| | 5 |
| Program description | |
| Core Qualification | 6 |
| Module M0560: Institutional Environment of International Management | 6 |
| Module M0698: Accounting | 8 |
| Module M0820: International Business | 12 |
| Module M0524: Non-technical Courses for Master | 16 |
| Module M0554: Quantitative Methods - Statistics and Operations Research | 18 |
| Module M1002: Production and Logistics Management | 21 |
| Module M0750: Economics | 24 |
| Module M1734: Organization and IT of international companies and supply chains | 26 |
| Module M1733: Foundations in Organizational Design and Human Resource Management | 29 |
| Module M0916: Project Seminar IWI | 32 |
| Specialization I. Electives Management | 33 |
| Module M0855: Marketing (Sales and Services / Innovation Marketing) | 33 |
| Module M0996: Supply Chain Management | 35 |
| Module M1034: Technology Entrepreneuship | 38 |
| Module M0558: Business Optimization - Advanced Operations Research | 41 |
| Module M0866: EIP and Productivity Management | 44 |
| Module M0697: Management Control | 46 |
| Module M0543: Advanced Topics in Management, Organization, and Human Resource Management | 48 |
| Module M0559: Strategic Management | 50 |
| Module M0815: Product Planning | 52 |
| Module M0994: Information Technology in Logistics | 54 |
| Module M1003: Management Control Systems for Operations | 55 |
| Module M1035: Entrepreneurial Finance | 58 |
| Module M1683: Project and Negotiation Management | 61 |
| Module M1701: Digital Economics | 65 |
| Module M0814: Technology Management | 67 |
| Specialization II. Civil Engineering | 69 |
| Module M0998: Statics and Dynamics of Structures | 69 |
| Module M0723: Design of Prestressed Structures and Concrete Bridges | 72 |
| Module M0977: Construction Logistics and Project Management | 74 |
| Module M0860: Harbour Engineering and Harbour Planning | 77 |
| Module M0581: Water Protection | 79 |
| Module M0595: Examination of Materials, Structural Condition and Damages | 81 |
| Module M0603: Nonlinear Structural Analysis | 82 |
| Module M0858: Coastal Hydraulic Engineering I | 84 |
| Module M0699: Geotechnics III | 86 |
| Module M0962: Sustainability and Risk Management | 88 |
| Module M0963: Steel and Composite Structures | 90 |
| Module M0964: Underground Constructions | 92 |
| Module M0713: Concrete Structures | 94 |
| Specialization II. Electrical Engineering | 96 |
| Module M0630: Robotics and Navigation in Medicine | 96 |
| Module M0673: Information Theory and Coding | 98 |
| Module M0712: Microwave Semiconductor Devices and Circuits I | 101 |
| Module M0746: Microsystem Engineering | 103 |
| Module M0676: Digital Communications | 105 |
| Module M0925: Digital Circuit Design | 108 |
| Module M1048: Integrated Circuit Design | 109 |
| Module M0548: Bioelectromagnetics: Principles and Applications | 111 |
| Module M0710: Microwave Engineering | 113 |
| Specialization II. Energy and Environmental Engineering | 115 |
| Modulo MOE13: Use of Solar Energy | 115 |
| Module M0512: Ose of Solar Energy Module M0513: System Aspects of Renewable Energies | 119 |
| Modulo M0974: Wastowator Systems | 122 |
| Module M0721: Air Conditioning | 125 |
| Module M1000: Combined Heat and Power and Combustion Technology | 127 |
| Module M1878: Sustainable energy from wind and water | 130 |
| Module M0801: Water Resources and -Supply | 133 |
| Module M1888: Environmental protection management | 136 |
| Module M0949: Rural Development and Resources Oriented Sanitation for different Climate Zones | 138 |
| Module M0540: Transport Processes | 140 |
| Module M1125: Bioresources and Biorefineries | 143 |
| Module M0542: Fluid Mechanics in Process Engineering | 146 |
| Module M0619: Waste Treatment Technologies | 148 |
| Module M0742: Thermal Energy Systems | 150 |
| Specialization II. Information Technology | 152 |
| Module M0837: Simulation of Communication Networks | 152 |
| | 102 |

| Module M1884: | Data-Driven Innovation | 153 |
|----------------|---|------------|
| Module M0627: | Machine Learning and Data Mining | 155 |
| Module M1879: | Causal Data Science for Business Analytics | 157 |
| Module M0676: | Digital Communications | 160 |
| Module M0753: | Software Verification | 163 |
| Module M0836: | Communication Networks | 165 |
| Module M0733: | Software Analysis | 167 |
| Module M1598: | Image Processing | 169 |
| | Deep Learning for Social Analytics | 171 |
| | Intelligent Autonomous Agents and Cognitive Robotics | 174 |
| Specialization | | 176 |
| | Sustainable Mobility of Goods and Logistics Systems | 176 |
| | Maritime Transport | 178 |
| | Integrated Maintenance and Spare Part Logistics | 180 |
| Module M1133: | | 182 |
| | Construction Logistics and Project Management | 184 |
| | Laboratory of Logistics Engineering and Automatisation | 187 |
| Module M1100: | | 189 |
| | Machine Learning in Logistics | 190 |
| | Factory Planning & Production Logistics | 193 |
| | Operational Aspekts in Aviation | 195 |
| | II. Aviation Systems | 199 |
| | Technical Acoustics I (Acoustic Waves, Noise Protection, Psycho Acoustics) | 199 |
| | Systems Engineering | 201 |
| | Air Conditioning | 203 |
| | Aircraft Design II (Special Air Vehicle Design) | 205 |
| | Flight Control Systems Aircraft Energy Systems | 207 209 |
| Module M0703. | | 209 |
| | Aircraft Design I (Civil Aircraft Design) | 213 |
| | Aircraft Cabin Systems | 215 |
| | Operational Aspekts in Aviation | 217 |
| | Cabin Systems Engineering | 221 |
| | Operational Aspekts in Aviation | 224 |
| | II. Mechatronics | 228 |
| | Nonlinear Dynamics | 228 |
| | Applied Design Methodology in Mechatronics | 229 |
| | Computational Structural Dynamics | 231 |
| | Industrial Process Automation | 233 |
| | Microsystem Engineering | 235 |
| Module M0751: | Vibration Theory | 237 |
| Module M0808: | Finite Elements Methods | 238 |
| Module M0768: | Microsystems Technology in Theory and Practice | 240 |
| Module M1025: | | 242 |
| Module M0563: | | 245 |
| Specialization | II. Product Development and Production | 247 |
| Module M1143: | Applied Design Methodology in Mechatronics | 247 |
| | High-Order FEM | 249 |
| | Structure and properties of fibre-polymer-composites | 251 |
| | Laboratory of Logistics Engineering and Automatisation | 253 |
| | Systems Engineering | 255 |
| | Automation Technology and Systems | 257 |
| Module M0563: | | 259 |
| | Finite Elements Methods | 261 |
| | Methods of Product Development | 263 |
| Module M1025: | | 265 |
| | Industrial Process Automation Phenomena and Methods in Materials Science | 268 270 |
| | Factory Planning & Production Logistics | 270 |
| Module MORA7 | Production Planning & Control and Digital Enterprise | 272 |
| | II. Ponowahla Energy | 276 |
| | Hos of Color Engrav | 276 |
| | System Aspects of Renewable Energies | 276 |
| | Waste and Energy | 283 |
| Module M0740 | Waste and Energy Waste Treatment and Solid Matter Process Technology | 285 |
| | Sustainable energy from wind and water | 287 |
| | Fluid Mechanics and Ocean Energy | 290 |
| Module M1294: | | 292 |
| | II. Process Engineering and Biotechnology | 296 |
| | System Aspects of Renewable Energies | 296 |
| | Wastewater Systems | 299 |
| | BIO II: Artificial Joint Replacement | 302 |
| | | |
| Module M0617: | High Pressure Chemical Engineering | 303 |

| Module M0914: Technical Microbiology | 309 |
|---|-----|
| Module M0749: Waste Treatment and Solid Matter Process Technology | 311 |
| Module M0896: Bioprocess and Biosystems Engineering | 313 |
| Module M0630: Robotics and Navigation in Medicine | 317 |
| Module M1702: Process Imaging | 319 |
| Module M0541: Process and Plant Engineering II | 321 |
| Module M0540: Transport Processes | 323 |
| Module M0542: Fluid Mechanics in Process Engineering | 326 |
| Module M1334: BIO II: Biomaterials | 328 |
| Module M0519: Particle Technology and Solid Matter Process Technology | 330 |
| Thesis | 332 |
| Module M-002: Master Thesis | 332 |

Program description

Content

It is the major objective of the Masters degree programme "International Management and Engineering" to offer students the opportunity to acquire the competencies which they will need for their future career, e.g. in a technical or management department of companies in different branches of industry, or for a future career in research (i.e. a PhD) in the area of Management and Engineering. The students' future sphere of activities hence may include research and development, leadership and management of international projects or tasks in operational or strategic management.

In particular, after having finished their studies, students are supposed to be able to carry out managerial functions in international companies and to act successfully at the interface of management and technology. They can successfully apply methods for solving managerial as well as technical problems, and they are also able to solve new problems in changing and volatile situations. Moreover, they will develop a critical attitude towards these methods and are also able to advance the methods, whenever necessary. Hence, they have a sound foundation for acting responsibly in their jobs and for taking ethical aspects and consequences of their decisions in account.

Career prospects

Graduates of the International Management and Engineering" programme find many job opportunities in industry, in particular in international companies, in service companies, in particular in consulting, and in research and development. They are particularly qualified for responsible and leading positions at the interface of management and technology.

Learning target

The graduates have acquired the basic skills, specialized knowledge and additional competences required for a national and/or international career in the interdisciplinary field of industrial engineering. They have gained scientifically based specialized knowledge of business sciences, as well as an indepth knowledge of engineering disciplines. Hence, they are qualified for performing interdisciplinary tasks, and they are able to pursue stand-alone tasks at the interface of business management and technology. Moreover, the graduates have the capability to work in strategic and operational management functions in different types of enterprises, including multinationals, or to pursue an academic career, i.e. a PhD.

In particular, the graduates are able to apply the methods and techniques required to solve both business-related and technological tasks, to critically analyze these methods, and to improve their development by applying new insights.

Furthermore, the graduates have acquired competences that enable them:

- To transfer their theoretical knowledge into practice
- To take on complex planning tasks in global value-added networks and successfully apply their theoretical knowledge of the management and engineering sciences in practice.
- To participate, in a leading function, in international technology and management-oriented projects.
- To analyze and critically assess processes, systems, and innovative technologies in different business-related areas.
- To also systematically consider the non-technical consequences of engineering activities and incorporate these responsibly and ethically in a socio-economic context.
- To independently acquire relevant knowledge from the scientific literature, to judge relevant publications critically and to write scientific reports.
- To carry out their own research projects
- To successfully communicate with experts from their field and from other fields in German and English

Moreover, the key qualifications acquired in the Bachelor's program were extended and enhanced by means of suitable teaching methods within the Master's degree course. In addition, the students' intercultural competence was developed and their ability to work in a team was improved.

Program structure

In this degree programme, students gain broad management competencies, especially for the application in an industrial and international operational area. Students can enhance their knowledge in special fields as, e.g. Supply Chain Management, Technology Management, Human Resource Management, Strategic Management or Marketing, Controlling or Operations Research. They can concentrate on different core areas, namely on

- Marketing and Technology
- Supply Chain Management and Logistics
- Corporate Management
- Entrepreneurship

In addition, students can select an engineering specialization. There are different areas of engineering on offer:

- Civil Engineering
- Electrical Engineering
- Power and Environmental Engineering
- Information Technology
- Logistics
- Aviation Systems
- Mechatronics
- Product Development and Production
- Renewable Energy
- Process Engineering and Biotechnology

As the third semester does not contain any complulsory courses, it is particularly well suited for a stay abroad at one of the many partner universities of TUHH. The TUHH strongly supports students when they are planning such a stay abroad.

Module M0698: Accounting Courses Title Hrs/wk Тур CP Financial Accounting and Finance (L3053) Lecture Management Accounting and Capital Budgeting (L3054) 2 Lecture 3 Module Responsible Prof. Matthias Meyer **Admission Requirements** None **Recommended Previous** Basic knowledge of accounting and general business administration. Knowledge The previous knowledge required for successful completion of this module, in particular of bookkeeping, is imparted within the framework of an e-learning programme Through an online test, the student can earn points which are added to the final examination result of the module. Students receive access and further information to the corresponding online learning module upon enrolment. **Educational Objectives** After taking part successfully, students have reached the following learning results **Professional Competence** Knowledge The students know ... • the basic structure of the current cost recording and allocation and can be used in • Different cost classifications (variable/fixed, individual/joint) and can classify them theoretically; · Subdivide into cost element, cost center and cost object accounting • the concept and necessity of cost centers; • Different costing procedures simulation-based methods for the design of cost accounting systems Instruments for cost planning and control; • various partial cost accounting systems as an alternative to full cost accounting and can characterize these comprehensively; • modern developments in cost management; • the Accuracy Effort Tradeoff and variance-based criticisms of Activity-Based Costing • the structure of the balance sheet, and they can explain individual balance sheet items with regard to their approach and • the components of the financial statements according to HGB and IFRS and can explain them; · the difference between the total cost method and the cost of sales method; Function and methodology of the audit; • the procedure of balance sheet analysis and can explain the steps of method selection, data preparation and data • the most important financial and performance indicators and can derive them • The role of the finance function in internationally operating companies and the interdependencies between investment and · the main theories and models in the field of investment and financing; Methods for evaluating companies and investment decisions; Approaches to risk assessment in the field of investment and financing and portfolio theory; · alternative financing options and their specific design and valuation; · the contents and methods of short- and long-term financial planning; • to explain characteristics of the cost and activity accounting and to apply methods from this range to economical problem • to describe the tasks of cost type, cost centre and cost unit accounting as well as to discuss the classification into the basic schema of cost recording and allocation: to differentiate between different possibilities of the case-by-case special allocation of cost center services and to implement them purposefully; to characterize and apply different calculation methods depending on the homogeneity or heterogeneity of the created to classify and apply marginal cost accounting as well as contribution margins related to bottlenecks as decision-oriented cost accounting systems and to interpret the results of their analyses; to distinguish cost planning from cost management: To apply process cost accounting and target costing and to interpret the results of their analyses; interpret current research results on the design of cost accounting systems to explain the connections between the different parts of the operational accountancy and to differentiate their addressees to explain and interpret the legal provisions of the German Commercial Code on accounting and bookkeeping and to apply them to common facts of business operations; to identify and critically evaluate differences between HGB and IFRS with respect to material balance sheet items; to explain the technique of balance sheet analysis, to apply it to the annual financial statements of various international companies (including IFRS) and to draw conclusions about the prevailing economic conditions there; to explain theories and models for the investment management of international enterprises, to evaluate their application possibilities and to reflect critically on the results: to apply methods of financial mathematics to investment and financing problems and to use suitable software tools for the

methods and indicators, to determine the optimal investment portfolio and to decide on it:

to adequately evaluate investment projects of internationally operating companies using suitable business management

to determine the capital requirements and capital costs of globally operating companies; to evaluate financing alternatives and select them based on the results; to determine, in the context of globalized financial markets, an appropriate level of dividends and the dividend policy of companies, as well as the type, volume, maturity and yield of corporate bonds; to financially assess the attractiveness of acquisitions by international competitors. Personal Competence Social Competence The students can... • analyse business problems in a team and develop solutions together; present the results of their analyses in an understandable way, also in English; explain the implications of current research results to others and to reflect critically on them togethe • act as a competent contact within the framework of an audit; • determine the ethical dilemmas of investment and financing decisions and to take them into account within the framework • assume leadership responsibility in questions of investment and financing in the company, but also in teamwork, and to present technically sound proposals for solutions. Autonomy The students are able... • to apply the presented methods of cost accounting in order to analyze business problems and to interpret and critically evaluate the results; to critically analyze the capital structure of globally operating companies to transfer the theoretical knowledge about accounting into operational practice; to decide independently which accounting methods can be used for which problems; to acquire knowledge about the subject area independently and to transfer the acquired knowledge to new questions; to use cost accounting systems independently and to design them purposefully; to carry out operational accounting tasks independently, also in internationally active companies; to use methods of the illustration and analysis of the seized business transactions, in order to analyze economical problem definitions and to evaluate the results critically; to interpret and critically evaluate the key figures determined within the framework of a balance sheet analysis; to strategically optimize the capital structure of a company and to use the different forms of corporate financing on the global financial markets in an appropriate manner; to carry out short-term and long-term financial planning; to analyse and optimise the profit and risk position of an internationally operating company; to evaluate companies and make international acquisition decisions.

Module M0820: International Business Courses Hrs/wk Тур CP Business-to-Business Marketing (L0762) Lecture Intercultural Management and Communication (L0846) 2 Lecture 2 International Management (L0157) Lecture **Module Responsible** Prof. Christian Lüthje **Admission Requirements Recommended Previous** Bachelor-level knowledge in marketing and (international) strategic management; basic understanding of market segmentation, modes of market entry, strategic management, pricing theory and marketing instruments. Knowledge The previous knowledge which is required for this module is taught by e-learning modules. Students receive access data and information regarding the online learning module after enrolment at TUHH. **Educational Objectives** After taking part successfully, students have reached the following learning results **Professional Competence** The students will develop a thorough understanding of the following: · Selling to organizations and marketing strategies in B2B markets • Relevant theories, methods and tools for operational B2B marketing · Relevant theories for intercultural communication · Theoretical knowledge of · the importance of globalization for firms and the challenges facing companies in the context of their international • methods of measuring the internationalization degree of companies and the resulting practical implications; • target market strategies, market entry strategies and foreign operation modes and allocation strategies; different types of international organizational structures (e.g. global organization, network organization, transnational organization); "culture" and its impact on human interaction: important aspects of (intercultural) communication issues. · methods of analysis and assessment of market entry risks by applying modern theories such as the "Innovator's Dilemma" framework: · modes of cooperation such as prime contractor and consortium models and their industrial cooperation related advantages and disadvantages: · special methods of assessment of specific country risks; The students will be able to apply this knowledge to • identify and systematically address relevant partners when selling to business organizations; • place, price and communicate industrial products with the help state-of-the-art B2B marketing tools; define the specifics of global industries and respond to them deriving appropriate practical recommendations (global competitors, regional consumers, local and global suppliers, etc.); • derive advantages and disadvantages of different target market, market entry, timing and allocation strategies: • apply the theoretical knowledge to business cases or real examples (e.g. internationalization processes of well-known hotel chains or franchise companies, etc.); • interpret symbols, rituals and gestures appropriately in an intercultural context. Based on these skills, the students will be able to • analyze market-entry options and market positioning in B2B markets; • systematically analyze, work up and present information needed for making the decision for or against internationalization of company's operations and regarding HOW, WHEN and WHAT; • analyze and evaluate risks in the context of international business operations; · decide which mode of market entry (e.g. franchising) yields most potential; · make methodically based internationalization decisions as well as master the specifics of strategic management in an international context and apply concrete planning processes; develop strategies when approaching international client companies and manage relationships with complex client entities; develop sophisticated market-entry strategies and to position innovative industrial goods in global business-to-business • develop communication strategies in the domain of industrial goods, develop pricing plans by applying state-of-the-art tools like Vickrey-auctions to measure willingness-to-pay and methods such as tender-bidding models. • solve complex operating planning tasks independently or in a team applying appropriate methods and comprehensibly present the results of their analysis; • identify problems and resolve cultural issues in multi-cultural teams and in intercultural collaborations successfully manage cultural diversity. Personal Competence Social Competence The students will be able to · have fruitful professional discussions; • present and defend the results of their work in a group of students; · work successfully in multi-cultural teams communicate and collaborate successfully and respectfully with others, also on an intercultural basis.

| Content | Contents Business-to-business (B2B) markets play an important role in most economies. At the same time, B2B markets differ strongly from consumer goods markets. For example, companies' buying decisions follow different rules than those of consuming individuals. Consequently, marketing mix decisions in B2B markets need to follow the specific circumstances in such markets. The aim of this lecture is to enable students to understand the specifics of marketing in B2B markets. At the beginning, students learn which strategic marketing decisions may be most appropriate in industrial markets. Following that, the lecture will focus more on different options to design marketing mix elements - Pricing, Communication and Distribution - in B2B markets. We extend the student's basic knowhow in marketing and focus on the specific requirements in B2B markets. Topics |
| | The importance, specific characteristics and developments of B2B markets today Organizational buying behavior and the corporate buying process B2B marketing strategies regarding modes and time of market entry with focus on innovative industrial products Types of project-related cooperation in the B2B project business Specific operational marketing methods in communication (success factors of fares and exhibitions, importance of public relations for B2B markets); pricing (measuring willingness-to-pay via auctions; value-based pricing in industrial markets, bidding models and auctioning); distribution and channel strategies for B2B markets Marketing in complex value chains: Solving the problem of direct customers' unwillingness to adopt innovative products by directly addressing indirect customers |
| | Knowledge The students will develop a thorough understanding of: How organizations and firms buy How marketing can be performed in complex value chains Promising market and competitive strategies in B2B markets Modes of cooperation in B2B markets Marketing-Mix decisions in B2B marketing (communication, pricing, distribution) |
| | Skills analyzing the advantages and disadvantages of different target market, market entry, timing and allocation strategies; |
| | identifying and systematically address relevant partners when selling to business organizations; developing context-specific market-entry and timing strategies; making appropriate decisions for the pricing and communication of industrial products; applying the theoretical knowledge to business cases or real examples Social Competence |
| | The students will be able to |
| | having fruitful professional discussions; presenting and defending the results of their work in groupwork; |
| | Self-reliance |
| | acquiring knowledge in the specific context independently and to map this knowledge onto other new complex problem fields. |
| | Assessment |
| | Written examination & Class participation in interactive elements (presentations, homework) |

| Content | Globalization of business processes and the revolution in information and communication technologies (ICT) have resulted in distributed workflows across geographic boundaries. These developments as well as increased immigration emanating, for example, as a consequence of a shortage of skilled labour in many industrialized nations, have led to the creation of (virtual) multicultural, multi-ethnic teams with diverse cultural backgrounds. Such diversity generally has a positive impact on creativity and innovativeness, as many empirical studies confirm. Nevertheless, varying cultural practices, communication styles, and contextual sensibilities have the potential to disturb or even disrupt collaborative work processes, if left unmanaged. This course focuses on inter-cultural management from both, theoretical as well as practical, points of view to provide a solid fundament to students enabling them to operate successfully in cross-cultural settings. Case studies and guest lecture(s) will be used to provide added practical relevance to the course. In addition, where practicable, student assignments will be used to foster autonomous learning. Some of the main topics covered in this course include: • Understanding "culture" and its impact on human interaction • Verbal and non-verbal communication • Verbal and non-verbal communication • Role of formality and non-formality in communication • Varying interpretations of symbols, rituals & gestures • Managing diversity in domestic settings |

| Content | Growing internationalization of companies and increased globalization require dealing with operations and specifics of international management as well as creating an understanding of intercultural differences. In order to help the students to understand these specifics and challenges accompanying international companies, the course will be divided in the following parts: |
| | Important Aspects in International Management Theories of Internationalization Specific characteristics of international companies and their strategies Organizational Structure and Leadership in international companies |
| | During the course, the content will be covered from a theoretical as well as a practical point of view by using examples of different companies. In order to provide practical relevance to the course, a guest speaker from a well-known international company will be invited or alternatively a company visit will be organized as well as an analysis of a case study will take place. |

| Module M0524: Non-technical Courses for Master | | |
|--|--|--|
| Module Responsible | Dagmar Richter | |
| Admission Requirements | None | |
| Recommended Previous None | | |
| Knowledge | | |
| Educational Objectives | After taking part successfully, students have reached the following learning results | |
| | | |

Professional Competence

Knowledae

The Nontechnical Academic Programms (NTA)

imparts skills that, in view of the TUHH's training profile, professional engineering studies require but are not able to cover fully. Self-reliance, self-management, collaboration and professional and personnel management competences. The department implements these training objectives in its **teaching architecture**, in its **teaching and learning arrangements**, in **teaching areas** and by means of teaching offerings in which students can qualify by opting for **specific competences** and a **competence level** at the Bachelor's or Master's level. The teaching offerings are pooled in two different catalogues for nontechnical complementary courses.

The Learning Architecture

consists of a cross-disciplinarily study offering. The centrally designed teaching offering ensures that courses in the nontechnical academic programms follow the specific profiling of TUHH degree courses.

The learning architecture demands and trains independent educational planning as regards the individual development of competences. It also provides orientation knowledge in the form of "profiles".

The subjects that can be studied in parallel throughout the student's entire study program - if need be, it can be studied in one to two semesters. In view of the adaptation problems that individuals commonly face in their first semesters after making the transition from school to university and in order to encourage individually planned semesters abroad, there is no obligation to study these subjects in one or two specific semesters during the course of studies.

Teaching and Learning Arrangements

provide for students, separated into B.Sc. and M.Sc., to learn with and from each other across semesters. The challenge of dealing with interdisciplinarity and a variety of stages of learning in courses are part of the learning architecture and are deliberately encouraged in specific courses.

Fields of Teaching

are based on research findings from the academic disciplines cultural studies, social studies, arts, historical studies, communication studies, migration studies and sustainability research, and from engineering didactics. In addition, from the winter semester 2014/15 students on all Bachelor's courses will have the opportunity to learn about business management and start-ups in a goal-oriented way.

The fields of teaching are augmented by soft skills offers and a foreign language offer. Here, the focus is on encouraging goaloriented communication skills, e.g. the skills required by outgoing engineers in international and intercultural situations.

The Competence Level

of the courses offered in this area is different as regards the basic training objective in the Bachelor's and Master's fields. These differences are reflected in the practical examples used, in content topics that refer to different professional application contexts, and in the higher scientific and theoretical level of abstraction in the B.Sc.

This is also reflected in the different quality of soft skills, which relate to the different team positions and different group leadership functions of Bachelor's and Master's graduates in their future working life.

Specialized Competence (Knowledge)

Students can

- explain specialized areas in context of the relevant non-technical disciplines,
- outline basic theories, categories, terminology, models, concepts or artistic techniques in the disciplines represented in the learning area.
- different specialist disciplines relate to their own discipline and differentiate it as well as make connections,
- sketch the basic outlines of how scientific disciplines, paradigms, models, instruments, methods and forms of representation in the specialized sciences are subject to individual and socio-cultural interpretation and historicity,
- Can communicate in a foreign language in a manner appropriate to the subject.

Skills Professional Competence (Skills)

In selected sub-areas students can

- apply basic and specific methods of the said scientific disciplines,
- aquestion a specific technical phenomena, models, theories from the viewpoint of another, aforementioned specialist discipline
- to handle simple and advanced questions in aforementioned scientific disciplines in a sucsessful manner,
- justify their decisions on forms of organization and application in practical questions in contexts that go beyond the technical relationship to the subject.

Personal Competence

Social Competence | Personal Competences (Social Skills)

Module Manual M.Sc. "International Management and Engineering"

| | Students will be able |
|------------------------------------|--|
| | to learn to collaborate in different manner, to present and analyze problems in the abovementioned fields in a partner or group situation in a manner appropriate to the addressees, to express themselves competently, in a culturally appropriate and gender-sensitive manner in the language of the country (as far as this study-focus would be chosen), to explain nontechnical items to auditorium with technical background knowledge. |
| | Personal Competences (Self-reliance) Students are able in selected areas • to reflect on their own profession and professionalism in the context of real-life fields of application • to organize themselves and their own learning processes • to reflect and decide questions in front of a broad education background • to communicate a nontechnical item in a competent way in writen form or verbaly • to organize themselves as an entrepreneurial subject country (as far as this study-focus would be chosen) |

| Admission Requirements | None | | | | | | |
| Recommended Previous | | | | | | | |
| Knowledge | basic knowledge of economics is expected. | | | | | | |
| Knowledge | The prior knowledge in the field of economics requi | red for successful completion of th | is module is impar | ted as an e-learning | | | |
| | offering. Students will receive access and further infor | mation on the associated online lear | ning module when t | they enroll. | | | |
| | | | | | | | |
| | By taking an associated online test, the student can | acquire points that are added to the | ne result of the fina | al examination of the | | | |
| | Economics module. | | | | | | |
| Educational Objectives | After taking part successfully, students have reached t | the following learning results | | | | | |
| | After taking part successivily, students have reached to | the following learning results | | | | | |
| Professional Competence | | | | | | | |
| Knowledge | The students know | | | | | | |
| | the most important principles of individual decis | sion making in a national and interna | tional context. | | | | |
| | different market structures, | | , | | | | |
| | types of market failure, | | | | | | |
| | the functioning of a single economy (including n | noney market financial and goods m | narkets labor marke | ⊇t) | | | |
| | the difference between and the interdependence | | rances, rapor mane | 22,, | | | |
| | the significance of expectations on the effects of the significance of expectations. | - · | | | | | |
| | the various links between economies and | r economic policy, | | | | | |
| | different economic policies and their effects on | the economy | | | | | |
| | unterent economic policies and their effects of | the economy. | | | | | |
| Skills | The students are able to model analytically or graphical | ally | | | | | |
| | the most important principles of individual decis | sion making in a national and interna | itional context. | | | | |
| | the most important principles of individual decision making in a national and international context, the market results of different market structures and market failure, | | | | | | |
| | the welfare effects of the market results, | | | | | | |
| | · | | | | | | |
| | the functioning of an economy (including money market, financial and goods markets, labor market), links between economics and | | | | | | |
| | links between economies and the effects of economic policies. | | | | | | |
| | the effects of economic policies. | | | | | | |
| Personal Competence | | | | | | | |
| Social Competence | The students are able | | | | | | |
| • | | | | | | | |
| | to anticipate expectations and decisions of indi | ividuals or groups of individuals. The | ese may be inside o | or outside of the own | | | |
| | firm, | | | | | | |
| | to take these decisions into account while decid | ling themselves and | | | | | |
| | to understand the behavior of markets and to as | ssess the opportunities and risks wit | h respect to the ow | n business activities. | | | |
| 4 | With the country of t | | | | | | |
| Autonomy | With the methods taught the students will be able | | | | | | |
| | to analyze empirical phenomena in single eco | onomies and the world economy a | and to reconcile the | em with the studied | | | |
| | theoretical concepts and | | | | | | |
| | to design, analyze and evaluate micro- and mac | croeconomic policies against the bac | kground of different | t models. | | | |

| Cycle | This course is structured as a lecture and a seminar. The lecture focuses on gaining an understanding of the fundamentals o |
| | human resource management and organizational design. The lecture also introduces quantitative and business analytics method for decision making in the field. In the lecture, the basic theoretical concepts are explained and discussed, whereas they an applied through the preparation of a seminar thesis in the seminar. Organizational Design & Human Resource Management |
| | The processes of developing organizational structures for small and mid-sized corporations as well as for large multinational enterprises; The adaptation of organizations and their structures to the competitive environment, with special focus on international operating organizations and global markets; |
| | Introduction to human resource management from a strategic and international perspective (incl. the typical challenges of international organizations); Key elements of human resource management (incl. design of work, employee recruitment, development, separation (retention); |
| | Introduction of methods and models for decision making in organizational design and human resource management. Possible Applications of the Theoretical Concepts |
| | Big data in organizations and human resource analytics; Business analytics and machine learning methods (e.g., factor analysis, regression analysis, and structural equatio modeling); Models for the management of organizations and human resource management (e.g., job satisfaction and turnove intention, motivation and organizational commitment). |

| Admission Requirements | None | | | | |
| Recommended Previous | Module International Business | | | | |
| Knowledge | Basic understanding of business administration principles (strategic) | planning, decision | on theory, p | roject management, | |
| | international business) | | | | |
| | Bachelor-level Marketing Knowledge (Marketing Instruments, Market and | Competitor Strate | egies, Basics | of Buying Behavior) | |
| | Unerstanding the differences beweetn B2B and B2C marketing | | | | |
| | Understanding of the importance of managing innovation in global indust | trial markets | | | |
| | Good English proficiency; presentation skills | | | | |
| Educational Objectives | After taking part successfully, students have reached the following learning resi | ults | | | |
| Professional Competence | After taking part successivity, students have reacted the following learning rest | uits | | | |
| • | Students will have gained a deep understanding of | | | | |
| Knowledge | Students will have gamed a deep understanding of | | | | |
| | Specific characteristics in the marketing of innovative poroducts and services. | vices | | | |
| | Approaches for analyzing the current market situation and the future ma | rket development | | | |
| | The gathering of information about future customer needs and requirement | ents | | | |
| | Concepts and approaches to integrate lead users and their needs into pro | oduct and service | developmen | t processes | |
| | Approaches and tools for ensuring customer-orientation in the development | ent of new produc | ts and innov | ative services | |
| | Marketing mix elements that take into consideration the specific require | ements and chall | enges of inn | ovative products and | |
| | services | | | | |
| | Pricing methods for new products and services | | | | |
| | The organization of complex sales forces and personal selling | | | | |
| | Communication concepts and instruments for new products and services | | | | |
| Skills | Based on the acquired knowledge students will be able to: | | | | |
| | Design and to evaluate decisions regarding marketing and innovation str | ategies | | | |
| | Analyze markets by applying market and technology portfolios | | | | |
| | Conduct forecasts and develop compelling scenarios as a basis for strategic planning | | | | |
| | • Translate customer needs into concepts, prototypes and marketable offers and successfully apply advanced methods for | | | | |
| | customer-oriented product and service development | | | | |
| | Use adequate methods to foster efficient diffusion of innovative products and services | | | | |
| | Choose suitable pricing strategies and communication activities for innovations | | | | |
| | Make strategic sales decisions for products and services (i.e. selection of sales channels) | | | | |
| | Apply methods of sales force management (i.e. customer value analysis) | | | | |
| Personal Competence | | | | | |
| - | The students will be able to | | | | |
| 222.2. Sompetence | | | | | |
| | have fruitful discussions and exchange arguments | | | | |
| | develop original results in a group | | | | |
| | present results in a clear and concise way | | | | |
| | carry out respectful team work | | | | |
| | | | | | |
| Autonomy | The students will be able to | | | | |
| | Acquire knowledge independently in the specific context and to map this | knowledge on oth | ner new com | olex problem fields. | |
| | Consider proposed business actions in the field of marketing and reflect of the field of marketing and reflect of the field of the | on them. | | | |

| Course L0862: PBL Marketing of Innovations | |
|--|--|
| Тур | Project-/problem-based Learning |
| Hrs/wk | 1 |
| СР | 2 |
| Workload in Hours | Independent Study Time 46, Study Time in Lecture 14 |
| Lecturer | Prof. Christian Lüthje |
| Language | EN |
| Cycle | SoSe |
| Content | This PBL course is seggregated into two afternoon sessions. This cours aims at enhancing the students' practical skills in (1) forecasting the future development of markets and (2) making appropriate market-related decisions (particularly segmentation, managing the marketing mix). The students will be prompted to use the knowledge gathered in the lecture of this module and will be invited to (1) Conduct a scenario analysis for an innovative product category and (2) Engage in decision making within a market simulation game. |

| Module M0996: Suppl | ly Chain Management |
| Courses | |
| Title | Typ Hrs/wk CP |
| Supply Chain Management (L1218) | •• |
| Value-Adding Networks (L1190) | Lecture 2 2 |
| Module Responsible | Prof. Thorsten Blecker |
| Admission Requirements | None |
| Recommended Previous | no |
| Knowledge | |
| Educational Objectives | After taking part successfully, students have reached the following learning results |
| Professional Competence | |
| Knowledge | Current developments in international business activities such as outsourcing, offshoring, internationalization and globalization |
| | and emerging markets illustrated by examples from practice. |
| | Theoretical Approaches and methods in logistics and supply chain management and use in practice. |
| | • to identify fields of decision in SCM . |
| | • reasons for the formation of networks based on various theories from institutional economics (transaction cost theory, principal |
| | agent theory, property-right theory) and the resource-based view. • Selected approaches to explain the development of networks. |
| | • to illustrate phases of network formation. |
| | • to understand the functional mechanisms of inter-organizational and international network relationships. |
| | • to explain and categorize relationships within networks. |
| | • to categorize sourcing concepts and explain motives/ barriers or advantages and disadvantages. |
| | • advantages and disadvantages of offshoring and outsourcing and to illustrate the distinction between the two terms . |
| | • to state criteria/ factors/ parameters that influence production location decisions at the global level (total network costs). |
| | to explain methods for location finding/evaluation. |
| | • to interpret phenotypes of production networks. |
| | recognize relationships between R & D and production and their locations and to describe coherent models. to solve sub-problems with the configuration of logistics networks (distribution and spare parts networks) by the use of |
| | appropriate approaches. |
| | • to categorise special waste logistics including their duties & objectives and to state and describe practical examples of good |
| | networking. |
| Ckille | a to accept rends and shallonges in national and international supply chains and logistics naturally and their consequences for |
| Skills | to asses trends and challenges in national and international supply chains and logistics networks and their consequences for companies. |
| | to evaluate, analyse and systematise networks and network relations based on the lecture. |
| | • to analyse partners and their suitability for co-operation in collaborations and cooperative relations. |
| | • to select sourcing concepts for specific products / product components based on the lecture as well as advantages and |
| | disadvantages of each approach. |
| | • to evaluate location decisions for production and R & D based on concepts. |
| | • to recognize relationships between R & D and production as well as their locations and to evaluate the suitability of specific models for different situations. |
| | to transfer the analyzed concepts to international practices. |
| | to analyse and evaluate the product development processes. |
| | • to anaylse concepts of Information and communication management in logistics. |
| | • to design subcontracting, procurement, production and disposal as well as R & D networks to shape, |
| | • to plan reorganise efficient and flow-oriented enterprise networks. |
| | to adopt methods of complexity management and risk management in logistics. |
| Personal Competence | |
| Social Competence | to evaluate intercultural and international relationships based on discussed case studies. |
| , | advance planning and design of network formation and their objectives based on content discussed in the lecture. |
| | definition of procurement strategies for individual parts using the gained knowledge of procurement networks. |
| | • design of the procurement network (external/internal/modules etc.) based on the sourcing concepts and core competencies, as |
| | well as on the findings of the case studies. |
| | • to make decision of location for production taking into account global contexts, evaluation methods and buying/selling markets, |
| | which were also discussed in the case studies and their dependence on R & D. • Decision on R & D locations based on the insights gained from case studies / practical examples and the selection of an |
| | appropriate model. |
| | |
| Autonomy | After completing the module students are capable to work independently on the subject of Supply Chain Management and transfer |
| | the acquired knowledge to new problems. |

| Content | Important note: This course is part of an 6 ECTS module consisting of two courses "Entrepreneurship" & "Creation of Business | | | | | | |
| | Opportunities", which have to be taken together in one semester. | | | | | | |
| | Startups are temporary, team-based organizations, which can form both within and outside of established companies, to pursue | | | | | | |
| | one central objective: taking a new venture idea to market by designing a business model that can be scaled to a full-grown | | | | | | |
| | company. In this course, students will form startup teams around self-selected ideas and run through the process just like real | | | | | | |
| | startups would do in the first three months of intensive work. Startup Engineering takes an incremental and iterative approach, | | | | | | |
| | in that it favors variety and alternatives over one detailed, linear five-year business plan to reach steady state operations. From a | | | | | | |
| | problem solving and systems thinking perspective, student teams create different possible versions of a new venture and | | | | | | |
| | alternative hypotheses about value creation for customers and value capture vis-à-vis competitors. We will draw on recent | | | | | | |
| | scientific findings about international success factors of new venture design. To test critical hypotheses early on, student teams | | | | | | |
| | engage in scientific, evidence-based, experimental trial-and-error learning process that measures real progress. | | | | | | |
| | Upon completion of this course, students will be able to: | | | | | | |
| | Apply a modern innovation toolkit relevant in both the corporate & startup world | | | | | | |
| | · Analyze given business opportunities in terms of its constituent elements | | | | | | |
| | · Design new business models by gathering and combining relevant ideas, facts and information | | | | | | |
| | · Evaluate business opportunities and derive judgment about next steps & decisions | | | | | | |
| | Course language is English, but participants can decide to give their graded presentations in German. Students are invited to | | | | | | |
| | apply to this course module already with a startup idea and/ or team, but this is not a requirement! We will form teams and ideas | | | | | | |
| | in the beginning of the course. Class meetings have alternate intervals of lecture inputs, teamwork, mentoring, and | | | | | | |
| | peer feedback. Attendance is mandatory for at least 80% of class time due to large proportion of teamwork sessions. | | | | | | |
| | Student teams give three presentations and submit them with backup analyses. Grading scheme: | | | | | | |
| | Startup discovery presentation after 5 weeks: 30% | | | | | | |
| | · Startup validation presentation after 10 weeks: 30% | | | | | | |
| | · Final startup pitches after 13 weeks: 40% | | | | | | |

| Recommended Previous | Knowledge from the | module "Quantitative | Methods": Linea | r Programming, Network Opt | imization and | basics of Integer |
| Knowledge | Programming. | | | | | |
| Educational Objectives | After taking part succe | ssfully, students have re | eached the following | ng learning results | | |
| Professional Competence | | | | | | |
| Knowledge | After taking this modul | e, students have an in- | depth knowledge o | f the following areas: They are a | able to | |
| | | | | | | . Is a latine as a constant as |
| | | | | . production models with integ | rated inventory | nolding over time |
| | | , revenue management ed tonics in linear prod | | ality theory and its application, | special structu | ires as iinner/lowe |
| | | bles; revised simplex m | | mey theory and its application, | special structi | ares us appei/lower |
| | | | | rtainty, i.e. the adaption of line | ar programming | g models to realistic |
| | applications as e | e.g. international humar | nitarian logistics pr | oblems (distribution of relief god | ods); | |
| | Discuss advance | ed topics in integer pr | ogramming: comp | lex problems, e.g. from vehicle | e routing, and | logical constraints |
| | advanced soluti | ions procedures as bran | ch and bound, cutt | ting-plane procedures etc. | | |
| | Examine dynam | ic and non-linear progra | mming problems a | and applications in Management | t; | |
| | | ms using appropriate so | | | | |
| | Understand and | explain OR reserach pro | ojects they learn a | bout in the course. | | |
| Skills | Students have in-depth | n abilities in the followin | g areas: They are a | able to | | |
| | | | | | | |
| | | | | g. production models with integ | rated inventor | y holding over time |
| | 1 | , revenue management | | chacial structures as upper/le | war baunda far | variables, use the |
| | revised simplex | | ming and analyze | special structures as upper/lo | wer bourids for | variables; use the |
| | 1 | | es and under unce | rtainty, i.e. the adaption of lines | ar programming | n models to realistic |
| | applications | is man manapie objectiv | es and ander ance | reality, ner ene dadperon or mice | a. programmi, | y models to realistic |
| | 1 | d models in integer prog | ramming and solv | e them, e.g. problems from veh | icle routing, or | logical constraints |
| | Analyze dynami | c and non-linear prograi | mming problems a | nd applications in Management | | |
| | to understand a | specified planning pro | blem of OR resea | rch, to implement a solution a | nd to documer | nt and explain thei |
| | approach in a co | oncise way. | | | | |
| Personal Competence | | | | | | |
| • | Students are able to | | | | | |
| 30ciai competence | Students are able to | | | | | |
| | work successfull | ly in a team, organize th | e team, and solve | complex tasks in a team in a gi | ven time frame | ! |
| | give structured to | feedback, following feed | lback rules, and als | so accept deeback from their fe | llow students | |
| | | on problems from the f | | | | |
| | present the resu | ılts of their work to spec | ialists. | | | |
| | | | | | | |

| Cycle | SoSe |
| Content | Special topics from different areas of the lecture are discussed in the seminar. Students are required to use current publications from highly esteemed journals in their assignment and to write an essay on a relevant OR topic. Moreover, they have to prepare and give a talk on that topic. The seminar is research-oriented and focuses on relevant research topics from the field. Students get a first-hand experience in carrying out a research project in a well-defined, limited area of OR. There is a limitation of the number of seminar participants (36 students). If necessary, selection of participants will be based on the results in the Quantitative Methods module which is a prerequisite for this course. |
| Literature | Fachartikel (Journal Papers), die zu Beginn des Seminars bekanntgegeben werden. |

| Content | This lecture focuses on multinational firms and advanced issues of management, organizations, and human resource management. This course is structured as a lecture and a seminar. In the lecture, the advanced theoretical concepts are explained and discussed, whereas they are applied in the seminar through the preparation of a seminar thesis. The students learn about the process and structure of a scientific article, and further deepen their knowledge, while working in groups. Example topics: Management: change management and corporate social responsibility; Organization: exploration & exploitation, networks, and organizational identity; Human Resource Management: human resource metrics & analytics and recruitment & selection. | |
| Literature | The students will be provided with selected journal articles. Bernardin, H.J. (2006): Human Resource Management: An Experiential Approach, 4e, New York: McGraw-Hill. Cascio, W. (2015): Managing Human Resources: Productivity, Quality of Work Life, Profits, revised edition, New York: McGraw-Hill. French, W./Bell, C.H./Zawacki, R.A. | Content | Product Planning Process |
| | This integrated lecture is designed to understand major issues, activities and tools in the context of systematic product planning, a key activity for managing the front-end of innovation, i.e.: Systematic scanning of markets for innovation opportunities Understanding strengths/weakness and specific core competences of a firm as platforms for innovation Exploring relevant sources for innovation (customers, suppliers, Lead Users, etc.) Developing ideas for radical innovation, relying on the creativeness of employees, using techniques to stimulate creativity and creating a stimulating environment Transferring ideas for innovation into feasible concepts which have a high market attractively Voluntary presentations in the third hour (articles / case studies) Guest lectures by researchers Lecture on Sustainability with frequent reference to current research Permanent reference to current research Examination: In addition to the written exam at the end of the module, students have to attend the PBL-exercises and prepare presentations in groups in order to pass the module. Additionally, students have the opportunity to present research papers on a voluntary base. With these presentations it is possible to gain a bonus of max. 20% for the exam. However, the bonus is only valid if the exam is passed without the bonus. |

| Knowledge | | | | |
| | | | | |
| Educational Objectives | After taking part successfully, students have reached th | e following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students have acquired in depth knowledge in the follow | ving areas and can | | |
| | explain the function and the requirements of mail | pagement control systems | | |
| | explain the targets and the tasks of production a | | | |
| | understand management control systems for pro | | | |
| | explain the major aspects of investment planning | | | |
| | explain the major aspects of cost management, | | | |
| | explain and understand the procedures of budge | ting, | | |
| | present and give a detailed explanation of meth | nods and tools of management contr | ol systems for pr | oduction and supply |
| | chains, | | | |
| | describe opportunities and risks of digitalization | for the design of management contr | ol systems for pr | oduction and supply |
| | chains, | | | |
| | give an overview of relevant research topics for r | nanagement control systems for prod | uction and supply | chains. |
| | | | | |
| | | | | |
| Skills | Based on the acquired knowledge students are capable | of | | |
| | | | | |
| | - Applying methods of managerial accounting in produ | | | |
| | - Selecting sufficient methods of managerial accounting | | | |
| | Selecting appropriate methods of managerial accour Making a holistic assessment of areas of decision | | | |
| | influence factors. | in management control systems for | production and ic | igistics and relevant |
| | initiachee factors. | | | |
| | | | | |
| Personal Competence | | | | |
| - | After completion of the module students can | | | |
| | - lead discussions and team sessions, | | | |
| | - arrive at work results in groups and document them | | | |
| | - develop joint solutions in mixed teams and present t | hem to others, | | |
| | - present solutions to specialists and develop ideas fu | ther. | | |
| | | | | |
| | | | | |
| Autonomy | After completion of the module students can | | | |
| | assess possible consequences of their professional act | ivitor | | |
| | - assess possible consequences of their professional act | ivity, | | |
| | - define tasks independently, acquire the requisite know | ledge and use suitable means of impl | ementation, | |
| | - define and carry out research tasks bearing in mind po | scible societal consequences | | |
| | - define and carry out research tasks bearing in mind po | ssible societal consequences. | | |

| Language Cycle | |
| | Entrepreneurial finance is at the center of a clash of two very distant worlds: that of entrepreneurship and that of finance. Finance is disciplined, based on numbers and logical thinking and looking for proven track records. Entrepreneurship is messy, based on intuition and experimentation and treading off the beaten track. Entrepreneurial finance is the provision of funding to young, innovative, growth-oriented companies. Entrepreneurial companies are young, typically less than ten years old, and introduce innovative products or business models. The younger are called "startups," and are typically less than five years old. There is a variety of investors who can finance entrepreneurial companies: family and friends, business angels, accelerators and incubators, crowdfunding platforms, venture capital firms, corporate investors, etc. The course provides a thorough understanding of what motivates them, of the way they invest, and of what support they can provide to a company at what stage in the fundraising cycle. The course addresses the following key questions: How much money can and should be raised? When should it |
| | be raised and from whom? What is a reasonable valuation of the company? How should funding, employment contracts and exit decisions be structured? Thus, the course provides an understanding of the whole fundraising cycle, from the moment the entrepreneur conceived her idea to the moment investors exit the company and move on. We examine the entrepreneur's signalling to investors of the qualities of the venture, the investors' evaluation of the venture, the various dimensions of contracting (cash flow rights, control rights, compensation, and other clauses), the negotiation of a deal and the provision of corporate governance, the process of staged financing, the financing through debt, and the exit process though liquidity events such as initial public offering, sale or merger. The following topics will be covered in lectures: |
| | Introduction: Evaluating Venture Opportunities |
| | 2. Financial Planning |
| | 3. Ownership and Returns |
| | 4. Valuation Methods |
| | 5. Term Sheets |
| | 6. Structuring Deals |
| | 7. Corporate Governance |
| | 8. Staged Financing |
| | 9. Debt Financing |
| | 10. Exits |
| | 11. Early Stage & Venture Capital Investors |
| | 12. Ecosystems |

| Content | The lecture "project management" aims at characterizing typical phases of projects. Important contents are: possible tasks, organization, techniques and tools for initiation, definition, planning, management and finalization of projects. This will also be deepened by exercises within the framework of the event. |
| | The following topics will be covered in the lecture: |
| | SMART, Work Breakdown Structure, Operationalization, Goals relation matrix Metra-Potential Method (MPM), Critical-Path Method (CPM), Program evaluation and review technique (PERT) Milestone Analysis, Earned Value Analyis (EVA) Progress reporting, Tracing of project goals, deadlines and costs, Project Management Control Loop, Maturity Level Assurance (MLA) Risk Management, Failure Mode and Effects Analysis (FMEA), Risk Matrix |

Content General description of course content and course goals

We negotiaate everday in privat and professional contexts. Leading negotiations successfully has a significant impact on future careers. Yet, we tend to have limited knowledge about the theory and empirical evidence regarding successful negotiating. Many people approach negotiations in a rather intuitive and unplanned way which often results in sub-optimal negotiation outcomes.

The purpose of this interactive and problem-based course is to theortically understand the strategies and process of negotiation as practiced in a variety of business-related settings (e.g. negotiations about working conditions, negotiations with customers and suppliers). The course will highlight the components of an effective negotiation (strategy, perparation, execution, evaluation) and offer the students the opportunity to analyze their own behavior in negotiations in order to improve.

The course structure is experiential and problem-based, combining lectures, class discussion, mini-cases and small erxercises, and more comprehensive negotiation practices in longer sessions. Through participation in negotiation exercises, students will have the opportunity to practice their communication and persuasion skills and to experiment with a variety of negotiating strategies and tactics. Students will apply the lessons learned to ongoing, real-world negotiations.

Content:

The students will find answers to the following fundamental questions of negotiation strategies in theory and practice:

- How do negotiations influence everyday life and business processes?
- What are key features of negotiations?
- What are different forms of negotiations? What kinds of negotiation can be distinguished?
- Which theoretical approaches to a theory of negotiation can be distinguished?
- How can game theory be applied to negotiation?
- · What makes an effective negotiator?
- Which factors should be considered when planning negotiations?
- What steps must be followed to reach a deal?
- Are there specific negotiation tactics?
- What are the typical barriers to an agreement and how to deal with them?
- What are possible cognitive (mental) errors and how to correct them?

Knowledge

Students know...

- the theory basics of negotiations (e.g. game theory, behavioral theories)
- the types and the pros and cons of diffrent negotiation strategies
- the process of negotiation, inlcuding goal formulation, preparation/planning, execution and evaluation
- about some key issues impacting negotiations (e.g. team building and roles, barriers to reaching a deal, cognitive biases, multi-phase negotiations)

Skills

Students are capable of..

- simultaneously considering multiple factors in negotiation situations and taking reasoned actions when preparing and
- Analyzing and handling the key challenges of uncertainty, risk, intercultural differences, and time pressure in realistic
- assessing the typical barriers to an agreement (e.g. lack of trust), dealing with hardball tactics (e.g. good cop, bad cop; lowball, highball; intimidation), and avoiding cognitive traps (e.g. unchecked emotions, overconfidence).
- reflecting on their decision-making in uncertain negotiation situations and derive actions for future decisions.

Social Competence

Students can...

- provide appropriate feedback and handle feedback on their own performance constructively.
- constructively interact with their team members in role playing in negotiations sessions
- develop joint solutions in mixed teams and present them to others in real-world negotiation situatio

Self-Reliance

Students are able to...

- assess possible consequences of their own negotiation behavior
- define own positions and tasks in the negotiation preparation process
- o justify and make elaborated decisions in authentic negotiation situations.

| | After successfully completing the module, students will be abl | le to | | | | |
| | describe individual procedures for the geotechnical mo | nitoring of civil engineering mea | isures, | | | |
| | reproduce exploration and investigation methods of the | e subsoil, | | | | |
| | select suitable types of field and laboratory tests for su | bsoil investigation and evaluate | their results, | | | |
| | state the differences between various stress and deformand distortion tensor, | mation states and the physical | significance of inv | variants of the stress | | |
| | outline the standard and special soil mechanics tests us | sed to determine the stress-stra | in behavior of soi | l, | | |
| | describe continuum models and the resulting boundary | | | | | |
| | as well as define boundary value problems from the fie | | n such a way tha | t they can be solved | | |
| | unambiguously. | 3 3 | , | , | | |
| Skills | Students will be able to | | | | | |
| | dimension vertical drains for soil improvement of soft s | oils | | | | |
| | 1 | | | | | |
| | calculate depth compaction using various appropriate methods, | | | | | |
| | apply principles of horizontal bearing capacity of piles, world, the integral and outcome tability of fluid guaranted displayage walls. | | | | | |
| | verify the internal and external stability of fluid-supported diaphragm walls, covaluate the houndary conditions for the design of a deep execution and design the individual components of the | | | | | |
| | excavation, | evaluate the boundary conditions for the design of a deep excavation and design the individual components of the | | | | |
| | perform, evaluate and interpret tests for the description | n and classification of soils acco | rding to applicabl | o standards | | |
| | | | raing to applicable | e standards, | | |
| | | computationally implement numerical algorithms to solve boundary value problems, select and apply the types of applyers depending on the degree of cativation, the impact, and the material behavior. | | | | |
| | select and apply the types of analyses depending on the degree of saturation, the impact, and the material behavior determine appropriate model parameters for different possibilities and limitations of material models for the grain structure | | | | | |
| | of soils. | possibilities and illineations of h | iateriai inioaeis ie | in the grain structure | | |
| | 01 30113. | | | | | |
| Personal Competence | | | | | | |
| Social Competence | Students can work in groups and support each other in finding | g solutions. | | | | |
| Autonom | Students are able to access their own strengths and week as | sos and based on this organiza | their time and la | arning management | | |
| Autonomy | Students are able to assess their own strengths and weakness | ses anu, paseu on this, organize | ureir urne and le | arning management | | |
| | and think in terms of processes. | | | | | |

|---|---|---|-----------------|-----------------------|--|--|
| Courses | | | | | | |
| Title | | Тур | Hrs/wk | СР | | |
| Information Theory and Coding (LO- | 436) | Lecture | 3 | 4 | | |
| Information Theory and Coding (LO | | Recitation Section (large) | 2 | 2 | | |
| Module Responsible | | | | | | |
| Admission Requirements | | | | | | |
| Recommended Previous | | | | | | |
| Knowledge | Mathematics 1-3 | | | | | |
| | Probability theory and random processes Basic knowledge of communications engineering (e.c.) | from lecture "Fundamentals | of Communica | ations and Random | | |
| | Processes") | , from fecture rundamentals | or communic | ations and Nandom | | |
| | , | | | | | |
| Educational Objectives | After taking part successfully, students have reached the follow | ring learning results | | | | |
| Professional Competence | | | | | | |
| Knowledge | The students know the basic definitions for quantification of in | | | - | | |
| | source coding theorem and channel coding theorem and are | | | • | | |
| | free data transmission over noisy channels. They understand to correcting channel coding. They are familiar with the princi | | | _ | | |
| | decoding. They know fundamental coding schemes, their prope | | with modern | nections of iterative | | |
| | | | | | | |
| | The students are familiar with the contents of lecture and tutor | ials. They can explain and apply | them to new pr | oblems. | | |
| Skills | The students are able to determine the limits of data compre | ession as well as of data transr | nission through | noisy channels and | | |
| | based on those limits to design basic parameters of a transmission scheme. They can estimate the parameters of an error-detecting or error-correcting channel coding scheme for achieving certain performance targets. They are able to compare the | | | | | |
| | | | | | | |
| | properties of basic channel coding and decoding schemes | | | | | |
| | | complexity and to decide for a suitable method. They are capable of implementing basic coding and decoding schemes in | | | | |
| B | software. | | | | | |
| Personal Competence | The students can jointly solve specific problems. | | | | | |
| 30Clai Competence | The students can jointly solve specific problems. | | | | | |
| Autonomy | The students are able to acquire relevant information from appropriate literature sources. They can control their level of | | | | | |
| | knowledge during the lecture period by solving tutorial problems, software tools, clicker system. | | | | | |

| СР | 4 |
| Workload in Hours | Independent Study Time 78, Study Time in Lecture 42 |
| Lecturer | Prof. Gerhard Bauch |
| Language | EN |
| Cycle | SoSe |
| Content | Introduction to information theory and coding Definitions of information: Self information, entropy Binary entropy function Source coding theorem Entropy of continuous random variables: Differential entropy, differential entropy of uniformly and Gaussian distributed random variables Source coding Principles of lossless source coding Optimal source codes Prefix codes, prefix-free codes, instantaneous codes Morse code Huffman code Shannon code Bounds on the average codeword length |

- Relative entropy, Kullback-Leibler distance, Kullback-Leibler divergence
- Cross entropy
- · Lempel-Ziv algorithm
- Lempel-Ziv-Welch (LZW) algorithm
- Text compression and image compression using variants of the Lempel-Ziv algorithm
- · Channel models
 - AWGN channel
 - · Binary-input AWGN channel
 - o Binary symmetric channel (BSC)
 - Relationship between AWGN channel and BSC
 - Binary error and erasure channel (BEEC)
 - · Binary erasure channel (BEC)
 - Discrete memoryless channels (DMC)
- Definitions of information for multiple random variables
 - Mutual information and channel capacity
 - o Entropy, conditional entropy
 - Chain rules for entropy and mutual information
- Channel coding theorem
- Channel capacity of fundamental channels: BSC, BEC, AWGN channel, binary-input AWGN channel etc.
- Power-limited vs. bandlimited transmission
- Capacity of parallel AWGN channels
 - Waterfilling
 - Examples: Multiple input multiple output (MIMO) channels, complex equivalent baseband channels, orthogonal frequency division multiplex (OFDM)
- Source-channel coding theorem, separation theorem
- Multiuser information theory
 - Multiple access channel (MAC)
 - · Broadcast channel
 - Principles of multiple access, time division multiple access (TDMA), frequency division multiple access (FDMA), nonorthogonal multiple access (NOMA), hybrid multiple access
 - Achievable rate regions of TDMA and FDMA with power constraint, energy constraint, power spectral density constraint, respectively
 - Achievable rate region of the two-user and K-user multiple access channels
 - o Achievable rate region of the two-user and K user broadcast channels
 - Multiuser diversity
- · Channel coding
 - Principles and types of channel coding
 - Code rate, data rate, Hamming distance, minimum Hamming distance, Hamming weight, minimum Hamming weight
 - Error detecting and error correcting codes
 - Simple block codes: Repetition codes, single parity check codes, Hamming code, etc.
 - Syndrome decoding
 - Representations of binary data
 - Non-binary symbol alphabets and non-binary codes
 - Code and encoder, systematic and non-systematic encoders
 - Properties of Hamming distance and Hamming weight
 - Decoding spheres
 - Perfect codes
 - Linear codes
 - Decoding principles
 - Svndrome decoding
 - Maximum a posteriori probability (MAP) decoding and maximum likelihood (ML) decoding
 - Hard decision and soft decision decoding
 - Log-likelihood ratios (LLRs), boxplus operation
 - MAP and ML decoding using log-likelihood ratios
 - Soft-in soft-out decoders
 - Error rate performance comparison of codes in terms of SNR per info bit vs. SNR per code bit
 - Generator
 - Generator matrix and parity check matrix, properties of generator matrix and parity check matrix
 - Dual codes
 - Low density parity check (LDPC) codes
 - Sparse parity check matrix

Message passing decoding

- Tanner graphs, cycles and girth
- Degree distributions
- Code rate and degree distribution
- Regular and irregular LDPC codes
 - Message passing decoding in binary erasure channels (BEC)
 - $\,\blacksquare\,$ Systematic encoding using erasure message passing decoding
 - Message passing decoding in binary symmetric channels (BSC)
 - Extrinsic information
 - Bit-flipping decoding
 - Effects of short cycles in the Tanner graph
 - Alternative bit-flipping decoding
 - Soft decision message passing decoding: Sum product decoding
 - Bit error rate performance of LDPC codes

- Repeat accumulate codes and variants of repeat accumulate codes
- Message passing decoding and turbo decoding of repeat accumulate codes
- Convolutional codes
 - Encoding using shift registers
 - Trellis representation
 - Hard decision and soft decision Viterbi decoding
 - Bit error rate performance of convolutional codes
 - Asymptotic coding gain
 - Viterbi decoding complexity
 - Free distance and optimum convolutional codes
 - Generator polynomial description and octal description
 - Catastrophic convolutional codes
 - Non-systematic and recursive systematic convolutional (RSC) encoders
 - Rate compatible punctured convolutional (RCPC) codes
 - Hybrid automatic repeat request (HARQ) with incremental redundancy
 - Unequal error protection with punctured convolutional codes
 - Error patterns of convolutional codes
- Concatenated codes
 - Serial concatenated codes
 - Parallel concatenated codes, Turbo codes
 - Iterative decoding, turbo decoding
 - Bit error rate performance of turbo codes
 - Interleaver design for turbo codes
- Coded modulation
 - Principle of coded modulation
 - Achievable rates with PSK/QAM modulation
 - Trellis coded modulation (TCM)
 - Set partitioning
 - Ungerböck codes
 - Multilevel coding
 - Bit-interleaved coded modulation

| Educational Objectives | After taking part successfully, students have reached | the following learning results | | |
| Professional Competence | | | | |
| Knowledge | The students are able to understand, compare and de | sign modern digital information transm | ission schemes. T | hey are familiar with |
| | the properties of linear and non-linear digital modulat | ion methods. They can describe distor | tions caused by tr | ansmission channels |
| | and design and evaluate detectors including chann | | | les of single carrier |
| | transmission and multi-carrier transmission as well as | the fundamentals of basic multiple acc | cess schemes. | |
| | The students are familiar with the contents of lecture | and tutorials. They can explain and app | oly them to new p | roblems. |
| Skills | The students are able to design and analyse a digital | information transmission scheme inclu | ding multiple acce | ess. They are able to |
| | choose a digital modulation scheme taking into accou | nt transmission rate, required bandwid | th, error probabili | ty, and further signal |
| | properties. They can design an appropriate detector including channel estimation and equalization taking into account | | | |
| | performance and complexity properties of suboptimur | n solutions. They are able to set param | neters of a single o | arrier or multi carrier |
| | transmission scheme and trade the properties of both | approaches against each other. | | |
| Personal Competence | | | | |
| Social Competence | The students can jointly solve specific problems. | | | |
| Autonomy | The students are able to acquire relevant informa | tion from appropriate literature sour | ces. They can c | ontrol their level of |
| | The students are able to acquire relevant information from appropriate literature sources. They can control their level of knowledge during the lecture period by solving tutorial problems, software tools, clicker system. | | | |

| Cycle | |
| Content | Repetition: Baseband Transmission |
| | Pulse shaping: Non-return to zero (NRZ) rectangular pulses, raised-cosine pulses, square-root raised-cosine pulse |
| | Power spectral density (psd) of baseband signals |
| | Intersymbol interference (ISI) |
| | First and second Nyquist criterion |
| | AWGN channel |
| | Matched filter |
| | Matched-filter receiver and correlation receiver |
| | Noise whitening matched filter |
| | Discrete-time AWGN channel model |
| | Representation of bandpass signals and systems in the equivalent baseband |
| | Quadrature amplitude modulation (QAM) |
| | Equivalent baseband signal and system |
| | Analytical signal |
| | Equivalent baseband random process, equivalent baseband white Gaussian noise process |

- Equivalent baseband AWGN channel
- Equivalent baseband channel model with frequency-offset and phase noise
- o Equivalent baseband Rayleigh fading and Rice fading channel models
- Equivalent baseband frequency-selective channel model
- Discrete memoryless channels (DMC)
- Bandpass transmission via carrier modulation
 - Amplitude modulation, frequency modulation, phase modulation
 - · Linear digital modulation methods
 - On-off keying, M-ary amplitude shift keying (M-ASK), M-ary phase shift keying (M-PSK), M-ary quadrature amplitude modulation (M-QAM), offset-QPSK
 - Signal space representation of transmit signal constellations and signals
 - Energy of linear digital modulated signals, average energy per symbol
 - Power spectral density of linear digital modulated signals
 - Bandwidth efficiency
 - Correlation coefficient of elementary signals
 - Error probabilities of linear digital modulation methods
 - Error functions
 - Gray mapping and natural mapping
 - Bit error probabilities, symbol error probabilities, pairwise symbol error probabilities
 - Euclidean distance and Hamming distance
 - Exact and approximate computation of error probabilities
 - Performance comparison of modulation schemes in terms of per bit SNR vs. per symbol SNR
 - Hierarchical modulation, multilevel modulation
 - Effects of carrier phase offset and carrier frequency offset
 - Differential modulation
 - M-ary differential phase shift keying (M-PSK)
 - Coherent and non-coherent detection of DPSK
 - p/M-differential phase shift keying (p/M-DPSK)
 - Differential amplitude and phase shift keying (DAPSK)
 - o Non-linear digital modulation methods
 - Frequency shift keying (FSK)
 - Modulation index
 - Minimum shift keying (MSK)
 - Offset-OPSK representation of MSK
 - MSK with differential precoding and rotation
 - Bit error probabilities of MSK
 - Gaussian minimum shift keying (GMSK)
 - Power spectral density of MSK and GMSK
 - Continuous phase modulation (CPM)
 - General description of CPM signals
 - Frequency pulses and phase pulsesCoherent and non-coherent detection of FSK
 - Performance comparison of linear and non-linear digital modulation methods
- Frequency-selective channels, ISI channels
 - Intersymbol interference and frequency-selectivity
 - RMS delay spread
 - Narrowband and broadband channels
 - Equivalent baseband transmission model for frequency-selective channels
 - Receive filter design
- Equalization
 - Symbol-spaced and fractionally-spaced equalizers
 - Inverse system
 - Non-recursive linear equalizers
 - Linear zero-forcing (ZF) equalizer
 - Linear minimum mean squared error (MMSE) equalizer
 - Non-linear equalization:
 - Decision feedback equalizer (DFE)
 - Tomlinson-Harashima precoding
 - Maximum a posteriori probability (MAP) and maximum likelihood equalizer, Viterbi algorithm
- Single-carrier vs. multi-carrier transmission
- Multi-carrier transmission
 - General multicarrier transmission
 - Orthogonal frequency division multiplex (OFDM)
 - OFDM implementation using the Fast Fourier Transform (FFT)
 - Cyclic guard interval
 - Power spectral density of OFDM
 - Peak-to-average power ratio (PAPR)
- Multiple access
 - Principles of time division multiple access (TDMA), frequency division multiple access (FDMA), code division multiple access (CDMA), non-orthogonal multiple access (NOMA), hybrid multiple access
- Spread spectrum communications
 - Direct sequence spread spectrum communications
 - Frequency hopping
 - o Protection against eavesdropping
 - Protection against narrowband jammers

 $\circ~$ Short vs. long spreading codes • Direct sequence spread spectrum communications in frequency-selective channels Code division multiple access (CDMA) ■ Design criteria of spreading sequences, autocorrelation function and crosscorrelation function of spreading ■ Intersymbol interference (ISI) and multiple access interference (MAI) ■ Pseudo noise (PN) sequences, maximum length sequences (m-sequences), Gold codes, Walsh-Hadamard codes, orthogonal variable spreading factor (OVSF) codes ■ Multicode transmission ■ CDMA in uplink and downlink of a wireless communications system ■ Single-user detection vs. multi-user detection Literature K. | Module M0548: Bioele | ectromagnetics: Principles an | d Applications | | | |
|-------------------------------------|---|----------------------------------|-----------------------|---------------------|-----------------------|
| Courses | | | | | |
| Title | | Тур | | Hrs/wk | СР |
| Bioelectromagnetics: Principles and | Applications (L0371) | Lecture | | 3 | 5 |
| Bioelectromagnetics: Principles and | Applications (L0373) | Recitation | on Section (small) | 2 | 1 |
| Module Responsible | Prof. Christian Schuster | | | | |
| Admission Requirements | None | | | | |
| Recommended Previous | Basic principles of physics | | | | |
| Knowledge | | | | | |
| | | | | | |
| | After taking part successfully, students ha | ve reached the following learni | ng results | | |
| Professional Competence | | | | | |
| Knowledge | Students can explain the basic principles, | | | | |
| | of electromagnetic fields in biological tiss them corresponding to wavelength and f | | | | |
| | techniques for characterization of electro | | | | |
| | diagnostic utilization of electromagnetic fie | | pheations . They co | in give examples | Tor enerapeatic and |
| | | 57 | | | |
| | | | | | |
| Skills | Students know how to apply various metho | ods to characterize the behavio | or of electromagnetic | fields in biologic | al tissue. In order t |
| | do this they can relate to and make use | of the elementary solutions o | f Maxwell's Equation | ns. They are able | to assess the mos |
| | important effects that these models pred | lict for biological tissue, they | can order the effect | cts corresponding | to wavelength an |
| | frequency, respectively, and they can ana | lyze them in a quantitative wa | y. They are able to | develop validation | n strategies for thei |
| | predictions. They are able to evaluate the | effects of electromagnetic field | Is for therapeutic an | d diagnostic appli | cations and make a |
| | appropriate choice. | | | | |
| | | | | | |
| Personal Competence | | | | | |
| • | Students are able to work together on su | hiect related tasks in small dr | nuns They are able | to present their | results effectively i |
| Social competence | Students are able to work together on subject related tasks in small groups. They are able to present their results effectively in English (e.g. during small group exercises). | | | | |
| | 3 : (:3 :: 3 :: 3 :: 4 | | | | |
| | | | | | |
| Autonomy | Students are capable to gather informat | ion from subject related, prof | essional publication | s and relate tha | t information to the |
| | context of the lecture. They are able to m | nake a connection between the | eir knowledge obtair | ned in this lecture | with the content of |
| | other lectures (e.g. theory of electromag | netic fields, fundamentals of | electrical engineerin | g / physics). The | ey can communicat |
| | problems and effects in the field of bioelec | tromagnetics in English. | | | |
| | | | | | |

| Admission Requirements | None | | | |
| Recommended Previous | Module: Technical Thermodynamics I | | | |
| Knowledge | Module: Technical Thermodynamics II | | | |
| Educational Objectives | After taking part successfully, students have reached the follo | owing learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy. | | | |
| Skills | Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode. Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of | | | |
| Personal Competence | other modules on renewable energy projects. In this context markets and energy trades. | | | |
| Social Competence | Students are able to discuss issues in the thematic fields in the | ne renewable energy sector addr | essed within the | module. |
| Autonomy | Students can independently exploit sources , acquire the puestions. $ \\$ | particular knowledge about the s | subject area and | transform it to new |

| | |
| Module Responsible Admission Requirements | |
| Recommended Previous | |
| Knowledge | |
| Educational Objectives | |
| Professional Competence | |
| Knowledge | Students know the different kinds of air conditioning systems for buildings and mobile applications and how these systems are controlled. They are familiar with the change of state of humid air and are able to draw the state changes in a h1+x,x-diagram. They are able to calculate the minimum airflow needed for hygienic conditions in rooms and can choose suitable filters. They know the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the help of simple methods. They know the principles to calculate an air duct network. They know the different possibilities to produce cold and are able to draw these processes into suitable thermodynamic diagrams. They know the criteria for the assessment of refrigerants. |
| Skills | Students are able to configure air condition systems for buildings and mobile applications. They are able to calculate an air duct network and have the ability to perform simple planning tasks, regarding natural heat sources and heat sinks. They can transfer research knowledge into practice. They are able to perform scientific work in the field of air conditioning. |
| Personal Competence Social Competence | In lectures and exercises, the students can use many examples and experiments to discuss in small groups in a goal-oriented manner, develop a solution and present it. Within the exercises, the students can independently develop further questions and work out targeted solutions. |
| Autonomy | Students are able to define tasks independently, to develop the necessary knowledge themselves based on the knowledge they have received, and to use suitable means for implementation. In the exercises, the students discuss the methods taught in the lectures using complex tasks and critically analyze the results. |

| Module Responsible | NN | | | | |
| Admission Requirements | None | | | | |
| Recommended Previous | | | | | |
| Knowledge | | | | | |
| | "Heat Transfe | ermodynamics I and II" | | | |
| | "Fluid Mechan | | | | |
| Educational Objectives | After taking part suc | cessfully, students have re | ached the following learning results | | |
| Professional Competence | | | | | |
| Knowledge | VBT/Combustion E | ingineering | | | |
| | The standards subline | | | | |
| | | • | chemical fundamentals of combust | · | |
| | _ | | reaction kinetics and fundamentals orimary reduction measures, and evo | | |
| | limit levels. | ion or emissions and the p | initially reduction measures, and evi | aluate the impact of reg | ulations and allowable |
| | KWK/Combined He | eat and Power | | | |
| | The students preser | nt the lavout, design and o | peration of Combined Heat and Pow | er plants and are in a po | sition to compare with |
| | - | | pressure steam turbine or condensi | | |
| | | | combined steam and gas turbine, c | | |
| | combustion engine. | They can explain and anal | yse aspects of combined heat, power | r and cooling (CCHP) and | describe the layout of |
| | the key components | needed. Through this spe | cialised knowledge they are able to | evaluate the ecological | significance of district |
| | CHP generation, as v | well as its economics. | | | |
| | Storage Technolog | gies | | | |
| | regards of their op | | peration of electrical and heat storaged and conditions in power plants and ies. | | |
| Skills | medium and long-te the combustion of a the students to eval from practical exper | The students will be able to identify optimization possibilities due to combined power and heat production and the usage of short, medium and long-term storage technologies. The detailed understanding of the complete energy conversion chain, starting with the combustion of a fuel, the conversion of the primary energy into heat and power, storage and discharge of the storage enables the students to evaluate the efficiency and economies of the processes and to holistically consider energy utilisation. Examples from practical experience, such as the CHP energy supply facility of the TUHH and the district heating network of Hamburg will be used, to highlight the potential from electricity generation plants with simultaneous heat extraction and storage. | | | |
| | Within the framewor | k of the exercises the stud | ents deepen their knowledge based | on examples from the inc | lustries. |
| Personal Competence | | | | | |
| Social Competence | | | ced on communication with the tuto for improving further this knowledge | | ents to reflect on their |
| | | | | | |
| Autonomy | | • | le to perform estimating calculation d the potential impact of different p | | |
| | highlighted. | | | | |

| | Thermodynamic and chemical fundamentals |
| | • Fuels |
| | Reaction kinetics |
| | Premixed flames |
| | Systematik of flames and combustion chambers |
| | Combustion Chamber design |
| | Reduction of Emissions |
| | |
| | Part 2: Energy Storage |
| | 1.Motivation: Why is Energy storage essential ? |
| | 2.Storage of electrical energy |
| | • Condensers |
| | Akkumulators |
| | Hydro power stations |
| | Short term storage with fly wheels |
| | Compressed air energy storage CAES |
| | Economics |
| | 3.Heat Storage |
| | |
| | Sensible heat storage |
| | Latent heat storage The storage to the storag |
| | Thermocheical heat storage |
| | Economics |
| | 4.Sector coupling and Power to X |
| | • PtG |
| | • PtL |
| | Research on PtX |
| | |
| | Part 3: "Combined Heat and Power": |
| | Layout, design and operation of Combined Heat and Power plants |
| | District heating plants with back-pressure steam turbine and condensing turbine with pressure-controlled extraction tapping |
| | District heating plants with pack-pressure steam tarbine and condensing tarbine with pressure-controlled extraction tappin District heating plants with gas turbine |
| | District heating plants with gas tarbine District heating plants with combined steam and gas turbine |
| | District heating plants with combined seeam and gas tarbine District heating plants with motor engine |
| | Combined cooling heat and power (CCHP) |
| | Layout of the key components |
| | Regulatory framework and allowable limits |
| | Economic significance and calculation of the profitability of district CHP plant |

| Water Resource Management (L04) | I | Recitation Section (small) | 1 | 1 | |
| Module Responsible | | | | | |
| Admission Requirements | None | | | | |
| Recommended Previous | Knowledge of water management and the key process | ses involved in water treatment. | | | |
| Knowledge | | | | | |
| Educational Objectives | After taking part successfully, students have reached | the following learning results | | | |
| Professional Competence | | | | | |
| Knowleage | Students will be able to outline key areas of conflict in water management, as well as their mutual dependence for sustainable water supply. They will understand relevant economic, environmental and social factors. Students will be able to explain and outline the organisational structures of water companies. They will be able to explain the available water treatment processes and the scope of their application. | | | | |
| Skills | Students will be able to assess complex problems in drinking water production and establish solutions involving water management and technical measures. They will be able to assess the evaluation methods that can be used for this. Students will be able to carry out chemical calculations for selected treatment processes and apply generally accepted technical rules and standards to these processes. | | | | |
| Personal Competence Social Competence Autonomy | and treatment of drinking water. They will be able t interests. They will be able to develop joint solutions in | o take an appropriate professional po n teams of diverse experts and present | sition, for examp these solutions to | le representing user | |

|------------------------------|---|
| Тур | Lecture |
| Hrs/wk | 2 |
| СР | 1 |
| Workload in Hours | Independent Study Time 2, Study Time in Lecture 28 |
| Lecturer | Dr. Klaus Johannsen |
| Language | DE |
| Cycle | WiSe |
| Content | The topic of this course is water chemistry with respect to drinking water treatment and water distribution |
| | Major topics are solubility of gases, carbonic acid system and calcium carbonate, blending, softening, redox processes, materials and legal requirements on drinking water treatment. Focus is put on generally accepted rules of technology (DVGW- and DIN-standards). Special emphasis is put on calculations using realistic analysis data (e.g. calculation of pH or calcium carbonate dissolution potential) in exercises. Students can get a feedback and gain extra points for exam by solving problems for homework. Knowledge of drinking water treatment processes is vital for this lecture. Therefore the most important processes are explained coordinated with the course "Water resources management" in the beginning of the semester. |

| Content | In the lecture methods for the reduction of emissions from industrial plants are treated. At the beginning a short survey of the different forms of air pollutants is given. In the second part physical principals for the removal of particulate and gaseous pollutants form flue gases are treated. Industrial applications of these principles are demonstrated with examples showing the removal of specific compounds, e.g. sulfur or mercury from flue gases of incinerators. | | |

| Module Responsible | Prof. Ralf Otterpohl | | | |
| Admission Requirements | None | | | |
| Recommended Previous | Basic knowledge of the global situation with rising pov | erty, soil degradation, lack of w | ater resources and sanita | tion |
| Knowledge | | | | |
| Educational Objectives | After taking part successfully, students have reached | the following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students can describe resources oriented wastewate | r systems mainly based on sou | irce control in detail. The | ey can comment on |
| | techniques designed for reuse of water, nutrients and | soil conditioners. | | |
| | Students are able to discuss a wide range of proven a | annoachos in Rural Dovolonmont | t from and for many rogic | ons of the world |
| | Students are able to discuss a wide range of proven a | oproacties in Kurai Developmeni | t from and for many regic | ons of the world. |
| | | | | |
| Skills | Students are able to design low-tech/low-cost sanita | ation, rural water supply, rainw | vater harvesting systems | s, measures for the |
| | rehabilitation of top soil quality combined with food a | nd water security. Students can | consult on the basics of s | soil building through |
| | "Holisitc Planned Grazing" as developed by Allan Savo | ry. | | |
| Personal Competence | | | | |
| • | The students are able to develop a specific topic in a t | eam and to work out milestones | according to a given pla | n |
| Social Competence | The students are able to develop a specific topic in a c | earn and to work out innestones | according to a given pla | |
| Autonomy | Students are in a position to work on a subject and | to organize their work flow in | dependently. They can a | also present on this |
| | subject. | | | |
| Workload in Hours | Independent Study Time 124, Study Time in Lecture 5 | 6 | | |
| Credit points | | | | |
| Course achievement | None | | | |
| Examination | Subject theoretical and practical work | | | |
| | During the course of the semester, the students work | towards mile stones. The work | includes presentations a | and papers. Detailed |
| | information will be provided at the beginning of the sn | | | |

| | Central part of this module is a group work on a subtopic of the lectures. The focus of these projects will be based on an interview with a target audience, practitioners or scientists. The group work is divided into several Milestones and Assignments. The outcome will be presented in a final presentation at the end of the semester. |

| Reactor Design Using Local Transpo | | Project-/problem-based Learning | 2 | 2 |
| Heat & Mass Transfer in Process En | gineering (L0103) | Lecture | 2 | 2 |
| Module Responsible | Prof. Michael Schlüter | | | |
| Admission Requirements | None | | | |
| | All lectures from the undergraduate studies, especially mathem | atics, chemistry, thermodynamics | s, fluid mecha | nics, heat- and mass |
| Knowledge | transfer. | | | |
| | After taking part successfully, students have reached the follow | ing learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able to: | | | |
| | describe transport processes in single- and multiphase flo | ows and they know the analogy b | etween heat- | and mass transfer as |
| | well as the limits of this analogy. | | | |
| | explain the main transport laws and their application as v | well as the limits of application. | | |
| | describe how transport coefficients for heat- and mass transport | ansfer can be derived experiment | ally. | |
| | compare different multiphase reactors like trickle bed rea | actors, pipe reactors, stirring tank | s and bubble | column reactors. |
| | are known. The Students are able to perform mass and | d energy balances for different k | ind of reacto | rs. Further more the |
| | industrial application of multiphase reactors for heat- and | I mass transfer are known. | | |
| Skills | The students are able to: | | | |
| S.M.S | | | | |
| | optimize multiphase reactors by using mass- and energy | | | |
| | use transport processes for the design of technical proce | sses, | | |
| | to choose a multiphase reactor for a specific application. | | | |
| | | | | |
| D | | | | |
| Personal Competence | | | | |
| Social Competence | The students are able to discuss in international teams in english and develop an approach under pressure of time. | | | time. |
| Autonomy | Students are able to define independently tasks, to solve the problem "design of a multiphase reactor". The knowledge that s | | | |
| | necessary is worked out by the students themselves on the bas | is of the existing knowledge from | the lecture. T | The students are able |
| | to decide by themselves what kind of equation and model is a | pplicable to their certain probler | n. They are a | able to organize their |
| | own team and to define priorities for different tasks. | | | |

| Content | In this Problem-Based Learning unit the students have to design a multiphase reactor for a fast chemical reaction concerning | |
| | optimal hydrodynamic conditions of the multiphase flow. | |
| | The four students in each team have to: | |
| | collect and discuss material properties and equations for design from the literature, | |
| | calculate the optimal hydrodynamic design, | |
| | check the plausibility of the results critically, | |
| | write an exposé with the results. | |
| | This exposé will be used as basis for the discussion within the oral group examen of each team. | |

| Content | The Europe 2020 strategy calls for bioeconomy as the key for smart and green growth of today. Biorefineries are the fundamental part on the way to convert the use of fossil-based society to bio-based society. For this reason, agriculture and forestry sectors are increasingly deliver bioresources. It is not only for their traditional applications in the food and feed sectors such as pulp or paper and construction material productions, but also to produce bioenergy and bio-based products such as bio-plastics. However although bioresources are renewable, they are considered as limited resources as well. The bioeconomy's limitation factor is the availability land on our world. In the context of the development of the bioeconomy, the sustainable and reliable supply of noon-food biomass feedstock is a critical success factor for the long-term perspective of bioenergy and other bio-based products production. Biorefineries are complex of technologies and process cascades using the available primary, secondary and tertiary bioresources to produce a multitude of products - a product mix from material and energy products. The lecture gives an overview on biorefinery technology and shall contribute to promotion of international biorefinery developments. Lectures: What is a biorefinery: Overview on basic organic substrates and processes which lead to material and energy products The worlds most advanced biorefinery The worlds most advanced biorefinery Example projects (e.g. combination of anaerobic digestion and composting in practice; demonstration project in Hamburgs city quarter Jenfelder Au) The lectures will be accompanied by technical tours. Optional it is also possible to visit more biorefinery lectures in the University of Hamburg (lectures in German only). In the exercise students have the possibility to work in groups on a biorefinery project or to work on a student-specific task. |

| | In the context of limited fossil resources, climate change mitigation and increasing population growth, Bioresources has a special role. They have to feed the population and in the same time they are important for material production such as pulp and paper or construction materials. Moreover they become more and more important in chemical industry and in energy provision as fossil substitution. Although Bioresources are renewable, they are also considered as limited resources. The availability of land on our planet is the main limitation factor. The sustainable and reliable supply of non-food biomass feedstock is a critical for successful and long term perspective on production of bioenergy and other bio-based products. As the consequence, the increasing competition and shortages continue to happen at the traditional sectors. On the other side, huge unused but potentials residue on waste and wastewater sector exist. Nowadays, a lot of activities to develop better processes, to create new bio-based products in order to become more efficient, the inclusion of secondary and tertiary bio-resources in the valorisation chain are going on. The lecture deals with the current state-of-the-art of bioresource management. It shows deficits and potentials for improvement especially in the sector of utilization of organic residues for material and energy generation: **Lectures on:** Bioresource generation and utilization including lost potentials today* Basic biological, mechanical, physico-chemical and logistical processes The conflict of material vs. energy generation from wood / waste wood The basics of pulp & paper production including waste paper recycling The Pros and Cons from biogas and compost production **Special lectures by invited guests from research and practice:** Pathways of waste organics on the example of Hamburg's City Cleaning Company Utilization options of landscaping materials on the example of grass Increase of process efficiency of anaerobic digestions Decision support tools on the example |

| Knowledge | |
| Educational Objectives | After taking part successfully, students have reached the following learning results |
| Professional Competence | |
| Knowledge | Students know the different energy conversion stages and the difference between efficiency and annual efficiency. They have |
| | increased knowledge in heat and mass transfer, especially in regard to buildings and mobile applications. They are familiar v |
| | German energy saving code and other technical relevant rules. They know to differ different heating systems in the domestic |
| | industrial area and how to control such heating systems. They are able to model a furnace and to calculate the transi |
| | temperatures in a furnace. They have the basic knowledge of emission formations in the flames of small burners and how |
| | conduct the flue gases into the atmosphere. They are able to model thermodynamic systems with object oriented languages. |
| | |
| | |
| Skills | Students are able to calculate the heating demand for different heating systems and to choose the suitable components. They |
| | able to calculate a pipeline network and have the ability to perform simple planning tasks, regarding solar energy. They can wi |
| | Modelica programs and can transfer research knowledge into practice. They are able to perform scientific work in the field |
| | thermal engineering. |
| | |
| | |
| Personal Competence | |
| Social Competence | |
| | manner, develop a solution and present it. Within the exercises, the students can independently develop further questions |
| | work out targeted solutions. |
| | |
| | |
| Autonomy | Students are able to define tasks independently, to develop the necessary knowledge themselves based on the knowledge t |
| | have received, and to use suitable means for implementation. In the exercises, the students discuss the methods taught in |
| | lectures using complex tasks and critically analyze the results. |

| Content | In the course necessary basic stochastics and the discrete event simulation are introduced. Also simulation models for communication networks, for example, traffic models, mobility models and radio channel models are presented in the lecture. Students work with a simulation tool, where they can directly try out the acquired skills, algorithms and models. At the end of the course increasingly complex networks and protocols are considered and their performance is determined by simulation. |
| Literature | Skript des Instituts für Kommunikationsnetze Further literature is announced at the beginning of the lecture. |

Module M1884: Data-Driven Innovation Courses Title Typ Hrs/wk CP Data-Driven Innovation (L3114) Lecture 3 3 3 Data-Driven Innovation Seminar (L3115) Project-/problem-based Learning 2 3 Module Responsible Prof. Moritz Göldner Admission Requirements None

Recommended Previous Knowledge Educational Objectives

After taking part successfully, students have reached the following learning results

Professional Competence

Knowledge

none

ledge By the end of this course, students will be able to:

- Understand the principles of Design Thinking and recognize their significance in conjunction with data-driven decision-making within the innovation process.
- Apply new methods for data analysis to identify user needs and insights.
- Demonstrate competence in using tools, including generative AI, through practical experience with real case studies and/or
 publicly accessible data repositories.
- Utilize methods that support strategic decision-making in the context of data-driven innovation.
- Evaluate ethical aspects and privacy regulations related to data-driven innovation.

Skills

- The students develop a profound understanding of the principles of Design Thinking and recognize their significance in the innovation process, taking into account data-driven decision-making.
- The students learn advanced methods for data analysis that enable them to effectively identify and understand user needs and insights.
- Through practical exercises involving real case studies and/or publicly accessible data repositories, the students gain competencies in using various tools, including generative artificial intelligence.
- The students acquire methods that assist them in making and implementing strategic decisions in the context of data-driven innovation.
- The students are sensitized to the ethical aspects and privacy regulations that need to be considered in the context of datadriven innovation and learn to critically evaluate them.

The students acquire these skills through active engagement in paper presentations, group work, case studies, and other practical exercises. They are guided to deliver multiple presentations and work in small groups on real-world problems. Through these diverse methodological approaches, the students are empowered to apply their skills in practice and continuously develop their competencies.

Personal Competence

Social Competence

- Teamwork and collaboration: Students are encouraged to collaborate closely with their peers in group work and case studies. They learn to effectively work in interdisciplinary teams to solve complex problems and develop innovative approaches. In the process, they further develop their communication and cooperation skills.
- Presentation and communication skills: Through paper presentations and other formats, students are guided to present
 their findings and research results to their peers. This enhances their ability to present content clearly and convincingly and
 effectively communicate their ideas.
- Discussion and negotiation skills: The lecture promotes active discussions and the exchange of different viewpoints.
 Students learn to express their opinions and arguments, consider other perspectives, and engage in constructive discussions. This develops their ability for critical reflection and collaboration in an academic environment.
- Empathy and collaboration: Dealing with data-driven innovation requires an understanding of the needs and perspectives of
 various stakeholders. Students learn to be empathetic and prioritize collaboration and common goals. This helps them
 develop solutions that take into account the needs and concerns of all parties involved.
- Intercultural competence: Through collaboration in interdisciplinary teams, students have the opportunity to work with
 peers from different cultural backgrounds and disciplines. They develop intercultural competencies by expanding their
 perspectives and learning to communicate and collaborate successfully in a global environment.

By practically applying these social skills in various exercises, group work, and discussions, students are prepared to work successfully in team-based projects and further develop their abilities to collaborate with other professionals.

Autonomy

- Self-Management: Students learn to effectively organize their time, set priorities, and independently plan and manage their tasks. They develop strategies for self-motivation and overcoming challenges to successfully complete their studies.
- Self-Directed Learning: Students are encouraged to independently research knowledge, study additional literature, and engage with current developments in their field of study. They develop the ability for self-directed learning and continuous education to keep their knowledge up to date with the latest trends and innovations in their field.
- Problem-Solving Skills: Students learn to identify, analyze, and develop solutions for complex problems. They are
 encouraged to employ critical thinking and analytical skills to find effective solutions to real-world challenges. The lecture
 exposes them to various case studies and practical exercises to enhance their problem-solving abilities.
- Taking Initiative: Students are encouraged to be proactive and take initiative in pursuing their own learning and career
 goals. They develop the ability to recognize opportunities, address challenges, and develop innovative solutions. They are
 supported in taking risks and taking responsibility for their own learning and personal development.

| | This course aims to combine the principles of design thinking with data science, focusing on all steps of the design thinking process from understanding the problem, investigating user's needs and integrating these needs into the development and testing in a data-driven manner. Students will learn several methods to accelerate the innovation process (such as generative AI and modern market research platforms) as well as more general data science methodologies to streamline the innovation process. Established and modern, data-driven methods will be compared and critically evaluated, including ethical and privacy-related considerations. Through a series of lectures, hands-on exercises, and project presentations, students will not only develop a robust theoretical understanding of these topics, but will also gain practical experience applying these concepts in realistic innovation scenarios. |

| Business Analytics with Causal Data | a Science (L3096) | Project-/problem-based Learning | 2 | 3 |
| Causal Data Science (L3095) | | Lecture | 2 | 3 |
| Module Responsible | | | | |
| Admission Requirements | | | | |
| Recommended Previous | - Linear Algebra | | | |
| Knowledge | - Basics of programming | | | |
| | - School knowledge in economics | | | |
| | - School knowledge in economics | | | |
| | | | | |
| | After taking part successfully, students have reached the | following learning results | | |
| Professional Competence | | | | |
| Knowledge | After completing the module, students will be able to: | | | |
| | - understand the difference between "correlation" and "co | ausation". | | |
| | - understand the shortcomings of current correlation-base | ed approaches. | | |
| | - discuss the conceptual ideas behind various causal data | science tools and algorithms. | | |
| | - critical examination of (study) results and spurious corre | elations. | | |
| | - understanding of application of methods in business and | d practice. | | |
| Skills | - develop causal knowledge relevant for specific data-driv | en decisions. | | |
| | - carry out state-of the art causal data analyses. | | | |
| | - isolating causal effects despite the existence of confoun | ding factors. | | |
| | - programming in relevant programming languages. | | | |
| | - selection of the appropriate method depending on the p | roblem. | | |
| Personal Competence | | | | |
| | Students can work on the problems both individually and | in groups during the exercise times and | d also ask que | stions and contribute |
| | to the solution of other people's problems outside the exe | | | |
| | students learn to prepare and present their results during | the course. | | |
| Autonomy | Students learn to transfer the knowledge and skills the | y have learned to other subject areas | and to link th | nem to new learning |
| | content. To obtain information and solve problems, espe | | | |
| | resources to help themselves. | | - | , |
| | | | | |

| Тур | Project-/problem-based Learning |
| Hrs/wk | 2 |
| СР | 3 |
| Workload in Hours | Independent Study Time 62, Study Time in Lecture 28 |
| Lecturer | Prof. Christoph Ihl |
| Language | |
| Cycle Content | Most managerial decision problems require answers to questions such as "what happens to Y if we do X?", or "was it X that caused Y to change?" In other words, practical business decision-making requires knowledge about cause-and-effect. While most data science and machine learning approaches are designed to efficiently detect patterns in high-dimensional data, they are not able to distinguish causal relationships from simple correlations. That means, commonly used approaches to business analytics often fall short to provide decision makers with important causal knowledge. Therefore, many leading companies currently try to develop specific causal data science capabilities. |
| | This module will provide an introduction into the topic of causal inference with the help of modern data science and machine learning approaches and with a focus on applications to practical business problems from various management areas. Based on an overarching framework for causal data science, the course will guide students to detect sources of confounding influence factors, understand the problem of selective measurement in data collection, and extrapolate causal knowledge across different business contexts. We also cover several tools for causal inference, such as A/B testing and experiments, difference-in-differences, instrumental variables, matching, regression discontinuity designs, etc. A variety of hands-on examples will be discussed that allow students to apply their newly obtained knowledge and carry out state-of-the-art causal analyses by themselves. |
| | Topics covered: |
| | 1. Introduction and Overview |
| | 2. Probability and Regression Review |
| | 3. Potential Outcomes Causal Model |
| | 4. Directed Acyclic Graphs |
| | 5. Experiments and A/B-Testing |
| | 6. Matching and Subclassification |
| | 7. Regression Discontinuity |
| | 8. Instrumental Variables |
| | 9. Panel Data |
| | 10. Difference-in-Differences |
| | 11. Synthetic Control |
| | 12. Heterogeneous Treatment Effects |
| | 13. Mediation Analysis |

| Content | Repetition: Baseband Transmission |
| | Pulse shaping: Non-return to zero (NRZ) rectangular pulses, raised-cosine pulses, square-root raised-cosine pulses Power spectral density (psd) of baseband signals Intersymbol interference (ISI) |
| | First and second Nyquist criterion AWGN channel |
| | Matched filter Matched-filter receiver and correlation receiver Noise whitening matched filter |
| | Discrete-time AWGN channel model Representation of bandpass signals and systems in the equivalent baseband |
| | Quadrature amplitude modulation (QAM) Equivalent baseband signal and system Analytical signal |
| | Equivalent baseband random process, equivalent baseband white Gaussian noise process |

- Equivalent baseband AWGN channel
- Equivalent baseband channel model with frequency-offset and phase noise
- o Equivalent baseband Rayleigh fading and Rice fading channel models
- Equivalent baseband frequency-selective channel model
- Discrete memoryless channels (DMC)
- Bandpass transmission via carrier modulation
 - Amplitude modulation, frequency modulation, phase modulation
 - · Linear digital modulation methods
 - On-off keying, M-ary amplitude shift keying (M-ASK), M-ary phase shift keying (M-PSK), M-ary quadrature amplitude modulation (M-QAM), offset-QPSK
 - Signal space representation of transmit signal constellations and signals
 - Energy of linear digital modulated signals, average energy per symbol
 - Power spectral density of linear digital modulated signals
 - Bandwidth efficiency
 - Correlation coefficient of elementary signals
 - Error probabilities of linear digital modulation methods
 - Error functions
 - Gray mapping and natural mapping
 - Bit error probabilities, symbol error probabilities, pairwise symbol error probabilities
 - Euclidean distance and Hamming distance
 - Exact and approximate computation of error probabilities
 - Performance comparison of modulation schemes in terms of per bit SNR vs. per symbol SNR
 - Hierarchical modulation, multilevel modulation
 - Effects of carrier phase offset and carrier frequency offset
 - Differential modulation
 - M-ary differential phase shift keying (M-PSK)
 - Coherent and non-coherent detection of DPSK
 - p/M-differential phase shift keying (p/M-DPSK)
 - Differential amplitude and phase shift keying (DAPSK)
 - o Non-linear digital modulation methods
 - Frequency shift keying (FSK)
 - Modulation index
 - Minimum shift keying (MSK)
 - Offset-QPSK representation of MSK
 - MSK with differential precoding and rotation
 - Bit error probabilities of MSK
 - Gaussian minimum shift keying (GMSK)
 - Power spectral density of MSK and GMSK
 - Continuous phase modulation (CPM)
 - General description of CPM signals
 - Frequency pulses and phase pulses
 - Coherent and non-coherent detection of FSK
 - Performance comparison of linear and non-linear digital modulation methods
- Frequency-selective channels, ISI channels
 - Intersymbol interference and frequency-selectivity
 - RMS delay spread
 - Narrowband and broadband channels
 - Equivalent baseband transmission model for frequency-selective channels
 - Receive filter design
- Equalization
 - Symbol-spaced and fractionally-spaced equalizers
 - Inverse system
 - Non-recursive linear equalizers
 - Linear zero-forcing (ZF) equalizer
 - Linear minimum mean squared error (MMSE) equalizer
 - Non-linear equalization:
 - Decision feedback equalizer (DFE)
 - Tomlinson-Harashima precoding
 - Maximum a posteriori probability (MAP) and maximum likelihood equalizer, Viterbi algorithm
- Single-carrier vs. multi-carrier transmission
- Multi-carrier transmission
 - General multicarrier transmission
 - Orthogonal frequency division multiplex (OFDM)
 - OFDM implementation using the Fast Fourier Transform (FFT)
 - Cyclic guard interval
 - Power spectral density of OFDM
 - Peak-to-average power ratio (PAPR)
- Multiple access
 - Principles of time division multiple access (TDMA), frequency division multiple access (FDMA), code division multiple access (CDMA), non-orthogonal multiple access (NOMA), hybrid multiple access
- Spread spectrum communications
 - Direct sequence spread spectrum communications
 - Frequency hopping
 - o Protection against eavesdropping
 - Protection against narrowband jammers

 $\circ~$ Short vs. long spreading codes • Direct sequence spread spectrum communications in frequency-selective channels • Code division multiple access (CDMA) ■ Design criteria of spreading sequences, autocorrelation function and crosscorrelation function of spreading ■ Intersymbol interference (ISI) and multiple access interference (MAI) ■ Pseudo noise (PN) sequences, maximum length sequences (m-sequences), Gold codes, Walsh-Hadamard codes, orthogonal variable spreading factor (OVSF) codes ■ Multicode transmission ■ CDMA in uplink and downlink of a wireless communications system ■ Single-user detection vs. multi-user detection Literature K. | Knowledge | Basic knowledge of software-engineering activitie | s | | |
| Miowicage | Discrete algebraic structures | | | |
| | Object-oriented programming, algorithms, and da | ta structures | | |
| | Functional programming or Procedural programming | ing | | |
| Educational Objectives | After taking part successfully, students have reached the | e following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students apply the major approaches to data-flow ar | nalysis, control-flow analysis, and t | ype-based analys | sis, along with their |
| | classification schemes, and employ abstract interpretation. They explain the standard forms of internal representations and | | | representations and |
| | models, including their mathematical structure and properties, and evaluate their suitability for a particular analysis. They explain | | | |
| | and categorize the major analysis algorithms. They distinguish precise solutions from approximative approaches, and show | | | |
| | termination and soundness properties. | | | |
| Skills | Presented with an analytical task for a software artifact, | students select appropriate approach | nes from software | analysis, and justify |
| | their choice. They design suitable representations by me | odifying standard representations. Th | ney develop custo | omized analyses and |
| | devise them as safe overapproximations. They formulat | e analyses in a formal way and cons | truct arguments | for their correctness, |
| | behavior, and precision. | | | |
| Personal Competence | | | | |
| Social Competence | Students discuss relevant topics in class. They defend th | eir solutions orally. They communica | te in English. | |
| Autonomy | Using accompanying on-line material for self study, s | tudents can assess their level of k | nowledge contin | uously and adjust it |
| | appropriately. Working on exercise problems, they red | eive additional feedback. Within lim | nits, they can se | t their own learning |
| | goals. Upon successful completion, students can identify | and precisely formulate new problem | ms in academic o | r applied research in |
| | the field of software analysis. Within this field, they can | conduct independent studies to acq | uire the necessa | ry competencies and |
| | compile their findings in academic reports. They can dev | rise plans to arrive at new solutions o | r assess existing | ones. |

| | Today, massive amounts of valuable data come in digital, yet often unstructured forms such as text or graphs. People communicate almost everything in language: e.g., social media, web search, product reviews, advertising, emails, customer service, language translation, chatbots, medical reports, etc. At the same time, they choose to interact with other people, products or websites. These networked interaction patterns can be represented as graphs of relationships between people and objects. Analyzing these new data sources and forms can help decision makers to significantly improve the effectiveness and efficiency of products, services and processes. |
| | This course introduces the fundamentals and current state of machine learning for natural language processing (NLP) and graphs in terms of content, users, and social relations. The course has a particular emphasis on key advancements in deep learning (or neural network) architectures, which in recent years have obtained very high performance across many different tasks, using single end-to-end models that do not require traditional, task-specific feature engineering. The course focuses on the computational, algorithmic, and modeling challenges specific to learning architecture for text and graphs. Students will gain a thorough introduction to modern deep learning algorithms. Through lectures and coding labs, students will learn the necessary skills to design, implement, and understand their own deep learning models. We will use Python and the deep learning framework PyTorch (Geometric). |
| | Topics Covered: |

| Knowledge | | | | | |
| Educational Objectives | After taking part successfully, students have | reached the following learning re | esults | | |
| Professional Competence | | | | | |
| Skills | (goals, utilities, environments). They can describe the main features of environments. The notion of adversarial agent cooperation can be discussed in terms of decision problems and algorithms for solving these problems. For dealing with uncertainty in real-world scenarios, students can summarize how Bayesian networks can be employed as a knowledge representation and reasoning formalism in static and dynamic settings. In addition, students can define decision making procedures in simple and sequential settings, with and with complete access to the state of the environment. In this context, students can describe techniques for solving (partially observable) Markov decision problems, and they can recall techniques for measuring the value of information. Students can identify techniques for simultaneous localization and mapping, and can explain planning techniques for achieving desired states. Students can explain coordination problems and decision making in a multi-agent setting in term of different types of equilibria, social choice functions, voting protocol, and mechanism design techniques. Students can select an appropriate agent architecture for concrete agent application scenarios. For simplified agent application students can derive decision trees and apply bayesian reasoning for simple queries. Students can also create Bayesian networks/dynamic Bayesian networks and apply bayesian reasoning for simple queries. Students can also name and apply different sampling techniques for simplified agent scenarios. For simple and complex decision making students can compute the best action or policies for concrete settings. In multi-agent situations students will apply techniques for finding different equilibria states,e.g., Nash equilibria. For multi-agent decision making students will apply different voting protocols and compare and explain the results. | | | | |

| Content | The intention of this lecture is to provide a general system analysis-based overview of how transportation chains emerge and how they are developed. The respective advantages and disadvantages of different international transportation chains of goods are to be pointed out from a micro- and a macroeconomic point of view. The effects on the traffic system as well as the ecological and social consequences of a spatial devision of economical activities are to be discussed. The overview of current international transportation chains is carried out on the basis of concrete material- and appendant information flows. Established transportation chains and some of their individual elements are to become transparent to the students by a number of practical examples. 1. A conceptual systems model 2. Elements of integrated and multi-modal transportation chains 3. interaction of transport and traffic, demand and supply on different layers of the transport system 4. Global Issues in Supply Chain Management 5. Global Players and networks 6. Logistics and corporate social responsibility (CSR) 7. Methods and data for assessment of international transport chains 8. Influence of cultural aspects on international transport and logstics system 9. New solutions using different focuses of the transport and logstics system |

| | The general tasks of maritime logistics include the planning, design, implementation and control of material and information flows in the logistics chain ship - port - hinterland. The aim of the course is to provide students with knowledge of maritime transport and the actors involved in the maritime transport chain. Typical problem areas and tasks will be dealt with, taking into account the economic development. Thus, classical problems as well as current developments and trends in the field of maritime logistics are considered. In the lecture, the components of the maritime logistics chain and the actors involved will be examined and risk assessments of human disturbances on the supply chain will be developed. In addition, students learn to estimate the potential of digitisation in maritime shipping, especially with regard to the monitoring of ships. In addition, students are able to design operational planning for fleets of container or tramp vessels. Further content of the lecture is the different modes of transport in the hinterland, which students can evaluate after completion of the course regarding their advantages and disadvantages. | |

| Cycle | SoSe |
| Content | Introduction: developments and trends in integrated maintenance and spare parts logistics, components of integrated maintenance, the terms maintenance and maintenance logistics, need for action and the "maintenance dilemma," maintenance planning measures. Basics of integrated maintenance: maintenance technology, organisational structures and workflows, maintenance controlling, integration of employees and management. Knowledge-based business management and maintenance: Production and maintenance, condition knowledge and diagnosis, business management strategy, management, motivation and success. Target and key performance indicator systems: developing target systems, performance indicator requirements, performance indicator analysis, strengths and weaknesses analysis, potential analysis, performance indicator models, monitoring (IH Cockpit) Maintenance methods: make or buy versus outsourcing, total productive maintenance, differentiating between logistics strategies. Maintenance planning: concept planning and realization, concept planning tasks and steps, supplementing planning basics, technology and organisation sub-concepts, overall concept of integrated maintenance and spare parts logistics. Practical examples, including for: energy-efficient asset management, maintenance strategies in highly automated goods distribution centers, remote diagnosis and service management in wind energy plants, value stream analysis in maintenance. |

| Content | Port Logistics deals with the planning, control, execution and monitoring of material flows and the associated information flows in the port system and its interfaces to numerous actors inside and outside the port area. The extraordinary role of maritime transport in international trade requires very efficient ports. These must meet numerous |
| | requirements in terms of economy, speed, safety and the environment. Against this background, the lecture Port Logistics deals with the planning, control, execution and monitoring of material flows and the associated information flows in the port system and its interfaces to numerous actors inside and outside the port area. The aim of the lecture Port Logistics is to convey an understanding of structures and processes in ports. The focus will be on different types of terminals, their characteristical layouts and the technical equipment used as well as the ongoing digitization and interaction of the players involved. |
| | In addition, renowned guest speakers from science and practice will be regularly invited to discuss some lecture-relevant topics from alternative perspectives. |
| | The following contents will be conveyed in the lectures: |
| | Instruction of structures and processes in the port Planning, control, implementation and monitoring of material and information flows in the port Fundamentals of different terminals, characteristical layouts and the technical equipment used Handling of current issues in port logistics |

| Content | The content of the exercise is the independent preparation of a scientific paper plus an accompanying presentation on a current topic of port logistics. The paper deals with current topics of port logistics. For example, the future challenges in sustainability and productivity of ports, the digital transformation of terminals and ports or the introduction of new regulations by the International Maritime Organization regarding the verified gross weight of containers. Due to the international orientation of the event, the paper is to be prepared in English. |

| Content | The aim of the seminar is the practical introduction of students in various technical solutions to logistical problems. Above all, the guided development of own solutions is the core task in the laboratory. The problems and solutions will be drawn from the following logistic topics: |
| | (1) warehousing (2) conveying (3) sorting |
| | (4) order picking |
| | (5) identifying |
| | The students develop technical solutions in small groups for selected problems and implement them on a lab scale. The solutions are presented to an audience and advantages and disadvantages are discussed. The recorded feedback is then added to the model solution. |

| Content | When dealing with large amounts of data (big data), it is no longer possible for humans to spot all relevant data by simply looking at the raw data. In the cologistics, the handling of temporal data and movement data plays a particularly important role. In this course the visualization, the calculation of statistics, application of machine learning algorithms are covered. Students are given various tools for later practical application. |
| | The course utilizes the machine learning methods learned in "Basics of Machine Learning". These are used and evaluated in the context of practical application in of traffic and logistics. In addition, various pre-processing steps for raw data are presented and it is discussed, under which conditions these measurements are application. |
| | The lecture contents are: The project structure for Machine Learning in science and industry Use cases for machine learning in logistics Image recognition in road traffic Temporal data in traffic Movement data Automated anomaly detection |

| | Students are able to understand specific procedures of machine learning and to use on real life examples. Students are able to use appropriate procedures for given data. |
| | Students are able to explain the differences between instance and model based learning approaches and are able to use specific approaches in machine learning on the base of static and incremental growing data. |
| | By the use of uncertainty the students can explain how axioms, parameter or structures can be learned. Additional the students learn to develop different cluster techniques. |

| | The lecture provides the necessary basics and methods for understanding the interactions between air traffic and the environment, |
| Content | both in terms of the effects of weather / climate on flying and with regard to the effects of air traffic on pollutant emissions, noise and climate. |
| | The following topics are covered: |
| | Atmospheric physics / chemistry |
| | Atmospheric physics / chemistry Structure and statics |
| | Dynamics (water cycle, formation of weather events, high and low pressure areas, wind, gusts and turbulence) |
| | Cloud physics (thermodynamics, contrails) |
| | Radiation physics (energy balance, greenhouse effect) |
| | Photochemistry (ozone chemistry) |
| | Impact of weather on flying |
| | Atmospheric influences on flight performance |
| | Flight planning |
| | Disturbances due to weather, e.g. thunderstorms, winter weather (icing), clear air turbulence, visibility |
| | Effects of climate change and adaptation |
| | Effects of air traffic on the environment and climate |
| | Aviation pollutant emissions |
| | Effect of emissions on concentrations in the atmosphere |
| | Climate metrics / models and background scenarios |
| | Emissions inventories Mitigation massures |
| | Mitigation measures Technological measures, e.g. climate-optimized aircraft design |
| | Alternative fuels |
| | Operational measures, e.g. climate-optimized flight planning |
| | Environmental policy measures, e.g. EU-ETS, CORSIA |
| | Potentials and comparison, concept of eco-efficiency |
| | Local environmental impacts |
| | Local air quality (particulate matter, other emissions near the ground) |
| | Noise (noise sources, noise metrics, noise impact, measurement, certification, psychoacoustics, noise mitigation) |
| | Health effects |
| | Aspects of sustainability |
| | Other aspects, including life cycle emissions, disposal/recycling |
| | Relation to global goals, e.g. United Nations goals for sustainable development, Paris climate agreement |
| | |

| itle | | Тур | Hrs/wk | СР |
| ystems Engineering (L1547) | | Lecture | 3 | 4 |
| ystems Engineering (L1548) | | Recitation Section (large) | 1 | 2 |
| Module Responsible | Prof. Ralf God | | | |
| Admission Requirements | None | | | |
| Recommended Previous | Basic knowledge in: | | | |
| Knowledge | Mathematics | | | |
| | Mechanics | | | |
| | Thermodynamics | | | |
| | Electrical Engineering | | | |
| | Control Systems | | | |
| | Previous knowledge in: | | | |
| | Aircraft Cabin Systems | | | |
| | - | | | |
| Educational Objectives | After taking part successfully, students have reach | ed the following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able to: | | | |
| | • understand systems engineering process models, methods and tools for the development of complex Systems | | | |
| | describe innovation processes and the need for technology Management | | | |
| | explain the aircraft development process and the process of type certification for aircraft | | | |
| | explain the system development process, including requirements for systems reliability identify any increase the conditions and text procedures for sixty and for sixty and text procedures for sixty and text | | | |
| | identify environmental conditions and test procedures for airborne Equipment value the methodology of requirements-based engineering (RBE) and model-based requirements engineering (MBRE) | | | |
| | value the methodology of requirements based or | ignicering (NBE) and moder based requirer | nents engineering | g (I-IDICE) |
| Skills | Students are able to: | | | |
| | • plan the process for the development of complex | | | |
| | organize the development phases and development Tasks | | | |
| | assign required business activities and technical Tasks | | | |
| | apply systems engineering methods and tools | | | |
| Personal Competence | | | | |
| Social Competence | Students are able to: | | | |
| | understand and accept their tasks within a devel | opment team | | |
| | • be comfortable with their role their tasks within the overall process | | | |
| | understand and serve their suppliers and customers in large projects | | | |
| | assume responsibility for people and technology | in the development of safety-critical system | ms | |
| Autonomy | Students are able to: | | | |
| , | interact and communicate in a development tear | n with division of tasks. | | |
| | independently research and identify certification | | | |
| | formulate requirements on their own | | | |
| | create test plans on their own and accompany ce | ertification processes | | |

| Content | The objective of the lecture with the corresponding exercise is to accomplish the prerequisites for the development and integration of complex systems using the example of commercial aircraft and cabin systems. Competences in the systems engineering process, tools and methods is to be achieved. Regulations, guidelines and certification issues will be known. |
| | Key aspects of the course are processes for innovation and technology management, system design, system integration and certification as well as tools and methods for systems engineering: Innovation processes IP-protection Technology management Systems engineering Aircraft program Certification issues Systems development Safety objectives and fault tolerance Environmental and operating conditions Tools for systems engineering Requirements-based engineering (RBE) Model-based requirements engineering (MBRE) |

|-------------------------------|---|---------------------|-----------------------|
| Courses | | | |
| Title | Тур | Hrs/wk | СР |
| Air Conditioning (L0594) | Lecture | 3 | 5 |
| Air Conditioning (L0595) | Recitation Section (large) | 1 | 1 |
| Module Responsible | e Prof. Arne Speerforck | | |
| Admission Requirements | s None | | |
| Recommended Previous | Technical Thermodynamics I, II, Fluid Dynamics, Heat Transfer | | |
| Knowledge | е | | |
| Educational Objectives | s After taking part successfully, students have reached the following learning results | | |
| Professional Competence | е | | |
| Knowledge | e Students know the different kinds of air conditioning systems for buildings and mobile ap | plications and ho | w these systems are |
| | controlled. They are familiar with the change of state of humid air and are able to draw the | ne state changes | in a h1+x,x-diagram. |
| | They are able to calculate the minimum airflow needed for hygienic conditions in rooms and | | |
| | the basic flow pattern in rooms and are able to calculate the air velocity in rooms with the l | | |
| | principles to calculate an air duct network. They know the different possibilities to produce | | e able to draw these |
| | processes into suitable thermodynamic diagrams. They know the criteria for the assessment | t of refrigerants. | |
| | | | |
| CL III | | | |
| Skills | Is Students are able to configure air condition systems for buildings and mobile applications. | - | |
| | network and have the ability to perform simple planning tasks, regarding natural heat sou research knowledge into practice. They are able to perform scientific work in the field of air | | ks. They can transfer |
| | research knowledge into practice. They are able to perform scientific work in the field of all | conditioning. | |
| | | | |
| Davisanal Commetence | | | |
| Personal Competence | | use in small arou | ns in a goal oriented |
| 30Clai Competence | In lectures and exercises, the students can use many examples and experiments to disc manner, develop a solution and present it. Within the exercises, the students can indepe | | |
| | work out targeted solutions. | ndentry develop i | arther questions and |
| | Note out targeted solutions. | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| Autonomy | Students are able to define tasks independently, to develop the necessary knowledge the | | |
| | have received, and to use suitable means for implementation. In the exercises, the stude | nts discuss the m | ethods taught in the |
| | lectures using complex tasks and critically analyze the results. | | |
| | | | |

| Knowledge | |
| 3 | mathematics |
| | mechanics |
| | thermo dynamics |
| | • electronics |
| | • fluid mechanics |
| | control theory |
| Educational Objectives | After taking part successfully, students have reached the following learning results |
| Professional Competence | |
| • | Students are able to |
| i.i.o.ieage | |
| | describe the structure and the functioning of primary flight control systems as well as actuation-, avionic-, high lift system |
| | of aircrafts in general along with corresponding properties and applications. |
| | give an overview over the functioning and the structure of landing gears and landing gear systems |
| | explain different configurations and designs and their origins |
| Skille | Students are able to |
| SKIIIS | Students are able to |
| | size primary flight control actuation systems |
| | perform a controller design process for the flight control actuators |
| | design high-lift systems and high-lift kinematics |
| | size landing gear components |
| | |
| | |
| | |
| | |
| | |
| Personal Competence | |
| | Students are able to: |
| , | |
| | Develop joint solutions in mixed teams |
| | Present and explain developed solutions in front of other students |
| | Discuss developed solutions with experts |
| | |
| Autonomy | Students are able to: |
| , aconomy | |
| | derive requirements and perform appropriate yet simplified design processes for aircraft systems from complex issues an |
| | circumstances in a self-reliant manner |
| | apply new skills and methods in the context of exercises in a self-reliant manner |
| | |

| Content | The objective of the lecture with the corresponding exercise is the acquisition of knowledge about aircraft cabin systems and cabin operations. A basic understanding of technological and systems engineering effort to maintain an artificial but comfortable and safe travel and working environment at cruising altitude is to be achieved. |
| | The course provides a comprehensive overview of current technology and cabin systems in modern passenger aircraft. The Fulfillment of requirements for the cabin as the central system of work are covered on the basis of the topics comfort, ergonomics, human factors, operational processes, maintenance and energy supply: • Materials used in the cabin • Ergonomics and human factors • Cabin interior and non-electrical systems • Cabin electrical systems and lights • Cabin electronics, communication-, information- and IFE-systems • Cabin and passenger process chains • RFID Aircraft Parts Marking • Energy sources and energy conversion |

| Content | The lecture provides the necessary basics and methods for understanding the interactions between air traffic and the environment, | |
| | both in terms of the effects of weather / climate on flying and with regard to the effects of air traffic on pollutant emissions, noise | |
| | and climate. | |
| | The following topics are covered: | |
| | The following topics are covered. | |
| | Atmospheric physics / chemistry | |
| | Structure and statics | |
| | Dynamics (water cycle, formation of weather events, high and low pressure areas, wind, gusts and turbulence) | |
| | Cloud physics (thermodynamics, contrails) | |
| | Radiation physics (energy balance, greenhouse effect) | |
| | Photochemistry (ozone chemistry) | |
| | Impact of weather on flying | |
| | Atmospheric influences on flight performance | |
| | Flight planning | |
| | Disturbances due to weather, e.g. thunderstorms, winter weather (icing), clear air turbulence, visibility | |
| | Effects of climate change and adaptation | |
| | Effects of air traffic on the environment and climate | |
| | Aviation pollutant emissions | |
| | Effect of emissions on concentrations in the atmosphere | |
| | Climate metrics / models and background scenarios | |
| | Emissions inventories | |
| | Mitigation measures | |
| | Technological measures, e.g. climate-optimized aircraft design | |
| | Alternative fuels | |
| | Operational measures, e.g. climate-optimized flight planning | |
| | Environmental policy measures, e.g. EU-ETS, CORSIA | |
| | Potentials and comparison, concept of eco-efficiency | |
| | Local environmental impacts | |
| | Local air quality (particulate matter, other emissions near the ground) | |
| | Noise (noise sources, noise metrics, noise impact, measurement, certification, psychoacoustics, noise mitigation) | |
| | Health effects | |
| | Aspects of sustainability | |
| | Other aspects, including life cycle emissions, disposal/recycling | |
| | Relation to global goals, e.g. United Nations goals for sustainable development, Paris climate agreement | |
| | | |

| Course L1310: Airline Operat | tions |
|------------------------------|--|
| Тур | Lecture |
| Hrs/wk | 3 |
| СР | 3 |
| Workload in Hours | Independent Study Time 48, Study Time in Lecture 42 |
| Examination Form | Klausur |
| Examination duration and | 90 min |
| scale | |
| Lecturer | Prof. Volker Gollnick, Dr. Karl Echtermeyer |
| Language | DE |
| Cycle | SoSe |
| Content | 1. Introdution and overview |
| | 2. Airline business models |
| | 3. Interdependencies in flight planning (network management, slot management, netzwork structures, aircraft circulation) |
| | 4. Operative flight preparation (weight & balance, payload/range, etc.) |
| | 5. fleet policy |
| | 6. Aircraft assessment and fleet planning |
| | 7. Airline organisation |
| | 8. Aircraft maintenance, repair and overhaul |

| Cycle | |
| | The lecture provides the necessary basics and methods for understanding the interactions between air traffic and the environment, |
| 2011-2011 | both in terms of the effects of weather / climate on flying and with regard to the effects of air traffic on pollutant emissions, noise and climate. |
| | The following topics are covered: |
| | Atmospheric physics / chemistry |
| | Structure and statics |
| | Dynamics (water cycle, formation of weather events, high and low pressure areas, wind, gusts and turbulence) Cloud physics (thermodynamics, contrails) |
| | Radiation physics (energy balance, greenhouse effect) |
| | Photochemistry (ozone chemistry) |
| | Impact of weather on flying |
| | Atmospheric influences on flight performance |
| | Flight planning |
| | Disturbances due to weather, e.g. thunderstorms, winter weather (icing), clear air turbulence, visibility |
| | Effects of climate change and adaptation |
| | Effects of air traffic on the environment and climate |
| | Aviation pollutant emissions |
| | Effect of emissions on concentrations in the atmosphere |
| | Climate metrics / models and background scenarios |
| | Emissions inventories |
| | Mitigation measures Technological measures of climate antimized sixuaft design. |
| | Technological measures, e.g. climate-optimized aircraft design |
| | Alternative fuels Operational measures of a climate entimized flight planning. |
| | Operational measures, e.g. climate-optimized flight planning Fourtenmental policy measures, e.g. ELLETS, CORSIA. |
| | Environmental policy measures, e.g. EU-ETS, CORSIA Potentials and comparison, concept of eco-efficiency |
| | Local environmental impacts |
| | Local air quality (particulate matter, other emissions near the ground) |
| | Noise (noise sources, noise metrics, noise impact, measurement, certification, psychoacoustics, noise mitigation) |
| | Health effects |
| | Aspects of sustainability |
| | Other aspects, including life cycle emissions, disposal/recycling |
| | Relation to global goals, e.g. United Nations goals for sustainable development, Paris climate agreement |
| | |
| | |

| Courses | | | | |
| litle . | | Тур | Hrs/wk | СР |
| Nonlinear Dynamics (L0702) | | Integrated Lecture | 4 | 6 |
| Module Responsible | Prof. Norbert Hoffmann | | | |
| Admission Requirements | None | | | |
| Recommended Previous | Calculus | | | |
| Knowledge | Linear Algebra | | | |
| | Engineering Mechanics | | | |
| | 2 Linguisting Freehands | | | |
| Educational Objectives | After taking part successfully, students have reached | the following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able to reflect existing terms and | d concepts in Nonlinear Dynamics and | to develop and res | earch new terms an |
| | concepts. | , | | |
| | Students are able to denote and expand meth | ods of modeling and analysis for nonli | near dynamical sys | tems. |
| | | | | |
| Skills | Students are able to apply existing methods a | nd procesures of Nonlinear Dynamics. | | |
| | Students are able to develop novel methods a | nd procedures for nonlinear dynamica | l systems. | |
| | | | | |
| Personal Competence | | | | |
| Social Competence | Students can analyze problems of nonlinear dy | ynamics also in groups. | | |
| | Students can achieve solution procedures for procedures for procedures. | problems of nonlinear dynamical syste | ems also in groups. | |
| Autonomy | | | | |
| Autonomy | Students are able to approach given research | tasks on the basis of given methods in | ndividually. | |
| | Students are able to identify and follow up nov | vel research tasks by themselves. | | |
| Workload in Hours | Independent Study Time 124, Study Time in Lecture | 56 | | |

|-----------------------------------|--|---------------------------------------|---------------------|--------------------|
| Courses | | | | |
| Title | | Тур | Hrs/wk | СР |
| Computational Structural Dynamics | s (L0282) | Lecture | 3 | 4 |
| Computational Structural Dynamics | | Recitation Section (small) | 1 | 2 |
| Module Responsible | Prof. Alexander Düster | | | |
| Admission Requirements | None | | | |
| Recommended Previous | Knowledge of partial differential equations is recommen | ded. | | |
| Knowledge | | | | |
| Educational Objectives | After taking part successfully, students have reached th | e following learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able to | | | |
| | + give an overview of the computational procedures for | problems of structural dynamics. | | |
| | + explain the application of finite element programs to | • | | |
| | + specify problems of computational structural dynami | cs, to identify them in a given situa | tion and to explain | their mathematical |
| | and mechanical background. | | | |
| Skills | Students are able to | | | |
| | + model problems of structural dynamics. | | | |
| | + select a suitable solution procedure for a given proble | m of structural dynamics. | | |
| | + apply computational procedures to solve problems of | structural dynamics. | | |
| | + verify and critically judge results of computational str | uctural dynamics. | | |
| Personal Competence | | | | |
| | Students are able to | | | |
| , | + solve problems in heterogeneous groups. | | | |
| | + present and discuss their results in front of others. | | | |
| | + give and accept professional constructive criticism. | | | |
| | | | | |
| Autonomy | Students are able to | | | |
| Adtonomy | + assess their knowledge by means of exercises and E-I | earning | | |
| | + acquaint themselves with the necessary knowledge to | | | |
| | + to transform the acquired knowledge to similar proble | | | |
| | | | | |
| | | | | |

| Admission Requirements | None | | | |
| Recommended Previous | Basics in physics, chemistry, mechanics and semiconductor tech | nology | | |
| Knowledge | | | | |
| Educational Objectives | After taking part successfully, students have reached the following | ng learning results | | |
| Professional Competence | | | | |
| Knowledge | Students are able | | | |
| | to account and to compain account following the photographic | | Ilir maakkaada f | iou kha fahriaakian a |
| | to present and to explain current fabrication techniques f private and private attacks are unabled to the integration the private attacks. | | ily methods i | or the fabrication o |
| | microsensors and microactuators, as well as the integration there | eoi in more compiex systems | | |
| | to explain in details operation principles of microsensors and | microactuators and | | |
| | to discuss the potential and limitation of microsystems in apple. | olication | | |
| | to discuss the potential and inflication of flicrosystems in app | pilcation. | | |
| | | | | |
| Skille | Students are capable | | | |
| Skilis | Students are capable | | | |
| | to analyze the feasibility of microsystems, | | | |
| | to develop process flows for the fabrication of microstructure | es and | | |
| | | | | |
| | to apply them. | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| Personal Competence | | | | |
| Social Competence | | | | |
| | Students are able to plan and carry out experiments in groups | , as well as present and repres | ent the resul | ts in front of others |
| | These social skills are practiced both during the preparation pl | nase, in which the groups work | out and pres | sent the theory, and |
| | during the follow-up phase, in which the groups prepare, docume | ent and present their practical ex | periences. | |
| | | | | |
| | | | | |
| Autonomy | The independence of the students is demanded and promoted in | n that they have to transfer and | l apply what t | they have learned to |
| | ever new boundary conditions. This requirement is communicate | | | |
| | the exam. Students are encouraged to work independently by no | | | |
| | step by step by asking specific questions. Students learn to as | | n they are fa | ced with a problem |
| | They learn to independently break down problems into manageal | bie sub-problems. | | |

| Content | The students receive the assignment in the form of a material design for test bodies made of fibre composites. Technical and normative requirements are listed in the assignment, all other required information comes from the lectures and exercises or the respective documents (electronically and in conversation). The procedure is specified in a milestone plan and enables the students to plan subtasks and thus work continuously. At the end of the project, different test specimens were tested in tensile or bending tests. In the individual project meetings, the conception (discussion of requirements and risks) is scrutinised. The calculations are analysed, the production methods are evaluated and determined. Materials are selected and the test specimens are manufactured according to standards. The quality and mechanical properties are checked and classified. At the end, a final report is prepared and the results are presented to all participants in the form of a presentation and discussed. | Content | |
| | The lecture extends and enhances the learned content of the module "Integrated Product Development and lightweight design" and is based on the knowledge and skills acquired there. Topics of the course include in particular: |
| | Methods of product development, Presentation techniques, Industrial Design, Design for variety Modularization methods, Design catalogs, Adapted QFD matrix, Systematic material selection, |
| | Assembly oriented design, Construction management CE mark, declaration of conformity including risk assessment, Patents, patent rights, patent monitoring Project management (cost, time, quality) and escalation principles, |
| | Development management for mechatronics, Technical Supply Chain Management. Exercise (PBL) In the exercise the content presented in the lecture "Integrated Product Development II" and methods of product development and design management will be enhanced. |
| | Students learn an independently moderated and workshop based approach through industry related practice examples to solve complex and currently existing issues in product development. They will learn the ability to apply important methods of product development and design management autonomous and acquire further expertise in the field of integrated product development. Besides personal skills, such as teamwork, guiding discussions and representing work results will be acquired through the workshop based structure of the event under its own planning and management. |

| Content | The lecture gives an introduction into the planning of factories and material flows. The students will learn process models and methods to plan new factories and improve existing material flow systems. The course includes three basic topics: (1) Analysis of factory and material flow systems (2) Development and re-planning of factory and material flow systems |
| | (3) Implementation and realization of factory planning |
| | The students are introduced into several different methods and models per topic. Practical examples and planning exercises deepen the methods and explain the application of factory planning. |
| | The special requirements of factory planning in an international context are discussed. Specific requirements of Current trends and issues in the factory planning round off the lecture. |

| Content | Introduction: situation, significance and main innovation focuses of logistics in a production company, aspects of procurement, production, distribution and disposal logistics, production and transport networks Logistics as a production strategy: logistics-oriented method of working in a factory, throughput time, corporate strategy, structured networking, reducing complexity, integrated organization, integrated product and production logistics (IPPL) Logistics-compatible production and process structuring; logistics-compatible product, material flow, information and organizational structures Logistics-oriented production control: situation and development tendencies, logistics and cybernetics, market-oriented production planning, control, monitoring, PPS systems and production control, cybernetic production organization and control, production logistics control systems. Production logistics planning: key performance indicators, developing a production logistics concept, computerized aids to planning production logistics, IPPL functions, economic efficiency of logistics projects Production logistics controlling: production logistics and controlling, material flow-oriented cost transparency, cost controlling (process cost accounting, costs model in IPPL), process controlling (integrated production system, methods and tools, MEPOT.net method portal) |

| | Due to the developments of Industry 4.0, digitalization and interconnectivity become a strategic advantage for companies in the international competition. This lecture focuses on the relevant modules and enables the participants to evaluate current developments in this context. In particular, knowledge management, simulation, process modelling and virtual technologies are covered. Content: Business Process Management and Data Modelling, Simulation Knowledge and Competence Management Process Management (PPC, Workflow Management) Computer Aided Planning (CAP) and NC-Programming Virtual Reality (VR) and Augmented Reality (AR) Computer Aided Quality Management (CAQ) |

| Knowledge | | | | |
| Educational Objectives | After taking part successfully, students have re | eached the following learning results | | |
| Professional Competence | | | | |
| Knowledge | With the completion of this module, students w | vill be able to deal with technical foundations | and current issues | and problems in the |
| _ | field of solar energy and explain and evaulate | these critically in consideration of the prior | curriculum and cu | rrent subject specific |
| | issues. In particular they can professionally | · | | |
| | application of solar modules. Furthermore, the | • | | · |
| | | , , | | , |
| Skills | Students can apply the acquired theoretical f | oundations of exemplary energy systems u | sing solar radiation | n. In this context, for |
| | example they can assess and evaluate potent | tial and constraints of solar energy systems | s with respect to d | ifferent geographical |
| | assumptions. They are able to dimension solar | energy systems in consideration of technical | al aspects and give | n assumptions. Using |
| | module-comprehensive knowledge students ca | an evalute the economic and ecologic condi | tions of these syste | ems. They can select |
| | calculation methods within the radiation theory | for these topics. | | |
| | | | | |
| | | | | |
| Personal Competence | | | | |
| Social Competence | Students are able to discuss issues in the them | natic fields in the renewable energy sector ac | ddressed within the | module. |
| Autonomy | Students can independently exploit sources an | d acquire the particular knowledge about th | o subject area with | rospoct to omphasis |
| Autonomy | Students can independently exploit sources and acquire the particular knowledge about the subject area with respect to emphasis fo the lectures. Furthermore, with the assistance of lecturers, they can discrete use calculation methods for analysing and | | | |
| | | | | |
| | dimensioning solar energy systems. Based of | in this procedure they can concrete asses | s their specific lea | arning level and can |
| | consequently define the further workflow. | | | |

| Content | The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture. |

| Cycle | WiSe |
| Content | 1) Markets for Agricultural Commodities |
| | What are the major markets and how are markets functioning |
| | Recent trends in world production and consumption. |
| | World trade is growing fast. Logistics. Bottlenecks. |
| | The major countries with surplus production |
| | Growing net import requirements, primarily of China, India and many other countries. |
| | Tariff and non-tariff market barriers. Government interferences. |
| | |
| | |
| | 2) Closer Analysis of Individual Markets |
| | Thomas Mielke will analyze in more detail the global vegetable oil markets, primarily palm oil, soya oil, |
| | rapeseed oil, sunflower oil. Also the raw material (the oilseed) as well as the by-product (oilmeal) will |
| | be included. The major producers and consumers. |
| | Vegetable oils and oilmeals are extracted from the oilseed. The importance of vegetable oils and |
| | animal fats will be highlighted, primarily in the food industry in Europe and worldwide. But in the past |
| | 15 years there have also been rapidly rising global requirements of oils & fats for non-food purposes, |
| | primarily as a feedstock for biodiesel but also in the chemical industry. |
| | Importance of oilmeals as an animal feed for the production of livestock and aquaculture |
| | Oilseed area, yields per hectare as well as production of oilseeds. Analysis of the major oilseeds |
| | worldwide. The focus will be on soybeans, rapeseed, sunflowerseed, groundnuts and cottonseed. |
| | Regional differences in productivity. The winners and losers in global agricultural production. |
| | 3) Forecasts: Future Global Demand & Production of Vegetable Oils |
| | Big challenges in the years ahead: Lack of arable land for the production of oilseeds, grains and other |
| | crops. Competition with livestock. Lack of water. What are possible solutions? Need for better |
| | education & management, more mechanization, better seed varieties and better inputs to raise yields. |
| | The importance of prices and changes in relative prices to solve market imbalances (shortage |
| | situations as well as surplus situations). How does it work? Time lags. |
| | Rapidly rising population, primarily the number of people considered "middle class" in the years ahead. |
| | Higher disposable income will trigger changing diets in favour of vegetable oils and livestock products. |
| | |
| | Urbanization. Today, food consumption per caput is partly still very low in many developing countries, primarily in Africa, some regions of Asia and in Central America. What changes are to be expected? |
| | |
| | The myth and the realities of palm oil in the world of today and tomorrow. |
| | Labour issues curb production growth: Some examples: 1) Shortage of labour in oil palm plantations in |
| | Malaysia. 2) Structural reforms overdue for the agriculture in India, China and other countries to |
| | become more productive and successful, thus improving the standard of living of smallholders. |

| | Goal of this course is it to discuss the physical, chemical, and biological as well as the technical, economic, and environmental basics of all options to provide energy from biomass from a German and international point of view. Additionally different system approaches to use biomass for energy, aspects to integrate bioenergy within the energy system, technical and economic development potentials, and the current and expected future use within the energy system are presented. The course is structured as follows: Biomass as an energy carrier within the energy system; use of biomass in Germany and world-wide, overview on the content of the course Photosynthesis, composition of organic matter, plant production, energy crops, residues, organic waste Biomass provision chains for woody and herbaceous biomass, harvesting and provision, transport, storage, drying Thermo-chemical conversion of solid biofuels Basics of thermo-chemical conversion through combustion: combustion technologies for small and large scale units, electricity generation technologies, flue gas treatment technologies, ashes and their use Gasification: Gasification technologies, producer gas cleaning technologies, options to use the cleaned producer gas for the provision of heat, electricity and/or fuels Fast and slow pyrolysis: Technologies for the provision of bio-oil and/or for the provision of charcoal, oil cleaning technologies, options to use the pyrolysis oil and charcoal as an energy carrier as well as a raw material Physical-chemical conversion of biomass containing oils and/or fats: Basics, oil seeds and oil fruits, vegetable oil production, production of a biofuel with standardized characteristics (trans-esterification, hydrogenation, co-processing in existing refineries), options to use this fuel, options to use the residues (i.e. meal, glycerine) Bio-chemical conversion of biomass Biogas: Process technologies for plants using agricultural feedstock, sewage sludge (sewage gas), organic waste fraction (landfill gas), technologi | | |

| | The experiments of the practical lab course illustrate the different aspects of heat generation from biogenic solid fuels. First, different biomasses (e.g. wood, straw or agricultural residues) will be investigated; the focus will be on the calorific value of the biomass. Furthermore, the used biomass will be pelletized, the pellet properties analysed and a combustion test carried out on a pellet combustion system. The gaseous and solid pollutant emissions, especially the particulate matter emissions, are measured and the composition of the particulate matter is investigated in a further experiment. Another focus of the practical course is the consideration of options for the reduction of particulate matter emissions from biomass combustion. In the practical course, a method for particulate matter reduction will be developed and tested. All experiments will be evaluated and the results presented. Within the practical lab course the students discuss different technical-scientific tasks, both subject-specifically and interdisciplinary. They discuss various approaches to solving the problem and advise on the theoretical or practical implementation. |

| Educational Objectives | After taking part successfully, students have reached the foll | owing learning results | | | |
| Professional Competence | 31 | | | | |
| Knowledge | Students are able to describe the processes in energy trading and the design of energy markets and can critically evaluate them in relation to current subject specific problems. Furthermore, they are able to explain the basics of thermodynamics of electrochemical energy conversion in fuel cells and can establish and explain the relationship to different types of fuel cells and their respective structure. Students can compare this technology with other energy storage options. In addition, students can give an overview of the procedure and the energetic involvement of deep geothermal energy. | | | | |
| Skills | Students can apply the learned knowledge of storage systems for excessive energy to explain for various energy systems different approaches to ensure a secure energy supply. In particular, they can plan and calculate domestic, commercial and industrial heating equipment using energy storage systems in an energy-efficient way and can assess them in relation to complex power systems. In this context, students can assess the potential and limits of geothermal power plants and explain their operating mode. Furthermore, the students are able to explain the procedures and strategies for marketing of energy and apply it in the context of | | | | |
| Personal Competence Social Competence | other modules on renewable energy projects. In this contex markets and energy trades. Students are able to discuss issues in the thematic fields in the | | | | |

| Content | Part I : Physical Chemistry and Thermodynamics |
| | 1. Introduction: Overview, achieving high pressure, range of parameters. |
| | 2. Influence of pressure on properties of fluids: P,v,T-behaviour, enthalpy, internal energy, entropy, heat capacity, viscosity thermal conductivity, diffusion coefficients, interfacial tension. |
| | 3. Influence of pressure on heterogeneous equilibria: Phenomenology of phase equilibria |
| | 4. Overview on calculation methods for (high pressure) phase equilibria). Influence of pressure on transport processes, heat and mass transfer. |
| | Part II : High Pressure Processes |
| | Separation processes at elevated pressures: Absorption, adsorption (pressure swing adsorption), distillation (distillation cair), condensation (liquefaction of gases) |
| | 6. Supercritical fluids as solvents: Gas extraction, cleaning, solvents in reacting systems, dyeing, impregnation, particl formation (formulation) |
| | 7. Reactions at elevated pressures. Influence of elevated pressure on biochemical systems: Resistance against pressure |
| | Part III: Industrial production |
| | 8. Reaction: Haber-Bosch-process, methanol-synthesis, polymerizations; Hydrations, pyrolysis, hydrocracking; Wet ai oxidation, supercritical water oxidation (SCWO) |
| | 9. Separation : Linde Process, De-Caffeination, Petrol and Bio-Refinery |
| | 10. Industrial High Pressure Applications in Biofuel and Biodiesel Production |
| | 11. Sterilization and Enzyme Catalysis |
| | 12. Solids handling in high pressure processes, feeding and removal of solids, transport within the reactor. |
| | 13. Supercritical fluids for materials processing. |
| | 14. Cost Engineering |
| | Learning Outcomes: |
| | After a successful completion of this module, the student should be able to |
| | - understand of the influences of pressure on properties of compounds, phase equilibria, and production processes. |
| | - Apply high pressure approches in the complex process design tasks |
| | - Estimate Efficiency of high pressure alternatives with respect to investment and operational costs |
| | Performance Record: 1. Presence (28 h) |
| | 2. Oral presentation of original scientific article (15 min) with written summary |
| | 3. Written examination and Case study |

| Content | Upon successful completion of the course, participants should be able to describe the foundations of the organization of the German health system and to describe different ways of treatment in the hospital. They should be able to describe the anatomy, physiology and basic diagnostic possibilities for the following organ system: heart / circulatory system, lungs, digestive tract, kidney, including the technical possibilities of monitoring heart-lung function, in the emergency department,in the monitoring stations and in intensive care and the basics of cardiopulmonary resuscitation. Furthermore, the anatomy and physiology of the nervous system will be explored. The importance and possibilities of preventive medicine of serious public health problems are described. Students prepare their own sub-themes in the form of small lectures and discuss various clinical cases on these topics interactively as problem-based learning. This course/Lecture by excursions into our emergency room, our endoscopy unit, minilaparoscopy and our ICU as well as out patient clinics. | | |

| Content | The industrial application of unit operations as part of process engineering is explained by actual examples of solid biomass processes. Size reduction, transportation and dosing, drying and agglomeration of renewable resources are described as important unit operations when producing solid fuels and bioethanol, producing and refining edible oils, when making Btl - and WPC - products. Aspects of explosion protection and plant design complete the lecture. |

| Robotics and Navigation in Medicin | | Project Seminar | 2 | 2 |
| Robotics and Navigation in Medicin | | Recitation Section (small) | 1 | 1 |
| Module Responsible | Prof. Alexander Schlaefer | | | |
| Admission Requirements | None | | | |
| Recommended Previous | • principles of math (algebra, analys | sis/saleulus) | | |
| Knowledge | principles of math (algebra, analys principles of programming, e.g., in | | | |
| | solid R or Matlab skills | Java of C++ | | |
| Educational Objectives | After taking part successfully, students h | ave reached the following learning results | | |
| Professional Competence | The taking part saccessiany, stadents in | ave reaction the following learning results | | |
| Knowledge | The students can explain kinematics an | nd tracking systems in clinical contexts and illus | strate systems and | their components |
| - | | respect to collision detection and safety and r | | |
| | systems regarding design and limitations | | | |
| | | | | |
| Skills | The students are able to design and eval | uate navigation systems and robotic systems for | medical application | S. |
| | | | | |
| Personal Competence | | | | |
| Social Competence | The students are able to grasp practica | I tasks in groups, develop solution strategies in | dependently, define | work processes ar |
| | work on them collaboratively. | | | |
| | The students are able to collaboratively | organize their work processes and software so | utions using virtua | I communication a |
| | software management tools. | | | |
| | The students can critically reflect on the | he results of other groups, make constructive | suggestions for im | provement, and al |
| | incorporate them into their own work. | | | |
| | | | | |
| | | | | |
| | | | | |
| Autonomy | The students can assess their level of | knowledge and independently control their lear | ning processes on | this basis as well a |
| | | ritically evaluate the results achieved and preser | nt them in an appro | priate argumentativ |
| | manner to the other groups. | | | |
| | | | | |

| Lecturer | Prof. Michael Schlüter | |
| Language | EN | |
| Cycle | WiSe | |
| Content | In this Problem-Based Learning unit the students have to design a multiphase reactor for a fast chemical reaction concerning | |
| | optimal hydrodynamic conditions of the multiphase flow. | |
| | The four students in each team have to: | |
| | collect and discuss material properties and equations for design from the literature, | |
| | calculate the optimal hydrodynamic design, | |
| | check the plausibility of the results critically, | |
| | write an exposé with the results. | |
| | This exposé will be used as basis for the discussion within the oral group examen of each team. | |

| Recommended Previous Knowledge | Mathematics I-III Fundamentals in Fluid Mechanics Technical Thermodynamics I-II Heat- and Mass Transfer | | | |
| | | | | |
| Educational Objectives | After taking part successfully, students have reached the | e following learning results | | |
| | The students are able to describe different applications of fluid mechanics in Process Engineering, Bioprocess Engineering, Energy- and Environmental Process Engineering and Renewable Energies. They are able to use the fundamentals of fluid mechanics for calculations of certain engineering problems. The students are able to estimate if a problem can be solved with an analytical solution and what kind of alternative possibilities are available (e.g. self-similarity in an example of free jets, empirical solutions in an example with the Forchheimer equation, numerical methods in an example of Large Eddy Simulation. Students are able to use the governing equations of Fluid Dynamics for the design of technical processes. Especially they are able to formulate momentum and mass balances to optimize the hydrodynamics of technical processes. They are able to transform a verbal formulated message into an abstract formal procedure. | | | |
| Personal Competence | | | | |
| | The students are able to discuss a given problem in smal | ll groups and to develop an approach | l. | |
| Autonomy | Students are able to define independently tasks for prob that is necessary to solve the problem by themselves on | | - | k out the knowledge |

| Module M1334: BIO II | : Biomaterials | | | |
|-------------------------------|---|--|-------------------------|-------------------|
| Courses | | | | |
| Title | | Тур | Hrs/wk | СР |
| Biomaterials (L0593) | | Lecture | 2 | 3 |
| Module Responsible | Prof. Michael Morlock | | | |
| Admission Requirements | None | | | |
| Recommended Previous | Basic knowledge of orthopedic and surgical technic | ques is recommended. | | |
| Knowledge | | | | |
| Educational Objectives | After taking part successfully, students have reach | ed the following learning results | | |
| Professional Competence | | | | |
| Knowledge | The students can describe the materials of the human body and the materials being used in medical engineering, and their fields of use. | | | |
| Skills | The students can explain the advantages and disac | dvantages of different kinds of biomate | erials. | |
| Personal Competence | | | | |
| Social Competence | The students are able to discuss issues related to | materials being present or being used | for replacements with | student mates and |
| | the teachers. | | | |
| Autonomy | The students are able to acquire information on the | eir own. They can also judge the inforn | nation with respect to | its credibility. |
| Workload in Hours | Independent Study Time 62, Study Time in Lecture | 28 | | |
| Credit points | 3 | | | |
| Course achievement | None | | | |
| Examination | Written exam | | | |
| Examination duration and | 90 min | | | |
| scale | | | | |
| Assignment for the | International Management and Engineering: Specia | alisation II. Process Engineering and Bi | otechnology: Elective (| Compulsory |
| Following Curricula | Materials Science: Specialisation Nano and Hybrid | Materials: Elective Compulsory | | |
| | Biomedical Engineering: Specialisation Artificial Organical | gans and Regenerative Medicine: Elect | ive Compulsory | |
| | Biomedical Engineering: Specialisation Implants an | d Endoprostheses: Compulsory | | |
| | Biomedical Engineering: Specialisation Medical Tec | | | |
| | Biomedical Engineering: Specialisation Managemen | | . , | |
| | Theoretical Mechanical Engineering: Specialisation | Bio- and Medical Technology: Elective | Compulsory | |

| Course L0593: Biomaterials | | | | |
|--|---|--|--|--|
| Тур | Lecture | | | |
| Hrs/wk | | | | |
| СР | 3 | | | |
| | Independent Study Time 62, Study Time in Lecture 28 Prof. Michael Modock, Prof. Kalina Pagnan Furlan, Prof. Shan Shi | | | |
| Lecturer Language | Prof. Michael Morlock, Prof. Kaline Pagnan Furlan, Prof. Shan Shi EN | | | |
| Cycle | | | | |
| Content | Topics to be covered include: | | | |
| | Introduction (Importance, nomenclature, relations) | | | |
| | 2. Biological materials | | | |
| | 2.1 Basics (components, testing methods) | | | |
| | 2.2 Bone (composition, development, properties, influencing factors) | | | |
| | 2.3 Cartilage (composition, development, structure, properties, influencing factors) | | | |
| | 2.4 Fluids (blood, synovial fluid) | | | |
| | 3 Biological structures | | | |
| | 3.1 Menisci of the knee joint | | | |
| | 3.2 Intervertebral discs | | | |
| | 3.3 Teeth | | | |
| | 3.4 Ligaments | | | |
| | 3.5 Tendons | | | |
| | 3.6 Skin | | | |
| | 3.7 Nervs | | | |
| | 3.8 Muscles | | | |
| | 4. Replacement materials | | | |
| | 4.1 Basics (history, requirements, norms) | | | |
| 3.7 Nervs3.8 Muscles4. Replacement materials | | | | |
| | 4.3 Titan (alloys, properties, reaction of the body) | | | |
| | 4.4 Ceramics and glas (properties, reaction of the body) | | | |
| | 4.5 Plastics (properties of PMMA, HDPE, PET, reaction of the body) | | | |
| | 4.6 Natural replacement materials | | | |
| | Knowledge of composition, structure, properties, function and changes/adaptations of biological and technical materials (which are used for replacements in-vivo). Acquisition of basics for theses work in the area of biomechanics. | | | |

| Module M0519: Partio | cle Technology | and Solid Matter | Process Ted | chnology | | |
|-------------------------------------|------------------------|-----------------------------|----------------------|-----------------------------------|-----------------|-----------------------|
| Courses | | | | | | |
| Title | | | | Тур | Hrs/wk | СР |
| Advanced Particle Technology II (L0 | 0051) | | | Project-/problem-based Learning | 1 | 1 |
| Advanced Particle Technology II (LC | 0050) | | | Lecture | 2 | 2 |
| Experimental Course Particle Techn | nology (L0430) | | | Practical Course | 3 | 3 |
| Module Responsible | Prof. Stefan Heinrich | | | | | |
| Admission Requirements | None | | | | | |
| Recommended Previous | Basic knowledge of s | olids processes and partic | le technology | | | |
| Knowledge | | | | | | |
| Educational Objectives | After taking part succ | cessfully, students have re | eached the followi | ng learning results | | |
| Professional Competence | | | | | | |
| Knowledge | After completion of t | he module the students w | ill be able to desc | cribe and explain processes for s | olids processir | ng in detail based on |
| | microprocesses on th | ne particle level. | | | | |
| Skills | Students are able t | o choose process steps | and apparatuses | for the focused treatment of | solids depend | ling on the specific |
| | characteristics. They | furthermore are able to a | dapt these proces | sses and to simulate them. | | |
| Personal Competence | | | | | | |
| Social Competence | Students are able to | present results from sm | all teamwork pro | jects in an oral presentation an | d to discuss t | heir knowledge with |
| | scientific researchers | scientific researchers. | | | | |
| Autonomy | Students are able to | analyze and solve problen | ns regarding solid | particles independently or in sn | nall groups. | |
| Workload in Hours | Independent Study T | ime 96, Study Time in Lec | ture 84 | | | |
| Credit points | 6 | | | | | |
| Course achievement | Compulsory Bonus | Form | Description | | | |
| | Yes None | Written elaboration | fünf Berichte | (pro Versuch ein Bericht) à 5-10 |) Seiten | |

Thesis

| Module M-002: Maste | r Thesis |
|-----------------------------------|--|
| Courses | |
| Title | Typ Hrs/wk CP |
| Module Responsible | Professoren der TUHH |
| Admission Requirements | According to General Regulations §21 (1): |
| | At least 60 credit points have to be achieved in study programme. The examinations board decides on exceptions. |
| Recommended Previous Knowledge | |
| Educational Objectives | After taking part successfully, students have reached the following learning results |
| Professional Competence | |
| Knowledge | The students can use specialized knowledge (facts, theories, and methods) of their subject competently on specialized issues. |
| | The students can explain in depth the relevant approaches and terminologies in one or more areas of their subject, describing current developments and taking up a critical position on them. |
| | The students can place a research task in their subject area in its context and describe and critically assess the state of research. |
| Skills | The students are able: |
| | To select, apply and, if necessary, develop further methods that are suitable for solving the specialized problem in question. To apply knowledge they have acquired and methods they have learnt in the course of their studies to complex and/or incompletely defined problems in a solution-oriented way. To develop new scientific findings in their subject area and subject them to a critical assessment. |
| Personal Competence | |
| Social Competence | Students can |
| | Both in writing and orally outline a scientific issue for an expert audience accurately, understandably and in a structured |
| | way. |
| | Deal with issues competently in an expert discussion and answer them in a manner that is appropriate to the addressees while upholding their own assessments and viewpoints convincingly. |
| Autonomy | Students are able: |
| | To structure a project of their own in work packages and to work them off accordingly. To work their way in depth into a largely unknown subject and to access the information required for them to do so. To apply the techniques of scientific work comprehensively in research of their own. |
| Workload in Hours | Independent Study Time 900, Study Time in Lecture 0 |
