequency response and root locus They can explain the Nyquist stability criterion and the stability margins derived from it. They can explain the role of the phase margin in analysis and synthesis of control loops They can explain the way a PID controller affects a control loop in terms of its frequency response They can explain issues arising when controllers designed in continuous time domain are implemented digitally
<i>Skills</i>	<ul style="list-style-type: none"> Students can transform models of linear dynamic systems from time to frequency domain and vice versa They can simulate and assess the behavior of systems and control loops They can design PID controllers with the help of heuristic (Ziegler-Nichols) tuning rules They can analyze and synthesize simple control loops with the help of root locus and frequency response techniques They can calculate discrete-time approximations of controllers designed in continuous-time and use it for digital implementation They can use standard software tools (Matlab Control Toolbox, Simulink) for carrying out these tasks
Personal Competence	
<i>Social Competence</i>	<p>Students can work in small groups to jointly solve technical problems, and experimentally validate their controller designs</p> <p>Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.</p>
<i>Autonomy</i>	They can assess their knowledge in weekly on-line tests and thereby control their learning progress.

Courses				
Title		Typ	Hrs/wk	CP
Practical Exercise Environmental Technology (L1387)		Practical Course	1	1
Environmental Technologie (L0326)		Lecture	2	2
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of inorganic/organic chemistry and biology			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	With the completion of this modul the students obtain profound knowledge of environmental technology. They are able to describe the behaviour of chemicals in the environment. Students can give an overview of scientific disciplines involved. They can explain terms and allocate them to related methods.			
<i>Skills</i>	Students are able to propose appropriate management and mitigation measures for environmental problems. They are able to determine geochemical parameters and to assess the potential of pollutants to migrate and transform. The students are able to work out well founded opinions on how Environmental Technology contributes to sustainable development, and they can present and defend these opinions in front of and against the group.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They are able to develop different approaches to the task as a group as well as to discuss their theoretical or practical implementation.			
<i>Autonomy</i>	Students can independently exploit sources about of the subject, acquire the particular knowledge and transfer it to new problems.

Cycle	WiSe/SoSe
Content	<p>In the management tutorial, the contents of the lecture will be deepened by practical examples and the application of the discussed tools.</p> <p>If there is adequate demand, a problem-oriented tutorial will be offered in parallel, which students can choose alternatively. Here, students work in groups on self-selected projects that focus on the elaboration of an innovative business idea from the point of view of an established company or a startup. Again, the business knowledge from the lecture should come to practical use. The group projects are guided by a mentor.</p>

Course L0880: Introduction to Management	
Typ	Lecture
Hrs/wk	3
CP	3
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42
Lecturer	Prof. Christoph Ihl, Prof. Thorsten Blecker, Prof. Christian Lüthje, Prof. Christian Ringle, Prof. Kathrin Fischer, Prof. Cornelius Herstatt, Prof. Wolfgang Kersten, Prof. Matthias Meyer, Prof. Thomas Wrona
Language	DE
Cycle	WiSe/SoSe
Content	<ul style="list-style-type: none"> • Introduction to Business and Management, Business versus Economics, relevant areas in Business and Management • Important definitions from Management, • Developing Objectives for Business, and their relation to important Business functions • Business Functions: Functions of the Value Chain, e.g. Production and Procurement, Supply Chain Management, Innovation Management, Marketing and Sales • Cross-sectional Functions, e.g. Organisation, Human Ressource Management, Supply Chain Management, Information Management • Definitions as information, information systems, aspects of data security and strategic information systems • Definition and Relevance of innovations, e.g. innovation opporunities, risks etc. • Relevance of marketing, B2B vs. B2C-Marketing • different techniques from the field of marketing (e.g. scenario technique), pricing strategies • important organizational structures • basics of human ressource management • Introduction to Business Planning and the steps of a planning process • Decision Analysis: Elements of decision problems and methods for solving decision problems • Selected Planning Tasks, e.g. Investment and Financial Decisions • Introduction to Accounting: Accounting, Balance-Sheets, Costing • Relevance of Controlling and selected Controlling methods • Important aspects of Entrepreneurship projects

Module M1498: Practice of Process Engineering

Courses

Title	Typ	Hrs/wk	CP
Practice in Process Engineering (L2271)	Project Seminar	2	2
Lectures for Pratices of Process Engineering (L2272)	Seminar	1	1
Module Responsible	Prof. Irina Smirnova		
Admission Requirements	None		
Recommended Previous Knowledge	none		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>After passing this module the students have the ability to:</p> <ul style="list-style-type: none"> • give an overview of a certain important field on process and bioprocess engineering, • explain some working methods for different fields in process engineering. <p>After successfully completing this module, students are able to</p> <ul style="list-style-type: none"> • prepare a written summary of a process engineering topic • to briefly present and discuss a topic in a short presentation • to roughly describe independently typical process engineering and biotechnological processes by means of notes. 		
<i>Knowledge</i>			
<i>Skills</i>			
Personal Competence	The students are able to		
<i>Social Competence</i>	<ul style="list-style-type: none"> • work out results in groups and document them, • provide appropriate feedback and handle feedback on their own performance constructively. 		
<i>Autonomy</i>	The students are able to estimate their progress of learning by themselves and to deliberate their lack of knowledge in Process Engineering and Bioprocess Engineering.		
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42		
Credit points	3		
Course achievement	None		
Examination	Subject theoretical and practical work		
Examination duration and scale	1 DIN A4 page report to be handed out to the person responsible for the module + presentation at the end of the semester		
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Elective Compulsory Process Engineering: Core qualification: Compulsory		

Course L2271: Practice in Process Engineering	
Typ	Project Seminar
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dozenten des SD V
Language	DE
Cycle	WiSe/SoSe
Content	<p>The following activities can be credited to students:</p> <ul style="list-style-type: none"> • Internships in industry (e.g. also during the semester break) • Completed practical projects with construction and workshop activities (basic internship) at institutes of the faculty • Activities on experimental plants at institutes of the faculty • Own project in the student workshop • Small projects in the FabLab <p>For further information please visit: https://www.tuhh.de/verfahrenstechnik/lehre.html</p>

Module M0670: Particle Technology and Solids Process Engineering

Courses

Title	Typ	Hrs/wk	CP
Particle Technology I (L0434)	Lecture	2	3
Particle Technology I (L0435)	Recitation (small)	Section 1	1
Particle Technology I (L0440)	Practical Course	2	2

Module Responsible	Prof. Stefan Heinrich
---------------------------	-----------------------

Admission Requirements	None
-------------------------------	------

Recommended Previous Knowledge	keine
---------------------------------------	-------

Educational Objectives	After taking part successfully, students have reached the following learning results
-------------------------------	--

Professional Competence	After successful completion of the module students are able to
<i>Knowledge</i>	<ul style="list-style-type: none"> • name and explain processes and unit-operations of solids process engineering, • characterize particles, particle distributions and to discuss their bulk properties
<i>Skills</i>	<p>Students are able to</p> <ul style="list-style-type: none"> • choose and design apparatuses and processes for solids processing according to the desired solids properties of the product • asses solids with respect to their behavior in solids processing steps • document their work scientifically.
Personal Competence	
<i>Social Competence</i>	The students are able to discuss scientific topics orally with other students or scientific personal and to develop solutions for technical-scientific issues in a group.
<i>Autonomy</i>	Students are able to analyze and solve questions regarding solid particles independently.

Workload in Hours	Independent Study Time 110, Study Time in Lecture 70

Module M1274: Environmental Technology				
Courses				
Title	Typ	Hrs/wk	CP	
Environmental Assessment (L0860)	Lecture	2	2	
Environmental Assessment (L1054)	Recitation (small)	Section 1	1	
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of inorganic/organic chemistry and biology			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
<i>Knowledge</i>	With the completion of this module the students acquire in-depth knowledge of important cause-effect chains of potential environmental problems which might occur from production processes, projects or construction measures. They have knowledge about the methodological diversity and are competent in dealing with different methods and instruments to assess environmental impacts. Besides the students are able to estimate the complexity of these environmental processes as well as uncertainties and difficulties with their measurement.			
<i>Skills</i>	The students are able to select a suitable method for the respective case from the variety of assessment methods. Thereby they can develop suitable solutions for managing and mitigating environmental problems in a business context. They are able to carry out Life Cycle Impact Assessments independently and can apply the software programs OpenLCA and the database Ecolnvent. After finishing the course the students have the competence to critically judge research results or other publications on environmental impacts.			
Personal Competence				
<i>Social Competence</i>	The students are able to discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They are able to develop jointly different solutions and to discuss their theoretical or practical implementation. Due to the selected lecture topics, the students receive insights into the multi-layered issues of the environment protection and the concept of sustainability. Their sensitivity and consciousness towards these subjects are raised and which helps to raise their awareness of their future social responsibilities in their role as engineers.			
<i>Autonomy</i>	The students learn to research, process and present a scientific topic independently. They are able to carry out independent scientific work. They can solve an environmental problem in a business context and are able to judge results of other publications.			
Workload in Hours	Independent Study Time 48, Study Time in Lecture 42

Cycle	SoSe
Content	<p>Presentation and application of free software programs in order to understand the concepts of environmental assessment methods better.</p> <p>Within the group exercise students discuss the various technical and scientific tasks, both subject-specific and multidisciplinary. They discuss different approaches to the task as well as it's theoretical or practical implementation.</p>
Literature	Power point Präsentationen

Thesis

Module M-001: Bachelor Thesis

Courses

Title	Typ	Hrs/wk	CP
Module Responsible	Professoren der TUHH		
Admission Requirements	<ul style="list-style-type: none"> According to General Regulations §21 (1): <p>At least 126 ECTS credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
Recommended Previous Knowledge			
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
<i>Knowledge</i>	<ul style="list-style-type: none"> The students can select, outline and, if need be, critically discuss the most important scientific fundamentals of their course of study (facts, theories, and methods). On the basis of their fundamental knowledge of their subject the students are capable in relation to a specific issue of opening up and establishing links with extended specialized expertise. The students are able to outline the state of research on a selected issue in their subject area. 		
<i>Skills</i>	<ul style="list-style-type: none"> The students can make targeted use of the basic knowledge of their subject that they have acquired in their studies to solve subject-related problems. With the aid of the methods they have learnt during their studies the students can analyze problems, make decisions on technical issues, and develop solutions. The students can take up a critical position on the findings of their own research work from a specialized perspective. 		
Personal Competence			
<i>Social Competence</i>	<ul style="list-style-type: none"> Both in writing and orally the students can outline a scientific issue for an expert audience accurately, understandably and in a structured way. The students can deal with issues in an expert discussion and answer them in a manner that is appropriate to the addressees. In doing so they can uphold their own assessments and viewpoints convincingly. 		
<i>Autonomy</i>	<ul style="list-style-type: none"> The students are capable of structuring an extensive work process in terms of time and of dealing with an issue within a specified time frame. The students are able to identify, open up, and connect knowledge and material necessary for working on a scientific problem. The students can apply the essential techniques of scientific work to research of their own.
