

## **Module Manual**

Master of Science

# **International Management and Engineering**

Cohort: Winter Term 2016

Updated: 8th July 2017

## Table of Contents

Table of Contents	2
Program description	5
Core qualification	6
Module M0560: Institutional Environment of International Management	6
Module M0698: Accounting	8
Module M0524: Nontechnical Elective Complementary Courses for Master	11
Module M0554: Quantitative Methods - Statistics and Operations Research	13
Module M0820: International Business	16
Module M1002: Production and Logistics Management	19
Module M0750: Economics	22
Module M0995: Organization international companies and IT	24
Module M0916: Project Seminar IWI	27
Specialization I. Electives Management	28
Module M0558: Operations Research	28
Module M0697: Management Control	30
Module M0823: Project Management	32
Module M0996: Supply Chain Management	35
Module M0855: Marketing (Sales and Services / Innovation Marketing)	38
Module M0866: EIP and Productivity Management	40
Module M1034: Technology Entrepreneurship	42
Module M0559: Strategic Management	44
Module M0543: Management, Organization and Human Resource Management	46
Module M0814: Technology Management	48
Module M0815: Product Planning	50
Module M1035: Corporate Entrepreneurship & Growth	52
Module M0994: Information Technology in Logistics	55
Module M1003: Management Control Systems for Operations	56
Specialization II. Civil Engineering	58
Module M0998: Statics and Dynamics of Structures	58
Module M0860: Harbour Engineering and Harbour Planning	60
Module M0723: Design of Prestressed Structures and Concrete Bridges	62
Module M0977: Construction Logistics and Project Management	64
Module M0581: Water Protection	67
Module M0595: Examination of Materials, Structural Condition and Damages	69
Module M0603: Nonlinear Structural Analysis	70
Module M0699: Advanced Foundation Engineering and Soil Laboratory Course	72
Module M0713: Concrete Structures	74
Module M0858: Coastal Hydraulic Engineering I	76
Module M0962: Sustainability and Risk Management	78
Module M0963: Steel and Composite Structures	80
Module M0964: Structures in Foundation and Hydraulic Engineering	82
Specialization II. Electrical Engineering	84
Module M0712: Microwave Semiconductor Devices and Circuits I	84
Module M0630: Robotics and Navigation in Medicine	86
Module M0548: Bioelectromagnetics: Principles and Applications	88
Module M0551: Pattern Recognition and Data Compression	91
Module M0918: Fundamentals of IC Design	92
Module M0673: Information Theory and Coding	94
Module M0746: Microsystem Engineering	96
Module M0846: Control Systems Theory and Design	98
Module M0710: Microwave Engineering	100
Module M0913: CMOS Nanoelectronics with Practice	102
Module M0676: Digital Communications	104
Specialization II. Energy and Environmental Engineering	106
Module M0511: Electricity Generation from Wind and Hydro Power	106
Module M0874: Wastewater Systems	109
Module M0512: Use of Solar Energy	112
Module M1145: Automation and Simulation	115
Module M0513: System Aspects of Renewable Energies	117
Module M0641: Steam Generators	120
Module M0721: Air Conditioning	122
Module M1000: Combined Heat and Power and Combustion Technology	124
Module M1037: Nuclear Power Plants and Steam Turbines	126
Module M0801: Water Resources and -Supply	129
Module M0902: Wastewater Treatment and Air Pollution Abatement	131
Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones	133
Module M0540: Transport Processes	135
Module M1125: Bioresources and Biorefineries	138
Module M0542: Fluid Mechanics in Process Engineering	140
Module M0619: Waste Treatment Technologies	142

Module M0742: Thermal Engineering	144
<b>Specialization II. Information Technology</b>	<b>146</b>
Module M0551: Pattern Recognition and Data Compression	146
Module M0627: Machine Learning and Data Mining	148
Module M0733: Software Analysis	150
Module M0758: Application Security	152
Module M1336: Soft Computing	154
Module M0550: Digital Image Analysis	155
Module M0629: Intelligent Autonomous Agents and Cognitive Robotics	157
Module M0676: Digital Communications	159
Module M0753: Software Verification	161
<b>Specialization II. Logistics</b>	<b>163</b>
Module M0978: International Logistics and Transport Systems	163
Module M1132: Maritime Transport	165
Module M1133: Port Logistics	167
Module M1089: Integrated Maintenance and Spare Part Logistics	169
Module M1012: Technical Logistics Laboratory	171
Module M1091: Flight Guidance and Airline Operations	173
Module M1100: Railways	175
Module M0739: Factory Planning & Production Logistics	176
<b>Specialization II. Aviation Systems</b>	<b>178</b>
Module M0764: Aircraft Systems II	178
Module M1156: Systems Engineering	180
Module M0721: Air Conditioning	182
Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	184
Module M1145: Automation and Simulation	185
Module M0763: Aircraft Systems I	187
Module M0771: Flight Physics	189
Module M0812: Aircraft Design	191
Module M1032: Airport Planning and Operations	193
Module M1091: Flight Guidance and Airline Operations	195
Module M1155: Aircraft Cabin Systems	197
Module M1043: Aircraft Systems Engineering	199
Module M1193: Cabin Systems Engineering	209
<b>Specialization II. Mechatronics</b>	<b>212</b>
Module M0605: Computational Structural Dynamics	212
Module M0752: Nonlinear Dynamics	214
Module M0563: Robotics	215
Module M0633: Industrial Process Automation	217
Module M0746: Microsystem Engineering	219
Module M0751: Vibration Theory	221
Module M0768: Microsystems Technology in Theory and Practice	222
Module M0808: Finite Elements Methods	224
Module M0846: Control Systems Theory and Design	226
Module M0832: Advanced Topics in Control	228
Module M1025: Fluidics	230
<b>Specialization II. Product Development and Production</b>	<b>233</b>
Module M1156: Systems Engineering	233
Module M1170: Phenomena and Methods in Materials Science	235
Module M1145: Automation and Simulation	237
Module M1143: Mechanical Design Methodology	239
Module M1144: Manufacturing with Polymers and Composites - From Molecule to Part	241
Module M0775: Ergonomics	243
Module M0563: Robotics	244
Module M0808: Finite Elements Methods	246
Module M1025: Fluidics	248
Module M0867: Production Planning & Control and Digital Enterprise	251
Module M1024: Methods of Integrated Product Development	253
<b>Specialization II. Renewable Energy</b>	<b>255</b>
Module M0511: Electricity Generation from Wind and Hydro Power	255
Module M0527: Marine Soil Technics	258
Module M0512: Use of Solar Energy	260
Module M0513: System Aspects of Renewable Energies	263
Module M0518: Waste and Energy	266
Module M0749: Waste Treatment and Solid Matter Process Technology	268
Module M0508: Fluid Mechanics and Ocean Energy	270
Module M1294: Bioenergy	272
<b>Specialization II. Process Engineering and Biotechnology</b>	<b>276</b>
Module M0513: System Aspects of Renewable Energies	276
Module M0874: Wastewater Systems	279
Module M0617: High Pressure Chemical Engineering	282
Module M0914: Technical Microbiology	286
Module M0749: Waste Treatment and Solid Matter Process Technology	288
Module M0896: Bioprocess and Biosystems Engineering	290

Module M1334: BIO II: Biomaterials	295
Module M0519: Particle Technology and Solid Matter Process Technology	297
Module M0540: Transport Processes	299
Module M0541: Process and Plant Engineering II	302
Module M0542: Fluid Mechanics in Process Engineering	305
Thesis	307
Module M-002: Master Thesis	307

### Content

## Core qualification

### Module M0560: Institutional Environment of International Management

#### Courses

Title	Typ	Hrs/wk	CP
International Business Law (L0163)	Lecture	2	2
Business Environment of Selected Countries (L0159)	Problem-based Learning	2	4
<b>Module Responsible</b>	Prof. Thomas Wrona		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge on international and intercultural management.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Knowledge: Students will be able to <ul style="list-style-type: none"> <li>• evaluate the importance of the institutional framework for doing business in different countries</li> <li>• outline and critically reflect the economic and legal framework in selected countries</li> <li>• understand historic, demographic and economic indicators in specific economic areas within an international context</li> <li>• use Hofstede's cultural dimensions to demonstrate that regional and national cultural groups do have an impact on the organization and management of a company</li> <li>• understand and apply methods of analysis of the external environment (competitive analysis , industry structure analysis by Porter, PESTEL analysis)</li> <li>• describe and explain the liability of legal entities and their organs</li> <li>• name criteria for the choice of legal form , arbitration clauses and choice of jurisdiction in international treaties</li> <li>• name the major risks of contract drafting for international supply</li> </ul>		
<i>Skills</i>	Skills: based on the acquired knowledge, Students will be able to <ul style="list-style-type: none"> <li>• identify cultural dimensions and to derive an influence on corporate management</li> <li>• identify typical problems within international management to develop solution proposals</li> <li>• analyze, interpret and present external and internal information in economic areas</li> <li>• assess which legal form is suitable for a company under certain premises or to achieve specific objectives</li> <li>• participate in the drafting of international treaties</li> <li>• assess the risks involved in international supply contracts</li> <li>• assess whether and to what extent a state of affairs raises issues of intellectual property rights</li> <li>• assess the effects of different contractual arrangements</li> <li>• critically assess content of international treaties and draft treaties</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Social competence: After completion of the module Students will be able to <ul style="list-style-type: none"> <li>• conduct subject-specific and interdisciplinary discussions</li> <li>• present results of their work</li> <li>• respectful work in a team</li> </ul>		
<i>Autonomy</i>	Self-employment: After completion of the module Students will be able to <ul style="list-style-type: none"> <li>• work independently and to transfer the acquired knowledge to new problem areas</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	60 min exam + 30 min presentation + 15 p thesis		
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Core qualification: Compulsory		

Course L0163: International Business Law	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Elke Umbeck
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Principles of company law and the liability of managers</p> <p>Design of international supply contracts</p> <p>Private international law and international civil procedure law</p> <p>CISG</p> <p>Mediation and arbitration</p> <p>Main features of transport law</p> <p>Securing means</p> <p>Letters of credit / export credit guarantees</p>
<b>Literature</b>	Skripte und Textdokumente, die während der Vorlesung herausgegeben werden.

Course L0159: Business Environment of Selected Countries	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Thomas Wrona
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Competitiveness of firms/industries/nations/regions</li> <li>• Competition Across Locations &amp; Global Strategy for MNCs</li> <li>• Industry Competition, Strategy and Location</li> <li>• The Diamond Model: developing/developed Economies</li> <li>• Clusters and Cluster Development</li> <li>• Harvard case studies of selected firms/industries/nations/regions</li> <li>• Development and presentation of case studies in groups</li> <li>• Participant-centered learning</li> <li>• Composition of a seminar thesis about a chosen cluster</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Audretsch, D. and Feldman, M. (1996), "Knowledge spillovers and the geography of innovation and production", American Economic Review, Vol. 86 No. 3, pp. 630-640.</li> <li>• Bamberger, I. and Wrona, T. (2012), Strategische Unternehmensführung, 2., erweiterte Auflage, München 2012.</li> <li>• Bamberger, I./Wrona, T. (2012): Strategische Unternehmensführung, 2., erweiterte Auflage, München 2012.</li> <li>• Bell, G.G. (2005), "Clusters, networks, and firm innovativeness", Strategic Management Journal, Vol. 26 No. 3, pp. 287-295.</li> <li>• Krugman, P. (1991), Geography and Trade, MIT Press, Cambridge, MA.</li> <li>• Porter, M.E. (1990), The Competitive Advantage of Nations, Free Press, New York, NY.</li> <li>• Porter, M.E. (2004), "Knowledge, clusters and competitive advantage", Academy of Management Review, Vol. 29 No. 2, pp. 258-271.</li> </ul>

[8]

Course L0143: Management and Financial Accounting	
Typ	Lecture
Hrs/wk	4
CP	4
Workload in Hours	Independent Study Time 64, Study Time in Lecture 56
Lecturer	Prof. Matthias Meyer
Language	DE
Cycle	WiSe
Content	<p><b>Management Accounting</b></p> <ul style="list-style-type: none"> <li>• Cost type accounting: Cost concepts, recognition and evaluation of resources</li> <li>• Cost center accounting: Expense distribution, stepladder method, equation method, indirect cost apportionment, special settlement of cost center service</li> <li>• Costing: Causer-pays and marginal principle, output costing, equivalence number costing, overhead calculation, charge rate calculation</li> <li>• Cost unit accounting: unit-of-output costing, cost unit period costing, total cost accounting, cost of sales accounting</li> <li>• Standard cost accounting: Cost resolution, fixed and flexible planned cost calculation, marginal costing</li> <li>• Breakeven analysis: Direct costing, multi-level fixed cost absorption, bottleneck-related contribution margin in operational production program planning</li> <li>• Modern cost management: Relevance Lost, activity based costing, target costing</li> </ul> <p><b>Financial Accounting</b></p> <ul style="list-style-type: none"> <li>• Importance of financial accounting and initial overview</li> <li>• Accounting principles and regulations: General approach, valuation and disclosure regulations (HGB)</li> <li>• Total and sales cost format, annex</li> <li>• International financial reporting (IFRS, US-GAAP)</li> <li>• Accounting policy</li> <li>• Auditing</li> <li>• Balance sheet analysis: Choice of method(s), data processing, data evaluation</li> <li>• Annual report analysis (financial: investment analysis, financing analysis, liquidity analysis; performance: cost analysis, earnings analysis, profitability analysis)</li> </ul> <p><b>Exercise:</b></p> <p>Both parts of the lecture include an exercise. For the Management Accounting part there are also Web-based exercises for self-testing.</p>
Literature	<p><b>Literatur internes Rechnungswesen:</b></p> <ol style="list-style-type: none"> <li>1. Skript und Unterlagen, die zur Vorlesung und Übung herausgegeben werden.</li> <li>2. Ausgewählte Bücher:             <ul style="list-style-type: none"> <li>◦ Horngren, C. T. /Bhimani, A./Datar, S. M./Foster, G. (2005): Management and Cost Accounting, 3rd ed., Harlow.</li> </ul> </li> <li>• Friedl, G./ Hofmann, C./Pedell, Burkhard. (2010): Kostenrechnung: eine entscheidungsorientierte Einführung, München.</li> <li>• Joos-Sachse, T. (2006): Controlling, Kostenrechnung und Kostenmanagement, 4. Aufl., Stuttgart.</li> <li>• Schweitzer, M./Küpper, H.-U. (2008): Systeme der Kosten- und Erlösrechnung, 9. Aufl., München.</li> <li>• Weber, J./Weißenberger, B. (2010): Einführung in das Rechnungswesen, 8. Aufl., Stuttgart.</li> </ol> <p><b>Literatur externes Rechnungswesen:</b></p> <ol style="list-style-type: none"> <li>1. Skript und Unterlagen, die zur Vorlesung und Übung herausgegeben werden.</li> <li>2. Ausgewählte Bücher:             <ul style="list-style-type: none"> <li>◦ Coenenberg, A./Haller, A./Matner, G./Schultze, W. (2009): Einführung in das Rechnungswesen, 3. Aufl., Stuttgart.</li> <li>• Döring, U./Buchholz, R. (2009): Buchhaltung und Jahresabschluss, 11. Aufl., Berlin.</li> <li>• Heinhold, M. (2010): Buchführung in Fallbeispielen, 11. Aufl., Stuttgart.</li> <li>• Pellens, B./Fülbier, R. U./Gassen, J./Selhorn, T. Aufl., Stuttgart.</li> <li>• Wöhe, G./Döring, U. (2010): Einführung in die allgemeine Betriebswirtschaftslehre, 24. Aufl., München.</li> </ul> </li> <li>1. Gesetzestexte/Standards:             <ul style="list-style-type: none"> <li>• Handelsgesetzbuch (HGB) (Achtung: BilMoG!), teilw. Aktiengesetz (AktG)</li> </ul> </li> </ol> <p><a href="http://www.gesetze-im-internet.de/hgb/index.html">http://www.gesetze-im-internet.de/hgb/index.html</a></p>

Course L0107: Corporate Finance	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christian Ringle
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction to corporate finance and financial management of the multinational firm</li> <li>• Valuation and capital budgeting (e.g., time value of money, valuing stocks and corporate bonds, discounted cash flow, net present value and other criteria, making capital investment decisions)</li> <li>• Risk and return (e.g., measuring risk, risk and diversification, the cost of capital, dividend decisions, valuation principles such as WACC, APV, multiples and real options)</li> <li>• Capital structure (e.g., equity financing and stocks, debt financing and corporate bonds, leasing and off-balance-sheet financing)</li> <li>• Options and futures (e.g., call and put options, warrants and convertibles, financial risk management with derivatives)</li> <li>• Financing and financial planning of the multinational firm (e.g., financial statement analysis, short and long-term financial planning, cash and credit management)</li> <li>• International corporate finance (e.g., foreign exchange exposure and management, international portfolio investments, international mergers and acquisitions)</li> </ul>
<b>Literature</b>	<p>Brealey, R.A./Myers, S.C./Marcus, A.J. (2009): Fundamentals of Corporate Finance, 6e, Boston: McGraw-Hill.</p> <p>Brealey, R.A./Myers, S.C./Allen, F. (2011): Principles of Corporate Finance, 10e, New York: McGraw-Hill.</p> <p>Berk, J./DeMarzo, P. (2011): Corporate Finance, 2e, Boston: Pearson.</p> <p>Eun, C.S./Resnick, B.G. (2012): International Financial Management, 6e, New York: McGraw-Hill.</p> <p>Robin, J.A. (2010): International Corporate Finance, New York: McGraw-Hill.</p> <p>Ross, S.A./Westerfield, R.W./Jaffe, J. (2009): Corporate Finance, 9e, New York: McGraw-Hill.</p> <p>Ross, S.A./Westerfield, R.W./Jaffe, J. (2010): Corporate Finance: Core Principles and Applications, 3e, New York: McGraw-Hill.</p>

Module M0524: Nontechnical Elective Complementary Courses for Master	
<b>Module Responsible</b>	Dagmar Richter
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	None
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p><b>The Nontechnical Academic Programms (NTA)</b></p> <p>imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its <b>teaching architecture</b>, in its <b>teaching and learning arrangements</b>, in <b>teaching areas</b> and by means of teaching offerings in which students can qualify by opting for <b>specific competences</b> and a <b>competence level</b> at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.</p> <p><b>The Learning Architecture</b></p> <p>consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.</p> <p>The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".</p> <p>The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.</p> <p><b>Teaching and Learning Arrangements</b></p> <p>provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.</p> <p><b>Fields of Teaching</b></p> <p>are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.</p> <p>The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goal-oriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.</p> <p><b>The Competence Level</b></p> <p>of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.</p> <p>This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.</p> <p><b>Specialized Competence (Knowledge)</b></p> <p>Students can</p> <ul style="list-style-type: none"> <li>• explain specialized areas in context of the relevant non-technical disciplines,</li> <li>• outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area,</li> <li>• different specialist disciplines relate to their own discipline and differentiate it as well as make connections,</li> <li>• sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,</li> <li>• Can communicate in a foreign language in a manner appropriate to the subject.</li> </ul> <p><i>Skills</i></p> <p><b>Professional Competence (Skills)</b></p> <p>In selected sub-areas students can</p> <ul style="list-style-type: none"> <li>• apply basic and specific methods of the said scientific disciplines,</li> <li>• question a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline,</li> <li>• to handle simple and advanced questions in aforementioned scientific disciplines in a successful manner,</li> <li>• justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.</li> </ul> <p><b>Personal Competence</b>  <i>Social Competence</i></p> <p><b>Personal Competences (Social Skills)</b></p> <p>Students will be able</p> <ul style="list-style-type: none"> <li>• to learn to collaborate in different manner,</li> <li>• to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees,</li> </ul>

<i>Autonomy</i>	<ul style="list-style-type: none"> <li>• to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen),</li> <li>• to explain nontechnical items to auditorium with technical background knowledge.</li> </ul> <b>Personal Competences (Self-reliance)</b> Students are able in selected areas <ul style="list-style-type: none"> <li>• to reflect on their own profession and professionalism in the context of real-life fields of application</li> <li>• to organize themselves and their own learning processes</li> <li>• to reflect and decide questions in front of a broad education background</li> <li>• to communicate a nontechnical item in a competent way in written form or verbally</li> <li>• to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen)</li> </ul>
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6

#### Courses

Information regarding lectures and courses can be found in the corresponding module handbook published separately.

Module M0554: Quantitative Methods - Statistics and Operations Research				
Courses				
Title	Typ		Hrs/wk	CP
Quantitative Methods - Statistics and Operations Research (L0127)	Lecture		3	4
Quantitative Methods - Statistics and Operations Research (L0250)	Recitation Section (large)		2	2
<b>Module Responsible</b>	Prof. Kathrin Fischer			
<b>Admission Requirements</b>	None.			
<b>Recommended Previous Knowledge</b>	Knowledge of Mathematics on the Bachelor Level. Relevant previous knowledge is taught and tested by an online module.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i></p> <p>The students know</p> <ul style="list-style-type: none"> <li>different methods from the field of descriptive statistics and can explain them and their importance for Business Analysis;</li> <li>different discrete and continuous distribution functions and can explain their meaning and their areas of application</li> <li>the laws of probability theory as, e.g. the Bayes rule, and can explain them;</li> <li>different methods of inferential statistics - e.g. confidence intervals, hypothesis testing and regression analysis - and can explain their theoretical background;</li> <li>the history and relevance of Operations Research;</li> <li>linear programming methods for solving planning problems and can explain them;</li> <li>selected methods of transportation and network optimization and can explain them;</li> <li>integer programming models and methods, e.g. for location planning;</li> <li>appropriate software for solving these problems.</li> </ul> <p><i>Skills</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>collect empirical data by appropriate methods, to aggregate, classify and analyze the data and to draw conclusions from them also in complex and realistic situations;</li> <li>recognize different distribution functions and to apply them in the solution of Business problems;</li> <li>apply laws of probability, as e.g. the Bayes rule, to construct solutions for Business problems;</li> <li>select appropriate methods of inferential statistics, apply them to Business problems and evaluate the results of their analysis;</li> <li>construct appropriate quantitative - linear or integer - models for Business planning situations;</li> <li>apply methods from linear and integer programming and interpret and evaluate the results;</li> <li>apply methods from transport and network planning and interpret and evaluate the results;</li> <li>solve the problems with appropriate software, carry out sensitivity analyses and evaluate the results;</li> <li>develop a critical judgement of the different methods and their applicability;</li> <li>use models and methods from Statistics and OR to analyse problems from the areas of business and engineering and to evaluate the results;</li> <li>apply their theoretical knowledge of the different methods to practical problems.</li> </ul> <p><b>Personal Competence</b></p> <p><i>Social Competence</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>engage in scientific discussions on topics from the fields of Statistics and OR;</li> <li>present the results of their work to specialists;</li> <li>work successfully and respectfully in a team.</li> </ul> <p><i>Autonomy</i></p> <p>Students are able to</p> <ul style="list-style-type: none"> <li>carry out complex data analyses independently, individually or in a team;</li> <li>solve complex Business planning problems independently or in a team, selecting and using appropriate software;</li> <li>gather knowledge in the area independently and to apply their knowledge also in new and unknown situations;</li> <li>critically evaluate the results of their work and the consequences.</li> </ul>

Module M0820: International Business			
Courses			
Title	Typ	Hrs/wk	CP
Business-to-Business Marketing (L0762)	Lecture	2	2
Intercultural Management and Communication (L0846)	Lecture	2	2
International Management (L0157)	Lecture	2	2
<b>Module Responsible</b>	Prof. Christian Lühje		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<p>Bachelor-level knowledge in marketing and (international) strategic management; basic understanding of market segmentation, modes of market entry, strategic management, pricing theory and marketing instruments.</p> <p>The previous knowledge which is required for this module is taught by e-learning modules. Students receive access data and former information regarding the online content after enrolment at TUHH.</p>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students will develop a thorough understanding of the following:</p> <ul style="list-style-type: none"> <li>• Selling to organizations and marketing strategies in B2B markets</li> <li>• Relevant theories, methods and tools for operational B2B marketing</li> <li>• Relevant theories for intercultural communication</li> <li>• Theoretical knowledge of               <ul style="list-style-type: none"> <li>◦ the importance of globalization for firms and the challenges facing companies in the context of their international operations;</li> <li>◦ methods of measuring the internationalization degree of companies and the resulting practical implications;</li> <li>◦ target market strategies, market entry strategies and foreign operation modes and allocation strategies;</li> <li>◦ different types of international organizational structures (e.g. global organization, network organization, transnational organization);</li> <li>◦ "culture" and its impact on human interaction;</li> <li>◦ important aspects of (intercultural) communication issues.</li> <li>◦ methods of analysis and assessment of market entry risks by applying modern theories such as the "Innovator's Dilemma" framework;</li> <li>◦ modes of cooperation such as prime contractor and consortium models and their industrial cooperation related advantages and disadvantages;</li> <li>◦ special methods of assessment of specific country risks;</li> </ul> </li> </ul> <p><i>Skills</i> The students will be able to apply this knowledge to</p> <ul style="list-style-type: none"> <li>• identify and systematically address relevant partners when selling to business organizations;</li> <li>• place, price and communicate industrial products with the help state-of-the-art B2B marketing tools;</li> <li>• define the specifics of global industries and respond to them deriving appropriate practical recommendations (global competitors, regional consumers, local and global suppliers, etc.);</li> <li>• derive advantages and disadvantages of different target market, market entry, timing and allocation strategies;</li> <li>• apply the theoretical knowledge to business cases or real examples (e.g. internationalization processes of well-known hotel chains or franchise companies, etc.);</li> <li>• interpret symbols, rituals and gestures appropriately in an intercultural context.</li> </ul> <p><b>Based on these skills, the students will be able to</b></p> <ul style="list-style-type: none"> <li>• analyze market-entry options and market positioning in B2B markets;</li> <li>• systematically analyze, work up and present information needed for making the decision for or against internationalization of company's operations and regarding HOW, WHEN and WHAT;</li> <li>• analyze and evaluate risks in the context of international business operations;</li> <li>• decide which mode of market entry (e.g. franchising) yields most potential;</li> <li>• make methodically based internationalization decisions as well as master the specifics of strategic management in an international context and apply concrete planning processes;</li> <li>• develop strategies when approaching international client companies and manage relationships with complex client entities;</li> <li>• develop sophisticated market-entry strategies and to position innovative industrial goods in global business-to-business markets;</li> <li>• develop communication strategies in the domain of industrial goods, develop pricing plans by applying state-of-the-art tools like Vickrey-auctions to measure willingness-to-pay and methods such as tender-bidding models.</li> <li>• solve complex operating planning tasks independently or in a team applying appropriate methods and comprehensibly present the results of their analysis;</li> <li>• identify problems and resolve cultural issues in multi-cultural teams and in intercultural collaborations</li> <li>• successfully manage cultural diversity.</li> </ul>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	<p>The students will be able to</p> <ul style="list-style-type: none"> <li>• have fruitful professional discussions;</li> <li>• present and defend the results of their work in a group of students;</li> <li>• work successfully in multi-cultural teams</li> <li>• communicate and collaborate successfully and respectfully with others, also on an intercultural basis.</li> </ul>		
<i>Autonomy</i>	<p>The students will be able to</p> <ul style="list-style-type: none"> <li>• acquire knowledge in the specific context independently and to map this knowledge onto other new complex problem fields.</li> </ul>

<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christian Lühje
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Contents</b></p> <p>Business-to-business (B2B) markets play an important role in most economies. At the same time, B2B markets differ strongly from consumer goods markets. For example, companies' buying decisions follow different rules than those of consuming individuals. Consequently, marketing mix decisions in B2B markets need to follow the specific circumstances in such markets.</p> <p>The aim of this lecture is to enable students to understand the specifics of marketing in B2B markets. At the beginning, students learn which strategic marketing decisions may be most appropriate in industrial markets. Following that, the lecture will focus more on different options to design marketing mix elements - Pricing, Communication and Distribution - in B2B markets. We extend the student's basic knowhow in marketing and focus on the specific requirements in B2B markets.</p> <p><b>Topics</b></p> <ul style="list-style-type: none"> <li>• The importance, specific characteristics and developments of B2B markets today</li> <li>• Organizational buying behavior and the corporate buying process</li> <li>• B2B marketing strategies regarding modes and time of market entry with focus on innovative industrial products</li> <li>• Types of project-related cooperation in the B2B project business</li> <li>• Specific operational marketing methods in communication (success factors of fairs and exhibitions, importance of public relations for B2B markets); pricing (measuring willingness-to-pay via auctions; value-based pricing in industrial markets, bidding models and auctioning); distribution and channel strategies for B2B markets</li> <li>• Marketing in complex value chains: Solving the problem of direct customers' unwillingness to adopt innovative products by directly addressing indirect customers</li> </ul> <p><b>Knowledge</b></p> <p>The students will develop a thorough understanding of:</p> <ul style="list-style-type: none"> <li>• How organizations and firms buy</li> <li>• How marketing can be performed in complex value chains</li> <li>• Promising market and competitive strategies in B2B markets</li> <li>• Modes of cooperation in B2B markets</li> <li>• Marketing-Mix decisions in B2B marketing (communication, pricing, distribution)</li> </ul> <p><b>Skills</b></p> <ul style="list-style-type: none"> <li>• analyzing the advantages and disadvantages of different target market, market entry, timing and allocation strategies;</li> <li>• identifying and systematically address relevant partners when selling to business organizations;</li> <li>• developing context-specific market-entry and timing strategies;</li> <li>• making appropriate decisions for the pricing and communication of industrial products;</li> <li>• applying the theoretical knowledge to business cases or real examples</li> </ul> <p><b>Social Competence</b></p> <p>The students will be able to</p> <ul style="list-style-type: none"> <li>• having fruitful professional discussions;</li> <li>• presenting and defending the results of their work in groupwork;</li> </ul> <p><b>Self-reliance</b></p> <ul style="list-style-type: none"> <li>• acquiring knowledge in the specific context independently and to map this knowledge onto other new complex problem fields.</li> </ul> <p><b>Assessment</b></p> <p>Written examination &amp; Class participation in interactive elements (presentations, homework)</p>

<b>Content</b>	<p>Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multi-cultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged.</p> <p>This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning.</p> <p>Some of the main topics covered in this course include:</p> <ul style="list-style-type: none"> <li>• Understanding "culture" and its impact on human interaction</li> <li>• Verbal and non-verbal communication</li> <li>• High and low context communication</li> <li>• Role of formality and non-formality in communication</li> <li>• Varying interpretations of symbols, rituals &amp; gestures</li> <li>• Managing diversity in domestic settings</li> </ul>

<b>Content</b>	<p>Growing internationalization of companies and increased globalization require dealing with operations and specifics of international management as well as creating an understanding of intercultural differences. In order to help the students to understand these specifics and challenges accompanying international companies, the course will be divided in the following parts:</p> <ul style="list-style-type: none"> <li>• Important Aspects in International Management</li> <li>• Theories of Internationalization</li> <li>• Specific characteristics of international companies and their strategies</li> <li>• Organizational Structure and Leadership in international companies</li> </ul> <p>During the course, the content will be covered from a theoretical as well as a practical point of view by using examples of different companies. In order to provide practical relevance to the course, a guest speaker from a well-known international company will be invited or alternatively a company visit will be organized as well as an analysis of a case study will take place.</p>
<b>Literature</b>	<ol style="list-style-type: none"> <li>1. Course notes and materials provided before the lecture.</li> <li>2. Module M1002: Production and Logistics Management				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Operative Production and Logistics Management (L1198)		Lecture	2	2
Strategic Production and Logistics Management (L1089)		Problem-based Learning	3	4
<b>Module Responsible</b>	Prof. Wolfgang Kersten			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	Introduction to Business and Management  The previous knowledge, that is necessary for the successful participation in this module is accessible via e-learning. Log-in and additional information will be distributed during the admission process.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>        <i>Skills</i>        <b>Personal Competence</b> <i>Social Competence</i>        <i>Autonomy</i>	Students will be able - to differentiate between strategic and operational production and logistics management, - to describe the areas of production and logistics management, - understand the difference between traditional and new concepts of production planning and control, - to describe and explain the actual challenges of production and logistics management, esp. in an international context.  Based on the acquired knowledge students are capable of  - Applying methods of production and logistics management in an international context, - Selecting sufficient methods of production and logistics management to solve practical problems, - Selecting appropriate methods of production and logistics management also for non-standardized problems, - Making a holistic assessment of areas of decision in production and logistics management and relevant influence factors.  After completion of the module students can - lead discussions and team sessions, - arrive at work results in groups and document them, - develop joint solutions in mixed teams and present them to others, - present solutions to specialists and develop ideas further.  After completion of the module students can  - assess possible consequences of their professional activity,  - define tasks independently, acquire the requisite knowledge and use suitable means of implementation,  - define and carry out research tasks bearing in mind possible societal consequences.

Module M0916: Project Seminar IWI			
Courses			
Title	Typ	Hrs/wk	CP
Project Seminar IWI (L1064)	Project Seminar	3	6
Module Responsible	Prof. Kathrin Fischer		
Admission Requirements	None		
Recommended Previous Knowledge	Prior knowledge in the relevant area from the relevant Management modules.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p>The knowledge and the skills which are gained in this module differ depending on the topic of the seminar. In all cases, in-depth knowledge of a certain scientific area and the respective skills are developed by the students, e.g. in-depth knowledge of complexity management in production, in-depth knowledge of the application of simulations in Controlling or in-depth knowledge of specific problems in Strategic Management or Marketing, and the respective skills, e.g. the ability to judge and select different approaches to certain strategic planning problems and to apply them successfully.</p> <p>Students are able to</p> <ul style="list-style-type: none"><li>independently acquire the relevant knowledge to handle their project</li><li>independently carry out a (pre-defined) complex research task and/or solve a complex problem</li><li>select and use the relevant literature and critically evaluate it</li><li>aggregate their knowledge and results and present it to others</li><li>write a scientific report on the project / problem at hand, individually or in a team.</li></ul>		
Knowledge			
Skills			
Personal Competence			
Social Competence			
Autonomy			
Workload in Hours	Independent Study Time 138, Study Time in Lecture 42		
Credit points	6		
Examination	Homework		
Examination duration and scale	To be announced in seminar.		
Assignment for the Following Curricula	International Management and Engineering: Core qualification: Compulsory		

Course L1064: Project Seminar IWI	
<b>Typ</b>	Project Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 138, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Kathrin Fischer
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe/SoSe
<b>Content</b>	Contents differ, depending on the institute which organizes the respective seminar. Topics are always announced at the start of the term.
<b>Literature</b>	Wird je nach Thema angegeben; in der Regel handelt es sich um wissenschaftliche Fachartikel und Publikationen, vorwiegend in englischer Sprache.

## Specialization I. Electives Management

### Module M0558: Operations Research

#### Courses

Title	Typ	Hrs/wk	CP
Operations Research (L0155)	Lecture	2	2
Operations Research - Seminar (L0156)	Seminar	2	3
Project Operations Research (L1793)	Problem-based Learning	1	1
<b>Module Responsible</b>	Prof. Kathrin Fischer		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge from the module "Quantitative Methods": Linear Programming, Network Optimization and basics of Integer Programming.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Students have an in-depth knowledge of the following areas: They are able to <ul style="list-style-type: none"> <li>• explain complex quantitative models for applications, e.g. production models with integrated inventory holding over time, portfolio models, revenue management models</li> <li>• Discuss advanced topics in linear programming, e.g. duality theory and its application, special structures as upper/lower bounds for variables; revised simplex method etc.</li> <li>• Study problems with multiple objectives and under uncertainty, i.e. the adaption of linear programming models to realistic applications</li> <li>• Discuss advanced topics in integer programming: complex problems, e.g. from vehicle routing, and logical constraints; advanced solutions procedures as branch and bound, cutting-plane procedures etc.</li> <li>• Examine dynamic and non-linear programming problems and applications in Management</li> </ul>		
<i>Skills</i>	Students have in-depth abilities in the following areas: They are able to <ul style="list-style-type: none"> <li>• formulate complex quantitative models for applications, e.g. production models with integrated inventory holding over time, portfolio models, revenue management models</li> <li>• Apply duality theory in linear programming and analyze special structures as upper/lower bounds for variables; use the revised simplex method etc.</li> <li>• Analyze problems with multiple objectives and under uncertainty, i.e. the adaption of linear programming models to realistic applications</li> <li>• Set up advanced models in integer programming and solve them, e.g. problems from vehicle routing, or logical constraints</li> <li>• Analyze dynamic and non-linear programming problems and applications in Management</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Students are able to <ul style="list-style-type: none"> <li>• work successfully in a team, organize the team, and solve complex tasks in a team in a given time frame</li> <li>• give structured feedback, following feedback rules, and also accept feedback from their fellow students</li> <li>• lead discussions on problems from the field of OR</li> <li>• present the results of their work to specialists.</li> </ul>		
<i>Autonomy</i>	Students are able to <ul style="list-style-type: none"> <li>• independently acquire relevant scientific knowledge from the literature</li> <li>• independently carry out a (pre-defined) complex research task</li> <li>• aggregate their knowledge and results and present it to others</li> <li>• apply their knowledge and experience also to new problems and unknown situations.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Homework		
<b>Examination duration and scale</b>	To be announced in Lecture		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Logistics, Infrastructure and Mobility: Core qualification: Elective Compulsory		

Course L0155: Operations Research	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kathrin Fischer

Module M0823: Project Management			
Courses			
Title	Typ	Hrs/wk	CP
Selected Topics and Advanced Business Cases in Project Management (L0109)	Seminar	2	2
Project Management Methods (L0710)	Lecture	1	2
Strategies and Methods of Negotiating (L0761)	Problem-based Learning	2	2
<b>Module Responsible</b>	Prof. Christian Ringle		
<b>Admission Requirements</b>	Limited number of students: 20		
<b>Recommended Previous Knowledge</b>	Basic Knowledge of Principles and Concepts in Business Administration		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students will be familiar with ... • characteristics and critical success factors of projects; • typical phases in projects, corresponding tasks and challenges; • advanced methods and tools which can be applied in special phases of a project (such as cost-benefit analyses, scheduling techniques, business process modeling techniques, change management approaches); • important soft factors influencing a project's success such as cultural aspects, team dynamics and leadership approaches; • strategies and advanced methods of negotiation including game theory.</p> <p><i>Skills</i> Students will be able to ... • conduct stakeholder and industry analyses; • apply project management techniques to complex business cases (e.g., optimize the target setting process, develop work breakdown structures, develop schedules and action plans, monitor project progress, manage risk throughout the project, and do the project controlling); • apply strategies and methods of negotiation to complex business cases; • internalize the components of an effective negotiation and practice their use; • appropriately present results of their work to others, both in terms of reports and oral presentations • critically analyze industries and multinational firms in terms of, e.g., their competitive situation, their strengths and weaknesses • be successful project leaders: They will be able to systematically implement project management techniques to international projects (e.g., plan international projects, deal with uncertainty, establish, harmonize and track quality, time and cost objectives) • successfully apply strategies and methods of negotiation in business practice in an international context (e.g., expose and overcome typical barriers to an agreement such as lack of trust, deal with typical hardball tactics such as good cop/bad cop, lowball/highball, intimidation, and avoid cognitive traps such as unchecked emotions, overconfidence).</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students will be able to • have fruitful group discussions; • present their results in written form and by oral presentations; • carry out respectful team work.</p> <p><i>Autonomy</i> The students will be able to • acquire further relevant information independently, critically evaluate this information and improve or adapt management techniques to new situations in international business practice.</p>

<b>Cycle</b>	SoSe
<b>Content</b>	<p>This seminar addresses current topics of strategic relevance to multinational firms and provides students with the opportunity to enhance the theoretical capabilities which they have gained in earlier terms as well as to apply their knowledge to complex case studies taken from business practice. Thereby, the students will also strengthen their soft skills (e.g., team work, presentation skills) which are required for all kinds of project related jobs in an international business context. The general topic of the seminar and the detailed case studies will be announced in each semester. Cases include the following general topics:</p> <ul style="list-style-type: none"> <li>• Evaluating industries and the business situation of multinational firms (e.g., identify strengths and weaknesses, analyze and forecast costs and benefits)</li> <li>• Developing and applying international management strategies</li> <li>• Managing business processes (including business process modeling and re-engineering)</li> <li>• Managing international projects</li> <li>• Managing change in a multinational firm</li> </ul>
<b>Literature</b>	<p>Information on the appropriate literature depends on the topics and will be updated each semester. Literature may include two textbooks (in addition to the ones below) that address the theoretical underpinnings of the general topic, journal articles, an introduction on how to develop case study solutions, and the case study text. General textbooks referred to are:</p> <ul style="list-style-type: none"> <li>• Dess, G. G. / Lumpkin, G. T. / Eisner, A. B. / Kim, Bongjin: Strategic Management, 6th edition, New York: McGraw-Hill/Irwin, 2012.</li> <li>• Jones, G. R. / Hill, C. W. L.: Theory of Strategic Management with Cases, 9th edition, South-Western: Cengage Learning, 2010.</li> <li>• Larson, E. <b>Cycle</b>	SoSe
<b>Content</b>	<p><b>General description of course content and course goals</b></p> <p>The purpose of the present course is to understand the theory and processes of negotiation as practiced in a variety of settings such as industrial marketing relations. A basic premise is that while students need analytical skills in order to develop optimal solutions, a broad array of negotiation skills is needed in order for these solutions to be accepted and implemented. Yet, even though we often negotiate, many students have limited knowledge about the strategies for and psychology of effective negotiations, which is going to be an important factor in their future careers. The course will highlight the components of an effective negotiation and teach students to analyze their own behavior in negotiations.</p> <p>The course structure is experiential and problem-based, combining lectures, class discussion, assigned readings, media presentations, and the practice of negotiations. Through participation in problem-based negotiation exercises, students will have the opportunity to practice their communication and persuasion skills and to experiment with a variety of negotiating strategies and tactics. Through analysis of case studies, media, and discussion of readings on negotiation concepts and tactics, students will apply the lessons learned to ongoing, real-world negotiations.</p> <p><b>Summarizing the most important contents</b></p> <p>The students will find answers to the following fundamental questions of negotiation theory and practice:</p> <ul style="list-style-type: none"> <li>• How do negotiations influence everyday life and business processes?</li> <li>• What are key features of negotiations?</li> <li>• What are different forms of negotiations? What kinds of negotiation can be distinguished?</li> <li>• Which theoretical approaches to a theory of negotiation can be distinguished?</li> <li>• How can game theory be applied to negotiation?</li> <li>• What makes an effective negotiator?</li> <li>• Which factors should be considered when planning negotiations?</li> <li>• What steps must be followed to reach a deal?</li> <li>• Are there specific negotiation tactics?</li> <li>• What are the typical barriers to an agreement and how to deal with them?</li> <li>• What are possible cognitive (mental) errors and how to correct them?</li> </ul> <p><b>Professional Competence</b></p> <p><b>Knowledge</b></p> <p>Students can...</p> <ul style="list-style-type: none"> <li>• explain the theory and underlying processes of negotiation as practiced in a variety of daily-life and business settings such as in industrial marketing relations.</li> <li>• explain strategies for and psychology of effective negotiations in daily-life and business situations (e.g. the steps that must be followed to reach a deal, mental errors, and the typical barriers to an agreement).</li> <li>• give an overview of the basics of game theory, (behavioral) decision theory, and negotiation analysis (e.g. distributive and integrative situations, core strategies and tactics, key concepts, stages, team building and roles, anchoring and first offers, multi-phase negotiations).</li> </ul> <p><b>Skills</b></p> <p>Students are capable of...</p> <ul style="list-style-type: none"> <li>• simultaneously considering multiple factors in negotiation situations and taking reasoned actions when preparing and conducting negotiations.</li> <li>• Analyzing and handling the key challenges of uncertainty, risk, intercultural differences, and time pressure in realistic negotiation situations.</li> <li>• assessing the typical barriers to an agreement (e.g. lack of trust), dealing with hardball tactics (e.g. good cop, bad cop; lowball, highball; intimidation), and avoiding cognitive traps (e.g. unchecked emotions, overconfidence).</li> </ul>

	<ul style="list-style-type: none"> <li>reflecting on their decision-making in uncertain negotiation situations and derive actions for future decisions.</li> </ul> <p><b>Personal Competence</b></p> <p><b>Social Competence</b></p> <p>Students can...</p> <ul style="list-style-type: none"> <li>provide appropriate feedback and handle feedback on their own performance constructively.</li> <li>enter into a dialogue with formerly unknown fellow students, participate in discussions, and present well-grounded arguments.</li> <li>constructively interact with their team members and lead team sessions and group work processes</li> <li>develop joint solutions in mixed teams and present them to others in real-world negotiation situations</li> </ul> <p><b>Self-Reliance</b></p> <p>Students are able to...</p> <ul style="list-style-type: none"> <li>assess possible consequences of their own negotiation behavior</li> <li>define own positions and tasks in the negotiation preparation process.</li> <li>justify and make elaborated decisions in authentic negotiation situations.</li> </ul>

<b>Cycle</b>	SoSe
<b>Content</b>	<p>This course is supposed to provide intense hands-on experiences with the entrepreneurial process, tools and concepts discussed in the lecture "Entrepreneurship" and additional online material. At the beginning of the class, students form teams to search for and create a scalable and repeatable business opportunity. Rather than writing a comprehensive business plan or designing the perfect product, both of which are highly difficult and risky investments in the uncertain front end of any business idea, we follow a lean startup approach. Student teams will have to think about all the parts of building a business and apply the tools of business model design and customer &amp; agile development in order to optimize the search for and creation of a business opportunity. Students will start by mapping the assumptions regarding each of the part in their business model and then devote significant time on testing these hypotheses with customers and partners outside in the field (customer development). Based on the gathered information, students should realize which of their assumptions were wrong, and figure out ways how to fix it (learning events called "pivots"). The goal is to proceed in an iterative and incremental way (agile development) to build prototypes and (minimum viable) products. Throughout the course, student teams will present their lessons-learned (pivots) and how their business models have evolved based on their most important pivots.</p>

<b>Cycle</b>	SoSe
<b>Content</b>	<p>This course introduces the fundamentals of technology entrepreneurship including its economic and cultural underpinnings. It highlights the differences between mere business ideas and scalable and repeatable business opportunities. It is designed to familiarize students with the process that technology entrepreneurs use to create business opportunities and to start companies. It involves taking a technology idea and finding a high-potential commercial opportunity, gathering resources such as talent and capital, figuring out how to sell and market the idea, and managing rapid growth. The course also discusses relevant concepts and tools from entrepreneurial strategy, such as disruptive innovations, technology adoption cycles and intellectual property, as well as from entrepreneurial marketing, such as product positioning and differentiation, distribution, promotion and pricing. Particular emphasis will be put on business model design and customer development proposed in the lean startup approach. All in all, the course is supposed to create the entrepreneurial mindset of looking for technology opportunities and business solutions, where others see insurmountable problems. This mindset of turning problems into opportunities can well be generalized from startups to larger companies and other settings.</p>

Module M0559: Strategic Management								
Courses								
Title		Typ	Hrs/wk	CP				
Strategic Management (L0158)		Lecture	4	6				
Module Responsible	Prof. Thomas Wrona							
Admission Requirements	None							
Recommended Previous Knowledge	Basic principles in International and Intercultural Management							
Educational Objectives	After taking part successfully, students have reached the following learning results							
Professional Competence	<div>Knowledge</div> <p>Students will accumulate extensive knowledge about different aspects of strategic management after having participated in this module. Apart from strategic planning, students will be able to discern different contingency factors in strategic decision making and apply various strategies accordingly.</p> <p>Students will gain competences in the following areas:</p> <ul style="list-style-type: none"><li>• The historical and theoretical development of strategic management</li><li>• Different forms of strategy formation</li><li>• Content and process view of strategic management</li><li>• Formulation and implementation of strategic options</li><li>• Management systems and their influence on strategies</li><li>• The origins of competitive advantage</li></ul> <div>Skills</div> <ul style="list-style-type: none"><li>• Students are able to analyze and interpret external and internal information in the context of strategic choice</li><li>• Students are able to differentiate environmental contingencies and assess risk potentials</li><li>• Students are able to evaluate the attractiveness of different industries</li><li>• Students are able to evaluate the pros and cons of strategic options and adequately select strategies during implementation</li><li>• In essence, students are able to conceptually and theoretically “design” strategic decision processes and considers industry and corporate peculiarities during strategic planning</li></ul> <p>Those skills refer to competences in information seeking and analysis, the consolidation of data and their presentation in teams. These skills will be continuously shaped...</p> <ul style="list-style-type: none"><li>• During case studies and strategic role plays, where students identify, develop and implement solutions for strategic problems</li><li>• During complex data analyses, which are performed in groups and discussed in class</li><li>• By making educated guesses about (yet unknown) corporate phenomena and decision makers attitudes, which are based on prior theoretical knowledge</li></ul> <div>Personal Competence</div> <div>Social Competence</div> <p>After attending the module students will be able...</p> <ul style="list-style-type: none"><li>• To interact and share own thoughts with group members during case study sessions or strategic role plays</li><li>• To lead and take part in strategy-related discussions</li><li>• To present results, both in written and verbal form</li></ul> <div>Autonomy</div> <p>After attending the module students will be able...</p> <ul style="list-style-type: none"><li>• To accumulate knowledge about specified strategic problems and transfer it to other related areas of interest</li><li>• To identify related literature and integrate relevant findings during problem solution</li><li>• To present existing and new knowledge about strategic phenomena in own conceptual ways</li></ul>

Module M0543: Management, Organization and Human Resource Management				
Courses				
Title		Typ	Hrs/wk	CP
Management, Organization and Human Resource Management (L0110)		Lecture	2	3
Management, Organization and Human Resource Management (L0111)		Seminar	2	3
Module Responsible	Prof. Christian Ringle			
Admission Requirements	None			
Recommended Previous Knowledge	Module "Human Resource Management and Organizational Design"			
	Knowledge of <ul style="list-style-type: none"><li>• The Study of Organizations and Organizational Theories</li><li>• The processes of developing organizational structures for multinational firms</li><li>• Analysis and Design of Work</li><li>• Strategic Management of the Human Resource Function in international business</li><li>• Human Resource Planning and Recruitment in the global environment</li><li>• Managing performance measurement, compensation and benefits of international corporations</li><li>• Employee Development</li><li>• Employee Separation and Retention</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	Knowledge	The students are able to ... <ul style="list-style-type: none"><li>• explain the different organizational design and strategies in an international environment with a focus on selected forms of cooperation (e.g., virtual organizations, strategic alliances) to compete in global business;</li><li>• map the need of organizational changes in light of new business lines, new strategies, altering employee attitudes and international competition;</li><li>• describe the business process management and reengineering techniques in order to consolidate resources to meet international customer requirements profitably;</li><li>• explain the meaning and importance of managing human resources in multinational companies and its relation to organizational designs and strategies;</li><li>• explain the personnel recruitment and talent management strategies (e.g., personnel planning, employee testing, developing) throughout national and international organizations;</li><li>• explain the models and approaches for appropriately measuring employee relations (e.g., job satisfaction models) including the development and estimation of causal models;</li><li>• present the models and research methodologies used to forecast personnel requirements (e.g., forecasting procedures, linear programming, neural networks).</li></ul>		
		Skills	The students are able to,... <ul style="list-style-type: none"><li>• collect empirical data (e.g., data on business processes and data on employee relations, such as job satisfaction), apply business process management and multivariate techniques to the data collected using standard software, and critically evaluate and interpret results gained in order to, for instance, optimize business processes (e.g. in terms of business efficiency) and develop new global HR strategies (e.g., regarding job satisfaction);</li><li>• critically rethink theoretical concepts and gain analytical ability in organization and human resource management (e.g., critically evaluate the process of acquiring, training, appraising and compensating employees in light of health, safety and fairness concerns in international environments);</li><li>• map their theoretical understanding of international human resources and business management on actual economic problems and to evaluate how these components affect other fields</li><li>• use their practical knowledge of the analytical toolset to successfully tackle the management challenges in organization and human resource management in internationally acting companies.</li><li>• to model and analyze business processes of firms using the essential techniques and standard software (with an emphasis on managing international processes);</li></ul>	
Personal Competence	Social Competence	The students are able to... <ul style="list-style-type: none"><li>• have discussions (with international experts) in the fields of organization and human resource management,</li><li>• respectfully work in teams,</li><li>• strengthen their intercultural personal competencies by problem based-learning elements</li></ul>		
		Autonomy	The students are able to independently acquire knowledge in the specific context and to map this knowledge on other or new complex problem fields. They will be able to improve their overall management skills (starting with a structured analysis of the business problem, via developing suitable solutions, to appropriately communicating/presenting solutions developed).

Course L1281: Corporate Entrepreneurship in the Digital Age	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Christoph Ihl
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>This is a 4 ECTS course as part of the module "Corporate Entrepreneurship &amp; Growth". Emerging paradigms of digital technology, such as industrial internet of things, blockchain, artificial intelligence, digital fabrication and 3D printing, are fundamentally transforming the competitive landscape and the nature of many companies in a wide range of industries. Where digital technologies become critical to the development of new products, services and business models, incumbent corporations in traditional industries suddenly face entirely new competition from purely digital players. Building a corporate capability to master digital innovation becomes a key success factor to establish and maintain market leadership. This course places students into the role of corporate managers, who need to understand the strategic implications of new digital technology, identify organizational strengths and barriers to (re-) act, design new business models that may fundamentally clash with existing ones, and organize broader digital transformation initiatives.</p> <p>Upon completion of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>Derive industry-specific implications of digital technologies for value creation and capture.</li> <li>Identify organizational sources of corporate (non-) responsiveness to digital opportunities.</li> <li>Contribute to the design and implementation of digitally enhanced business models.</li> <li>Evaluate options of organizational transformation by corporate venturing as well as open platforms and ecosystems.</li> <li>Contribute to organization and leadership of corporate-wide digital transformation initiatives.</li> </ul> <p>Course language is English. In this course, value is created interactively, that means it mainly consists of student presentations and group discussions, structured and moderated by the instructors. This in turn requires that everyone has prepared the relevant materials in advance of each session. Please devote significant time to do so! All the great ideas relevant to this course topic cannot be found in a single textbook. Therefore, we have curated an up-to-date and colourful mix of materials in two different kinds: (1) academic &amp; managerial papers, and (2) case studies. Please refer to the detailed course schedule for the assignment of paper presentations and case memos to specific participants. For your paper presentations you may also include additional references, whereas the case memos should only be based on the cases. Even if you are not assigned a specific paper or case, you should have prepared core materials to participate in the discussion. For the common team project, we cooperate with real companies from the Hamburg metropolitan region to contribute to their strategic intent of embracing new digital technology.</p> <p>Student assessment will be based on four aspects with the following grading scheme:</p> <ul style="list-style-type: none"> <li>20%: Participation in class discussions on papers and case studies.</li> <li>20%: One paper presentation of 20 minutes length plus 10 minutes discussion: 20%.</li> <li>20%: Two case memos (2 pages) that summarize in bullet points your answers to assigned questions for two case studies.</li> <li>40%: Final project on a real digital transformation project delivered as 30 minutes presentation plus 15 minutes discussion by teams of four students.</li> </ul>

Course L1282: Entrepreneurial Finance	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Christoph Ihl
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>This course examines the elements of entrepreneurial finance, focusing on technology-based start-up ventures and the early stages of company development. The course addresses key questions relevant to both startup and corporate entrepreneurs: How much money can and should be raised? When should it be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured? This course will focus on the finance principles related to the risk &amp; return of venture capital, the valuation of high growth companies, the capital structure specific to venture capital-backed companies, and investment decisions under uncertainty. Three main topics will be covered:</p> <p>(1) New business opportunity valuation: Most time will be devoted to the understanding and application of tools to value early stage business opportunities and high-growth companies versus mature companies. Standard tools for financial and liquidity planning as well as discounted cash flow valuation will be applied to startup situations. Furthermore, the venture capital method, analysis of comparables and the real options approach to valuation are introduced.</p> <p>(2) Financing and employment contracts: We will discuss the main sources of financing that entrepreneurs can choose from. Particular emphasis will be put on venture capital funds and their fund raising process. The design of financial contracts will be analyzed in terms of addressing information and incentive problems in uncertain environments. Employment contracts will be motivated as a compensation device to attract and retain key employees.</p> <p>(3) Growth and exit strategies: We will discuss entrepreneurs' option to grow or exit. Liquidity events are considered such as initial public offering, sale or merger as compared to independent growth as a private company. We also examine later stage options such as mezzanine financing and buy-outs and the specifics of international growth.</p> <p>Guest lecturers will present the latest trends in these areas. The ideal audience for the course will be students who are interested in technology entrepreneurship, either at startups or within larger organizations. It is also useful for those pursuing careers in corporate finance or valuation consulting.</p>

Module M1003: Management Control Systems for Operations				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Management Control Systems for Operations (L1219)		Problem-based Learning	3	4
Management Control Systems for Operations (L1224)		Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Wolfgang Kersten			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Introduction to Business and Management			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students have acquired in depth knowledge in the following areas and can <ul style="list-style-type: none"> <li>• explain the function and the requirements of management control systems,</li> <li>• explain the targets and the tasks of production and supply chain controlling,</li> <li>• understand management control systems for production in an international context,</li> <li>• explain the major aspects of investment planning and control,</li> <li>• explain the major aspects of cost management,</li> <li>• explain and understand the procedures of budgeting,</li> <li>• present and give a detailed explanation of methods and tools of management control systems for production and supply chains.</li> </ul>			
<i>Skills</i>	Based on the acquired knowledge students are capable of <ul style="list-style-type: none"> <li>- Applying methods of managerial accounting in production and logistics in an international context,</li> <li>- Selecting sufficient methods of managerial accounting in production and logistics to solve practical problems,</li> <li>- Selecting appropriate methods of managerial accounting in production and logistics also for non-standardized problems,</li> <li>- Making a holistic assessment of areas of decision in management control systems for production and logistics and relevant influence factors.</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	After completion of the module students can <ul style="list-style-type: none"> <li>- lead discussions and team sessions,</li> <li>- arrive at work results in groups and document them,</li> <li>- develop joint solutions in mixed teams and present them to others,</li> <li>- present solutions to specialists and develop ideas further.</li> </ul>			
<i>Autonomy</i>	After completion of the module students can <ul style="list-style-type: none"> <li>- assess possible consequences of their professional activity,</li> <li>- define tasks independently, acquire the requisite knowledge and use suitable means of implementation,</li> <li>- define and carry out research tasks bearing in mind possible societal consequences.</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	90 min			
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Specialisation I. Electives Management: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory			

Course L1219: Management Control Systems for Operations	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Wolfgang Kersten
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Identification of missions and changing requirements on controlling</li> <li>• Differentiating managerial accounting, production management, logistics and supply chain controlling</li> <li>• Considering global dispersed supply chain networks in production management and supply chain controlling</li> <li>• Analyzing investment projects and resulting effects (investment control, risk management in investment)</li> <li>• In depth knowledge in planning, realizing and controlling investments</li> <li>• Developing characteristics of differentiation for cost and activity accounting (aim, purpose, opportunities in structuring etc.)</li> <li>• In depth knowledge in cost management (cost types and units)</li> <li>• Budgeting in practice; Analysis of existing methods</li> <li>• Development of an approach in activity based costing</li> <li>• Application of target costing</li> <li>• Knowing the importance and method of life cycle costing</li> <li>• Applying performance figures in production and logistics</li> <li>• Developing recommendations for problem solving by using problem based learning sessions for case studies; thereby preparing and presenting results in intercultural teams</li> </ul>

## Specialization II. Civil Engineering

### Module M0998: Statics and Dynamics of Structures

#### Courses

Title	Typ	Hrs/wk	CP
Structural Dynamics (L1202)	Lecture	2	2
Structural Dynamics (L1203)	Recitation Section (large)	2	2
Fracture mechanics and fatigue in steel structures (L0564)	Lecture	1	1
Fracture Mechanics and Fatigue (L0565)	Recitation Section (large)	1	1
<b>Module Responsible</b>	Prof. Uwe Starossek		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Knowledge of linear structural analysis of statically determinate and indeterminate structures; Mechanics I/II, Mathematics I/II, Differential equations I		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	After successful completion of this module, the student can explain the basic aspects of dynamic effects on structures and the respective methods.		
<i>Skills</i>	After successful completion of this module, the students will be able to predict the response of material and structures to dynamics loading using the appropriate computational approaches and methods.		
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	135 min		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory		

#### Course L1202: Structural Dynamics

## Module M0860: Harbour Engineering and Harbour Planning

### Courses

Title	Typ	Hrs/wk	CP
Harbour Engineering (L0809)	Lecture	2	2
Harbour Engineering (L1414)	Problem-based Learning	1	2
Port Planning and Port Construction (L0378)	Lecture	2	2
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to define in details and to choose design approaches for the functional design of a port and apply them to design tasks. They can design the fundamental elements of a port.		
<i>Skills</i>	The students are able to select and apply appropriate approaches for the functional design of ports.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems such as the functional design of ports. Additionally, they will be able to work in team with engineers of other disciplines.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	The duration of the examination is 150 min. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. ### Course L1414: Harbour Engineering

<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Peter Fröhle
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Course L0378: Port Planning and Port Construction	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Frank Feindt
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Planning and implementation of major projects</li> <li>• Market analysis and traffic relations</li> <li>• Planning process and plan</li> <li>• Port planning in urban neighborhood</li> <li>• Development of the logistics center "Port of Hamburg" in the metropolis</li> <li>• Quays and waterfront structure</li> <li>• Special planning Law Harbor - securing of a flexible use of the port</li> <li>• Dimensioning of quays</li> <li>• Flood protection structures</li> <li>• Port of Hamburg - Infrastructure and development</li> <li>• Preparation of areas</li> <li>• Scour formation in front of shore structures</li> </ul>
<b>Literature</b>	Vorlesungsumdruck, s. <a href="http://www.tu-harburg.de/gbt">www.tu-harburg.de/gbt</a>

Module M0723: Design of Prestressed Structures and Concrete Bridges			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Design of Prestressed Structures and Concrete Bridges (L0603)	Lecture	3	4
Design of Prestressed Structures and Concrete Bridges (L0604)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Günter Rombach		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Detailed knowledge on the design of concrete structures.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students know the main bridge types, their applications and the various loads. They can explain the basic design methods. They can explain the design of a prestressed bridge.		
<i>Skills</i>	The students are able to design reinforced or prestressed concrete bridges.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students can design in teamwork a real concrete bridge.		
<i>Autonomy</i>	The students are able to design a prestressed concrete bridge and discuss the problems and results with other students.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	180 minutes		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory		

Course L0603: Design of Prestressed Structures and Concrete Bridges	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Günter Rombach
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	prestressed structures <ul style="list-style-type: none"> <li>• basis of prestressed structures</li> <li>• differences between reinforced and prestressed concrete structures</li> <li>• history of prestressing</li> <li>• construction materials: concrete, tendons, ducts, anchorage systems</li> <li>• construction: prestressing methods</li> <li>• prestressing forces and member forces (friction, elongation)</li> <li>• tendon layout</li> <li>• time dependant prestressing losses</li> <li>• design of prestressed structures</li> <li>• design of anchorage region</li> <li>• non-bonded prestressing</li> <li>• prestressed flat slabs</li> </ul> Concrete bridges <ul style="list-style-type: none"> <li>• history of bridges</li> <li>• design of bridges</li> <li>• loads on bridges</li> <li>• member forces for slab, T-beam, hollow box, frame and arch bridges</li> <li>• precast bridges - precast segmental bridges</li> <li>• bearings</li> <li>• abutments, columns</li> <li>• construction methods</li> </ul>

Module M0977: Construction Logistics and Project Management					
Courses					
Title		Typ	Hrs/wk	CP	
Construction Logistics (L1163)		Lecture	1	2	
Construction Logistics (L1164)		Recitation Section (small)	1	2	
Project Development and Management (L1161)		Lecture	1	1	
Project Development and Management (L1162)		Problem-based Learning	1	1	
Module Responsible	Prof. Heike Flämig				
Admission Requirements	none				
Recommended Previous Knowledge	none				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence					
Knowledge					Students can... <ul style="list-style-type: none"><li>• give definitions of the main terms of construction logistics and project development and management</li><li>• name advantages and disadvantages of internal or external construction logistics</li><li>• explain characteristics of products, demand and production of construction objects and their consequences for construction specific supply chains</li><li>• differentiate constructions logistics from other logistics systems</li></ul>
Skills					Students can... <ul style="list-style-type: none"><li>• carry out project life cycle assessments</li><li>• apply methods and instruments of construction logistics</li><li>• apply methods and instruments of project development and management</li><li>• apply methods and instruments of conflict management</li><li>• design supply and waste removal concepts for a construction project</li></ul>
Personal Competence					
Social Competence					Students can... <ul style="list-style-type: none"><li>• hold presentations in and for groups</li><li>• apply methods of conflict solving skills in group work and case studies</li></ul>
Autonomy	Students can... <ul style="list-style-type: none"><li>• solve problems by holistic, systemic and flow oriented thinking</li><li>• improve their creativity, negotiation skills, conflict and crises solution skills by applying methods of moderation in case studies</li></ul>				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56				
Credit points	6				
Examination	Written elaboration				
Examination duration and scale	Two written compositions and two short presentations				
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory				

Course L1163: Construction Logistics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Heike Flämig
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The lecture gives deeper insight how important logistics are as a competitive factor for construction projects and which issues are to be addressed.</p> <p>The following topics are covered:</p> <ul style="list-style-type: none"> <li>• competitive factor logistics</li> <li>• the concept of systems, planning and coordination of logistics</li> <li>• material, equipment and reverse logistics</li> <li>• IT in construction logistics</li> <li>• elements of the planning model of construction logistics and their connections</li> <li>• flow oriented logistics systems for construction projects</li> <li>• logistics concepts for ready to use construction projects (especially procurement and waste removal logistics)</li> <li>• best practice examples (construction logistics Potsdamer Platz, recent case study of the region)</li> </ul> <p>Contents of the lecture are deepened in special exercises.</p>
<b>Literature</b>	<p>Flämig, Heike: Produktionslogistik in Stadtregionen. In: Forschungsverbund Ökologische Mobilität (Hrsg.) Forschungsbericht Bd. 15.2. Module M0595: Examination of Materials, Structural Condition and Damages			
Courses			
Title	Typ	Hrs/wk	CP
Examination of Materials, Structural Condition and Damages (L0260)	Lecture	4	4
Examination of Materials, Structural Condition and Damages (L0261)	Recitation Section (small)	1	2
Module Responsible	Prof. Frank Schmidt-Döhl		
Admission Requirements	None		
Recommended Previous Knowledge	Basic knowledge about building materials or material science, for example by the module Building Materials and Building Chemistry.		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<div>The students are able to describe the rules for trading, use and marking of construction products in Germany. They know which methods for the testing of building material properties are usable and know the limitations and characteristics of the most important testing methods.</div> <div>The students are able to responsibly discover the rules for trading and using of building products in Germany.</div> <div>They are able to chose suitable methods for the testing and inspection of construction products, the examination of damages and the examination of the structural conditions of buildings. They are able to conclude from symptons to the cause of damages. They are able to describe an examination in form of a test report or expert opinion.</div>

Module M0603: Nonlinear Structural Analysis				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Nonlinear Structural Analysis (L0277)		Lecture	3	4
Nonlinear Structural Analysis (L0279)		Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Alexander Düster			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mathematics I, II, III, Mechanics I, II, III, IV Differential Equations 2 (Partial Differential Equations)			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to + give an overview of the different nonlinear phenomena in structural mechanics. + explain the mechanical background of nonlinear phenomena in structural mechanics. + to specify problems of nonlinear structural analysis, to identify them in a given situation and to explain their mathematical and mechanical background.			
<i>Skills</i>	Students are able to + model nonlinear structural problems. + select for a given nonlinear structural problem a suitable computational procedure. + apply finite element procedures for nonlinear structural analysis. + critically verify and judge results of nonlinear finite elements. + to transfer their knowledge of nonlinear solution procedures to new problems.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to + solve problems in heterogeneous groups and to document the corresponding results. + share new knowledge with group members.			
<i>Autonomy</i>	Students are able to + assess their knowledge by means of exercises and E-Learning.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0858: Coastal Hydraulic Engineering I			
<b>Courses</b>			
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>
Basics of Coastal Engineering (L0807)		Lecture	3
Basics of Coastal Engineering (L1413)		Recitation Section (large)	1
<b>Module Responsible</b>	Prof. Peter Fröhle		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basics of hydraulic engineering, hydrology and hydromechanics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to define and explain the basic concepts of coastal engineering and port engineering. They are able to apply the concepts to selected practical problems of coastal engineering. Students can define and determine the basics for design and dimensioning of coastal engineering constructions.		
<i>Skills</i>	The students are capable to apply basic design approaches to selected and pre-defined design tasks in coastal engineering.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to deploy their gained knowledge in applied problems such as the design of coastal protection structures. Additionally, they will be able to work in team with engineers of other disciplines, for instance designing of coastal breakwaters.		
<i>Autonomy</i>	The students will be able to independently extend their knowledge and apply it to new problems.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	The duration of the examination is 2 hours. The examination includes tasks with respect to the general understanding of the lecture contents and calculations tasks.		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory		

Course L0807: Basics of Coastal Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Peter Fröhle
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>Basics of planning and design               <ul style="list-style-type: none"> <li>Water levels</li> <li>Currents</li> <li>Waves</li> <li>Ice</li> </ul> </li> <li>Planning and Design in Coastal Engineering               <ul style="list-style-type: none"> <li>Functional and constructional design</li> <li>Determination of design parameters</li> <li>Design-approaches                   <ul style="list-style-type: none"> <li>Filter</li> <li>Rubble mound constructions</li> <li>Piles</li> <li>Vertical constructions</li> </ul> </li> </ul> </li> </ul>
<b>Literature</b>	Coastal Engineering Manual, CEM  Vorlesungsumdruck

Module M0962: Sustainability and Risk Management			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Safety, Reliability and Risk Assessment (L1145)	Seminar	2	3
Environment and Sustainability (L0319)	Lecture	2	3
<b>Module Responsible</b>	Prof. Kerstin Kuchta		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p>Students are able to describe single techniques and to give an overview for the field of safety and risk assessment as well as environmental and sustainable engineering, in detail:</p> <ul style="list-style-type: none"> <li>basics in safety and reliability of technical facilities</li> <li>safety and reliability analysis methods</li> <li>risk assessment</li> <li>Production and usage of bio-char</li> <li>energy production and supply</li> <li>sustainable product design</li> </ul> <p>Students are able apply interdisciplinary system-oriented methods for risk assessment and sustainability reporting. They can evaluate the effort and costs for processes and select economically feasible treatment concepts.</p> <p>Students can gain knowledge of the subject area from given sources and transform it to new questions. Furthermore, they can define targets for new application or research-oriented duties in for risk management and sustainability concepts accordance with the potential social, economic and cultural impact.</p>		
<i>Knowledge</i>			
<i>Skills</i>			
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can gain knowledge of the subject area from given sources and transform it to new questions. Furthermore, they can define targets for new application or research-oriented duties in for risk management and sustainability concepts accordance with the potential social, economic and cultural impact.		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written elaboration		
<b>Examination duration and scale</b>	Elaboration and presentation (45 minutes in groups)		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Water and Environmental Engineering: Core qualification: Compulsory		

Course L1145: Safety, Reliability and Risk Assessment	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Marco Ritzkowski
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	An introduction in safety and risk assessment is given and some typical problems of structural and environmental engineering are treated: <ul style="list-style-type: none"> <li>basics in safety and reliability of technical facilities</li> <li>safety and reliability analysis methods</li> <li>risk assessment</li> <li>practical examples and excursions</li> <li>discussions and presentations</li> </ul>
<b>Literature</b>	- Vorlesungsunterlagen - Schneider, J., Schlatter, H.P.: Sicherheit und Zuverlässigkeit im Bauwesen. <a href="http://www.risksafety.ch/files/sicherheit_und_zuverlaessigkeit.pdf">www.risksafety.ch/files/sicherheit_und_zuverlaessigkeit.pdf</a>

Course L0319: Environment and Sustainability	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Kerstin Kuchta
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>This course presents actual methodologies and examples of environmental relevant, sustainable technologies, concepts and strategies in the field of energy supply, product design, water supply, waste water treatment or mobility. The following list show examples.</p> <p>Production and Usage of Bio-char</p> <p>Energy production with algae</p> <p>Environmental product design</p> <p>Clean Development mechanism (CDM)</p> <p>Democracy and Energy</p> <p>New Concepts for a sustainable Energy Supply</p> <p>Recycling of Wind Turbines</p> <p>Alternative Mobility</p> <p>Disposal of Nuclear Wastes</p> <p>Waste2Energy</p> <p>Offshore Wind energy</p>
<b>Literature</b>	Wird in der Veranstaltung bekannt gegeben.

Module M0963: Steel and Composite Structures				
Courses				
Title	Typ	Hrs/wk	CP	
Steel and Composite Structures (L1204)	Lecture	2	2	
Steel and Composite Structures (L1205)	Recitation Section (large)	2	2	
Steel Bridges (L1097)	Lecture	2	2	
Module Responsible	Dr. Jürgen Priebe			
Admission Requirements	None			
Recommended Previous Knowledge	Basics of steel construction (i.e. Steel Structures I and II, BUBC)			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>After successful completion, students can</div> <ul style="list-style-type: none"><li>describe the phenomenon of local buckling</li><li>explain warping torsion</li><li>illustrate the behaviour of composite structures</li><li>specify the principles in design of composite structures</li><li>sketch the constructions of steel and composite bridges</li></ul> <div>After successful participation students are able to</div> <ul style="list-style-type: none"><li>check stiffened and unstiffened plated structures</li><li>recognize and verify warping torsion in structures</li><li>design composite structures</li><li>design bridges and o perform the detailing</li></ul>

Course L1097: Steel Bridges	
Typ	Lecture
Hrs/wk	2
CP	2
Workload in Hours	Independent Study Time 32, Study Time in Lecture 28
Lecturer	Dr. Jörg Ahlgrimm
Language	DE
Cycle	WiSe
Content	<p><b>Lecture Contents ,Steel Bridge Construction'</b>  <b>Dr.-Ing. Jörg Ahlgrimm</b></p> <ul style="list-style-type: none"> <li>- From tendering and contracting to completion - the development of a steel bridge</li> <li>- Contents of a bridge static - structural details, examples of analysis in detail:               <ul style="list-style-type: none"> <li>-&gt; effective width in regard to the longitudinal stiffeners</li> <li>-&gt; Bearing point, bearing stiffener</li> <li>-&gt; Crossbeam breakthrough, crossbeam reinforcement</li> <li>-&gt; Analysis of the Rib-to-Floorbeam (RF) connection (web-tooth of the floorbeam between trapezoidal shaped Ribs)</li> </ul> </li> <li>- Steel grades, -designation, testing methods and approval certificates</li> <li>- Nondestructive weld inspecting</li> <li>- Corrosion protection</li> <li>- Bridge bearing - types, format, function, dimensioning, installation</li> <li>- Expansion Joints</li> <li>- Oscillation of bridge hangers and cables - oscillation damper</li> <li>- Opening bridges- Detailed reviews to different assembling procedures and - implements</li> <li>- Selective damage events</li> </ul> <p>Requirements: Basic knowledge in the calculation, dimensioning, and construction of structural elements and joints of constructional steelwork</p>
Literature	<ul style="list-style-type: none"> <li>• Herbert Schmidt, Ulrich Schulte, Rainer Zwätz, Lothar Bär: Ausführung von Stahlbauten</li> <li>• Petersen, Christian: Stahlbau, Abschnitt Brückenbau</li> <li>• Ahlgrimm, J., Lohrer, I.: Erneuerung der Eisenbahnüberführung in Fulda-Horas über die Fulda, Stahlbau 74 (2005), Heft 2, S. 114</li> </ul>

Module M0964: Structures in Foundation and Hydraulic Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Steel Structures in Foundation and Hydraulic Engineering (L1146)	Lecture	2	3
Underground Constructions (L0707)	Lecture	1	2
Underground Constructions (L1811)	Recitation Section (large)	1	1
Module Responsible	Prof. Jürgen Grabe		
Admission Requirements	None		
Recommended Previous Knowledge	Modules from Bachelor studies Civil and environmental engineering: <ul style="list-style-type: none"><li>• Geotechnics I-II</li><li>• Steel Structures I-II</li></ul>		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence			
Knowledge	Knowledge of different tunnel construction types as well as special methods and techniques of subsoil construction. The students get deeper knowledge of steel and ground engineering as well as constructions knowledge concerning quay walls. Furthermore, the students get all the necessary knowledge to design singular construction elements for sheet pile walls and they know how to choose the right construction elements depending on the influencing conditions.		
Skills	Basic knowledge of tunnel design as well as practical skills in structural tunnel analysis. Furthermore, the students are able to dimension sheet pile wall construction regarding all construction elements, to choose the suitable construction elements with respect to the influencing conditions, to design all kinds of sheet pile walls (wave sheet pile walls and combined sheet pile walls) and to dimension all construction elements and connections.		
Personal Competence			
Social Competence	Capacity for teamwork concerning project management and design of tunnels.		
Autonomy	Promotion of independent and creative work flow in the framework of a design exercise.		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56		
Credit points	6		
Examination	Written exam		
Examination duration and scale	120 minutes		
Assignment for the Following Curricula	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Compulsory Civil Engineering: Specialisation Coastal Engineering: Compulsory International Management and Engineering: Specialisation II. Civil Engineering: Elective Compulsory		

Course L1146: Steel Structures in Foundation and Hydraulic Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Frank Feindt
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	Design of a sheet pile wall, design of a combined sheet pile wall, piles, walings, connections, fatigue
<b>Literature</b>	EAU 2012, EA-Pfähle, EAB

Course L0707: Underground Constructions	
<b>Typ</b>	Lecture

## Specialization II. Electrical Engineering

### Module M0712: Microwave Semiconductor Devices and Circuits I

#### Courses

Title	Typ	Hrs/wk	CP
Microwave Semiconductor Devices and Circuits I (L0580)	Lecture	3	4
Microwave Semiconductor Devices and Circuits I (L0581)	Recitation Section (large)	2	2
<b>Module Responsible</b>	Prof. Arne Jacob		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Electrical Engineering IV, Microwave Engineering, Fundamentals of Semiconductor Technology		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are capable of explaining the functionality of amplifier, mixer, and oscillator in detail. They can present theories, concepts, and reasonable assumptions for description and synthesis of these devices. They are able to apply thorough knowledge of semiconductor physics of selected microwave devices to amplifier, mixer, and oscillator. They can compare different devices with respect to various parameters (such as frequency range, power and efficiency).		
<i>Skills</i>	The students can assess occurring linear and nonlinear effects in active microwave circuits and are capable of analyzing and evaluating them. They are able to develop passive and active linear microwave circuits with the help of modern software-tools, taking application requirements into account.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to carry out subject-specific tasks in small groups, and to adequately present solutions (e.g. in CAD-Exercises).		
<i>Autonomy</i>	The students are able to obtain additional information from given literature sources and set the content in context with the lecture. They can link and deepen their knowledge of other courses, e.g., Electrical Engineering IV, Theoretical Engineering, Microwave Engineering, Semiconductor Devices. The students acquire the ability to communicate problems and solutions in the field of microwave semiconductor devices and circuits in English.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>			
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Microwave Engineering, Optics, and Electromagnetic Compatibility: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory		

#### Course L0580: Microwave Semiconductor Devices and Circuits I

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Arne Jacob

Module M0630: Robotics and Navigation in Medicine				
Courses				
Title		Type	Hrs/wk	CP
Robotics and Navigation in Medicine (L0335)		Lecture	2	3
Robotics and Navigation in Medicine (L0338)		Project Seminar	2	2
Robotics and Navigation in Medicine (L0336)		Recitation Section (small)	1	1
Module Responsible	Prof. Alexander Schlaefer			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>principles of math (algebra, analysis/calculus)</li><li>principles of programming, e.g., in Java or C++</li><li>solid R or Matlab skills</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	The students can explain kinematics and tracking systems in clinical contexts and illustrate systems and their components in details. Systems can be evaluated with respect to collision detection and safety and regulations. Students can assess typical systems regarding design and limitations.			
Skills	The students are able to design and evaluate navigation systems and robotic systems for medical applications.			
Personal Competence				
Social Competence	The students discuss the results of other groups, provide helpful feedback and can incorporate feedback into their work.			
Autonomy	The students can reflect their knowledge and document the results of their work. They can present the results in an appropriate manner.			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 minutes			
Assignment for the Following Curricula	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Bio- and Medical Technology: Elective Compulsory			

Course L0335: Robotics and Navigation in Medicine	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schläefer

Module M0548: Bioelectromagnetics: Principles and Applications			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Bioelectromagnetics: Principles and Applications (L0371)	Lecture	3	5
Bioelectromagnetics: Principles and Applications (L0373)	Recitation Section (small)	2	1
<b>Module Responsible</b>	Prof. Christian Schuster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic principles of physics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can explain the basic principles, relationships, and methods of bioelectromagnetics, i.e. the quantification and application of electromagnetic fields in biological tissue. They can define and exemplify the most important physical phenomena and order them corresponding to wavelength and frequency of the fields. They can give an overview over measurement and numerical techniques for characterization of electromagnetic fields in practical applications. They can give examples for therapeutic and diagnostic utilization of electromagnetic fields in medical technology.		
<i>Skills</i>	Students know how to apply various methods to characterize the behavior of electromagnetic fields in biological tissue. In order to do this they can relate to and make use of the elementary solutions of Maxwell's Equations. They are able to assess the most important effects that these models predict for biological tissue, they can order the effects corresponding to wavelength and frequency, respectively, and they can analyze them in a quantitative way. They are able to develop validation strategies for their predictions. They are able to evaluate the effects of electromagnetic fields for therapeutic and diagnostic applications and make an appropriate choice.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises).		
<i>Autonomy</i>	Students are capable to gather information from subject related, professional publications and relate that information to the context of the lecture. They are able to make a connection between their knowledge obtained in this lecture with the content of other lectures (e.g. theory of electromagnetic fields, fundamentals of electrical engineering / physics). They can communicate problems and effects in the field of bioelectromagnetics in English.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Oral exam		
<b>Examination duration and scale</b>	30-60 minutes		
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Microwave Engineering, Optics, and Electromagnetic Compatibility: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Module M0551: Pattern Recognition and Data Compression			
Courses			
Title	Typ	Hrs/wk	CP
Pattern Recognition and Data Compression (L0128)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	Students can name the basic concepts of pattern recognition and data compression.  Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.		
<i>Skills</i>	Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.		
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture and materials in StudIP		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory International Management and Engineering: Specialisation II. Information Technology: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L0128: Pattern Recognition and Data Compression	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Rolf-Rainer Grigat
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	Structure of a pattern recognition system, statistical decision theory, classification based on statistical models, polynomial regression, dimension reduction, multilayer perceptron regression, radial basis functions, support vector machines, unsupervised learning and clustering, algorithm-independent machine learning, mixture models and EM, adaptive basis function models and boosting, Markov random fields  Information, entropy, redundancy, mutual information, Markov processes, basic coding schemes (code length, run length coding, prefix-free codes), entropy coding (Huffman, arithmetic coding), dictionary coding (LZ77/Deflate/LZMA2, LZ78/LZW), prediction, DPCM, CALIC, quantization (scalar and vector quantization), transform coding, prediction, decorrelation (DPCM, DCT, hybrid DCT, JPEG, JPEG-LS), motion estimation, subband coding, wavelets, HEVC (H.265, MPEG-H)
<b>Literature</b>	Schürmann: Pattern Classification, Wiley 1996 Murphy, Machine Learning, MIT Press, 2012 Barber, Bayesian Reasoning and Machine Learning, Cambridge, 2012 Duda, Hart, Stork: Pattern Classification, Wiley, 2001 Bishop: Pattern Recognition and Machine Learning, Springer 2006  Salomon, Data Compression, the Complete Reference, Springer, 2000 Sayood, Introduction to Data Compression, Morgan Kaufmann, 2006 Ohm, Multimedia Communication Technology, Springer, 2004 Solari, Digital video and audio compression, McGraw-Hill, 1997 Tekalp, Digital Video Processing, Prentice Hall, 1995

Module M0918: Fundamentals of IC Design				
Courses				
Title		Typ	Hrs/wk	CP
Fundamentals of IC Design (L0766)		Lecture	2	3
Fundamentals of IC Design (L1057)		Laboratory Course	2	3
Module Responsible	Prof. Wolfgang Krautschneider			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of electrical engineering, electronic devices and circuits			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><ul style="list-style-type: none"><li>Students can explain the basic structure of the circuit simulator SPICE.</li><li>Students are able to describe the differences between the MOS transistor models of the circuit simulator SPICE.</li><li>Students can discuss the different concept for realization the hardware of electronic circuits.</li><li>Students can exemplify the approaches for "Design for Testability".</li><li>Students can specify models for calculation of the reliability of electronic circuits.</li></ul></div> <div><div>Skills</div><ul style="list-style-type: none"><li>Students can determine the input parameters for the circuit simulation program SPICE.</li><li>Students can select the most appropriate MOS modelling approaches for circuit simulations.</li><li>Students can quantify the trade-off of different design styles.</li><li>Students can determine the lot sizes and costs for reliability analysis.</li></ul></div> <div><div>Personal Competence</div><div>Social Competence</div><ul style="list-style-type: none"><li>Students can compile design studies by themselves or together with partners.</li><li>Students are able to select the most efficient design methodology for a given task.</li><li>Students are able to define the work packages for design teams.</li></ul></div> <div><div>Autonomy</div><ul style="list-style-type: none"><li>Students are able to assess the strengths and weaknesses of their design work in a self-contained manner.</li><li>Students can name and bring together all the tools required for total design flow.</li></ul></div>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Oral exam			
Examination duration and scale	40 min			
Assignment for the Following Curricula	Electrical Engineering: Specialisation Nanoelectronics and Microsystems Technology: Elective Compulsory International Management and Engineering: Specialisation II. Module M0673: Information Theory and Coding				
Courses				
Title	Typ		Hrs/wk	CP
Information Theory and Coding (L0436)	Lecture		3	4
Information Theory and Coding (L0438)	Recitation Section (large)		1	2
<b>Module Responsible</b>	Prof. Gerhard Bauch			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>Mathematics 1-3</li> <li>Probability theory and random processes</li> <li>Basic knowledge of communications engineering (e.g. from lecture "Fundamentals of Communications and Random Processes")</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students know the basic definitions for quantification of information in the sense of information theory. They know Shannon's source coding theorem and channel coding theorem and are able to determine theoretical limits of data compression and error-free data transmission over noisy channels. They understand the principles of source coding as well as error-detecting and error-correcting channel coding. They are familiar with the principles of decoding, in particular with modern methods of iterative decoding. They know fundamental coding schemes, their properties and decoding algorithms.</p> <p><i>Skills</i> The students are able to determine the limits of data compression as well as of data transmission through noisy channels and based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the properties of basic channel coding and decoding schemes regarding error correction capabilities, decoding delay, decoding complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in software.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

Module M0710: Microwave Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Microwave Engineering (L0573)	Lecture		2	3
Microwave Engineering (L0574)	Recitation Section (large)		2	2
Microwave Engineering (L0575)	Laboratory Course		1	1
<b>Module Responsible</b>	Prof. Arne Jacob			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Fundamentals of communication engineering, semiconductor devices and circuits. Basics of Wave propagation from transmission line theory and theoretical electrical engineering.			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students can explain the propagation of electromagnetic waves and related phenomena. They can describe transmission systems and components. They can name different types of antennas and describe the main characteristics of antennas. They can explain noise in linear circuits, compare different circuits using characteristic numbers and select the best one for specific scenarios.			
<i>Skills</i>	Students are able to calculate the propagation of electromagnetic waves. They can analyze complete transmission systems und configure simple receiver circuits. They can calculate the characteristic of simple antennas and arrays based on the geometry. They can calculate the noise of receivers and the signal-to-noise-ratio of transmission systems. They can apply their theoretical knowledge to the practical courses.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students work together in small groups during the practical courses. Together they document, evaluate and discuss their results.			
<i>Autonomy</i>	Students are able to relate the knowledge gained in the course to contents of previous lectures. With given instructions they can extract data needed to solve specific problems from external sources. They are able to apply their knowledge to the laboratory courses using the given instructions.

Module M0676: Digital Communications				
Courses				
Title		Typ	Hrs/wk	CP
Digital Communications (L0444)		Lecture	2	3
Digital Communications (L0445)		Recitation Section (large)	1	2
Laboratory Digital Communications (L0646)		Laboratory Course	1	1
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>• Mathematics 1-3</li><li>• Signals and Systems</li><li>• Fundamentals of Communications and Random Processes</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.</p> <p><i>Skills</i> The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>

## Specialization II. Energy and Environmental Engineering

### Module M0511: Electricity Generation from Wind and Hydro Power

#### Courses

Title	Typ	Hrs/wk	CP
Renewable Energy Projects in Emerged Markets (L0014)	Project Seminar	1	1
Hydro Power Use (L0013)	Lecture	1	1
Wind Turbine Plants (L0011)	Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)	Lecture	1	1

<b>Module Responsible</b>	Dr. Joachim Gerth
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.  Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.
<i>Skills</i>	Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can discuss scientific tasks subject-specificly and multidisciplinary within a seminar.
<i>Autonomy</i>	Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Courses				
Title		Type	Hrs/wk	CP
Wastewater Systems - Collection, Treatment and Reuse (L0934)		Lecture	2	2
Wastewater Systems - Collection, Treatment and Reuse (L0943)		Recitation Section (large)	1	1
Advanced Wastewater Treatment (L0357)		Lecture	2	2
Advanced Wastewater Treatment (L0358)		Recitation Section (large)	1	1
Module Responsible	Prof. Ralf Otterpohl			
Admission Requirements	None			
Recommended Previous Knowledge	Knowledge of wastewater management and the key processes involved in wastewater treatment.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Students are able to outline key areas of the full range of treatment systems in waste water management, as well as their mutual dependence for sustainable water protection. They can describe relevant economic, environmental and social factors.</div> <div>Students are able to pre-design and explain the available wastewater treatment processes and the scope of their application in municipal and for some industrial treatment plants.</div> <div>Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.</div>

Module M0512: Use of Solar Energy				
Courses				
Title		Typ	Hrs/wk	CP
Collector Technology (L0018)		Lecture	2	2
Solar Power Generation (L0015)		Lecture	2	2
Radiation and Optic (L0016)		Lecture	1	1
Radiation and Optic (L0017)		Recitation Section (small)	1	1
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	none			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	With the completion of this module, students will be able to deal with technical foundations and current issues and problems in the field of solar energy and explain and evaluate these critically in consideration of the prior curriculum and current subject specific issues. In particular they can professionally describe the processes within a solar cell and explain the specific features of application of solar modules. Furthermore, they can provide an overview of the collector technology in solar thermal systems.  Students can apply the acquired theoretical foundations of exemplary energy systems using solar radiation. In this context, for example they can assess and evaluate potential and constraints of solar energy systems with respect to different geographical assumptions. They are able to dimension solar energy systems in consideration of technical aspects and given assumptions. Using module-comprehensive knowledge students can evaluate the economic and ecologic conditions of these systems. They can select calculation methods within the radiation theory for these topics.  Students can independently exploit sources and acquire the particular knowledge about the subject area with respect to emphasis to the lectures. Furthermore, with the assistance of lecturers, they can discrete use calculation methods for analysing and dimensioning solar energy systems. Based on this procedure they can concrete assess their specific learning level and can consequently define the further workflow.

Module M0513: System Aspects of Renewable Energies			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Energy Trading (L0019)	Lecture	1	1
Energy Trading (L0020)	Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I Module: Technical Thermodynamics II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.</p> <p>Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.</p> <p>Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energy markets and energy trades.</p> <p>Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p>Students can independently exploit sources, acquire the particular knowledge about the subject area and transform it to new questions.</p>

Module M0641: Steam Generators				
Courses				
Title		Typ	Hrs/wk	CP
Steam Generators (L0213)		Lecture	3	5
Steam Generators (L0214)		Recitation Section (large)	1	1
Module Responsible		Prof. Alfons Kather		
Admission Requirements		None		
Recommended Previous Knowledge		<ul style="list-style-type: none"><li>• "Technical Thermodynamics I and II"</li><li>• "Heat Transfer"</li><li>• "Fluid Mechanics"</li><li>• "Steam Power Plants"</li></ul>		
Educational Objectives		After taking part successfully, students have reached the following learning results		
Professional Competence		<p>The students outline the steam thermodynamics and the technical types of steam generators. They are in a position to describe the basic principles of steam generators and highlight the combustion and fuel supply aspects of fossil-fuelled power plants. They can perform thermal design calculations and conceive the water-steam side, as well as determine the constructive details of the steam generator. The students can describe and evaluate the operational behaviour of steam generators and explain these also in the context of related disciplines.</p> <p>The students will be able, using detailed knowledge on the calculation, design and construction of steam generators linked with a wide theoretical and methodical foundation, to understand the main design and construction aspects of steam generators. Through problem definition and formulation, modelling of processes and training in the solution methodology for partial problems they obtain a good overview of this key component of the power plant.</p> <p>Within the framework of the exercise the students obtain the ability to draw the balances and dimension the steam generator and its components. For this purpose small but close to reality tasks are solved, to highlight aspects of the design of steam generators.</p> <p>An excursion within the framework of the lecture is planned for those students that are interested. In this come the students in direct contact with the whole subject field of gas and steam generators. Through discussions with the plant personnel they obtain an overview of the daily operation problems and their solution approach.</p> <p>The students assisted by the tutors will be able to develop alone basic calculations covering partial aspects of the steam generator. In this manner the theoretical and practical knowledge from the lecture is consolidated and the potential effects from different process schemata and boundary conditions highlighted.</p>

Module M0721: Air Conditioning				
Courses				
Title	Typ		Hrs/wk	CP
Air Conditioning (L0594)	Lecture		3	5
Air Conditioning (L0595)	Recitation Section (large)		1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a $h_1+x,x$ -diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.			
<i>Skills</i>	Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.

Module M1000: Combined Heat and Power and Combustion Technology				
Courses				
Title		Typ	Hrs/wk	CP
Combined Heat and Power and Combustion Technology (L0216)		Lecture	3	5
Combined Heat and Power and Combustion Technology (L0220)		Recitation Section (large)	1	1
Module Responsible		Prof. Alfons Kather		
Admission Requirements		None		
Recommended Previous Knowledge		<ul style="list-style-type: none"><li>• "Gas-Steam Power Plants"</li><li>• "Technical Thermodynamics I and II"</li><li>• "Heat Transfer"</li><li>• "Fluid Mechanics"</li></ul>		
Educational Objectives		After taking part successfully, students have reached the following learning results		
Professional Competence		<p><i>Knowledge</i></p> <p>The students outline the thermodynamic and chemical fundamentals of combustion processes. From the knowledge of the characteristics and reaction kinetics of various fuels they can describe the behaviour of premixed flames and non-premixed flames, in order to describe the fundamentals of furnace design in gas-, oil- and coal combustion plant. The students are furthermore able to describe the formation of NO<sub>x</sub> and the primary NO<sub>x</sub> reduction measures, and evaluate the impact of regulations and allowable limit levels.</p> <p>The students present the layout, design and operation of Combined Heat and Power plants and are in a position to compare with each other district heating plants with back-pressure steam turbine or condensing turbine with pressure-controlled extraction tapping, CHP plants with gas turbine or with combined steam and gas turbine, or even district heating plants with an internal combustion engine. They can explain and analyse aspects of combined heat, power and cooling (CCHP) and describe the layout of the key components needed. Through this specialised knowledge they are able to evaluate the ecological significance of district CHP generation, as well as its economics.</p> <p><i>Skills</i></p> <p>Using thermodynamic calculations and considering the reaction kinetics the students will be able to determine interdisciplinary correlations between thermodynamic and chemical processes during combustion. This then enables quantitative analysis of the combustion of gaseous, liquid and solid fuels and determination of the quantities and concentrations of the exhaust gases. In this module the first step toward the utilisation of an energy source (combustion) to provide usable energy (electricity and heat) is taught. An understanding of both procedures enables the students to holistically consider energy utilisation. Examples taken from the praxis, such as the CHP energy supply facility of the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction.</p> <p>Within the framework of the exercises the students will first learn to calculate the energetic and mass balances of combustion processes. Moreover, the students will gain a deeper understanding of the combustion processes by the calculation of reaction kinetics and fundamentals of burner design. In order to perform further analyses they will familiarise themselves to the specialised software suite EBSILON Professional™. With this tool small and close to reality tasks are solved on the PC, to highlight aspects of the design and balancing of heating plant cycles. In addition CHP will also be considered in its economic and social contexts.</p>

## Module M1037: Nuclear Power Plants and Steam Turbines

### Courses

Title	Typ	Hrs/wk	CP
Steam Turbines in Renewable and Conventional Applications (L1286)	Lecture	2	2
Steam Turbines in Renewable and Conventional Applications (L1287)	Recitation Section (small)	1	1
Basics of Nuclear Power Plants (L1283)	Lecture	2	2
Basics of Nuclear Power Plants (L1285)	Recitation Section (small)	1	1

<b>Module Responsible</b>	Prof. Alfons Kather
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	<p>For the part "Steam Turbines":</p> <ul style="list-style-type: none"> <li>• "Gas and Steam Power Plants"</li> <li>• "Technical Thermodynamics I &amp; II"</li> </ul> <p>For the part "Basics of Nuclear Power Plants" knowledge of:</p> <ul style="list-style-type: none"> <li>• Thermodynamics</li> <li>• Fluid Mechanics</li> <li>• Gas-Steam Power Plants</li> </ul> <p>is required</p>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>	<p>After successful completion of the part "Steam Turbines" of the module the students must be in a position to:</p> <ul style="list-style-type: none"> <li>• name and identify the various constructive sections and groups of steam turbines</li> <li>• describe and explain the key operating conditions for the application of steam turbines</li> <li>• classify different construction types and differentiate among steam turbines according to size and operating ranges</li> <li>• describe the thermodynamic processes and the constructive and operational repercussions resulting from the latter</li> <li>• calculate thermodynamically a turbine stage and a stage grouping</li> <li>• calculate or estimate and evaluate further sections of the turbine</li> <li>• outline diagrams describing the operating range and the constructive characteristics</li> <li>• investigate the constructive aspects and develop from the thermodynamic requirements the required construction characteristics</li> <li>• discuss and argue on the operation characteristics of different turbine types</li> <li>• evaluate thermodynamically the integration of different turbine designs in heat cycles.</li> </ul> <p>In the part of the module "Basics of Nuclear Power Plants" the students gain an overview of the safety requirements for the design, construction and operation of nuclear power plants.</p> <p>Students of various study programmes, who wish to specialise in the field of nuclear power engineering in future, are introduced to the special requirements of the nuclear power technology, which are important for the perception of this field.</p> <p>After successful completion of this part of the module the students acquire the following skills:</p> <ul style="list-style-type: none"> <li>• Know the fundamental physical processes for the energetic use of nuclear energy, which extends up to using nuclear fission in a regulated reactor</li> <li>• Know the physical and technical features of different reactor types</li> <li>• Know the construction of a nuclear plant for electricity generation</li> <li>• Understand and elucidate the heat generation in the fuel rods and the heat transfer to the cooling medium of the nuclear reactor (reactor thermodynamics)</li> <li>• Understand and explain the concepts for regulating water cooled reactors</li> <li>• Comprehend the concepts behind the safety systems that safeguard the necessary reliability and the fundamental constructive features of existing and new nuclear power plants</li> <li>• Understand the basic technical safety requirements on component integrity and their verification under long-term operation.</li> </ul>
<b>Skills</b>	<p>In the part of the module "Steam Turbines" the students learn the fundamental approaches and methods for the design and operational evaluation of complex plant and gain confidence in seeking optimisations.</p> <p>In the part of the module "Basics of Nuclear Power Plants" the students:</p> <ul style="list-style-type: none"> <li>• obtain the ability to estimate the potential of nuclear power generation from an economical and technical standpoint in comparison to fossil plants</li> <li>• can evaluate the performance and technical limitations in using nuclear power plants for supplying the electric grid both with base-load electricity and regulating energy</li> <li>• can judge the hazards from radioactive radiation and the behaviour of radioactive elements based on the tables of nuclides</li> <li>• can evaluate the effectiveness of safety systems against various failure events being considered</li> <li>• from knowledge obtained on the impact of power plant operation on component integrity can identify the requirements aiming at failure prevention</li> <li>• can define the fundamental repercussions for design and management of nuclear power plants on the basis of the overlaying requirements of the technical nuclear Regulations.</li> </ul>
<b>Personal Competence</b> <i>Social Competence</i>	<p>In the part of the module "Steam Turbines" the students learn:</p> <ul style="list-style-type: none"> <li>• to work together with others whilst seeking a solution</li> <li>• to assist each other in problem solving.</li> </ul>

<i>Autonomy</i>	In the part of the module "Basics of Nuclear Power Plants" the students learn to: <ul style="list-style-type: none"> <li>• participate in discussions</li> <li>• present results</li> <li>• work together in a team.</li> </ul>
	In the part of the module "Steam Turbines" the students learn the independent working of a complex theme whilst considering various aspects. They also learn how to carry independently single functions in a system combination.
	In the part of the module "Basics of Nuclear Power Plants" the students become the ability to gain independently knowledge and transfer it also to new problem solving.
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	180 min
<b>Assignment for the Following Curricula</b>	Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory

Course L1286: Steam Turbines in Renewable and Conventional Applications	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Christian Scharfetter
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Construction Aspects of a Steam Turbine</li> <li>• Energy Conversion in a Steam Turbine</li> <li>• Construction Types of Steam Turbines</li> <li>• Behaviour of Steam Turbines</li> <li>• Sealing Systems for Steam Turbines</li> <li>• Axial Thrust</li> <li>• Regulation of Steam Turbines</li> <li>• Stiffness Calculation of the Blades</li> <li>• Blade and Rotor Oscillations</li> <li>• Fundamentals of a Safe Steam Turbine Operation</li> <li>• Application in Conventional and Renewable Power Stations</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Traupel, W.: Thermische Turbomaschinen. Module M0801: Water Resources and -Supply			
Courses			
Title	Typ	Hrs/wk	CP
Chemistry of Drinking Water Treatment (L0311)	Lecture	2	1
Chemistry of Drinking Water Treatment (L0312)	Recitation Section (large)	1	2
Water Resource Management (L0402)	Lecture	2	2
Water Resource Management (L0403)	Recitation Section (small)	1	1
<b>Module Responsible</b>	Prof. Mathias Ernst		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of water management and the key processes involved in water treatment.		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application.</p> <p><i>Skills</i> Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> Working in a diverse group of specialists, students will be able to develop and document complex solutions for the management and treatment of drinking water. They will be able to take an appropriate professional position, for example representing user interests. They will be able to develop joint solutions in teams of diverse experts and present these solutions to others.</p> <p><i>Autonomy</i> Students will be in a position to work on a subject independently and present on this subject.</p>		
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 min (chemistry) + presentation		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Specialisation Structural Engineering: Elective Compulsory Civil Engineering: Specialisation Geotechnical Engineering: Elective Compulsory Civil Engineering: Specialisation Coastal Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Water: Compulsory Water and Environmental Engineering: Specialisation Environment: Elective Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory		

Course L0311: Chemistry of Drinking Water Treatment	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 2, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Klaus Johannsen
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The topic of this course is water chemistry with respect to drinking water treatment and water distribution</p> <p>Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards).</p> <p>Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework.</p> <p>Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester.</p>
<b>Literature</b>	<p><b>MHW (rev. by Crittenden, J. et al.):</b> Water treatment principles and design. John Wiley &amp; Sons, Hoboken, 2005.</p> <p><b>Stumm, W., Morgan, J.J.:</b> Aquatic chemistry. Course L0203: Air Pollution Abatement	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Ernst-Ulrich Hartge
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants from flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators.
<b>Literature</b>	Handbook of air pollution prevention and control, Nicholas P. Cheremisinoff. - Amsterdam [u.a.] : Butterworth-Heinemann, 2002 Atmospheric pollution : history, science, and regulation, Mark Zachary Jacobson. - Cambridge [u.a.] : Cambridge Univ. Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0942)	Seminar	2	3
Rural Development and Resources Oriented Sanitation for different Climate Zones (L0941)	Lecture	2	3
<b>Module Responsible</b>	Prof. Ralf Otterpohl		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Basic knowledge of the global situation with rising poverty, soil degradation, lack of water resources and sanitation		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can describe resources oriented wastewater systems mainly based on source control in detail. They can comment on techniques designed for reuse of water, nutrients and soil conditioners.  Students are able to discuss a wide range of proven approaches in Rural Development from and for many regions of the world.		
<i>Skills</i>	Students are able to design low-tech/low-cost sanitation, rural water supply, rainwater harvesting systems, measures for the rehabilitation of top soil quality combined with food and water security. Students can consult on the basics of soil building through "Holistic Planned Grazing" as developed by Allan Savory.		
<b>Personal Competence</b>			
<i>Social Competence</i>			
<i>Autonomy</i>	Students are in a position to work on a subject and to organize their work flow independently. They can also present on this subject.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Project		
<b>Examination duration and scale</b>	During the course of the semester, the students work towards mile stones. The work includes presentations and papers. Detailed information will be provided at the beginning of the semester.		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory Environmental Engineering: Specialisation Water: Elective Compulsory International Management and Engineering: Specialisation II. Module M0540: Transport Processes				
Courses				
Title		Typ	Hrs/wk	CP
Multiphase Flows (L0104)		Lecture	2	2
Reactor Design Using Local Transport Processes (L0105)		Problem-based Learning	2	2
Heat & Mass Transfer in Process Engineering (L0103)		Lecture	2	2
Module Responsible	Prof. Michael Schlüter			
Admission Requirements	None			
Recommended Previous Knowledge	All lectures from the undergraduate studies, especially mathematics, chemistry, thermodynamics, fluid mechanics, heat- and mass transfer.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Students are able to:</div> <ul style="list-style-type: none"><li>describe transport processes in single- and multiphase flows and they know the analogy between heat- and mass transfer as well as the limits of this analogy.</li><li>explain the main transport laws and their application as well as the limits of application.</li><li>describe how transport coefficients for heat- and mass transfer can be derived experimentally.</li><li>compare different multiphase reactors like trickle bed reactors, pipe reactors, stirring tanks and bubble column reactors.</li><li>are known. The Students are able to perform mass and energy balances for different kind of reactors. Further more the industrial application of multiphase reactors for heat- and mass transfer are known.</li></ul> <div>The students are able to:</div> <ul style="list-style-type: none"><li>optimize multiphase reactors by using mass- and energy balances,</li><li>use transport processes for the design of technical processes,</li><li>to choose a multiphase reactor for a specific application.</li></ul>			
Knowledge				
Skills				
Personal Competence				
Social Competence	The students are able to discuss in international teams in english and develop an approach under pressure of time.			
Autonomy	Students are able to define independently tasks, to solve the problem "design of a multiphase reactor". The knowledge that s necessary is worked out by the students themselves on the basis of the existing knowledge from the lecture. The students are able to decide by themselves what kind of equation and model is applicable to their certain problem. They are able to organize their own team and to define priorities for different tasks.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Examination	Colloquium			
Examination duration and scale	15 min Presentation + 90 min multiple choice written examen			
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Process Engineering: Core qualification: Compulsory

Module M1125: Bioresources and Biorefineries				
Courses				
Title		Type	Hrs/wk	CP
Biorefinery Technology (L0895)		Lecture	2	2
Biorefinery Technologie (L0974)		Recitation Section (small)	1	1
Bioresource Management (L0892)		Lecture	2	2
Bioresource Management (L0893)		Recitation Section (small)	1	1
Module Responsible	Dr. Ina Körner			
Admission Requirements	None			
Recommended Previous Knowledge	Basics on engineering; Basics of waste and energy management			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students can give an overview on principles and theories in the field's bioresource management and biorefinery technology and can explain specialized terms and technologies.			
Skills	Students are capable of applying knowledge and know-how in the field's bioresource management and biorefinery technology in order to perform technical and regional-planning tasks. They are also able to discuss the links to waste management, energy management and biotechnology.			
Personal Competence				
Social Competence	Students can work goal-oriented with others and communicate and document their interests and knowledge in acceptable way.			
Autonomy	Students are able to solve independently, with the aid of pointers, practice-related tasks bearing in mind possible societal consequences.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Ina Körner
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The Europe 2020 strategy calls for bioeconomy as the key for smart and green growth of today. Biorefineries are the fundamental part on the way to convert the use of fossil-based society to bio-based society. For this reason, agriculture and forestry sectors are increasingly deliver bioresources. It is not only for their traditional applications in the food and feed sectors such as pulp or paper and construction material productions, but also to produce bioenergy and bio-based products such as bio-plastics. However although bioresources are renewable, they are considered as limited resources as well. The bioeconomy's limitation factor is the availability land on our world. In the context of the development of the bioeconomy, the sustainable and reliable supply of non-food biomass feedstock is a critical success factor for the long-term perspective of bioenergy and other bio-based products production. Biorefineries are complex of technologies and process cascades using the available primary, secondary and tertiary bioresources to produce a multitude of products - a product mix from material and energy products.</p> <p>The lecture gives an overview on biorefinery technology and shall contribute to promotion of international biorefinery developments.</p> <p>Lectures:</p> <ul style="list-style-type: none"> <li>• What is a biorefinery: Overview on basic organic substrates and processes which lead to material and energy products</li> <li>• The way from a fossil based to a biobased economy in the 21st century</li> <li>• The worlds most advanced biorefinery</li> <li>• Presentation of various biorefinery systems and their products (e.g. lignocellulose biorefinery, green biorefinery, whole plant biorefinery, civilization biorefinery)</li> <li>• Example projects (e.g. combination of anaerobic digestion and composting in practice; demonstration project in Hamburgs city quarter Jenfelder Au)</li> </ul> <p>The lectures will be accompanied by technical tours. Optional it is also possible to visit more biorefinery lectures in the University of Hamburg (lectures in German only).</p> <p>In the exercise students have the possibility to work in groups on a biorefinery project or to work on a student-specific task.</p>
<b>Literature</b>	<p>Biorefineries - Industrial Process and Products - Status Qua and Future directions by Kamm, Gruber and Kamm (2010); Wiley VCH, available on-line in TUHH-library</p> <p>Powerpoint-Präsentations / selected Publications / further recommendations depending on the actual developments</p> <p>Industrial Biorefineries and White Biorefinery, by Pandey, Höfer, Larroche, Taherzadeh, Nampoothiri (Eds.); (2014 book development in progress)</p>

<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Ina Körner
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>In the context of limited fossil resources, climate change mitigation and increasing population growth, Bioresources has a special role. They have to feed the population and in the same time they are important for material production such as pulp and paper or construction materials. Moreover they become more and more important in chemical industry and in energy provision as fossil substitution. Although Bioresources are renewable, they are also considered as limited resources. The availability of land on our planet is the main limitation factor. The sustainable and reliable supply of non-food biomass feedstock is a critical for successful and long term perspective on production of bioenergy and other bio-based products. As the consequence, the increasing competition and shortages continue to happen at the traditional sectors. On the other side, huge unused but potentials residue on waste and wastewater sector exist. Nowadays, a lot of activities to develop better processes, to create new bio-based products in order to become more efficient, the inclusion of secondary and tertiary bio-resources in the valorisation chain are going on.</p> <p>The lecture deals with the current state-of-the-art of bioresource management. It shows deficits and potentials for improvement especially in the sector of utilization of organic residues for material and energy generation:</p> <p><i>Lectures on:</i></p> <ul style="list-style-type: none"> <li>• Bioresource generation and utilization including lost potentials today</li> <li>• Basic biological, mechanical, physico-chemical and logistical processes</li> <li>• The conflict of material vs. energy generation from wood / waste wood</li> <li>• The basics of pulp &amp; paper production including waste paper recycling</li> <li>• The Pros and Cons from biogas and compost production</li> </ul> <p><i>Special lectures by invited guests from research and practice:</i></p> <ul style="list-style-type: none"> <li>• Pathways of waste organics on the example of Hamburg's City Cleaning Company</li> <li>• Utilization options of landscaping materials on the example of grass</li> <li>• Increase of process efficiency of anaerobic digestions</li> <li>• Decision support tools on the example of an municipality in Indonesia</li> </ul> <p><i>Optional: Technical visits</i></p>

Module M0542: Fluid Mechanics in Process Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Applications of Fluid Mechanics in Process Engineering (L0106)	Recitation Section (large)	2	2
Fluid Mechanics II (L0001)	Lecture	2	4
<b>Module Responsible</b>	Prof. Michael Schlüter		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics I-III</li> <li>• Fundamentals in Fluid Mechanics</li> <li>• Technical Thermodynamics I-II</li> <li>• Heat- and Mass Transfer</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe different applications of fluid mechanics in Process Engineering, Bioprocess Engineering, Energy- and Environmental Process Engineering and Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity in an example of free jets, empirical solutions in an example with the Forchheimer equation, numerical methods in an example of Large Eddy Simulation.</p> <p><i>Skills</i> Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i> The students are able to discuss a given problem in small groups and to develop an approach.</p> <p><i>Autonomy</i> Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.</p>

Module M0619: Waste Treatment Technologies				
Courses				
Title	Typ		Hrs/wk	CP
Waste and Environmental Chemistry (L0328)	Laboratory Course		2	2
Biological Waste Treatment (L0318)	Problem-based Learning		3	4
<b>Module Responsible</b>	Prof. Kerstin Kuchta			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	chemical and biological basics			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The module aims possess knowledge concerning the planning of biological waste treatment plants. Students are able to explain the design and layout of anaerobic and aerobic waste treatment plants in detail, describe different techniques for waste gas treatment plants for biological waste treatment plants and explain different methods for waste analytics.			
<i>Skills</i>	The students are able to discuss the compilation of design and layout of plants. They can critically evaluate techniques and quality control measurements. The students can recherché and evaluate literature and date connected to the tasks given in der module and plan additional tests. They are capable of reflecting and evaluating findings in the group.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development in front of colleagues. Furthermore, they can give and accept professional constructive criticism.			
<i>Autonomy</i>	Students can independently tap knowledge from literature, business or test reports and transform it to the course projects. They are capable, in consultation with supervisors as well as in the interim presentation, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70

Module M0742: Thermal Engineering				
Courses				
Title		Typ	Hrs/wk	CP
Thermal Engineering (L0023)		Lecture	3	5
Thermal Engineering (L0024)		Recitation Section (large)	1	1
Module Responsible	Prof. Gerhard Schmitz			
Admission Requirements	None			
Recommended Previous Knowledge	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar with German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic and industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transient temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how to conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages.			
Skills	Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They are able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can write Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field of thermal engineering.			
Personal Competence				
Social Competence	The students are able to discuss in small groups and develop an approach.			
Autonomy	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	60 min			
Assignment for the Following Curricula	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy Engineering: Elective Compulsory Energy Systems: Specialisation Energy Systems: Compulsory Energy Systems: Specialisation Marine Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Renewable Energies: Core qualification: Compulsory Theoretical Mechanical Engineering: Specialisation Energy Systems: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory			

Course L0023: Thermal Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	5
<b>Workload in Hours</b>	Independent Study Time 108, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Gerhard Schmitz
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	1. Introduction 2. Fundamentals of Thermal Engineering 2.1 Heat Conduction 2.2 Convection 2.3 Radiation 2.4 Heat transition 2.5 Combustion parameters 2.6 Electrical heating 2.7 Water vapor transport 3. Heating Systems 3.1 Warm water heating systems 3.2 Warm water supply 3.3 piping calculation 3.4 boilers, heat pumps, solar collectors 3.5 Air heating systems 3.6 radiative heating systems 4. Thermal treatment systems 4.1 Industrial furnaces 4.2 Melting furnaces 4.3 Drying plants 4.4 Emission control 4.5 Chimney calculation 4.6 Energy measuring 5. Laws and standards 5.1 Buildings 5.2 Industrial plants

## Specialization II. Information Technology

### Module M0551: Pattern Recognition and Data Compression

#### Courses

Title	Typ	Hrs/wk	CP
Pattern Recognition and Data Compression (L0128)	Lecture	4	6
<b>Module Responsible</b>	Prof. Rolf-Rainer Grigat		
<b>Admission Requirements</b>			
<b>Recommended Previous Knowledge</b>	Linear algebra (including PCA, unitary transforms), stochastics and statistics, binary arithmetics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	<p>Students can name the basic concepts of pattern recognition and data compression.</p> <p>Students are able to discuss logical connections between the concepts covered in the course and to explain them by means of examples.</p> <p>Students can apply statistical methods to classification problems in pattern recognition and to prediction in data compression. On a sound theoretical and methodical basis they can analyze characteristic value assignments and classifications and describe data compression and video signal coding. They are able to use highly sophisticated methods and processes of the subject area. Students are capable of assessing different solution approaches in multidimensional decision-making areas.</p> <p>Students are capable of identifying problems independently and of solving them scientifically, using the methods they have learnt.</p>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	60 Minutes, Content of Lecture and materials in StudIP		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Information and Communication Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory Information and Communication Systems: Specialisation Secure and Dependable IT Systems, Focus Software and Signal Processing: Elective Compulsory Information and Communication Systems: Specialisation Communication Systems, Focus Signal Processing: Elective Compulsory International Management and Engineering: Specialisation II. Module M0627: Machine Learning and Data Mining				
Courses				
Title		Typ	Hrs/wk	CP
Machine Learning and Data Mining (L0340)		Lecture	2	4
Machine Learning and Data Mining (L0510)		Recitation Section (small)	2	2
Module Responsible	NN			
Admission Requirements				
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>Calculus</li><li>Stochastics</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i></p> <p>Students can explain the difference between instance-based and model-based learning approaches, and they can enumerate basic machine learning technique for each of the two basic approaches, either on the basis of static data, or on the basis of incrementally incoming data . For dealing with uncertainty, students can describe suitable representation formalisms, and they explain how axioms, features, parameters, or structures used in these formalisms can be learned automatically with different algorithms. Students are also able to sketch different clustering techniques. They depict how the performance of learned classifiers can be improved by ensemble learning, and they can summarize how this influences computational learning theory. Algorithms for reinforcement learning can also be explained by students.</p> <p><i>Skills</i></p> <p>Student derive decision trees and, in turn, propositional rule sets from simple and static data tables and are able to name and explain basic optimization techniques. They present and apply the basic idea of first-order inductive leaning. Students apply the BME, MAP, ML, and EM algorithms for learning parameters of Bayesian networks and compare the different algorithms. They also know how to carry out Gaussian mixture learning. They can contrast kNN classifiers, neural networks, and support vector machines, and name their basic application areas and algorithmic properties. Students can describe basic clustering techniques and explain the basic components of those techniques. Students compare related machine learning techniques, e.g., k-means clustering and nearest neighbor classification. They can distinguish various ensemble learning techniques and compare the different goals of those techniques.</p>

Module M0733: Software Analysis				
Courses				
Title	Typ		Hrs/wk	CP
Software Analysis (L0631)	Lecture		2	3
Software Analysis (L0632)	Recitation Section (small)		2	3
<b>Module Responsible</b>	Prof. Sibylle Schupp			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Basic knowledge of software-engineering activities</li> <li>• Discrete algebraic structures</li> <li>• Object-oriented programming, algorithms, and data structures</li> <li>• Functional programming or Procedural programming</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students apply the major approaches to data-flow analysis, control-flow analysis, and type-based analysis, along with their classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show termination and soundness properties.</p> <p><i>Skills</i> Presented with an analytical task for a software artifact, students select appropriate approaches from software analysis, and justify their choice. They design suitable representations by modifying standard representations. They develop customized analyses and devise them as safe overapproximations. They formulate analyses in a formal way and construct arguments for their correctness, behavior, and precision.</p> <p><i>Personal Competence</i> Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.</p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software analysis. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.</p>

Module M0629: Intelligent Autonomous Agents and Cognitive Robotics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Intelligent Autonomous Agents and Cognitive Robotics (L0341)	Lecture	2	4
Intelligent Autonomous Agents and Cognitive Robotics (L0512)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Rainer Marrone		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Vectors, matrices, Calculus		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students can explain the agent abstraction, define intelligence in terms of rational behavior, and give details about agent design (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques.		
<i>Skills</i>	Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply basic optimization techniques. For those applications they can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states, e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to discuss their solutions to problems with others. They communicate in English		
<i>Autonomy</i>	Students are able of checking their understanding of complex concepts by solving variants of concrete problems		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Digital Communications (L0444)		Lecture	2	3
Digital Communications (L0445)		Recitation Section (large)	1	2
Laboratory Digital Communications (L0646)		Laboratory Course	1	1
Module Responsible	Prof. Gerhard Bauch			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>Mathematics 1-3</li><li>Signals and Systems</li><li>Fundamentals of Communications and Random Processes</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<p><i>Knowledge</i> The students are able to understand, compare and design modern digital information transmission schemes. They are familiar with the properties of linear and non-linear digital modulation methods. They can describe distortions caused by transmission channels and design and evaluate detectors including channel estimation and equalization. They know the principles of single carrier transmission and multi-carrier transmission as well as the fundamentals of basic multiple access schemes.</p> <p><i>Skills</i> The students are able to design and analyse a digital information transmission scheme including multiple access. They are able to choose a digital modulation scheme taking into account transmission rate, required bandwidth, error probability, and further signal properties. They can design an appropriate detector including channel estimation and equalization taking into account performance and complexity properties of suboptimum solutions. They are able to set parameters of a single carrier or multi carrier transmission scheme and trade the properties of both approaches against each other.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students can jointly solve specific problems.</p> <p><i>Autonomy</i> The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system.</p>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M0753: Software Verification				
Courses				
Title		Typ	Hrs/wk	CP
Software Verification (L0629)		Lecture	2	3
Software Verification (L0630)		Recitation Section (small)	2	3
Module Responsible	Prof. Sibylle Schupp			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>• Automata theory and formal languages</li><li>• Computational logic</li><li>• Object-oriented programming, algorithms, and data structures</li><li>• Functional programming or procedural programming</li><li>• Concurrency</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence Knowledge	<p>Students apply the major verification techniques in model checking and deductive verification. They explain in formal terms syntax and semantics of the underlying logics, and assess the expressivity of different logics as well as their limitations. They classify formal properties of software systems. They find flaws in formal arguments, arising from modeling artifacts or underspecification.</p> <p>Students formulate provable properties of a software system in a formal language. They develop logic-based models that properly abstract from the software under verification and, where necessary, adapt model or property. They construct proofs and property checks by hand or using tools for model checking or deductive verification, and reflect on the scope of the results. Presented with a verification problem in natural language, they select the appropriate verification technique and justify their choice.</p> <p>Students discuss relevant topics in class. They defend their solutions orally. They communicate in English.</p> <p>Using accompanying on-line material for self study, students can assess their level of knowledge continuously and adjust it appropriately. Working on exercise problems, they receive additional feedback. Within limits, they can set their own learning goals. Upon successful completion, students can identify and precisely formulate new problems in academic or applied research in the field of software verification. Within this field, they can conduct independent studies to acquire the necessary competencies and compile their findings in academic reports. They can devise plans to arrive at new solutions or assess existing ones.</p>

## Specialization II. Logistics

### Module M0978: International Logistics and Transport Systems

#### Courses

Title		Typ	Hrs/wk	CP
Mobility of Goods, Logistics, Traffic (L1165)		Lecture	2	2
International Logistics and Transport Systems (L1168)		Problem-based Learning	3	4
<b>Module Responsible</b>	Prof. Heike Flämig			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Introduction to Logistics and Mobility</li> <li>• Foundations of Management</li> <li>• Legal Foundations of Transportation and Logistics</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to... <ul style="list-style-type: none"> <li>• give definitions of system theory, (international) transport chains and logistics in the context of supply chain management</li> <li>• explain trends and strategies for mobility of goods and logistics</li> <li>• describe elements of integrated and multi-modal transport chains and their advantages and disadvantages</li> <li>• deduce impacts of management decisions on logistics system and traffic system and explain how stakeholders influence them</li> <li>• explain the correlations between economy and logistics systems, mobility of goods, space-time-structures and the traffic system as well as ecology and politics</li> </ul>			
<i>Skills</i>	Students are able to... <ul style="list-style-type: none"> <li>• Design intermodal transport chains and logistic concepts</li> <li>• apply the commodity chain theory and case study analysis</li> <li>• evaluate different international transport chains</li> <li>• cope with differences in cultures that influence international transport chains</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to... <ul style="list-style-type: none"> <li>• develop a feeling of social responsibility for their future jobs</li> <li>• give constructive feedback to others about their presentation skills</li> <li>• plan and execute teamwork tasks</li> </ul>			
<i>Autonomy</i>	Students are able to improve presentation skills by feedback of others			
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	60 minutes			
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Mechanical Engineering and Management: Specialisation Management: Elective Compulsory			

Course L1165: Mobility of Goods, Logistics, Traffic	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Heike Flämig
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The intention of this lecture is to provide a general system analysis-based overview of how transportation chains emerge and how they are developed. The respective advantages and disadvantages of different international transportation chains of goods are to be pointed out from a micro- and a macroeconomic point of view. The effects on the traffic system as well as the ecological and social consequences of a spatial division of economical activities are to be discussed.</p> <p>The overview of current international transportation chains is carried out on the basis of concrete material- and appendant information flows. Established transportation chains and some of their individual elements are to become transparent to the students by a number of practical examples.</p> <ol style="list-style-type: none"> <li>1. A conceptual systems model</li> <li>2. Elements of integrated and multi-modal transportation chains</li> <li>3. interaction of transport and traffic, demand and supply on different layers of the transport system</li> <li>4. Global Issues in Supply Chain Management</li> <li>5. Global Players and networks</li> <li>6. Logistics and corporate social responsibility (CSR)</li> <li>7. Methods and data for assessment of international transport chains</li> <li>8. Influence of cultural aspects on international transport chains</li> <li>9. New solutions using different focuses of the transport and logistics system</li> </ol>

Course L0063: Maritime Transport	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Carlos Jahn
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The lecture aims to provide detailed knowledge about maritime transportation and to describe its main challenges and functions. In this context, conventional and current problems are dealt with. All actors of a maritime transport chain are considered during the lecture. In this context, ports, vessels and sea routes are analysed and discussed in details. Conventional problems, planning tasks and current subjects, e. g. Green Logistics, are also part of the lecture.

<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Carlos Jahn
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The exercise lesson bases on the haptic management game MARITIME. MARITIME focuses on providing knowledge about structures and processes in a maritime transport network. Furthermore, the management game systematically provides process management methodology and also promotes personal skills of the participants.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Brinkmann, Birgitt. Seehäfen: Planung und Entwurf. Berlin Heidelberg: Springer-Verlag, 2005.</li> </ul>

Module M1133: Port Logistics			
Courses			
Title	Type	Hrs/wk	CP
Port Logistics (L0686)	Lecture	2	3
Port Logistics (L1473)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Carlos Jahn		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students are able to... <ul style="list-style-type: none"> <li>describe the historical port development (regarding port functions, port terminals and the corresponding operating models) and consider these facts in the historical context;</li> <li>explain different types of seaport terminals and their typical characteristics (type of cargo, handling and transportation equipment, functional areas);</li> <li>name typical planning and scheduling tasks (e. g. berth planning, stowage planning, yard planning) as well as corresponding approaches (methods and tools) for performing tasks in seaport terminals;</li> <li>name and discuss trends regarding planning and scheduling in innovative seaport terminals.</li> </ul>		
<i>Skills</i>	The students are able to... <ul style="list-style-type: none"> <li>recognise functional areas within seaports and within seaport terminals;</li> <li>define and assess possible operation systems for a container terminal;</li> <li>conduct static calculations of container terminals regarding capacity requirements based on given conditions;</li> <li>reliably estimate how certain conditions effect typical logistics metrics in the context of the static planning process of selected seaport terminals.</li> </ul>		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students are able to... <ul style="list-style-type: none"> <li>discuss and organise extensive work packages in groups;</li> <li>document and present the elaborated results.</li> </ul>		
<i>Autonomy</i>	The students are able to <ul style="list-style-type: none"> <li>research and select technical literature as well as norms and guidelines</li> <li>to hand in on time and to present an own share of a considerable written scientific work which was compiled in a small team together with other team members</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 minutes		
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Infrastructure and Mobility: Elective Compulsory Renewable Energies: Specialisation Wind energy: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Maritime Technology: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L0686: Port Logistics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Carlos Jahn
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The outstanding role of maritime transport for international trade requires efficient ports. These must meet numerous requirements in terms of profitability, speed, safety and environment. Recognising this, port logistics contains the planning, management, operation and control of material flows and the corresponding information flows in the system and its interfaces to several actors within and outside the port area. The course "Port Logistics" aims to provide skills to comprehend structures and processes in ports. It focuses on different terminal types, their characteristic layouts, the technical equipment which is used and the interaction between the actors.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Brinkmann, Birgitt. Seehäfen: Planung und Entwurf. Berlin Heidelberg: Springer-Verlag, 2005.</li> </ul>

Course L1473: Port Logistics	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Carlos Jahn
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The exercise lesson focuses on analytical tasks in the field of terminal planning. During the exercise lesson, the students work in small groups on designing terminal layouts under consideration of given conditions. The calculated logistics metrics, respectively the corresponding terminal layouts must be illustrated in 2D and 3D using special planning software.
<b>Literature</b>	<ul style="list-style-type: none"> <li>• Brinkmann, Birgitt. Seehäfen: Planung und Entwurf. Berlin Heidelberg: Springer-Verlag, 2005.</li> </ul>

Module M1089: Integrated Maintenance and Spare Part Logistics				
Courses				
Title		Typ	Hrs/wk	CP
Spare Part Logistics (L1403)		Lecture	1	2
Maintenance Logistics (L1401)		Lecture	2	2
Exercises to Integrated Maintenance and Spare Part Logistics (L1405)		Recitation Section (small)	1	2
Module Responsible	Ingo Martens			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of logistical processes			
Educational Objectives	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"><li>• Students can explain basic concepts of maintenance and spare parts logistics and distinguish between them.</li><li>• Students can explain key approaches and concepts of maintenance and spare parts logistics, locate them in a theoretical context and present practical applications.</li></ul>			
<i>Skills</i>				
<b>Personal Competence</b> <i>Social Competence</i>				
<i>Autonomy</i>				
	<ul style="list-style-type: none"><li>• Students can plan and evaluate processes, techniques and organizational forms in the field of maintenance and spare parts logistics.</li><li>• Students can apply planning methods in maintenance and spare parts logistics to practical examples.</li><li>• Students can develop and apply key performance indicator systems and carry out current status analyses.</li></ul>			
	<ul style="list-style-type: none"><li>• Students can present and argue their own expert opinions and work results in front of teachers and other students in an appropriate manner.</li><li>• Students can achieve accurate work results as members of a team.</li></ul>			
	<ul style="list-style-type: none"><li>• Students can access specialist knowledge independently and transfer the knowledge acquired to new problems.</li></ul>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam

<b>Examination duration and scale</b>	Prototype construction in laboratory with documentation (group work)		
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory		

Course L1462: Technical Logistics Laboratory	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Jochen Kreutzfeldt
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>The aim of the seminar is the practical introduction of students in various technical solutions to logistical problems. Above all, the guided development of own solutions is the core task in the laboratory. The problems and solutions will be drawn from the following logistic topics:</p> <ul style="list-style-type: none"> <li>(1) warehousing</li> <li>(2) conveying</li> <li>(3) sorting</li> <li>(4) order picking</li> <li>(5) identifying</li> </ul> <p>The students develop technical solutions in small groups for selected problems and implement them on a lab scale. The solutions are presented to an audience and advantages and disadvantages are discussed. The recorded feedback is then added to the model solution.</p>

Module M1100: Railways							
Courses							
Title		Typ	Hrs/wk	CP			
Railways (L1466)		Lecture	2	3			
Railways (L1468)		Recitation Section (large)	2	3			
Module Responsible		Prof. Carsten Gertz					
Admission Requirements		None					
Recommended Previous Knowledge		Introduction to railways					
Educational Objectives		After taking part successfully, students have reached the following learning results					
Professional Competence							
<i>Knowledge</i>							
Students can...							
<ul style="list-style-type: none"><li>• concieve the entrepreneurial perspective of transport and infrastructure companies</li><li>• estimate intra- and intermodal competition</li><li>• understand regulatory and transport policy determinants</li><li>• reflect megatrends in the transport market</li><li>• understand the key performance indicators for railway transport market</li></ul>							
<i>Skills</i>							
Students can...							
<ul style="list-style-type: none"><li>• apply traffic Intermodal perspective</li><li>• understand strategic challenges, opportunities and issues of companies</li><li>• recognize the relevance of sustainability and digitization for companies</li></ul>							
Personal Competence							
<i>Social Competence</i>							
Students can...							
<ul style="list-style-type: none"><li>• discuss and organize task packages in small groups</li><li>• document and present work results in small groups</li></ul>							
<i>Autonomy</i>							
Students can...							
<ul style="list-style-type: none"><li>• research and select literature</li><li>• submit their own shares of an extensive written work in small groups and present it collaborativly within a fixed time frame</li></ul>							
Workload in Hours					Independent Study Time 124, Study Time in Lecture 56		
Credit points					6		
Examination		Written exam

**Module M0739: Factory Planning & Production Logistics**
**Courses**

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Factory Planning (L1445)	Lecture	3	3
Production Logistics (L1446)	Lecture	2	3
<b>Module Responsible</b>	Prof. Jochen Kreutzfeldt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Bachelor degree in logistics		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	The students will acquire the following knowledge: 1. The students know the latest trends and developments in the planning of factories. 2. The students can explain basic procedures of factory planning and are able to deploy these procedures while considering different conditions. 3. The students know different methods of factory planning and are able to deal critically with these methods.		
<i>Skills</i>	The students will acquire the following skills: 1. The students are able to analyze factories and other material flow systems with regard to new development and the need for change of these logistical systems. 2. The students are able to plan and redesign factories and other material handling systems. 3. The students are able to develop procedures for the implementation of new and revised material flow systems.		
<b>Personal Competence</b>			
<i>Social Competence</i>	The students will acquire the following social skills: 1. The students are able to develop plans for the development of new and improvement of existing material flow systems within a group. 2. The developed planning proposal from the group work can be documented and presented together. 3. The students are able to derive suggestions for improvement from the feedback on the planning proposals and can even provide constructive criticism themselves.		
<i>Autonomy</i>	The students will acquire the following independent competencies: 1. The students can plan and re-design material flow systems using existing planning procedures. 2. The students can evaluate independently the strengths and weaknesses of several techniques for factory planning and choose appropriate methods in a given context. 3. The students are able to carry out autonomously new plans and transformations of material flow systems.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	International Management and Engineering: Specialisation II. Logistics: Elective Compulsory Logistics, Infrastructure and Mobility: Specialisation Production and Logistics: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Product Development and Production: Elective Compulsory		

Course L1445: Factory Planning	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Jochen Kreutzfeldt
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The lecture gives an introduction into the planning of factories and material flows. The students will learn process models and methods to plan new factories and improve existing material flow systems. The course includes three basic topics:</p> <ol style="list-style-type: none"> <li>(1) Analysis of factory and material flow systems</li> <li>(2) Development and re-planning of factory and material flow systems</li> <li>(3) Implementation and realization of factory planning</li> </ol> <p>The students are introduced into several different methods and models per topic. Practical examples and planning exercises deepen the methods and explain the application of factory planning. Current trends and issues in the factory planning round off the lecture.</p>

Module M0721: Air Conditioning				
Courses				
Title	Typ		Hrs/wk	CP
Air Conditioning (L0594)	Lecture		3	5
Air Conditioning (L0595)	Recitation Section (large)		1	1
<b>Module Responsible</b>	Prof. Gerhard Schmitz			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a $h_1+x,x$ -diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants.			
<i>Skills</i>	Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning.			
<b>Personal Competence</b>				
<i>Social Competence</i>	The students are able to discuss in small groups and develop an approach.			
<i>Autonomy</i>	Students are able to define independently tasks, to get new knowledge from existing knowledge as well as to find ways to use the knowledge in practice.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Module M0805: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0516)		Lecture	2	3
Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics ) (L0518)		Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> The students possess an in-depth knowledge in acoustics regarding acoustic waves, noise protection, and psycho acoustics and are able to give an overview of the corresponding theoretical and methodical basis.</p> <p><i>Skills</i> The students are capable to handle engineering problems in acoustics by theory-based application of the demanding methodologies and measurement procedures treated within the module.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> The students are able to independently solve challenging acoustical problems in the areas treated within the module. Possible conflicting issues and limitations can be identified and the results are critically scrutinized.</p>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Oral exam			
<b>Examination duration and scale</b>	20-30 Minuten			
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Product Development and Production: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory			

Course L0516: Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics )	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Otto von Estorff
<b>Language</b>	EN
<b>Cycle</b>	SoSe
<b>Content</b>	- Introduction and Motivation - Acoustic quantities - Acoustic waves - Sound sources, sound radiation - Sound energy and intensity - Sound propagation - Signal processing - Psycho acoustics - Noise - Measurements in acoustics
<b>Literature</b>	Cremer, L.; Heckl, M. (1996): Körperschall. Springer Verlag, Berlin Veit, I. (1988): Technische Akustik. Vogel-Buchverlag, Würzburg Veit, I. (1988): Flüssigkeitsschall. Vogel-Buchverlag, Würzburg

**Module M1145: Automation and Simulation**
**Courses**

Title	Typ	Hrs/wk	CP
Automation and Simulation (L1525)	Lecture	3	3
Automation and Simulation (L1527)	Recitation Section (large)	2	3

<b>Module Responsible</b>	Prof. Günter Ackermann
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	<b>BSc Mechanical Engineering or similar</b>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>	Students can describe the structure and the function of process computers, the corresponding components, the data transfer via bus systems and programmable logic computers.  They can describe the basic principle of a numeric simulation and the corresponding parameters.  They can explain the usual method to simulate the dynamic behaviour of three-phase machines.  Students can describe and design simple controllers using established methods.  They are able to assess the basic characteristics of a given automation system and to evaluate, if it is adequate for a given plant.  They can model and simulate technical systems with respect to their dynamical behaviour and can use Matlab/Simulink for the simulation.  They are able to apply established methods for the calculation of the dynamical behaviour of three-phase machines.
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	Teamwork in small teams.  Students are able to identify the need of methodical analyses in the field of automation systems, to do these analyses in an adequate manner and to evaluate the results critically.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Oral exam
<b>Examination duration and scale</b>	Vorzugsweise in Dreier-Gruppen, etwa 1 Stunde
<b>Assignment for the Following Curricula</b>	Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Module M1155: Aircraft Cabin Systems				
Courses				
Title	Typ		Hrs/wk	CP
Aircraft Cabin Systems (L1545)	Lecture		3	4
Aircraft Cabin Systems (L1546)	Recitation Section (large)		1	2
<b>Module Responsible</b>	Prof. Ralf God			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Control Systems</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• describe cabin operations, equipment in the cabin and cabin Systems</li> <li>• explain the functional and non-functional requirements for cabin Systems</li> <li>• elucidate the necessity of cabin operating systems and emergency Systems</li> <li>• assess the challenges human factors integration in a cabin environment</li> </ul> Students are able to: <ul style="list-style-type: none"> <li>• design a cabin layout for a given business model of an Airline</li> <li>• design cabin systems for safe operations</li> <li>• design emergency systems for safe man-machine interaction</li> <li>• solve comfort needs and entertainment requirements in the cabin</li> </ul> Students are able to: <ul style="list-style-type: none"> <li>• understand existing system solutions and discuss their ideas with experts</li> </ul> Students are able to: <ul style="list-style-type: none"> <li>• Reflect the contents of lectures and expert presentations self-dependent</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	120 Minutes			
<b>Assignment for the Following Curricula</b>	Energy Systems: Specialisation Energy Systems: Elective Compulsory Aircraft Systems Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory			

Course L1545: Aircraft Cabin Systems	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Ralf God
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>The objective of the lecture with the corresponding exercise is the acquisition of knowledge about aircraft cabin systems and cabin operations. A basic understanding of technological and systems engineering effort to maintain an artificial but comfortable and safe travel and working environment at cruising altitude is to be achieved.</p> <p>The course provides a comprehensive overview of current technology and cabin systems in modern passenger aircraft. The Fulfillment of requirements for the cabin as the central system of work are covered on the basis of the topics comfort, ergonomics, human factors, operational processes, maintenance and energy supply:</p> <ul style="list-style-type: none"> <li>• Materials used in the cabin</li> <li>• Ergonomics and human factors</li> <li>• Cabin interior and non-electrical systems</li> <li>• Cabin electrical systems and lights</li> <li>• Cabin electronics, communication-, information- and IFE-systems</li> <li>• Cabin and passenger process chains</li> <li>• RFID Aircraft Parts Marking</li> <li>• Energy sources and energy conversion</li> </ul>

## Module M1043: Aircraft Systems Engineering

### Courses

Title	Typ	Hrs/wk	CP
Design Optimization and Probabilistic Approaches in Structural Analysis (L1814)	Seminar	3	3
Fatigue & Damage Tolerance (L0310)	Lecture	2	3
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1514)	Lecture	2	2
Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics (L1515)	Recitation Section (large)	1	1
Lightweight Design Practical Course (L1258)	Problem-based Learning	3	3
Aviation Security (L1549)	Lecture	2	2
Aviation Security (L1550)	Recitation Section (small)	1	1
Mechanisms, Systems and Processes of Materials Testing (L0950)	Lecture	2	2
Metallic Materials for Aircraft Applications (L0514)	Lecture	2	3
Turbo Jet Engines (L0908)	Lecture	2	3
System Analysis in Air Transportation (L0855)	Lecture	3	3
Materials Testing (L0949)	Lecture	2	2
Reliability in Engineering Dynamics (L0176)	Lecture	2	2
Reliability in Engineering Dynamics (L1303)	Recitation Section (small)	1	2
Reliability of avionics assemblies (L1554)	Lecture	2	2
Reliability of avionics assemblies (L1555)	Recitation Section (small)	1	1
Reliability of Aircraft Systems (L0749)	Lecture	2	3

<b>Module Responsible</b>	Prof. Frank Thielecke
<b>Admission Requirements</b>	None
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Hydraulics</li> <li>• Control Systems</li> </ul>
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i> <ul style="list-style-type: none"> <li>• Students are able to find their way through selected special areas within systems engineering, air transportation system and material science</li> <li>• Students are able to explain basic models and procedures in selected special areas.</li> <li>• Students are able to interrelate scientific and technical knowledge.</li> </ul> <i>Skills</i> Students are able to apply basic methods in selected areas of engineering.	
<b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i> Students can choose independently, in which fields they want to deepen their knowledge and skills through the election of courses.	
<b>Workload in Hours</b>	Depends on choice of courses
<b>Credit points</b>	6
<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory International Management and Engineering: Specialisation II. Aviation Systems: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Aircraft Systems Engineering: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory

Course L1814: Design Optimization and Probabilistic Approaches in Structural Analysis	
<b>Typ</b>	Seminar
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Examination Form</b>	Hausarbeit
<b>Examination duration and scale</b>	ca. 10 Seiten und Diskussion
<b>Lecturer</b>	Prof. Benedikt Kriegesmann
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	<p>In the course the theoretic basics for design optimization and reliability analysis are taught, where the focus is on the application of such methods. The lectures will consist of presentations as well as computer exercises. In the computer exercises, the methods learned will be implemented in Matlab for understanding the practical realization.</p> <p>The following contents will be considered:</p> <ul style="list-style-type: none"> <li>• Design optimization           <ul style="list-style-type: none"> <li>◦ Gradient based methods</li> <li>◦ Genetic algorithms</li> <li>◦ Optimization with constraints</li> <li>◦ Topology optimization</li> </ul> </li> <li>• Reliability analysis           <ul style="list-style-type: none"> <li>◦ Stochastic basics</li> <li>◦ Monte Carlo methods</li> <li>◦ Semi-analytic approaches</li> </ul> </li> <li>• robust design optimization           <ul style="list-style-type: none"> <li>◦ Robustness measures</li> <li>◦ Coupling of design optimization and reliability analysis</li> </ul> </li> </ul>

Course L0310: Fatigue & Damage Tolerance	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	45 min
<b>Lecturer</b>	Dr. Martin Flamm
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Design principles, fatigue strength, crack initiation and crack growth, damage calculation, counting methods, methods to improve fatigue strength, environmental influences
<b>Literature</b>	<p>Jaap Schijve, Fatigue of Structures and Materials. Kluwer Academic Publisher, Dordrecht, 2001</p> <p>E. Haibach. Betriebsfestigkeit Verfahren und Daten zur Bauteilberechnung. VDI-Verlag, Düsseldorf, 1989</p>

Course L1514: Lightweight Construction with Fibre Reinforced Polymers - Structural Mechanics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Examination Form</b>	Mündliche Prüfung
<b>Examination duration and scale</b>	30 min
<b>Lecturer</b>	Dr. Marco Schürg
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p><b>Fundamentals of Anisotropic Elasticity</b></p> <p>Displacements, strains and stresses; Equilibrium equations; Kinematics; Hooke's generalized law</p> <p><b>Behaviour of a single laminate layer</b></p> <p>Material law of a single laminate layer; Full anisotropy and coupling effects; Material symmetries; Engineering constants; Plane state of stress; Transformation rules</p> <p><b>Fundamentals of Micromechanics of a laminate layer</b></p> <p>Representative unit cell; Determination of effective material constants; Effective stiffness properties of a single layer</p> <p><b>Classical Laminate Plate Theory</b></p> <p>Notations and laminate code; Kinematics and displacement field; Strains and stresses, stress resultants; Constitutive equations and coupling effects; Special laminates and their behavior; Effective laminate properties</p> <p><b>Strength of Laminated Plates</b></p> <p>Fundamental concept; Phenomenological failure criteria: maximum stresses, maximum strains, Tsai-Hill, Tsai-Wu, Puck, Hashin</p> <p><b>Bending of Composite Laminated Plates</b></p> <p>Differential Equations; Boundary Conditions; Navier-type solutions; Lévy-type solutions</p> <p><b>Stress Concentration Problems</b></p> <p>Free-edge effects; Stress concentrations at holes, cracks, delaminations; Aspects of failure analysis</p> <p><b>Stability of Thin-Walled Composite Structures</b></p> <p>Buckling of anisotropic plates and shells; Influence of loading conditions; Influence of boundary conditions; Exact transcendental solutions and their evaluation; Buckling of stiffened composite plates; Minimum stiffness requirements; Local buckling of stiffener profiles</p> <p><b>Written exercise (report required)</b></p> <p>Assessment of a thin-walled composite laminated beam taking several different dimensioning criteria into account</p>

Course L0749: Reliability of Aircraft Systems	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Examination Form</b>	Klausur
<b>Examination duration and scale</b>	90 Minuten
<b>Lecturer</b>	Prof. Frank Thielecke, Dr. Andreas Vahl, Dr. Uwe Wieczorek
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Functions of reliability and safety (regulations, certification requirements)</li> <li>• Basics methods of reliability analysis (FMEA, fault tree, functional hazard assessment)</li> <li>• Reliability analysis of electrical and mechanical systems</li> </ul>
<b>Literature</b>	<ul style="list-style-type: none"> <li>• CS 25.1309</li> <li>• SAE ARP 4754</li> <li>• SAE ARP 4761</li> </ul>

Module M1193: Cabin Systems Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Computer and communication technology in cabin electronics and avionics (L1557)	Lecture		2	2
Computer and communication technology in cabin electronics and avionics (L1558)	Recitation Section (small)		1	1
Model-Based Systems Engineering (MBSE) with SysML/UML (L1551)	Problem-based Learning		3	3
<b>Module Responsible</b>	Prof. Ralf God			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic knowledge in: <ul style="list-style-type: none"> <li>• Mathematics</li> <li>• Mechanics</li> <li>• Thermodynamics</li> <li>• Electrical Engineering</li> <li>• Control Systems</li> </ul> Previous knowledge in: <ul style="list-style-type: none"> <li>• Systems Engineering</li> </ul>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to: <ul style="list-style-type: none"> <li>• describe the structure and operation of computer architectures</li> <li>• explain the structure and operation of digital communication Networks</li> <li>• explain architectures of cabin electronics, integrated modular avionics (IMA) and Aircraft Data Communication Network (ADCN)</li> <li>• understand the approach of Model-Based Systems Engineering (MBSE) in the design of hardware and software-based cabin systems</li> </ul>			
<i>Skills</i>	Students are able to: <ul style="list-style-type: none"> <li>• understand, operate and maintain a Minicomputer</li> <li>• build up a network communication and communicate with other network participants</li> <li>• connect a minicomputer with a cabin management system (A380 CIDS) and communicate over a AFDX®-Network</li> <li>• model system functions by means of formal languages SysML/UML and generate software code from the models</li> <li>• execute software code on a minicomputer</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to: <ul style="list-style-type: none"> <li>• elaborate partial results and merge with others to form a complete solution</li> </ul>			
<i>Autonomy</i>	Students are able to: <ul style="list-style-type: none"> <li>• organize and schedule their practical tasks</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 96, Study Time in Lecture 84			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	120 minutes			
<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Compulsory International Management and Engineering: Specialisation II. ## Specialization II. Mechatronics

### Module M0605: Computational Structural Dynamics

#### Courses

Title	Typ	Hrs/wk	CP
Computational Structural Dynamics (L0282)	Lecture	3	4
Computational Structural Dynamics (L0283)	Recitation Section (small)	1	2
<b>Module Responsible</b>	Prof. Alexander Düster		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Mathematics I, II, III, Mechanics I, II, III, IV Differential Equations 2 (Partial Differential Equations)		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to + give an overview of the computational procedures for problems of structural dynamics. + explain the application of finite element programs to solve problems of structural dynamics. + specify problems of computational structural dynamics, to identify them in a given situation and to explain their mathematical and mechanical background.		
<i>Skills</i>	Students are able to + model problems of structural dynamics. + select a suitable solution procedure for a given problem of structural dynamics. + apply computational procedures to solve problems of structural dynamics. + verify and critically judge results of computational structural dynamics.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students are able to + solve problems in heterogeneous groups and to document the corresponding results.		
<i>Autonomy</i>	Students are able to + assess their knowledge by means of exercises and E-Learning.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2h		
<b>Assignment for the Following Curricula</b>	Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Materials Science: Specialisation Modelling: Elective Compulsory Mechatronics: Technical Complementary Course: Elective Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

#### Course L0282: Computational Structural Dynamics

<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 78, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Alexander Düster
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	1. Motivation 2. Basics of dynamics 3. Time integration methods 4. Modal analysis 5. Fourier transform 6. Applications
<b>Literature</b>	[1] K.-J. Bathe, Finite-Elemente-Methoden, Springer, 2002. [2] J.L. Humar, Dynamics of Structures, Taylor & Francis, 2012.

Course L0283: Computational Structural Dynamics	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	1
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 46, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Alexander Düster
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0752: Nonlinear Dynamics			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Nonlinear Dynamics (L0702)	Lecture	4	6
<b>Module Responsible</b>	Prof. Norbert Hoffmann		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Calculus</li> <li>• Linear Algebra</li> <li>• Engineering Mechanics</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	Students are able to reflect existing terms and concepts in Nonlinear Dynamics and to develop and research new terms and concepts.		
<i>Knowledge</i>	Students are able to apply existing methods and procedures of Nonlinear Dynamics and to develop novel methods and procedures.		
<i>Skills</i>			
<b>Personal Competence</b>	Students can reach working results also in groups.		
<i>Social Competence</i>	Students are able to approach given research tasks individually and to identify and follow up novel research tasks by themselves.		
<i>Autonomy</i>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	2 Hours		
<b>Assignment for the Following Curricula</b>	Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprostheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L0702: Nonlinear Dynamics	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Norbert Hoffmann
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	Fundamentals of Nonlinear Dynamics.
<b>Literature</b>	S. Strogatz: Nonlinear Dynamics and Chaos. Perseus, 2013.

Module M0563: Robotics			
Courses			
Title	Typ	Hrs/wk	CP
Robotics: Modelling and Control (L0168)	Lecture	3	3
Robotics: Modelling and Control (L1305)	Recitation Section (small)	2	3
<b>Module Responsible</b>	Prof. Uwe Weltin		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Fundamentals of electrical engineering Broad knowledge of mechanics Fundamentals of control theory		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i> <i>Skills</i>  <b>Personal Competence</b> <i>Social Competence</i> <i>Autonomy</i>	Students are able to describe fundamental properties of robots and solution approaches for multiple problems in robotics. Students are able to derive and solve equations of motion for various manipulators.  Students can generate trajectories in various coordinate systems.  Students can design linear and partially nonlinear controllers for robotic manipulators.  Students are able to work goal-oriented in small mixed groups. Students are able to recognize and improve knowledge deficits independently.  With instructor assistance, students are able to evaluate their own knowledge level and define a further course of study.		
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Production Management: Specialisation Production Technology: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechanical Engineering and Management: Core qualification: Compulsory Mechatronics: Core qualification: Compulsory Product Development, Materials and Production: Specialisation Product Development: Elective Compulsory Product Development, Materials and Production: Specialisation Production: Elective Compulsory Product Development, Materials and Production: Specialisation Materials: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Product Development and Production: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory		

Course L0168: Robotics: Modelling and Control	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	3
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 48, Study Time in Lecture 42
<b>Lecturer</b>	Prof. Uwe Weltin
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	Fundamental kinematics of rigid body systems  Newton-Euler equations for manipulators  Trajectory generation  Linear and nonlinear control of robots
<b>Literature</b>	Craig, John J.: Introduction to Robotics Mechanics and Control, Third Edition, Prentice Hall. ISBN 0201-54361-3  Spong, Mark W.; Hutchinson, Seth; Vidyasagar, M. : Robot Modeling and Control. WILEY. ISBN 0-471-64990-2

Course L1305: Robotics: Modelling and Control	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Uwe Weltin
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0633: Industrial Process Automation				
Courses				
Title		Typ	Hrs/wk	CP
Industrial Process Automation (L0344)		Lecture	2	3
Industrial Process Automation (L0345)		Recitation Section (small)	2	3
Module Responsible	Prof. Alexander Schlaefer			
Admission Requirements	None			
Recommended Previous Knowledge	mathematics and optimization methods principles of automata principles of algorithms and data structures programming skills			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence <i>Knowledge</i>	The students can evaluate and assess discrete event systems. They can evaluate properties of processes and explain methods for process analysis. The students can compare methods for process modelling and select an appropriate method for actual problems. They can discuss scheduling methods in the context of actual problems and give a detailed explanation of advantages and disadvantages of different programming methods.			
<i>Skills</i>				
Personal Competence <i>Social Competence</i>				
<i>Autonomy</i>				
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	90 minutes			
Assignment for the Following Curricula	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Specialisation Control and Power Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Cabin Systems: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Production Management: Specialisation Production Technology: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation Intelligent Systems and Robotics: Elective Compulsory Theoretical Mechanical Engineering: Specialisation Numerics and Computer Science: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory			

Course L0344: Industrial Process Automation	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	- foundations of problem solving and system modeling, discrete event systems - properties of processes, modeling using automata and Petri-nets - design considerations for processes (mutex, deadlock avoidance, liveness) - optimal scheduling for processes - optimal decisions when planning manufacturing systems, decisions under uncertainty - software design and software architectures for automation, PLCs
<b>Literature</b>	J. Lunze: „Automatisierungstechnik“, Oldenbourg Verlag, 2012 Reisig: Petrinetze: Modellierungstechnik, Analysemethoden, Fallstudien; Vieweg+Teubner 2010 Hruz, Zhou: Modeling and Control of Discrete-event Dynamic Systems; Springer 2007 Li, Zhou: Deadlock Resolution in Automated Manufacturing Systems, Springer 2009 Pinedo: Planning and Scheduling in Manufacturing and Services, Springer 2009

Course L0345: Industrial Process Automation	
<b>Typ</b>	Recitation Section (small)
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Alexander Schlaefer
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0746: Microsystem Engineering				
Courses				
Title	Typ		Hrs/wk	CP
Microsystem Engineering (L0680)	Lecture		2	4
Microsystem Engineering (L0682)	Problem-based Learning		1	1
Microsystem Engineering (L0681)	Recitation Section (small)		1	1
<b>Module Responsible</b>	Prof. Manfred Kasper			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basic courses in physics, mathematics and electric engineering			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students know about the most important technologies and materials of MEMS as well as their applications in sensors and actuators.			
<i>Skills</i>	Students are able to analyze and describe the functional behaviour of MEMS components and to evaluate the potential of microsystems.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to solve specific problems alone or in a group and to present the results accordingly.			
<i>Autonomy</i>	Students are able to acquire particular knowledge using specialized literature and to integrate and associate this knowledge with other fields.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	2h			
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Core qualification: Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Electrical Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Mechanical Engineering and Management: Specialisation Mechatronics: Elective Compulsory Mechatronics: Specialisation System Design: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory			

Course L0680: Microsystem Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Manfred Kasper
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Object and goal of MEMS</p> <p>Scaling Rules</p> <p>Lithography</p> <p>Film deposition</p> <p>Structuring and etching</p> <p>Energy conversion and force generation</p> <p>Electromagnetic Actuators</p> <p>Reluctance motors</p> <p>Piezoelectric actuators, bi-metal-actuator</p> <p>Transducer principles</p> <p>Signal detection and signal processing</p> <p>Mechanical and physical sensors</p> <p>Acceleration sensor, pressure sensor</p> <p>Sensor arrays</p> <p>System integration</p> <p>Yield, test and reliability</p>
<b>Literature</b>	<p>M. Kasper: Mikrosystementwurf, Springer (2000)</p> <p>M. Madou: Fundamentals of Microfabrication, CRC Press (1997)</p>

Course L0682: Microsystem Engineering	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Prof. Manfred Kasper
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Examples of MEMS components</p> <p>Layout consideration</p> <p>Electric, thermal and mechanical behaviour</p> <p>Design aspects</p>
<b>Literature</b>	Wird in der Veranstaltung bekannt gegeben

Course L0681: Microsystem Engineering	
<b>Typ</b>	Recitation Section (small)

Module M0751: Vibration Theory				
Courses				
Title		Typ	Hrs/wk	CP
Vibration Theory (L0701)		Lecture	4	6
Module Responsible	Prof. Norbert Hoffmann			
Admission Requirements	None			
Recommended Previous Knowledge	<ul style="list-style-type: none"><li>• Calculus</li><li>• Linear Algebra</li><li>• Engineering Mechanics</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Knowledge</div> <div>Students are able to denote terms and concepts of Vibration Theory and develop them further.</div> <div>Skills</div> <div>Students are able to denote methods of Vibration Theory and develop them further.</div> <div>Personal Competence</div> <div>Social Competence</div> <div>Students can reach working results also in groups.</div> <div>Autonomy</div> <div>Students are able to approach individually research tasks in Vibration Theory.</div>			
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56			
Credit points	6			
Examination	Written exam			
Examination duration and scale	2 Hours			
Assignment for the Following Curricula	Energy Systems: Core qualification: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Product Development, Materials and Production: Core qualification: Compulsory Naval Architecture and Ocean Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Technical Complementary Course: Elective Compulsory			

Course L0701: Vibration Theory	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	4
<b>CP</b>	6
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56
<b>Lecturer</b>	Prof. Norbert Hoffmann
<b>Language</b>	DE/EN
<b>Cycle</b>	WiSe
<b>Content</b>	Linear and Nonlinear Single and Multiple Degree of Freedom Oscillations and Waves.
<b>Literature</b>	K. Magnus, K. Popp, W. Sextro: Schwingungen. Physikalische Grundlagen und mathematische Behandlung von Schwingungen. Springer Verlag, 2013.

Module M0768: Microsystems Technology in Theory and Practice				
Courses				
Title	Typ		Hrs/wk	CP
Microsystems Technology (L0724)	Lecture		2	4
Microsystems Technology (L0725)	Problem-based Learning		2	2
<b>Module Responsible</b>	Prof. Hoc Khiem Trieu			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Basics in physics, chemistry, mechanics and semiconductor technology			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able <ul style="list-style-type: none"> <li>to present and to explain current fabrication techniques for microstructures and especially methods for the fabrication of microsensors and microactuators, as well as the integration thereof in more complex systems</li> <li>to explain in details operation principles of microsensors and microactuators and</li> <li>to discuss the potential and limitation of microsystems in application.</li> </ul>			
<i>Skills</i>	Students are capable <ul style="list-style-type: none"> <li>to analyze the feasibility of microsystems,</li> <li>to develop process flows for the fabrication of microstructures and</li> <li>to apply them.</li> </ul>			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to prepare and perform their lab experiments in team work as well as to present and discuss the results in front of audience.			
<i>Autonomy</i>	None			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Oral exam			
<b>Examination duration and scale</b>	30 min			
<b>Assignment for the Following Curricula</b>	Electrical Engineering: Specialisation Nanoelectronics and Microsystems Technology: Elective Compulsory Electrical Engineering: Specialisation Medical Technology: Elective Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Microelectronics and Microsystems: Core qualification: Elective Compulsory			

Course L0724: Microsystems Technology	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Hoc Khiem Trieu
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Introduction (historical view, scientific and economic relevance, scaling laws)</li> <li>• Semiconductor Technology Basics, Lithography (wafer fabrication, photolithography, improving resolution, next-generation lithography, nano-imprinting, molecular imprinting)</li> <li>• Deposition Techniques (thermal oxidation, epitaxy, electroplating, PVD techniques: evaporation and sputtering; CVD techniques: APCVD, LPCVD, PECVD and LECVD; screen printing)</li> <li>• Etching and Bulk Micromachining (definitions, wet chemical etching, isotropic etch with HNA, electrochemical etching, anisotropic etching with KOH/TMAH: theory, corner undercutting, measures for compensation and etch-stop techniques; plasma processes, dry etching: back sputtering, plasma etching, RIE, Bosch process, cryo process, XeF<sub>2</sub> etching)</li> <li>• Surface Micromachining and alternative Techniques (sacrificial etching, film stress, stiction: theory and counter measures; Origami microstructures, Epi-Poly, porous silicon, SOI, SCREAM process, LIGA, SU8, rapid prototyping)</li> <li>• Thermal and Radiation Sensors (temperature measurement, self-generating sensors: Seebeck effect and thermopile; modulating sensors: thermo resistor, Pt-100, spreading resistance sensor, pn junction, NTC and PTC; thermal anemometer, mass flow sensor, photometry, radiometry, IR sensor: thermopile and bolometer)</li> <li>• Mechanical Sensors (strain based and stress based principle, capacitive readout, piezoresistivity, pressure sensor: piezoresistive, capacitive and fabrication process; accelerometer: piezoresistive, piezoelectric and capacitive; angular rate sensor: operating principle and fabrication process)</li> <li>• Magnetic Sensors (galvanomagnetic sensors: spinning current Hall sensor and magneto-transistor; magnetoresistive sensors: magneto resistance, AMR and GMR, fluxgate magnetometer)</li> <li>• Chemical and Bio Sensors (thermal gas sensors: pellistor and thermal conductivity sensor; metal oxide semiconductor gas sensor, organic semiconductor gas sensor, Lambda probe, MOSFET gas sensor, pH-FET, SAW sensor, principle of biosensor, Clark electrode, enzyme electrode, DNA chip)</li> <li>• Micro Actuators, Microfluidics and TAS (drives: thermal, electrostatic, piezo electric and electromagnetic; light modulators, DMD, adaptive optics, microscanner, microvalves: passive and active, micropumps, valveless micropump, electrokinetic micropumps, micromixer, filter, inkjet printhead, microdispenser, microfluidic switching elements, microreactor, lab-on-a-chip, microanalytics)</li> <li>• MEMS in medical Engineering (wireless energy and data transmission, smart pill, implantable drug delivery system, stimulators: microelectrodes, cochlear and retinal implant; implantable pressure sensors, intelligent osteosynthesis, implant for spinal cord regeneration)</li> <li>• Design, Simulation, Test (development and design flows, bottom-up approach, top-down approach, testability, modelling: multiphysics, FEM and equivalent circuit simulation; reliability test, physics-of-failure, Arrhenius equation, bath-tub relationship)</li> <li>• System Integration (monolithic and hybrid integration, assembly and packaging, dicing, electrical contact: wire bonding, TAB and flip chip bonding; packages, chip-on-board, wafer-level-package, 3D integration, wafer bonding: anodic bonding and silicon fusion bonding; micro electroplating, 3D-MID)</li> </ul>
<b>Literature</b>	<p>M. Madou: Fundamentals of Microfabrication, CRC Press, 2002</p> <p>N. Schwesinger: Lehrbuch Mikrosystemtechnik, Oldenbourg Verlag, 2009</p> <p>T. M. Adams, R. A. Layton: Introductory MEMS, Springer, 2010</p> <p>G. Gerlach; W. Dötzel: Introduction to microsystem technology, Wiley, 2008</p>

Course L0725: Microsystems Technology	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Hoc Khiem Trieu
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	See interlocking course
<b>Literature</b>	See interlocking course

Module M0808: Finite Elements Methods				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Finite Element Methods (L0291)		Lecture	2	3
Finite Element Methods (L0804)		Recitation Section (large)	2	3
<b>Module Responsible</b>	Prof. Otto von Estorff			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	Mechanics I (Statics, Mechanics of Materials) and Mechanics II (Hydrostatics, Kinematics, Dynamics) Mathematics I, II, III (in particular differential equations)			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	The students possess an in-depth knowledge regarding the derivation of the finite element method and are able to give an overview of the theoretical and methodical basis of the method.			
<i>Skills</i>	The students are capable to handle engineering problems by formulating suitable finite elements, assembling the corresponding system matrices, and solving the resulting system of equations.			
<b>Personal Competence</b>				
<i>Social Competence</i>	-			
<i>Autonomy</i>	The students are able to independently solve challenging computational problems and develop own finite element routines. Problems can be identified and the results are critically scrutinized.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Written exam			
<b>Examination duration and scale</b>	120 min			
<b>Assignment for the Following Curricula</b>	Civil Engineering: Core qualification: Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Elective Compulsory Aircraft Systems Engineering: Specialisation Air Transportation Systems: Elective Compulsory Computational Science and Engineering: Specialisation Scientific Computing: Elective Compulsory International Management and Engineering: Specialisation II. Mechatronics: Elective Compulsory International Management and Engineering: Specialisation II. Product Development and Production: Elective Compulsory Mechatronics: Core qualification: Compulsory Biomedical Engineering: Specialisation Implants and Endoprotheses: Compulsory Biomedical Engineering: Specialisation Management and Business Administration: Elective Compulsory Biomedical Engineering: Specialisation Medical Technology and Control Theory: Elective Compulsory Biomedical Engineering: Specialisation Artificial Organs and Regenerative Medicine: Elective Compulsory Product Development, Materials and Production: Core qualification: Compulsory Technomathematics: Specialisation III. Engineering Science: Elective Compulsory Technomathematics: Core qualification: Elective Compulsory Theoretical Mechanical Engineering: Core qualification: Compulsory			

Course L0291: Finite Element Methods	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Otto von Estorff
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>- General overview on modern engineering</li> <li>- Displacement method</li> <li>- Hybrid formulation</li> <li>- Isoparametric elements</li> <li>- Numerical integration</li> <li>- Solving systems of equations (statics, dynamics)</li> <li>- Eigenvalue problems</li> <li>- Non-linear systems</li> <li>- Applications</li> <li>- Programming of elements (Matlab, hands-on sessions)</li> <li>- Applications</li> </ul>
<b>Literature</b>	Bathe, K.-J. (2000): Finite-Elemente-Methoden. Springer Verlag, Berlin

Course L0804: Finite Element Methods

Module M0846: Control Systems Theory and Design			
<b>Courses</b>			
<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Control Systems Theory and Design (L0656)	Lecture	2	4
Control Systems Theory and Design (L0657)	Recitation Section (small)	2	2
<b>Module Responsible</b>	Prof. Herbert Werner		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Introduction to Control Systems		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students can explain how linear dynamic systems are represented as state space models; they can interpret the system response to initial states or external excitation as trajectories in state space</li> <li>They can explain the system properties controllability and observability, and their relationship to state feedback and state estimation, respectively</li> <li>They can explain the significance of a minimal realisation</li> <li>They can explain observer-based state feedback and how it can be used to achieve tracking and disturbance rejection</li> <li>They can extend all of the above to multi-input multi-output systems</li> <li>They can explain the z-transform and its relationship with the Laplace Transform</li> <li>They can explain state space models and transfer function models of discrete-time systems</li> <li>They can explain the experimental identification of ARX models of dynamic systems, and how the identification problem can be solved by solving a normal equation</li> <li>They can explain how a state space model can be constructed from a discrete-time impulse response</li> </ul>		
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can transform transfer function models into state space models and vice versa</li> <li>They can assess controllability and observability and construct minimal realisations</li> <li>They can design LQG controllers for multivariable plants</li> <li>They can carry out a controller design both in continuous-time and discrete-time domain, and decide which is appropriate for a given sampling rate</li> <li>They can identify transfer function models and state space models of dynamic systems from experimental data</li> <li>They can carry out all these tasks using standard software tools (Matlab Control Toolbox, System Identification Toolbox, Simulink)</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	Students can work in small groups on specific problems to arrive at joint solutions.		
<i>Autonomy</i>	Students can obtain information from provided sources (lecture notes, software documentation, experiment guides) and use it when solving given problems.  They can assess their knowledge in weekly on-line tests and thereby control their learning progress.		
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56		
<b>Credit points</b>	6		
<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	120 min		
<b>Assignment for the Following Curricula</b>	Computer Science: Specialisation Intelligence Engineering: Elective Compulsory Electrical Engineering: Core qualification: Compulsory Energy Systems: Core qualification: Elective Compulsory Aircraft Systems Engineering: Specialisation Aircraft Systems: Compulsory Computational Science and Engineering: Specialisation Systems Engineering and Robotics: Elective Compulsory International Management and Engineering: Specialisation II. Module M0832: Advanced Topics in Control				
Courses				
Title	Typ		Hrs/wk	CP
Advanced Topics in Control (L0661)	Lecture		2	3
Advanced Topics in Control (L0662)	Recitation Section (small)		2	3
<b>Module Responsible</b>	Prof. Herbert Werner			
<b>Admission Requirements</b>	None			
<b>Recommended Previous Knowledge</b>	H-infinity optimal control, mixed-sensitivity design, linear matrix inequalities			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>Students can explain the advantages and shortcomings of the classical gain scheduling approach</li> <li>They can explain the representation of nonlinear systems in the form of quasi-LPV systems</li> <li>They can explain how stability and performance conditions for LPV systems can be formulated as LMI conditions</li> <li>They can explain how gridding techniques can be used to solve analysis and synthesis problems for LPV systems</li> <li>They are familiar with polytopic and LFT representations of LPV systems and some of the basic synthesis techniques associated with each of these model structures</li> </ul>			
<i>Skills</i>	<ul style="list-style-type: none"> <li>Students can explain how graph theoretic concepts are used to represent the communication topology of multiagent systems</li> <li>They can explain the convergence properties of first order consensus protocols</li> <li>They can explain analysis and synthesis conditions for formation control loops involving either LTI or LPV agent models</li> </ul>			
<b>Personal Competence</b>	<ul style="list-style-type: none"> <li>Students can explain the state space representation of spatially invariant distributed systems that are discretized according to an actuator/sensor array</li> <li>They can explain (in outline) the extension of the bounded real lemma to such distributed systems and the associated synthesis conditions for distributed controllers</li> </ul>			
<i>Social Competence</i>	<ul style="list-style-type: none"> <li>Students are capable of constructing LPV models of nonlinear plants and carry out a mixed-sensitivity design of gain-scheduled controllers; they can do this using polytopic, LFT or general LPV models</li> <li>They are able to use standard software tools (Matlab robust control toolbox) for these tasks</li> </ul>			
<i>Autonomy</i>	<ul style="list-style-type: none"> <li>Students are able to design distributed formation controllers for groups of agents with either LTI or LPV dynamics, using Matlab tools provided</li> <li>Students are able to design distributed controllers for spatially interconnected systems, using the Matlab MD-toolbox</li> </ul>			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56

Course L1580: Experimental Methods for the Characterization of Materials	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Patrick Huber
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Structural characterization by photons, neutrons and electrons (in particular X-ray and neutron scattering, electron microscopy, tomography)</li> <li>• Mechanical and thermodynamical characterization methods (indenter measurements, mechanical compression and tension tests, specific heat measurements)</li> <li>• Characterization of optical, electrical and magnetic properties (spectroscopy, electrical conductivity and magnetometry)</li> </ul>
<b>Literature</b>	William D. Callister und David G. Rethwisch, Materialwissenschaften und Werkstofftechnik, Wiley&Sons, Asia (2011).  William D. Callister, Materials Science and Technology, Wiley& Sons, Inc. (2007).

Course L1579: Phase equilibria and transformations	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	3
<b>Workload in Hours</b>	Independent Study Time 62, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Jörg Weißmüller
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	Fundamentals of statistical physics, formal structure of phenomenological thermodynamics, simple atomistic models and free-energy functions of solid solutions and compounds. Corrections due to nonlocal interaction (elasticity, gradient terms). Phase equilibria and alloy phase diagrams as consequence thereof. Simple atomistic considerations for interaction energies in metallic solid solutions. Diffusion in real systems. Kinetics of phase transformations for real-life boundary conditions. Partitioning, stability and morphology at solidification fronts. Order of phase transformations; glass transition. Phase transitions in nano- and microscale systems.
<b>Literature</b>	Wird im Rahmen der Lehrveranstaltung bekannt gegeben.

Module M1145: Automation and Simulation				
Courses				
Title		Typ	Hrs/wk	CP
Automation and Simulation (L1525)		Lecture	3	3
Automation and Simulation (L1527)		Recitation Section (large)	2	3
Module Responsible	Prof. Günter Ackermann			
Admission Requirements	none			
Recommended Previous Knowledge	BSc Mechanical Engineering or similar			
Educational Objectives	After taking part successfully, students have reached the following learning results			
<div>Professional Competence</div> <div>Knowledge</div> <div>Skills</div> <div>Personal Competence</div> <div>Social Competence</div> <div>Autonomy</div>	Students can describe the structure an the function of process computers, the corresponding components, the data transfer via bus systems an programmable logic computers .			
	They can describe the basich principle of a numeric simulation and the corresponding parameters.			
	Thy can explain the usual method to simulate the dynamic behaviour of three-phase machines.			
	Students can describe and design simple controllers using established methodes.			
	They are able to assess the basic characterisits of a given automation system and to evaluate, if it is adequate for a given plant.			
	They can modell and simulate technical systems with respect to their dynamical behaviour and can use Matlab/Simulink for the simulation.			
	They are able to applay established methods for the caclulation of the dynamical behaviour of three-phase machines.			
	Teamwork in small teams.			
	Students are able to identify the need of methocic analysises in the field of automation systems, to do these analysisis in an adequate manner und to evaluate the results critically.			
	Workload in Hours	Independent Study Time 110, Study Time in Lecture 70		
Credit points	6			
Examination	Oral exam			
Examination duration and scale	Vorzugsweise in Dreier-Gruppen, etwa 1 Stunde

Module M1144: Manufacturing with Polymers and Composites - From Molecule to Part				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Manufacturing with Polymers and Composites (L0511)		Lecture	2	3
From Molecule to Composites Part (L1516)		Problem-based Learning	2	3
<b>Module Responsible</b>	Prof. Bodo Fiedler			
<b>Admission Requirements</b>	Non			
<b>Recommended Previous Knowledge</b>	Structure and Properties of Polymers Structure and Properties of Composites			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>				
<i>Knowledge</i>	Students are able to give a summary of the technical details of the manufacturing processes polymers and composites and illustrate respective relationships. They are capable of describing and communicating relevant problems and questions using appropriate technical language. They can explain the typical process of solving practical problems and present related results.			
<i>Skills</i>	The students can transfer their fundamental knowledge on civil engineering to the process of solving practical problems. They identify and overcome typical problems during the realization of projects in the context of civil engineering. Students are able to develop, compare, and choose conceptual solutions for non-standardized problems.			
<b>Personal Competence</b>				
<i>Social Competence</i>	Students are able to cooperate in small, mixed-subject groups in order to independently derive solutions to given problems in the context of civil engineering. They are able to effectively present and explain their results alone or in groups in front of a qualified audience. Students have the ability to develop alternative approaches to an engineering problem independently or in groups and discuss advantages as well as drawbacks.			
<i>Autonomy</i>	Students are capable of independently solving mechanical engineering problems using provided literature. They are able to fill gaps in as well as extent their knowledge using the literature and other sources provided by the supervisor. Furthermore, they can meaningfully extend given problems and pragmatically solve them by means of corresponding solutions and concepts.			
<b>Workload in Hours</b>	Independent Study Time 124, Study Time in Lecture 56			
<b>Credit points</b>	6			
<b>Examination</b>	Written elaboration

<b>Content</b>	<p>Students get the task in the form of a customer request for the development and production of a MTB handlebar made of fiber composites. In the task technical and normative requirements (standards) are given, all other required information come from the lectures and tutorials, and the respective documents (electronically and in conversation).</p> <p>The procedure is to specify in a milestone schedule and allows students to plan tasks and to work continuously. At project end, each group has a made handlebar with approved quality.</p> <p>In each project meeting the design (discussion of the requirements and risks) are discussed. The calculations are analyzed, evaluated and established manufacturing methods are selected. Materials are selected bar will be produced. The quality and the mechanical properties are checked. At the end of the final report created (compilation of the results for the "customers").</p> <p>After the test during the "customer / supplier conversation" there is a mutual feedback-talk ("lessons learned") in order to ensure the continuous improvement.</p>
<b>Literature</b>	Customer Request ("Handout")

Module M0867: Production Planning & Control and Digital Enterprise				
Courses				
Title		Typ	Hrs/wk	CP
The Digital Enterprise (L0932)		Lecture	2	2
Production Planning and Control (L0929)		Lecture	2	2
Production Planning and Control (L0930)		Recitation Section (small)	1	1
Exercise: The Digital Enterprise (L0933)		Recitation Section (small)	1	1
Module Responsible	Prof. Hermann Lödding			
Admission Requirements	None			
Recommended Previous Knowledge	Fundamentals of Production and Quality Management			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence				
Knowledge	Students can explain the contents of the module in detail and take a critical position to them.			
Skills	Students are capable of choosing and applying models and methods from the module to industrial problems.			
Personal Competence				
Social Competence	Students can develop joint solutions in mixed teams and present them to others.			
Autonomy	-			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Examination	Written exam			
Examination duration and scale	180 Minuten

## Specialization II. Renewable Energy

### Module M0511: Electricity Generation from Wind and Hydro Power

#### Courses

Title	Typ	Hrs/wk	CP
Renewable Energy Projects in Emerged Markets (L0014)	Project Seminar	1	1
Hydro Power Use (L0013)	Lecture	1	1
Wind Turbine Plants (L0011)	Lecture	2	3
Wind Energy Use - Focus Offshore (L0012)	Lecture	1	1

<b>Module Responsible</b>	Dr. Joachim Gerth
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I, Module: Technical Thermodynamics II, Module: Fundamentals of Fluid Mechanics
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b>	
<i>Knowledge</i>	By ending this module students can explain in detail knowledge of wind turbines with a particular focus of wind energy use in offshore conditions and can critical comment these aspects in consideration of current developments. Furthermore, they are able to describe fundamentally the use of water power to generate electricity. The students reproduce and explain the basic procedure in the implementation of renewable energy projects in countries outside Europe.  Through active discussions of various topics within the seminar of the module, students improve their understanding and the application of the theoretical background and are thus able to transfer what they have learned in practice.
<i>Skills</i>	Students are able to apply the acquired theoretical foundations on exemplary water or wind power systems and evaluate and assess technically the resulting relationships in the context of dimensioning and operation of these energy systems. They can in compare critically the special procedure for the implementation of renewable energy projects in countries outside Europe with the in principle applied approach in Europe and can apply this procedure on exemplary theoretical projects.
<b>Personal Competence</b>	
<i>Social Competence</i>	Students can discuss scientific tasks subject-specificly and multidisciplinary within a seminar.
<i>Autonomy</i>	Students can independently exploit sources in the context of the emphasis of the lecture material to clear the contents of the lecture and to acquire the particular knowledge about the subject area.
<b>Workload in Hours</b>	Independent Study Time 110, Study Time in Lecture 70
<b>Credit points</b>	6
<b>Examination</b>	Written exam
<b>Examination duration and scale</b>	3 hours written exam

Module M0527: Marine Soil Technics				
<b>Courses</b>				
<b>Title</b>		<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Analysis of Maritime Systems (L0068)		Lecture	2	2
Analysis of Maritime Systems (L0069)		Recitation Section (small)	1	1
Offshore Geotechnical Engineering (L0067)		Lecture	2	3
<b>Module Responsible</b>	Dr. Joachim Gerth			
<b>Admission Requirements</b>	none			
<b>Recommended Previous Knowledge</b>	Knowledge in analysis and differential equations  Basics of maritime technology			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results			
<b>Professional Competence</b>	<p><i>Knowledge</i> Students can use the basic techniques for the analysis of offshore systems, including the related studies of the properties of the seabed, to provide an overview about that topic. Furthermore they can explain the associated content taking into account the specialist adjacent contexts.</p> <p><i>Skills</i> Students are able to model and evaluate dynamic offshore systems. Consequently they are also able to think system-oriented and to break down complex system into subsystems .</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p><i>Autonomy</i> Students can independently exploit sources , acquire the particular knowledge about the subject area and transform it to new questions. Furthermore, they can concrete assess their specific learning level within the exercise hours guided by teachers and can consequently define the further workflow.</p>

Module M0512: Use of Solar Energy				
Courses				
Title		Typ	Hrs/wk	CP
Collector Technology (L0018)		Lecture	2	2
Solar Power Generation (L0015)		Lecture	2	2
Radiation and Optic (L0016)		Lecture	1	1
Radiation and Optic (L0017)		Recitation Section (small)	1	1
Module Responsible	Prof. Martin Kaltschmitt			
Admission Requirements	none			
Recommended Previous Knowledge	none			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	With the completion of this module, students will be able to deal with technical foundations and current issues and problems in the field of solar energy and explain and evaluate these critically in consideration of the prior curriculum and current subject specific issues. In particular they can professionally describe the processes within a solar cell and explain the specific features of application of solar modules. Furthermore, they can provide an overview of the collector technology in solar thermal systems.  Students can apply the acquired theoretical foundations of exemplary energy systems using solar radiation. In this context, for example they can assess and evaluate potential and constraints of solar energy systems with respect to different geographical assumptions. They are able to dimension solar energy systems in consideration of technical aspects and given assumptions. Using module-comprehensive knowledge students can evaluate the economic and ecologic conditions of these systems. They can select calculation methods within the radiation theory for these topics.  Students can independently exploit sources and acquire the particular knowledge about the subject area with respect to emphasis fo the lectures. Furthermore, with the assistance of lecturers, they can discrete use calculation methods for analysing and dimensioning solar energy systems. Based on this procedure they can concrete assess their specific learning level and can consequently define the further workflow.

**Module M0513: System Aspects of Renewable Energies**
**Courses**

<b>Title</b>	<b>Typ</b>	<b>Hrs/wk</b>	<b>CP</b>
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Energy Trading (L0019)	Lecture	1	1
Energy Trading (L0020)	Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)	Lecture	2	2

<b>Module Responsible</b>	Prof. Martin Kaltschmitt
<b>Admission Requirements</b>	none
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I Module: Technical Thermodynamics II
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results
<b>Professional Competence</b> <i>Knowledge</i>  <i>Skills</i>	<p>Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.</p> <p>Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.</p> <p>Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energy markets and energy trades.</p>
<b>Personal Competence</b> <i>Social Competence</i>  <i>Autonomy</i>	<p>Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p>Students can independently exploit sources, acquire the particular knowledge about the subject area and transform it to new questions.</p>

Module M0518: Waste and Energy					
Courses					
Title		Typ	Hrs/wk	CP	
Waste Recycling Technologies (L0047)		Lecture	2	2	
Waste Recycling Technologies (L0048)		Recitation Section (small)	1	2	
Waste to Energy (L0049)		Problem-based Learning	2	2	
Module Responsible	Prof. Kerstin Kuchta				
Admission Requirements	none				
Recommended Previous Knowledge	Basics of process engineering				
Educational Objectives	After taking part successfully, students have reached the following learning results				
Professional Competence					
Knowledge					Students are able to describe and explain in detail techniques, processes and concepts for treatment and energy recovery from wastes.
Skills					The students are able to select suitable processes for the treatment and energy recovery of wastes. They can evaluate the efforts and costs for processes and select economically feasible treatment Concepts. Students are able to evaluate alternatives even with incomplete information. Students are able to prepare systematic documentation of work results in form of reports, presentations and are able to defend their findings in a group.
Personal Competence					
Social Competence					Students can participate in subject-specific and interdisciplinary discussions, develop cooperated solutions and defend their own work results in front of others and promote the scientific development of colleagues. Furthermore, they can give and accept professional constructive criticism.
Autonomy	Students can independently tap knowledge of the subject area and transform it to new questions. They are capable, in consultation with supervisors, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.

<b>Content</b>	The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture.

Module M0508: Fluid Mechanics and Ocean Energy			
Courses			
Title	Typ	Hrs/wk	CP
Energy from the Ocean (L0002)	Lecture	2	2
Fluid Mechanics II (L0001)	Lecture	2	4
Module Responsible	Prof. Michael Schlüter		
Admission Requirements	None		
Recommended Previous Knowledge	Technische Thermodynamik I-II Wärme- und Stoffübertragung		
Educational Objectives	After taking part successfully, students have reached the following learning results		
Professional Competence	<p><i>Knowledge</i></p> <p>The students are able to describe different applications of fluid mechanics for the field of Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems in the field of ocean energy. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity, empirical solutions, numerical methods).</p> <p><i>Skills</i></p> <p>Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.</p> <p><i>Personal Competence</i></p> <p><i>Social Competence</i></p> <p>The students are able to discuss a given problem in small groups and to develop an approach. They are able to solve a problem within a team, to prepare a poster with the results and to present the poster.</p> <p><i>Autonomy</i></p> <p>Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.</p>		
Workload in Hours	Independent Study Time 124, Study Time in Lecture 56

Module M1294: Bioenergy			
Courses			
Title	Typ	Hrs/wk	CP
Biofuels Process Technology (L0061)	Lecture	1	1
Biofuels Process Technology (L0062)	Recitation Section (small)	1	1
Thermal Utilization of Biomass (L1767)	Lecture	2	2
World Market for Agricultural Commodities (L1769)	Lecture	1	1
Sustainable Mobility (L0010)	Lecture	2	1
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	none		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>			
<i>Knowledge</i>	Students are able to reproduce an in-depth outline of energy production from biomass, aerobic and anaerobic waste treatment processes, the gained products and the treatment of produced emissions.		
<i>Skills</i>	Students can apply the learned theoretical knowledge of biomass-based energy systems to explain relationships for different tasks, like dimesioning and design of biomass power plants. In this context, students are also able to solve computational tasks for combustion, gasification and biogas, biodiesel and bioethanol use.		
<b>Personal Competence</b>			
<i>Social Competence</i>	Students can participate in discussions to design and evaluate energy systems using biomass as an energy source.		
<i>Autonomy</i>	Students can independently exploit sources with respect to the emphasis of the lectures. They can choose and aquire the for the particular task useful knowledge. Furthermore, they can solve computational tasks of biomass-based energy systems independently with the assistance of the lecture. Regarding to this they can assess their specific learning level and can consequently define the further workflow.

Course L1767: Thermal Utilization of Biomass	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Martin Kaltschmitt
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<p>Goal of this course is it to discuss the physical, chemical, and biological as well as the technical, economic, and environmental basics of all options to provide energy from biomass from a German and international point of view. Additionally different system approaches to use biomass for energy, aspects to integrate bioenergy within the energy system, technical and economic development potentials, and the current and expected future use within the energy system are presented.</p> <p>The course is structured as follows:</p> <ul style="list-style-type: none"> <li>• Biomass as an energy carrier within the energy system; use of biomass in Germany and world-wide, overview on the content of the course</li> <li>• Photosynthesis, composition of organic matter, plant production, energy crops, residues, organic waste</li> <li>• Biomass provision chains for woody and herbaceous biomass, harvesting and provision, transport, storage, drying</li> <li>• Thermo-chemical conversion of solid biofuels           <ul style="list-style-type: none"> <li>◦ Basics of thermo-chemical conversion</li> <li>◦ Direct thermo-chemical conversion through combustion: combustion technologies for small and large scale units, electricity generation technologies, flue gas treatment technologies, ashes and their use</li> <li>◦ Gasification: Gasification technologies, producer gas cleaning technologies, options to use the cleaned producer gas for the provision of heat, electricity and/or fuels</li> <li>◦ Fast and slow pyrolysis: Technologies for the provision of bio-oil and/or for the provision of charcoal, oil cleaning technologies, options to use the pyrolysis oil and charcoal as an energy carrier as well as a raw material</li> </ul> </li> <li>• Physical-chemical conversion of biomass containing oils and/or fats: Basics, oil seeds and oil fruits, vegetable oil production, production of a biofuel with standardized characteristics (trans-esterification, hydrogenation, co-processing in existing refineries), options to use this fuel, options to use the residues (i.e. meal, glycerine)</li> <li>• Bio-chemical conversion of biomass           <ul style="list-style-type: none"> <li>◦ Basics of bio-chemical conversion</li> <li>◦ Biogas: Process technologies for plants using agricultural feedstock, sewage sludge (sewage gas), organic waste fraction (landfill gas), technologies for the provision of bio methane, use of the digested slurry</li> <li>◦ Ethanol production: Process technologies for feedstock containing sugar, starch or celluloses, use of ethanol as a fuel, use of the stillage</li> </ul> </li> </ul>
<b>Literature</b>	Kaltschmitt, M.; Hartmann, H. (Hrsg.): <b>Energie aus Biomasse</b> ; Springer, Berlin, Heidelberg, 2009, 2. Auflage

Course L1769: World Market for Agricultural Commodities	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	1
<b>CP</b>	1
<b>Workload in Hours</b>	Independent Study Time 16, Study Time in Lecture 14
<b>Lecturer</b>	Thomas Mielke
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	<p>1) Markets for Agricultural Commodities</p> <p>What are the major markets and how are markets functioning</p> <p>Recent trends in world production and consumption.</p> <p>World trade is growing fast. Logistics. Bottlenecks.</p> <p>The major countries with surplus production</p> <p>Growing net import requirements, primarily of China, India and many other countries.</p> <p>Tariff and non-tariff market barriers. Government interferences.</p> <p>2) Closer Analysis of Individual Markets</p> <p>Thomas Mielke will analyze in more detail the global vegetable oil markets, primarily palm oil, soya oil, rapeseed oil, sunflower oil. Also the raw material (the oilseed) as well as the by-product (oilmeal) will be included. The major producers and consumers.</p> <p>Vegetable oils and oilmeals are extracted from the oilseed. The importance of vegetable oils and animal fats will be highlighted, primarily in the food industry in Europe and worldwide. But in the past 15 years there have also been rapidly rising global requirements of oils &amp; fats for non-food purposes, primarily as a feedstock for biodiesel but also in the chemical industry.</p> <p>Importance of oilmeals as an animal feed for the production of livestock and aquaculture</p> <p>Oilseed area, yields per hectare as well as production of oilseeds. Analysis of the major oilseeds worldwide. The focus will be on soybeans, rapeseed, sunflowerseed, groundnuts and cottonseed.</p> <p>Regional differences in productivity. The winners and losers in global agricultural production.</p> <p>3) Forecasts: Future Global Demand &amp; Production of Vegetable Oils</p> <p>Big challenges in the years ahead: Lack of arable land for the production of oilseeds, grains and other crops. Competition with livestock. Lack of water. What are possible solutions? Need for better education &amp; management, more mechanization, better seed varieties and better inputs to raise yields.</p> <p>The importance of prices and changes in relative prices to solve market imbalances (shortage situations as well as surplus situations). How does it work? Time lags.</p> <p>Rapidly rising population, primarily the number of people considered "middle class" in the years ahead.</p> <p>Higher disposable income will trigger changing diets in favour of vegetable oils and livestock products.</p> <p>Urbanization. Today, food consumption per caput is partly still very low in many developing countries, primarily in Africa, some regions of Asia and in Central America. What changes are to be expected?</p> <p>The myth and the realities of palm oil in the world of today and tomorrow.</p> <p>Labour issues curb production growth: Some examples: 1) Shortage of labour in oil palm plantations in Malaysia. 2) Structural reforms overdue for the agriculture in India, China and other countries to become more productive and successful, thus improving the standard of living of smallholders.</p>

## Specialization II. Process Engineering and Biotechnology

### Module M0513: System Aspects of Renewable Energies

#### Courses

Title	Type	Hrs/wk	CP
Fuel Cells, Batteries, and Gas Storage: New Materials for Energy Production and Storage (L0021)	Lecture	2	2
Energy Trading (L0019)	Lecture	1	1
Energy Trading (L0020)	Recitation Section (small)	1	1
Deep Geothermal Energy (L0025)	Lecture	2	2
<b>Module Responsible</b>	Prof. Martin Kaltschmitt		
<b>Admission Requirements</b>	none		
<b>Recommended Previous Knowledge</b>	Module: Technical Thermodynamics I Module: Technical Thermodynamics II		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy.</p> <p><i>Skills</i> Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode.</p> <p>Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of other modules on renewable energy projects. In this context they can unassistedly carry out analysis and evaluations of energie markets and energy trades.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> Students are able to discuss issues in the thematic fields in the renewable energy sector addressed within the module.</p> <p><i>Autonomy</i> Students can independently exploit sources , acquire the particular knowledge about the subject area and transform it to new questions.</p>

Module M0617: High Pressure Chemical Engineering				
Courses				
Title		Type	Hrs/wk	CP
High Pressure Technique for Apparatus Engineering (L1278)		Lecture	2	2
Industrial Processes Under High Pressure (L0116)		Lecture	2	2
Advanced Separation Processes (L0094)		Lecture	2	2
Module Responsible	Dr. Monika Johannsen			
Admission Requirements	none			
Recommended Previous Knowledge	Fundamentals of Chemistry, Chemical Engineering, Fluid Process Engineering, Thermal Separation Processes, Thermodynamics, Heterogeneous Equilibria			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	After a successful completion of this module, students can: <ul style="list-style-type: none"><li>explain the influence of pressure on the properties of compounds, phase equilibria, and production processes,</li><li>describe the thermodynamic fundamentals of separation processes with supercritical fluids,</li><li>exemplify models for the description of solid extraction and countercurrent extraction,</li><li>discuss parameters for optimization of processes with supercritical fluids.</li></ul>			
Knowledge				
Skills				
Personal Competence				
Social Competence	After successful completion of this module, students are able to: <ul style="list-style-type: none"><li>present a scientific topic from an original publication in teams of 2 and defend the contents together.</li></ul>			
Autonomy				
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Bioprocess Engineering: Specialisation B - Industrial Bioprocess Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Chemical and Bioprocess Engineering: Specialisation General Process Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory			

Course L1278: High Pressure Technique for Apparatus Engineering	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Dr. Robert Surma
<b>Language</b>	DE/EN
<b>Cycle</b>	SoSe
<b>Content</b>	<ol style="list-style-type: none"> <li>1. Basic laws and certification standards</li> <li>2. Basics for calculations of pressurized vessels</li> <li>3. Stress hypothesis</li> <li>4. Module M0749: Waste Treatment and Solid Matter Process Technology				
Courses				
Title		Typ	Hrs/wk	CP
Solid Matter Process Technology for Biomass (L0052)		Lecture	2	2
Thermal Waste Treatment (L0320)		Lecture	2	2
Thermal Waste Treatment (L1177)		Recitation Section (large)	1	2
Module Responsible	Prof. Kerstin Kuchta			
Admission Requirements	none			
Recommended Previous Knowledge	Basics of <ul style="list-style-type: none"><li>thermo dynamics</li><li>fluid dynamics</li><li>chemistry</li></ul>			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div><div>Knowledge</div><div>The students can name, describe current issue and problems in the field of thermal waste treatment and particle process engineering and contemplate them in the context of their field.</div><div>The industrial application of unit operations as part of process engineering is explained by actual examples of waste incineration technologies and solid biomass processes. Compostion, particle sizes, transportation and dosing, drying and agglomeration of renewable resources and wastes are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, electricity , heat and mineral recyclables.</div><div>Skills</div><div>The students are able to select suitable processes for the treatment of wastes or raw material with respect to their characteristics and the process aims. They can evaluate the efforts and costs for processes and select economically feasible treatment concepts.</div><div>Personal Competence</div><div><div>Social Competence</div><div>Students can<ul style="list-style-type: none"><li>respectfully work together as a team and discuss technical tasks</li><li>participate in subject-specific and interdisciplinary discussions,</li><li>develop cooperated solutions</li><li>promote the scientific development and accept professional constructive criticism.</li></ul></div><div>Autonomy</div><div>Students can independently tap knowledge of the subject area and transform it to new questions. They are capable, in consultation with supervisors, to assess their learning level and define further steps on this basis. Furthermore, they can define targets for new application-or research-oriented duties in accordance with the potential social, economic and cultural impact.</div></div></div>			
Workload in Hours	Independent Study Time 110, Study Time in Lecture 70			
Credit points	6			
Examination	Written exam			
Examination duration and scale	120 min			
Assignment for the Following Curricula	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Specialisation Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory International Management and Engineering: Specialisation II. Renewable Energy: Elective Compulsory Renewable Energies: Specialisation Bio energies: Elective Compulsory Process Engineering: Specialisation Chemical Process Engineering: Elective Compulsory Process Engineering: Specialisation Process Engineering: Elective Compulsory Process Engineering: Specialisation Environmental Process Engineering: Elective Compulsory Water and Environmental Engineering: Specialisation Environment: Compulsory Water and Environmental Engineering: Specialisation Cities: Elective Compulsory			

Course L0052: Solid Matter Process Technology for Biomass	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Werner Sitzmann
<b>Language</b>	DE
<b>Cycle</b>	SoSe
<b>Content</b>	The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture.

Module M0896: Bioprocess and Biosystems Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Bioreactor Design and Operation (L1034)	Lecture	2	2
Bioreactor Design and Operation (L1035)	Laboratory Course	1	1
Biosystems Engineering (L1036)	Lecture	2	2
Biosystems Engineering (L1037)	Problem-based Learning	1	1
<b>Module Responsible</b>	Prof. An-Ping Zeng		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	Knowledge of bioprocess engineering and process engineering at bachelor level		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	After completion of this module, participants will be able to: <ul style="list-style-type: none"> <li>differentiate between different kinds of bioreactors and describe their key features</li> <li>identify and characterize the peripheral and control systems of bioreactors</li> <li>depict integrated biosystems (bioprocesses including up- and downstream processing)</li> <li>name different sterilization methods and evaluate those in terms of different applications</li> <li>recall and define the advanced methods of modern systems-biological approaches</li> <li>connect the multiple "omics"-methods and evaluate their application for biological questions</li> <li>recall the fundamentals of modeling and simulation of biological networks and biotechnological processes and to discuss their methods</li> <li>assess and apply methods and theories of genomics, transcriptomics, proteomics and metabolomics in order to quantify and optimize biological processes at molecular and process levels.</li> </ul>		
<b>Skills</b>	After completion of this module, participants will be able to: <ul style="list-style-type: none"> <li>describe different process control strategies for bioreactors and chose them after analysis of characteristics of a given bioprocess</li> <li>plan and construct a bioreactor system including peripherals from lab to pilot plant scale</li> <li>adapt a present bioreactor system to a new process and optimize it</li> <li>develop concepts for integration of bioreactors into bioproduction processes</li> <li>combine the different modeling methods into an overall modeling approach, to apply these methods to specific problems and to evaluate the achieved results critically</li> <li>connect all process components of biotechnological processes for a holistic system view.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	After completion of this module, participants will be able to debate technical questions in small teams to enhance the ability to take position to their own opinions and increase their capacity for teamwork.  The students can reflect their specific knowledge orally and discuss it with other students and teachers.		
<i>Autonomy</i>	After completion of this module, participants will be able to solve a technical problem in teams of approx. 8-12 persons independently including a presentation of the results. <ul style="list-style-type: none"> <li></li> </ul>

Module M0519: Particle Technology and Solid Matter Process Technology				
Courses				
Title		Typ	Hrs/wk	CP
Advanced Particle Technology II (L0050)		Lecture	2	2
Advanced Particle Technology II (L0051)		Recitation Section (small)	1	1
Experimental Course Particle Technology (L0430)		Laboratory Course	3	3
Module Responsible	Prof. Stefan Heinrich			
Admission Requirements	None			
Recommended Previous Knowledge	Basic knowledge of solids processes and particle technology			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	After completion of the module the students will be able to describe and explain processes for solids processing in detail based on microprocesses on the particle level.  Students are able to choose process steps and apparatuses for the focused treatment of solids depending on the specific characteristics. They furthermore are able to adapt these processes and to simulate them.  Students are able to present results from small teamwork projects in an oral presentation and to discuss their knowledge with scientific researchers.  Students are able to analyze and solve problems regarding solid particles independently or in small groups.

Module M0540: Transport Processes				
Courses				
Title		Typ	Hrs/wk	CP
Multiphase Flows (L0104)		Lecture	2	2
Reactor Design Using Local Transport Processes (L0105)		Problem-based Learning	2	2
Heat & Mass Transfer in Process Engineering (L0103)		Lecture	2	2
Module Responsible	Prof. Michael Schlüter			
Admission Requirements	None			
Recommended Previous Knowledge	All lectures from the undergraduate studies, especially mathematics, chemistry, thermodynamics, fluid mechanics, heat- and mass transfer.			
Educational Objectives	After taking part successfully, students have reached the following learning results			
Professional Competence	<div>Students are able to:</div> <ul style="list-style-type: none"><li>describe transport processes in single- and multiphase flows and they know the analogy between heat- and mass transfer as well as the limits of this analogy.</li><li>explain the main transport laws and their application as well as the limits of application.</li><li>describe how transport coefficients for heat- and mass transfer can be derived experimentally.</li><li>compare different multiphase reactors like trickle bed reactors, pipe reactors, stirring tanks and bubble column reactors.</li><li>are known. The Students are able to perform mass and energy balances for different kind of reactors. Further more the industrial application of multiphase reactors for heat- and mass transfer are known.</li></ul> <div>The students are able to:</div> <ul style="list-style-type: none"><li>optimize multiphase reactors by using mass- and energy balances,</li><li>use transport processes for the design of technical processes,</li><li>to choose a multiphase reactor for a specific application.</li></ul>			
Knowledge				
Skills				
Personal Competence				
Social Competence	The students are able to discuss in international teams in english and develop an approach under pressure of time.			
Autonomy	Students are able to define independently tasks, to solve the problem "design of a multiphase reactor". The knowledge that s necessary is worked out by the students themselves on the basis of the existing knowledge from the lecture. The students are able to decide by themselves what kind of equation and model is applicable to their certain problem. They are able to organize their own team and to define priorities for different tasks.			
Workload in Hours	Independent Study Time 96, Study Time in Lecture 84			
Credit points	6			
Examination	Colloquium			
Examination duration and scale	15 min Presentation + 90 min multiple choice written examen			
Assignment for the Following Curricula	Bioprocess Engineering: Core qualification: Compulsory Energy and Environmental Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Process Engineering: Core qualification: Compulsory			

Course L0104: Multiphase Flows	
<b>Typ</b>	Lecture

Course L0105: Reactor Design Using Local Transport Processes	
<b>Typ</b>	Problem-based Learning
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Michael Schlüter
<b>Language</b>	EN
<b>Cycle</b>	WiSe
<b>Content</b>	In this Problem-Based Learning unit the students have to design a multiphase reactor for a fast chemical reaction concerning optimal hydrodynamic conditions of the multiphase flow.  The four students in each team have to: <ul style="list-style-type: none"> <li>• collect and discuss material properties and equations for design from the literature,</li> <li>• calculate the optimal hydrodynamic design,</li> <li>• check the plausibility of the results critically,</li> <li>• write an exposé with the results.</li> </ul> This exposé will be used as basis for the discussion within the oral group examen of each team.
<b>Literature</b>	see actual literature list in StudIP with recent published papers

Module M0542: Fluid Mechanics in Process Engineering			
Courses			
Title	Typ	Hrs/wk	CP
Applications of Fluid Mechanics in Process Engineering (L0106)	Recitation Section (large)	2	2
Fluid Mechanics II (L0001)	Lecture	2	4
<b>Module Responsible</b>	Prof. Michael Schlüter		
<b>Admission Requirements</b>	None		
<b>Recommended Previous Knowledge</b>	<ul style="list-style-type: none"> <li>• Mathematics I-III</li> <li>• Fundamentals in Fluid Mechanics</li> <li>• Technical Thermodynamics I-II</li> <li>• Heat- and Mass Transfer</li> </ul>		
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b>	<p><i>Knowledge</i> The students are able to describe different applications of fluid mechanics in Process Engineering, Bioprocess Engineering, Energy- and Environmental Process Engineering and Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity in an example of free jets, empirical solutions in an example with the Forchheimer equation, numerical methods in an example of Large Eddy Simulation.</p> <p><i>Skills</i> Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure.</p> <p><b>Personal Competence</b></p> <p><i>Social Competence</i> The students are able to discuss a given problem in small groups and to develop an approach.</p> <p><i>Autonomy</i> Students are able to define independently tasks for problems related to fluid mechanics. They are able to work out the knowledge that is necessary to solve the problem by themselves on the basis of the existing knowledge from the lecture.</p>

<b>Examination</b>	Written exam		
<b>Examination duration and scale</b>	180 min		
<b>Assignment for the Following Curricula</b>	Bioprocess Engineering: Specialisation A - General Bioprocess Engineering: Elective Compulsory Energy and Environmental Engineering: Core qualification: Compulsory International Management and Engineering: Specialisation II. Energy and Environmental Engineering: Elective Compulsory International Management and Engineering: Specialisation II. Process Engineering and Biotechnology: Elective Compulsory Process Engineering: Core qualification: Compulsory		

Course L0106: Applications of Fluid Mechanics in Process Engineering	
<b>Typ</b>	Recitation Section (large)
<b>Hrs/wk</b>	2
<b>CP</b>	2
<b>Workload in Hours</b>	Independent Study Time 32, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Michael Schlüter
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	The Exercise-Lecture will bridge the gap between the theoretical content from the lecture and practical calculations. For this aim a special exercise is calculated at the blackboard that shows how the theoretical knowledge from the lecture can be used to solve real problems in Process Engineering.
<b>Literature</b>	<ol style="list-style-type: none"> <li>1. Brauer, H.: Grundlagen der Einphasen- und Mehrphasenströmungen. Verlag Sauerländer, Aarau, Frankfurt (M), 1971.</li> <li>2. Course L0001: Fluid Mechanics II	
<b>Typ</b>	Lecture
<b>Hrs/wk</b>	2
<b>CP</b>	4
<b>Workload in Hours</b>	Independent Study Time 92, Study Time in Lecture 28
<b>Lecturer</b>	Prof. Michael Schlüter
<b>Language</b>	DE
<b>Cycle</b>	WiSe
<b>Content</b>	<ul style="list-style-type: none"> <li>• Differential equations for momentum-, heat and mass transfer</li> <li>• Examples for simplifications of the Navier-Stokes Equations</li> <li>• Unsteady momentum transfer</li> <li>• Free shear layer, turbulence and free jets</li> <li>• Flow around particles - Solids Process Engineering</li> <li>• Coupling of momentum and heat transfer - Thermal Process Engineering</li> <li>• Rheology – Bioprocess Engineering</li> <li>• Coupling of momentum- and mass transfer – Reactive mixing, Chemical Process Engineering</li> <li>• Flow through porous structures - heterogeneous catalysis</li> <li>• Pumps and turbines - Energy- and Environmental Process Engineering</li> <li>• Wind- and Wave-Turbines - Renewable Energy</li> <li>• Introduction into Computational Fluid Dynamics</li> </ul>
<b>Literature</b>	<ol style="list-style-type: none"> <li>1. Brauer, H.: Grundlagen der Einphasen- und Mehrphasenströmungen. Verlag Sauerländer, Aarau, Frankfurt (M), 1971.</li> <li>2. ## Thesis

### Module M-002: Master Thesis

#### Courses

Title	Typ	Hrs/wk	CP
<b>Module Responsible</b>	Professoren der TUHH		
<b>Admission Requirements</b>	<ul style="list-style-type: none"> <li>According to General Regulations §24 (1):</li> </ul> <p>At least 78 credit points have to be achieved in study programme. The examinations board decides on exceptions.</p>		
<b>Recommended Previous Knowledge</b>			
<b>Educational Objectives</b>	After taking part successfully, students have reached the following learning results		
<b>Professional Competence</b> <i>Knowledge</i>	<ul style="list-style-type: none"> <li>The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues.</li> <li>The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them.</li> <li>The students can place a research task in their subject area in its context and describe and critically assess the state of research.</li> </ul>		
<b>Skills</b>	<p>The students are able:</p> <ul style="list-style-type: none"> <li>To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question.</li> <li>To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way.</li> <li>To develop new scientific findings in their subject area and subject them to a critical assessment.</li> </ul>		
<b>Personal Competence</b> <i>Social Competence</i>	<p>Students can</p> <ul style="list-style-type: none"> <li>Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured way.</li> <li>Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly.</li> </ul>		
<i>Autonomy</i>	<p>Students are able:</p> <ul style="list-style-type: none"> <li>To structure a project of their own in work packages and to work them off accordingly.</li> <li>To work their way in depth into a largely unknown subject and to access the information required for them to do so.</li> <li>To apply the techniques of scientific work comprehensively in research of their own.</li> </ul>		
<b>Workload in Hours</b>	Independent Study Time 900, Study Time in Lecture 0		
<b>Credit points</b>	30		
<b>Examination</b>	according to Subject Specific Regulations		
<b>Examination duration and scale</b>	see FSPO		
<b>Assignment for the Following Curricula</b>	Civil Engineering: Thesis: Compulsory Bioprocess Engineering: Thesis: Compulsory Chemical and Bioprocess Engineering: Thesis: Compulsory Computer Science: Thesis: Compulsory Electrical Engineering: Thesis: Compulsory Energy and Environmental Engineering: Thesis: Compulsory Energy Systems: Thesis: Compulsory Environmental Engineering: Thesis: Compulsory Aircraft Systems Engineering: Thesis: Compulsory Global Innovation Management: Thesis: Compulsory Computational Science and Engineering: Thesis: Compulsory Information and Communication Systems: Thesis: Compulsory International Production Management: Thesis: Compulsory International Management and Engineering: Thesis: Compulsory Joint European Master in Environmental Studies - Cities and Sustainability: Thesis: Compulsory Logistics, Infrastructure and Mobility: Thesis: Compulsory Materials Science: Thesis: Compulsory Mechanical Engineering and Management: Thesis: Compulsory Mechatronics: Thesis: Compulsory Biomedical Engineering: Thesis: Compulsory Microelectronics and Microsystems: Thesis: Compulsory Product Development, Materials and Production: Thesis: Compulsory Renewable Energies: Thesis: Compulsory Naval Architecture and Ocean Engineering: Thesis: Compulsory Ship and Offshore Technology: Thesis: Compulsory Theoretical Mechanical Engineering: Thesis: Compulsory Process Engineering: Thesis: Compulsory Water and Environmental Engineering: Thesis: Compulsory
